# Actions and Results 4/4: control of ungulate populations

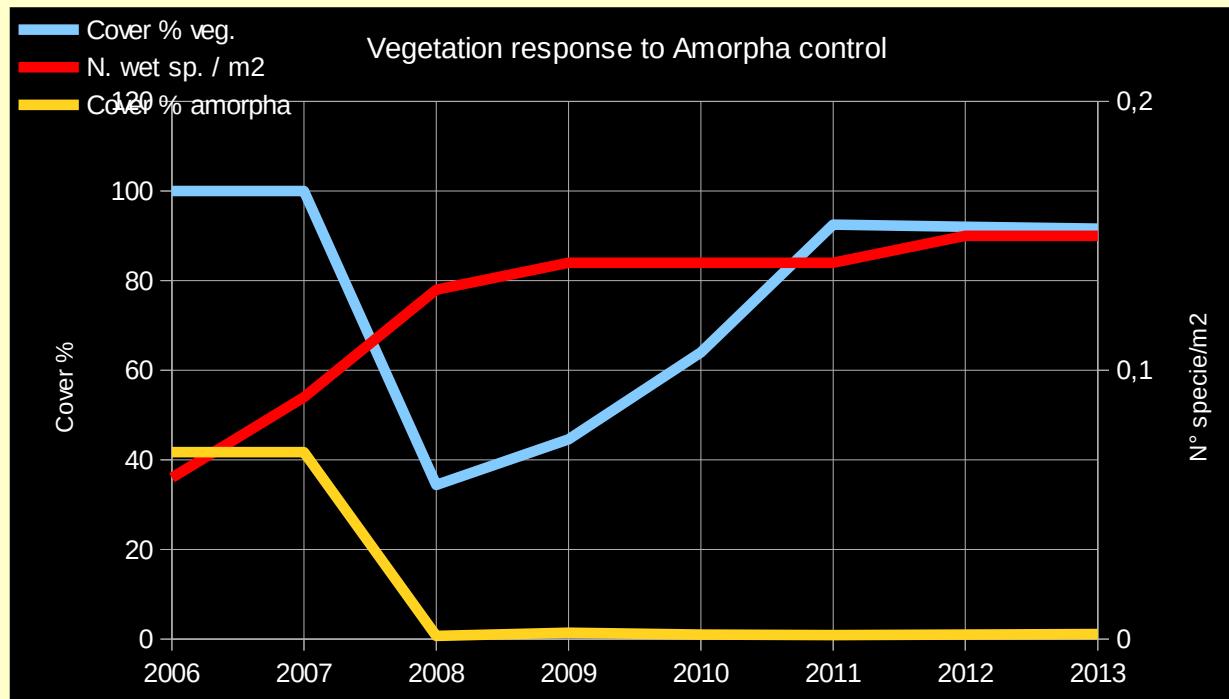

Annual ungulate control in the MSRM Park

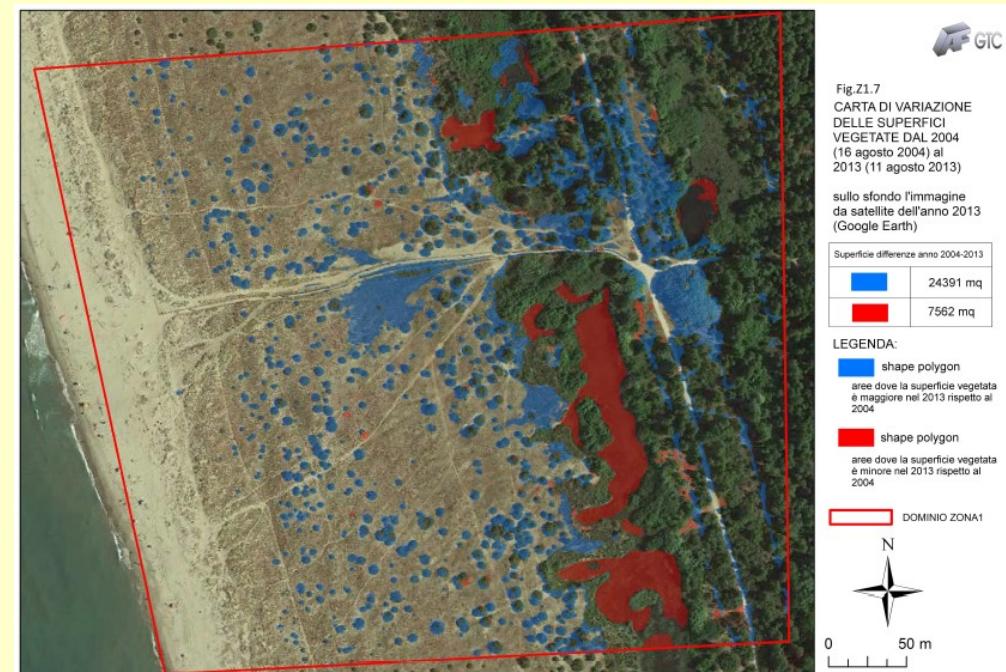

Trend of forecast population in San Rossore Estate from 2003 to 2014  
(minimum error, after birth season)

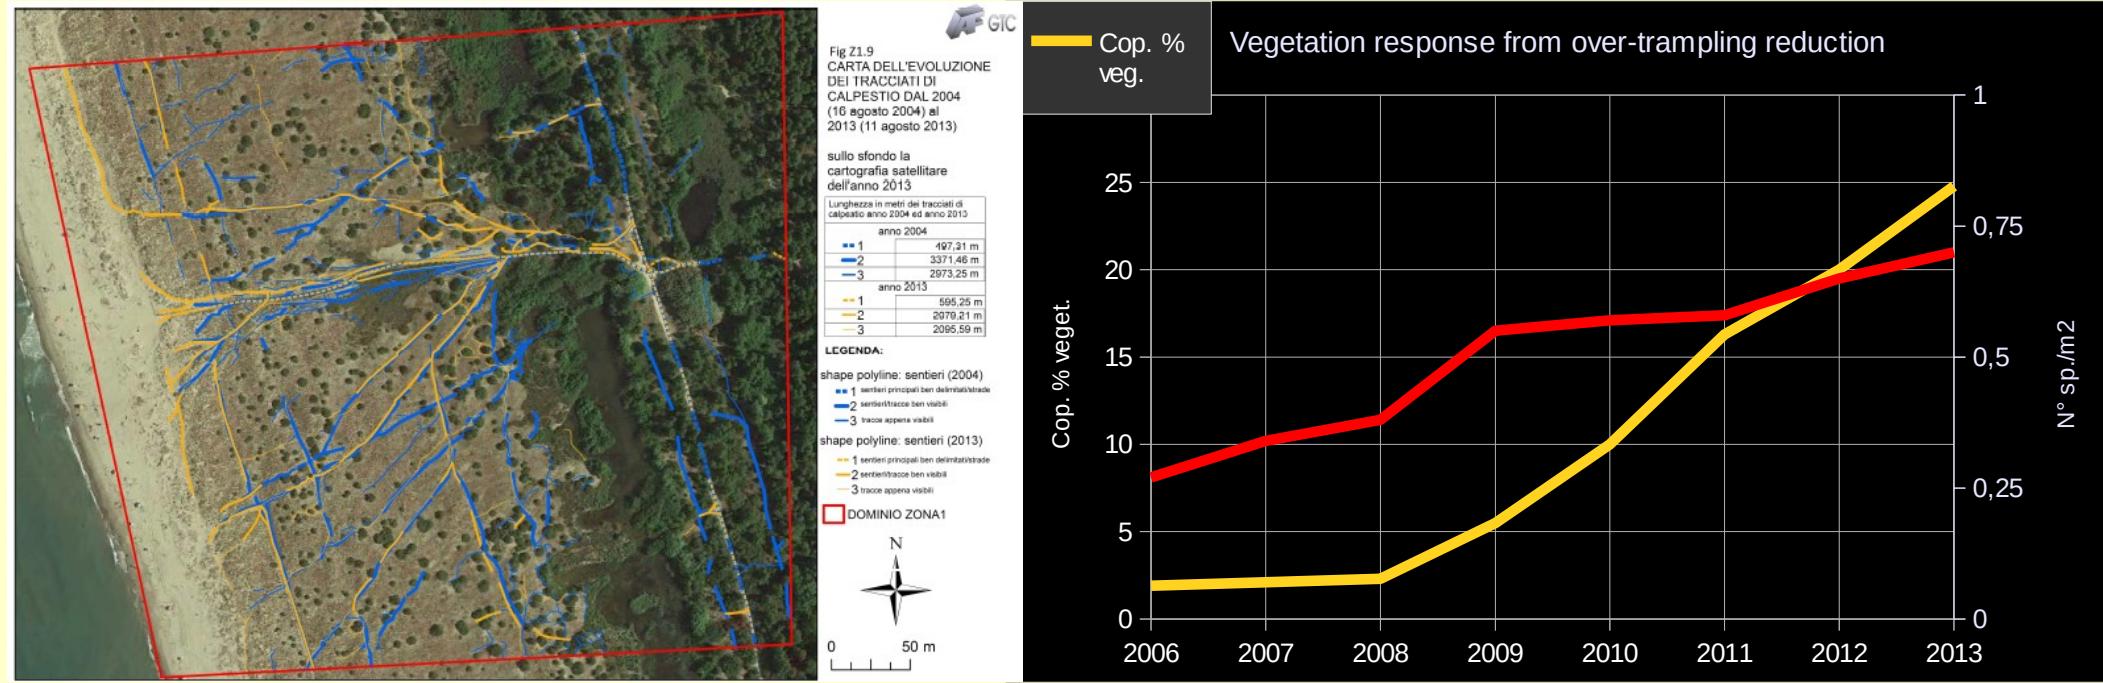

# Results: Wetlands recovery after Amorpha control

# Results: Dunal recovery from Yucca control

# Results: Dunal recovery after over-trampling control

# General results

Re-built dunal integrity

Enhance of *Juniperus* priority habitats

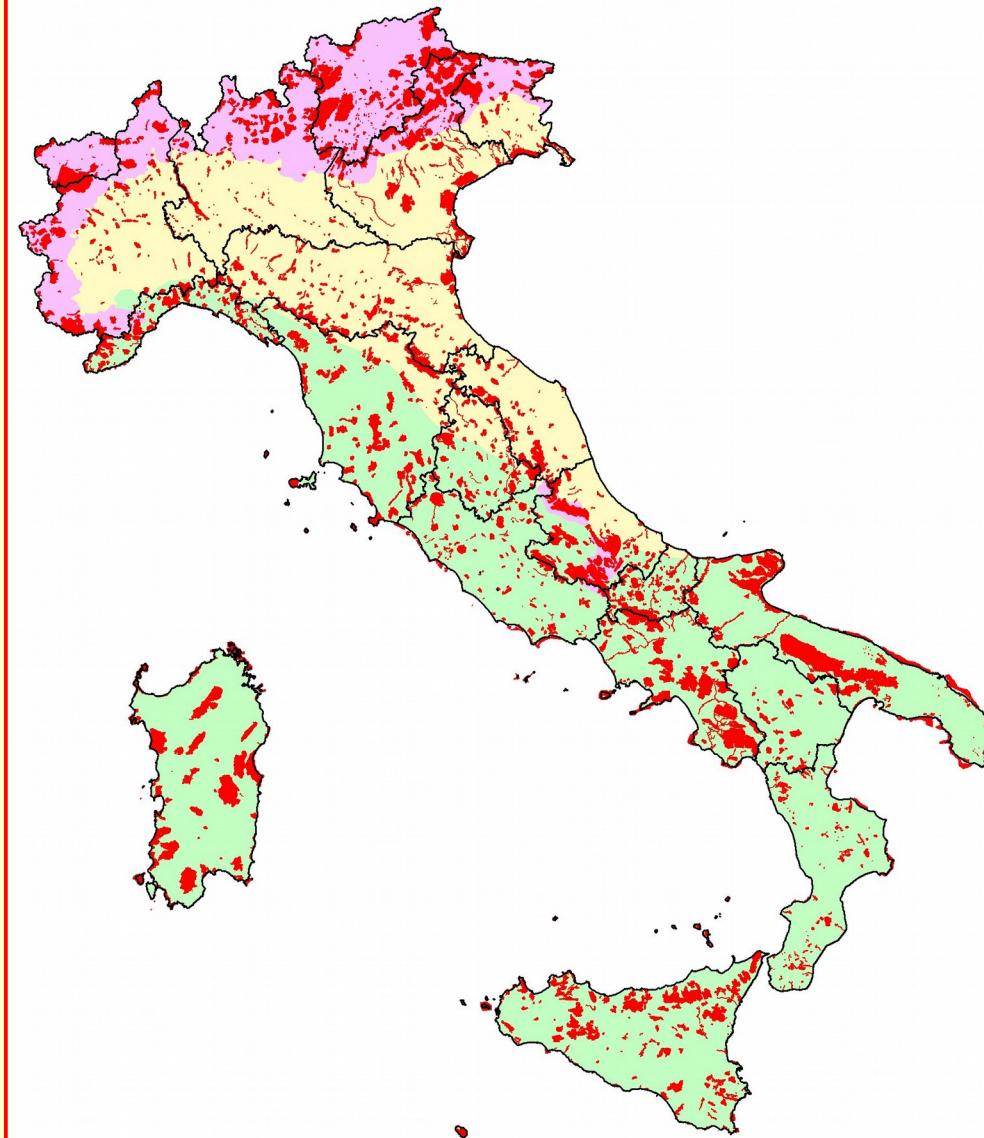

2002

New dunes

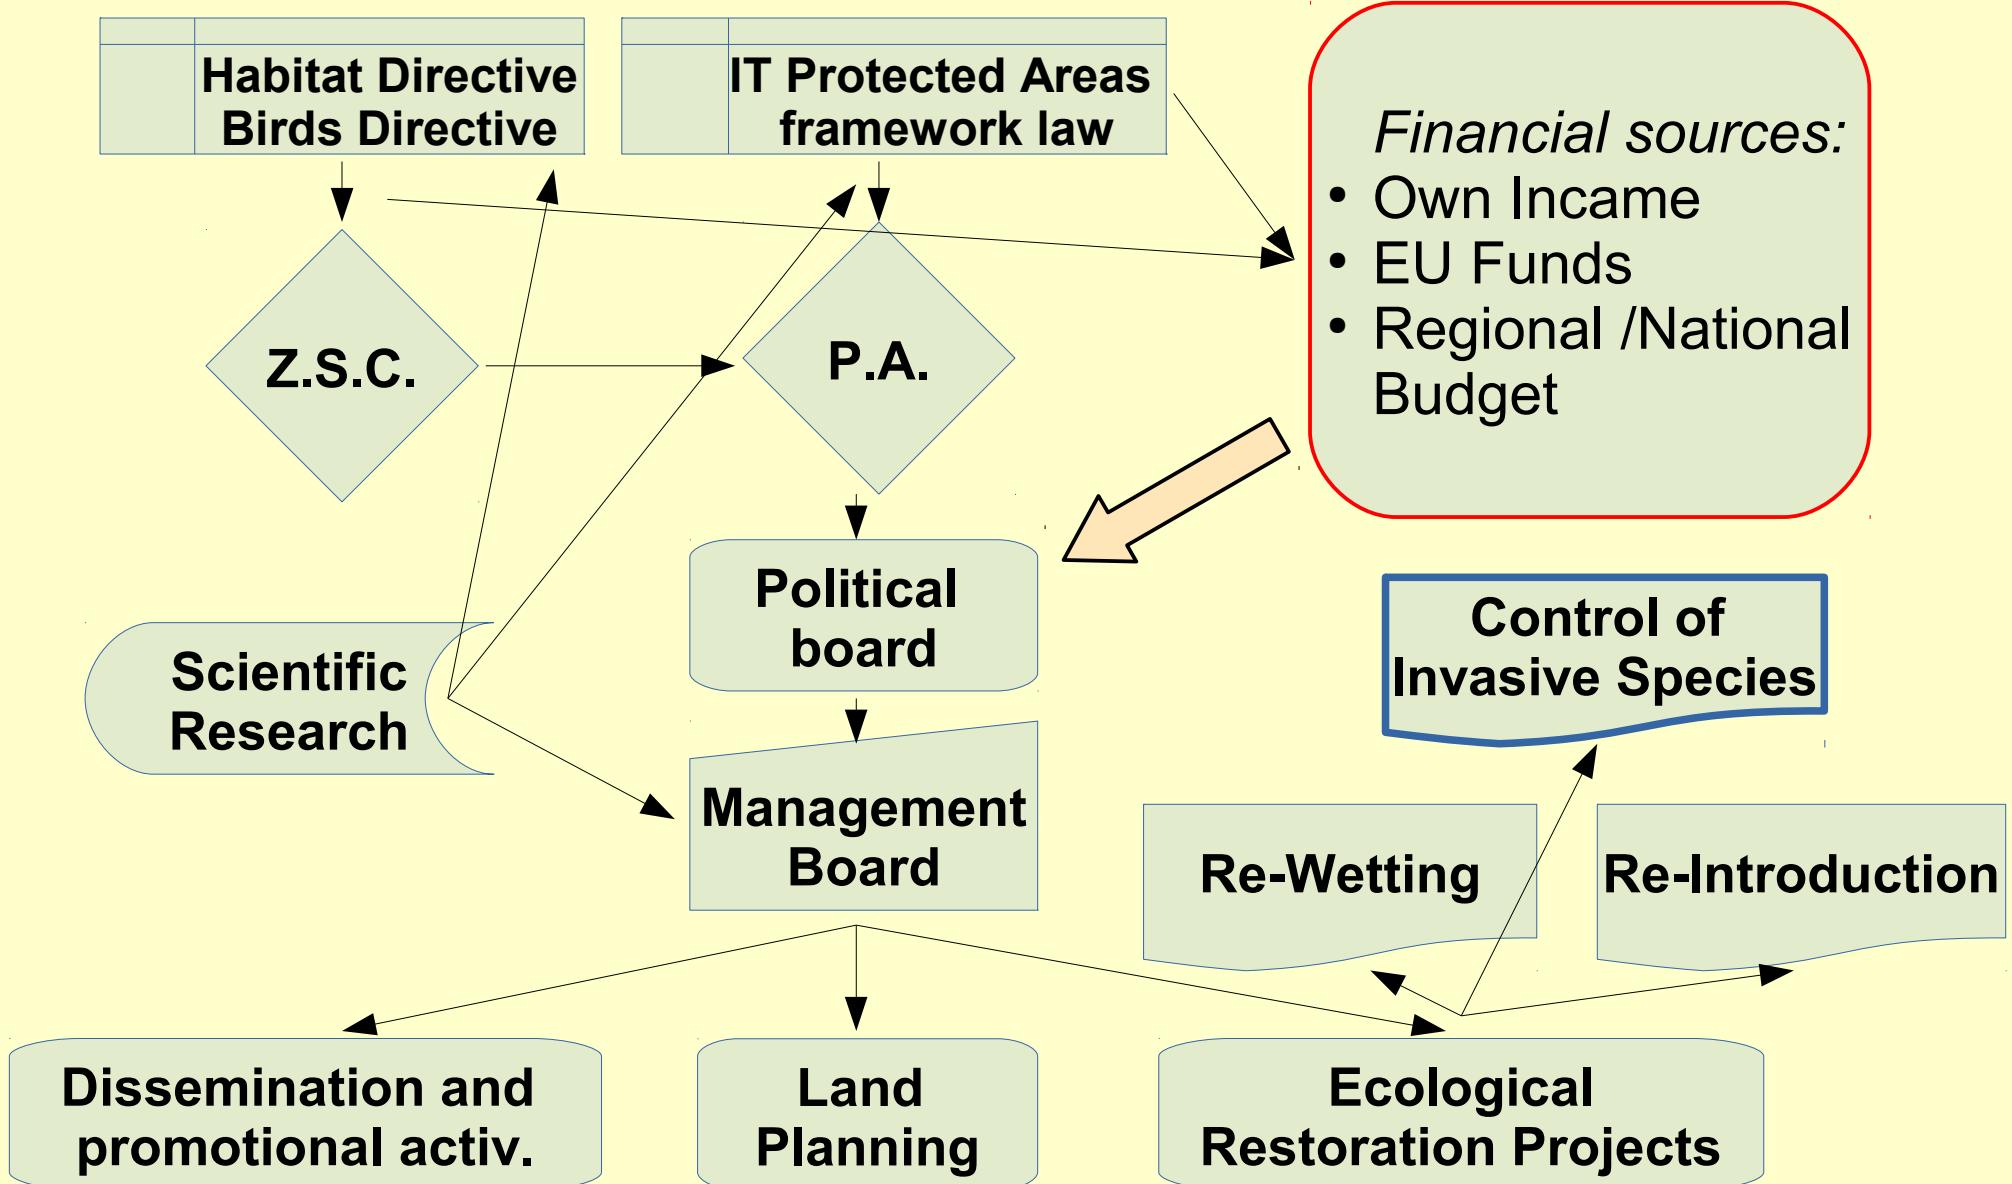

2013

# Place of IAS control in management activities

- **Ecological Restoration**  
(Re-wetting, dunal restore, Re-introduction, Control of invasive species)
- **Promotional activities**  
(Volunteers, Citizen science, Environmental friendly production)
- **Land planning**

# Place of IAS control in management activities

# Thank you!
