

- *- Indication of the name and address of the suspect (when he/she is known, but the concrete user's IP Address is not known) and, if known, the date and time of use and the name of the ISP*
- 

If the purpose of the MLA request is to obtain the identification of the user of an IP address (when the IP address is known), it is essential to indicate the date and time of the use (time-stamp) and the name of the Internet Service Provider owning that IP Address.

When the IP address is unknown and the identification of the concrete IP used is requested, the name and address of the suspect and also the date and time of use of the sought IP must be indicated.
