

## *7 Activity: Clear water...*

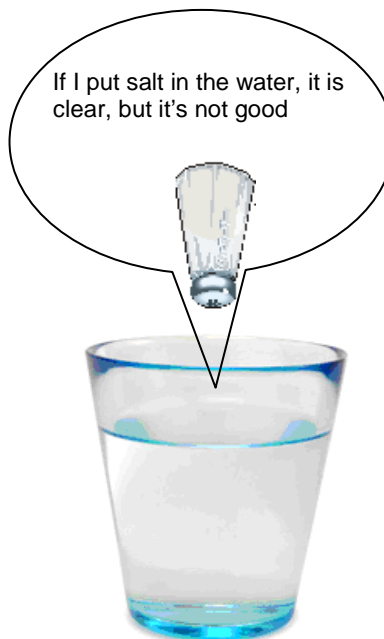

**Clean water is clear, but it is possible that it can be undrinkable.**

*Be careful! Do not confuse clean water with drinkable water*

*Clean water can have a different taste and composition ...*

Be careful, in order to drink it, the water must be drinkable before putting the sugar in

In order to taste it, the water must be drinkable before adding salt to it.

If I pour a product for the soil into it, it's clear but it's **DANGEROUS**  
**DO NOT TASTE IT!**
