7. Compétences des entités administratives en matière de paysage

Premier niveau administratif (nom de l'entité au niveau de l'Etat)

Region

Responsabilité dans le domaine du paysage ?

☒ Oui

☐ Non

Generalitat de Catalunya

The Generalitat (Government of Catalonia) is the institutional system around which Catalonia's self-government is politically organised. The Department of Territory and Sustainability has competences in areas related to territorial planning, environment, biodiversity and landscape.

Deuxième niveau administratif (nom de l'entité)

Local

Responsabilité dans le domaine du paysage ?

☒ Oui

☐ Non

Municipality

The Municipalities of Catalonia have competences in urban planning at local scale.

Troisième niveau administratif (nom de l'entité)

...

Responsabilité dans le domaine du paysage ?

☒ Oui

☐ Non

...

Référence à une carte officielle administrative de l'Etat/de la région :

...

Commentaire

(le cas échéant, précisez les éléments d'organisation de l'Etat/la Région non inclus ci-dessus)

The Spanish Constitution of 1978 defines the territorial structure of the State as based on seventeen Autonomous Communities, which each of these regions endowed with political autonomy in order to exercise its right of self-government. The Autonomous Community of Catalonia governs this region in accordance with the Spanish Constitution and the basic institutional regulations set out in the Statute of Autonomy of Catalonia of 2006.

1. Dispositions générales

1.1. Définitions

1.1.1. Paysage

1.1.1.1. Paysage

8. Le terme 'paysage' est-il défini dans votre langue ?

☒ Oui ☐ Non

Dans l'affirmative, décrivez la signification et l'usage courants de tout autre mot signifiant « paysage » ; donnez le contexte précis dans lequel chaque mot est utilisé (p. ex. aménagement du territoire)

Langue

Catalan

Mot

Paisatge

Signification

S'entén per paisatge, als efectes d'aquesta llei, qualsevol part del territori, tal com la col·lectivitat la percep, el caràcter de la qual resulta de l'acció de factors naturals o humans i de llurs interrelacions. /// Landscape, for the purposes of this law, is understood by any part of the territory, as perceived by the community, whose character results from the action of natural or human factors and their interrelations.

Document(s) complémentaire(s) disponible(s) sur le site

9. La définition juridique du terme 'paysage' dans l'Etat/la Région est-elle différente de celle de la Convention ?

☐ Oui ☒ Non

1.1.2. Politique du paysage

1.1.2.1. Politique du paysage

10. La définition juridique de 'politique du paysage' dans l'Etat/la Région est-elle différente de celle de la Convention ?

☐ Oui ☒ Non

1.1.3. Objectif de qualité paysagère

1.1.3.1. Objectif de qualité paysagère

11. La définition juridique de 'objectif de qualité paysagère' dans l'Etat/la Région est-elle différente de celle de la Convention ?

☐ Oui ☒ Non

1.1.4. Protection des paysages

1.1.4.1. Protection des paysages

12. La définition juridique de 'protection des paysages' dans l'Etat/la Région est-elle différente de celle de la Convention ?

☐ Oui ☒ Non

1.1.5. Gestion des paysages

1.1.5.1. Gestion des paysages

13. La définition juridique de 'gestion des paysages' dans l'Etat/la Région est-elle différente de celle de la Convention ?

☐ Oui ☒ Non

1.1.6. Aménagement des paysages

1.1.6.1. Aménagement des paysages

14. La définition juridique de 'aménagement des paysages' dans l'Etat/la Région est-elle différente de celle de la Convention ?

☐ Oui ☒ Non

1.2. Champ d'application

1.2.1. Champ d'application

1.2.1.1. Champ d'application

15. Le champ d'application de la Convention est-il repris dans un document formel de l'Etat/la Région ?

☒ Oui ☐ Non

Dans l'affirmative, donnez des renseignements sur le document

Titre

The Landscape Act for Protection, Management and Planning, Law 8/2005, 8 june, (DOGC No 4407 - 16/06/2005)

Référence/site web

<https://portaldogc.gencat.cat/utillsEADOP/PDF/4407/468159.pdf>

Charger fichier PDF (max. 20 Mo)

Document(s) complémentaire(s) disponible(s) sur le site

Décrivez brièvement le champ d'application du 'paysage' énoncé dans le présent document et indiquez s'il est fait spécifiquement référence à des espaces particuliers (p. ex. naturel, rural, urbain, périurbain, etc., et aux espaces terrestres, aquatiques - eaux intérieures et maritimes - et aériens).

The Catalan Landscape Law does not excludes any part of the territory. On the contrary, it analyses natural environments, rural environments, urban areas, periurban areas, in-land waterways, marine areas, outstanding landscape, everyday landscape and degraded landscapes.

1.3. Objectifs

1.3.1. Objectifs

1.3.1.1. Objectifs

16. Une politique du paysage a-t-elle été définie ?

☒ Oui ☐ Non

Dans l'affirmative, donnez des précisions sur cette politique

La politique intègre-t-elle la protection, la gestion et l'aménagement du paysage ?

☒ Oui

☐ Non

Un ministère ou une autorité nationale/régionale est-il (elle) chargé(e) de mettre en œuvre cette politique ?

☒ Oui

☐ Non

Dans l'affirmative, quel est le nom du ministère ou de l'autorité (dans ce dernier cas, indiquez aussi le nom du ministère de rattachement)

Departament de Territori i Sostenibilitat de la Generalitat de Catalunya (TES) // Ministry of Territory and Sustainability (Government of Catalonia)

Site web du ministère et/ou de l'autorité

Departament de Territori i Sostenibilitat de la Generalitat de Catalunya - <http://territori.gencat.cat/ca/inici/>

Les politiques de gestion et d'aménagement des paysages sont-elles intégrées dans d'autres politiques ?

☒ Oui

☐ Non

...

18. Existe-t-il dans ce ministère un service spécial consacré au paysage ?

☒ Oui ☐ Non

Dans l'affirmative, donnez des précisions sur ce service

Service

Secretaria d'Hàbitat Urbà i Territori /// Secretariat of Urban Habitat and Territory

Chef du service

Secretary

Site web

http://sac.gencat.cat/sacgencat/AppJava/organisme_fitxa.jsp?codi=18119

Description

- a) Design, plan, program and promote territorial, urban planning, housing, mountain, coastal and landscape planning policies.
- b) Promote the management of the maritime-terrestrial public domain and the regulation of its economic-financial system in the scope of the powers of the Generalitat.
- c) Promote and direct the drafting, revision or modification of territorial plans, urban planning plans and other supra-municipal planning instruments.

- d) Coordinate the participation in the bodies that carry out functions in their field of competence.
- e) Direct the information, registration and archiving systems in the field of urban planning in Catalonia.
- f) Promote and direct a program of actions of strategic and economic interest of a supramunicipal nature and coordinate the development of the strategic actions derived therefrom.
- g) Promote and direct the elaboration of a Catalan urban agenda and the policies for improving the urban habitat.
- h) Participate and monitor the work of the Urban Planning Plan of the Metropolitan Area of Barcelona and ensure the proper development of the urban activity and the fit of the subsequent Metropolitan Urban Planning Plan.
- i) Promote actions to promote the quality and the promotion of architecture to strengthen their collective and individual values.
- j) Plan, direct, coordinate and monitor the policies, programs and plans related to the management of buildings, the control of the quality of processes and the products of the building, the policies for the promotion of Sustainability and control of the habitability of buildings and homes.
- k) Plan, coordinate and monitor the policies, programs and plans related to the rehabilitation of houses and the remodeling of residential buildings and housing units, and the mobilization of the existing vacancies.
- l) To direct and coordinate the policies of integral rehabilitation of neighborhoods and urban areas that require special attention.
- m) Promote and encourage the intervention of other public administrations and socioeconomic agents in the housing plans and programs included in their scope of action.
- n) Direct and coordinate the policies aimed at the management and improvement of urban developments with urban deficits.
- o) Address the protection of legality within the scope of its powers.
- p) Supervise the proposals for resolving the resources, requirements and claims that are placed in matters that fall within its competence and, where appropriate, resolve those who stand against the resolutions dictated by the organic units that depend on them.
- q) Replace the head of the Department in its role as president of the corresponding city planning bodies.
- r) Any other function of a similar nature that is entrusted to you.

Public Consortium

Activités

The functions assigned to it in its Constitution (<http://www.catpaisatge.net/fitxers/resolucio.pdf>) are:

- To establish criteria for the adoption of measures for landscape protection, management and planning;
- To fix criteria for establishing the necessary landscape quality objectives, measures and actions in order to achieve these targets;
- To establish mechanisms for the observation of evolution and change in the landscape;
- To propose actions aimed at improvement, restoration or creation of landscapes;
- To prepare Landscape Catalogues for Catalonia in order to identify, classify and qualify the various existing landscapes;
- To promote social awareness campaigns with respect to the landscape, its evolution, functions and change;
- To disclose studies and reports, plus, establishing working methodologies in landscape matters;
- To stimulate scientific and academic collaboration in landscape matters and, the interchange of work and experiences among specialists and experts from universities and other academic and cultural institutions;
- To follow-up European initiatives in landscape matters;
- To prepare seminars, courses, exhibitions and conferences, as well as publications and specific information and training programmes on landscape policies;
- To create a documentation centre open to all the Catalan public.

Type d'organisation

University Research Group

Activités

The main aim of the Grup de Recerca de Paisatge i Paleoambients de la Muntanya Mediterrània (UB) is to understand the past and modern natural variability in landscape evolution, particularly, in mountain environments. The interdisciplinary research projects cover different time scales from past environmental conditions to modern processes and focus mainly on the western Mediterranean mountains (Spanish Sierra Nevada and eastern Pyrenees) and basins (Vera basin, Sorbas basin, Penedès basin, etc.) but include also other areas such as the Alps. Special attention is also paid to the influence of human impact and land-use on past ecosystems.

Created to adapt the Caixa d'Estalvis de Catalunya, Tarragona and Manresa to Law 9/2012 of July 25th (<https://www.fundaciocatalunya-lapedrera.com/sites/default/files/ESTATUTOS.pdf>), the Fundació Catalunya - La Pedrera is a non-profit organization that promotes knowledge, healthy eating habits, plus, it supports the cultural and natural territory of Catalonia. For Territory and Environment issues, it aims to build cultural values within the territory to the whole Catalan society, by following three main lines of action:

- Disclosures networks of natural spaces to enjoy unique experiences for everyone;
- Focuses efforts on threatened species and fragile ecosystems;
- Participates in global projects for sustainability and biodiversity.

The main aim of the Grup de Recerca de Paisatge i Reconstrucció Paleoambiental de la Muntanya Mediterrània (UB) is to understand the past and modern natural variability in landscape evolution, particularly, in mountain environments. The interdisciplinary research projects cover different time scales from past environmental conditions to modern processes and focus mainly on the western Mediterranean mountains (Spanish Sierra Nevada and eastern Pyrenees) and basins (Vera basin, Sorbas basin, Penedès basin, etc.) but include also other areas such as the Alps. Special attention is also paid to the influence of human impact and land-use on past ecosystems.

- Ministry of Territory and Sustainability
- Landscape Observatory of Catalonia
- Promoting agents (County Councils, Commonwealths...)

Documentation

Landscape and the local perspective

Site web

<http://www.catpaisatge.net/monlocal/eng/cartes.php>

Description

Landscape charters are voluntary instruments setting out agreements between the agents in an area in order to promote actions and strategies regarding landscape assessment and improvement. The charters can be promoted by the Government of Catalonia, by local authorities (district councils, communities, municipalities) and/or by entities.

The charters are formalised with the public signing of a document which states the commitments agreed by each of the signatories in favour of the landscape and the timeline for achieving these objectives. Its content must take into account the landscape catalogue in their ambit of action. The coherence of both instruments is ensured by the Landscape Observatory.

This type of instrument has been found useful in other countries, in contexts similar to our own.

Documentation

Eight Landscape Catalogues of Catalonia (one for each of the regions of application of the Partial Territorial Plans)

Site web

<http://www.catpaisatge.net/eng/catalegs.php>

Description

The Act 8/2005 of 8th June for the Protection, Management and Planning of the landscape in Catalonia creates the Landscape Catalogue as a new instrument for the introduction of landscape objectives into spatial planning and sectoral policies in Catalonia, and in this way adopts the principles and action strategies established in the European Landscape Convention promoted by the Council of Europe.

In other words, the landscape catalogues are the tools which enable us to find out what our landscape is like and what values it has, the factors which explain why we have a certain type of landscape and not another, how our landscape evolves with regard to the current financial, social and environmental dynamics, plus, they define what type of landscape we want and how we can achieve it.

The landscape catalogues, therefore, supply information of great interest on all the Catalan landscapes and in this way contribute to the definition and application of a new landscape policy in Catalonia.

Description

The "Ciutat, Territori i Paisatge" educational project is the result of the collaboration between the Ministry of Territory and Sustainability and the Ministry of Education of the Government of Catalonia and; the Landscape Observatory of Catalonia and its aimed at pupils and teachers of secondary schools in Catalonia.

Its purpose is to enhance the knowledge of Catalan landscape heritage and raise students' awareness to the need to preserve landscape values and understand the action of humans on natural surroundings.

It is an interdisciplinary initiative which offers the chance to work on the natural and human elements of the territory in a comprehensive manner and from the observation of specific, real landscapes, subject to very modern changes and problems.

ARTICLE 27. RIGHTS AND OBLIGATIONS CONCERNING THE ENVIRONMENT

Article 27.1 - Each individual has the right to live in an environment that is balanced, sustainable and respectful of health, in accordance with the standards and levels of protection established by law. Each individual also has equal rights to enjoy the landscape and natural resources, and has the obligation to use these responsibly and to avoid squander and damage of natural resources.

ARTICLE 46. THE ENVIRONMENT, SUSTAINABLE DEVELOPMENT AND TERRITORIAL BALANCE

Article 46.3 - The public authorities shall create conditions for the preservation of nature and biodiversity, promote the integration of environmental objectives into sectorial policies, and establish conditions in which all individuals can enjoy the natural heritage and landscape.

Article 46.4 - The public authorities shall ensure economic and territorial cohesion by applying policies that ensure a special treatment for mountain zones, protection of the landscape and the coastline, the promotion of agriculture, livestock farming and forestry, and a balanced distribution of productive sectors, services of general interest and communication networks throughout the territory.

ARTICLE 149. Territorial, landscape, coastline and urban development planning

Article 149.1 - The Generalitat has exclusive power over territorial and landscape planning. This power includes in all cases:

- Establishment of guidelines for planning and management of the territory, and the landscape and of the actions that affect them;
- Establishment and regulation of the forms of territorial planning and of the procedures for their processing and approval;
- Establishment and regulation of the instruments to safeguard natural areas and biological corridors;
- Planning for future location of infrastructures and equipment;
- Determination of specific measures for the promotion of territorial, demographic, socio-economic and environmental balance.

Statut juridique

This law aims to recognize the protection, management and planning of the landscape, with the aim of preserving its natural, patrimonial, cultural, social and economic values within the framework of sustainable development. With this objective, this law promotes the full integration of the landscape in planning, in territorial and urban planning policies, as well as in other sector policies that affect it directly or indirectly.

This law is structured in five chapters.

The first, titled "General Provisions", establishes the objective of the Law, its foundations, the definition of landscape, the scope of application, the landscape policies, the type of actions to be carried out on it and their objectives. The law establishes as an objective the integration of landscape into territorial and urban planning policies and other sector policies involved. In accordance with this objective, the scope of application of this law is the entire territory of Catalonia, both the areas where nature is predominant as well as those that have been transformed by human action. The application of this law does not exclude, however, the applicability of any other sector legislation on certain spaces or protection categories.

Chapter II, referring to landscape in territorial planning, establishes the instruments to be used for landscape protection, management and planning are established within the framework of this law. Thus, landscape catalogues will be created, as documents that determine the type of landscape in Catalonia and its current and potential values and which propose quality objectives. Also established are the landscape guidelines, by means of which the proposals of landscape quality objectives in territorial planning are incorporated.

Chapter III, dedicated to organization, refers to the Landscape Observatory, as an entity for support and collaboration with the Government of Catalonia in questions related to creation, application and management of landscape policies.

Chapter IV Refers to the creation and use of new instruments of agreement for strategies on landscape, such as the landscape maps. The Govern is also committed to promote social awareness about the landscape, teaching and the training of specialists in these matters.

Finally, Chapter V, dealing with the objectives of this law, refers to the creation of a Fund for protection, management and planning of landscape, as a financial instrument of the Government of Catalonia. The aim of the Fund is to finance specific actions for protection, management and planning of landscape implemented in accordance with the criteria established in this law and the regulations that derive from it.

Also noteworthy is the Legislative Decree no. 343/2006 of September 19th, which elaborates upon Law 8/2005, of 8 June, on Landscape Protection, Management and Planning in Catalonia and regulates the studies and reports of landscape impact and integration (Official Gazette of the Government of Catalonia - DOGC no.4723 - 21/09/2006). Its goal is the development of the tools that the law creates and in particular to regulate the approval procedures of catalogues, plus, the approval of landscape guidelines, through which the decisions necessary for the implementation of the policies affecting regional and urban planning are integrated therein. It also regulates the landscape impact studies established in urban legislation, so as to ensure harmonised development of both regulations.

Loi

Law no. 9/1995 of July 27th on vehicular access to the natural environment (Official Gazette of the Government of Catalonia - DOGC no.2083 - 02/08/1995)

Date

19950727

Objet

Environment. Vehicular access to the natural environment.

Description

The continuous circulation of motorised vehicles in recent years has led to a considerable increase in human pressure on

natural areas. The power and maneuverability of the vehicles and the progressive access of the population to places until recently preserved of the human action, where they inhabit animal species and vegetal communities of natural interest, constitute a threat that sometimes it jeopardizes the maintenance of the ecological balance and the conservation of the natural systems, affecting negatively the rights and the quality of life of the rural population.

It is worth noting ARTICLE 8.LIMITATIONS AND PROHIBITIONS, item b): Prohibit motorized circulation in rural roads and forest tracks, to preserve the natural values of the affected areas, after having consulted the respective town councils.

Protecting natural areas

Description

The Law no.12/1985 aims to protect, conserve, manage and, if necessary, restore and improve the genetic diversity, wealth and productivity of the natural spaces of Catalonia, which must be compatible with the development and use of the natural and environmental resources, within the framework of the protection of the environment and the rational and balanced planning of the territory. This law considers natural spaces that are present in one or more ecosystems, not essentially transformed by human exploitation and employment, with plant species or animals of scientific or educational interest and those that present; plus, natural landscapes of aesthetic value.

Environment. Modifications to other laws.

Description

This law responds to the need to introduce a set of timely modifications to the current legislation in the field of the environment. It is worth noting ARTICLE 11, in reference to Law no. 12/1985, in which a new chapter - Chapter IV bis. Special areas of conservation and areas of special protection for birds - is added:

ARTICLE 34 bis. SPECIAL CONSERVATION ZONES

According to 34 bis.1 - The Special Areas of Conservation (ZEC) are areas where there are natural habitats of community interest and habitats of species of community interest, in which maintenance or restoration must be guaranteed, at a favorable conservation status for the natural habitats and populations of the species, for which the place has been designated.

According to 34 bis.2 - The Special Areas of Conservation (ZEC) are declared by the Government, with the previous selection as sites of community importance for the European Commission, in accordance with the provisions of the Directive 92/43/EEC of 21 May 1992 on the conservation of natural habitats and of the wild fauna and flora.

CATPAISATGE 2020

Description

CATPAISATGE 2020. Country, Landscape, Future

Since 2005, the Landscape Observatory has focused its efforts on identifying and cataloguing the landscapes of Catalonia, setting up the instruments envisaged in the Landscape Law, and helping to position our country among the European leaders in landscape policies. Now that these lines are consolidated, the Observatory is embarking on a new approach, for which it has designed a roadmap called CATPAISATGE 2020.

Under the slogan "Country, Landscape, Future", the new strategy places the emphasis on issues such as internationalisation, local and entrepreneurial development, and highlighting new landscapes, and on the importance of values, research, and communication. CATPAISATGE 2020 is structured into ten lines of research:

1. Internationalisation from singularity

Internationalisation has always been one of the mainstays of the work carried out by the Landscape Observatory. Now, the policy is to develop this approach as a way to endow Catalonia with an international profile. It must be borne in mind, however, that this will only succeed by focusing on the singular nature of a country that contains some of the greatest landscape diversity in Europe. It cannot be overlooked that landscapes that maintain, reinforce, and develop their identity and personality are more likely to prosper in the end than either urban or rural landscapes that have lost these qualities;

2. Living and producing in quality surroundings

The quality of the landscape is a symbol of the maturity and cultural level of any country. In this sense, quality landscapes contribute to the international profile of the country and facilitate the competitiveness of its territories, for example, by attracting skilled labour and innovative companies. On the other hand, quality local production is closely linked to quality landscapes;

3. Landscape, creativity and strategic sectors

The quality and singularity of the landscape have a positive impact on sectors such as cinema, advertising, fashion, gastronomy, design and so on, but at the same time, they are part of the more successful development strategies for tourism and agriculture. Quality tourism is known to shun spoiled or mediocre landscapes;

4. Landscape and the local world

There is a growing consensus that landscapes - especially landscapes with strong personalities - contribute to local development not only from the economic perspective but also in terms of self-esteem, identity, and quality of life;

5. The creation of new benchmark landscapes

Catalonia has many benchmark landscapes, landscapes imbued with strong symbolic significance. Many of these landscapes, moreover, gained their iconic status decades or even centuries ago. They have reached us today in reasonably good condition and it is now incumbent upon us to preserve both their cultural and identity value. However, in a context of increasing trivialisation of many ordinary landscapes, we must make an effort to create new benchmark landscapes, without overlooking their time-honoured counterparts. Using good design and projects, we should be able to convert ordinary, anodyne landscapes into places of reference with which the local population can identify and establish a dialogue;

6. Landscape, values and community

Awareness of the diversity of landscapes, visual enjoyment of our surroundings, and respect and sensitivity to the natural or heritage dimensions are all values that reinforce the social fabric and dignify the community;

7. Landscape, employment and entrepreneurship

The landscape generates economic opportunities and becomes an agent for creating employment in sectors linked to the territory, and to agriculture, education, and the environment. This is also true of emerging creative fields in their

relationship with the landscape, such as cinema, advertising, fashion, and gastronomy, among others;

8. Climate change, energy and landscape

Landscape is a first-class indicator for understanding the effects of climate change, imagining future scenarios, and designing adaptation strategies, while at the same time combating this change, above all by means of widespread use of renewable energies;

9. Research and innovation as growing values

Landscape research is a growing value that provides a comprehensive response to some of the new global challenges. It also reinforces the potential for entrepreneurship and the creation of employment in various sectors;

10. Education and communication

Landscape education is not sufficient: we must also know how to communicate the value of landscape education. Communication is a crucial aspect of contemporary societies and therefore we must make good use of the enormous communicative value of the landscape, a true bearer of messages easily recognised by the population.

2.5.3. Procédures de participation

2.5.3.1. Procédures de participation

39. Existe-t-il des procédures permettant aux autorités régionales de participer aux décisions publiques relatives aux paysages ?

☒ Oui ☐ Non

Dans l'affirmative, donnez des renseignements sur chaque procédure

Nom

Landscape Catalogues of Catalonia

Description

The landscape catalogues of Catalonia incorporate public consultation as a tool for the involvement and co-responsibility of society in landscape management and planning. Its importance is also based on the fact that it is through participatory processes that the more perceptible, identity-based and intangible factors of landscape can be detected, factors which are difficult to identify exclusively from the work of specialised experts.

The mechanisms of public consultation used throughout the process of making the landscape catalogues are diverse and vary in each landscape catalogue. These mechanisms are the following:

- Information sessions;
- Participatory workshops;
- Interviews with landscape agents;
- Workshops with landscape agents;
- Discussion groups;
- Opinion poll;
- Landscape Inbox;
- Consultation via the web.

Special Plans for Protection of the natural environment and the landscape of Areas of Natural Interest

Description

The management bodies of the areas of natural interest of Catalonia prepare their special protection plans of the natural environment and landscape through processes where participation plays an important role.

The procedure is not defined in detail by law, so it was considered appropriate to explain the participatory process of a concrete natural area: the area of natural interest of the Alta Garrotxa. The process of drafting the Plan gives special importance to public participation, which involves designing a process of public participation and communication with the main stakeholders who have influence in the area of the Alta Garrotxa.

The mechanisms are:

- Electronic survey (the deadline for answering the online survey has elapsed. You see the results in the documents section of this website);
- Participatory geographic information system;
- Electronic mailbox to collect all your suggestions and comments;

Landscape Charters

Description

Landscape charters are voluntary instruments setting out agreements between the agents in an area in order to promote actions and strategies regarding landscape assessment and improvement. The charters can be promoted by the Government of Catalonia, by local authorities (district councils, communities, municipalities) and/ or by entities.

Landscape Catalogues of Catalonia

Description

The landscape catalogues of Catalonia incorporate public consultation as a tool for the involvement and co-responsibility of society in landscape management and planning. Its importance is also based on the fact that it is through participatory processes that the more perceptible, identity-based and intangible factors of landscape can be detected, factors which are difficult to identify exclusively from the work of specialised experts.

The mechanisms of public consultation used throughout the process of making the landscape catalogues are diverse and vary in each landscape catalogue. These mechanisms are the following:

- Information sessions;
- Participatory workshops;
- Interviews with landscape agents;
- Workshops with landscape agents;
- Discussion groups;
- Opinion poll;
- Landscape Inbox;
- Consultation via the web.

Pla de l'Energia i Canvi Climàtic de Catalunya 2012-2020 (PECAC) /// Energy Plan and Climate Change in Catalonia 2012-2020

Description

For the elaboration of this plan, the collaboration between the Ministry of Business and Employment and the Ministry of the Territory and Sustainability has been considered convenient, given the relationship between energy and climate change. In order to face these challenges by optimizing efforts and integrating transversal policies in the whole of government action from its design phase, the Plan for Energy and Climate Change of Catalonia 2012-2020 addresses the new direction that the current Government of the Generalitat de Catalunya wants to give to the Catalan energy policy, integrating those aspects of the mitigation of climate change related to the energy.

Disposition

Topic "Consolidation and improvement of the strategies for the evaluation of the potentials of renewable energies and the saving and energy efficiency in Catalonia", measure "5.8.5.8. Coordination and structuring of the Catalan energy planning strategies with the forest, waste, hydraulic, territorial and landscape planning of the Generalitat de Catalunya":
- Landscape Planning: improve the landscape catalogs in order to minimize the potential obstacles to the territorial implantation of energy facilities that use renewable energy sources and the development of the necessary transport and distribution networks to ensure the guarantee and the quality of the electric supply to citizens and companies throughout the Catalan territory.

Strategy of the Natural Heritage and Biodiversity of Catalonia 2011-2020 /// Estratègia del Patrimoni Natural i la Biodiversitat de Catalunya 2011-2020

Description

Strategic planning document that defines the road map of nature conservation policies in Catalonia until 2030. It is an essential document that implements in Catalonia what was established on the Convention of Biological Diversity of the United Nations of 1992, on the 2011-2020 Plan that unfolds it and on the 2020 Strategy on biodiversity of the European Union.

The strategy of the natural heritage and the biodiversity of Catalonia defines strategic objectives to reach the year 2030, but will be deployed on a quadrennial basis, with lines of action that will be specified in actions, in a first phase during the period 2019-2022. It is structured on the basis of six guiding principles, which define the priorities of the Government's action to conserve nature and to curb the loss of biodiversity in Catalonia:

- The knowledge and management of information on natural heritage;
- The conservation of the habitats, the species and the ecological processes;
- The reorientation of the territorial model;
- The integration of sectoral policies;
- The administrative structure and the legal framework;
- The social implication.

Disposition

Recognizes the importance of landscape protection and management in defining a strategy for natural heritage and biodiversity.

Chapter 5 - Diagnosis

5.3 Scope - Territorial Model

Section b) The Landscape

Law 8/2005, on the protection, management and planning of the landscape of Catalonia, creates landscape catalogs as instruments for the introduction of landscape objectives in territorial planning in Catalonia, as well as in sectoral policies, and adopts the principles and strategies of action established by the European Landscape Convention promoted by the Council of Europe.

In Catalonia, seven landscape catalogs have been approved covering the entire territory, which coincide with the territorial areas of the approved partial territorial plans. They are the tools that allow us to know how the landscape is and what values it has, what factors determine it, how it evolves based on the economic, social and environmental dynamics, and finally, what type of landscape you want and how to achieve it. The landscape map identifies 135 landscape units, highlighting the great diversity and richness of landscapes in Catalonia, one of the highest in the European continent.

Inclusion of Landscape into the programme of study in primary education, compulsory secondary education and A-levels

Description

An educational curriculum is the set of aims, basic skills, content, educational methods and evaluation criteria of the different levels of instruction. The curriculum contains a list of objectives or elements that students have to learn and that set the corresponding plan of study, with potential or travelling or elective ones as well as some shared minimum ones. Therefore, the act of building a curriculum can express a certain concept of education.

Disposition

The curriculums used in primary, compulsory secondary and A-level education include comprehension, identification and characterisation of the landscape, and especially the Catalan landscape.

Règles

- Legislative Decree no. 142/2008 of July 15th on the Education system for A-level teaching (Official Gazette of the Government of Catalonia - DOGC no.5183 - 29/07/2008), which establishes planning for instruction in A-level education;
- Legislative Decree no. 119/2015 of June 23rd on the Education system for primary school (Official Gazette of the Government of Catalonia - DOGC no.6900 - 26/06/2015), which establishes planning for instruction in primary education;
- Legislative Decree no. 187/2015 of August 25th on the Education system for compulsory secondary school (Official Gazette of the Government of Catalonia - DOGC no.6945 - 28/08/2015), which establishes planning for instruction in compulsory school education;

General Forestry Policy Plan of Catalonia

Description

The General Forestry Policy Plan of Catalonia is an instrument created by Law no. 6/1988 of March 30th on Forestry of Catalonia (Articles 6 and 7), to establish guidelines and strategies to promote the sustainable development of forest terrain, ensuring that forest ecosystems and their environmental functions are conserved, as well as sustainable development of their social and economic values

Disposition

Among the various tools resulting from this policy are the Forest Resource Plans (PORF). These are spatial planning instruments that zone and define compatibility in uses of forest landscapes, give some guidelines for management and create a programme of actions to develop them. Furthermore, there is also research group working on landscape ecology and spatial planning.

Règles

Law no. 6/1988 of March 30th on Catalan Forestry (Official Gazette of the Government of Catalonia - DOGC no.978 - 15/04/1988)

Instruments

- Forest Resource Plans (PORF);
- Catalogue of Forests of public utility;
- Atlas of woody species of the forests of Catalonia.

Titre

Pla d'Infraestructures del Transport de Catalunya (PITC) 2006-2026 /// Plan of Transport Infrastructures for Catalonia 2006-2026

Description

The Government of Catalonia has developed the Plan of Transport Infrastructures for Catalonia (PITC) with the aim of defining the network of road, rail and logistics that are necessary for Catalonia within the time horizon of 2026, and it is intended to expand it with the rest of the infrastructure, ports and airports in the short term, in order to establish a complete plan for infrastructures in Catalonia.

Disposition

The objective of the PITC is not to establish the reserves of land conditions derived from the new proposed infrastructures, which will be defined later in other documents. In the case of infrastructures of a strategic nature or crossing specially committed areas, specific urban planning plans will be encouraged to reserve the land as a guarantee of the future of the infrastructure. For the development of this Plan, preliminary and informational studies will be carried out in order to guarantee the compatibility between new infrastructures with the preexisting landscape, taking care of their proper integration with agricultural activities and the network of roads and livestock roads.

Règles

The PITC is a sectoral territorial plan, in accordance with Law no.23/1983 of November 21st on Territorial Policy (Official Gazette of the Government of Catalonia - DOGC no.385 - 30/11/1983), and a specific plan for the purpose of what is established in Law no. 9/2003 of June 13th on Mobility (Official Gazette of the Government of Catalonia - DOGC no.3913 - 27/06/2003)

Protection and Restoration of the spaces affected by open-air extraction activities

Description

The main aim of the restoration policy is to return the land affected by exploitation to its original uses or to adapt them to the new needs of the territory.

Disposition

The purpose of the restoration programme is to get the area affected by exploitation to remain integrated into the surrounding landscape.

Règles

- Law no. 12/1981 of December 24th on Establishing additional standards for protection of the spaces of special natural interest affected by extractive activities (Official Gazette of the Government of Catalonia - DOGC no.189 - 31/12/1981), plus; standards for protecting the environment from the implementation of extraction activities.

Both dispositions are updated by Decree no. 202/1994 of June 14th on Establishing criteria for the determination of the bonds related to the restoration programs of extractive activities (Official Gazette of the Government of Catalonia - DOGC no.1931 - 08/08/1994)

Instruments

- Restoration programme: it is a document with a formal structure befitting a project and aims to prevent and compensate for the damaging consequences activities leave on the environment. This is obtained by defining the pertinent restoration measures that must be adopted both at the end of each exploitation phase and activities;
- Integrated restoration: it is a mechanism for minimising the environmental and landscape impact created by open-air extraction activities. Integrated restoration advantage of the movements of earth generated by the same extraction activity to restore already-exploited areas alongside. It helps the party undertaking the exploitation to the tempo of extraction activities and thereby to minimise the economic costs of restoration. Integrated restoration also guarantees that the areas affected are reduced and strengthens the link between affect and restoration as a mandatory premise for

any open-air mining activity.

Planning protected natural spaces

Description

A system of protected natural spaces that is structured and endowed with consistency is the main pillar for achieving conservation of biodiversity and natural heritage and is useful for protected spaces to fulfill their role as tools for planning natural and cultural resources. Planning the system includes relations between the different units and categories in the protected natural spaces, as well as links with other categories and plans of the region. This policy has three basic instruments: - Law 12/1985, on natural spaces, which defines the natural spaces enjoying special protection under the categories of national parks, natural parks, natural areas of interest and natural reserves. - The Plan of Spaces of Natural Interest of Catalonia (PEIN) establishes the network of protected natural spaces in Catalonia with the aim of conserving the geological heritage, habitats and ecosystems that are most representative and best conserved in Catalonia. - Special plans to protect the environment and the landscape: protected natural spaces are often associated with a special protection plan by which standards for protecting and planning the territory are established

Disposition

The general aim of this policy is to preserve, manage and plan the natural landscapes of Catalonia in an appropriate way.

Règles

aw no. 12/1985 of June 13th on Catalan Natural Spaces (Official Gazette of the Government of Catalonia - DOGC no.556 - 28/06/1985). Decree no. 328/1992 of September 14th (Official Gazette of the Government of Catalonia - DOGC no.1714 - 01/03/1993), by which the plan for natural areas of interest is approved

Instruments

Plan for natural spaces of interest of Catalonia Special plans to protect the environment and the landscape information system about natural heritage.

Programa de Desarrollo Rural (PDR) /// Spain - Rural Development Programme - (Regional) - Cataluña

Description

The Rural Development Programme (PDR) of Catalonia 2014-2020 is the tool used to implement rural development strategies and directives on the EU, national and regional government level. It is also the main instrument available to the Government of Catalonia to implement a structural policy aimed at the rural world, with special attention paid to the agricultural sector. The programme's objectives are:

- Increasing the agricultural and forestry sector's ability to compete;
- Improving the environment and rural settings;
- Improving the quality of life in rural areas and promoting diversification in the rural economy;
- Developing local capacities to create employment and diversification;
- Ensuring consistency for the programme and complementarity among the different EU instruments.

Disposition

Part of the rural development programme is the global exploitation contract, a commitment agreement that is obtained via a contract proposal signed by the applicant and a resolution to approve it from the government administration. It aims to give incentives to the development of global project covering the productive, economic, environmental and social aspects of agriculture in order to promote the viability of agricultural exploitation and achieve sustainable rural development. Among the related lines of aid, there are some that have a direct relation with the landscape:

- 4.2.13: Promote forest management and improvement of transformation processes;
- 4.2.17: Reinforce prevention and restoration of forest areas affected by wildfires;
- 4.2.18: Enhance the management and planning of nature spaces, species, habitats and landscapes;
- 4.2.21: Protect cultural and natural heritage of rural areas.

Spatial Planning Programme

Description

This programme has developed the seven Partial Territorial Plans for Catalonia - Alt Pirineu i Aran, Camp de Tarragona, Comarques Centrals, Comarques Gironines, Penedès, Regió Metropolitana de Barcelona, Terres de l'Ebre and Terres de Lleida - which are the tools for defining the equilibrium objectives of each part of Catalanian territory and the guiding framework of the actions that will be taken to move towards a decisive vision of the future.

Disposition

The framework criteria for developing spatial plans include "preserving the landscape and cultural heritage as social values and economic assets of the land". These plans also define different categories of soil, including "soil of agricultural and/or landscape interest". As part of Law 8/2005, of 8 June, on Landscape Protection, Management and Planning in Catalonia (Official Gazette of the Government of Catalonia - DOGC no.4407 - 16/06/2005), the spatial plans include the landscape directives which, based on the Landscape Catalogues, set out the proposed landscape quality objectives and incorporate them into the regulation of the partial territorial plans or land master plans.

Landscape integration of constructions on nondevelopable land

Description

The Legislative Decree no. 343/2006 of September 19th, which elaborates upon Law 8/2005, of 8 June, on Landscape Protection, Management and Planning in Catalonia and regulates the studies and reports of landscape impact and integration (Official Gazette of the Government of Catalonia - DOGC no.4723 - 21/09/2006), assigns the task of considering the consequences that the implementation of certain actions, projects or activities could have on the landscape, in addition to exposing the criteria adopted for its integration into landscape. This is done by making a "landscape impact and integration study".

The suppositions according to which it is mandatory to carry out a landscape impact and integration study correspond to the actions on nondevelopable land laid out in Article 48 of Legislative Decree no. 1/2005 of July 26th, by which was approved the reworked text of the Urban Planning Law, the cases in which spatial or urban planning schemes would require it, and when it is established by a certain law or general disposition.

Disposition

Landscape impact and integration studies are instruments foreseen within Catalan landscape and planning legislation to promote the proper insertion of diverse activities within landscapes. The content and obligatory nature of this instrument are established in Decree 343/2006, of 19 September, which elaborates upon Law 8/2005, of 8 June, on Landscape Protection, Management and Planning in Catalonia, which assigns it the task of considering the consequences that the implementation of certain actions, projects or activities could have on the landscape, in addition to exposing the criteria adopted

for its integration into landscape. The aforementioned Decree also sets out the requisites of the landscape impact and integration reports and establishes that the aim of these reports is to evaluate the suitability and sufficiency of the criteria or

measures adopted in the landscape impact and integration studies in order to integrate into landscape the actions, uses, works and activities to carry out. The status of the reports is consultative and their purpose is to help the territorial urban planning commissions to make the agreements to grant authorisation or final approval.

Règles

- Article 48 of Legislative Decree no. 1/2005 of July 16th, by which was approved the reworked text of the Urban Planning Law;

- Legislative Decree no. 343/2006 of September 19th, which elaborates upon Law 8/2005, of 8 June, on Landscape Protection, Management and Planning in Catalonia and regulates the studies and reports of landscape impact and integration (Official Gazette of the Government of Catalonia - DOGC no.4723 - 21/09/2006)

Titre

Estratègia de Turisme 2020 - Pla Estratègic de Turisme de Catalunya 2018-2022 (PETC) /// Tourism Strategy 2020 - Strategic Tourism Plan for Catalonia 2018-2022

Description

The Strategic Tourism Plan for Catalonia 2018-2022 undertakes 28 initiatives, following seven lines of action: offer an exceptional touristic experience; conquer and retain the right costumers; attract the necessary investments; make a smart tourism; improve the competitive conditions of the destination; improve tourist management of the territory and its development; reforming the organization, management and governance.

Disposition

The 2018-2022 Tourism Plan recognizes landscapes on the following initiatives:

- Initiative 4 - execute a programme to eliminate visual pollution; work package 4.1 - update and improve the specific regulations and their application: in order to be able to successfully execute the program for the elimination of visual contamination, it is essential to have a legal framework that is aligned with the aim of increasing and / or recovering the beauty of the territory. For this reason, regulations that regulate new constructions and others that will stimulate the renovation of buildings that negatively affect the landscape of the Catalan destinations will be reviewed, developed and applied.

- Initiative 15 - implement a model for intelligent tourism; 12 International principles for the sustainable development of tourism:

9. Integritat física - mantenir i millorar la qualitat dels paisatges, tant urbans com rurals, i evitar la degradació física i visual del medi ambient.

Description

The Water Management Plan is a collection of proposals created in agreement with the principles of the water framework directive that are aimed at economising and rationing water use, and to guarantee the proper state of water systems (rivers, basins, marshes, wet zones, coastal waters and underground waters). This plan is divided into three sections: the management plan for the river basin district of Catalonia, the programme of measures and the management proposals and measures for the plan to demarcate the Ebro River.

Disposition

A plan with various objectives, including to guarantee the proper state of the water-based landscapes of Catalonia. One of the blocks of the plan's programme of measures deals with improving the hydromorphological and biological quality of the environment, which brings together the set of measures aimed at attaining a proper state of the physical habitat and of the biological communities associated with bodies of water.

Landscape Observatory of Catalonia

Description

The Landscape Observatory of Catalonia has two collections of books under the name "Plocs de Paisatge" and "Documents". The collection 'Plocs de Paisatge' has two series: 'Reflections' and 'Tools'. The first includes articles, studies, workshops and conferences which consider, either generally or through specific cases, a particular aspect or problem related to the landscape. The series 'Tools', on the other hand, includes regulations, instruments and methods for the protection, management and planning of landscape. as it names indicates, "Documents" is a collection of short texts on landscape in small format.

Prix

Rosa Barba European landscape award

Niveau

International

Description

The Rosa Barba European Landscape Prize, within the Landscape Biennial of Barcelona framework, serves to recognise the best landscape projects over the last four years. All works presented at the Biennial may compete to be awarded with this prize just twice, with the exception of works with renewed phases and other special situation to be judged by the organizing committee. The finalist projects of the past editions can't be presented to the Prize.

One author (individual / company) can not be a finalist with more than one work.

Both members of the jury and members of the organizing committee or people directly involved with the organization, are entitled to participate with their works to the stage of finalists. They can not opt for the Prize. Once selected as finalists they will be automatically removed from the contest.

Institution responsable

Col·legi d'Arquitectes de Catalunya (COAC) /// Architects' Association of Catalonia
Universitat Politècnica de Catalunya /// Polytechnic University of Catalonia

Règlement

- Regulation of participation in the exhibition of the work carried out in the Biennial of Landscape:

Any individual and work accomplished within the International context can participate.

- The organizing committee reserves the right to exhibit and publish unrealized projects if by its characteristics indicate innovative ways of working and strategic to understand the state of matter in the professional territory.

- Landscape planning should be considered relevant as constructed.

- Both the jury and committee members can present their projects to participate in the exhibition of the work done world-wide since the exhibition and publication in the catalogue is a separate procedure.

- Definition and Designation of Jury:

The jury must be formed by 3 or 7 members selected on every edition by the Biennial organizing committee. In case of a tie vote while in the internal voting, the president's vote shall prevail. The International Jury is structured from a President and members and a Secretary, (non-voting) that will or Member of the Organizing Committee or the coordination team of the European Biennial of Landscape. The position of Chairman, Members and the secretary, shall be appointed by the organizing committee of the Biennial.

- Responsibilities of the Jury

The international jury will meet and attend to the finalist's presentation of their work during the symposium and deliberate on the prize. In the absence of a member of the international jury, it shall be replaced by another person on behalf of the organizing committee. The jury is committed to deliberate after the finalists presentation in order to choose the winner before the next day at noon. The jury must select between 7 and 10 works as finalists. The number of participants will be justified in the minutes of their meeting.

Prix

Mediterranean Landscape Prize (PMP)

Niveau

International

Description

The Mediterranean Landscape Prize (PMP) represents an instrument for raising awareness of the important role that

landscape play in defining the cultural sense of identity of the territories in the Mediterranean area and improving the quality of life of the inhabitants. The Mediterranean Landscape Prize helps to stimulate more attention towards the landscape by promoting a selection of all those public or private fields of action, both plans and programmes, works of architecture and infrastructure, management activities and awareness-raising experience and artistic creations, which attract particular attention to issues concerning the landscape.

Institution responsable

...

Règlement

The selection procedure is first of all held regionally, as the single partners pick out 5 candidates from those which have been put forward. These 5 candidates were evaluated by the Steering Committee, made up of technical representatives from each partner region, which selects the candidates to be admitted to the evaluation of the International Jury, which established the winners in the final phase. All the candidates which have been selected on a regional level will be published in the Catalogue of Good Practices which aims at helping to raise awareness of matters regarding the landscape and to contribute towards the establishment of a common culture for the landscape.

Institutional website of the Landscape Observatory of Cataloni

Description

In July 2005 the Observatory launched its website on the subject of landscape referring to Catalonia and the world, with the aim of becoming the reference website in Catalonia for everything related to landscape.

The Landscape Observatory website is the principal exposition of the activity which it develops and the Observatory's principal tool for information and public awareness. Translation of the website into Spanish, English and French has helped to make it a reference website around the world, as is shown by the increase in the number of visits from every continent experienced in recent months and the fact that it has been visited by over 100 different countries.

Curs de Paisatge per a l'administració local: 'Paisatge. Ordenació i gestió a escala local' /// Landscape Course for the Local Administration: 'Landscape. Spatial planning and management at local scale'

Sponsors: Observatori del Paisatge de Catalunya, Diputació Tarragona /// Landscape Observatory of Catalonia, Tarragona Diputation

Target Audience:

- Charges elected, environmental technicians, architects, engineers, technicians in tourism and heritage and managers of the local entities of the Camp de Tarragona and the Terres de l'Ebre.

- Technicians of the Generalitat, preferably those that work the aspects of environmental and urban management, DARPA, DTS, as well as of Patrimony of the Department of Culture.

- Technicians from other public administrations of Catalonia and universities.

Objective:

The landscape is seen increasingly as a development engine, a local attraction and a way to increase the quality of life and welfare of citizens. Landscape policies and strategies offer an alternative way of looking and managing the territory in the key to improving landscape quality and local promotion and dynamism. The objective of this seminar is to train local politicians and technicians of the local administration in the field of planning, promotion and management of the landscape, for local dynamization, urban planning, tourism and heritage, and so that These policies can be incorporated within the set of tools that local agents use (local councils, regional councils, municipalities and networks of municipalities, etc.)

Number of Days: 5 (3, 4, 10, 17 i 21 of june of 2019)

Sessions:

- June 3rd (Castell de Miravet): "El paisatge, clau en el desenvolupament urbanístic i territorial" /// "The landscape, key in the urban and territorial development"

- June 4th (Cartoixa d'Escaladei): "Com posar en valor els paisatges locals?" /// "How to value local landscapes?"

- June 10th (Palau Alenyà de Montblanc): "Com es pot millorar la qualitat dels paisatges?" /// "How can the quality of the landscapes be improved?"

- June 17th (Castell-Monestir d'Escornalbou): "Eines per gestionar el paisatge a l'escala local" /// "Tools to manage the landscape at local scale"

- June 21st : Guided visit - Priorat-Montsant-Siurana Cultural Landscape

Taller internacional. Paisatge i canvi climàtic /// International workshop. Landscape and Climate Change - 2012

Description

The University of Girona, the University of Venice and the Landscape Observatory of Catalonia, helped by the Olot's Fundació d'Estudis Superiors, jointly organized between July 8 and 21 the international seminar "Landscape and climate

change". The event is a part of the European Masters Course in Planning and policies for the City, Environment and Landscape, offered by the UdG, the IUAV University of Venice (Italy), the University of Sassari (Sardinia), the University of Ghent (Belgium), the Autonomous University of Barcelona and the Technical University of Lisbon (Portugal).

The seminar was aimed at fostering specific proposals for the mitigation and adaptation to climate change in different landscape areas (river banks, coastal landscape, energy-related landscape, evolution of agriculture and forest landscape and urban landscapes) of the landscape units of the Empordà plains and the Olot valleys, included in the Landscape Catalogue of the Comarques Gironines.

Description

"City, territory, landscape" is an educational innovation project that fosters the culture of the territory and the sensitization towards the landscape. It is included in the general and secondary objectives of compulsory secondary education (ESO) established according to Decree no. 179/2002 of June 25 by the Generalitat of Catalonia, as well as in the objectives of landscape awareness provided by Law no. 8/2005 of June 8 on protection, management and planning of the landscape of Catalonia.

"City, territory, landscape" is promoted by the Department of Education, the Department of Territorial Policy and Public Works and the Landscape Observatory of Catalonia.

The main purpose of this project is to facilitate the work of the teaching staff, to contribute to the updating of the knowledge of ESO students about the city and the territory of today's Catalonia, and promote sensitization towards the landscape, as a component important of the natural and cultural heritage of our country and, therefore, of our collective identity.

Description

The City, Territory, Landscape project is aimed at pupils and teachers of secondary schools in Catalonia. Its purpose is to enhance the knowledge of Catalan landscape heritage and raise students' awareness to the need to preserve landscape values and understand the action of humans on natural surroundings. It is an interdisciplinary initiative which offers the chance to work on the natural and human elements of the territory in a comprehensive manner and from the observation of specific, real landscapes, subject to very modern changes and problems.

Exigence

According to Chapter 2, First Section, Article 2, items 2.1 and 2.2:

This law requires the creation of Landscape Catalogues as descriptive and prospective instruments that determine the typology of the landscapes of Catalonia, identify their values and state of conservation and propose the quality objectives that must be met, by classifying and relating the attributes and values that the current landscape presents, through the perception of its citizens.

Description

According to Chapter 2, First Section, Article 7, items 7.1 and 7.2:

The Landscape Catalogues must include a diagnosis and evaluation report that collects the defining elements of the landscape for the whole territorial scope as for each of the landscape units.

Forme

Inventory of patrimonial, cultural, aesthetic, environmental, economic, current and potential assets; plus, of the main routes and spaces from where the landscape is perceived.

Définition juridique

Article 2 - Definició i característiques dels Catàlegs del paisatge

2.1 Els Catàlegs del paisatge són els documents de caràcter descriptiu i prospectiu que determinen la tipologia dels paisatges de Catalunya, identifiquen els seus valors i estat de conservació i proposen els objectius de qualitat que han de complir;

2.2 Els catàlegs, a més de classificar i relacionar els atributs i valors que presenta el paisatge, han de tenir en compte les relacions i interaccions entre factors ambientals, culturals, socials i econòmics que expliquen la seva aparença actual i la percepció que la ciutadania en té.

Article 7 - Memòria de la diagnosi i avaluació

7.1 La memòria ha de recollir els elements definidors del paisatge tant per a tot l'àmbit territorial com per a cadascuna de les unitats de paisatge.

7.2 Pel que fa a les unitats de paisatge la memòria ha de contenir:

- a) La identificació i descripció dels elements naturals, culturals, visuals i d'altres configuradors del paisatge que serveixen de base per a establir les àrees que, per tenir característiques pròpies i cohesió interna, s'han de delimitar com a unitats de paisatge, de conformitat amb els criteris que estableix article 10 d'aquest decret;
- b) Evolució històrica del paisatge;
- c) Un inventari dels valors patrimonials, culturals, estètics, ambientals, econòmics, actuals i potencials;
- d) Principals recorreguts i espais des d'on es percep el paisatge;
- e) La descripció de la dinàmica general del paisatge i els factors naturals, humans i socioeconòmics que han intervingut i intervenen en la seva evolució i transformació;
- f) L'anàlisi de la possible evolució del paisatge, considerant les dinàmiques naturals del medi, les tendències socioeconòmiques, la legislació vigent o la implementació de les polítiques territorials, urbanístiques i sectorials actuals;
- g) L'avaluació dels riscos que poden afectar la seva evolució, així com les oportunitats per a la seva protecció, gestió i ordenació.

Traduction

Article 2 - Definition and characteristics of the Landscape Catalogs

2.1 The Landscape Catalogs are descriptive and prospective documents that determine the typology of the landscapes of Catalonia, identify their values and state of conservation and propose the quality objectives that must be met;

2.2 The catalogs, in addition to classifying and relating the attributes and values that landscape presents, should take into account the relationships and interactions between environmental, cultural, social and economic factors that explain their current appearance and the perception that citizens in has.

Article 7 - Diagnosis and evaluation report

7.1 The memory must collect the defining elements of the landscape for the whole territorial scope as for each of the landscape units.

7.2 Regarding the landscape units, the memory must contain:

- a) The identification and description of the natural, cultural, visual and other landscape configurators that serve as the basis for establishing the areas that, due to their own characteristics and internal cohesion, must be defined as landscape units, in accordance with the criteria established in article 10 of this decree;
- b) Historic evolution of the landscape;
- c) An inventory of patrimonial, cultural, aesthetic, environmental, economic, current and potential assets;
- d) Main routes and spaces from where the landscape is perceived;
- e) The description of the general dynamics of the landscape and the natural, human and socioeconomic factors that have intervened and intervene in its evolution and transformation;
- f) Analysis of the possible evolution of the landscape, considering the natural dynamics of the environment, socioeconomic trends, current legislation or the implementation of territorial policies, current urban and sectoral;
- g) The assessment of the risks that may affect their evolution, as well as the opportunities for their protection, management and planning.

Methodology of the Landscape Catalogues of Catalonia

Description

Through its novel character and its importance in spatial planning in Catalonia, the Landscape Observatory has published a book on the Methodology of the Landscape Catalogues which establishes a basic conceptual, methodological and procedural outline to ensure that the seven Landscape Catalogues are put together in a coherent and coordinated way. In 2005 this document was presented to more than 70 institutions, research groups and landscape experts in order to obtain the maximum consensus as to its contents, and it was the subject of a first review in May 2006.

The landscape catalogues incorporate public consultation as a tool for the involvement and co-responsibility of society in landscape management and planning. Its importance is also based on the fact that it is through participatory processes that the more perceptible, identity-based and intangible factors of landscape can be detected, factors which are difficult to identify exclusively from the work of specialised experts.

For identifying landscape units:

The study of the landscape units referred to in article 11 section five of the Landscape Act allows us to understand and visualise the general structure and functioning of the territory and diversity of landscape in each of the seven territorial planning regions, so that the landscape units express the large range of landscapes existing in each of the seven territorial regions and, in general, in Catalonia. The final result, having defined the units, will constitute an identification of the basic items in the rich and diverse landscape mosaic in Catalonia.

The landscape units are defined according to the landscape characteristics of the territorial area under study (the ambit of the respective Territorial Partial Plan), but also considering their priority usage in the instruments of territorial planning, urban planning and all the decisions for action and intervention in the territory arising from the implementation of sector policies.

Thus, the landscape units become, through the landscape catalogues, the basic territorial items on which the landscape policy of Catalonia will be founded in the coming years. They are the basic territorial units on which the landscape quality objectives emanating from the European Landscape Convention will finally be formulated, as well as the criteria, proposals and measures which will end up by being integrated into territorial, urban and sector planning. This fact gives the landscape units resulting from the preparation of the catalogues outstanding importance.

It must be pointed out that the landscape catalogue is not conceived as a set of catalogues of various areas of landscape interest, but rather that there are landscape units covering the whole of the territory of Catalonia, so that every point and every place will always belong to a certain landscape unit. This nuance is important because it makes clear that the catalogues do not deal only with landscapes with certain exceptional scenic, harmonious and/or ecological values, but that they embrace all kinds of landscapes down to the very last corner of the territory, above all those which lack any protection or attention. The landscape units also avoid discontinuity in the boundary areas between the seven territorial regions (see figure 3), in such a way that the landscape unit can have – and in fact has – continuity with the neighbouring territorial ambits.

As the principal objective of the landscape catalogues is, as has already been indicated, to integrate landscape into territorial planning, the scale of the work coincides with that proper to the Territorial Partial Plans, which is the scale of 1:50.000. This level of detail is optimum for the study of the landscape information needed for town and country planning.

The conception of landscape unit in Landscape Catalogues:

A detailed analysis of studies on landscape at a international scale shows that, for the definition and characterisation of landscapes, the concept of the 'landscape unit' has been widely used. The use of this concept has been extended to other disciplines studying the landscape from various focal points and this has led to the enrichment of the diversity of views on the landscape, but, in contrast, it has not fostered communication among the specialists. In this sense, the landscape catalogues give a new meaning to the landscape unit, in accordance with the modern trends to be observed in landscape analysis throughout Europe and on a international scale, trends which give more and more importance to the dynamic and intangible elements of landscape (as well as those static and material) when defining its nature.

Landscape units are portions of land sharing the same nature, that is, they are characterised by a set of features which contribute to making one landscape different from another, and in no way better or worse. Thus, the landscape units in the catalogues are based, principally, on the elements that structure the territory (mountains, rivers, the road network) and on its organisation (agricultural, forest or urban land), but considering at the same time that this landscape has some specific dynamic features which have contributed – and do contribute – to shaping its present image (irreversible development processes, agricultural transformations, etc.) and a cultural tradition and particular history. The nature of the unit will depend, then, on a combination of the shapes of the relief (mountain, valley, plane, etc.), land cover (crops, developed areas, riverside woods, etc.), the organisation of the space, historic dimension (age-old and modern landscape structures, etc.), perception (texture, colours, shapes, etc.), and the relationships established between the local population and their landscape (proximity, feeling of belonging, etc.).

From a methodological viewpoint, what has been said above means, in fact, that the landscape unit in the landscape catalogues is not just the result of outlining on a map a portion of territory with similar morphology and ground cover and, therefore, the result of a merely structural combination of elements. The landscape unit, as introduced in the catalogues, also considers the relationships (social, economic, cultural) which have been established between a territory

and its inhabitants and which form part of the identity of the people who live there. In this sense, every landscape unit will be unique, singular, different from the others and from those of other corners of the country, displaying diverse structural, functional and historical criteria.

Thus, an operational concept of the landscape unit is proposed, understood as a part of the territory characterised by a specific combination of landscape components of an environmental, cultural and aesthetic nature, and of clearly recognisable dynamics, conferring on it an idiosyncrasy differentiated from the rest of the territory. The definition of the units is based on landscape elements enduring in time, to ensure that the catalogues have a long period of validity. The six landscape variables used to define the landscape units are:

- The physiographical factors and, particularly, the relief, which is of great importance in Catalonia;
- The use and cover of the land, a study of which enables the characteristic spatial layout of each landscape to be identified;
- The historical dimension of the landscape, that is, the human factor as the principal transforming agent of the landscape from a historical perspective. The landscape reflects the functions given to it through the centuries. It is founded on the landscape forms and structures that we have inherited, such as, for example, the urban patterns (shape and dimensions of an urban centre), the parcelling and ownership structure, the types of settlements in the area (disperse or concentrated populations), the historical distribution of certain production activities (terracing, industrial colonies, pasture areas or mineral extraction activities), the water infrastructures (reservoirs, channels and irrigation networks), the old road networks and other communication and transport infrastructures (roads and railways). The endurance of these marks in the area contribute to defining the character of a specific landscape and the identity of a territory and are basic elements which must be considered in later landscape planning;
- The structure of the landscape, analysed from the ecology of the landscape through calculation of indices of diversity or fragmentation of the landscape;
- The study of visibilities and, therefore, the view of the landscape. This aspect is very important in defining the landscape units, since the observation and comprehension of the landscape is strongly conditioned by the existence of particular visual observation points and routes (topographical landmarks, urban centres, communication routes, etc.), which are the factors that to a great degree contribute to our perception of the landscape;
- Detection of recent dynamics and immediate trends. The definition of the units must be based also on long-lasting landscape elements, to ensure that the catalogues are valid for a long time. Projects which already affect parts of the territory, but which are not recorded in the reference cartography, must be also considered;
- The feeling of the place. Landscape is much more than a set of natural, aesthetic components or the result of historical and social-economic factors which have intervened in the territory. Landscape is, to a great degree, concerned with experience, that is to say, it is formed from the sum of experiences lived through over the years, with deep-rooted feelings of belonging and identity. The ancestral social and economic relationship established between the various populations of a territory, or between a village and a nearby river, the use of certain techniques and practices in dealing with crops, the names of places, the existence of a dialect spoken in a little area and the special recognition of certain landscapes (through their importance during childhood or through their daily use) are, among others, some of the factors –now intangible – which identify us with a particular landscape.

Landscape Indicators of Catalonia

Description

Applying a set of indicators for landscape monitoring, in a meticulous and detailed way, appears to be as a challenge since it considers quantitative and qualitative aspects from physical, social, cultural and perceptual dimensions at all administrative levels, which makes it a very complex process. As different landscape indicators arrays were integrated, structured and applied throughout European countries, a set of systemic transversal criteria is, yet, to be found. Still, as landscape matter seems to be a common field of interest in technical and normative development, this shows a variety of approaches for landscape evaluation that, methodologically, can be very objectifiable.

Implement a landscape indicators array in Catalonia justifies the evaluation of policies carried out by the Generalitat; the inspection and update of the Landscape Catalogues through a preparation of reports and; the effectiveness of the proposed landscape quality objectives, since they are intentioned to monitorize the landscape state and its evolution in the framework of sustainable development.

Mise en œuvre

Landscape Observatory of Catalonia

Méthodologie

The Landscape Observatory has prepared ten indicators, that are more like ideas open and subject to discussion, since it is an entity that desires to create knowledge, as new methodologies and approaches are debated in search of a monitoring array. The following list shows the landscape indicators proposed by the Landscape Observatory:

1. Transformation, which is the analysis of the landscape changes (appearance, natural and cultural characteristics, values);
2. Diversity; related to the evolution of the richness of landscape layouts;
3. Fragmentation; as the process of splitting into pieces the continuity and coherence of a landscape;
4. Economic value; which is the capacity of a landscape to convert its features into productive resources;
5. Knowledge; which reflects the level of recognition and interaction of an landscape based on population's experience;
6. Satisfaction; which evaluates the satisfaction or dissatisfaction of the population towards its surroundings;
7. Sociability; related to social relations and dynamics, generated by and in relation to the landscape,
8. Communication; as an approximation of the communicative dimension of a landscape;
9. Conservation; which includes monitoring public policies and private actions in the field of landscape protection, management and planning and;
10. Legislation; which evaluates the degree to which territorial instruments have been implemented to evaluate their real contribution to public policies in landscape protection, management and planning.

This indicators, although simple, are rigorous in the way it describes the reality of Catalonia's landscapes, allows the disclosure of information related to legal acts for protection, management and planning of the landscape and, also,

permits the search for flexible solutions. Furthermore, takes in consideration the evaluation of the policies' effectiveness at all territorial levels and; focuses on communication efficiency when informing the general public about landscape features and characters in an understandable way, which facilitates the definitions of objectives and measures in public participations. Needless to say that when applying any array of landscape indicators they must be consistent and follow the temporal evolution of the political making-decision process of the country.

Landscape Catalogues of Catalonia

Description

Of the whole process of characterisation of the landscape, the most significant part is the identification of values. The is concerned with landscape values in all their dimensions, through a broad classification which has been chosen with regard to the wealth and diversity of cultural landscapes in Catalonia and the overwhelming need to identify them and record them. The values analysed are of various types and are described in more detail in the next two sections:

- Aesthetic values;
- Natural and ecological values;
- Productive values;
- Historical values;
- Social use values;
- Spiritual and mythological values;
- Symbolic and identity values.

For the identification of the more cultural, perceptive and interpretative values (such as the aesthetic, symbolic and spiritual) and, therefore, more subjective in evaluation, it is very important to know the opinions of the people who live in a territory, through enquiries both general and directed to informed people. However, public participation is not the only way of finding out about these values. Exploration of the artistic and literary legacy of the place is another way.

Throughout history, artists and writers have transmitted landscapes in their works with aesthetic and symbolic attributes and – we should not forget this either – they themselves, at times, have been their creators. In addition to those appearing in the above list, other values of a perceptive or interpretative type can be identified. They correspond to the sensory perceptions – not only visual – that a person has of a particular landscape. It can be a safe landscape, or a terrifying, calm, noisy, disturbing, wild or remote landscape.

These values are easy to describe but very difficult to identify and are not considered as priorities for the catalogues. Now, at this point, it is very important for the working teams who prepare the catalogues to have sensitivity and a capacity of observation and empathy with the place under study.

Donnez des exemples décrivant comment les objectifs de qualité paysagère ont été formulés.

Some examples of landscape quality objectives of Landscape Catalogues are:

1) Costa Brava landscape unit (Landscape catalogue of the Girona counties)

The coastline of Begur, Palafrugell, Mont-ras, Palamós, Calonge and Castell-Platja d'Aro, with well-conserved and –managed cliffs, beaches, coves and dunes, maintaining the scenic and historic heritage and landscape identity of each place and the values and features that form its natural, historic, cultural and ethnological nature (nature reserves, coastal paths, lighthouses, Art Nouveau and colonial style buildings, sea fronts, warehouses and port facilities)

2) Pla de Girona landscape unit (Landscape catalogue of the Girona counties)

A landscape of well-conserved and –managed periurban market gardens in Girona, Salt and Bescanó, which conserve the diverse elements that characterise them and give them unique identity; with a system of water infrastructure that has been refurbished, rehabilitated and redeveloped due to its role in forming and structuring the landscape.

3) From the long and varied list of landscape quality objectives defined in the landscape catalogues, ten stand out which refer to aspects common to almost all of Catalonia: these are the 10 landscape quality objectives for Catalonia (Link: <http://www.catpaisatge.net/eng/objectius.php>):

1. Well preserved, planned and managed landscapes, independently of their type (urban, suburban, rural or natural) and their character;
2. Lively and dynamic landscapes – those existing and those newly created by intervention – capable of absorbing the inevitable territorial transformations without losing their individuality;
3. Heterogeneous landscapes, reflecting the rich diversity of Catalan landscape and avoiding homogenisation;
4. Orderly and harmonious landscapes, avoiding disruption and fragmentation;
5. Unique landscapes, anything but mundane;
6. Landscapes which retain and reinforce their references and values, both tangible and intangible (ecological, historical, aesthetic, social, productive, symbolic and identity-based);
7. Landscapes which are always respectful of the legacy of the past;
8. Landscapes which transmit tranquility, free of dissonant elements, discordant sounds and light or odour pollution;
9. Landscapes which can be enjoyed without endangering their heritage and individuality;
10. Landscapes which take social diversity into account and contribute to the individual and social welfare of the population.

Also some local authorities are beginning to establish local landscape quality objectives.

Moyen d'intervention

Landscape Catalogues of Catalonia

Description

The Landscape Catalogue are instruments for the introduction of landscape objectives into spatial planning and sectoral policies in Catalonia, and in this way adopts the principles and action strategies established in the European Landscape Convention promoted by the Council of Europe. The landscape catalogues are the tools which enable us to find out what our landscape is like and what values it has, the factors which explain why we have a certain type of landscape and not another, how our landscape evolves with regard to the current financial, social and environmental dynamics and, finally, they define what type of landscape we want and how we can achieve it.

Pilot schemes, studies and projects

Description

One of the strategic lines of action to which the Catalan Government is committed regard to the landscape and its values concerns promoting action to improve the landscape through implementing pilot schemes and studies by the government itself or through support for action promoted by stakeholders and cofinanced through cooperation agreements. The purpose of such action is to promote the implementation of projects with exemplifying and incentivising effects, that is, to develop strategies that can be generally applied and can provide responses to the landscape challenges found consistently around Catalonia.

The measures and studies implemented are:

- Study for the landscape regeneration of the River Ripoll
- Project for landscape improvement to the Granollers access by the BP-5002 road
- Landscape rehabilitation and organisation of in the Pinar de Perruquet urban park
- Study of coastal paths. Inventory, audit and directives

Public Participation

Résumé

Available in Catalan and English:

El Conveni europeu del paisatge afirma que és fonamental que la població i l'Administració participin de manera conjunta en les decisions que afecten la protecció, gestió i ordenació del paisatge. Estableix que, per fer-ho possible, cal fomentar processos participatius. Malgrat tot, en l'àmbit de la planificació i gestió del paisatge, no existeix encara una metodologia participativa unànimement reconeguda i, ni tan sols, assajada. Per aquesta raó, es pot considerar que la participació

ciudadana dels catàlegs de paisatge de Catalunya té un caràcter pioner i experimental. Precisament, aquest fet atorga un interès especial a la publicació Paisatge i participació ciutadana, que descriu els instruments de participació utilitzats en l'elaboració dels catàlegs de paisatge de Catalunya, en fa una valoració i estableix aspectes clau que cal tenir en compte a l'hora de dur a terme un procés participatiu d'aquestes característiques. Paisatge i participació ciutadana inaugura la nova col·lecció de l'Observatori del Paisatge, "Documents", caracteritzada pel seu format més breu i àgil que les publicacions de la col·lecció "Plocs de Paisatge".

Traduction

Available in Catalan and English:

The European Landscape Convention states that it is vital for citizens and the Administration to participate together in the decisions affecting the protection, management and planning of the landscape. It establishes that participatory processes must be encouraged in order to make this possible. However, in the area of landscape management and planning, there is not as yet a participatory methodology that has been unanimously recognised or even tried out. Therefore, public participation in the landscape catalogues of Catalonia can be regarded as a pioneering experiment. This gives a special interest to the present publication, Landscape and public participation, being the first volume of the new series "Documents", with a shorter and more agile format than the "Plocs de Paisatge" series. The text describes and evaluates the tools that have been used, establishing key elements that must be taken into account when carrying out a participatory process of this kind.

Description

- Public Participation: overview of public participation; public participation in Catalonia and Europe
- Landscape policies: the European Landscape Convention, the Landscape Act of Catalonia, the landscape catalogues of Catalonia (identification and characterisation of the landscape, landscape assessment, definition of landscape quality objectives, establishment of proposed criteria and actions);
- Public participation in the Landscape Catalogues: methodology (participants, methodological design and typology of participatory techniques); tools used (telephone survey, opinion poll, public consultation via the web, interviews with landscape agents, discussion group, workshops with landscape agents, workshops with individuals, open workshops); information, communication and feedback (informative sessions on the catalogues, landscape inbox, participation feedback); results of the landscape catalogues' participatory processes (influence of the participatory process, main contributions of the participatory process).

Description

The diversity of landscapes is one of the most noteworthy features of the Catalan territory and an essential component of its heritage. This publication compiles the Autonomous Government's policies regarding the conservation and enhancement of the landscapes of Catalonia, ranging from unique landscapes of singular interest to more commonplace landscapes where Catalan people carry out their daily lives.

Landscape Catalogues of Catalonia

Résumé

Available in Catalan, Spanish and English:

Els catàlegs de paisatge de Catalunya van néixer en un moment en què resultava vital implantar una nova cultura de l'ordenació territorial basada en una gestió prudent, en un tractament nou i imaginatiu del sòl no urbanitzable i del paisatge en el seu conjunt, i en una nova forma de govern i de gestió del territori basada en el diàleg i la concertació social. Amb tots els catàlegs de paisatge finalitzats i aprovats pel Departament de Territori i Sostenibilitat, és el moment més indicat per explicar-ne la metodologia d'elaboració. Aquesta publicació explica i deixa constància de la metodologia utilitzada per a l'elaboració dels set catàlegs de paisatge i constitueix alhora una base i un precedent per a eines metodològiques futures.

Traduction

Available in Catalan, Spanish and English:

The landscape catalogues were created at a time in which it was essential to introduce a new culture of territorial planning based on prudent management, on a new, imaginative treatment of open space and of the landscape as a whole and on a new way of governing and of managing the territory based on dialogue and social consensus. Now, with all the landscape catalogues completed and approved by the Catalan Ministry of the Territory and Sustainability, it is the best time to explain their preparation methodology. Therefore, this publication explains and records the methodology used for preparing the seven landscape catalogues and is, at the same time, a basis and a precedent for future methodological tools.

Description

- Landscape Catalogues of Catalonia - concept, contents and functions: European background; concept of landscape in the catalogues; what the landscape catalogues are and what they are not; area and scale of application; contents and structure; functions of the catalogues; preparation phases; work teams that have prepared the catalogues; approval of the landscape catalogues; preparation and approval of the landscape directives; consultation process and public and social participation; the numbers of the seven catalogues; access to the information of the landscape catalogues;
- Landscape units: concept of a landscape unit; general criteria for delimiting landscape units; variables used for delimiting landscape units; procedure for delimiting landscape units; name of the landscape units; public participation in the delimiting and naming of 134 landscape units; cartographical representation of the landscape units;
- Characterisation and Evaluation of the Landscape: values in the landscape; artistic expression of the landscape; dynamics in the landscape; viewpoints and itineraries; landscape evaluation; landscapes with special attention;
- Landscape Quality Objectives, criteria and actions: what the landscape quality objectives are; criteria and actions; public participation in defining the landscape quality objectives, criteria and actions;
- Challenges and perspectives.

Résumé

Full version available in Catalan. Summary available in Spanish and English:

Aquest llibre explora les relacions entre paisatge, qualitat de vida i benestar individual i social des d'una perspectiva innovadora i interdisciplinària. Reflexiona a l'entorn de les iniciatives que s'han anat desenvolupant en aquesta temàtica, des de les polítiques públiques que vinculen la salut amb el territori i el medi ambient a les experiències terapèutiques. Aplega contribucions inèdites d'especialistes de camps tan diversos com l'arquitectura, les ciències ambientals, l'enginyeria agrònoma i forestal, la geografia, la medicina, la psicologia ambiental o la sociologia, i procedents de països tan variats com Espanya, França, Itàlia, Regne Unit i Suïssa.

Traduction

Full version available in Catalan. Summary available in Spanish and English:

This book considers the relationship between landscape, quality of life and individual and social well-being from an innovative and interdisciplinary perspective. It discusses the initiatives that have been developed along this line, from public policies that associate health with the territory and the environment to therapeutic experiences. It includes unique contributions from specialists in fields as diversified as architecture, environmental sciences, agricultural and forestry engineering, geography, medicine, environmental psychology or sociology, from countries as far ranging as Spain, France, Italy, the United Kingdom and Switzerland.

Description

- Landscape, well-being and quality of life: "Landscape and the well-being of society and the individual"; "Landscape and quality of life"; "Traumatic loss of the sense of place: degradation of the landscape and depressive pathologies"; "Urban space and health: a historical vision"; "The architecture of health";
- Environment, landscape and health - public policies: "Climate, meteorology and health"; "Climate change and health"; "The contribution of woods and green spaces to health improvement"; "Landscape, environment and public health: implications for change"; "Integral interventions for the reduction of health inequalities at a local level: District Health Programme"

- Experiences and therapies: "Landscape and cultural diversity"; "Everyday landscape and social and gender diversity in the context of health and well-being"; "Landscape tranquillity and health"; "Physical activity and contemplation of the landscape"; "Ecoteraphy: effects of therapeutic urban green spaces"; "Vegetable gardens in the city and therapeutic horticulture"

Thème

Peripheral landscapes

Résumé

Full version available in Catalan. Summary available in Spanish and English:

La perifèria no és només el resultat -sovint imprevist i indesitjat- d'un centre que creix i necessita expandir-se on sigui i com sigui. La perifèria és quelcom més que el perímetre d'un centre: és també -i sobretot- un llinar entre diferents realitats territorials -i a voltes mentals- amb un protagonisme cada cop més notable. Per entendre la seva lògica i la seva idiosincràsia calen mirades molt variades, de l'art a la literatura, de la música al cinema, de la fotografia a l'arquitectura, de la geografia a la sociologia, de l'urbanisme a l'ecologia. Per actuar-hi, cal modificar substancialment l'escala espacial i temporal a la qual estem acostumats i entendre que els seus referents socials i simbòlics, inclosos els paisatgístics, són uns altres.

Aquest llibre, que té el seu origen en un seminari internacional celebrat a Olot el novembre de 2010, proposa noves formes d'intervenció i de gestió, nous referents paisatgístics, lectures alternatives a les hegemòniques i habituals per a aquests espais. L'objectiu és, tal com recomanen el Conveni europeu del paisatge i la Llei de protecció, gestió i ordenació del paisatge de Catalunya, que les polítiques públiques no deixin de banda els paisatges perifèrics, que són els paisatges quotidians de milers de persones.

Traduction

Full version available in Catalan. Summary available in Spanish and English:

The periphery is not only the unforeseen and undesired result of a centre that is growing and needs to expand, with no regard to where or how. The periphery is more than just the perimeter of a centre; it is also, and above all, a threshold between different territorial (and sometimes mental) realities, with increasing prominence. To understand their logic and their idiosyncrasy requires a great variety of gazes, from art to literature, from music to cinema, from photography to architecture, from geography to sociology, from town planning to ecology. To act in the periphery, we need a substantial change in the space and time scale to which we are accustomed, and we need to understand that its social and symbolic (and even landscape) yardsticks are different.

This new text is the result of the international seminar with the same name held in Olot in November 2010 and it aims to propose new, alternative readings to hegemonic and traditional views, new landscape references, and new means of intervention and management of these spaces in order to not abandon daily peri-urban landscapes from public policies in keeping with the European Landscape Convention. These areas are often neglected or suffer from chaotic growth.

Description

- From the fringes: "Galicia. From rururban landscape to humanised mega-territory"; "Landscape of conflict, space for dialogue"; "Landscape, literature and periphery";
- Detecting the fringes: "Landscapes on the periphery: constructing the gaze on the 21st-century city"; "Walking along the edge"; "The periphery as non-landscape";
- Acting in the fringes: "Urban peripheries. The experience of the Catalan landscape catalogues"; "Preservation and adaptation of farming in peri-urban spaces. The example of Regadiu de Manresa"; "Calabria and Sicily. Landscapes in waiting"; "Hydraulic fringes, between geographical distress and survival strategies: the case of the Veneto mainland"; "MAD#sub. Notes from the sub-suburbs of Madrid"; "Artistic interventions on the landscapes of the periphery".

Water Landscapes

Résumé

Full version available in Catalan. Summary available in Spanish and English:

L'aigua ha estat històricament un dels principals elements vertebradors i articuladors del paisatge a les nostres latituds. L'ocupació mil·lenària del territori i el seu afaïonament per part de les societats humanes que s'hi han establert s'explica en bona mesura per l'aigua, ja sigui en forma de deus, de fonts, de rius i rieres o d'estanys i estanyols. És per això que es fa difícil parlar del paisatge sense associar-lo a l'aigua i al patrimoni que ha sorgit al seu voltant. Un patrimoni històric — el vinculat als paisatges de l'aigua — que, a casa nostra, està intrínsecament unit a uns cursos fluvials que estan desenvolupant nous papers i estan prenent nous significats. Aquest llibre proposa reflexionar sobre la qüestió des d'una perspectiva interdisciplinària i internacional.

Traduction

Full version available in Catalan. Summary available in Spanish and English:

Water has historically been one of the main structural and connecting factors in the landscape in our latitudes. The long-term occupation of the land and its shaping by human societies which have established themselves on it largely explained by water whether in the form of springs, rivers and streams or lakes and ponds. Hence today, it is difficult to discuss landscape without associating it to water and to the heritage that has developed around it. A heritage - one linked to the landscapes of water - which here is intrinsically bonded to the course of several rivers that are developing new roles and taking on new meanings. This book seeks to reflect on the question from an interdisciplinary and international perspective.

Description

- Landscape, water and planning: "In the right place at the right time: water in human landscapes"; "Landscape planning in an age-old new polder landscape in the «green heart» of Holland: The case of Midden-Delfland"; "Water landscapes and territorial development: the case of the River Ter";
- River landscapes in Art and Cinema: "Dam, wall, landscape"; "Rivers in contemporary art and some notes on practical potamology"; "The poetics and uses of fluvial landscapes throughout the history of cinema";
- River landscapes - heritage and uses: "Agricultural landscapes and water heritage: the need to preserve the heritage values of an everyday landscape in the mediterranean region"; "Formation, degradation and recovery of the water landscapes of the Po Valley"; "Hydroelectric energy and the transformation of the pyrenean landscape"; "Planning for the

Catalonian water basin reservoirs".

Economic sector in landscape

Résumé

Full version available in Catalan. Summary available in Spanish and English:

El paisatge és cada cop més una peça clau del desenvolupament local i un recurs econòmic de primer ordre, i no només per a sectors que en viuen directament, com el turístic o el vitivinícola. Hi ha un munt d'iniciatives innovadores i empreses que són capaces de generar ocupació i que troben en el paisatge la seva font d'inspiració. D'altra banda, moltes empreses decideixen localitzar-se en un territori determinat –i no en un altre– perquè el seu paisatge dota de contingut i significació el seu producte. Aquestes empreses són les primeres interessades a vetllar pel manteniment i la millora de la qualitat i singularitat del paisatge en el qual s'insereixen, perquè els atorga un valor afegit molt difícil de reemplaçar. Cada cop és més evident, per tant, el potencial competitiu i d'atracció d'oportunitats de negoci i d'emprenedoria que té el paisatge, sempre que no s'hagi banalitzat ni hagi perdut la seva identitat. I això val tant per a l'economia convencional com per als sectors econòmics alternatius.

Traduction

Full version available in Catalan. Summary available in Spanish and English:

The landscape is increasingly a cornerstone of local development and a prime economic resource, and not just for the sectors directly involved therein, such as the tourism and wine production industries. There are a plethora of innovative and entrepreneurial initiatives with the potential to generate employment, which draw their inspiration from the landscape. Moreover, many companies decide to set up in one particular territory rather than another, owing to the fact that the landscape affords content and meaning to their product. These companies are the primary stakeholders in ensuring that the quality and uniqueness of the landscape where they set up is upheld and enhanced, as it lends them added value that is high on irreplaceable. The landscape's potential to deliver competitiveness and to attract business and entrepreneurial opportunities is ever more palpable, provided it has not been trivialised or its identity has not been lost. And this applies both to the conventional economy and to alternative economic sectors.

Description

- Landscape as a competitive and innovative factor of the territories: "Branding and the sense of place as factors in regional competitive capacity: the contribution of the landscape"; "The collaborative economy and landscape";
- Landscape as an active for development: "Active preservation of the landscape for the DOC (denominació d'origen qualificada) in Catalonia's Priorat Region"; "Caring for the landscape: A local development tool"; "Towards global port city landscapes"; "The landscape considered as an energy assistant";
- Financial instruments for the improvement and management of the landscape: "To donate money, without spending money", "Landscape partnerships in the UK", "The role of the foundations";
- Entrepreneurship based on the landscape: "Protecting the landscape through circular economy", "The landscape: a key element in rethinking the tourist model";
- Initiatives, marketing and landscape: "Bottom-up processes used to transform the urban economic area in Barcelona's Poblenou district"; "Landscape, value marketing and awareness advertising"; "The power of open innovation"

Cartography

Résumé

Full version available in Catalan. Summary available in Spanish and English:

Pocs objectes són tan habituals com els mapes. Són presents en la nostra vida quotidiana de manera tan recurrent que gairebé ens passen desapercebuts. Els veiem cada dia a la premsa, en revistes i en anuncis publicitaris de tot tipus, als

serveis informatius de la televisió, al carrer, per la carretera, a les agències de viatges i, per descomptat, a l'escola. Creixem i vivim envoltats de mapes que ens permeten orientar-nos geogràficament i conservar la memòria dels llocs. Els mapes són, a més, uns instruments imprescindibles per a l'ordenació i gestió del territori i per a la implementació de les noves polítiques de paisatge. Ara bé, reflectir cartogràficament el paisatge no és fàcil, i menys quan hom vol representar-ne les dinàmiques i els valors. Aquest llibre, fruit del seminari Reptes en la Cartografia del Paisatge. Dinàmiques Territorials i Valors Intangibles, organitzat per l'Observatori del Paisatge de Catalunya l'any 2011, es planteja la necessitat de disposar de nous conceptes i noves tècniques de representació que permetin obtenir mapes que incorporin valors intangibles del paisatge i que plasmin les canviants i ràpides dinàmiques pròpies del territori.

Traduction

Full version available in Catalan. Summary available in Spanish and English:

Few objects are as common as maps. They are so recurrent in our daily lives that they almost go unnoticed. We see them every day in the press, in magazines and in all types of advertising, on the TV news, in the street, on the motorway, in travel agencies and obviously at school. We grow up and live surrounded by maps that we use to guide ourselves geographically and to hold on to the memory of places. Besides, maps are indispensable tools for spatial planning and management and for implementing new landscape policies. Of course it is not easy to reflect the landscape in a map properly, and even less so when aiming to represent its dynamics and values. A result of the seminar "Challenges in mapping the landscape: territorial dynamics and intangible values", organised by the Landscape Observatory of Catalonia in 2011, this book raises the need for new concepts and new techniques of representation to provide us with maps that incorporate intangible landscape values and express rapidly changing territorial dynamics.

Description

- "Mapping the landscapes of today and those yet to come"; "Maps of aesthetic and symbolic values of the landscape: from the landscape catalogue experience to the landscape project"; "Mapping landscape dynamics in the landscape atlases of France"; "Mixed reality mapping: new technologies for the maps of the future"; "From reality to representation: from cartography to choreography"; "Mapping the intangible: making the invisible visible"; "From sacred geography to mapping natural and spiritual heritage: experiences and challenges"; "Mapping social perceptions: tendency landscapes"; "Maps of emotional landscapes"

Landscape Planning at a Local Level

Résumé

Full version available in Catalan and English:

Finalment, el paisatge ha arribat al món local. I no podia ser d'altra manera, en ser l'escala local la més immediata, la més propera, a la gestió dels paisatges de la vida quotidiana. Les administracions locals en són conscients i han començat a veure en el paisatge un motor per al desenvolupament dels territoris que administren. Conscients d'aquest fet, l'Observatori del Paisatge de Catalunya, amb la col·laboració del Ministeri de Turisme i Medi Ambient del Govern d'Andorra, ha realitzat un estudi per conèixer més a fons les principals eines i experiències de planificació del paisatge en l'àmbit local existents a Europa per tal d'analitzar-ne la vinculació amb el planejament local. Cal entendre, per tant, el present document com a una eina que posem a l'abast del món local per tal de trobar-hi referents, idees, conceptes aplicables o adaptables a cada realitat.

Traduction

Full version available in Catalan and English:

At last, the landscape has reached the local world. This is how it had to be as the local scale is the most immediate one, the closest one to managing everyday landscapes. The local administrations are aware of this and have started to see the landscape as a driving force behind the development of the territories they administer. With this in mind, the Landscape Observatory of Catalonia, with the collaboration of the Ministry of Tourism and Environment of the Andorran Government, has carried out a study to get to know the main landscape planning tools and experiences in the local area that exist in Europe in greater depth, to be able to analyse their link to local planning. Therefore, this document should be understood as a tool that is being offered to the local world to be able to find points of reference, ideas and concepts that are applicable or adaptable to each reality.

Description

- Landscape policies: Germany; France; the Netherlands; the United Kingdom; Switzerland; the Walloon Region, Belgium;

- Landscape planning tools: Landscape Plan; Landscape Charter; Regional Natural Park Charter; Protection Perimeter and Recovery of Periurban Agricultural Areas; Green and Blue Network; Landscape Development Plan; Landscape Quality Plan; Aesthetic Quality Regulation and Framework Plan; Green Infrastructure; Landscape Development Plan; Landscape Programme;

- Landscape in urban planning: Territorial Coherence Plan; Local Urban Development Plan; Area of valorisation of

Architecture and Heritage; Zoning Plan with respect to the LOK; Landscape Character Assessment in Local Planning;

- Financial tools: 1% Landscape and Development Policy; Heritage Lottery Fund; The Swiss Landscape Fund.

"Landscape Planning at Local Level" Study

Objet

The Landscape Observatory of Catalonia, with the collaboration of the Ministry of Tourism and Environment of the Andorran Government, has carried out a study to get to know the main landscape planning tools and experiences in the local area that exist in Europe in greater depth, to be able to analyse their link to local planning. Therefore, this document should be understood as a tool that is being offered to the local world to be able to find points of reference, ideas and concepts that are applicable or adaptable to each reality.

Cross-border workshop on Landscape Planning and Management

Objet

Since 2005, and taking the European Landscape Convention as a reference, the French Department of Ecology, Energy, Sustainable Development and Land Planning has organized annual workshops aimed at discussing landscape management and planning methodologies with experts from different European countries. The first four editions of the workshop were held in countries or regions sharing borders with France (Wallonia, Spain, Italy and England). In 2009, the French Department chose Catalonia as a partner. The Landscape Observatory of Catalonia is located in Olot, which was the town selected for the event. The workshop was supported by the Mixed Research Unit of the French National Scientific Research Centre (CNRC) and the French Laboratory of Social Dynamics and Reconstruction of Spaces (LADYSS).

The workshop focused on exchanging points of views and working methodologies in order to address the following questions: How might a landscape atlas or a landscape catalogue contribute to foster the awareness and implementation of landscape policies? How can landscape characterization and qualification be combined with the process of defining goals in terms of landscape quality? How can this process be combined with territorial and sectoral planning?

5th Meeting of Workshops for the Implementation of the European Landscape Convention (2006)

Objet

The 5th Meeting of Workshops for the Implementation of the European Landscape Convention took place in Girona entitled "Objectives for Landscape Quality: from Theory to Practice". The Meeting, the fifth since the approval of the European Landscape Agreement, dealt with different international experiences for identifying and assessing landscapes and debated on the definition of landscape quality objectives and the application of landscape policies at the local, regional and State spheres.

Interreg PAYSMED project

Objet

The PAYS.MED.URBAN Project: high quality of the landscape as a key element in the sustainability and the competitiveness of the Mediterranean urban areas, Med Programme 2007-2013, represents the continuation and the capitalisation of the results and the experiences which were achieved in the PAYS.DOC, INTERREG IIB MEDOCC project. Fifteen partners belonging to four European States are involved: Italy, Spain, Portugal and Greece, with Andalusia as the Lead partner and RECE-ENELC as the observing partner.

The project deals with issues relating to the peri-urban and suburban landscape. It sustains that the high quality of the landscape is not only an element of identity and a heritage of natural, ecological and historical-artistic values, but also a powerful resource for economic development and competitiveness of urban areas, which are in a position to increase both the attractions for tourists and the localisation of industries belonging to new economic sectors.

PAYS.MED.URBAN considers the landscape to be a non-transferable territorial "capital", which is fundamental for sustainable development and for the quality of life in the peri-urban and suburban areas. The project is divided into 6 key

actions, of which the Observatory, the Guidelines, and the Mediterranean Landscape Prize-Catalogue of Good Practices and the paysmed.net portal are an extension of the actions of the PAYS.DOC project. The Pilot Actions and the Awareness-raising Activities represent, on the other hand, innovative activities. The project began in April 2009 and ended in October 2011.

European Network of Local and Regional Authorities for the Implementation of the European Landscape Convention (RECEP-ENELC)

Description

RECEP-ENELC is an international association of local and regional authorities promoting the implementation of the European Landscape Convention continent-wide. It was established in 2006 following Resolution 178/2004 of the Council of Europe's Congress of Local and Regional Authorities. RECEP-ENELC is part of Eurolandscape, a network gathering universities, civil society and territorial public authorities in support of the Convention. Moreover, it contributes as a partner organisation to the monitoring process of the Convention carried out in the framework of the Council of Europe. The permanent headquarters of RECEP-ENELC are in Florence, Italy.

Transfrontier Landscape Plan of La Cerdanya

Niveau

☐ National

☐ Régional

☒ Local

Thème

La Cerdanya, despite sharing a landscape identity and having various landscape planning tools on each side of the border, never had any landscape tools that would pay attention to the whole set.

The landscape involves very diverse actors of the territory and represents a very important aspect for the quality of life of all. The landscape, in fact, plays an important role in the structuring of a development project in a territory. Imagining a common future, on the Cerdanya scale, is the innovative element of the La Cerdanya Transfrontier Landscape Plan.

131. Quel est le mode de sélection des candidats au Prix du paysage du Conseil de l'Europe ?

Mode de sélection et règlement

The project was chosen by a specific Commission of the Spanish Ministry of the Environment and Rural and Marine Affairs from among a variety of different initiatives around Spain to participate in the biennial competition, which was set up in order to recognize exemplary initiatives implemented by signatory countries to the European Landscape Convention.
