Co-Regulation of the Media in Europe:
European Provisions for the Establishment of Co-regulation Frameworks

What role can co-regulation play in the audiovisual media? What is co-regulation anyway? How is it different from self-monitoring and self-regulation? Is there a European legal framework for co-regulation?

The following article attempts to get to the bottom of these issues, focusing on European Union and Council of Europe provisions that need to be implemented through national legislation. With regard to audiovisual services, these provisions concern, inter alia, bodies entrusted with supervisory tasks within a co-regulation system, in particular their staffing, specific role, powers and, last but not least, how they themselves are monitored. This “European legal framework” for co-regulation is primarily described using the example of the protection of minors.

However, these questions are also relevant to other areas such as advertising, the independence of journalists, protection of human dignity, dissemination of racist ideas and the establishment of technical standards. This edition of IRIS plus is therefore just the prelude to a more detailed study of media co-regulation in Europe, which the Observatory intends to embark on with its partners, EMR and IViR. This will take the form of a workshop to be held in September 2002, the results of which will be summarised in the November issue of IRIS plus.

You can therefore look forward to the next instalment!

Co-Regulation of the Media in Europe: European Provisions for the Establishment of Co-regulation Frameworks

by Dr Carmen Palzer
Institute of European Media Law (EMR), Saarbrücken/ Brussels

The concepts of co-regulation, self-regulation and self-monitoring have become central to the current political and academic debate on alternatives to traditional forms of public authority control. The debate concerns many different spheres of political control at national, regional, European and international levels. But what provisions exist at the European level for such regulatory models, especially for co-regulation? The following article aims to answer this question. It also serves as a preparatory document for a workshop to be held in the autumn 2002 by the European Audiovisual Observatory (Strasbourg), the Institute of European Media Law (Saarbrücken) and the Institute for Information Law (Amsterdam).

I. Self-monitoring/Self-regulation/ Co-regulation

Although the terms “self-monitoring”, “self-regulation” and “co-regulation” are used as if their meaning were self-evident, there are no standard official definitions. None of the three basic types of regulatory framework - industry self-regulation, public authority control or a combination of the two - are clearly defined and, even where there is an accepted definition, there is no general consensus on whether any particular model is adequate in itself.1 Also, different terms are sometimes used to describe the same type of framework.2 Even at the European level, the terminology is not always consistent. Therefore, before we begin to discuss this subject, we must clarify the key concepts.

1. Self-monitoring

A self-monitoring system is limited to monitoring compliance with a given set of regulations.3 The regulations themselves, whose implementation is monitored by a self-monitoring body, are not laid down by that body, but rather by another authority, such as the State.

2. Self-regulation

Self-regulation, on the other hand, is a regulatory framework under which bodies draw up their own regulations in order to achieve certain objectives and take full responsibility for monitoring compliance with those regulations. Such regulations may take the form of technical or quality standards or even codes of conduct defining good and bad practice. A key element of self-regulation is that the participation of those who are subject to the regulations is admissible as a regulatory model from a European point of view and, if it is, how it can be incorporated into the regulatory framework.4 The elements chosen as the foundations of a co-regulation framework depend in particular on the task to be performed. If the framework is meant to fulfil what was originally a public authority responsibility, such as the protection of minors in the media, that task will have to be relinquished by the public authority concerned. The corresponding legal framework must take account of the responsibility still incumbent on the State to ensure that the task is fulfilled effectively and efficiently. The public authority should therefore monitor the activities of the self-regulatory body; should the latter fail to adequately protect of minors, the State must be entitled to intervene. In other areas, in which the public authority intervenes after an industry has been fully self-regulating (e.g., the action taken by the EU to implement the Multimedia Home Platform (MHP) Standard that sets out how interactive multimedia applications may be run in the home for the next generation of digital set top boxes), the public authority element is completely different. In such circumstances, the original objective of the agreement reached at industry level is proposed by the market players. When the agreement is converted into or added to legal provisions by the public authority, not only is the binding nature of the agreement reinforced, but it can also be applied to parties that were not involved in drawing it up. Since the agreement is reached by market players for economic reasons, it is in their own economic interests to adhere to it. The level of State monitoring may be reduced accordingly.

II. European Provisions for the Establishment of Co-regulation Frameworks

1. General: Co-regulation within the European Union

Co-regulation is not mentioned in the European treaties, which tend to be based on a traditional form of public authority regulation. It therefore needs to be clarified whether co-regulation is admissible as a regulatory model from a European point of view and, if it is, how it can be incorporated into the regulatory framework already in place for the implementation of European policy.

1.1 European Governance White Paper

In early 2000, the European Commission explained that refor-
IRIS
LEGAL OBSERVATIONS
OF THE EUROPEAN AUDIOVISUAL OBSERVATORY

• Scope
Co-regulation cannot be used where fundamental rights or major political decisions are involved, or where safety or citizens’ equality are at stake. In the Commission’s view, co-regulation cannot be used to implement Community policy in situations where rules need to apply in a uniform way in all the Member States. It should only be used where it clearly adds value and serves the general interest.

• Legal Framework
A framework of overall objectives, basic rights, enforcement and appeal mechanisms and conditions for monitoring compliance should be set out in the legislation. The Mandelkern report states that co-regulation does not mean that the responsibility for the rules being implemented is shared. The primacy of the public authority remains intact.

• Co-regulation Bodies
Participating organisations must be representative, accountable, reliable and capable of following open procedures in applying agreed rules.

• Public Authority Control
According to the Mandelkern report, co-regulation does not mean that the regulatory or legislative authority is no longer concerned with the effective application of the rules. On the contrary, supervisory mechanisms must be set up. The Commission explains that, where co-regulation fails to deliver the desired results or where certain private actors do not adhere to the agreed rules, it will always remain possible for public authorities to intervene by establishing the specific rules needed.

1.2 Mandelkern Report
Similar conclusions are reached in the final report of the so-called “Mandelkern Group”, which deals with the problems of enhancing and simplifying the legislative process at European and national levels from the perspective of the governments of the Member States. The Mandelkern Group was a High Level Consultative Group comprising representatives of the 15 Member States and the Commission. It was established on 7 November 2000 by the EU Ministers of Public Administration in order to implement one of the conclusions of the European Council meeting in Lisbon.

On the basis that public authority regulation is not necessarily the best or the only way of resolving the current problems facing public administration, the report suggests a number of alternatives. One example is co-regulation, which combines public authority objectives with the responsibility of those subject to regulation. Co-regulation can exist in various forms, combining legislative or regulatory rules and alternatives to regulation. The report mentions in particular two approaches to co-regulation: an “initial approach” and a “bottom to top approach”. The first involves establishing, by public authority regulation, global objectives and the main implementation mechanisms and methods for monitoring the application of public policies. Private actors are required to draw up the detailed transposition arrangements. On the other hand, with the “bottom to top approach”, non-compulsory rules agreed by private partners are changed into mandatory rules by the public authority. Similarly, the public administration may penalise bodies for failing to honour their commitments without giving any regulatory force to those commitments.

1.3 General Conditions for the Recognition of Co-regulation as a Means of Transposing Community Law
The White Paper and the Mandelkern Report both describe a series of conditions that co-regulation frameworks must meet in order to be recognised as effective instruments for achieving EU objectives.

Scope
Co-regulation cannot be used where fundamental rights or major political decisions are involved, or where safety or citizens’ equality are at stake. In the Commission’s view, co-regulation cannot be used to implement Community policy in situations where rules need to apply in a uniform way in all the Member States. It should only be used where it clearly adds value and serves the general interest.

Legal Framework
A framework of overall objectives, basic rights, enforcement and appeal mechanisms and conditions for monitoring compliance should be set out in the legislation. The Mandelkern report states that co-regulation does not mean that the responsibility for the rules being implemented is shared. The primacy of the public authority remains intact.

Co-regulation Bodies
Participating organisations must be representative, accountable, reliable and capable of following open procedures in applying agreed rules.

Public Authority Control
According to the Mandelkern report, co-regulation does not mean that the regulatory or legislative authority is no longer concerned with the effective application of the rules. On the contrary, supervisory mechanisms must be set up. The Commission explains that, where co-regulation fails to deliver the desired results or where certain private actors do not adhere to the agreed rules, it will always remain possible for public authorities to intervene by establishing the specific rules needed.

1.4 Can Co-regulation be Used as an Implementing Tool in Areas Regulated by EC Directives?
The recognition of co-regulation models as implementing tools should pose little problem where directives specifically refer to them as instruments for the transposition of their provisions, as long as those models also fulfill the criteria mentioned above (1.3).

In other cases, where directives do not mention co-regulation systems, it is necessary to refer back to the general rules governing the transposition of directives. In principle, the transposition of a directive into national law does not necessarily require its provisions to be formally incorporated verbatim in express, specific legislation by the Member States. A general legal context may, depending on the content of the directive in question, be adequate for the purpose, provided that it does indeed guarantee the full application of the directive in a sufficiently clear and precise manner so that, where the directive is intended to create

© 2002, European Audiovisual Observatory, Strasbourg (France)
rights for individuals, the persons concerned can ascertain the full extent of their rights and, where appropriate, rely on them before the national courts.14 A specific legal framework is therefore necessary. Modifying an administrative practice15 or issuing a circular16 is not sufficient, since these can be amended at any time. Administrative provisions designed to implement a directive are only adequate if they have an efect vis-à-vis third parties.19 The other criteria which transposing provisions must meet also depend on the content of the directive: for example, if the directive requires sanctions to be imposed for breaches of its provisions, those sanctions must be efective, reasonable and dissuasive.20

Co-regulation frameworks can be used as an additional mode of transposition as long as they fulfill the necessary conditions. In principle, this is possible because co-regulation is always associated with a legal framework which, together with other rules, can ensure the proper implementation of the directive concerned. The detailed provisions of the directive will have a significant influence on how the system is organised, determining for example whether the rights of individuals should be established in the legal framework or whether the need for transparency and enforceability can be met some other way. If it is necessary to impose responsibilities on individuals for the effective implementation of the directive, consideration should likewise be given to including these responsibilities in the legal framework in order to ensure by means of public authority sanctions that they are fulfilled. Moreover, the conditions set out by the Commission for the recognition of co-regulation systems as suitable are fulfilled. Moreover, the conditions set out by the Commission for the recognition of co-regulation systems as suitable means for the proper implementation of directives (see 1.3, above) must also be met. Additional rules concerning the exact form of the co-regulation system may be laid down in the directive that is to be transposed.

2. European Provisions for the Establishment of Co-regulation Models in the Audiovisual Media

Generally speaking, the actual structure of a co-regulation model depends essentially on the field in which the political objectives are to be implemented. These structures are therefore extremely varied. This can be illustrated with reference to two specific fields: firstly, co-regulation of the protection of minors in the television sector as an example of the national transposition of binding regulations, and secondly, protection of minors in the audiovisual services sector as an example of co-regulation in a field in which the EU and the Council of Europe have introduced non-binding rules, known as “soft law”.

2.1 Protection of Minors in the Television Sector

General regulations on the protection of minors in the television sector exist mainly at European Union level.21 Council of Europe Conventions apply to a broader geographical area.22

2.1.1 European Union

The protection of minors in the television sector is mainly regulated by the “Television without Frontiers” Directive,23 which aims to guarantee transfrontier circulation of television programmes freely within the internal market. A receiving State may not restrict the reception and retransmission of broadcasts from other Member States if they comply with the rules applicable in the transmitting State and the provisions of the Directive (Art. 2a para.1). The transmitting State must ensure that these rules and provisions are complied with (Art. 2 para.1 and Art. 3 para.2). Provisions on the protection of minors are set out in Art. 22 ff. and Art. 16. According to Art. 22 para.1, Member States must take appropriate measures to ensure that television broadcasts by broadcasters under their jurisdiction do not include any programmes that might seriously impair the development of minors, in particular programmes that involve pornography or gratuitous violence. Under the terms of Art. 22 para. 2, other programmes which are likely to harm the development of minors may be broadcast where it is ensured, by selecting the time of the broadcast or by any technical measure, that minors will not normally hear or see such broadcasts. According to Art. 22a, the Member States must ensure that broadcasts do not contain any incitement to hatred on grounds of race, sex, religion or nationality. Finally, Art. 16 contains provisions on the protection of minors in connection with advertising and teleshopping.

There are currently no references to co-regulation systems as instruments for the transposition of this Directive. The inclusion of such provisions was called for in connection with the promised review of the “Television without Frontiers” Directive,24 although it is doubtful whether any revision will take place in the near future and the scope of such a review is unclear.25 If the general conditions for the transposition of directives are adhered to (see 1.4) and if the criteria set out by the Commission for the recognition of the proper implementation of Community law (see 1.3) are met, there is no reason why co-regulation should not be used to achieve Community objectives in this area. The exact nature of such a co-regulation system cannot be fully discussed here. We can, however, mention a few key aspects: when the framework is devised, it will be important to ensure in particular that the aims of the Directive - e.g., to ban the broadcasting of pornography - can be effectively achieved through national legislation. The related responsibilities of broadcasters must be binding and State sanctions should apply to those who fail to fulfil them. The same applies to the other requirements and prohibitions laid down in the Directive: they, along with sanctions in case of non-compliance, should be established within the legal framework. Since basic rights are involved here, it is also important to ensure that those rights are protected by the public authority. The use of co-regulation should not lead to the unlawful restriction of individuals’ basic rights. However, the detailed rules may be drawn up by the co-regulatory bodies set up by the industry. The private sector may also or be entrusted with the task of monitoring compliance with the rules, as long as the State, which bears ultimate responsibility for adherence to the provisions, reserves the right to intervene if monitoring by the co-regulatory bodies is inadequate.

Another aspect that should be borne in mind when establishing a co-regulation framework is described in Art. 3 para. 3 of the “Television without Frontiers” Directive. This obliges Member States to set up appropriate procedures for third parties directly affected, including nationals of other Member States, to apply to the competent judicial or other authorities to seek effective compliance with the provisions of the Directive according to national provisions. Now, if these provisions include codes of conduct and other rules inherent in a co-regulation system, it is possible that a complaints board set up as part of the co-regulation framework to deal with alleged breaches of a code of conduct, for example, could constitute an “other authority” in the sense of Art. 3 para. 3. According to Art. 3 para. 3, all EC citizens should be entitled to lodge such a complaint. However, the wording of Art. 3 para. 3 tends to suggest that “other authorities” could mean other public authorities. On the other hand, a “co-regulation-friendly” interpretation is also conceivable26. If this is ruled out, Art. 3 para. 3 should be revised in order that the Directive may be transposed by means of co-regulation.

2.1.2 Council of Europe

Beyond EU borders, the protection of minors in the television broadcasting sector is dealt with by the European Convention on Transfrontier Television (“Transfrontier Television Convention”).27 According to Art. 1, the purpose of the Convention is
to facilitate the transfrontier transmission and retransmission of television programme services. Therefore, the parties undertake, in Art. 4, to guarantee freedom of reception and not to restrict the retransmission on their territories of programme services which comply with the terms of the Convention. They are obliged to ensure that all programme services transmitted by broadcasters within their jurisdiction comply with the terms of the Convention (Art. 5). Art. 7 contains regulations concerning content that is illegal or harmful to minors. According to Art. 7, para. 2, programmes which are likely to impair the development of children and adolescents must not be scheduled when, because of the time of transmission and reception, they are likely to watch them. Art. 7 para. 1 prohibits the broadcasting of content which is indecent, i.e., which contains pornography, or which gives undue prominence to violence or is likely to incite to racial hatred. Other rules concerning the protection of minors are contained in Art. 11 para. 3 and Art. 15 para. 2(a), for example, which are concerned with advertising. Since Community law, including the “Television without Frontiers” Directive, takes priority in relations between EU Member States (Art. 27 of the Transfrontier Television Convention), the Transfrontier Television Convention mainly applies if there are no Community rules governing a specific subject, or if either the transmitting or receiving State is not a member of the EU.

If, in these circumstances, the protection of minors in the television sector is transposed using co-regulation, the provisions of the Transfrontier Television Convention, which are binding under international law, must be respected. The parties involved must fulfil their obligations under the Convention. Each State is free to decide how to implement the Convention at national level; however, they are responsible to the other parties for ensuring that the provisions on the protection of minors contained in the Convention are effectively applied. It is therefore advisable to incorporate the duties incumbent on broadcasters under the Convention into the legal framework and to ensure they are fulfilled by means of public authority sanctions. However, the detailed implementation could be entrusted to self-regulatory organisations established within a co-regulation framework.

2.2 Audiovisual Services

2.2.1 European Union

Although it has not issued any binding legal instruments in this field, the EU is also making great efforts to protect minors in the audiovisual services and Internet sectors. The most important measure it has taken is the Council Recommendation of 24 September 1998, which deals with the protection of minors and human dignity.31 It also self-regulatory organisations, complaints bodies, companies and their associations.

The Annex to the Recommendation contains practical guidelines for the organisation of the required “self-regulation frameworks”, particularly with regard to the content of codes of conduct:

- **Legal Framework**
  - Since the main purpose of a self-regulation framework is to supplement existing legislation, it is not meant to replace the current regulatory framework.
  - **Consultation and Representativeness of the Parties Concerned**
    - All parties concerned, e.g., public authorities, users, consumers and businesses, should participate fully in the definition, application and evaluation of the national self-regulation framework.
  - **Self-regulation of Public and Private Sectors**
    - The respective responsibilities of the parties concerned, both public and private, should be clearly set out.
  - **Drawing up Codes of Conduct**
    - The parties concerned should draw up rules governing their conduct on a voluntary basis. In doing so, they must take into account the diversity of services and functions performed by the various categories of operators and service providers and the diversity of environments and applications in on-line services; more than one code of conduct may therefore be necessary. They should also uphold the principles of freedom of expression, protection of privacy, free movement of services, technical and economic feasibility (given that the overall objective is to develop the Information Society in Europe) and proportionality. Codes of conduct should at least contain the following:
      - Comprehensive information for users concerning the dangers posed by content, and ways in which they can protect themselves or minors;
      - Rules on the establishment of complaints bodies and on the complaints procedure;
      - Dissuasive sanctions for violations of the codes of conduct, proportionate to the nature of the violation;
      - Rules on appeal and mediation procedures for disputes over imposed sanctions;
      - For illegal content: rules on co-operation between operators/service providers and the appropriate judicial and police authorities, in accordance with their respective responsibilities and functions.

- **Networking of Appropriate Structures**
  - In order to facilitate co-operation at Community level, the appropriate structures within the Member States should be networked. To this end, all the parties involved in the drawing up of a national self-regulation network and those involved in an effective complaint-management system should set up a national contact point.

- **Monitoring of the Framework by Member States**
  - Measures should be introduced for the evaluation of the self-regulation framework at national level. They should serve to assess its effectiveness in protecting the general interests in question. This should take into account appropriate European-level co-operation, inter alia on the development of comparable assessment methodologies.

At the beginning of the year, the Commission published its evaluation report on the application of the Recommendation. In the report, the Commission concludes, inter alia, that the results of the application of the Recommendation are generally encouraging, but that interested parties, particularly consumers, should have been more involved. It states “that the challenges are to be met with respect to the protection of minors and human dignity across all the media, be it Internet, broadcasting, videogames or supports like videoscas-
settes and DVDs”. It believes renewed efforts need to be made to ensure a coherent approach, particularly in view of the fact that “convergence will continue to increase, with Internet TV, interactive broadcasting or downloading of videogames from the Internet.”

The EU is also taking measures to combat illegal and harmful Internet content. Of particular note is the action plan on promoting safer use of the Internet, which offers funding for projects designed to promote self-regulation and content-monitoring schemes, for the development of filtering tools and rating systems and for campaigns to raise users’ awareness of the possibilities and the dangers of the Internet.

2.2.2 Council of Europe

The Council of Europe is also concerned with the protection of minors in the audiovisual services sector. On 5 September 2001, it adopted a Recommendation on self-regulation and user protection against illegal or harmful content on new communications and information services. In the Appendix to this Recommendation, it sets out principles and mechanisms that might be used to achieve this objective. The Member States are encouraged to implement these principles, which are described below, in their domestic law.

- **Self-regulatory Organisations**
  - Member States should encourage the establishment of organisations which are representative of Internet actors, for example Internet service providers, content providers and users. They should encourage such organisations to establish regulatory mechanisms within their remit, especially codes of conduct, and to monitor compliance with these codes.
  - Organisations in the media field, which already have self-regulatory standards, should be encouraged to apply them to new communications and information services.
  - Member States should encourage self-regulatory organisations to participate in relevant legislative processes and in the implementation of relevant norms, as well as Europe-wide and international co-operation between such organisations.

- **Development and Use of Content Descriptors**
  - Member States should encourage the definition of a set of content descriptors, on the widest possible geographical scale and in co-operation with self-regulatory organisations, in order to provide for neutral labelling of content. Such content descriptors should indicate, for example, violent and pornographic content as well as content promoting the use of tobacco or alcohol, gambling services, and content which allows unsupervised and anonymous contacts between minors and adults.
  - Content providers should be encouraged to apply these content descriptors, in order to enable users to recognise and filter such content regardless of its origin.

- **Filtering Systems**
  - Member States should encourage the development of filtering systems, which provide users with the ability to select content on the basis of content descriptors.
  - Member States should encourage the use of conditional access tools by content and service providers in relation to content harmful to minors. These might include age-verification systems, personal identification codes, passwords, encryption and decoding systems or access through cards with an electronic code.

- **Complaints Systems**
  - Member States should encourage the establishment of complaints systems, such as hotlines, which are provided by Internet service providers, content providers, user associations or other organisations. Such systems should, where necessary for ensuring an adequate response against presumed illegal content, be complemented by hotlines provided by public authorities. The development of common minimum requirements and practices should be particularly encouraged. Such requirements should include, for instance, the provision of a permanent web address, 24-hour availability, the provision of information to the public about the legally responsible persons and entities within the hotline providers and about the rules and practices relating to the complaints procedure, including co-operation with law enforcement authorities with regard to presumed illegal content, the provision of information to users concerning the processing of their complaints and the provision of links to other content complaints systems.
  - Member States should also set up, at the domestic level, an adequate framework for co-operation between complaints bodies and public authorities with regard to presumed illegal content. For this purpose, they should define the legal responsibilities and privileges of bodies offering complaints systems when accessing, copying, collecting and forwarding presumed illegal content to law enforcement authorities. Member States should also foster Europe-wide and international co-operation between complaints bodies. They should undertake all necessary legal and administrative measures for transfrontier co-operation between their relevant law enforcement authorities with regard to complaints and investigations concerning presumed illegal content.

- **Out-of-Court Mediation**
  - Member States should encourage the creation, at the domestic level, of voluntary, fair, independent, accessible and effective bodies or procedures for out-of-court mediation as well as mechanisms for the arbitration of disputes concerning content-related matters. They should also encourage Europe-wide and international co-operation between such mediation and arbitration bodies, open access for everyone to such mediation and arbitration procedures, irrespective of frontiers, and the mutual recognition and enforcement of out-of-court settlements reached hereby, with due regard to the national ordre public and fundamental procedural safeguards.

- **User Information**
  - Finally, Member States should encourage the provision of comprehensive information about the aforementioned principles to users and the public. The development of quality labels for Internet content, for example for governmental content, educational content and content suitable for children, should also be encouraged.

2.2.3 Application of Recommendations

These European Council and Council of Europe recommendations have no direct legal effect insofar as the Member States are not obliged to incorporate their provisions into domestic law. Nevertheless, EU Member States are obliged, under the principle of loyalty to the Community (Art. 10 EC Treaty), to base their actions on Council recommendations. The purpose of Council of Europe recommendations is also to encourage Member States to take particular action. Whether the recommendations are binding or not, common international standards are necessary to ensure that minors are properly protected in individual countries.
where an international medium such as the Internet is concerned. It is therefore sensible, when creating or reviewing national frameworks for the protection of minors on the Internet, to include these provisions, which should as far as possible be compatible with the respective legal systems and practices.

III. Matters to Be Resolved

It therefore appears that detailed provision has already been made within the European Community and the wider geographical area covered by the Council of Europe for the establishment of co-regulation frameworks relating to the protection of minors in the audiovisual media.

Nevertheless, uncertainty still shrouds certain aspects of the establishment of co-regulation frameworks, such as the amount of detail that domestic legislation should contain. Co-regulation systems can tend towards public authority regulation or industry self-regulation, which begs the question: which aspects of the traditional mandatory regulation model should be included in co-regulation frameworks in order for them to work efficiently? On the other hand, to what extent can the public authority be involved before the system is no longer one of co-regulation, i.e., at what point does State regulation begin?

Furthermore, it is unclear how the self-regulatory bodies within the co-regulation framework should be staffed and who is responsible for appointing the people concerned. One idea is to staff them only with representatives of the parties involved, e.g., companies and consumers; on the other hand, State representatives or independent experts could be recruited. It might also be possible to appoint “independent” State representatives, who would be guaranteed independence and would not be subject to instructions from higher authorities. Closely related to this issue is that of whether any public authority representatives involved would or should have full voting rights, a casting vote (e.g., a right of veto) or whether they should merely act in an advisory capacity. The answer may lie in the need to separate the public and private sectors: the two types of regulation should not be combined. The need for separation[4] implies that it should be clearly apparent who is responsible for which areas of decision-making: the State or the self-regulatory organisation. It can therefore do no harm for a public authority representative to act as an advisor or observer within the self-regulatory body. However, if the public sector can have a deciding influence on the actions of the self-regulatory organisation, the whole identity of the framework needs to be rethought: is it still a co-regulation framework? Or is it a State framework that merely makes use of private sector expertise?

Further questions are raised by the conclusions of the Commission’s evaluation report on the application of the Council Recommendation concerning the protection of minors and human dignity. What should the coherent approach necessitated by increasing convergence look like? Should all media be included in a co-regulation framework? Or should different frameworks be established and networking be used to ensure that consistent decisions are taken? Clues to the answers to these questions might be found in the reasons why a coherent approach is required: as a result of convergence, different technical methods might be used to transmit the same content, which should be rated in the same way. For example, if it is illegal to broadcast pornographic content on television, it should also be illegal to transmit it to a computer screen via the Internet. It might therefore be wise to create a central, cross-media authority with responsibility for rating all content.[5] The methods used to prevent or restrict the dissemination of such content can then be determined, in accordance with the means of transmission used, by the various co-regulatory bodies. It should also be remembered that some States already have self-regulation frameworks in place for various media.[6] These systems, whose experiences should be built upon, should be incorporated into the new framework as smoothly as possible. Finally, the choice of a particular framework will also depend on local conditions in the State concerned.

A final, but not unimportant, question relating to the creation of a functioning co-regulation framework is that of finance. Such a system may be funded by the companies concerned, the State or a combination of the two. Here also, there are many possible scenarios. For example, if the purpose of co-regulation is to take over a State function, i.e., to relieve the State of a certain task, the State can be expected to provide start-up funding at the very least. However, a co-regulation framework should not be predominantly financed by the public sector.

Even in relation to a limited sphere of reference, therefore, numerous questions remain unresolved. They cannot be answered clearly, but only in relation to various alternatives, depending on national legal systems and traditions. This is particularly true in a number of fields in which the use of co-regulation is being considered as a way of achieving a whole range of quite different political objectives. Insofar as common Europe-wide standards are necessary for the fulfilment of these objectives or for the system to function properly, there are bound to be similarities between the different co-regulation frameworks established in individual States. However, as far as the detail is concerned, co-regulation frameworks in Europe will be as varied as the States themselves.

1) For example, the term “self-regulation” is also used to describe regulation of the market by means of supply and demand: Hoffmann-Riem/Risch/Schulz/Held, Konvergenz und Regulierung, Baden-Baden 2000, p.50; Schulz/Held, Reguliertes Selbst-Regulierung als Form modernen Beginens, Gutachten, Zwi- schenbericht, October 2001, p.A-2, etc.
2) For example, in German administrative law circles, the model referred to in this article as “co-regulation” is known as regulated self-regulation, although the European institutions use the term co-regulation.
4) White Paper on European Governance, Footnote 6, p.27: a very broad definition appears in the Mandelkern report, Footnote 9, p.15: “... combining legislative or regulatory rules and alternatives to regulation”.
5) The definition of co-regulation is deliberately broad so that it includes the various forms of co-regulation which, in view of individual States’ various legal provisions and traditions, are or could be used to pursue political objectives.
7) Only five of 83 EC Directives which should have been transposed in 2000 had been implemented in all Member States by summer 2001, White Paper, p.25.
8) White Paper, p.27.
10) The Commission, Council and Member States were urged to do everything they could to set out by 2001 a strategy for further coordinated action to simplify the regulatory environment, including the performance of public administration, at both national and Community level. This was to include identifying areas where further action is required by Member States to rationalise the transposition of Community legislation into national law; see Conclusions of the Presidency of the European Council at Lisbon, 23 and 24 March 2000, no.17, available at
18) ECJ, case 239/85, Commission/Belgium, Rec. 1988, p. 3-8645.

At Community level can contribute to the proper implementation of Articles 5 to 15 of the Directive; see also Art. 27 of the Data Protection Directive, Directive 95/46/EC of the European Parliament and of the Council of 24 October 1995 on the protection of individuals with regard to the processing of personal data and on the free movement of such data, OJ L 281/31 of 23 November 1995, which states that codes of conduct can contribute to the proper implementation of national provisions adopted pursuant to this Directive.

18) ECJ, case 239/85, Commission/Belgium, Rec. 1988, p. 3-8645.

An overview and links to the regulations may be found at: http://europa.eu.int/comm/avpolicy/regul/new_srv/pmdh_de.htm; for details of Commission policy in the audiovisual sector until 2004, see Communication from the Commission to the Council, the European Parliament, the Economic and Social Committee and the Committee of the Regions of 14 December 1999, COM (1999) 657 final: Principles and guidelines for the Community’s audiovisual policy in the digital age.

22) An overview and various references to the Council of Europe’s activities in the media sector can be found at: http://www.humanrightsco.ee/int/media/

24) According to Art. 26 of the “Television without Frontiers” Directive, the Commission has until the end of 2002 to produce a report on the application of the Directive and, if necessary, make further proposals to adapt it to developments in the field of television broadcasting, in particular in the light of recent technological developments. The report should pay particular attention to the application of provisions on the protection of minors and public order (Art. 12b para. 1). Information on the current state of preparations for this report can be found at: http://europa.eu.int/comm/avpolicy/regul/rgul_reg_de.htm

25) The Commission is considering three alternatives: an “immediate radical amendment of the Directive”, i.e., major reform, a “fine-tuning”, i.e., minor reform, or establishment of a work programme to prepare a proposal at a later date. The Commissioner responsible, Viviane Reding, declared in a speech in Brussels on 21 March that the third option, which would involve setting up a working group, is the most likely. See http://europa.eu.int/comm/avpolicy/legisl/rgul_reg_de.htm

28) See the rules on dealing with alleged violations of the Convention, Arts 24 et seq.

30) Recommendation on the protection of minors and human dignity, Recital 5 (broadcasting, proprietary on-line services, or services on the Internet).
31) Recommendation on the protection of minors and human dignity, Section I No. 1.
32) Recommendation on the protection of minors and human dignity, Section I No. 3, Secrao, see White Paper, p. 28.
33) These “self-regulation frameworks” should be established within a legal framework; public authorities should also be involved in order that these frameworks conform with the definition of co-regulation used in this report.
34) Recommendation on the protection of minors and human dignity, Annex Objective.
35) Ibid.
36) Recommendation on the protection of minors and human dignity, Annex, Section 1.
37) Further details, e.g., regarding the timing of information given to users about potential risks or the available warning signals and filter systems, particularly support for parents, are mentioned in the Recommendation on the protection of minors and human dignity, Annex, sections 2.2.1 (a), (b) and (c); these provisions apply to illegal content and content that may be harmful to minors (section 2.2.2 (a)).
38) Recommendation on the protection of minors and human dignity, Annex, section 2.2.2 (d); this is also covered in greater detail and also applies to illegal content, section 2.2.2 (b).
39) Recommendation on the protection of minors and human dignity, Annex, section 2.2.3; this should strengthen the credibility of the codes.
41) Recommendation on the protection of minors and human dignity, Annex, section 3.
42) Recommendation on the protection of minors and human dignity, Annex, section 3.
45) Recommendation No. R (2001) 8 on self-regulation concerning cyber content (self-regulation and user protection against illegal or harmful content on new communications and information services), http://cm.coe.int/ta/tec/2001/2001018.htm; which lists previous Council of Europe Recommendations, such as Recommendation No. R (92) 19 on video games with a racist content and Recommendation No. R (97) 19 on the protection of minors and human dignity in on-line audiovisual and information services.
47) See Art. 249 para. 5 of the EC Treaty: “Recommendations and opinions shall have no binding force.”; regarding the Council of Europe recommendations, see Seidi-Hohesfelder/Lobli, Das Recht der Internationalen Organisationen, para. 1548.
48) See, for example, Hetmeier in Lenz, Das Recht der Internationalen Organisationen, para. 1548.
49) See, for example, Hetmeier in Lenz, Das Recht der Internationalen Organisationen, para. 1548.
50) Further details, e.g., regarding the timing of information given to users about potential risks or the available warning signals and filter systems, particularly support for parents, are mentioned in the Recommendation on the protection of minors and human dignity, Annex, sections 2.2.1 (a), (b) and (c); these provisions apply to illegal content and content that may be harmful to minors (section 2.2.2 (a)).
51) Recommendation on the protection of minors and human dignity, Annex, Section I No. 1.
52) Recommendation on the protection of minors and human dignity, Section I No. 3, Secrao, see White Paper, p. 28.
53) These “self-regulation frameworks” should be established within a legal framework; public authorities should also be involved in order that these frameworks conform with the definition of co-regulation used in this report.
54) Recommendation on the protection of minors and human dignity, Annex Objective.
55) Ibid.
56) Recommendation on the protection of minors and human dignity, Annex, Section 1.
