Part 1

EUROPEAN COMMISSION FOR THE EFFICIENCY OF JUSTICE (CEPEJ)

Study on the functioning of judicial systems in the EU Member States

Facts and figures from the CEPEJ questionnaires 2012 to 2020

Study prepared under the authority of the Working Group on the evaluation of judicial systems
(CEPEJ-GT-EVAL)
for the attention of the European Commission (Directorate General Justice)

Part 1 - Data tables per indicator for all EU member States

The information and views set out in this study are those of the authors and do not necessarily reflect the official opinion of the Commission. The Commission does not guarantee the accuracy of the data included in this study. Neither the Commission nor any person acting on the Commission's behalf may be held responsible for the use which may be made of the information contained therein.

Les informations et les opinions exprimées dans cette étude ne lient que leurs auteurs et ne peuvent en aucun cas être considérées comme reflétant la position officielle de la Commission en la matière. La Commission ne garantit pas l'exactitude des données intégrées dans cette étude. Ni la Commission, ni aucune autre personne agissant en son nom ne peuvent être tenues responsables de l'éventuelle utilisation de l'information contenue dans le présent document.

Executive summary

English version

The European Commission has requested the European Commission for the Efficiency of Justice (CEPEJ) of the Council of Europe, relying on its own methodology for evaluating the functioning of the judicial systems of Council of Europe member States, to conduct a study aimed at analysing the situation of the judicial systems in the EU member States.

This study is based on the processing and analysing data and comments provided by member States through four evaluation cycles (2012, 2014, 2016 and 2018) and four specific questionnaires (2013, 2015, 2017 and 2019). It will constitute one of the sources used by the European Commission for the « EU justice Scoreboard ».

Structure of the study

Following the technical specifications provided by the European Commission, the study, based on 2019 data and also presenting the evolution in relation to 2012, 2013, 2014, 2015, 2016, 2017 and 2018 data, is structured in two main parts:

- the first part examines the judicial systems in the European Union (EU) member States providing data tables per indicator for the member States ;
- the second part contains country sheets, with a contextual analysis.

Main elements

The study provides an overview of the functioning of the justice public service based on the main elements, which, according to the CEPEJ, are constitutive of the effectiveness and quality of systems.

Budget of judicial systems

In order to understand and analyse budget data properly, the two concepts have to be distinguished: budget allocated to the judicial system on the one hand and budget allocated to the whole justice system on the other. They are used by the CEPEJ for the analysis of the resources allocated to justice in order to obtain an overview of the EU member States budgets.

There are indeed, depending on the State, common or separate financing mechanisms for the courts, the prosecution services and legal aid. Nevertheless, these three elements have been broken down as far as possible to allow comparisons, not only of the resources allocated to the prosecutorial or trial functions, despite the difference in the organisation of systems, but also of the amounts budgeted for access to justice.

Thus, the budget allocated to the « judicial system » consists of the addition of resources allocated:

- to courts;
- to legal aid;
- to the prosecution service.

It must be emphasized that the judicial system budget and the court budget, as precisely defined by the CEPEJ methodology to provide the most rigorous assessment of the effort of the member States, are not comparable with other indicators available by other European institutions.

The CEPEJ obtains a wider analysis of justice system with another calculation: the budgets of other services involved in the functioning of the public service of justice (prison, system of enforcement of court decisions, judicial protection of juveniles, etc.) are added to the judicial system budget to evaluate the « whole justice system ».

For a closer insight into the budgets allocated to judicial systems, the different components of these budgets were examined with different entries singled out: gross salaries of staff, information technologies (computers, software, investments and maintenance), justice expenses (such as remuneration of interpreters or experts), costs for the rental and running of premises, real estate investments and training.

Specifically between 2012 and 2019, the analysis of the data sent by the member States shows that a wide majority of the EU States have increased the contribution to their justice system (in absolute value), even in a persistent context of control of public expenditure.

Human resources

Different categories of judges (permanent, occasional, non-professional) can serve the justice system. The 2019 study focused on professional judges sitting permanently, whose number has a European average of 21,5 judges per 100 000 inhabitants (the median is 24,5 judges per 100 000 inhabitants). The median has slightly increased between 2018 and 2019, whereas trend of the distribution of the evolution (increase / decrease) between the countries is more in favour of the decrease. The number of judges per 100 000 inhabitants has decreased in 15 member States. Conversely, this number has increased or remained the same in 12 member States. More significant variation is noticed only for Austria 7,9% increase while for Malta and Latvia a decrease of 7,9 and 6,2 respectively.

Moreover, this number varies considerably from country to country according to the organisation of the judicial system and the existence of occasional judges, non-professional judges or even *Rechtspfleger*.

In almost all member States, judges receive initial training given the extent of the necessary knowledge to exercise this function. Finland, Malta and Sweden are the only member states where the initial training is only optional. Following that, over the course of a career, countries offer general or specialised in-service training to judges in order to maintain a high level of legal expertise. The general in-service trainings are mandatory only in five EU countries. Other in-service trainings are mostly optional.

The existence alongside judges of competent staff with defined functions and a recognised status is essential for the quality and efficiency of a judicial system. A difference is made between the five types of non-judge staff:

- the "Rechtspfleger" function (defined by the European Union of *Rechtspfleger* (EUR) as an independent judicial body),
- the non-judge staff whose function is to assist judges directly,
- the staff responsible for administrative matters such as court management,
- the technical staff,
- and other types of non-judge staff that fall outside of all the categories mentioned above.

Two observations can be made following an analysis of data provided by the member States. Firstly, the average number of non-judge staff per 100 000 inhabitants in 2019 has slightly increased compared with 2012. Secondly, 13 countries have staff with "Rechtspfleger" functions (or equivalent - no changes between 2012 and 2019). The average number of staff in this specialised body has increased within the studied period while the average number of assistant to judge decreased.

Judicial organisation

The study distinguishes three types of courts:

- ordinary courts of first instance with jurisdiction in all matters for which jurisdiction has not been assigned to a specialised court – their enumeration is made as legal entities
- specialised courts of first instance (also considered as legal entities)
- courts (at all levels) as geographic locations

The geographical locations per 100 000 inhabitants has decreased in most of the member States (the median was 1,71 per 100 000 inhabitants in 2012; 1,52 in 2015 and 1,29 in 2019). Since 2012, 16 countries have reduced their number of geographical locations, 6 have same number and the rest increased this number). Between 2018 and 2019, 3 countries reduced number of courts' geographic locations.

As regards the distribution of the disputes between legal entities, almost all the States have specialised courts of first instance.

The existing specialised courts deal mainly with administrative cases, commercial cases and with disputes related to the application of labour legislation. However, there are countries that have many specialised courts for different matters like Sweden.

Legal aid

Legal aid is one of the fundamental elements guaranteeing equal access to justice for all individuals. It is intended to provide, particularly for citizens without sufficient financial resources, the benefit of legal assistance for free or limited expenses.

Legal aid comprises two aspects, clearly distinguished by certain States:

- on the one hand, aid for access to law (legal information and advice, aid for an alternative to trial – ADR alternative dispute resolution),
- on the other hand, aid in asserting one's rights in the context of a judicial action as applicant or defendant in a trial.

Consequently, the CEPEJ drew up the following typology to quantify the resources allocated to legal aid:

- cases not brought to court with regards to aid for access to law
- cases brought to court with regards to aid for assistance or representation within a framework of litigation.

Concerning cases brought to court, it must be stressed that only a few States were able to distinguish within the overall budget the amounts allocated to legal aid in civil or criminal matters (4 countries out of 27).

In the tables concerning this indicator, the budgetary data of legal aid in member States are presented in absolute value and per inhabitant which enables a standardisation of the communicated data. This analytical method indicates quite large differences between States, with a group of northern European countries allocating considerable budgets in comparison with other surveyed countries. It must be borne in mind that certain states in fact have few cases that are eligible for legal aid but grant a large amount per case, whereas other states make the opposite choice to limit the amounts granted per case while making the conditions of admission to legal aid more open.

The average amount allocated per inhabitant has increased between 2012 and 2019 (from 5,8 € to 8,3 €) and also between 2018 and 2019 (from 8,2 to 8,3 €).

Lawyers

After a continuous increase between 2012 and 2015, and decrease in 2016, the average number of lawyers per 100 000 inhabitants in the EU member States seems to be stabilized now. An increase of 15,5% has been recorded in the period from 2012 and 2019, while between 2018 and 2019 only a slight rise of both median and average values has been identified.

Even if the southern States seem to have larger bars (number of lawyers per 100 000 inhabitants), the wide dispersal of values, also verifiable with the number of lawyers per professional judge, is also likely to indicate a considerable heterogeneity within the tasks actually carried out by qualified persons and persons entitled to plead in accordance with national law, to act on behalf of his clients, to practice law, to take part in judicial proceedings or to advise and to represent their clients in legal matters (Definition of the lawyers' legal practice in accordance with the Recommendation Rec(2000)21 of the Committee of Ministers, Council of Europe).

ADR - Alternative Dispute Resolution measures

In various European countries, the use of alternative dispute resolution (ADR) measures is now widely accepted among the public and legal professionals. It contributes to the improvement of effectiveness of justice by providing courts users with alternatives to a regular judicial procedure.

There are different types of ADR in the member countries:

Mediation: refers to a voluntary trial in a non-binding private dispute settlement in which an impartial and independent third party assists the parties in facilitating discussions aiming to resolve their difficulties and to reach an agreement.

Court-related mediation: within this type of mediation, there's always an intervention of a judge and of a prosecutor who facilitates, advises, decides and/or approves the procedure.

Conciliation: the main objective of a conciliator is to reconcile, most of the time he/she will do so by seeking for concessions. He/she may make suggestions to the parties aimed to settle a dispute. The conciliator has more power and plays a more proactive role in comparison with the mediator.

Arbitration: the parties choose a neutral third party - an arbitrator whose final decision is binding. The parties may present evidences and testimonies to the arbitrators. Sometimes, several arbitrators are appointed to work as a court. Arbitration is most widely used for commercial disputes settlements because it provides a greater confidentiality.

Court-related mediation exists in all States, essentially in civil and commercial spheres. Mediation other than court-related and arbitration also exist in all the surveyed countries.

It could be noted that the average number of accredited or registered mediators per 100 000 inhabitants has strongly increased between 2012 and 2019 (from 9,9 in 2012 to 17,7, in 2019). This may contribute to strengthen awareness of the member States that having a high level of trained mediators supports the policies of enhancement of ADR.

Performance of the courts

One of the essential components of the proper functioning of courts is related to the respect of the fair trial principle within a reasonable time (Article 6 of the European Convention on Human Rights). This should be fully taken into account when considering the workload of the court, the length of procedures and the specific measures to reduce the length of delays in proceedings and to improve the efficiency.

The CEPEJ has chosen to develop efficiency court indicators on the European level. The first indicator is the Clearance Rate which indicates precisely the capacity of the courts and judicial system to deal with the flow of incoming cases.

The second indicator is the calculated Disposition Time of pending cases and it measures in terms of number of days the estimated time required to close a pending case.

Looking at the productivity of courts of first instance in other than criminal cases from 2012 to 2019, by only taking into account these two quantitative angles, it should be acknowledged that the median of the Clearance Rate improved between 2012 and 2014 and has been stable in the following years with slight decrease in 2019 (from 100,6% in 2018 to 99,9% in 2019). As regards the Disposition Time, there is a decrease between 2012 and 2019 (133 days in 2012 to 111 in 2019). However, it should be noted that Disposition Time increased between 2018 and 2019 by 20 days.

Administrative cases have highest Disposition time calculated at 347 days on average. They take notably longer time than the civil and commercial cases that need 258 days on average.

This performance must be contextualised with regard to the evolution of the median number of incoming other than criminal cases per 100 inhabitants which decreased between 2012 and 2019 (9,0 cases per 100 inhabitants in 2012 compared with 7,2 in 2019). The same trend has been identified for the median number of incoming litigious civil and commercial cases per 100 inhabitants (2,9 in 2012 and 1,9 in 2019), whereas the median number of new administrative cases per 100 inhabitants has been relatively stable during the same period (0,28 and 0,25 respectively).

The median number of other than criminal pending cases in courts, which was relatively stable between 2013 and 2017, increased significantly in 2018 (3,3 cases per 100 inhabitants) but decreased in 2019 to the similar level that was recorded in 2017 and previous years (2,8 cases). On the other hand, for the civil and commercial litigious cases the median number declined between 2012 and 2019 (respectively 1,7 and 1,1). Similar trend has been identified for administrative cases (the number varied between 0,3 and 0,2 cases in the period 2012-2019).

System for measuring and evaluating the functioning of courts

In a lot of countries many fields of courts activity (incoming or postponed cases, courts' decisions, length of proceedings) are currently undergoing evaluation and follow-up procedures. In terms of court management, arrangements for regular monitoring of the activity are made everywhere in Europe. These are intended to review the day-to-day activity of courts through data gathering and statistical analyses. A majority of States indicate to disseminate these elements in an annual activity report.

These systems increasingly exceed the simple periodic review of the courts performance, to offer the management staff a longer-term view, which includes the definition of objectives and is based on indicators to achieve useful projections in allocating budgetary or human resources.

Nowadays, the majority of countries use performance or activity indicators at court level. The number of countries that defined qualitative standards also increased above half of the EU members in recent years (15 states in 2019). In fact, the European Court of Human Rights recalls that it is crucial that the courts of a democratic society should inspire confidence to court users.

The use of information technology (IT) in courts and for the benefit of court users

While initially acting as a simple support tool for productivity, the information technology (IT) is always one of the major levers for improvement of the efficiency of courts. The increasingly strategic approach by the ministries of justice and management staff of the courts, essentially inspired by new public management policies, is indeed based on the extraordinary possibilities of the automation of IT tasks in order to free up budgetary and human resources.

Compared with previous cycles, no major changes should be noticed in the 27 evaluated member States. Most of the justice systems have already developed IT to assist the judges and their staff, to administrate their courts and to communicate with their users. The electronic case management systems and the communication with users seem to have been improved in a lot of countries. There is slight increase in the evaluation for some countries that is logical in IT development. The decrease noted in others is due to more precise questionnaire that resulted in clarifying the development for certain countries.

French version

La Commission européenne a demandé à la Commission européenne pour l'efficacité de la justice (CEPEJ) du Conseil de l'Europe de réaliser une étude ayant pour objet l'analyse de la situation des systèmes judiciaires dans les Etats membres de l'UE, en se basant sur sa propre méthodologie utilisée dans le cadre l'évaluation du fonctionnement des systèmes judiciaires des Etats membres du Conseil de l'Europe.

Cette étude s'appuie sur le traitement et l'analyse des données et commentaires communiqués par les Etats membres au travers de quatre cycles d'évaluation (2012, 2014, 2016 et 2018) et de quatre questionnaires spécifiques (2013, 2015, 2017 et 2019). Elle sera l'une des sources utilisées par la Commission Européenne pour rédiger le « Tableau de bord de la justice dans l'UE ».

Structure du rapport

Conformément à la note technique de la Commission Européenne, l'étude, porte sur les données de 2019 et leur évolution par rapport aux données de 2012, 2013, 2014, 2015, 2016, 2017 et 2018. Elle est divisée en deux parties :

- la première décrit les systèmes judiciaires des Etats membres de l'Union européenne (UE) à l'aide de tableaux de données par indicateur pour les Etats membres ;
- la seconde contient des fiches par pays, qui réalisent une analyse contextualisée.

Principaux éléments

L'étude dresse un état des lieux relatif au fonctionnement du service public de la justice sur la base des éléments qui, d'après la CEPEJ, sont principalement constitutifs de l'efficacité et de la qualité des systèmes.

Le budget des systèmes judiciaires

Pour bien comprendre et analyser les données budgétaires, il faut distinguer les deux notions : le budget alloué au système judiciaire d'une part et le budget alloué au système de justice dans son ensemble, d'autre part. Elles sont utilisées par la CEPEJ pour l'analyse des ressources allouées à la justice afin d'obtenir une vue d'ensemble des budgets des États membres de l'UE.

Il existe en effet, selon les Etats, des modes de financement communs ou distincts des juridictions, des ministères publics et de l'aide judiciaire. Ces trois éléments ont toutefois été décomposés au maximum pour permettre des comparaisons, non seulement des moyens alloués aux fonctions de poursuite ou de jugement, malgré la différence d'organisation des systèmes, mais aussi des montants attribués à l'accès à la justice.

Ainsi, le budget alloué au « système judiciaire » se compose de l'addition des moyens affectés :

- aux tribunaux;
- à l'aide judiciaire;
- au C118ministère public.

Il doit être souligné que le budget des systèmes judiciaires et celui des tribunaux, tels que définis précisément par la méthodologie de la CEPEJ pour fournir une évaluation rigoureuse de l'effort des Etats membres, ne sont pas comparables à d'autres indicateurs disponibles au sein d'autres institutions européennes.

La CEPEJ obtient une analyse plus large du système de justice avec un autre calcul : les budgets des autres services concourant au fonctionnement du service public de la justice (prison, service d'exécution des décisions, protection judiciaire de la jeunesse etc.) sont additionnés à celui du système judiciaire pour évaluer le « système de justice dans son ensemble ».

Afin d'appréhender les budgets alloués aux systèmes judiciaires de façon plus fine, les différentes composantes de ces budgets ont été examinées en distinguant différents postes : les salaires bruts des personnels, les technologies de l'information (ordinateurs, logiciels, investissements et maintenance), les frais de justice (comme la rémunération des interprètes ou des experts), les coûts de location et de fonctionnement des bâtiments, les investissements immobiliers, la formation.

Spécifiquement entre 2012 et 2019, l'analyse des données communiquées par les Etats membres révèle qu'une large majorité des Etats de l'UE ont augmenté (en valeur absolue) la contribution à leur système de justice, en dépit d'un contexte persistant de contrôle des dépenses publiques.

Ressources humaines

Plusieurs catégories de juges (permanents, occasionnels, non professionnels) peuvent concourir au système judiciaire. L'étude 2019 s'est concentrée sur les juges professionnels siégeant à titre permanent, dont le nombre s'élève en moyenne à 21,5 juges pour 100 000 habitants (la médiane est à 24,5 juges pour 100 000 habitants). La médiane a légèrement augmenté entre 2018 et 2019, alors que la tendance de la répartition de l'évolution (hausse / baisse) entre les pays est plus favorable à la diminution. Le nombre de juges pour 100 000 habitants a diminué dans 15 Etats membres. A l'inverse, ce nombre a augmenté ou est resté le même dans 12 Etats membres. Une variation plus significative n'est observée que pour l'Autriche avec 7,9 % d'augmentation, tandis que Malte et la Lettonie ont connu une diminution de 7,9 et 6,2 respectivement.

Ce nombre varie toutefois considérablement d'un Etat à l'autre en fonction de l'organisation des systèmes judiciaires et de l'existence de juges occasionnels, non-professionnels ou même de Rechtspfleger.

Dans la plupart des Etats membres, les juges bénéficient d'une formation initiale au vu de l'étendue des connaissances nécessaires à l'exercice de la fonction. La Finlande, Malte et la Suède sont les seuls Etats membres où la formation initiale est uniquement facultative. Par la suite, en cours de carrière, les pays offrent une formation continue générale ou spécialisée aux juges afin de maintenir un niveau élevé d'expertise juridique. Les formations continues générales ne sont obligatoires que dans cinq pays de l'UE. Les autres formations continues sont pour la plupart facultatives.

L'existence aux côtés des juges d'un personnel compétent avec des fonctions définies et un statut reconnu est une condition essentielle pour la qualité et l'efficacité d'un système judiciaire. Une différence est opérée entre cinq types de personnels non-juges :

- la fonction de "Rechtspfleger" (définie par L'Union Européenne des Greffiers de Justice et Rechtspfleger (EUR) comme un organe judiciaire indépendant),
- le personnel non-juge dont la fonction est d'assister directement les juges,
- les personnes responsables de tâches administratives telles que la gestion des tribunaux
- le personnel technique
- les personnels non-juges n'entrant dans aucune de ces catégories.

Deux constats peuvent être dressés à l'issue d'une analyse des données communiquées par les Etats membres. En premier lieu, le nombre de personnels non-juges pour 100 000 habitants en 2019 a légèrement augmenté par rapport à l'année 2012. En second lieu, 13 pays ont des personnels avec des fonctions de "Rechtspfleger" (ou équivalent - pas de modification entre 2012 et 2019). Le nombre moyen de personnel dans ce corps spécialisé a augmenté durant la période étudiée alors que le nombre moyen d'assistants des juges a decru.

Organisation judiciaire

L'étude distingue trois types de tribunaux :

- les tribunaux de droit commun de première instance compétents dans toutes les matières pour lesquelles la compétence n'a pas été donnée à une juridiction spécialisée – leur dénombrement est effectué en tant qu'entités juridiques
- les tribunaux spécialisés de première instance, compris également comme entités juridiques
- les tribunaux (tous niveaux confondus) en tant qu'implantations géographiques

Le nombre d'implantations géographiques pour 100 000 habitants a decru dans la plupart des Etats membres (la médiane était de 1,71 tribunaux pour 100 000 habitants en 2012, 1,52 en 2015 et 1,29 en 2019). Depuis 2012, 16 pays ont réduit leur nombre d'implantations géographiques, 6 ont gardé le même nombre, tandis que le reste des pays a augmenté ce nombre. Entre 2018 et 2019, 3 pays ont réduit le nombre d'implantations géographiques.

En ce qui concerne la répartition des contentieux entre entités juridiques, presque tous les Etats disposent de tribunaux de première instance spécialisés.

Les tribunaux spécialisés existants traitent majoritairement des affaires administratives, commerciales et de contentieux relatif à l'application de la législation de travail. Toutefois, certains pays, comme la Suède, disposent de nombreux tribunaux spécialisés dans différentes matières.

Aide judiciaire

L'aide judiciaire est un des éléments fondamentaux garantissant un égal accès à la justice pour tous les individus. Elle doit permettre, en particulier pour les citoyens qui n'ont pas de moyens financiers suffisants de pouvoir bénéficier gratuitement ou à moindre coût d'une assistance juridique.

L'aide judiciaire comporte deux aspects, que distinguent clairement certains Etats :

- d'une part, l'aide à l'accès au droit (information et conseil juridique, aide pour une alternative au procès – ADR alternative dispute resolution),
- d'autre part l'aide pour faire valoir ses droits dans le cadre d'une action en justice en tant que demandeur ou défendeur dans un procès civil.

En conséquence, la CEPEJ a dressé la typologie suivante pour quantifier les moyens alloués à l'aide judiciaire :

- les affaires non portées devant les tribunaux en ce qui concerne l'aide à l'accès au droit
- les affaires portées devant les tribunaux en ce qui concerne l'aide à l'assistance ou à la représentation dans un cadre contentieux.

Dans le cadre contentieux, il doit être relevé qu'un faible nombre d'Etats a été en capacité de distinguer dans le budget total les montants attribués à une aide judiciaire en matière civile ou pénale (4 pays sur 27).

Dans les tableaux concernant cet indicateur, sont présentées les données budgétaires de l'aide judiciaire dans les Etats membres en valeur absolue et par habitant afin d'obtenir une standardisation des données communiquées. Cette méthode d'analyse révèle des différences assez nettes entre les Etats, avec un groupe de pays d'Europe du nord allouant des moyens considérables par rapport aux autres pays étudiés. Il convient de garder à l'esprit que dans certains Etats peu d'affaires sont éligibles à l'aide judiciaire, mais qu'un montant élevé est accordé pour chacune d'entre elles. D'autres Etats font le choix opposé de limiter le montant par affaire tout en élargissant les conditions d'admission à l'aide judiciaire.

Le montant moyen alloué par habitant a augmenté entre 2012 et 2019 (de 5,8 € à 8,3 €) et aussi entre 2018 et 2019 (de 8,2 à 8,3 €).

Avocats

Après une augmentation continue entre 2012 et 2015, et une diminution en 2016, le nombre moyen d'avocats pour 100 000 habitants dans les Etats membres de l'UE semble maintenant stabilisé. Une augmentation de 15,5% a été enregistrée entre 2012 et 2019, alors qu'entre 2018 et 2019, seule une légère augmentation des valeurs médianes et moyennes a été identifiée.

Même si les Etats du sud paraissent avoir des barreaux plus importants (nombre d'avocats pour 100 000 habitants), la forte dispersion des valeurs, également vérifiable avec le nombre d'avocats par juge professionnel, est également susceptible de révéler une grande hétérogénéité dans les tâches effectivement exercées par des personnes qualifiées et habilitées conformément au droit national à plaider, à agir au nom de ses clients, à pratiquer le droit, à ester en justice ou à conseiller et représenter leurs clients en matière juridique (Définition de l'activité d'avocat au regard de la Recommandation Rec(2000)21 du Comité des Ministres du Conseil de l'Europe).

Mesures alternatives au règlement des litiges (ADR - alternative dispute resolution)

Dans différents pays européens, l'utilisation des mesures alternatives au règlement des litiges (ADR) est maintenant largement acceptée par le public et les professionnels du droit. Ces mesures contribuent à l'amélioration de l'efficacité de la justice en fournissant aux usagers des alternatives à une procédure judiciaire régulière.

Il existe différents types d'ADR dans les pays membres :

La médiation: il s'agit d'un procès volontaire, non contraignant de règlement des litiges privés dans lequel un tiers impartial et indépendant aide les parties à faciliter la discussion afin de les aider à résoudre leurs difficultés et de parvenir à un accord

La médiation conduite ou renvoyée par le tribunal : dans ce type de médiation, il y a toujours intervention d'un juge, d'un procureur qui facilite, conseille, décide ou/et approuve la procédure.

La conciliation: le principal objectif du conciliateur est de concilier, la plupart du temps en recherchant des concessions. Il/Elle peut proposer aux parties des suggestions pour le règlement d'un litige. Par rapport au médiateur, le conciliateur a plus de pouvoir et il est davantage proactif.

L'arbitrage: les parties choisissent un tiers impartial - un arbitre, dont la décision définitive est contraignante. Les parties peuvent présenter des preuves et des témoignages devant les arbitres. Parfois, il y a plusieurs arbitres désignés qui travaillent en tant que juridiction. L'arbitrage est le plus souvent utilisé pour la résolution des litiges commerciaux car il offre une plus grande confidentialité.

La médiation conduite ou renvoyée par le tribunal existe dans tous les Etats, essentiellement en matière civile ou commerciale. La médiation autre que celle conduite ou renvoyée par le tribunal et l'arbitrage existent également dans tous les pays étudiés.

Il peut être relevé que la moyenne du nombre pour 100 000 habitants de médiateurs accrédités ou enregistrés a fortement augmenté entre 2012 et 2019 (de 9,9 en 2012 à 17,7 en 2019). Cela peut contribuer à sensibiliser davantage les États membres au fait que le fait de disposer d'un niveau élevé de médiateurs formés soutient les politiques de renforcement des ADR.

Performance des tribunaux

Un des éléments essentiels du bon fonctionnement des tribunaux est lié au respect du principe fondamental du procès équitable dans un délai raisonnable (Article 6 de la Convention Européenne des Droits de l'Homme). Il convient d'en tenir pleinement compte lorsque l'on considère la charge de travail du tribunal, la durée des procédures et les mesures spécifiques pour en réduire la longueur et en améliorer l'efficacité.

La CEPEJ a choisi de développer des indicateurs d'efficacité des tribunaux au niveau européen. Le premier indicateur est le taux de variation du stock d'affaires pendantes (Clearance Rate) qui montre précisément la capacité du tribunal et du système judiciaire à faire face aux flux d'affaires nouvelles.

Le second indicateur est la durée estimée d'écoulement du stock d'affaires pendantes (calculated Disposition Time) et il mesure en nombre de jours la durée nécessaire estimée pour qu'une affaire pendante soit terminée.

En observant, sous ces deux seuls angles quantitatifs, la productivité des tribunaux de première instance entre 2012 et 2019 en matière autre que pénale, il doit être relevé que la médiane du Clearance Rate s'est améliorée entre 2012 et 2014 et est restée stable les années suivantes avec une légère baisse en 2019 (de 100,6 % en 2018 à 99,9 % en 2019). En ce qui concerne le Disposition Time, il y a une diminution entre 2012 et 2019 (133 jours en 2012 à 111 en 2019). Toutefois, il convient de noter que le Disposition Time a augmenté de 20 jours entre 2018 et 2019.

Les affaires administratives ont le Disposition Time le plus élevé, calculé à 347 jours en moyenne. Elles sont nettement plus longues que les affaires civiles et commerciales qui nécessitent 258 jours en moyenne.

Cette performance est également à contextualiser au regard de l'évolution du nombre médian total d'affaires nouvelles autres que pénales pour 100 habitants, qui a baissé entre 2012 et 2019 (9,0 affaires pour 100 habitants en 2012 contre 7,2 en 2019). La même tendance a été identifiée pour le nombre médian de nouvelles affaires civiles et commerciales contentieuses pour 100 habitants (2,9 en 2012 et 1,9 en 2019), alors que le nombre médian de nouvelles affaires administratives pour 100 habitants a été relativement stable pendant la même période (0,28 et 0,25 respectivement).

Le nombre médian d'affaires pendantes autres que pénales dans les tribunaux, qui était relativement stable entre 2013 et 2017, a considérablement augmenté en 2018 (3,3 affaires pour 100 habitants) alors qu'il a baissé en 2019 au même niveau qu'en 2017 et les années précédentes (2,8 affaires). En revanche, pour les affaires civiles et commerciales contentieuses, le nombre médian a diminué entre 2012 et 2019 (respectivement 1,7 et 1,1). Une tendance similaire a été identifiée pour les affaires administratives (le nombre a varié entre 0,3 et 0,2 affaires au cours de la période 2012-2019).

Système pour mesurer et évaluer le fonctionnement des tribunaux

De nombreux domaines d'activité des tribunaux (affaires nouvelles ou renvoyées, décisions rendues, durée des procédures) font actuellement l'objet, dans de nombreux pays, de procédures d'évaluation et de suivi. En matière d'administration judiciaire, un suivi régulier de l'activité est mis en place partout en Europe ; ces dispositifs sont censés analyser l'activité quotidienne des tribunaux au travers de collectes de données et d'analyses statistiques. Une majorité d'Etats indique qu'ils restituent ces éléments dans un rapport annuel d'activité.

Ces systèmes dépassent de plus en plus le simple examen périodique de la performance des tribunaux, pour offrir aux personnels de direction une vision à plus long terme, qui intègre la notion d'objectifs et s'appuie sur des indicateurs pour réaliser des projections utiles à l'affectation des moyens budgétaires ou humains.

La majorité des pays utilisent aujourd'hui des indicateurs de performance ou d'activité au niveau des tribunaux. Le nombre de pays ayant défini des standards qualitatifs a également augmenté de plus de la moitié des membres de l'UE au cours des dernières années (15 États en 2019).

Par ailleurs, la Cour Européenne des Droits de l'Homme rappelle qu'il est fondamental que les tribunaux d'une société démocratique inspirent confiance aux justiciables.

L'utilisation des technologies de l'information (TI) dans les tribunaux et au bénéfice des usagers des juridictions

De simple support à la productivité, les technologies de l'information (TI) sont devenues progressivement l'un des leviers majeurs de modernisation des juridictions. L'approche de plus en plus stratégique des ministères de la justice et des personnels de direction dans la gestion des juridictions, inspirée essentiellement par les politiques de nouvelle gestion publique, s'est en effet fondée sur les extraordinaires possibilités d'automatisation de tâches de l'informatique afin de libérer des moyens budgétaires et humains.

Comparé aux cycles précédents, aucun changement majeur n'est à relever dans les 27 États membres évalués, la plupart des systèmes judiciaires ayant déjà investi dans les TI pour assister les juges et leurs personnels, pour administrer leurs tribunaux et communiquer avec les usagers. Les systèmes électroniques de gestion des affaires et la communication avec les usagers semblent s'être améliorées dans de nombreux pays. Il y a une légère hausse de l'évaluation pour certains pays, ce qui est logique dans le développement des TI. La diminution constatée dans d'autres pays est due à un questionnaire plus précis qui a permis de clarifier le développement pour certains pays.

Methodology

The methodology used for this study completely follows CEPEJ methodology for its biennial evaluation using a questionnaire for evaluating judicial systems. This Scheme is filled by the CEPEJ's national correspondents, whose responses are statistically processed and analysed by the Secretariat of the CEPEJ.

With the data collected, the CEPEJ has built a database to compare situations and developments between the member states (when such comparisons are scientifically consistent).

Such inter-governmental work requires permanent dialogue and full transparency with the member states of the Council of Europe.

- **Data collection, validation and analysis**

Numbers indicated between brackets following the letter Q refer to the questions of the CEPEJ questionnaire.

From a methodological point of view, and with a commitment to quality, consistency and comparability of the data supplied, data collection is primarily responsibility of the CEPEJ's national correspondents. The national correspondents are the unique interlocutors of the Secretariat when collecting new data. States providing such data are liable for the quality of data used in the survey.

According to CEPEJ methodology, an extensive work is carried out by the CEPEJ Secretariat to verify the quality of the data submitted by the correspondents. This quality check process requires a certain time in order to guarantee the reliability of the quantitative and qualitative data to be finally presented to European Commission.

The reference year for the data collection is 2020. As for previous cycle, wherever data for 2020 is not possible to obtain notation NA (not available) is used. Only in exceptional cases and only for questions that are used for standardisation, CEPEJ can accept 2019 data. This data is population, GDP per capita and average annual salary.

The study itself is based on 2020 data as well on previous cycles (every year, starting with 2012) wherever evolution and trends are presented. "

- **The quality of data**

The reader should bear in mind and always interpret statistical figures presented (including in the country fiches) in the light of their attached narrative comments.

The CEPEJ has chosen to process and present only the data which offered a high level of quality and accountability: it decided to disregard figures which were too different from one country to another or from one exercise to another without sufficient explanations, or when they did not present sufficient guarantees of reliability. For some issues covered by this study, no data could be provided. This could mean that none were available, that the data could not be collected as such or that no data meeting these requirements had been provided within the deadline set.

- The following abbreviations have been used in this study:

NA: data not available;

NAP: data non applicable;

CR: Clearance Rate;

DT: Disposition Time.

Methodological disclaimer

1) The data analysed have been provided by the member states until beginning of December 2021 and have then been validated during quality control process finalised beginning of December 2021. Amendments provided by member states after the delivery of this study may appear in future reports, as CEPEJ's database is regularly updated. This also explains why previous cycle data updated on the day of this delivery, may not always fully coincide with the data published in previous CEPEJ reports and studies (even sometimes replacing data with "NA").

The validation has been made according to CEPEJ's methodology. However, the full reliability of data depends mostly on the data providers. It should be kept in mind that the accuracy of some entries was confirmed by national correspondents without specific explanation on potential discrepancies.

Spain provided the last set of data for 2020 only at the end of December 2021. The quality control ended beginning of January 2022.

2) Some data cannot be compared with previous data since the questionnaire was modified between the different evaluation cycles.

3) It should also be noted that the minimum, maximum, average and median values in certain tables are calculated with quantified data (excluding answers "NA" or "NAP").

4) The CEPEJ works in full transparency vis-à-vis the member states as regards the purpose of the data collection exercise. According to CEPEJ methodology, only the final version of the study can be disseminated, after possible comments from the member states. Before the final version of the study, all the data collected remains confidential. When using data provided by the CEPEJ in public reports, European Commission should always mention "Source: CEPEJ data". If CEPEJ data are presented together with other data, the source of the different data must be clearly mentioned.

Austria data on average salary is for 2019. Germany provides annual household income instead of annual average gross salary.

General data

Comments provided by the national correspondents

Question 066. Are quality standards determined for the judicial system at national level (are there quality systems for the judiciary and/or judicial quality policies)?

Question 067. Do you have specialised personnel entrusted with implementation of these national level quality standards?

Question 073. Do you have a system to evaluate regularly court performance based primarily on the defined indicators?

Question 073-0. If yes, please specify the frequency:

Question 073-1. Is this evaluation of the court activity used for the later allocation of resources within this court?

Question 073-2. If yes, which courses of action are taken?

Question 070. Do you regularly monitor court activities (performance and quality) concerning:

Question 077-1. Concerning public prosecution activities, have you defined performance and quality indicators?

Question 078-1. If yes, please select the main performance and quality indicators for the public prosecution services that have been defined:

Question 073-3. Do you have a system to evaluate regularly the performance of the public prosecution services based primarily on the defined indicators?

Question 073-4. If yes, please specify the frequency:

Question 073-5. Is this evaluation of the activity of public prosecution services used for the later allocation of resources within this public prosecution service?

Question 073-6. If yes, which courses of action are taken?

Question 070-1. Do you regularly monitor public prosecution activities (performance and quality) concerning:

Question 071. Do you monitor the number of pending cases and cases that are not processed within a reasonable timeframe (backlogs) for:

Question 072. Do you monitor waiting time during judicial proceedings?

Question 077. Concerning court activities, have you defined performance and quality indicators?

Question 078. If yes, please select the main performance and quality indicators that have been defined for courts:

Question 083-2. Are there quantitative performance targets defined for each public prosecutor (e.g. the number of decisions in a month or year)?

Question 083-3. Who is responsible for setting the individual targets for each public prosecutor

Question 120. Is there a system of qualitative individual assessment of the public prosecutors' work?

Question 120-1. If yes, please specify the frequency of this assessment:

Austria

Q073-0 (2020): monthly statistics about incoming and closed cases (more frequent)

Periodic check lists (annual)

Internal audit examination all 4 to 7 years (less frequent)

Q073-0 (2019): Operational Information System (BIS) annually

Periodic check lists

Less frequent:

Internal Audit all 4 to 7 years

More frequent:

Monthly statistics about incoming and closed cases ("Kurzstatistik")

Q073-0 (2018): Operational Information System (BIS) annually

Periodic check lists (on October 1st of every year)

Internal audit examination all 4 to 7 years (less frequent)

Monthly statistics about incoming and closed cases ("Kurzstatistik") (more frequent)

Q073-0 (2017): Operational Information System (BIS) annually
Periodic check lists (on October 1st of every year)
Internal audit examination all 4 to 7 years (less frequent)
Monthly statistics about incoming and closed cases ("Kurzstatistik") (more frequent)

Q073-0 (2016): Operational Information System (BIS) annually
Periodic check lists (on October 1st of every year)
Internal audit examination all 4 to 7 years (less frequent)
Monthly statistics about incoming and closed cases ("Kurzstatistik") (more frequent)

Q070 (General Comment): .

Q070 (2017): "other": e.g. certain kinds of decisions, clearance rate (annually)

Q073-4 (2020): Monthly statistics about incoming and closed cases (more frequent)
Periodic check lists (annual)

Internal audit examination all 4 to 7 years (less frequent)

Q073-4 (2018): Operational Information System (Sta-BIS) annually

Periodic check lists (on October 1st of every year)

Internal audit examination all 4 to 7 years (less frequent)

Monthly statistics about incoming and closed cases ("Kurzstatistik") (more frequent)

Q072 (2016): Supreme administrative Court: Statistic of incoming cases, number of decisions delivered, number of postpones cases, length of proceedings (timeframes) and age of cases

Q083-3 (2018): There are no specific targets given to public prosecutors.

Belgium

Q073 (2017): There are ad hoc evaluation systems within the courts. But there is not yet a central or coordinated system.

Q073 (2016): There are ad hoc evaluation systems within the courts. But there is no central or coordinated system.

Q070 (2017): There are ad hoc systems for monitoring activities within the courts. There is a central service responsible for the collection of statistics which ensures the annual publication of statistics. The Central Statistical Service is developing a uniform and coordinated policy, but there is (as yet) no central system for regular monitoring of activities.

Q070 (2016): There are ad hoc systems for monitoring activities within the courts. There is a central service responsible for the collection of statistics which ensures the annual publication of statistics. But there is no (yet) central system for regular monitoring of activities.

Q073-4 (2020): "More frequent :

- by means of monthly statistics on the number of cases handled (general prosecutors' offices)
- on the basis of bi-monthly dashboards (public prosecutors' offices)
- quarterly at the meetings of the public prosecutor with the public prosecutors and the labour auditors".

Q073-6 (2020): "comments for question 73-5:

Evaluation used at the local level (public prosecutor's offices, labor auditorates, general prosecutor's offices)"

Q071 (2016): There are ad hoc evaluation systems within the courts. But there is no central or coordinated system.

Q072 (2020): Monitoring mechanism via dashboards for prosecution services.

Q120 (General Comment):

This is the evaluation system in the judicial system

Bulgaria

Q066 (General Comment): Ordinance № 2 from 23.02.2017 on the indicators, methodology and procedure for appraisal of a judge, chairman and deputy chairman of a court

Article. 4. The Ordinance aims: 1. to affirm the rule of law and ensure effective protection of the rights of judges; 2. to ensure a lawful, transparent and fair procedure for career growth; 3. to increase the personal motivation for professional development of the judges, to maintain and improve the quality of their work; 4. to prevent corruption in the system of the judiciary; 5. to contribute to increasing the trust in the judiciary. Article 5. (1) The appraisal is an objective assessment of the professional, business and moral qualities of a judge, chairman and deputy chairman of a court, demonstrated in the performance of his position. (2) A unified appraisal form for a judge, chairman and deputy chairman of a court shall be filled in according to a sample pursuant to the appendix for the assessment as a result of the appraisal. Article 6. The appraisal guarantees professional self-improvement, equal and fair opportunities for the career growth of judges, based on the principles of legality, equality, objectivity and transparency.

Article 7. The appraisal may not affect the independence and fundamental rights of judges. Article 8. (1) The appraisal shall refer to the qualification, the achievements and the professional suitability, as well as the observance of the rules for ethical behavior by a judge, chairman and deputy chairman of a court. (2) The qualification is a set of the acquired professional knowledge, skills and personal abilities of the appraised. (3) The achievements are the personal qualitative and quantitative results, achieved by the appraised in his practical activity. (4) Professional suitability is the specific qualification for a specifically defined position. (5) The observance of the rules for ethical conduct is a conduct, compliant with the rules of the respective code of ethics.

Judiciary System Act Article. 196. (1) Appraisal shall be carried out:

1. initial - for a three-year period as of the appointment of a judge, prosecutor or investigator - when participating in a competition or in case of a proposal for promotion in ranking;
2. for the purpose of acquiring tenure: upon completion of five years service as a judge, prosecutor or investigating magistrate;
3. periodic - for a 5-year period as of the attestation for tenure of a judge, prosecutor and investigator, of an administrative head and a deputy administrative head;
4. extraordinarily: in the cases under Article 197 (5).

(2) Junior judges, junior prosecutors and junior investigators shall not undergo initial appraisal. A report on their work shall be drawn up by the supervisor for the second year of their appointment.

Q066 (2020): Judiciary system Act:

Article. 198 (1) The criteria for the appraisal of a judge, prosecutor or an investigating magistrate shall be:

1. legal knowledge and skills of applying it;
2. skill of analysing legally relevant facts;
3. skill of making optimum working arrangements;
4. efficiency and discipline;
5. compliance with the rules of ethical behaviour.

(2) In the course of the appraisal under Paragraph (1) the following indicators shall be taken into account:

1. keeping deadlines;
2. number of instruments upheld and reversed and the grounds for this;
3. the results of inspections carried out by the Inspectorate with the Supreme Judicial Council,
4. the overall caseload of the respective judicial district and judicial authority, as well as the workload of the appraised judge, prosecutor or investigating magistrate compared to other judges, prosecutors or investigating magistrates in the same judicial authority.

(4) The time served by the judge, prosecutor or investigating magistrate as a permanent trainer at the National Institute of Justice shall also be included in the appraisal period. The evaluation of the work performance as a trainer shall be given by the Managing Board.

(5) The time served by the judge, prosecutor or investigating magistrate as an European Delegated Prosecutor shall also be included in the appraisal period. The evaluation of the results of their work under Regulation (EU) 2017/1939 shall become part of their appraisal.

Article. 199. (1) A judge shall be appraised under the following specific criteria:

1. complying with the schedule for conduct of court hearings;
2. skill of conducting a court hearing and drawing up a record of proceedings;
3. administrating cases and appeals, preparing for a court hearing;
4. number of appealed judicial instruments from among the appealable judicial instruments, appealed judicial instruments upheld, judicial instruments reversed or invalidated, in whole or in part, and the grounds for it; the ability to reason and justify judicial instruments and to analyse evidence shall be subject to evaluation.

(2) A prosecutor shall be appraised under the following specific criteria:

1. skills of planning and structuring steps in pre-trial and trial proceedings;
2. complying with the written instructions and orders of the superior prosecutor;
3. ability to make working arrangements and direct the investigating authorities and the teams participating in pre-trial proceedings;
4. number of unappealed prosecutorial instruments, including warrants to terminate and suspend criminal proceedings, number of final judicial instruments rendered on instruments submitted by the prosecutor appraised, as well as the final judicial instruments returning cases for the rectification of procedural breaches, and the reasons for this, number of appeals granted, the prosecutorial instruments upheld, modified and reversed upon an instance and on official review. (2) An investigating

Q067 (2020): The Supreme Judicial Council, through its Commission for Attestation/Appraisal and Competitions at the Judges College/Chamber of the Supreme Judicial Council and the Commission for Attestation/Appraisal and Competitions at the Prosecutorial College/Chamber, are the bodies that perform an objective assessment of the professional, business and moral qualities of magistrates.

Q073 (General Comment): The Inspectorate to the Supreme Judicial Council (ISJC) is a body of the judicial system of the Republic of Bulgaria established under the art. 132a of the Constitution of the Republic of Bulgaria /published in State Gazette N.12 from 6th February 2007/. The Inspectorate to the Supreme Judicial Council is an independent body with the primary function of examining the operation of the judicial bodies without affecting their independence. Art. 54, para. 1 of the Judicial Power Act assigns powers to the Inspectorate to the Supreme Judicial Council.

The Inspectorate annually, not later than the end of March of the current year, adopts a program for the planned inspections.

Q073 (2019): The Inspectorate to the Supreme Judicial Council (ISJC) is a body of the judicial system of the Republic of Bulgaria created with art. 132a of the Constitution of the Republic of Bulgaria /published in State Gazette N.12 from 6th February 2007/. The Inspectorate to the Supreme Judicial Council is an independent body with the primary function of examining the operation of the judicial bodies without affecting their independence. The powers of the Inspectorate to the Supreme Judicial Council are provided for in Art. 54, para. 1 of the Judiciary System Act.

Rules for the organization of the activities of the Inspectorate with the Supreme Judicial Council and for the activity of the administration and the experts

Section II Organization and procedure for conducting plan checks

Art. 53. (1) The Inspectorate annually, not later than the end of March of the current year, adopts a program for the planned inspections.

(2) The Annual Program for the planned inspections contains:

1. the appellate areas and the bodies of the judiciary in which a complex inspection will be carried out;
2. the bodies of the judiciary in which thematic and control inspections will be carried out;
3. an indicative timetable for carrying out the inspections.

(3) The annual program may be supplemented and amended by a decision of the Inspectorate. (4) The annual program is announced on the website of the Inspectorate.

Art. 54. (1) The planned inspections may be complex, thematic and control inspections. (2) The complex inspections relate to the overall activity of the body of the judiciary. (3) Thematic inspections are conducted on a specific topic on the application of the law by a judicial authority during the period under review, a judge, a prosecutor or an investigating magistrate.

(4) Control inspections are carried out after a complex or thematic inspection, which provides recommendations for overcoming negative practices. Art. 55. (1) Immediately after the adoption of the annual program, by lot ensuring random allocation, the chief inspector in the presence of all inspectors determines the specific judicial authority that will be inspected, and the teams that will carry out the inspection.

Q073-0 (2017): The Inspectorate to the Supreme Judicial Council (ISJC) is a body of the judicial system of the Republic of Bulgaria created with art. 132a of the Constitution of the Republic of Bulgaria /published in State Gazette N.12 from 6th February 2007/. The Inspectorate to the Supreme Judicial Council is an independent body with the primary function of examining the operation of the judicial bodies without affecting their independence. Art. 54, para. 1 of the Judicial Power Act assigns to the Inspectorate to the Supreme Judicial Council the following powers:

1. check the organisation of administrative operation of the courts, prosecution offices and investigating authorities;
2. check the arrangements made for the institution and progress of court, prosecutorial and investigative cases, as well as the disposal thereof within the established time limits;
3. analyse and summarise the cases that have been disposed of by virtue of an enforceable judicial instrument, as well as the case files and cases disposed of by prosecutors and investigating magistrates;
4. in the presence of conflicting case-law, the existence of which has been found in carrying out the activity under Paragraph (3), it shall alert the competent authorities of the need to request the rendition of interpretative judgements or interpretative decrees;
5. upon breaches identified in the implementation of the activities under Items 1 to 3, it shall alert the administrative head of the judicial authority concerned and the respective chamber of the Supreme Judicial Council;
6. make proposals for the imposition of disciplinary sanctions on judges, prosecutors and investigating magistrates and on the administrative heads of judicial authorities;
7. address alerts, proposals and reports to other state bodies, including the competent judicial authorities;
8. carry out integrity testing and examinations for conflict of interest of judges, prosecutors and investigating magistrates, verifications of the financial interests disclosure declarations, as well as checks for identifying actions damaging the prestige of the Judiciary and such related to impairment of the independence of judges, prosecutors and investigating magistrates;
9. examine applications against an infringement of the right to have a case examined and disposed of within a reasonable time;
10. adopt internal rules for carrying out the testing and examinations under Items 1 to 3 and Item 8 in the judicial authorities;
11. adopt internal rules for conduct of the integrity testing of experts with the Inspectorate and organise the conduct of such testing;
12. draw up an annual programme for scheduled inspections and an annual report on the activity thereof, which it shall submit to the Plenum of the Supreme Judicial Council;
13. discuss the draft budget for the Judiciary proposed by the Minister of Justice with regard to the budget of the Inspectorate and submit it to the Supreme Judicial Council;
14. make publicly available information on the activity thereof and publish the annual report on the activity thereof on the website thereof.

Rules for the organization of the activities of the Inspectorate with the Supreme Judicial Council and for the activity of the administration and the experts

Prom., SG, no. 103 of 27.12.2016, in force as of 01.01.2017.

Section II Organization and procedure for conducting plan checks

Q078-1 (2020): With the Guidance of Organization of the Information Activities at the Prosecutor's Office, issued by the Prosecutor General, the performance and quality indicators were defined, outside of the given ones, and covered the acts and actions of the public prosecutor for all types of supervisions that are carried out by the Prosecutor's Office:

In criminal proceedings, including the supervision of the enforcement of penalties, the following may be additionally, but not exhaustively mentioned: prosecutor's acts filed with the court; terminated cases; objections against judicial acts; acts for the enforcement of sentences that have already entered into force; acts for supervision over the sentence enforcement.

Actions for resolving the competition between administrative criminal liability and criminal liability;

Within civil proceedings – claims submitted under the cases provided by the law; Within administrative proceedings – participation in trials under the cases provided by the law; Acts on the supervision of legality

Q078-1 (2018): With the Guidance for the Organization of the Information Activities at the Prosecutor's Office, issued by the Prosecutor General, the performance and quality indicators were defined, outside of the given ones, and covered the acts and actions of the public prosecutor for all types of supervisions that are carried out by the Prosecutor's Office:

In criminal proceedings, including the supervision of the enforcement of penalties, the following may be additionally, but not exhaustively mentioned: prosecutor's acts filed with the court; terminated cases; objections against judicial acts; acts for the enforcement of sentences that have already entered into force; acts for supervision over the sentence enforcement.

Actions for resolving the competition between administrative criminal liability and criminal liability;

Within civil proceedings – claims submitted under the cases provided by the law; Within administrative proceedings – participation in trials under the cases provided by the law; Acts on the supervision of legality

Q073-3 (General Comment): With the Guidance for the Organization of the Information Activities at the Prosecutor's Office of the Republic of Bulgaria, all indicators for the activity of the Prosecutor's Office of the Republic of Bulgaria are regulated, as well as the obligation of all prosecutor's offices to prepare only a statistical report for the first half of the year, as well as analytical annual reports for their activity. The Rules for Measuring the Workload of the Prosecutor's Offices and the Individual Workload of Each Prosecutor and Investigator, adopted by a Decision of the Supreme Judicial Council under Protocol No. 60/11.12.2014, are applied in all prosecutor's offices, investigation departments and in the National Investigation Service. The use of the Unified Information System of the Prosecutor's Office ensures that the data is retrieved in real time and allows for its verification and reliability. Data on the administrative and managerial workload of the administrative heads, their deputies and the heads of the investigation departments is also provided through the system. The ratio of the number of law enforcement acts to one administrative act at the levels of the prosecutor's offices is also taken into account. The analysis of this relation is important for the efficiency/resource ratio analysis.

Within the Prosecutor's Office's Annual Report, an analysis is made for the workload of the public prosecutor's offices and the investigative bodies and it is compared to the workload of authorities of the same type and degree.

Data on the workload of public prosecutor's offices and investigative bodies is also collected every six months.

Ordinance No. 3 of 23.02.2017 on the Indicators and Methods for Assessment and the Criteria for Reporting the Workload Degree of Prosecutors, Investigators, Administrative Heads and Their Deputies can also be mentioned (adopted by a decision of the Plenum of the Supreme Judicial Council under Protocol No. 7 of 23.02.2017, promulgated in SG 21/10.03.2017).

Workload reporting is designated to ensure fairness of the assessment in terms of the volume of actual work. (The evaluation takes into account the actual workload of the relevant judicial authority, as well as the individual workload of the assessed prosecutor, investigator, administrative head, deputy administrative head and head of department. The workload of the respective judicial authority is compared to the workload of the bodies of the same type and degree, and the individual workload is compared to the set out workload norm and the workload of other prosecutors or investigators from the same body of the judiciary).

Q073-4 (2020): The answer here is both "Annual" and "More frequent" With the Direction of Organization of the Information Activities at the Prosecutor's Office of the Republic of Bulgaria, all indicators for the activity of the Prosecutor's Office of the Republic of Bulgaria are regulated, as well as the obligation of all prosecutor's offices to prepare only a statistical report for the first half of the year, as well as analytical annual reports for their activity. The Rules for Measuring the Workload of the Prosecutor's Offices and the Individual Workload of Each Prosecutor and Investigator, adopted by a Decision of the Supreme Judicial Council under Protocol No. 60/11.12.2014, are applied in all prosecutor's offices, investigation departments and in the National Investigation Service. The use of the Unified Information System of the Prosecutor's Office ensures that the data is retrieved in real time and allows for its verification and reliability. Data on the administrative and managerial workload of the administrative heads, their deputies and the heads of the investigation departments is also provided through the system. The ratio of the number of law enforcement acts to one administrative act at the levels of the prosecutor's offices is also taken into account. The analysis of this relation is important for the efficiency/resource ratio analysis. Within the Prosecutor's Office's Annual Report, an analysis is made for the workload of the public prosecutor's offices and the investigative bodies and it is compared to the workload of authorities of the same type and degree. Data on the workload of public prosecutor's offices and investigative bodies is also collected every six months. Ordinance No. 3 of 23.02.2017 on the Indicators and Methods for Assessment and the Criteria for Reporting the Workload Degree of Prosecutors, Investigators, Administrative Heads and Their Deputies can also be mentioned (adopted by a decision of the Plenum of the Supreme Judicial Council under Protocol No. 7 of 23.02.2017, promulgated in SG 21/10.03.2017). Workload reporting is designated to ensure fairness of the assessment in terms of the volume of actual work. (The evaluation takes into account the actual workload of the relevant judicial authority, as well as the individual workload of the assessed prosecutor, investigator, administrative head, deputy administrative head and head of department. The workload of the respective judicial authority is compared to the workload of the bodies of the same type and degree, and the individual workload is compared to the set out workload norm and the workload of other prosecutors or investigators from the same body of the judiciary).

Q073-5 (2020): The implementation of optimization within the Prosecutor's Office is in view of the data on the volume of prosecutorial activity, the workload of prosecutors, as well as the territorial scope and specifics of the region served by the respective prosecutor's office. Decisions on this optimization are made by the Supreme Judicial Council (SJC) on the basis of information periodically provided by the prosecution. On the basis of an analysis of the above indicators, the staff for the respective prosecutor's office is determined (in case of need for increase or reduction of staff, resp. in case of transfer of a full-time position from one to another prosecutor's office). The answer to questions 73-5 and 73-6 for 2020 takes into account the process of optimization of the court card started on 01.01.2019, as the Prosecutor's Office started the transformation of district prosecutor's offices into territorial divisions to district prosecutor's offices in the regional centers. Out of a total of 113 district prosecutor's offices at the end of 2018 - 11 were transformed into territorial departments from 01.01.2019, 28 were transformed into territorial departments from 01.01.2020, and as of January 1, 2021 another 38 district prosecutor's offices have been transformed into territorial divisions. The data on the workload and a set of other indicators were used for decision-making by the SJC for the indicated consolidation.

Q070-1 (General Comment): Monitoring, through the reports and analyzes of the Prosecutor's Office of the Republic of Bulgaria and individual prosecutors, of the activities of the Prosecutor's Office is carried out only in terms of number of incoming cases, length of proceedings (timeframes), number of resolved cases, number of pending cases, backlogs and percentage of convictions and acquittals.

Q070-1 (2018): "Other": percentage of returned cases

Q071 (General Comment): The duration of the court proceedings initiated by the Prosecutor's Office of the Republic of Bulgaria is monitored, as in case of excessive delay there is a possibility to request acceleration of these proceedings through the procedure under Chapter 26 of the PPC.

Q077 (2017): incoming cases; duration of proceedings /deadlines/; completed cases; pending cases; result of appealed and protested cases.

Q120 (General Comment): The assessment is carried out in compliance with the Judicial System Act and Ordinance No. 3/23.02.2017 on the Indicators and Methods for Assessment and the Criteria for Reporting the Workload Degree of Prosecutors, Investigators, Administrative Heads and Their Deputies (adopted by a decision of the Plenum of the Supreme Judicial Council under Protocol No. 7/23.02.2017, promulgated in SG 21/10.03.2017). The Prosecutor's Office of the Republic of Bulgaria has established an order for its implementation and for the retrieval and provision of data on prosecutors and investigators in accordance with validated performance indicators.

Croatia

Q066 (General Comment): According to the Courts Act (Official Gazette, No. 28/13, 33/15, 82/15, 67/18), the president of the court evaluates the work of every judge according to Framework Criteria for the work of judges in the period of one year following the standards on the number of judgements delivered by a judge compared with the number of judgements that should have been delivered, according to the Framework Criteria for the work of judges, result of work in different kinds of cases, respecting deadlines in delivery of judgements and drafting of judgements, quality of judgements on the grounds of expressed remedies in legal actions and other activities of judges.

Framework criteria are adopted by the Minister of Justice on the proposal of the General Assembly of Supreme Court. The Criteria prescribe the number of decisions that need to be rendered every year by a judge.

According to the State Attorney Office Act (Official Gazette, No. 67/18), State Attorneys' and Deputy State Attorneys' performance is evaluated every three years according to the following criteria: achieved results in resolving cases (based on the number of cases assigned to work on the basis of the Framework Criteria for the Work of Deputy State Attorneys and the average work results of county or municipal state attorney's offices for the previous three-year period), the quality of decisions and the justified use of legal remedies, proper performance of the state attorney's duty - observance of deadlines during the procedure, other activities of the State Attorney and the Deputy State Attorney, experience in performing the duty of state attorney and compliance of conduct with the Code of Ethics of State Attorneys and Deputy State Attorneys. The Framework criteria are adopted by the Minister in charge of judicial affairs, with the prior opinion of the Chief State Attorney of the Republic of Croatia.

Q066 (2018): According to the Courts Act (Official Gazette, number 28/13, 33/15, 82/15), the president of the court evaluates the work of every single judge according to Framework for the workload of judges in the period of one year following the standards on the number of judgements delivered by a judge compared with the number of judgements that should have been delivered, according to the Framework for the workload of judges, result of work in different kinds of cases, respecting deadlines in delivery of judgements and drafting of judgements, quality of judgements on the grounds of expressed remedies in legal actions and other activities of judges.

Framework criteria are adopted by the Minister of Justice on the proposal of the General Assembly of Supreme Court. The Criteria prescribe the number of decisions that need to be rendered every year by a judge.

Q066 (2017): According to the Courts Act (Official Gazette, No. 28/13, 33/15, 82/15), the president of the court evaluates the work of every single judge in his/her court for the previous year on the basis of the following standards: the number of judgements delivered by a judge compared with the number of judgements that should have been delivered, according to the Framework for the workload of judges, result of work in different kinds of cases in absolute numbers and percentages, respecting deadlines in delivery of judgements and drafting of judgements, quality of judgements on the grounds of expressed remedies in legal actions and other activities of judges.

Framework criteria are adopted by the Minister of Justice on the proposal of the General Assembly of Supreme Court. The Criteria prescribe the number of decisions that need to be rendered every year by a judge.

Q073 (2015): According to the Court Act, the president of court supervises accurate performance of court activities in due time. The president of court has a duty to write a report on the performed supervision and its results, as well as on the measures taken, at least once a month. The report has to be inserted into a case file of judicial administration. The president of court is obliged to ensure court efficiency in the resolution of cases, especially when it comes to the resolution of cases the procedure of which lasts more than three years.

The president of court, except for the president of the Supreme Court of the Republic of Croatia, has a duty to submit a report on the performed tasks of judicial administration, measures and activities undertaken to improve work and efficiency of the court in the resolution of cases. The report is to be submitted directly to a court of higher instance, to the State Judicial Council and the Ministry of Justice, once a year, at least before 31 March for the previous year.

The courts use special information systems for the management and operation of the courts' cases, which consist of standard applications, computer and telecommunications equipment and infrastructure, system software and tools and all the data that are entered, stored and transmitted in all of the registers of the system. Misdemeanour courts operate using JCMS (Joint Case Management System), while other courts of general jurisdiction and commercial courts use ICMS (Integrated Case Management System). Through these systems it is possible to regularly monitor and evaluate the activity, performance and output of courts.

Q073-0 (General Comment): According to the Courts Act (Official Gazette, No. 28/13, 33/15, 82/15, 67/18), the president of court supervises accurate performance of court activities in due time. The president of court has a duty to write a report on the performed supervision and its results, as well as on the measures taken, at least once a month. The report has to be inserted into a case file of judicial administration. The president of court is obliged to ensure court efficiency in the resolution of cases, especially when it comes to the resolution of cases the procedure in which lasts more than three years. The president of court, except for the president of the Supreme Court of the Republic of Croatia, has a duty to submit a report on the performed tasks of judicial administration, measures and activities undertaken to improve work and efficiency of the court in the resolution of cases. The report is to be submitted directly to a court of higher instance, to the State Judicial Council and the Ministry in charge for Justice, once a year, at the latest by the 31 March for the previous year.

The president of the Supreme Court submits the report on the state of judiciary to the Croatian Parliament, once a year, at the latest by the 30th April for the previous year. In this yearly report the president of the Supreme Court can report on the state and actions of the judiciary, organizational problems in courts and legislation shortcomings as well as give suggestions for the improvement of the work of courts. The courts use special information systems for the management and operation of the courts' cases, which consist of standard applications, computer and telecommunications equipment and infrastructure, system software and tools and all the data that are entered, stored and transmitted in all of the registers of the system. Through Case Management system it is possible to regularly monitor and evaluate the activity, performance and output of courts for the Ministry of Justice and the courts themselves.

Q073-0 (2019): According to the Courts Act (Official Gazette, number 28/13, 33/15, 82/15, 82/16, 67/18, 126/19), the president of court supervises accurate performance of court activities in due time. The president of court has a duty to write a report on the performed supervision and its results, as well as on the measures taken, at least once a month. The report has to be inserted into a case file of judicial administration. The president of court is obliged to ensure court efficiency in the resolution of cases, especially when it comes to the resolution of cases the procedure of which lasts more than three years. The president of the court is obliged to take special care to respect the rights and protect children in proceedings before the courts in accordance with international standards. The president of court, except for the president of the Supreme Court of the Republic of Croatia, has a duty to submit a report on the performed tasks of judicial administration, measures and activities undertaken to improve work and efficiency of the court in the resolution of cases. The report is to be submitted directly to a court of higher instance, to the State Judicial Council and the Ministry of Justice, once a year, at least before 31 January for the previous year. The president of the Supreme Court submits the report on the state of judiciary to the Croatian Parliament, once a year, at the latest by the 30 April for the previous year. In this yearly report the president of the Supreme Court can report on the state and actions of the judiciary, organizational problems in courts and legislation shortcomings as well as give suggestions for the improvement of the work of courts.

The courts use special information systems for the management and operation of the courts' cases, which consist of standard applications, computer and telecommunications equipment and infrastructure, system software and tools and all the data that are entered, stored and transmitted in all of the registers of the system. Misdemeanour courts operate using JCMS (Joint Case Management System), while other courts of general jurisdiction and commercial courts use ICMS (Integrated Case Management System). Through these systems it is possible to regularly monitor and evaluate the activity, performance and output of courts for the Ministry of Justice and the courts themselves.

Q073-0 (2018): According to the Courts Act (Official Gazette, number 28/13, 33/15, 82/15), the president of court supervises accurate performance of court activities in due time. The president of court has a duty to write a report on the performed supervision and its results, as well as on the measures taken, at least once a month. Q070 (2019): As regards "number of appeals", from 2019 we are able to get this data from our case management system.

Q073-3 (General Comment): According to the State Attorney's Act (Official Gazette, No. 67/18), a state attorney supervises accurate performance of all state attorney office activities in due time. A state attorney submits reports to the higher state attorney on his state attorney office performance each month and annually and reports on undertaken and planned actions in cases of special state interest or in cases with complex factual or legal issues. The General State Attorney Office submits the report on the status and trends of reported crime in the previous year, on cases related to the protection of property interests of the Republic of Croatia, legal issues in particular areas and a review of the organization and personnel in state attorney organization to the Croatian Parliament, once a year, at the latest by the 30 April for the previous year. In this yearly report, there can be a warning on the state and functioning of the legal system, deficiencies in the legislation and internal affairs of the state attorney's office and suggestions for improving the work.

The state attorney offices use a special information system for the management and operation of the state attorney cases, as an interactive data base in real time. Through the CTS (Case tracking system) it is possible to regularly monitor and evaluate the activity, performance and output of state attorney offices.

Q073-4 (2018): According to the State Attorney's Act (Official Gazette, number 76/09, 153/09, 116/10, 145/10, 57/11, 130/11, 72/13, 148/13, 33/15, 82/15), a state attorney supervises accurate performance of all state attorney office activities in due time. A state attorney submits reports to the higher state attorney on his state attorney office performance each month and annually and reports on undertaken and planned actions in cases of special state interest or in cases with complex factual or legal issues. The General State Attorney Office submits the report on the status and trends of reported crime in the previous year, on cases related to the protection of property interests of the Republic of Croatia, legal issues in particular areas and a review of the organization and personnel in state attorney organization to the Croatian Parliament, once a year, at the latest by the 30 April for the previous year. In this yearly report, there can be a warning on the state and functioning of the legal system, deficiencies in the legislation and internal affairs of the state attorney's office and suggestions for improving the work.

The state attorney offices use special information systems for the management and operation of the state attorney cases, as an interactive data base in real time. Through the CTS (Case tracking system) it is possible to regularly monitor and evaluate the activity, performance and output of state attorney offices.

Q078 (2019): As regards "number of appeals", from 2019 we are able to get this data from our case management system.

Q078 (2014): On the occasion of the 2014 evaluation, it has been explained that the productivity as a performance and quality indicator, applies only to judges (not court staff).

Q083-3 (2020): According to the State Attorney Office Act (Official Gazette No. 67/18), the Minister in charge for Justice, upon the proposal of Prosecutor General, adopts the Framework criteria for the work of public prosecutors (Deputy State Attorneys).

Q083-3 (2018): According to the State Attorney's Act, the Minister of Justice, upon the proposal of Prosecutor General, adopts the Framework criteria for the work of public prosecutors.

Cyprus

Q066 (General Comment): Quality standards are applied in practice

Q066 (2017): Quality standards are applied in practice

Q066 (2016): There are no written standards but in practice there are quality standards.

Q066 (2015): In practice there are quality standards

Q066 (2014): In practice there are quality standards

Q073-0 (2020): monthly and annually

Q073-0 (2019): monthly

Q073-0 (2018): monthly and annually

Q073-0 (2017): monthly and annually

Q073-0 (2016): monthly and annually statistics

Czech Republic

Q073-1 (2016): In 2015, a new policy from the Ministry of Justice resulted in the fact that the evaluation of the court activity is used for the later allocation of means to this court.

Q073-1 (2015): In 2015, a new policy from the Ministry of Justice resulted in the fact that the evaluation of the court activity is used for the later allocation of means to this court.

Q077 (2016): The answer should be YES - there are performance indicators such as number of cases that the judge should resolve within a month, but these are not so strictly binding.

Q120-1 (2018): The individual assessment of the public prosecutors' work take place at least once every two years.

Denmark

Q066 (2019): No, we use quantitative measures. Quality is usually measured as length of time to finalize a case.

Q066 (2016): No, we use quantitative measures. Quality is measured as length of time to finalize a case.

Q066 (2015): The only standards are objective standards for example acceptable timeframes to finalize a case.

Q067 (2019): As above

Q067 (2018): The public prosecution is not part of Danish Court Administration.

Q067 (2017): Because judges are independent, we do not interfere with a judge decision. However, there is always the possibility to appeal a court decision if either of the parties disagree with the verdict.

Q067 (2016): As above.

Q073 (2019): Weighted cases is also a way to see how much activity a court has.

Q073-0 (2020): Monthly, quarterly, half yearly and yearly.

Q073-0 (2019): Monthly for the district courts quarterly for other courts.

Q073-0 (2018): Monthly for the district courts. quarterly for other courts.

Q073-0 (2017): Monthly for the district courts. Quarterly for the High Courts, the Maritime and Commercial Court and the Supreme Court.

Q073-1 (2017): Definitely. Both in relation to funds but also in relation to appointment of new judges in case of vacancy. In case of vacancy, it is not necessarily the same district court where the judge will be placed. It may change to another court. At the high court and the Supreme court the law defines a fixed number of judges at each court.

Q073-2 (2020): Half yearly weighted cases and productivity figures are worked out. These data are used to allocate resources and to find which court should have the next free judge position.

Q070 (2020): We value independence high. Therefore Danish Court Administration does not evaluate the performance or productivity of individual judges. We follow overall productivity and case flow though as that is used to allocate resources and to find the court most in need of vacant judge positions.

Q070 (2019): Courts are followed yearly in a yearly report. District courts receives monthly a report about case flow, pending cases, backlogs, weighted cases and the time it takes to finalize cases.

Q070 (2017): In Denmark we have a management system which information is updated monthly for the district courts where the points above are shown. For the High Courts and the Supreme Court, the case flow is not followed so often and in a so detailed way, but there are also much fewer cases. "Other": activity in terms of weighted cases and also pending cases

Q070 (2016): The so called "weighted cases" are measured in order to have a measure for the activity.

Q078-1 (2020): We do not have performance indicators that measure length of proceedings directly. However, we measure them indirectly, since we have performance measures on the time from a case is given to the public prosecution until the case is resolved. Earlier we have interpreted this as an indirect measure of time-frames, but we have come to the conclusion that it is more correct to say, that we do not measure timeframes.

Q073-4 (2020): Monthly

Q073-4 (2018): Monthly

Q070-1 (2020): The methodology of replying changed in this question.

The prosecution makes quarterly reports to the Ministry of Justice on data regarding number of cases, clearance rate, etc. Disposition time is measured indirectly through a report that measures all steps in a criminal case from arrest to imprisonment. There is no direct measure of disposition time, but it can be read from this report. Therefore we find it more correct to check this option. Satisfaction of the prosecution staff has always been measured but not by the ministry of justice. Therefore it was not checked last time. However, it is measured, and we therefore find it correct to check this option. The prosecution makes an annual survey on the satisfaction of the prosecution staff.

Q071 (2020): Danish Court Administration is not doing it as a general thing. If a specific court needs help, Danish Court Administration can work out list of pending cases and list them according to age to give the court a tool to locate cases that need attention.

Q072 (2020): Danish Court Administration is typically not doing this. A responsible court follow their cases though.

Q072 (2018): We monitor the overall time from the courts receive a case until it is finalized, but not what happen in between. The same goes for the prosecution

Q077 (General Comment): The data is collected for all parts of the judicial system, eg. Police, Public prosecution, courts and the prison system. The data is used to measure the performance of the individual agencies/administrations, but also - and perhaps most importantly - to measure the interplay between these.

Q077 (2017): We have for a number of categories of cases defined that a certain percentage of cases should be solved within a certain time span. It varies for the different categories of cases.

Q077 (2016): In terms of productivity figures, weighted cases and target attainments.

Q078 (2019): Backlogs is qualified by showing the average age of pending cases to the district courts.

Q083-2 (General Comment): There is a productivity target for the prosecution as a whole, but not for each public prosecutor.

Q120 (2020): Public prosecutors go through intensive education for the first three years of them being recruited and this evaluation is structured centrally with HR at the Attorney Generals office. During that period they are individually being assessed through exams and through working with mentors. Thus they are continuously being assessed both centrally through exams as well as locally through the daily work that the mentor sees. Later in the career the assessment is not structured in such a way but all through their career the prosecutors are evaluated through their daily work and how they perform in court.

Q120-1 (2020): See response to 120: More frequent during the first three years of their career. Less frequent after that.

Estonia

Q066 (General Comment): Estonia has developed a quality system consisting of 3 parts. The first part contains the quality standards (good practice) for the management of the court that describe activities related to the chairman of the court. The second part contains the quality standards for the administration of courts and is focused on the different roles of the parties involved in the administration of courts: directors, Ministry of Justice, Council for the Administration of Courts. The third part contains quality standards for the court proceedings and is addressed to all the judges. All of the three parts of the quality standards have been discussed and approved by the Council for Administration of Courts, respectively in 2012, 2013 and 2015.

Q073-0 (2020): 4 times a year.

Q073-0 (2019): 4 times a year.

Q073-0 (2017): Every 4 months but if necessary even more frequent.

Q073-1 (2016): It can be part of it but it's not a rule.

Q070 (General Comment): The scope of the monitoring system is extended to the results of proceedings; the categories of cases; the number of decisions appealed and revoked, fully or partially. The waiting time and the 'age' of pending (not solved) cases are also monitored. It is worthy of mention that every year all the courts and the Ministry of Justice enter into an agreement according to which courts should aim to carry out structural changes and to make changes in case-flow management that will ultimately ensure efficient proceedings. The content of the agreement has changed since 2017. The goals are more general and the same for all the courts (except The Supreme Court).

Q070 (2017): See previous general comments.

Q070 (2016): see general comments

Q078 (2014): In 2014, the number of old cases has been considered among the main performance and quality indicators that have been defined. In 2012, this was not an official policy. In 2014, according to the decree adopted by the Minister of Justice, any case that has been pending for longer than two years is considered as an "old case".

Finland

Q066 (General Comment): There are quality projects covering both civil and criminal cases in the Court of Appeal of Rovaniemi judicial district and in the Helsinki Court of Appeal judicial district. In a quality project, one or several working groups are set up usually for a year. There are judges from each district court within the judicial district of a court of appeal and court of appeal judges and referendaries in the working group. Depending on the topic, prosecutors, attorneys-at-law and other lawyers, public legal aid lawyers and police may also participate in the working group's work. The working group writes a report on a specific theme, for example developing conduct of the court proceedings or legal costs in criminal and civil cases. The written report is presented and discussed in a formal event and published. The aim is to provide legal professionals with practical information and guidelines on a certain topic.

In addition, there are co-operation projects between administrative courts.

Prosecution Services' system quality improvement project is underway.

The Finnish Association of Judges compiled and published Ethical Principles for Judges in 2012.

Q066 (2020): Prosecution Services' system quality improvement project is underway.

Q066 (2015): There is a Quality Project of the courts in the jurisdiction of the Court of Appeal of Rovaniemi. (The jurisdiction of the Court of Appeal of Rovaniemi is the northernmost of the six appellate jurisdictions in Finland.) In 1999, the courts in the jurisdiction of the Court of Appeal of Rovaniemi launched a project for improvement of quality in adjudication. The quality project covers both civil cases and criminal cases.

The objective of the quality project is to develop the functioning of the courts further and further so that the proceedings meet the criteria of a fair trial, that the decisions are well reasoned and justified, and that the services of the courts are affordable to the individual customers. The main working method consists of systematic discussions

among the judges and also between the judges and stakeholders. The development work is steered by the development committee of the quality project. Normally four working groups for quality are set up for each year. The membership consists of judges from each of the District Courts in the appellate jurisdiction, members of the Court of Appeal, and referendaries of the Court of Appeal. Also prosecutors, private attorneys, public legal aid attorneys and heads of pre-trial investigation may serve as members in the working groups for quality. Each working group for quality is tasked to deal with one of the development themes which have been selected. The reports of the working groups are presented at the Quality Conference, they are discussed, and quality objectives based on the reports are set for the following year. The Report of Quality, containing the final reports, is published every year.

There is also a quality project of the courts in the jurisdiction of the Court of Appeal of Helsinki. Quality Project consists of working methods of two kind: cooperation with the University of Helsinki and working groups. Working groups for quality are set up for each year. The membership consists of judges from District Courts, members of the Court of Appeal, referendaries of the Court of Appeal, prosecutors and lawyers. Each working group for quality is tasked to address to one of the development themes which have been selected. The reports of the working groups are presented at the conference called 'Day of Jurisdiction'.

In addition there is a cooperation project between administrative courts. Some topics of the project have related to the quality standards. The reports of the project have discussed the matters like the factors of quality at administrative courts and the collection of information on quality.

It is also worth mentioning that on 15 October 2009, the presidents of Finnish Courts of Appeal proposed that the Finnish Association of Judges should begin work on drafting ethical guidelines for judges. A working group was set and the draft on ethical principles was discussed widely. The principles were formally released at the Judge Day event held in Helsinki on 12 October 2012.

Q073-0 (2020): During the annual budget negotiations the performance of each court is evaluated. However, the general performance of the courts as a whole (for example disposition times) is monitored more frequently.

Q073-2 (2020): The evaluation is used for later allocation of resources in the courts but the evaluation is not the main criteria when allocating the resources.

Q073-2 (2019): The evaluation is used for later allocation of resources in the courts but the evaluation is not the main criteria when allocating the resources.

Q073-2 (2018): The evaluation is used for later allocation of resources in the courts but the evaluation is not the main criteria when allocating the resources.

Q070 (General Comment): All courts keep statistics of the mentioned court activities in the operational case management systems. The National Courts Administration can access these figures through a reporting system.

Q070 (2019): satisfaction of court staff is monitored with job satisfaction surveys which are taken every second year

Q077-1 (2020): Performance yes, quality no - See answer 066

Q073-4 (2020): Biannually. The prosecution services are evaluated twice a year.

Q073-4 (2018): When necessary.

Q070-1 (2020): "Backlogs": cases that have been pending for longer than a year are monitored.

Q072 (2020): Within the courts, the time the case is pending in a court is monitored.

Q072 (2018): Within the courts, the time the case is pending in a court is monitored.

Q077 (2019): Statistics Finland no longer collects statistical data regarding the functioning of the courts and the judiciary. The Ministry of

Justice/National Courts Administration collects data and publishes the annual operational statistics, please see for example Courts statistics 2019 (in Finnish): <http://urn.fi/URN:ISBN:978-952-259-912-4>

Q078 (2020): Statistics Finland (until 2013) or Ministry of Justice (until 2019) no longer collect statistical data regarding the functioning of the courts and the judiciary. From 2020 onward the National Courts Administration collects data and publishes the annual operational statistics.

Q078 (2018): Statistics Finland no longer collects statistical data regarding the functioning of the courts and the judiciary. The Ministry of Justice collects data and publishes the annual operational statistics, please see for example Courts statistics 2018 (in Finnish): <http://urn.fi/URN:ISBN:978-952-259-745-8>

France

Q066 (2020): "If yes, please specify: Quality standards developed for public administration are used in the judicial system. The charter of the administrations thus sets the rules for the reception of litigants in all the courts and can lead to certification. There are also local initiatives aimed at setting up a "quality system" based on certification by an external body, which consist in establishing procedures describing the reception process, the organization of work and the management of a case. With regard to administrative justice: the rate of annulment and reversal of jurisdictional decisions must be kept below 15% and the stock of cases older than two years below 7.5% of the total stock."

Q066 (2019):

Quality standards developed for public administration are used in the judicial system. The charter of administrations thus sets out the rules for the reception of litigants in all courts and may give rise to certification. There are also local initiatives to set up a "quality system" based on certification by an external body, which consists of establishing procedures describing the process of reception, work organisation and management of a case.

Administrative justice: the rate of annulment of court decisions must be kept below 15% and the number of cases pending for more than two years.

Q066 (2016): Quality standards developed for public administration are used in the judicial system. The charter of the administrations determines the rules for the reception of litigants in all courts and may give rise to certification. There are also local initiatives aimed at setting up a "quality system" based on certification by an external body, which consists in establishing procedures describing the process of reception, organisation of work and management of a case.

Q067 (2020): The answer is no for the administrative justice.

Q067 (2014): 2010: State prosecutors draw an annual report on the activity, management of their public prosecution office and on the enforcement of the law, as well as an annual report concerning the measures of custody and the condition of the custody facilities.

Q067 (2012): 2012: in French law on the judicial organisation, there is no statutory or regulatory requirement providing specialised staff in courts responsible for quality norms.

However, as part of the maintenance dialog to have operational resources, each court fills a document for the Ministry of Justice, comprising informations such as the number of handled cases, pending cases, the number of judges and administrative staff, as well as the performance objectives to reach. This document is not available on the intranet to all of the staff. Only agents of the Ministry in charge of the maintenance dialog have access to these figures thanks to appropriate softwares.

Q073 (2016): Administrative courts also use dashboards on monthly basis, while civil and criminal courts receive quarterly management activity reports via a business application.

Q073 (2014): 2012, 2013, 2014: for the administrative courts, the performance indicators comprised an estimate and objectives updated every three months. The activity is assessed every year in the administrative jurisdictions during management conferences. A monitoring board for the activity is transmitted every month to the heads of administrative jurisdictions.

Q073 (2013): 2012, 2013, 2014: for the administrative courts, the performance indicators comprised an estimate and objectives updated every three months. The activity is assessed every year in the administrative jurisdictions during management conferences. A monitoring board for the activity is transmitted every month to the heads of administrative jurisdictions.

Q073 (2012): 2012, 2013, 2014: for the administrative courts, the performance indicators comprised an estimate and objectives updated every three months. The activity is assessed every year in the administrative jurisdictions during management conferences. A monitoring board for the activity is transmitted every month to the heads of administrative jurisdictions.

Q073-0 (2020):

With regard to the courts of the judicial order, there are two objectives for evaluating the performance of the courts. The first is the need to provide the heads of courts with steering elements via monthly dashboards (civil and criminal); the second consists, in the context of annual management dialogues, in proposing dashboards covering a whole year. These dashboards are freely accessible in order to allow for a very wide distribution to all the actors and thus encourage comparison, the first vector of performance analysis.

Q073-0 (2019): Concerning civil and criminal branches, there are two objectives for evaluating courts' performance. The first lies in the need to provide the heads of courts with steering elements via monthly dashboards (Civil and Criminal), the second in the context of annual management dialogues, the dashboard covering this time a whole year. These dashboards are freely accessible so that they can be widely diffused to all stakeholders and thus facilitate comparison, the latter being the primary means of analysing performance. Administrative courts also use monthly dashboards and civil and criminal courts receive quarterly reports on steering activities via a business application.

Q073-0 (2018): For judicial courts, the performance analysis is based on the PHAROS information centre used by courts (courts and prosecution services) and central administration.

The results of the management dialogues are published in July. The so-called steering returns can be updated every quarter and every month according to the disputes monitored.

For administrative courts, the frequency is annual

Q073-1 (2017): Annual management conferences (management dialogues) are held between the Ministry or the General Secretariat of the Council of State, depending on whether the court is judicial or administrative, during which the activity indicators of each court are analysed for the previous year and, in the light of the objectives achieved, the objectives and the resources in terms of credits and personnel granted for the coming year are set.

Q073-1 (2016): Annual management conferences (management dialogues) are held between the Ministry or the General Secretariat of the State Council (Conseil d'Etat), depending on whether the court is civil, criminal or administrative, during which, the activity indicators of each court are analysed for the past year, and, in the light of the objectives achieved, the objectives and the means in terms of credits and staff granted are set for the coming year.

Q073-2 (2020): No comment

Q073-2 (2019): Annual management conferences (management dialogues) are held between the Ministry or the General Secretariat of the Supreme Administrative Court (Conseil d'Etat), depending on whether the court is civil/criminal or administrative, during which the activity indicators of each court are analysed for the past year and, in the light of the objectives achieved, the objectives and the resources in terms of credits and personnel granted are set for the coming year.

Q073-2 (2018): The evaluation of a court's activity contributes in part to the subsequent allocation of resources to that court, in particular for the location of jobs for judges and civil servants.

However, the performance indicators are cross-referenced with other data (HR data, budgetary data, etc.) in the context of the allocation of human resources and the distribution of appropriations.

Q070 (2020): Judicial and administrative jurisdictions combined.

Q070 (2019): Civil and criminal justice: After the deployment of innovative applications, satisfaction questionnaires are sent to users in the courts (heads of courts, directors of registries, judges and registry officials) in order to improve change support actions and the implementation.

In addition, with regard to victims, the Ministry of Justice will conduct a satisfaction survey in the second half of 2019 among victims of criminal offences who resort to victim support associations. The results of this survey, similar to a previous survey conducted in 2011, could be published in 2020. Likewise, the Ministry of Justice is attentive to citizens' views on the way they are received in the courts. For several years now, surveys have been conducted on the reception in the courts by a service provider pretending being a litigant. In 2018, an online survey, coupled with a face-to-face survey, was conducted in seven 1st instance courts "tribunaux de grande instance" among litigants appearing in these courts. In 2019, the satisfaction survey will be carried out in all "tribunaux de grande instance" via an online survey accessible by internet address or QR code. Finally, a national survey is also under way on the reception of litigants in the courts in the specific context of the implementation of social centres within the "tribunaux de grande instance" and the integration within these courts of the three separate courts that previously dealt with these types of litigation. The survey, carried out among court staff, aims to assess the difficulties encountered by persons presenting themselves at the reception desk and to identify any corrections that could be included in the texts.

The reply to the question encompasses replies from administrative justice and civil and criminal justice.

Q070 (2018): The coverage rate of cases as well as the structure of civil or criminal litigation are used by the courts.

In addition, other indicators usefully complete the analysis: .

Share of decisions on the merits in completed cases (civil activity).

Share of referrals in completed cases (civil activity).

Theoretical time to sell off the stock.

Average age of the stock.

Percentage of cases over 12 months in stock (civil activity).

Q070 (2017): The number of cases referred is an indicator used only by administrative courts.

The courts have business applications to monitor their civil and criminal activities. At national level, data from these applications is

from these applications are collected automatically via infocentres, reprocessed and cross-referenced, then in the form of tables or graphs. These reports can be generated on a monthly basis, except for certain activity data (court of appeal).

These reports can be generated on a monthly basis, except for certain activity data (criminal courts, juvenile court judges, enforcement of sentences), for which reports are generated annually.

These infocentres enable the courts to monitor statistics and manage their activity. They enable the central administration to They enable the central administration to prepare management dialogues from a performance perspective.

Q070 (2016): The number of cases subject to referral is an indicator used only by administrative courts.

Courts have business applications to monitor their civil and criminal activities. At national level, data from these applications are collected automatically via info-centres, processed and cross-referenced, and then presented in the form of tables or graphs. These refunds can be generated monthly, except for certain activity data (assize court, juvenile judges, enforcement of sentences), for which the refunds are annual.

These info-centres enable courts to carry out a statistical follow-up and to monitor their activities. They allow the central administration to prepare management dialogues from a performance perspective.

Q070 (2015): The number of cases being referred is used only by administrative courts.

The rate of coverage of cases is used by judicial courts.

The state of stocks by age group is used by administrative courts.

Q070 (2014): 2013, 2014, the category "others" includes:

- the coverage rate of cases (used by judicial courts)
- the state of the stocks per age group (used by administrative courts)

It should be noted that concerning the indicators mentioned in the question, the number of appealed cases is only used by administrative courts.

Q070 (2013): 2013, 2014, the category "others" includes:

- the coverage rate of cases (used by judicial courts)
- the state of the stocks per age group (used by administrative courts)

It should be noted that concerning the indicators mentioned in the question, the number of appealed cases is only used by administrative courts.

Q070 (2012): 2010, 2012: the category "others" includes the state of the stocks per age group. It should be noted that concerning the indicators mentioned in the question, the number of appealed cases is only used by administrative courts

Q078-1 (2020):

This data is not available.

Q073-6 (2020): No additional information is available.

Q070-1 (2020): Judicial jurisdiction.

Q071 (2020): No further indication.

Q071 (2016): In civil matters, courts of first instance (TGI), labour courts (conseils de prud'hommes) and courts of appeal can measure their stock on the basis of business applications or data returns carried out by info-centers.

The identification of cases not processed within a reasonable time is easier through business applications that offer dashboards breaking down cases in stock by age group.

In criminal matters, first instance courts (TGI) can use the Cassiopée business application to record cases in stock at the registry and the number of unedited judgments. The situation of cases in stock at the registry office cannot be measured via the info-centre, which only allows establishing the number of cases registered with the Public Prosecutor's Office and the Correctional Service.

Q072 (2020): Answer for the court.

Q078 (2020): No comment.

Q078 (2019): Replies from both the Directorate of Civil and Criminal Services (Direction des services judiciaires) and the Supreme Administrative Court (Conseil d'Etat) on civil, criminal and administrative justice.

Q078 (2018): The coverage rate of cases as well as the structure of civil or criminal litigation are used by the courts.

In addition, other indicators usefully complete the analysis: .

Share of decisions on the merits in completed cases (civil activity).

Share of referrals in completed cases (civil activity).

Theoretical time to sell off the stock.

Average age of the stock.

Percentage of cases over 12 months in stock (civil activity).

Q078 (2014): In 2014, the category "others" refers to the civil and criminal cassation rate for judicial justice and the annulment rate for administrative justice. Among the main performance indicators of these jurisdictions, are the rate and the time of enforcement of sentences, the criminal response rate, the use of ADR rate, the dismissal of national criminal record rate, the number of dematerialised exchanges for judicial jurisdictions. Regarding the administrative jurisdictions, there is an anticipated average time for the judgement of cases and the proportion of pending cases for more than 2 years.

Concerning the enforcement of criminal decisions, it has been decided to make a performance indicator out of it in 2014, but the available statistical tools make it impossible to produce it.

Germany

Q066 (General Comment): Since 2012, the reply "No" is provided depending on the answer of the majority of the respondent Landers.

Q066 (2013): For 2010, 2012 and 2013, no information was provided from Mecklenburg-Western Pomerania and Thuringia. Four Landers replied “Yes”, while the remaining Landers answered “No”.

In Baden-Württemberg, the performance of each court is compared against the others in regard to number and duration of proceedings. Key performance indicators on performance ability of the courts are ascertained and compared at the Lander level.

A comprehensive quality management system has been introduced in Schleswig-Holstein at all courts and public prosecution offices. All of the accessible areas of the court administration are subject to quality management. Judicial independence and the professional independence of Rechtspfleger present natural constitutional and statutory boundaries that must always be considered.

In Brandenburg, a quality management system seeks to guarantee that quality demands that are statutorily prescribed, self-imposed, or demanded by users of the system are fulfilled with an optimal use of resources. These last years, a number of strategies have been implemented for ensuring quality in the justice system by means of cost and performance accounting, a controlling system, budgeting of personnel costs, benchmark procedures, balanced scorecard, the EFQM Model, various instruments for personnel and organisation development, calculation of personnel requirements, optimisation of business processes, surveys of attorneys, citizens, and employees, and evaluation instruments both for individual judicial and public prosecution work as well as for the courts and public prosecution offices as organisational units. The increased use of modern technology (e.g. Internet) has opened up the possibility for the justice system to reach a large number of citizens and, thus, to offer court users the best possible service. Likewise, the continuous expansion of electronic legal transactions offers new opportunities for improvement in the quality of the justice system with regard to the performance characteristics public accessibility and public service. However, the developments and models named are not uniformly established in the Lander. In Lower Saxony, a quality strategy was developed through the surveys AgiL (performance comparison of local courts) and LiVE (performance comparison of regional courts). This is based on the assumption that it is possible to compare courts by the collection of data. Following the comparison, an analysis is conducted to determine the reasons for which better numbers are achieved at one court location over another. These are then discussed in expert groups and measures are developed to promote those tools that seem likely to succeed for the duties at all court locations. The surveys do not serve to evaluate individual employees but rather to uncover structures that promote performance, which can then be transposed. This quality management concept takes place together with judicial councils and personnel representatives.

Q067 (2020): Due to judicial independence, there are no national level quality standards.

Q073 (2013): In respect of the 2010, 2012 and 2013 exercises no information was provided from Mecklenburg-Western Pomerania and Thuringia. Five States provided a positive reply, while the remaining Landers answered “NO”. As to Bavaria, the information varied depending on the individual court jurisdiction for which information was provided: “YES” for Bavarian fiscal courts and “NO” for the remaining Bavarian courts.

In Brandenburg, the analysis is only subject to the figures provided regarding incoming cases, conclusions, duration of proceedings, number of court persons working, etc., which could possibly be used as indicators for the assessment of the performance abilities and the quality standards of the court. In Bremen, there is a benchmarking based upon key performance indicators.

In Lower Saxony regular assessments of the activities of the courts and public prosecution offices take place through administrative supervision. Qualitative evaluation of court activities is not possible through the implemented statistics and, based upon the constitutional law guarantee of judicial independence, is not desired. Likewise, the current view in Saarland is that such an evaluation system is incompatible with judicial independence protected by the Basic Law. Moreover, in North-Rhine/Westphalia, monitoring adjudicative activities is prohibited based upon constitutional law grounds. In this Lander there is a comprehensive system for assessing internal business. In certain areas there is also a management information system with statistical core data relevant to management on the number of incoming cases, duration of proceedings, and numbers of conclusions.

Saxony-Anhalt specified that the instrument for operative and strategic management of the courts is the management report. In the conceptual (as regards content) design of the management reports, the department comparison is defined as central criteria. This approach results, on the one hand, in a comparison of one's own department with the average of all departments and, on the other hand, in taking account of the basic idea behind benchmarking, with the average of the three best departments. Concrete measures with calculable targets are set forth in target agreements between the Ministry for Finance and the Ministry for Justice and Equality as well as in how they are structured with each budgeted department. The bases for this, among others, are indicators in the management reports.

Q073 (2012): In respect of the 2010, 2012 and 2013 exercises no information was provided from Mecklenburg-Western Pomerania and Thuringia. Five States provided a positive reply, while the remaining Landers answered "NO". As to Bavaria, the information varied depending on the individual court jurisdiction for which information was provided: "YES" for Bavarian fiscal courts and "NO" for the remaining Bavarian courts.

In Brandenburg, the analysis is only subject to the figures provided regarding incoming cases, conclusions, duration of proceedings, number of court persons working, etc., which could possibly be used as indicators for the assessment of the performance abilities and the quality standards of the court. In Bremen, there is a benchmarking based upon key performance indicators.

In Lower Saxony regular assessments of the activities of the courts and public prosecution offices take place through administrative supervision. Qualitative evaluation of court activities is not possible through the implemented statistics and, based upon the constitutional law guarantee of judicial independence, is not desired. Likewise, the current view in Saarland is that such an evaluation system is incompatible with judicial independence protected by the Basic Law. Moreover, in North-Rhine/Westphalia, monitoring adjudicative activities is prohibited based upon constitutional law grounds. In this Lander there is a comprehensive system for assessing internal business. In certain areas there is also a management information system with statistical core data relevant to management on the number of incoming cases, duration of proceedings, and numbers of conclusions.

Saxony-Anhalt specified that the instrument for operative and strategic management of the courts is the management report. In the conceptual (as regards content) design of the management reports, the department comparison is defined as central criteria. This approach results, on the one hand, in a comparison of one's own department with the average of all departments and, on the other hand, in taking account of the basic idea behind benchmarking, with the average of the three best departments. Concrete measures with calculable targets are set forth in target agreements between the Ministry for Finance and the Ministry for Justice and Equality as well as in how they are structured with each budgeted department. The bases for this, among others, are indicators in the management reports.

Q070 (General Comment): At the level of the Federal Government, statistics on proceedings encompass the number of incoming cases, the type of proceeding, the form of conclusion, and the time needed for conclusion. Moreover, information regarding other characteristics is also collected (legal aid in litigation and legal aid for proceedings, value of dispute, subject area, remedies, etc.) All of this information can be correlated to one another upon evaluation. The regular evaluations can be found in the publications of the Federal Statistical Office. Data regarding the business overviews usually does not contain – in that it involves manual statistics – additional information beyond the business workload, particularly as regards the duration of proceedings.

Q070 (2020): The monitoring activities mentioned under "other" were reported only by some of the Länder.

Q070 (2019): Some of the Länder did mention a monitoring system concerning other court activities such as statistics on the nature of resolution are kept (e.g. in civil cases: dealt with by contentious judgment/by acknowledgement/by settlement, etc.).

Q070 (2018): Some of the Länder did mention a monitoring system concerning other court activities such as statistics on the nature of resolution are kept (e.g. in civil cases: dealt with by contentious judgment/by acknowledgement/by settlement, etc.).

Q070 (2016): other: Some of the Länder did mention a monitoring system concerning other court activities such as statistics on the nature of resolution are kept (e.g. in civil cases: dealt with by contentious judgment/by acknowledgement/by settlement, etc.).

Q070 (2014): In 2014, some of the Landers did mention a monitoring system concerning other court activities, namely statistics on the nature of resolution (e.g. in civil matters cases are dealt with by contentious judgment/by acknowledgement/by settlement, etc.).

Q070 (2013): In 2013, seven Landers communicated information on their regular monitoring system. For example, Baden-Württemberg refereed to calculation of the specific personnel requirements on a mathematical-analytical basis. Bavaria mentioned the type of proceedings, form of decision, etc. for courts of labour and social jurisdiction and workload, ratio of part-time employees; average age of employees, training and sick days, duration of proceedings in months, ratio of appeals for courts of general jurisdiction. In Brandenburg, the number of pending cases and the ratio of terminated proceedings as against incoming cases are monitored.

Q070 (2012): For 2010 and 2012, five Landers did not provide any reply. Seven Landers communicated detailed information on their regular monitoring system of courts' activity. Among the main other monitored parameters are the deadlines for the drafting of judgments (Bavaria), the number of pending cases and the ratio of terminated proceedings as against incoming cases (Brandenburg), the nature of resolution – cases dealt with by contentious judgment, by acknowledgment, by settlement etc. (Hamburg), cases allocated among staff, i.e. caseload quota (Hesse); finance benchmarks, item costs, standardized deployment of person hours related to product (Saxony-Anhalt).

Q078-1 (2020): Just over half of the Länder answered that quality indicators have been defined for backlogs, a few reported that quality indicators for satisfaction of users, costs, clearance rate or disposition time have also been defined.

Q070-1 (2020): A few Länder answered that they have also been monitoring productivity and costs.

Q071 (2020): The majority, but not all of the Länder have reported to monitor pending cases and backlogs.

Q071 (2018): In 2018, Länder have monitored the number of pending cases and the backlogs.

Q078 (2020): Scarcely half of the Länder answered that quality indicators have been defined for backlogs, a few reported that quality indicators for costs, number of appeals, appeal ratio, clearance rate or disposition time have also been defined.

Q083-3 (2020): There are no quantitative performance targets for each public prosecutor

Greece

Q066 (General Comment): Quality standards are set by the Code of Organization of Courts and Status of Judicial Officers (Law 1756/1988).

Q066 (2017): Most of the measures taken recently in Greece aim at speeding up Justice. However the Law provides a set of quality criteria that must be taken into account when inspectors check the performance of each judge.

Q067 (2017): The Law provides a set of quality criteria that must be taken into account when inspectors check the performance of each judge.

Q073 (2017): According to L. 1756/1988 (art. 85), supreme judges appointed as inspectors for one year's term redact every year General Reports on the operation of each Court and prosecutor's Office in their district and recommend the necessary measures for the proper functioning of the service. Furthermore, data regarding the flow of cases collected by the Ministry of Justice is used for ad hoc analysis (e.g. to provide a basis for decisions regarding the function of courts or answers to questions of parliamentary control).

Q073-0 (2017): The regular evaluation activity is performed every year. Besides, the Law 1756/1988 provides for inspections. Namely, according to art. 85, supreme judges appointed as inspectors for one year term redact every year General Reports on the operation of each Court and prosecutor's Office in their district and recommend the necessary measures for the proper functioning of the service. Furthermore, data regarding the performance of courts is collected as follows: Regarding Administrative courts and Civil procedure the data is collected every quarter. Regarding penal procedure this is collected every semester.

Furthermore, ad hoc evaluations are conducted, based on the data collected every quarter and semester respectively.

Q073-1 (2017): Concerning the staff of the court, under certain circumstances, this evaluation of the Court activity could lead to a decision to increase or diminish it.

Q070 (General Comment): According to Law 1756/1988 (art. 85), supreme judges appointed as inspectors for one year's term, redact every year general reports on the operation of each court and prosecutor's office in their district and recommend the necessary measures for the proper functioning of the service. Regarding administrative courts, this task is fulfilled by the General Commission of the State for ordinary administrative courts

Q070 (2019): The Greek government has introduced a new system for organizing and evaluating the planning and implementation of public sector actions and projects, which introduces among others, monitoring court activities. (L. 4622/2019 art. 49 foll.)

Q070 (2017): Regarding Administrative Courts, this task is fulfilled by the General Commission of the State for ordinary administrative courts. In the near future there will be a possibility for the General Commission of the state to use a business intelligence program, in order to extract composite statistical data without contacting any court [E-mail: g-epitropia-d-d@otenet.gr]

Q072 (General Comment): The waiting time during court procedures is monitored annually through the inspection process. The interval between the adjudication of the case and the issuance of the decision is watched, so that the judge does not have much pending and there is a quick delivery of justice.

Q072 (2018): There is a monitoring system regarding the length of the judicial procedure, but it does not include such kind of information.

Q072 (2016): There is a monitoring system regarding the length of the judicial procedure, but it does not include such kind of information.

Q077 (2017): N/A

Q078 (2019): The Greek government has introduced a new system for organizing and evaluating the planning and implementation of public sector actions and projects, which envisages, among other things, the preparation of action plans that include various performance indicators. (L. 4622/2019 art. 49 foll.)

Q120 (General Comment): The court and prosecution offices Inspection and the Inspection of judges and prosecutors is being carried out by a Council and Inspection bodies, staffed by judicial officers. Inspectors draw up a separate, detailed and substantiated report for each judge of their court district. This report evaluates: the moral quality, vigor and character, scientific qualifications, judicial judgment and perception, diligence, hardworking and service (qualitative and quantitative) performance, Justice administration, wording of court decisions and procedure management capacity and concerning Prosecutors, the capacity to administer justice, both in the pre-litigation procedure and hearing, as well as their oral speech capacity, the judges' behavior in general and in the audience, as well as his social status. The inspector shall also indicate in the report whether s/he considers as eligible for promotion, the Judges of First Instance and the Deputy Prosecutors of First Instance who have completed five years of service in their grade, as well as the judges and prosecutors from the rank of the Judge President to the Court of First Instance and Prosecutor of First Instance and above, after the completion of one year in their grade. Inspectors' reports shall be submitted to the Chairman of the Council of Inspectors within two months from the end of their term of office. In the event of an extraordinary or additional inspection, the report shall be submitted immediately after it has been carried out. A copy of each report shall be submitted by the Chairman of the Inspection Council to the Minister of Justice and, as the case may be, to the President and the Prosecutor of the Supreme Court, the President of the Council of State, the President of the Court of Auditors and the Auditor General of the Court of Auditors and the General Commissioner of the General Commission of the State. A copy of the inspection report shall be placed on the individual file of the inspected person. Another copy is being handed over to the inspected person by the competent department of the Ministry of Justice.

Hungary

Q066 (General Comment): Second instance courts have to prepare a note on the decision and the trial procedure of the first instance court, based on professional criteria in every case. In this note, the court of appeal has to examine: the application of substantive, procedural and administrative regulations; the preparation of the hearings; the quality of the judges trial leading practice; if the coercive measures were well founded; if the hearings were set timely; if the ruling was transcribed in time; if the decision was edited correctly. The conclusions are summarized and judges of first instance courts are informed about them at least once a year.

Furthermore, the departments of the Supreme Court (Kúria) responsible for examining the judicial practice evaluates the practice of the courts and regularly inform judges about their experience.

Q073 (2014): On the occasion of the 2013 and 2014 evaluations, it has been stressed that the statistics of the court system are carried out every quarter, semi-annually and annually. It is published on the central internet website of the courts every half year.

If some elements of the IT system described in 2012 have been implemented, this system is not yet able to replace the regular methods of measuring workload.

Q073 (2013): On the occasion of the 2013 and 2014 evaluations, it has been stressed that the statistics of the court system are carried out every quarter, semi-annually and annually. It is published on the central internet website of the courts every half year.

If some elements of the IT system described in 2012 have been implemented, this system is not yet able to replace the regular methods of measuring workload.

Q073 (2012): On the occasion of the 2012 exercise, it has been mentioned that the development of an IT system was under way which would make it possible to automatically measure and evaluate the workload of judges.

Q073-0 (2020): The statistics of the court system are composed in every quarter, half and whole year. It is published on the central internet website of the courts in every half year.

Q073-0 (2019): The statistics of the court system are composed in every quarter, half and whole year. It is published on the central internet website of the courts in every half year.

Q073-0 (2018): The statistics of the court system are composed in every quarter, half and whole year. It is published on the central internet website of the courts in every half year.

Q073-0 (2017): The statistics of the court system are composed in every quarter, half and whole year. It is published on the central internet website of the courts in every half year.

Q073-1 (General Comment): The statistical output of a court (mainly the number of incoming and pending cases) is taken into consideration during the distribution of human resources.

Q073-2 (2019): The statistical output of a court (mainly the number of incoming and pending cases) is taken into consideration during the distribution of human resources.

Q070 (General Comment): Among others:

- individual judge's statistics, - statistics on the reasons of the postpone of the trials,
- number of trial days in cases, - number of tried cases per day,
- pending cases of an individual judge / court,
- the time frame of pending cases
- number of appealed cases,
- the subject of incoming / finished / pending cases,
- the ratio of litigious and non-litigious cases,
- cases that are pending over 2 or 5 years have a separated statistical report every month
- cases in which there were no actions taken in the last 30 days by the court have a separated statistical report every month

Q070 (2020): - statistics on the reasons of the postpone of the trials,

- number of trial days in cases, - number of tried cases per day,
- the subject of incoming / finished / pending cases,
- the ratio of litigious and non-litigious cases,
- cases that are pending over 2 or 5 years have a separated statistical report every month
- cases in which there were no actions taken in the last 30 days by the court have a separated statistical report every month

Q070 (2019): Other:

- statistics on the reasons of the postpone of the trials,
- number of trial days in cases, - number of tried cases per day,
- the subject of incoming / finished / pending cases,
- the ratio of litigious and non-litigious cases,
- cases that are pending over 2 or 5 years have a separated statistical report every month
- cases in which there were no actions taken in the last 30 days by the court have a separated statistical report every month

Q070 (2018): Other:

- statistics on the reasons of the postpone of the trials,
- number of trial days in cases, - number of tried cases per day,
- the subject of incoming / finished / pending cases,
- the ratio of litigious and non-litigious cases,
- cases that are pending over 2 or 5 years have a separated statistical report every month
- cases in which there were no actions taken in the last 30 days by the court have a separated statistical report every month

Q070 (2015): Among others:

- individual judge's statistics,
- statistics on the reasons of the postpone of the trials,
- number of trial days in cases,
- number of tried cases per day,
- pending cases of an individual judge / court,
- the time frame of pending cases
- number of appealed cases,
- the subject of incoming / finished / pending cases,
- the ratio of litigious and non-litigious cases,
- cases that are pending over 2 or 5 years have a separated statistical report every month
- cases in which there were no actions taken in the last 30 days by the court have a separated statistical report every month

Q070 (2014): In 2013 and 2014, among other are quoted individual judge's statistics, statistics on the reasons of postponing trials, the number of trial days, the number of tried cases per day, the number of pending cases of an individual judge/court, the time frame of pending cases, the number of appealed cases, the subject of incoming/resolved/pending cases, the ratio of litigious and non-litigious cases. Cases that are pending over 2 or 5 years have a separated statistical report every month, as well as cases in which there were no actions taken in the last 30 days by the court.

Q070 (2013): In 2013 and 2014, among other are quoted individual judge's statistics, statistics on the reasons of postponing trials, the number of trial days, the number of tried cases per day, the number of pending cases of an individual judge/court, the time frame of pending cases, the number of appealed cases, the subject of incoming/resolved/pending cases, the ratio of litigious and non-litigious cases. Cases that are pending over 2 or 5 years have a separated statistical report every month, as well as cases in which there were no actions taken in the last 30 days by the court.

Q070 (2012): In 2010 and 2012, a reference is made to individual judge's statistics, statistics on the reasons of postponing trials, the number of trial days, the number of resolved cases, the number of cases scheduled within one day, the number of pending cases of an individual judge.

Q071 (General Comment): Judges have to report those cases on a monthly basis that are pending for more than 2 years. The president of the court can order a fast-track procedure for a case based on the report.

Q071 (2018): Judges have to report those cases on a monthly basis that are pending for more than 2 years. The president of the court can order a fast-track procedure for a case based on the report.

Q072 (General Comment): The administrative office of the court reports those cases to the president in which there was no judicial activity in the last 30 days.

Q072 (2018): The administrative office of the court reports those cases to the president in which there was no judicial activity in the last 30 days.

Q078 (General Comment): Measuring the satisfaction of court users has been introduced in 2014.

Q078 (2020): Among others: individual judge's statistics; statistics on the reasons of the postpone of the trials; number of trial days in cases;

number of cases heard per day; pending cases of an individual judge / court; the time frame of pending cases; number of appealed cases; the subject of incoming / finished / pending cases; the ratio of litigious and non-litigious cases; cases that are pending over 2 or 5 years have a separated statistical report every month; cases in which there were no actions taken in the last 30 days by the court have a separated statistical report every month

Q078 (2019): Among others: individual judge's statistics; statistics on the reasons of the postpone of the trials; number of trial days in cases;

number of cases heard per day; pending cases of an individual judge / court; the time frame of pending cases; number of appealed cases; the subject of incoming / finished / pending cases; the ratio of litigious and non-litigious cases; cases that are pending over 2 or 5 years have a separated statistical report every month; cases in which there were no actions taken in the last 30 days by the court have a separated statistical report every month

Q078 (2018): Among others: individual judge's statistics; statistics on the reasons of the postpone of the trials; number of trial days in cases; number of cases heard per day; pending cases of an individual judge / court; the time frame of pending cases; number of appealed cases; the subject of incoming / finished / pending cases; the ratio of litigious and non-litigious cases; cases that are pending over 2 or 5 years have a separated statistical report every month; cases in which there were no actions taken in the last 30 days by the court have a separated statistical report every month

Q120 (General Comment): The evaluation system is defined by Articles 50-52 of the Act on the Legal Status of Prosecutors. The purpose is to assess the quality of the prosecutor's activities, his/her skills, abilities and character traits with an impact thereon and to facilitate professional development. Prosecutors, with the exception of the Prosecutor General and the Deputy Prosecutor General, are assessed before the expiry of the fixed term of the first appointment, while in the case of a first appointment for an indefinite term, before the expiry of a period of 3 years following the appointment, and thereafter every 8 years. Prosecutors need not be assessed during the 6 years preceding the completion of the applicable old-age pension age. A prosecutor shall also be assessed if: requested by the prosecutor; circumstances have emerged that indicate the prosecutor's professional ineligibility or the necessity to alter the evaluation of the previous assessment; in the extraordinary proceeding to be completed without delay, s/he fails to meet the deadline extended by the superior prosecutor. The assessment is the duty of the person exercising the employer's rights. The official work of prosecutors assigned to the Ministry is evaluated by the Minister responsible for justice in accordance with the rules applicable to government officials. As a result, prosecutors may be awarded the following grades: excellent, suitable for promotion; excellent and fully eligible; eligible; eligible, subsequent assessment required; ineligible. In the event of an ineligible grade, the prosecutor shall be called upon to resign his/her office within thirty days. If the prosecutor is awarded a grade "eligible, subsequent assessment required", the person exercising the employer's rights identifies the deficiencies and irregularities and states the main criteria of the desired changes which shall be reviewed prior to the next assessment (within 2 years). A prosecutor shall be awarded an ineligible grade upon the next assessment if he/she fails to obtain an eligible grade. S/he may request a court of law to quash any erroneous or untrue finding.

Q120-1 (2018): The evaluation system is defined by Articles 50-52 of the Act on the Legal Status of Prosecutors. The purpose is to assess the quality of the prosecutor's activities, his/her skills, abilities and character traits with an impact thereon and to facilitate professional development. Prosecutors, with the exception of the Prosecutor General and the Deputy Prosecutor General, are assessed before the expiry of the fixed term of the first appointment, while in the case of a first appointment for an indefinite term, before the expiry of a period of 3 years following the appointment, and thereafter every 8 years. Ireland

Q070 (2014): 2014: Since 2014 Ireland introduced a monitoring system for the length of proceedings and it is now capable of calculating average length of proceedings in first instance jurisdictions.

Q077-1 (2018): Prosecutors adhere to Code of Ethics and Guidelines of respective professional bodies .There are file reviews and regular periodic management reports in place

Q070-1 (2020): information is published in Annual Report available at: <https://www.dppireland.ie/app/uploads/2020/10/AR-2019-eng.pdf>

Q070-1 (2018): Information is published in Annual Report available at [https://www.dppireland.ie/filestore/documents/AR2017_\[eng\].pdf](https://www.dppireland.ie/filestore/documents/AR2017_[eng].pdf)

Q071 (2020): NAP

Q071 (2018): NAP

Q071 (2016): NAP

Q077 (2017): Waiting times for proceedings categories in the various jurisdictions are recorded and published in the Courts Service Annual Report.

Q083-2 (2018): Work is demand led by number of files submitted by external investigating agencies

Q120 (General Comment): In addition to reporting directly to their line managers in relation to their work as prosecutors, they are required to participate in the Office-and-Public-Service-wide process of Performance Management and Development conducted during each year on an individual basis between Management and Staff.

Q120-1 (2018): Prosecutors working in-house are required to participate in Public service wide Performance Management and Development System (PMDS).

Italy

Q066 (General Comment): In Italy there is not a strict quality system as such. However, there is a regular monitoring system in place which tracks the performance of court activities.

Q073-0 (2020): Quarterly

Q073-0 (2019): Quarterly

Q073-0 (2018): Quarterly

Q073-0 (2017): Quarterly

Q073-0 (2016): Quarterly

Q073-2 (2020): The evaluation of the court activity (case flow, DT, CR, etc.) are used to draw up the staffing plan ("pianta organica") i.e. the ideal allocation of judges and court staff among the courts. More recently, this data is used for monitoring the implementation of reforms and investments related to the Recovery and Resilience Plan (PNRR) and the related EU Next Generation funds.

Q073-4 (2020): Quarterly

Q073-4 (2018): Quarterly

Q072 (2018): Waiting time is monitored only for Administrative Justice.

Q077 (General Comment): The performance of each court is given by different indicators such as the clearance rate, the variation of backlogs and the age of the proceeding.

Q120 (General Comment): The assessment procedure applies to both judges and public prosecutors. Every four years, the High Judicial Council (CSM) conducts a professional appraisal based on the professional skills of judges/prosecutors. The professional status of both judges and prosecutors is organized into 7 different levels. Several criteria are taken into consideration: independence, impartiality, balance, professional capacity, hardworkingness, diligence and commitment. The assessment is based on a number of acts and documents that describe all the professional aspects of the magistrate to be evaluated. The most significant are: • a "self report" where the magistrate illustrates all the elements that he/she believes are necessary or useful to be considered for the purpose of his/her appraisal; • a random sample of acts and documents produced by the magistrate during the evaluation period; • an "informative report" prepared by a superior of the magistrate; • the statistics concerning activity of the magistrate: the number of provisions drafted, the processing times of the proceedings, the time for filing the documents (even in comparison with the other magistrates of the office); • scientific publications, if any; • reports from the lawyers' council, if any.

Latvia

Q066 (General Comment): In January 15, 2020 the "Visitors service standards of the district (city) courts and regional courts" were approved. This document summarizes the general principles related to functions such as judicial reception and providing with information. The standards help court staff to raise their professionalism and understand the court visitors servicing values.

The reply is partly "yes" because according to the Law on Judicial Power Section 27.1., a Chief Judge of a court shall plan and determine the objectives of the court work in relation to average time periods for adjudication of matters in a court (standard of time periods for adjudication of matters) prior to the beginning of each calendar year, in co-operation with court judges. This standard shall be determined, taking into account the court resources and the necessity to ensure the right of a person to adjudication of a matter in a reasonable time period and other basic principles related to the guarantee of fair trial. A Chief Judge of a court shall approve the standard and supervise the actual time periods of examining matters in a court. He/she shall submit information to the Board of Justice regarding the approved standard until 1 February of each year.

Q066 (2020): Partly yes, according to the Law on Judicial Power Section 27.1. the Court President before the beginning of each calendar year, shall plan and determine the objectives of the court work in relation to average time periods for the examination of cases in a court (the standard of time periods for the examination of cases) in cooperation with court judges. The standard of time periods for the examination of cases shall be determined by taking into account the court resources and the necessity to ensure the right of a person to the examination of a case in a reasonable time period and in conformity with other basic principles for the examination of cases. The Court President shall submit the standard case examination time limits for approval to the Judicial Council until 1 February of each year.

Q066 (2019): In January 15, 2020 the "Visitors service standards of the district (city) and regional court" is adopted. This document defines the procedure by which the employee of the district (city) and regional court shall ensure the servicing of the court visitor, the participant in the proceedings, its representative (hereinafter - customer) (the acceptance of the client, the provision of information and communication in person, by telephone and by electronic means) and basic customer service values, general principles and basic rules for customer service.

Q066 (2017): According to the Law on Judicial Power Art 27.1. chief judge of a court shall plan and determine the objectives of the court work in relation to average time periods for adjudication of matters in a court (the standard of time periods for adjudication of matters) prior to the beginning of each calendar year in co-operation with court judges. The standard of time periods for adjudication of matters shall be determined, taking into account the court resources and the necessity to ensure the right of a person to adjudication of a matter in a reasonable time period and in conformity with other basic principles for examination of matters. A Chief Judge of a court shall approve the standard of time periods for adjudication of matters in a court and supervise the actual time periods of examining matters in a court. A Chief Judge of a court shall submit information to the Board of Justice regarding the approved standard of time periods for adjudication of matters until 1 February of each year. First standards of time periods for adjudication of matters were submitted to the Board of Justice in 2014.

Q066 (2016): Partly yes, according to the Law on Judicial Power Section 27.1. chief judge of a court shall plan and determine the objectives of the court work in relation to average time periods for adjudication of matters in a court (the standard of time periods for adjudication of matters) prior to the beginning of each calendar year in co-operation with court judges. The standard of time periods for adjudication of matters shall be determined, taking into account the court resources and the necessity to ensure the right of a person to adjudication of a matter in a reasonable time period and in conformity with other basic principles for examination of matters. A Chief Judge of a court shall approve the standard of time periods for adjudication of matters in a court and supervise the actual time periods of examining matters in a court. A Chief Judge of a court shall submit information to the Board of Justice regarding the approved standard of time periods for adjudication of matters until 1 February of each year.

First standards of time periods for adjudication of matters were submitted to the Board of Justice in 2014.

Q066 (2015): Since 2008 courts apply 'The visitors service standards of the district (city) courts and regional courts'. This courts visitor's service standard summarizes the general principles of judicial reception and providing with information. Standard helps court staff to raise their professionalism and understand the court visitors servicing values. On 2015 May 18 Council of Justice approved guidelines on communication of the court system. The aim of the guidelines is to promote the effective functioning of the judiciary and promote the public confidence in the judiciary, creating a positive Court's image and enhance its' authority in society.

Q066 (2014): In 2014, for the first time, standards of time periods for adjudication of matters were submitted to the Board of Justice.

Q073 (2015): Latvia has the Court Information System it contains statistical data about court performance. The statistical data have been published in the e-portal: www.manas.tiesas.lv and regularly analysed by Court administration and Ministry of Justice (MoJ).

Q073-0 (2020): Evaluation of courts activities are done mainly in two ways: every month and on a basis of request. The evaluation can happen for a single court or instance at any time for a number of reasons. An Annual evaluation of court staff is also carried out, which is essential for high-quality work of courts.

Q073-0 (2019): Evaluation happens on a basis of request. The evaluation can happen for a single court or instance at any time for a number of reasons.

Q073-0 (2018): Evaluation happens on a basis of request. The evaluation can happen for a single court or instance at any time for a number of reasons.

Q073-0 (2017): Latvia has the Court Information System it contains statistical data about court performance. The statistical data have been published in the e-portal: www.tiesas.lv and regularly analysed by Court administration and MoJ.

Q073-0 (2016): Latvia has the Court Information System it contains statistical data about court performance. The statistical data have been published in the e-portal: www.tiesas.lv and regularly analysed by Court administration and MoJ.

Q073-1 (2020): Not currently, but there is a suggestion from State Audit Office and a subsequent proposition from Ministry of Justice and Court administration to the Judiciary Council to start to take court work statistical indicators into account when planning annual budget. If necessary, based on workload data resources can be allocated later within a court.

Q073-1 (2019): Not currently, but there is a suggestion from State Audit Office and a subsequent proposition from Ministry of Justice and Court administration to the Judiciary Council to start to take court work statistical indicators into account when planning annual budget. If necessary, based on workload data resources can be allocated later within a court.

Q073-1 (2018): Not currently, but there is a suggestion from State Audit Office and a subsequent proposition from Ministry of Justice and Court administration to the Judiciary Council to start to take court work statistical indicators into account when planning annual budget. If necessary, based on workload data resources can be allocated later within a court.

Q070 (General Comment): Implemented business intelligence solution allows to very closely monitor all the mentioned court activities.

Satisfaction of court staff and users is being evaluated by regular questionnaires in courts.

Q070 (2017): Decision stability (proportion of decisions appealed in higher instance)

Q070 (2016): Decision stability (proportion of decisions appealed in higher instance)

Q073-4 (2020): In accordance with the order of the Prosecutor General, a monthly report is prepared on the results of the public prosecutor's work in pre-trial criminal proceedings and the results of the work, which are not related to the progress of pre-trial criminal proceedings.

Q073-4 (2018): Monthly reports on the results of the public prosecutor's work in pre-trial criminal proceedings and the results of work which are not related to the conduct of pre-trial criminal proceedings shall be drawn up in accordance with the order of the Prosecutor General.

Q071 (2018): We have created a specific tool for this purpose that is available also in public from <https://dati.gov.lv/>

Q077 (2014): First standards of time periods for adjudication of matters were submitted to the Board of Justice in 2014.

Q078 (2020): The indicators "productivity of judges and court staff" and "number of appeals" are taken into account when assessing the professional activity of a judge, because the objective of the assessment of the professional activities of a judge is to promote the continuous professional growth of a judge throughout his or her career, thereby improving the quality of the work of the judge and the court. An Annual evaluation of court staff is also carried out, which is essential for high-quality work of courts.

Q078 (2019): All of these indicators can and are used to evaluate different aspects of court work from efficiency, quality and stability to decision of filling out a vacancy.
First four modalities are included in the report that courts have to prepare for the Judiciary Council before the end of January.

Q078 (2018): All of these indicators can and are used to evaluate different aspects of court work from efficiency, quality and stability to decision of filling out a vacancy.
First four modalities are included in the report that courts have to prepare for the Judiciary Council before the end of January.

Q078 (2014): According to the Law on Judicial Power as amended in 2014, the chief judge of a court, in cooperation with court judges, determines prior to the beginning of each calendar year targets in relation to the average length of court proceedings.

The standard in terms of length of proceedings is determined, taking into account the court resources and the necessity to ensure the right of a person to have his/her matter adjudicated within a reasonable time period and in compliance with other basic principles guaranteeing the right to a fair trial. A chief judge of a court must approve the standard of time periods and supervise the actual time periods of examining matters in a court.

The guidelines approved by the Judicial Council are used to establish standards of time periods for adjudication of matters.

Q083-2 (General Comment): The prosecutor provides a monthly report on the statistical indicators of his or her work. In addition, the statistical indicators of the individual work of the public prosecutor (statistical indicators for the monitoring of the investigation, prosecution, maintenance of the State prosecution and other functions of the public prosecutor) are also analysed during the process of assessing the professional activities of prosecutors (not less than once every five years).

Q120-1 (General Comment): The assessment of the professional activities of prosecutors have been commenced and is operational from 1 January 2014, within which, as for judges, the professional activities of prosecutors are assessed on a regular basis (not less than once every five years).

Q120-1 (2020): Not less than once every five years

Lithuania

Q070 (General Comment): All of these data are recorded in the Lithuanian Court Information System (LITEKO), as well as other data, related to the case, its process and the parties to the proceedings.

Q073-4 (2020): Chief prosecutors of the departments of the prosecutor's offices are regularly provided with monthly data based on basic indicators of the performance of public prosecution offices, every 3 months – with the larger scale of performance data.

Q073-4 (2018): Every 6 months.

Q072 (2020): courts: through administrative supervision mechanism

Q083-2 (2018): The quantitative performance targets are defined for the Prosecutor General's Office and 5 regional Prosecutor's Offices, but not for individual public prosecutors.

Q083-3 (2018): The quantitative performance targets are defined for the Prosecutor's Offices, but not for individual public prosecutors.

Q120-1 (General Comment): According to Article 33 of the Law on Prosecution Service, evaluation of prosecutor's individual performance, qualification and suitability is carried out by the Attestation Commission. Performance of a prosecutor who has received a positive evaluation after his/her internship, is thereafter evaluated every five years during the regular evaluation of the service. The extraordinary evaluation can be carried out by decision of the Prosecutor General: at the request of the public prosecutor him/herself, if at least half a year has passed since his/her last evaluation; in the case the prosecutor is applying for a higher position, or to the same or an equivalent post after the expiry of the term of appointment; if three years have passed since the last evaluation of his/her service; if the prosecutor's performance has repeatedly been deficient, giving rise to reasonable doubts as to his/her suitability for the position in question.

Luxembourg

Q073 (2020): "Although the technically correct answer is "no", the Judiciary edits every year an annual report on its activities during the previous year. This reports is available to the public (report 2020, see <https://justice.public.lu/fr/publications/juridictions-judiciaires/rapports-juridictions-judiciaires-2020.html>)."

Q073 (2019): Although the technically correct answer is "no", the Judiciary edits every year an annual report on its activities during the previous year. This report is available to the public (report 2019, see <https://justice.public.lu/dam-assets/fr/publications/rapport-activites-judiciaires/Rapports-juridictions-judiciaires-2019.pdf>).

Q073 (2018): Although the technically correct answer is "no", the Judiciary edits every year an annual report on its activities during the previous year. This reports is available to the public (report 2018, see <https://justice.public.lu/dam-assets/fr/publications/rapport-activites-judiciaires/Rapport-juridictions-judiciaires-2018.pdf>) .

Q073 (2014): 2014: There is no regular monitoring system. Statistical tools and the court management system may be used to monitor the activity but this is not their primary function.

Q073-1 (General Comment): The figures presented by the SSJ are used on a regular basis to allocate (and ask for) means to the courts and prosecutorial services.

Q073-1 (2020):

The annual report is used to the effect set out in Q. 073-1 (report 2020, see <https://justice.public.lu/fr/publications/juridictions-judiciaires/rapports-juridictions-judiciaires-2020.html>).

Q073-1 (2019): The annual report is used to the effect set out in Q. 073-1

Q073-1 (2018): The annual report is used to the effect set out in Q. 073-1

Q073-1 (2016): The figures presented by the SSJ are used on a regular basis to allocate (and ask for) means to the courts and prosecutorial services.

Q070 (General Comment): No regular system has been implemented up to today. However, a monitoring can be done through the statistical service of the judiciary (SSJ) on an punctual basis and upon request by the competent authorities.

Q070 (2017): ??? (see comments to parent campaign)

Q070 (2016): No regular system has been implemented up to today. However, a monitoring can be done through the statistical service of the judiciary (SSJ) on an punctual basis and upon request by the competent authorities.

Q070 (2015): By using the newly implemented statistical tools, the information ticked in addition to last year's questionnaire can now be retrieved by the statistical service on an as needed basis at least for criminal cases. Identical markers are being implemented for civil and commercial cases and will available in a foreseeable future.

Q070 (2014): 2014: There is no regular monitoring system. However, new statistical tools are implemented and can provide monitoring elements when necessary without daily measurement current affairs.

Q073-3 (2020): The annual report covers both judges and prosecutors (report 2020, see <https://justice.public.lu/fr/publications/juridictions-judiciaires/rapports-juridictions-judiciaires-2020.html>).

Q073-3 (2018): The annual report covers both judges and prosecutors.

Q073-5 (2020):

The annual report covers both judges and prosecutors (report 2020, see <https://justice.public.lu/fr/publications/juridictions-judiciaires/rapports-juridictions-judiciaires-2020.html>).

Q073-5 (2018): The annual report covers both judges and prosecutors.

Q071 (2018): New systems of monitoring have been implemented since 2016 (JUCIV for the civil law cases and JANGA for administrative law cases)

Q071 (2016): No regular system has been implemented up to today. However, a monitoring can be done through the statistical service of the judiciary (SSJ) on an punctual basis and upon request by the competent authorities.

Q072 (2014): According to 2014 data, the newly set up statistical tools, as well as the courts' CMS, allow an "as needed" check of the waiting time.

Q083-2 (2018): NAP

Q083-3 (2018): NAP

Malta

Q066 (General Comment): There exists a Code of Ethics for the members of the Judiciary which, though not providing for the organisation and quality of the judicial work, does lay upon the members of the Judiciary certain obligations which are important in ensuring the transparency and independence of the judicial process.

Q066 (2017): There exists a Code of Ethics for the members of the Judiciary which, though not providing for the organisation and quality of the judicial work, does lay upon the members of the Judiciary certain obligations which are important in ensuring the transparency and independence of the judicial process.

Q066 (2016): There exists a Code of Ethics for the Judiciary which, though not providing for the organisation and quality of judicial work, does lay upon the members of the Judiciary, certain obligations which are important in ensuring the transparency and independence of the judicial process.

Q067 (2018): There are general quality standards that apply to the public sector, but not specific quality standards that monitor the implementation of quality standards within the judiciary or the prosecution services.

Q073 (2015): Currently, Malta carries out systematic quantitative analysis of the performance of the courts, based on established international indicators. Furthermore, ongoing internal reports, commissioned specifically to study areas of interest in the performance of certain courts, also complement the quantitative analysis, and serve to further address identified shortcomings in a more strategic manner.

Q073 (2014): On the occasion of the 2014 exercise, it has been indicated that since 2015, a system of monitoring court performance through quantitative means, using established performance indicators such as Clearance Rate and Pending caseload, has been initiated.

Q073-0 (2020): Court performance is evaluated on a quarterly basis, or as the need arises.

Q073-0 (2018): Court evaluation in terms of performance is carried out on a monthly basis, or on a case by need basis.

Q073-0 (2017): The activity of the courts is monitored on a monthly basis.

Q073-0 (2016): Court evaluation in terms of performance is carried out on a monthly basis.

Q073-1 (2017): Court performance evaluation is brought to the attention of both the Minister for Justice, Culture and Local Government as well as to the attention of the Chief Justice. The Chief Justice, who is vested with the authority to effect changes in judicial duties, does make use of such performance data in the better interest of increased efficiency and expediency of the judicial process.

Q073-1 (2016): Court performance evaluation is brought to the attention of both the Minister for Justice, Culture and Local Government as well as to the attention of the Chief Justice. The Chief Justice, who is vested with the authority to effect changes in judicial duties, does make use of such performance data in the better interest of increased efficiency and expediency of the judicial process.

Q073-2 (General Comment): Court performance evaluation is brought to the attention of both the Minister for Justice as well as to the attention of the Chief Justice. The Chief Justice, who is vested with the authority to effect changes in judicial duties, does make use of such performance data in the better interest of increased efficiency and expediency of the judicial process.

Q073-2 (2020): Other refers to the Court's ability to request more financial and human resources in a bid to improve the performance on the selected indicators

Q073-2 (2018): Court performance evaluation is brought to the attention of both the Minister for Justice, Culture and Local Government as well as to the attention of the Chief Justice. The Chief Justice, who is vested with the authority to effect changes in judicial duties, does make use of such performance data in the better interest of increased efficiency and expediency of the judicial process. On the other hand, the Ministry also monitors these performance evaluations and tries to assist through legislative amendments or other interventions that lie within its powers and that do not impinge on the independence of the judiciary.

Q070 (2019): Other: age of pending caseload

Q070 (2017): other: clearance rate

Q070 (2015): The monitoring of court activities also takes place through the ongoing analysis of the Clearance Rate and Disposition Time of the various courts. This data is also being published online on a monthly basis.

The category "other" refers to the monitoring of the Clearance Rate and Disposition Time of all civil courts, boards and tribunals. This exercise was started in 2015.

Q070 (2014): In 2014, the court administration was monitoring length of proceedings through the number of incoming and resolved cases, as well as through the pending caseload. The age of civil cases was another parameter that was being assessed.

On the occasion of the 2014 exercise, it has been indicated that since 2015, Malta started computing the Disposition Time and Clearance Rate of all the civil and criminal courts. By the end of 2015, for the civil courts, this information will be made available online.

Q077-1 (2018): The Office of the AG does keep a record of the number of incoming cases as well as those cases that can be considered as terminated from the Office because for example, a bill of indictment is issued. However no official statistics are kept.

Q073-3 (2020): The Office of the AG has started setting up a system to assess the performance of the prosecution service, but this is still in its initial phases and more work is being planned on it to make it more integrated.

Q073-6 (2018): The workload of the Office of the AG is used for the recruitment of additional human resources.

Q070-1 (2018): The Office of the AG does hold a record of the number of incoming cases and terminated cases, but these are not as yet organised into official performance indicators.

Q072 (2016): In Malta, there is no formal monitoring system. However, an “informal” monitoring used to take place. It falls mostly within the remit of the Chief Justice and the respective members of the judiciary.

Q077 (2017): Despite the on-going monitoring and evaluation of the court activities and performance, we do not have defined target indicators against which to monitor performance. In general terms, we seek to ensure that the performance of the courts improves in efficiency year after year, and we try to address various aspects of the system in order to facilitate this improvement.

Q077 (2016): Currently Malta carries out systematic quantitative analysis of the performance of the different courts, based on international standards. We are also addressing measures of quality as defined by recognised international institutions, supplemented by internal reports that are purposely commissioned to focus on specific aspects of the functioning of the justice system. These ongoing efforts at measuring the efficiency and quality of our justice system is compared with past performance, but as yet, not with established targets.

Malta does not have defined 'targets' but assesses its performance in terms of indicators defined by international institutions

Q078 (2020): Other: age of pending cases

Q078 (2019): Other: age of pending caseload

Q083-3 (2018): NA

Q120-1 (2020): The work of public prosecutors is constantly monitored by the Deputy AG and the AG herself. The monitoring is not scheduled at specific annual intervals but it is ingrained in the daily work processes in the Office.

Q120-1 (2018): The work of public prosecutors is constantly monitored by the Deputy Attorney General (in charge of the criminal field) and the Attorney General. The monitoring is not scheduled at specific annual intervals, but is ongoing and ingrained in the daily work processes of the Office.

Netherlands

Q066 (General Comment): There are quality standards which are measured by annual statistical figures per individual court. Examples are the scores of customer satisfaction surveys, the percentage of cases judged by three instead of one judge and case processing times (the so called 'Kengetallen gerechten'). There is a Team Judicial Quality (Team Juridische Kwaliteit) which studies topics in a theme-wise manner, on a structural basis. A team of public prosecutors participates in TKJ and assesses the judicial work of colleagues in a structured and systematic way. Often there is a baseline assessment and a follow-up, sometimes a second follow-up. If necessary, the assessment framework is adjusted.

www.tweedekamer.nl/kamerstukken/detail?id=2018D52900&did=2018D52900

There are also professional standards, developed to show what good justice entails. These are publically available on the website of the Judiciary (<https://www.rechtspraak.nl/Organisatie-en-contact/Rechtspraak-in-Nederland/Rechters/Paginas/De-professionele-standaarden-van-de-rechters.aspx>)

Q066 (2019): There is a so-called Team Judicial Quality (Team Juridische Kwaliteit), which studies topics in a theme-wise manner. This is part of the program 'Programma OM Strafvordering 2020'. A team of public prosecutors participates in TKJ and assesses the judicial work of colleagues in a structured and systematic way. There is often a first assessment (baseline) and a first follow-up assessment, and sometimes even a second follow-up. If necessary, the assessment framework is adjusted.

Q067 (2017): yes

Q073-0 (2020): Along with monthly reports and quarterly reports, there are annual reports which are more thorough and elaborate.

Q073-0 (2019): Along with the monthly reports and quarterly reports, there are annual reports which are more thorough and elaborate.

Q073-1 (2020): This is not a 'hard' rule, the outcomes of the evaluation do not directly influence the allocation of resources in the next years.

Q070 (2020): There is an annual publication that includes the appeal ratio for some case types. To call it 'monitoring' would be a bit too much, but it is annually checked and reported on.

Incoming cases and length of proceedings have not previously been mentioned, but these are monitored.

Q073-4 (2020): Along with the monthly reports and quarterly reports, there are annual reports which are more thorough and elaborate.

Q073-6 (2020): In 2019, the system Directing and Funding (Besturen en Bekostigen) was formally introduced. This system introduced more measurements and questions about allocation. Also in 2019 an internal budget allocation model was introduced for allocation of resources between parts of the public prosecution.

Q073-6 (2018): Each three years, the amount of money is defined. The public prosecutors got a fixed amount and an amount of resources based on the amount of cases they dealt with.

Q072 (2020): Within the courts: Registration in the court system gives the opportunity to monitor waiting time. Within the public prosecution services: Across the justice chain, agreements have been made on the timeframes in which particular caseloads (sexual offences, youth cases and specific traffic violations) should be handled. These agreements are monitored. Annually, the government (Second Chamber) is informed on this via the factsheet 'Strafrechtketen'. Besides this, timeframe-agreements have been reached within the public prosecution on speed with which penal orders are to be issued, terms in which an objection is to be judged and the speed with which the first decision with attachment is to be taken (eerste beslissing bij beslag).

Q072 (2013): All steps and dates are recorded in information systems of the court. But this registration does not show 'waiting times' as such.

Q078 (2020): Satisfaction is monitored, but courts are not necessarily judged for that.

Q083-2 (2020): There is no national policy on targets for every prosecutor. An office (parket) could choose to set targets for their prosecutors (see next question), but this may vary across offices.

Q120 (2020): The public prosecution has a team Judicial Quality at the General Office (Parket Generaal) that studies the quality of the criminal proceedings of the public prosecution. As part of these studies and assessments, a pool of prosecutors has been compiled, and they study the work of other public prosecutors. The results of these studies are used for quality enhancement trajectories. The studies are repeated periodically.

Poland

Q066 (General Comment): The Ministry of Justice collects statistical data sent by common courts concerning their current activity, and also evaluates annual information on the activity of courts, prepared by presidents of courts of appeal about the activity of courts within the area of appeals, within the scope of tasks entrusted to them. In addition, the Minister of Justice convenes a meeting with presidents of courts of appeal at least once a year to discuss issues related to exercising supervision. Within the framework of that evaluation, a multifaceted analysis of collected statistical data is conducted, inter alia, an indicator of stability of jurisprudence, an indicator of control over the inflow of court cases or time of adjudication in incoming cases. However, no legal provision defines specific quality standards for individual indicators, concerning organisational quality and/or justice quality policy, to be formulated for the justice system as a whole.

Q066 (2016): The most important indicator comes from evaluation of judgements through second instance procedure. In this purpose "judgement stability" ratio are in use as a ratio of judgements reversed or annulled in procedure of appeal.

Q067 (General Comment): Inspection departments operate in the appellate and regional courts. The task of the judges working in these departments is to perform on behalf of the president of the court activities in the scope of supervision over the administrative activity of the courts in the area of the operation of a given appellate or district court. Supervision consists in taking actions to improve the office of the courts or increase the efficiency and level of work organization culture in the courts. For this purpose, visits of departments in courts or surveys of recognized cases of a given category are carried out, the secretariats of departments in the courts are controlled.

Activities in the scope of administrative supervision can not enter the field in which judges and assessors are independent.

Q073 (2019): Every year, an analysis is made of the annual information of the presidents of the courts of appeal about the activities of the courts operating in the area of appeals containing statistical data from individual appeals and information on actions taken to ensure the best activity of the courts in the area of appeal. The Minister of Justice assesses the annual information and accepts or refuses to accept this information

The analysis of the work of courts in the areas of operation of individual appeals is also based on statistical data for the first half of each year.

Based on the obtained statistical data, the Department of Administrative Surveillance carries out, as required, data on judicial units, in particular in the context of the efficiency of proceedings and the need for appropriate action by court presidents to ensure the most effective work of their subordinate units.

Q073 (2017): The Minister of Justice regularly assesses the activities of the courts as part of external administrative supervision, by analysing the annual information provided by the Presidents of the appellate courts pursuant to art. 37b § 2 point 1 of the Act of July 27, 2001. The law on the system of common courts (i.e. Journal of Laws of 2018.23), in turn as part of internal supervision, regularly evaluates the activities of courts by presidents, by visiting and reviewing selected issues.

Q073-0 (General Comment): Annual information of the presidents of courts of appeal on the activity of courts operating within the area of appellate courts, containing statistical data from particular appellate courts and information on actions taken to ensure the best possible activity of courts within the area of appellate courts, is analyzed every year. The Minister of Justice evaluates annual information and either accepts it or refuses to accept it

The analysis of work of courts within the jurisdiction of particular appellate courts is also carried out on the basis of statistical data for the first half of each year. On the basis of statistical data collected, the Department of Administrative Supervision performs, according to the needs, an analysis of data concerning judicial units, in particular in the context of efficiency of proceedings and the need to undertake appropriate actions by presidents of courts in order to ensure the most efficient work of units subordinate to them.

Q073-0 (2019): The analysis of the work of all courts is carried out cyclically for the first half of each year and after its completion, in particular based on the average duration of the procedure, control of influence and degree of residue, influence, settlement and remaining case, influence and settlement of cases on a judge according to the limit as at the last day of the statistical period, impact, settlement and remainder on staffing in versions 1 and 3. In addition, data on individual units are analyzed as required.

Q070 (2017): Supervision covers only the administrative activities of the courts. There are the internal supervision exercised by the presidents of the courts and the external supervision exercised by the Minister of Justice within the narrow scope specified in the law.

Q070 (2016): Supervision covers only the administrative activities of the courts. There are the internal supervision exercised by the presidents of the courts and the external supervision exercised by the Minister of Justice within the narrow scope specified in the law.

Q073-3 (General Comment): Pursuant to Article 30 of the Act on the Public Prosecutor's Office, the National Public Prosecutor, but also regional and circuit public prosecutors within the area of their activities, may order a visit to an organisational unit of the public prosecution services in order to control the performance of statutory tasks by this unit within a specified scope. Pursuant to § 77 item 1 of the Ordinance of the Minister of Justice - Rules of Procedure of the universal prosecutorial bodies of the public prosecution services, visitation and inspection shall be carried out as appropriate, in particular when there are signals of significant irregularities in the activities of a given body. Visitations should be carried out at least every 5 years.

2. An inspection may be carried out to check the correctness of practices in selected sections of the operation or when there is a need to investigate the causes of shortcomings in the operation or irregularities in the operation of the given body.

3 Visitation and inspection includes:

1) the control of the performance of the statutory tasks by the bodies, and in particular the examination of the correctness of the activities undertaken and the level of work;

2) assessing the performance of professional duties by prosecutors and administration staff and their professional qualifications and work culture;

3) an assessment of the way in which the body is managed, the organisation of work and the division of tasks.

4) In the course of visitations and inspections, instructions shall be given as necessary to improve the operation of the audited bodies and to help solve current problems.

Conclusions from the visitations and inspections of public prosecutor's offices are considered by the regional prosecutor's office board [kolegium prokuratury regionalnej] (Article 49 of the Act on the Public Prosecutor's Office).

Q073-4 (2020): Once a month, the head of the organizational unit of the prosecutor's office shall submit to his or her superior prosecutor a report containing the number of incoming cases and the number of cases disposed of .

Q073-4 (2018): Once a month a head of the organisational unit of the public prosecution service presents to their superior public prosecutor a report which contains a number of incoming cases and number of resolved cases.

Q072 (General Comment): Public Prosecution services

The issue of the duration of pre-trial proceedings is defined in the Code of Criminal Procedure, in Article 310 § 1 and § 2 and Article 325i § 1. Article 310 § 1 and § 2 states that the investigation shall be completed within 3 months. In justified cases the investigation period may be extended by a specified period of time by the public prosecutor supervising the investigation or the public prosecutor directly superior to the public prosecutor leading the investigation, but not longer than one year. In particularly justified cases a competent public prosecutor superior to the prosecutor supervising or leading the investigation may extend the investigation by a specified period of time.

Article 325i § 1 states that an investigation should be completed within 2 months. The prosecutor may extend this period to 3 months, and in particularly justified cases – to a longer specified period of time.

The authority empowered to order the extension of an investigation or an inquiry by a specified period of time shall monitor such proceedings with respect to their proper conduct in view of their possible length and shall assess the validity of the procedural steps taken or to be taken.

The request for the extension of an investigation or an inquiry must include the steps that need to be taken in the further course of the proceedings and indicate the reasons why they have not yet been taken.

Courts:

The presidents of the courts, in exercising internal administrative supervision over the administrative activity of the courts, control the taking of actions by judges within appropriate time limits; direct control is also exercised by the presidents of the divisions. Monitored also within the framework of management control and analysis of annual information on activities of courts operating within the area of appellate courts prepared by presidents of courts of appeal

Q072 (2018): In the mode of external and internal administrative supervision over the administrative activity of courts by analyzing the results of the courts or departments and monitoring the efficiency of individual cases in the case of detected lengthiness.

Q083-3 (2020): Individual goals are set by prosecutors themselves in a way that enables them to carry out their duties effectively

Portugal

Q066 (General Comment): Law on the organisation of the judicial system (Law 62/2013 of 26 August) sets out that the High Council for the Judiciary and the Prosecutor-General, in liaison with the member of Government responsible for the justice, establish, within their respective competences, the strategic objectives for first instance courts for a three year period. These entities are also responsible for setting, every year, the strategic objectives of first instance courts for the following judicial year. Taking into account the results obtained in the previous year and the strategic objectives formulated for the subsequently year, the president of the court and the public prosecutor coordinator, after hearing the judiciary administrator, articulate proposals for the procedural objectives for each court. This system is very recent, is currently being implemented, subject to improvements, and only covers civil and commercial cases.

Q066 (2020): For instance, the Prosecutor General's Directives and Instructions define good practices of functional performance at national level and their compliance may be viewed an indicator of the quality of the work developed (example, Directive 5/2019, on acting in cases of domestic violence (<https://dre.pt/home/-/dre/126870404/details/maximized> - text in Portuguese).

In addition to Directives and Instructions, the performance assessment system for prosecutors is based on quality criteria/performance parameters, as a rule, uniformly applied at national level.

Q067 (2020): The High Council of the Public Prosecution Service has “inspectors” (“inspctores”) who assess the quality of the work carried out by the prosecutors, applying national quality criteria or standards.

Q073 (General Comment): Besides an annual report, there are also a trimestral and semestral statistics to evaluate judge's performance.

In the case of the Administrative and Tax Courts the reports are semestral.

Q073 (2015): Every month a data collection of all courts is assembled. In addition, in first degree courts the electronical procedures allow a daily basis analysis. The website is very exhaustive and can be consulted in

http://www.siej.dgpi.mj.pt/webgis/index.jsp?username=Publico&pgmWindowName=pgmWindow_633918141195530467.

Every 4 years we have a complete analysis to the work of all courts, with the local inspectors made by judges appointed by the Judicial Council.

Q073-0 (2018): Besides an annual report, there are also a trimestral and semestral statistics to evaluate judge's performance. In the case of the Administrative and Tax Courts the reports are semestral.

Q073-0 (2017): Every 4 months.

Q073-0 (2016): Every 6 months.

Q070 (2020): we included "satisfaction of users" because one of the tasks of the president judge of the court is to monitor and evaluate the activity of the court, in particular the quality of the justice service provided to citizens, taking into account particular complaints or responses to satisfaction questionnaires. "Article 94 of Law 62/2013, 26th August, on the judicial organization"

Q070 (2019): In this evaluation cycle we included "satisfaction of users" because one of the tasks of the president judge of the court is to monitor and evaluate the activity of the court, in particular the quality of the justice service provided to citizens, taking into account particular complaints or responses to satisfaction questionnaires. "Article 94 of Law 62/2013, 26th August, on the judicial organization"

Q070 (2017): Scheduling; delays of judges and sections.

Q070 (2016): Scheduling; delays of judges and sections.

Q070 (2015): Scheduling: time delays of judges and sections of the court.

Q070-1 (2020): We included "clearance rate" and "disposition time" because one of the tasks of the public prosecutor coordinator is to monitor and evaluate the activity of the public prosecutors services, including the efficiency of procedures. Article 101 of Law 62/2013, 26th August on judicial organization.

Q072 (General Comment): Through SITAF and CITIUS (case management systems for administrative and tax courts and judicial courts, respectively) it is possible to check waiting times during judicial proceedings.

The Portuguese Code of Criminal Procedure establishes no binding timeframes for criminal investigations. At a national level, within the public prosecution services, there is only monitoring of the judicial proceedings time during on criminal investigations, with reference to this timeframe.

At a local level, some other proceedings (such as the initial intervention of public prosecutors on protection of adults with some incapacity, requesting accompanying measures – under the legal framework of the accompanied adult [Regime Jurídico do Maior Acompanhado]) are also monitored on time duration.

Q072 (2018): Through SITAF and CITIUS (case management systems) it is possible to check waiting times during judicial proceedings.

Q083-2 (General Comment): Yes for some District Prosecution's Office and No at a national level. At national level, only reference values are fixed for the purpose of placing prosecutors. Also at a national level, the fact that a prosecutor has finished more proceedings than those that he/she started is a general criterion of evaluation and compliance with general objectives, in the qualitative individual assessment of the public prosecutors' work.

Q083-3 (2020): The local hierarchically superior public prosecutor can set individual targets for each public prosecutor.

The High Council of the Public Prosecution Service only sets reference values for the purpose of placing prosecutors and establishing how many prosecutors are needed for a particular Public Prosecution Office.

Q120 (General Comment): According to articles 141 and 143 of the Statute of the Public Prosecution Service, as a rule, a first assessment takes place three years after the beginning of the functions as a public prosecutor, then after four years and then every five years.

If a prosecutor has twice the maximum grade, he/she may be waived of the next assessment.

After the period of long-term leave, the public prosecutor is subject to a new inspection, one year after the resumption of functions

Romania

Q066 (General Comment): There are no formal standards for quality established for the whole judiciary. However, informal standards are being used (such as training, quality of the reasoning, assessment of the activity of the judges, assessment of the good reputation of the judges etc.).

More precisely, the activity of courts is evaluated and monitored periodically, on the basis of certain statistical data/performance indicators, such as those presented at question 70. The evaluation is achieved by verifications carried out by inspectors of the Judicial Inspection of the SCM, by elaborating periodical reports. The schedule and thematic of those verifications are approved every year by the SCM.

At organizational level, there are no quality standards established for courts. It may be considered that such standards exist at individual level, for each judge, by the indicators for the evaluation of professional activity.

Q066 (2012): In the frame of the 2012 exercise, a reference was made to the "Court Optimisation Project" financed by the World Bank, implemented from October 2011 to March 2013. The final recommendation included the introduction of Key Performance Indicators (KPIs), such as the clearance rate, the number of cases older than one year, the number of cases solved within 1 year, and the comparative measurement system.

Q073 (2015): The courts have to carry out a monthly assessment and the Superior Council of Magistracy on the basis of individual reports as well as on the basis of the overall indicators carries out a half-yearly assessment of the judicial system.

Q073-0 (2020): biannual (twice a year)

Q073-0 (2018): BIANUAL

Q073-0 (2017): The system may be inquired and offer information in real time. On a regular basis, the information is used within the annual report of the judiciary.

Q073-0 (2016): The system may be inquired and offer information in real time. On a regular basis, the information is used within the annual report of the judiciary.

Q073-1 (2017): A periodic evaluation system of the activity (performance and result) of the court is not formally adopted (by law or by a subsequent regulatory act). SCM uses a series of performance indicators (see questions 71 and 74 below) concerning the activity of the courts. Periodical assessments are being carried out and further measures are being implemented on the highlighted results. By the decisions 1305/2014 and 149/2015, SCM has approved the reports on implementing these indicators and there were established new margins for their implementation.

Q073-1 (2016): A periodic evaluation system of the activity (performance and result) of the court is not formally adopted (by law or by a subsequent regulatory act). SCM uses a series of performance indicators (see questions 71 and 74 below) concerning the activity of the courts. Periodical assessments are being carried out and further measures are being implemented on the highlighted results. By the decisions 1305/2014 and 149/2015, SCM has approved the reports on implementing these indicators and there were established new margins for their implementation.

Q070 (General Comment): Since 2012, the category "other" subsumes the length of administrative procedures, the number of final convictions, legal aid, suspended cases etc.

Q070 (2020): ECRIS - case management and STATIS - statistics monitoring application including for court's efficiency assessment

Q070 (2019): ECRIS - case management and STATIS - statistics monitoring application including for court's efficiency assessment

Q070 (2017): - e.g. suspended cases

Q070 (2016): - suspended cases etc.

Q071 (2020): STATIS - statistics monitoring application including for court's efficiency assessment

Q072 (2020): There are statistical reports developed by an IT application called Statis that monitor the duration of a court trial on different levels - total time, preliminary proceedings, delays between the sessions, time for drafting the decision etc.

Q072 (2018): There are statistical reports developed by an IT application called Statis that monitor the duration of a court trial on different levels - total time, preliminary proceedings, delays between the sessions, time for drafting the decision etc.

Q072 (2016): There are statistical reports developed by an IT application called Statis that monitor the duration of a court trial on different levels - total time, preliminary proceedings, delays between the sessions, time for drafting the decision etc.

Q072 (2014): According to 2014 data, there are statistical reports developed by Statis IT application monitoring the duration of a court trial on different levels - total time, preliminary proceedings, delays between the sessions, time for drafting the decision etc. More precisely, in 2014, the Superior Council of Magistracy has established a working group that has analyzed several national and international documents on the efficiency of the courts and has developed a set of indicators that are used to make an overall assessment of the efficiency of courts, sections and, if needed panels of judges. These indicators were implemented and used in the Statis application.

Q078 (2020): - e.g. suspended cases

Q078 (2019): e.g. Suspended cases

Q078 (2018): - e.g. suspended cases

Q120-1 (2020): According to the provisions of art. 39 of the Law no. 303/2004, amended and republished in 2018, judges and prosecutors are being periodically evaluated under the observance of the professional and performance criteria. The evaluation shall envisage the quality of their activity, efficiency, integrity as well as the fulfillment of the obligation to take part in in-service professional training and on managerial activity for those judges and prosecutors in leadership positions. The periodical evaluation shall be first carried out by the end of the first 2 years of activity after the entering in profession and shall be continued every 3/4/5 years depending on the seniority in profession (5-10 years, 10-15 years, over 15 years of seniority).

Q120-1 (2018): similar to judges, see Q114, 114.1 and the additional comments

Slovakia

Q066 (2020): Internal revision of the court is a type of control of the court and judges, which aims to check the current state of the judiciary, to identify the causes of shortcomings in the performance of the judiciary and to propose measures to eliminate them.

Q066 (2014): There is a system to evaluate the overall functioning of courts with respect to the Manifesto of the Government of the Slovak Republic for the period of 2010-2014:

http://www.vlada.gov.sk/data/files/855_the-manifesto-of-the-governmentof-the-slovak-republic-for-the-period-of-2010-2014.pdf

Q067 (General Comment): Judicial Council, Council of Prosecutors and disciplinary commissions.

Q067 (2020): Judicial Council, Council of Prosecutors and disciplinary commissions.

Q067 (2019): Judicial Council, Council of Prosecutors and disciplinary commissions

Q073 (2018): See general comment

Q070 (General Comment): The category “other” encompasses: the number of cases according to types of disputes, the result of the case

(reconciliation, dismissals, full satisfaction, partial satisfaction, etc.). Statistical data of the Ministry of Justice of the Slovak Republic are

detailed and regularly collected and published in a yearbook which is publicly accessible at the website of the Analytical centre of MoJ

<https://www.justice.gov.sk/Stranky/Informacie/Analyticke-centrum.aspx>

<http://web.ac-mssr.sk/statisticka-rocenka-2018/>. Data on the activity of the courts are published every month in interactive Dashboard on

the <http://web.ac-mssr.sk/dashboard/>.

Q077 (2020): The main performance and quality indicators that have been defined for courts and used in the selfevaluation reports of some

pilot courts involved Number of appeals as well. The selfevaluation reports of the courts were not repeated with the data 2019.

The other indicators are used and made public in dashboards and statistical reports. The number of the appeals is published but not as a indicator of quality, only as a statistical number.

Q078 (2019): The main performance and quality indicators that have been defined for courts and used in the selfevaluation reports of some pilot courts involved Number of appeals as well. The selfevaluation reports of the courts were not repeated with the data 2019. The other indicators are used and made public in dashboards and statistical reports. The number of the appeals is published but not as a indicator of quality, only as a statistical number.

Slovenia

Q066 (General Comment): The Supreme Court's Data warehouse, containing all court cases, as well as financial data and human resources data was implemented in 2011. The data are collected based on CEPEJ Guidelines on Judicial statistics (GOJUST). A special office at the Supreme Court with specialised knowledge was introduced in order to monitor the quality and define quality policies on the level of entire judiciary and individual courts. Quality standards based on SATURN guidelines are taken into account in several predefined BI system reports.

The important role in the determination of quality standards is played by the Supreme Court's „Opening of the judicial year“ document, in which a set of priorities is determined. The priorities are subsequently monitored throughout the judicial year by automated BI tools and customised analysis at the Supreme Court.

The 2013 amendment to the Courts Act provides that the Supreme Court shall adopt the Criteria for quality of work for courts for the next (judicial) year, based on its Yearly report on efficiency and effectiveness of courts. Since 2015, the Supreme Court has been adopting the timeframes for different types of procedures as well as for different procedural phases for next year (as a part of the Criteria for quality of work).

As for public prosecution, the criteria for quality of work are defined in the Prosecution Policy (adopted by the Prosecutor General), while the quantitative aspects of work are defined in the Criteria for evaluating the performance of the state prosecutor's offices adopted by the State Prosecutorial Council.

Q066 (2015): The Supreme Court's Data warehouse, containing all court cases, as well as financial data and human resources data was implemented in 2011. The data are collected based on CEPEJ Guidelines on Judicial statistics (GOJUST). The system was awarded with Special mention in the 2012 Crystal Scales of Justice Competition and was defined as "Inspiring example" in the EC document Quality of Public Administration - A Toolbox for Practitioners - <http://ec.europa.eu/social/main.jsp?catId=738&langId=sl&pubId=7757>.

A special office at the Supreme Court with specialised knowledge was introduced in order to monitor the quality and define quality policies on the level of entire judiciary and individual courts.

Quality standards based on SATURN guidelines are taken into account in several predefined BI system reports.

The important role in the determination of quality standards is played by the Supreme Court's „Opening of the judicial year“ document, in which a set of priorities is determined. The priorities are subsequently monitored throughout the judicial year by automated BI tools and customised analysis at the Supreme Court.

The 2013 amendment to the Courts Act provides that the Supreme Court shall adopt the Criteria for quality of work for courts for the next (judicial) year, based on its Yearly report on efficiency and effectiveness of courts. In 2015 the Supreme Court adopted the timeframes for different types of procedures as well as for different procedural phases for 2016 (as a part of the Criteria for quality of work).

Q066 (2014): 2014 A dedicated office at the Supreme Court with specialised knowledge was introduced in order to monitor the quality and define quality policies at the level of entire judiciary and individual courts level.

Quality standards based on SATURN guidelines are taken into account in several predefined BI system reports.

The recent amendment of the Courts Act provides that the Supreme Court shall adopt the Criteria for quality of work for courts for the next (judicial) year, based on its Yearly report on efficiency and effectiveness of courts. Since the amendment was adopted in the middle of 2013, the first Annual report of Supreme Court will be for 2014 (to be published in 2015).

Consequently, only 2015 will be the (first) year to formally adopt the aforementioned Criteria.

The important role in the determination of quality standards is played by the Supreme Court's „Opening of the judicial year“ document, in which a set of priorities is determined. The priorities are subsequently monitored throughout the judicial year by automated BI tools and customised analysis at the Supreme Court.

Q066 (2013): 2013 According to the priorities for the whole judiciary, set by the Supreme Court in the „Opening of the judicial year“ document for judicial year 2013, specific areas were monitored and the standards determined for the following areas:

1. Management of courts
2. Solving of oldest unresolved cases
3. Business process – Time management of judicial procedures and the reform of civil enforcement procedure
4. Disburdening the judges
5. Levelling of human resources

Q066 (2012): 2012: The Supreme court's Data warehouse, containing all court cases, as well as financial data and human resources data was implemented in 2011. The data are collected based on CEPEJ Guidelines on Judicial statistics (GOJUST). The system was awarded with Special mention in the 2012 Crystal Scales of Justice Competition and was defined as Inspiring example in the EC document Quality of Public Administration - A Toolbox for Practitioners – <http://ec.europa.eu/social/main.jsp?catId=738&langId=sl&pubId=7757>.

Q067 (General Comment): The Office for Court Management Development at the Supreme Court promotes the improvement in leadership and management of courts and the increase in effectiveness and efficiency. It is responsible for the preparation of different reports and analysis regarding work of courts and the promotion of best practices. The Department for the Organization and Development of Management of the Supreme State Prosecutor's Office of the Republic of Slovenia is responsible for monitoring the implementation of the Prosecution Policy and the Criteria for the Success of Prosecution of State Prosecutor's Offices.

Q073 (2014): 2014: Until, the 2013 the Judicial Council was entrusted with monitoring and evaluating the performance of courts and issuing a yearly report on the execution of judicial power (Courts Act, Article 28). With the amendment to the Courts Act (ZS-K) of the Courts Act that came in force in 2014 this responsibility is transferred to the Supreme Court.

Q070 (General Comment): In Slovenia there is a regular monitoring system in a form of collecting data on court statistics. Court statistics are collected and published four times a year by the Ministry of Justice. They include the data on the number of judges and court staff, number of incoming, resolved and pending cases, age of unresolved cases, length of proceedings, average time to resolve a case, type of decision, court backlogs, legal remedies and time to issue a court decision. Besides that, the data on court activities are automatically on national level, thus statistical analysis are made possible. All courts have access to a wide range of special reports, generated in the Court management information system. Reports include detailed information on court activities (for example length of specific phases of a court proceeding, top 20 oldest cases in certain area of law, etc.), human resources, court performance indicators (the critical indicators are marked red for unsatisfactory performance and green when meeting the standards) that provide guidance to presidents and directors of courts. The business intelligence system that creates priority reports derives the data from the Data warehouse of the Supreme Court. The same source is used for Court statistics publications by the Ministry of Justice. Each court is able to access the above mentioned reports at any moment, while some data are quarterly collected and published on national level (as prescribed by the Court rules). The satisfaction surveys are performed and results published bi-annually.

Q070 (2015): The data on court activities are automatically collected on national level, thus statistical analysis is made possible.

All courts have access to a wide range of special reports, generated in the Court management information system. Reports include detailed information on court activities (e.g. length of specific phases of a court proceeding, top 20 oldest cases per legal area etc.), human resources, court performance indicators (the critical indicators are marked red for unsatisfactory performance and green when meeting the standards) that provide guidance to presidents and directors of courts. These additional data available to court management officials are the reason, why we put check before "other elements".

The business intelligence system that creates priority reports derives the data from the Data warehouse of the Supreme Court. The same source is used for Court statistics publications by the Ministry of Justice.

Each court is able to access the above mentioned reports at any moment, while some data are quarterly collected and published on national level (as prescribed by the Court rules).

Q077-1 (General Comment): The State Prosecutorial Council adopts the Criteria for evaluating the performance of the state prosecutor's offices on the proposal of the State Prosecutor General. The criteria define indicators and their target values for the appraisal of the work efficiency and realization of prosecution policy.

Q078-1 (General Comment): The criteria for the success of the prosecution of public prosecutors determine the following indicators: the number of unresolved cases at the end of the period, clearance rate, expected solution time, time criteria for typical process actions, (from the initiative of the police to the submission of a proposal to carry out urgent investigative actions, from the receipt to the rejection of the criminal complaint, from the receipt of the criminal complaint to the submission of a request for investigation or a proposal for individual investigative actions, from the receipt of the criminal complaint (without investigation) to the filing of the indictment, from the end of the investigation or individual investigative actions until the filing of the indictment, from the receipt of the complaint to the decision of the public prosecutor on the postponed prosecution and settlement, efficiency indicator, cost-effectiveness indicator, proportions of prosecution decisions, shares of rejected complaints according to individual reasons, shares of decisions alternative to criminal prosecution, share of penal orders, share of convictions, shares of imposed criminal sanctions.

Q073-3 (General Comment): The quantitative indicators are defined in the Criteria for evaluating the performance of the state prosecutor's offices adopted by the State Prosecutorial Council. General guidelines for the work of state prosecutors and priority fields of prosecution are defined in a Prosecution Policy by prosecutor general. Heads of offices implement both criteria in their Annual Work Program. Twice a year the prosecutor general, the State Prosecutorial Council and the Minister discuss the performance of state prosecutor's offices at joint meetings held with the heads of state prosecutor's offices and adopt and/or coordinate the measures required for implementation of annual work programmes. An evaluation of attained goals set in the adopted Annual Work Programme, Criteria and Prosecution Policy are an integral part of Annual Report of each prosecution office. The prosecutor general compiles Joint Annual Report on the work of the whole state prosecutor offices. The Minister and State Prosecutorial Council may submit their opinion to this report.

Q073-4 (2020): See general comment.

Q073-4 (2018): The quantitative indicators are defined in the Criteria for evaluating the performance of the state prosecutor's offices adopted by the State Prosecutorial Council. General guidelines for the work of state prosecutors and priority fields of prosecution are defined in a Prosecution Policy by prosecutor general. Heads of offices implement both criteria in their Annual Work Program. Twice a year the prosecutor general, the State Prosecutorial Council and the Minister discuss the performance of state prosecutor's offices at joint meetings held with the heads of state prosecutor's offices and adopt and/or coordinate the measures required for implementation of annual work programmes. An evaluation of attained goals set in the adopted Annual Work Programme, Criteria and Prosecution Policy are an integral part of Annual Report of each prosecution office. The prosecutor general compiles Joint Annual Report on the work of the whole state prosecutor offices. The Minister and State Prosecutorial Council may submit their opinion to this report.

Q073-6 (General Comment): Based on the data and analysis from the previous paragraph, the joint annual report shall contain: (1) Measures for improving the efficiency, performance and economy of work and implementation of the prosecution policy for particular and for all state prosecutor's offices together; (2) Measures for improving the efficiency of state prosecutor's offices whose results deviate considerably from the planned ones; (3) Assessment of suitability of the number of state prosecutor posts and state prosecutor personnel and other conditions including the appropriate proposals for their improvement.

Q073-6 (2018): Based on the data and analysis from the previous paragraph, the joint annual report shall contain: -Measures for improving the efficiency, performance and economy of work and implementation of the prosecution policy for particular and for all state prosecutor's offices together; -Measures for improving the efficiency of state prosecutor's offices whose results deviate considerably from the planned ones; -Assessment of suitability of the number of state prosecutor posts and state prosecutor personnel and other conditions including the appropriate proposals for their improvement.

Q070-1 (General Comment): The BI tools that use data gathered in information system of the State Prosecutor's Office provide the heads of prosecution offices with up-to-date overview of the performance of state prosecutors and the functioning of the office. Heads can customize the level and content of information presented to them for the purpose of making quantitative data supported decisions on allocation of work among prosecutors, control of the case-flow.

Q070-1 (2020): "Other": percentage of different types of decisions, value of proceeds of crime under freezing order, pronounced criminal sanctions...

Q072 (General Comment): In accordance with the Prosecution Policy adopted in 2017, cases in which a final court decision at first instance has not been adopted within 3 years of filing a written charge with the court, are monitored in particular.

Q077 (General Comment): The Annual work programme (see Q75) consists of the assessment of the expected number of incoming cases, timeframes for typical procedural acts and solving the cases and the plan of operating results. The latter includes the expected number of resolved cases and criteria of efficiency (resolved cases to staff ratio), effectiveness (expected time to resolution) and economy (budgetary funds to solved cases ratio) (the Courts Act, art. 71.b). The number of complaints is monitored as a performance indicator, however it is not directly considered as a measure of quality of work.

The data on satisfaction of court staff and users is also collected, however it is not yet used as quality indicator.

Q078 (2014): According to 2014 data, the Annual work programme established by court presidents consists of the assessment of the expected number of incoming cases, timeframes for typical procedural acts and solving the cases and the plan of operating results. The latter includes the expected number of resolved cases and criteria of efficiency (resolved cases to staff ratio), effectiveness (expected time to resolution) and economy (budgetary funds to solved cases ratio). The number of complaints is monitored as a performance indicator, however it is not directly considered as a measure of quality of work.

Q078 (2012): According to 2012 data, the Judicial Council has monitored performance of courts mainly through indicators such as incoming, closed and pending cases and backlogs, productivity of judges and court staff. With the development of justice administration the attention has shifted towards indicators prescribed by the Courts Act to draft a yearly plan of operating results: criterion of efficiency – number of closed cases, divided with the number of judges and non-judge staff; criterion of effectiveness – timeframes of proceedings; criterion of economy – budget, divided with the number of closed cases.

Q083-2 (General Comment): State Prosecutorial Council adopts Criteria for the assessment of state prosecutors' performance which define quality and quantity indicators. The quantitative criteria define expected time for the resolution of cases and for typical procedural acts. The performance of the evaluated prosecutor is compared to other prosecutors at his/her office concerning the number of assigned, resolved and unresolved cases, number of attendances at the court hearings, conviction rate, pronounced sanctions and number of logged appeals.

Q083-3 (General Comment): State Prosecutorial Council adopts the Criteria for the assessment of state prosecutors' performance on the proposal of the state prosecutor general.

Q120 (General Comment): Qualitative indicators are professional knowledge, capability of logical and analytical deliberation, protection of the reputation of prosecutor's office and his/her function and the proficiency of verbal and written communication.

Q120-1 (General Comment): Regular individual assessment of the public prosecutors' work is carried out every three years. The assessment can also be carried out on demand of the State Prosecutorial Council, head of prosecutor's office, Minister or the prosecutor himself. In first three years after the appointment for the state prosecutor the assessment is carried out every single year.

Q120-1 (2018): Every three years

Spain

Q066 (2015): Every three months each Court sends statistics to the Council for the Judiciary with complete information about the activity of the Court.

Q067 (2015): Every three months each Court sends statistics to the Council for the Judiciary with complete information about the activity of the Court.

Q073-0 (2016): Every six months there is a virtual (on line) inspection of the work of the Courts.

Q070 (General Comment): The category "other" encompasses: number of enforcement procedures, number of decisions appealed, number of rogatory letters issued, received and resolved, aid between courts, pending writings, form of termination of trials, etc.

Q070 (2017): The category "other" includes many other data such appeals, aid between courts, pending writings, etc.

Q070 (2016): The category "other" includes many other data such appeals, aid between courts, pending writings, enforcement proceedings, form of termination of trials, etc.

Q077 (General Comment): The statistic report that the Court sends every three months to the Inspection Service, and the reports and studies that the General Council for the Judiciary carry out with the information provided, serve to measure and control the burden of work of the Judges, Letrados de la Administración de Justicia, and Courts in general. On the other hand, the "Citizens' bill of rights before the law" is the document approved by the Parliament at 2002 that includes the list of rights of the citizen in their relation with the administration of justice, and the principles and good practices that must guide the service of the Justice to the citizens. It sets the principles of transparency, appropriate attention and information, gives special care and attention to the citizens who are most vulnerable (victims of crime, gender violence, minors, and other). The document is compulsory for all the professionals involved in Justice. According to this Bill of rights, the Parliament, through the Committee for Justice, will carry out a follow-up monitoring and continuous evaluation of the evolution of, and compliance with this Bill. The annual report submitted by the Council for the Judiciary to the Parliament will include a specific and sufficiently detailed reference to the claims, complaints, and suggestions made by citizens about the running of the Administration of Justice.

In addition to that, during the beginning of the implementation of the judicial offices (2010), a map of procedures and a quality management system with own indicators for this kind of offices were implemented. The model has been under review and is expected to be reviewed on the basis of electronic processing.

Finally, the hierarchical structure of the Letrados de la Administración de Justicia allow the Ministry of Justice control and ensure the compliance of standards and parameters of quality fixed, and achieve the new objectives fixed for the implementation of new measures (such the digitalization of Justice or the implementation of electronic tools right now).

Q077 (2017): On September 6 2018, the Ministry of Justice has announced a project to develop a quality plan to improve the administrative management of all the judicial offices in the territory over its competence.

In a second phase, the Ministry will apply the Evaluation, Learning and Improvement Model (EVAM) designed by the Ministry of Territorial Policy and Public Function, a model of excellence for organizations that begin their process towards the management of quality.

The culminating element of the process of implementation of quality management will be the certification of the level of excellence according to a model yet to be determined.

Q078 (2014): Judicial counsellors of each court fill a questionnaire every six months in which the personal performance is evaluated with data regarding the following: number of definitive rulings, number of cost proceedings appraisals, number of payments made to the parties, number of court fees managed and communicated to the Tax Authority, number of communications issued to the Land and Business Registries and number of seizures.

Q078 (2013): For 2014, the category "other" refers to the number of enforcement procedures, appealed decisions, rogatory letters issued, received and resolved.

Q083-3 (General Comment): In accordance with Royal Decree 432/2004, of March 12, which regulates the variable complement by objectives of the members of the Prosecution service, the State Attorney General, at the proposal of the Prosecution Inspection, after hearing the Prosecutor Council and prior the report from the Ministry of Justice, will determine for each annual period the objectives whose fulfillment will lead to the perception of the variable remuneration.

Indicator 1: Systems for measuring and evaluating the performance of courts

Table 1.1 National policies applied in courts and public prosecution services in 2020 (Q66 and Q67)

Indicator 1: Systems for measuring and evaluating the performance of courts and prosecution services

Comments provided by the national correspondents

organised by country

Question 066. Are quality standards determined for the judicial system at national level (are there quality systems for the judiciary and/or judicial quality policies)?

Question 067. Do you have specialised personnel entrusted with implementation of these national level quality standards?

Question 073. Do you have a system to evaluate regularly court performance based primarily on the defined indicators?

Question 073-0. If yes, please specify the frequency:

Question 073-1. Is this evaluation of the court activity used for the later allocation of resources within this court?

Question 073-2. If yes, which courses of action are taken?

Question 070. Do you regularly monitor court activities (performance and quality) concerning:

Question 077-1. Concerning public prosecution activities, have you defined performance and quality indicators?

Question 078-1. If yes, please select the main performance and quality indicators for the public prosecution services that have been defined:

Question 073-3. Do you have a system to evaluate regularly the performance of the public prosecution services based primarily on the defined indicators?

Question 073-4. If yes, please specify the frequency:

Question 073-5. Is this evaluation of the activity of public prosecution services used for the later allocation of resources within this public prosecution service?

Question 073-6. If yes, which courses of action are taken?

Question 070-1. Do you regularly monitor public prosecution activities (performance and quality) concerning:

Question 071. Do you monitor the number of pending cases and cases that are not processed within a reasonable timeframe (backlogs) for:

Question 072. Do you monitor waiting time during judicial proceedings?

Question 077. Concerning court activities, have you defined performance and quality indicators?

Question 078. If yes, please select the main performance and quality indicators that have been defined for courts:

Question 083-2. Are there quantitative performance targets defined for each public prosecutor (e.g. the number of decisions in a month or year)?

Question 083-3. Who is responsible for setting the individual targets for each public prosecutor

Question 120. Is there a system of qualitative individual assessment of the public prosecutors' work?

Question 120-1. If yes, please specify the frequency of this assessment:

Austria

Q073-0 (2020): monthly statistics about incoming and closed cases (more frequent)

Periodic check lists (annual)

Internal audit examination all 4 to 7 years (less frequent)

Q073-0 (2019): Operational Information System (BIS) annually

Periodic check lists

Less frequent:

Internal Audit all 4 to 7 years

More frequent:

Monthly statistics about incoming and closed cases ("Kurzstatistik")

Q073-0 (2018): Operational Information System (BIS) annually
Periodic check lists (on October 1st of every year)
Internal audit examination all 4 to 7 years (less frequent)
Monthly statistics about incoming and closed cases ("Kurzstatistik") (more frequent)

Q073-0 (2017): Operational Information System (BIS) annually
Periodic check lists (on October 1st of every year)
Internal audit examination all 4 to 7 years (less frequent)
Monthly statistics about incoming and closed cases ("Kurzstatistik") (more frequent)

Q073-0 (2016): Operational Information System (BIS) annually
Periodic check lists (on October 1st of every year)
Internal audit examination all 4 to 7 years (less frequent)
Monthly statistics about incoming and closed cases ("Kurzstatistik") (more frequent)

Q070 (General Comment): .

Q070 (2017): "other": e.g. certain kinds of decisions, clearance rate (annually)

Q073-4 (2020): Monthly statistics about incoming and closed cases (more frequent)
Periodic check lists (annual)
Internal audit examination all 4 to 7 years (less frequent)

Q073-4 (2018): Operational Information System (Sta-BIS) annually
Periodic check lists (on October 1st of every year)
Internal audit examination all 4 to 7 years (less frequent)
Monthly statistics about incoming and closed cases ("Kurzstatistik") (more frequent)

Q072 (2016): Supreme administrative Court: Statistic of incoming cases, number of decisions delivered, number of postpones cases, length of proceedings (timeframes) and age of cases

Q083-3 (2018): There are no specific targets given to public prosecutors.

Belgium

Q073 (2017): There are ad hoc evaluation systems within the courts. But there is not yet a central or coordinated system.

Q073 (2016): There are ad hoc evaluation systems within the courts. But there is no central or coordinated system.

Q070 (2017): There are ad hoc systems for monitoring activities within the courts. There is a central service responsible for the collection of statistics which ensures the annual publication of statistics. The Central Statistical Service is developing a uniform and coordinated policy, but there is (as yet) no central system for regular monitoring of activities.

Q070 (2016): There are ad hoc systems for monitoring activities within the courts. There is a central service responsible for the collection of statistics which ensures the annual publication of statistics. But there is no (yet) central system for regular monitoring of activities.

Q073-4 (2020): "More frequent :

- by means of monthly statistics on the number of cases handled (general prosecutors' offices)
- on the basis of bi-monthly dashboards (public prosecutors' offices)
- quarterly at the meetings of the public prosecutor with the public prosecutors and the labour auditors".

Q073-6 (2020): "comments for question 73-5:

Evaluation used at the local level (public prosecutor's offices, labor auditorates, general prosecutor's offices)"

Q071 (2016): There are ad hoc evaluation systems within the courts. But there is no central or coordinated system.

Q072 (2020): Monitoring mechanism via dashboards for prosecution services.

Q120 (General Comment):

This is the evaluation system in the judicial system

Bulgaria

Q066 (General Comment): Ordinance № 2 from 23.02.2017 on the indicators, methodology and procedure for appraisal of a judge, chairman and deputy chairman of a court

Article. 4. The Ordinance aims: 1. to affirm the rule of law and ensure effective protection of the rights of judges; 2. to ensure a lawful, transparent and fair procedure for career growth; 3. to increase the personal motivation for professional development of the judges, to maintain and improve the quality of their work; 4. to prevent corruption in the system of the judiciary; 5. to contribute to increasing the trust in the judiciary. Article 5. (1) The appraisal is an objective assessment of the professional, business and moral qualities of a judge, chairman and deputy chairman of a court, demonstrated in the performance of his position. (2) A unified appraisal form for a judge, chairman and deputy chairman of a court shall be filled in according to a sample pursuant to the appendix for the assessment as a result of the appraisal. Article 6. The appraisal guarantees professional self-improvement, equal and fair opportunities for the career growth of judges, based on the principles of legality, equality, objectivity and transparency.

Article 7. The appraisal may not affect the independence and fundamental rights of judges. Article 8. (1) The appraisal shall refer to the qualification, the achievements and the professional suitability, as well as the observance of the rules for ethical behavior by a judge, chairman and deputy chairman of a court. (2) The qualification is a set of the acquired professional knowledge, skills and personal abilities of the appraised. (3) The achievements are the personal qualitative and quantitative results, achieved by the appraised in his practical activity. (4) Professional suitability is the specific qualification for a specifically defined position. (5) The observance of the rules for ethical conduct is a conduct, compliant with the rules of the respective code of ethics.

Judiciary System Act Article. 196. (1) Appraisal shall be carried out:

1. initial - for a three-year period as of the appointment of a judge, prosecutor or investigator - when participating in a competition or in case of a proposal for promotion in ranking;
2. for the purpose of acquiring tenure: upon completion of five years service as a judge, prosecutor or investigating magistrate;
3. periodic - for a 5-year period as of the attestation for tenure of a judge, prosecutor and investigator, of an administrative head and a deputy administrative head;
4. extraordinarily: in the cases under Article 197 (5).

(2) Junior judges, junior prosecutors and junior investigators shall not undergo initial appraisal. A report on their work shall be drawn up by the supervisor for the second year of their appointment.

Q066 (2020): Judiciary system Act:

Article. 198 (1) The criteria for the appraisal of a judge, prosecutor or an investigating magistrate shall be:

1. legal knowledge and skills of applying it;
2. skill of analysing legally relevant facts;
3. skill of making optimum working arrangements;
4. efficiency and discipline;
5. compliance with the rules of ethical behaviour.

(2) In the course of the appraisal under Paragraph (1) the following indicators shall be taken into account:

1. keeping deadlines;
2. number of instruments upheld and reversed and the grounds for this;
3. the results of inspections carried out by the Inspectorate with the Supreme Judicial Council,
4. the overall caseload of the respective judicial district and judicial authority, as well as the workload of the appraised judge, prosecutor or investigating magistrate compared to other judges, prosecutors or investigating magistrates in the same judicial authority.

(4) The time served by the judge, prosecutor or investigating magistrate as a permanent trainer at the National Institute of Justice shall also be included in the appraisal period. The evaluation of the work performance as a trainer shall be given by the Managing Board.

(5) The time served by the judge, prosecutor or investigating magistrate as an European Delegated Prosecutor shall also be included in the appraisal period. The evaluation of the results of their work under Regulation (EU) 2017/1939 shall become part of their appraisal.

Article. 199. (1) A judge shall be appraised under the following specific criteria:

1. complying with the schedule for conduct of court hearings;
2. skill of conducting a court hearing and drawing up a record of proceedings;
3. administrating cases and appeals, preparing for a court hearing;
4. number of appealed judicial instruments from among the appealable judicial instruments, appealed judicial instruments upheld, judicial instruments reversed or invalidated, in whole or in part, and the grounds for it; the ability to reason and justify judicial instruments and to analyse evidence shall be subject to evaluation.

(2) A prosecutor shall be appraised under the following specific criteria:

1. skills of planning and structuring steps in pre-trial and trial proceedings;
2. complying with the written instructions and orders of the superior prosecutor;
3. ability to make working arrangements and direct the investigating authorities and the teams participating in pre-trial proceedings;
4. number of unappealed prosecutorial instruments, including warrants to terminate and suspend criminal proceedings, number of final judicial instruments rendered on instruments submitted by the prosecutor appraised, as well as the final judicial instruments returning cases for the rectification of procedural breaches, and the reasons for this, number of appeals granted, the prosecutorial instruments upheld, modified and reversed upon an instance and on official review.

Q067 (2020): The Supreme Judicial Council, through its Commission for Attestation/Appraisal and Competitions at the Judges College/Chamber of the Supreme Judicial Council and the Commission for Attestation/Appraisal and Competitions at the Prosecutorial College/Chamber, are the bodies that perform an objective assessment of the professional, business and moral qualities of magistrates.

Q073 (General Comment): The Inspectorate to the Supreme Judicial Council (ISJC) is a body of the judicial system of the Republic of Bulgaria established under the art. 132a of the Constitution of the Republic of Bulgaria /published in State Gazette N.12 from 6th February 2007/. The Inspectorate to the Supreme Judicial Council is an independent body with the primary function of examining the operation of the judicial bodies without affecting their independence. Art. 54, para. 1 of the Judicial Power Act assigns powers to the Inspectorate to the Supreme Judicial Council.

The Inspectorate annually, not later than the end of March of the current year, adopts a program for the planned inspections.

Q073 (2019): The Inspectorate to the Supreme Judicial Council (ISJC) is a body of the judicial system of the Republic of Bulgaria created with art. 132a of the Constitution of the Republic of Bulgaria /published in State Gazette N.12 from 6th February 2007/. The Inspectorate to the Supreme Judicial Council is an independent body with the primary function of examining the operation of the judicial bodies without affecting their independence. The powers of the Inspectorate to the Supreme Judicial Council are provided for in Art. 54, para. 1 of the Judiciary System Act.

Rules for the organization of the activities of the Inspectorate with the Supreme Judicial Council and for the activity of the administration and the experts

Section II Organization and procedure for conducting plan checks

Art. 53. (1) The Inspectorate annually, not later than the end of March of the current year, adopts a program for the planned inspections.

(2) The Annual Program for the planned inspections contains:

1. the appellate areas and the bodies of the judiciary in which a complex inspection will be carried out;
2. the bodies of the judiciary in which thematic and control inspections will be carried out;
3. an indicative timetable for carrying out the inspections.

(3) The annual program may be supplemented and amended by a decision of the Inspectorate. (4) The annual program is announced on the website of the Inspectorate.

Art. 54. (1) The planned inspections may be complex, thematic and control inspections. (2) The complex inspections relate to the overall activity of the body of the judiciary. (3) Thematic inspections are conducted on a specific topic on the application of the law by a judicial authority during the period under review, a judge, a prosecutor or an investigating magistrate.

(4) Control inspections are carried out after a complex or thematic inspection, which provides recommendations for overcoming negative practices. Art. 55. (1) Immediately after the adoption of the annual program, by lot ensuring random allocation, the chief inspector in the presence of all inspectors determines the specific judicial authority that will be inspected, and the teams that will carry out the inspection.

Q073-0 (2017): The Inspectorate to the Supreme Judicial Council (ISJC) is a body of the judicial system of the Republic of Bulgaria created with art. 132a of the Constitution of the Republic of Bulgaria /published in State Gazette N.12 from 6th February 2007/. The Inspectorate to the Supreme Judicial Council is an independent body with the primary function of examining the operation of the judicial bodies without affecting their independence. Art. 54, para. 1 of the Judicial Power Act assigns to the Inspectorate to the Supreme Judicial Council the following powers:

1. check the organisation of administrative operation of the courts, prosecution offices and investigating authorities;
2. check the arrangements made for the institution and progress of court, prosecutorial and investigative cases, as well as the disposal thereof within the established time limits;
3. analyse and summarise the cases that have been disposed of by virtue of an enforceable judicial instrument, as well as the case files and cases disposed of by prosecutors and investigating magistrates;
4. in the presence of conflicting case-law, the existence of which has been found in carrying out the activity under Paragraph (3), it shall alert the competent authorities of the need to request the rendition of interpretative judgements or interpretative decrees;
5. upon breaches identified in the implementation of the activities under Items 1 to 3, it shall alert the administrative head of the judicial authority concerned and the respective chamber of the Supreme Judicial Council;
6. make proposals for the imposition of disciplinary sanctions on judges, prosecutors and investigating magistrates and on the administrative heads of judicial authorities;
7. address alerts, proposals and reports to other state bodies, including the competent judicial authorities;
8. carry out integrity testing and examinations for conflict of interest of judges, prosecutors and investigating magistrates, verifications of the financial interests disclosure declarations, as well as checks for identifying actions damaging the prestige of the Judiciary and such related to impairment of the independence of judges, prosecutors and investigating magistrates;
9. examine applications against an infringement of the right to have a case examined and disposed of within a reasonable time;
10. adopt internal rules for carrying out the testing and examinations under Items 1 to 3 and Item 8 in the judicial authorities;
11. adopt internal rules for conduct of the integrity testing of experts with the Inspectorate and organise the conduct of such testing;
12. draw up an annual programme for scheduled inspections and an annual report on the activity thereof, which it shall submit to the Plenum of the Supreme Judicial Council;
13. discuss the draft budget for the Judiciary proposed by the Minister of Justice with regard to the budget of the Inspectorate and submit it to the Supreme Judicial Council;
14. make publicly available information on the activity thereof and publish the annual report on the activity thereof on the website thereof.

Rules for the organization of the activities of the Inspectorate with the Supreme Judicial Council and for the activity of the administration and the experts

Prom., SG, no. 103 of 27.12.2016, in force as of 01.01.2017.

Section II Organization and procedure for conducting plan checks

Q078-1 (2020): With the Guidance of Organization of the Information Activities at the Prosecutor's Office, issued by the Prosecutor General, the performance and quality indicators were defined, outside of the given ones, and covered the acts and actions of the public prosecutor for all types of supervisions that are carried out by the Prosecutor's Office:

In criminal proceedings, including the supervision of the enforcement of penalties, the following may be additionally, but not exhaustively mentioned: prosecutor's acts filed with the court; terminated cases; objections against judicial acts; acts for the enforcement of sentences that have already entered into force; acts for supervision over the sentence enforcement.

Actions for resolving the competition between administrative criminal liability and criminal liability;

Within civil proceedings – claims submitted under the cases provided by the law; Within administrative proceedings – participation in trials under the cases provided by the law; Acts on the supervision of legality

Q078-1 (2018): With the Guidance for the Organization of the Information Activities at the Prosecutor's Office, issued by the Prosecutor General, the performance and quality indicators were defined, outside of the given ones, and covered the acts and actions of the public prosecutor for all types of supervisions that are carried out by the Prosecutor's Office:

In criminal proceedings, including the supervision of the enforcement of penalties, the following may be additionally, but not exhaustively mentioned: prosecutor's acts filed with the court; terminated cases; objections against judicial acts; acts for the enforcement of sentences that have already entered into force; acts for supervision over the sentence enforcement.

Actions for resolving the competition between administrative criminal liability and criminal liability;

Within civil proceedings – claims submitted under the cases provided by the law; Within administrative proceedings – participation in trials under the cases provided by the law; Acts on the supervision of legality

Q073-3 (General Comment): With the Guidance for the Organization of the Information Activities at the Prosecutor's Office of the Republic of Bulgaria, all indicators for the activity of the Prosecutor's Office of the Republic of Bulgaria are regulated, as well as the obligation of all prosecutor's offices to prepare only a statistical report for the first half of the year, as well as analytical annual reports for their activity. The Rules for Measuring the Workload of the Prosecutor's Offices and the Individual Workload of Each Prosecutor and Investigator, adopted by a Decision of the Supreme Judicial Council under Protocol No. 60/11.12.2014, are applied in all prosecutor's offices, investigation departments and in the National Investigation Service. The use of the Unified Information System of the Prosecutor's Office ensures that the data is retrieved in real time and allows for its verification and reliability. Data on the administrative and managerial workload of the administrative heads, their deputies and the heads of the investigation departments is also provided through the system. The ratio of the number of law enforcement acts to one administrative act at the levels of the prosecutor's offices is also taken into account. The analysis of this relation is important for the efficiency/resource ratio analysis.

Within the Prosecutor's Office's Annual Report, an analysis is made for the workload of the public prosecutor's offices and the investigative bodies and it is compared to the workload of authorities of the same type and degree.

Data on the workload of public prosecutor's offices and investigative bodies is also collected every six months.

Ordinance No. 3 of 23.02.2017 on the Indicators and Methods for Assessment and the Criteria for Reporting the Workload Degree of Prosecutors, Investigators, Administrative Heads and Their Deputies can also be mentioned (adopted by a decision of the Plenum of the Supreme Judicial Council under Protocol No. 7 of 23.02.2017, promulgated in SG 21/10.03.2017).

Workload reporting is designated to ensure fairness of the assessment in terms of the volume of actual work. (The evaluation takes into account the actual workload of the relevant judicial authority, as well as the individual workload of the assessed prosecutor, investigator, administrative head, deputy administrative head and head of department. The workload of the respective judicial authority is compared to the workload of the bodies of the same type and degree, and the individual workload is compared to the set out workload norm and the workload of other prosecutors or investigators from the same body of the judiciary).

Q073-4 (2020): The answer here is both "Annual" and "More frequent" With the Direction of Organization of the Information Activities at the Prosecutor's Office of the Republic of Bulgaria, all indicators for the activity of the Prosecutor's Office of the Republic of Bulgaria are regulated, as well as the obligation of all prosecutor's offices to prepare only a statistical report for the first half of the year, as well as analytical annual reports for their activity. The Rules for Measuring the Workload of the Prosecutor's Offices and the Individual Workload of Each Prosecutor and Investigator, adopted by a Decision of the Supreme Judicial Council under Protocol No. 60/11.12.2014, are applied in all prosecutor's offices, investigation departments and in the National Investigation Service. The use of the Unified Information System of the Prosecutor's Office ensures that the data is retrieved in real time and allows for its verification and reliability. Data on the administrative and managerial workload of the administrative heads, their deputies and the heads of the investigation departments is also provided through the system. The ratio of the number of law enforcement acts to one administrative act at the levels of the prosecutor's offices is also taken into account. The analysis of this relation is important for the efficiency/resource ratio analysis. Within the Prosecutor's Office's Annual Report, an analysis is made for the workload of the public prosecutor's offices and the investigative bodies and it is compared to the workload of authorities of the same type and degree. Data on the workload of public prosecutor's offices and investigative bodies is also collected every six months. Ordinance No. 3 of 23.02.2017 on the Indicators and Methods for Assessment and the Criteria for Reporting the Workload Degree of Prosecutors, Investigators, Administrative Heads and Their Deputies can also be mentioned (adopted by a decision of the Plenum of the Supreme Judicial Council under Protocol No. 7 of 23.02.2017, promulgated in SG 21/10.03.2017). Workload reporting is designated to ensure fairness of the assessment in terms of the volume of actual work. (The evaluation takes into account the actual workload of the relevant judicial authority, as well as the individual workload of the assessed prosecutor, investigator, administrative head, deputy administrative head and head of department. The workload of the respective judicial authority is compared to the workload of the bodies of the same type and degree, and the individual workload is compared to the set out workload norm and the workload of other prosecutors or investigators from the same body of the judiciary).

Q073-5 (2020): The implementation of optimization within the Prosecutor's Office is in view of the data on the volume of prosecutorial activity, the workload of prosecutors, as well as the territorial scope and specifics of the region served by the respective prosecutor's office. Decisions on this optimization are made by the Supreme Judicial Council (SJC) on the basis of information periodically provided by the prosecution. On the basis of an analysis of the above indicators, the staff for the respective prosecutor's office is determined (in case of need for increase or reduction of staff, resp. in case of transfer of a full-time position from one to another prosecutor's office). The answer to questions 73-5 and 73-6 for 2020 takes into account the process of optimization of the court card started on 01.01.2019, as the Prosecutor's Office started the transformation of district prosecutor's offices into territorial divisions to district prosecutor's offices in the regional centers. Out of a total of 113 district prosecutor's offices at the end of 2018 - 11 were transformed into territorial departments from 01.01.2019, 28 were transformed into territorial departments from 01.01.2020, and as of January 1, 2021 another 38 district prosecutor's offices have been transformed into territorial divisions. The data on the workload and a set of other indicators were used for decision-making by the SJC for the indicated consolidation.

Q070-1 (General Comment): Monitoring, through the reports and analyzes of the Prosecutor's Office of the Republic of Bulgaria and individual prosecutors, of the activities of the Prosecutor's Office is carried out only in terms of number of incoming cases, length of proceedings (timeframes), number of resolved cases, number of pending cases, backlogs and percentage of convictions and acquittals.

Q070-1 (2018): "Other": percentage of returned cases

Q071 (General Comment): The duration of the court proceedings initiated by the Prosecutor's Office of the Republic of Bulgaria is monitored, as in case of excessive delay there is a possibility to request acceleration of these proceedings through the procedure under Chapter 26 of the PPC.

Q077 (2017): incoming cases; duration of proceedings /deadlines/; completed cases; pending cases; result of appealed and protested cases.

Q120 (General Comment): The assessment is carried out in compliance with the Judicial System Act and Ordinance No. 3/23.02.2017 on the Indicators and Methods for Assessment and the Criteria for Reporting the Workload Degree of Prosecutors, Investigators, Administrative Heads and Their Deputies (adopted by a decision of the Plenum of the Supreme Judicial Council under Protocol No. 7/23.02.2017, promulgated in SG 21/10.03.2017). The Prosecutor's Office of the Republic of Bulgaria has established an order for its implementation and for the retrieval and provision of data on prosecutors and investigators in accordance with validated performance indicators.

Croatia

Q066 (General Comment): According to the Courts Act (Official Gazette, No. 28/13, 33/15, 82/15, 67/18), the president of the court evaluates the work of every judge according to Framework Criteria for the work of judges in the period of one year following the standards on the number of judgements delivered by a judge compared with the number of judgements that should have been delivered, according to the Framework Criteria for the work of judges, result of work in different kinds of cases, respecting deadlines in delivery of judgements and drafting of judgements, quality of judgements on the grounds of expressed remedies in legal actions and other activities of judges.

Framework criteria are adopted by the Minister of Justice on the proposal of the General Assembly of Supreme Court. The Criteria prescribe the number of decisions that need to be rendered every year by a judge.

According to the State Attorney Office Act (Official Gazette, No. 67/18), State Attorneys' and Deputy State Attorneys' performance is evaluated every three years according to the following criteria: achieved results in resolving cases (based on the number of cases assigned to work on the basis of the Framework Criteria for the Work of Deputy State Attorneys and the average work results of county or municipal state attorney's offices for the previous three-year period), the quality of decisions and the justified use of legal remedies, proper performance of the state attorney's duty - observance of deadlines during the procedure, other activities of the State Attorney and the Deputy State Attorney, experience in performing the duty of state attorney and compliance of conduct with the Code of Ethics of State Attorneys and Deputy State Attorneys. The Framework criteria are adopted by the Minister in charge of judicial affairs, with the prior opinion of the Chief State Attorney of the Republic of Croatia.

Q066 (2018): According to the Courts Act (Official Gazette, number 28/13, 33/15, 82/15), the president of the court evaluates the work of every single judge according to Framework for the workload of judges in the period of one year following the standards on the number of judgements delivered by a judge compared with the number of judgements that should have been delivered, according to the Framework for the workload of judges, result of work in different kinds of cases, respecting deadlines in delivery of judgements and drafting of judgements, quality of judgements on the grounds of expressed remedies in legal actions and other activities of judges.

Framework criteria are adopted by the Minister of Justice on the proposal of the General Assembly of Supreme Court. The Criteria prescribe the number of decisions that need to be rendered every year by a judge.

Q066 (2017): According to the Courts Act (Official Gazette, No. 28/13, 33/15, 82/15), the president of the court evaluates the work of every single judge in his/her court for the previous year on the basis of the following standards: the number of judgements delivered by a judge compared with the number of judgements that should have been delivered, according to the Framework for the workload of judges, result of work in different kinds of cases in absolute numbers and percentages, respecting deadlines in delivery of judgements and drafting of judgements, quality of judgements on the grounds of expressed remedies in legal actions and other activities of judges.

Framework criteria are adopted by the Minister of Justice on the proposal of the General Assembly of Supreme Court. The Criteria prescribe the number of decisions that need to be rendered every year by a judge.

Q073 (2015): According to the Court Act, the president of court supervises accurate performance of court activities in due time. The president of court has a duty to write a report on the performed supervision and its results, as well as on the measures taken, at least once a month. The report has to be inserted into a case file of judicial administration. The president of court is obliged to ensure court efficiency in the resolution of cases, especially when it comes to the resolution of cases the procedure of which lasts more than three years.

The president of court, except for the president of the Supreme Court of the Republic of Croatia, has a duty to submit a report on the performed tasks of judicial administration, measures and activities undertaken to improve work and efficiency of the court in the resolution of cases. The report is to be submitted directly to a court of higher instance, to the State Judicial Council and the Ministry of Justice, once a year, at least before 31 March for the previous year.

The courts use special information systems for the management and operation of the courts' cases, which consist of standard applications, computer and telecommunications equipment and infrastructure, system software and tools and all the data that are entered, stored and transmitted in all of the registers of the system. Misdemeanour courts operate using JCMS (Joint Case Management System), while other courts of general jurisdiction and commercial courts use ICMS (Integrated Case Management System). Through these systems it is possible to regularly monitor and evaluate the activity, performance and output of courts.

Q073-0 (General Comment): According to the Courts Act (Official Gazette, No. 28/13, 33/15, 82/15, 67/18), the president of court supervises accurate performance of court activities in due time. The president of court has a duty to write a report on the performed supervision and its results, as well as on the measures taken, at least once a month. The report has to be inserted into a case file of judicial administration. The president of court is obliged to ensure court efficiency in the resolution of cases, especially when it comes to the resolution of cases the procedure in which lasts more than three years. The president of court, except for the president of the Supreme Court of the Republic of Croatia, has a duty to submit a report on the performed tasks of judicial administration, measures and activities undertaken to improve work and efficiency of the court in the resolution of cases. The report is to be submitted directly to a court of higher instance, to the State Judicial Council and the Ministry in charge for Justice, once a year, at the latest by the 31 March for the previous year.

The president of the Supreme Court submits the report on the state of judiciary to the Croatian Parliament, once a year, at the latest by the 30th April for the previous year. In this yearly report the president of the Supreme Court can report on the state and actions of the judiciary, organizational problems in courts and legislation shortcomings as well as give suggestions for the improvement of the work of courts. The courts use special information systems for the management and operation of the courts' cases, which consist of standard applications, computer and telecommunications equipment and infrastructure, system software and tools and all the data that are entered, stored and transmitted in all of the registers of the system. Through Case Management system it is possible to regularly monitor and evaluate the activity, performance and output of courts for the Ministry of Justice and the courts themselves.

Q073-0 (2019): According to the Courts Act (Official Gazette, number 28/13, 33/15, 82/15, 82/16, 67/18, 126/19), the president of court supervises accurate performance of court activities in due time. The president of court has a duty to write a report on the performed supervision and its results, as well as on the measures taken, at least once a month. The report has to be inserted into a case file of judicial administration. The president of court is obliged to ensure court efficiency in the resolution of cases, especially when it comes to the resolution of cases the procedure of which lasts more than three years. The president of the court is obliged to take special care to respect the rights and protect children in proceedings before the courts in accordance with international standards. The president of court, except for the president of the Supreme Court of the Republic of Croatia, has a duty to submit a report on the performed tasks of judicial administration, measures and activities undertaken to improve work and efficiency of the court in the resolution of cases. The report is to be submitted directly to a court of higher instance, to the State Judicial Council and the Ministry of Justice, once a year, at least before 31 January for the previous year. The president of the Supreme Court submits the report on the state of judiciary to the Croatian Parliament, once a year, at the latest by the 30 April for the previous year. In this yearly report the president of the Supreme Court can report on the state and actions of the judiciary, organizational problems in courts and legislation shortcomings as well as give suggestions for the improvement of the work of courts.

The courts use special information systems for the management and operation of the courts' cases, which consist of standard applications, computer and telecommunications equipment and infrastructure, system software and tools and all the data that are entered, stored and transmitted in all of the registers of the system. Q070 (2019): As regards "number of appeals", from 2019 we are able to get this data from our case management system.

Q073-3 (General Comment): According to the State Attorney's Act (Official Gazette, No. 67/18), a state attorney supervises accurate performance of all state attorney office activities in due time. A state attorney submits reports to the higher state attorney on his state attorney office performance each month and annually and reports on undertaken and planned actions in cases of special state interest or in cases with complex factual or legal issues. The General State Attorney Office submits the report on the status and trends of reported crime in the previous year, on cases related to the protection of property interests of the Republic of Croatia, legal issues in particular areas and a review of the organization and personnel in state attorney organization to the Croatian Parliament, once a year, at the latest by the 30 April for the previous year. In this yearly report, there can be a warning on the state and functioning of the legal system, deficiencies in the legislation and internal affairs of the state attorney's office and suggestions for improving the work.

The state attorney offices use a special information system for the management and operation of the state attorney cases, as an interactive data base in real time. Through the CTS (Case tracking system) it is possible to regularly monitor and evaluate the activity, performance and output of state attorney offices.

Q073-4 (2018): According to the State Attorney's Act (Official Gazette, number 76/09, 153/09, 116/10, 145/10, 57/11, 130/11, 72/13, 148/13, 33/15, 82/15), a state attorney supervises accurate performance of all state attorney office activities in due time. A state attorney submits reports to the higher state attorney on his state attorney office performance each month and annually and reports on undertaken and planned actions in cases of special state interest or in cases with complex factual or legal issues. The General State Attorney Office submits the report on the status and trends of reported crime in the previous year, on cases related to the protection of property interests of the Republic of Croatia, legal issues in particular areas and a review of the organization and personnel in state attorney organization to the Croatian Parliament, once a year, at the latest by the 30 April for the previous year. In this yearly report, there can be a warning on the state and functioning of the legal system, deficiencies in the legislation and internal affairs of the state attorney's office and suggestions for improving the work.

The state attorney offices use special information systems for the management and operation of the state attorney cases, as an interactive data base in real time. Through the CTS (Case tracking system) it is possible to regularly monitor and evaluate the activity, performance and output of state attorney offices.

Q078 (2019): As regards "number of appeals", from 2019 we are able to get this data from our case management system.

Q078 (2014): On the occasion of the 2014 evaluation, it has been explained that the productivity as a performance and quality indicator, applies only to judges (not court staff).

Q083-3 (2020): According to the State Attorney Office Act (Official Gazette No. 67/18), the Minister in charge for Justice, upon the proposal of Prosecutor General, adopts the Framework criteria for the work of public prosecutors (Deputy State Attorneys).

Q083-3 (2018): According to the State Attorney's Act, the Minister of Justice, upon the proposal of Prosecutor General, adopts the Framework criteria for the work of public prosecutors.

Cyprus

Q066 (General Comment): Quality standards are applied in practice

Q066 (2017): Quality standards are applied in practice

Q066 (2016): There are no written standards but in practice there are quality standards.

Q066 (2015): In practice there are quality standards

Q066 (2014): In practice there are quality standards

Q073-0 (2020): monthly and annually

Q073-0 (2019): monthly

Q073-0 (2018): monthly and annually

Q073-0 (2017): monthly and annually

Q073-0 (2016): monthly and annually statistics

Czech Republic

Q073-1 (2016): In 2015, a new policy from the Ministry of Justice resulted in the fact that the evaluation of the court activity is used for the later allocation of means to this court.

Q073-1 (2015): In 2015, a new policy from the Ministry of Justice resulted in the fact that the evaluation of the court activity is used for the later allocation of means to this court.

Q077 (2016): The answer should be YES - there are performance indicators such as number of cases that the judge should resolve within a month, but these are not so strictly binding.

Q120-1 (2018): The individual assessment of the public prosecutors' work take place at least once every two years.

Denmark

Q066 (2019): No, we use quantitative measures. Quality is usually measured as length of time to finalize a case.

Q066 (2016): No, we use quantitative measures. Quality is measured as length of time to finalize a case.

Q066 (2015): The only standards are objective standards for example acceptable timeframes to finalize a case.

Q067 (2019): As above

Q067 (2018): The public prosecution is not part of Danish Court Administration.

Q067 (2017): Because judges are independent, we do not interfere with a judge decision. However, there is always the possibility to appeal a court decision if either of the parties disagree with the verdict.

Q067 (2016): As above.

Q073 (2019): Weighted cases is also a way to see how much activity a court has.

Q073-0 (2020): Monthly, quarterly, half yearly and yearly.

Q073-0 (2019): Monthly for the district courts quarterly for other courts.

Q073-0 (2018): Monthly for the district courts. quarterly for other courts.

Q073-0 (2017): Monthly for the district courts. Quarterly for the High Courts, the Maritime and Commercial Court and the Supreme Court.

Q073-1 (2017): Definitely. Both in relation to funds but also in relation to appointment of new judges in case of vacancy. In case of vacancy, it is not necessarily the same district court where the judge will be placed. It may change to another court. At the high court and the Supreme court the law defines a fixed number of judges at each court.

Q073-2 (2020): Half yearly weighted cases and productivity figures are worked out. These data are used to allocate resources and to find which court should have the next free judge position.

Q070 (2020): We value independence high. Therefore Danish Court Administration does not evaluate the performance or productivity of individual judges. We follow overall productivity and case flow though as that is used to allocate resources and to find the court most in need of vacant judge positions.

Q070 (2019): Courts are followed yearly in a yearly report. District courts receives monthly a report about case flow, pending cases, backlogs, weighted cases and the time it takes to finalize cases.

Q070 (2017): In Denmark we have a management system which information is updated monthly for the district courts where the points above are shown. For the High Courts and the Supreme Court, the case flow is not followed so often and in a so detailed way, but there are also much fewer cases. "Other": activity in terms of weighted cases and also pending cases

Q070 (2016): The so called "weighted cases" are measured in order to have a measure for the activity.

Q078-1 (2020): We do not have performance indicators that measure length of proceedings directly. However, we measure them indirectly, since we have performance measures on the time from a case is given to the public prosecution until the case is resolved. Earlier we have interpreted this as an indirect measure of time-frames, but we have come to the conclusion that it is more correct to say, that we do not measure timeframes.

Q073-4 (2020): Monthly

Q073-4 (2018): Monthly

Q070-1 (2020): The methodology of replying changed in this question.

The prosecution makes quarterly reports to the Ministry of Justice on data regarding number of cases, clearance rate, etc. Disposition time is measured indirectly through a report that measures all steps in a criminal case from arrest to imprisonment. There is no direct measure of disposition time, but it can be read from this report. Therefore we find it more correct to check this option. Satisfaction of the prosecution staff has always been measured but not by the ministry of justice. Therefore it was not checked last time. However, it is measured, and we therefore find it correct to check this option. The prosecution makes an annual survey on the satisfaction of the prosecution staff.

Q071 (2020): Danish Court Administration is not doing it as a general thing. If a specific court needs help, Danish Court Administration can work out list of pending cases and list them according to age to give the court a tool to locate cases that need attention.

Q072 (2020): Danish Court Administration is typically not doing this. A responsible court follow their cases though.

Q072 (2018): We monitor the overall time from the courts receive a case until it is finalized, but not what happen in between. The same goes for the prosecution

Q077 (General Comment): The data is collected for all parts of the judicial system, eg. Police, Public prosecution, courts and the prison system. The data is used to measure the performance of the individual agencies/administrations, but also - and perhaps most importantly - to measure the interplay between these.

Q077 (2017): We have for a number of categories of cases defined that a certain percentage of cases should be solved within a certain time span. It varies for the different categories of cases.

Q077 (2016): In terms of productivity figures, weighted cases and target attainments.

Q078 (2019): Backlogs is qualified by showing the average age of pending cases to the district courts.

Q083-2 (General Comment): There is a productivity target for the prosecution as a whole, but not for each public prosecutor.

Q120 (2020): Public prosecutors go through intensive education for the first three years of them being recruited and this evaluation is structured centrally with HR at the Attorney Generals office. During that period they are individually being assessed through exams and through working with mentors. Thus they are continuously being assessed both centrally through exams as well as locally through the daily work that the mentor sees. Later in the career the assessment is not structured in such a way but all through their career the prosecutors are evaluated through their daily work and how they perform in court.

Q120-1 (2020): See response to 120: More frequent during the first three years of their career. Less frequent after that.

Estonia

Q066 (General Comment): Estonia has developed a quality system consisting of 3 parts. The first part contains the quality standards (good practice) for the management of the court that describe activities related to the chairman of the court. The second part contains the quality standards for the administration of courts and is focused on the different roles of the parties involved in the administration of courts: directors, Ministry of Justice, Council for the Administration of Courts. The third part contains quality standards for the court proceedings and is addressed to all the judges. All of the three parts of the quality standards have been discussed and approved by the Council for Administration of Courts, respectively in 2012, 2013 and 2015.

Q073-0 (2020): 4 times a year.

Q073-0 (2019): 4 times a year.

Q073-0 (2017): Every 4 months but if necessary even more frequent.

Q073-1 (2016): It can be part of it but it's not a rule.

Q070 (General Comment): The scope of the monitoring system is extended to the results of proceedings; the categories of cases; the number of decisions appealed and revoked, fully or partially. The waiting time and the 'age' of pending (not solved) cases are also monitored. It is worthy of mention that every year all the courts and the Ministry of Justice enter into an agreement according to which courts should aim to carry out structural changes and to make changes in case-flow management that will ultimately ensure efficient proceedings. The content of the agreement has changed since 2017. The goals are more general and the same for all the courts (except The Supreme Court).

Q070 (2017): See previous general comments.

Q070 (2016): see general comments

Q078 (2014): In 2014, the number of old cases has been considered among the main performance and quality indicators that have been defined. In 2012, this was not an official policy. In 2014, according to the decree adopted by the Minister of Justice, any case that has been pending for longer than two years is considered as an "old case".

Finland

Q066 (General Comment): There are quality projects covering both civil and criminal cases in the Court of Appeal of Rovaniemi judicial district and in the Helsinki Court of Appeal judicial district. In a quality project, one or several working groups are set up usually for a year. There are judges from each district court within the judicial district of a court of appeal and court of appeal judges and referendaries in the working group. Depending on the topic, prosecutors, attorneys-at-law and other lawyers, public legal aid lawyers and police may also participate in the working group's work. The working group writes a report on a specific theme, for example developing conduct of the court proceedings or legal costs in criminal and civil cases. The written report is presented and discussed in a formal event and published. The aim is to provide legal professionals with practical information and guidelines on a certain topic.

In addition, there are co-operation projects between administrative courts.

Prosecution Services' system quality improvement project is underway.

The Finnish Association of Judges compiled and published Ethical Principles for Judges in 2012.

Q066 (2020): Prosecution Services' system quality improvement project is underway.

Q066 (2015): There is a Quality Project of the courts in the jurisdiction of the Court of Appeal of Rovaniemi. (The jurisdiction of the Court of Appeal of Rovaniemi is the northernmost of the six appellate jurisdictions in Finland.) In 1999, the courts in the jurisdiction of the Court of Appeal of Rovaniemi launched a project for improvement of quality in adjudication. The quality project covers both civil cases and criminal cases.

The objective of the quality project is to develop the functioning of the courts further and further so that the proceedings meet the criteria of a fair trial, that the decisions are well reasoned and justified, and that the services of the courts are affordable to the individual customers. The main working method consists of systematic discussions

among the judges and also between the judges and stakeholders. The development work is steered by the development committee of the quality project. Normally four working groups for quality are set up for each year. The membership consists of judges from each of the District Courts in the appellate jurisdiction, members of the Court of Appeal, and referendaries of the Court of Appeal. Also prosecutors, private attorneys, public legal aid attorneys and heads of pre-trial investigation may serve as members in the working groups for quality. Each working group for quality is tasked to deal with one of the development themes which have been selected. The reports of the working groups are presented at the Quality Conference, they are discussed, and quality objectives based on the reports are set for the following year. The Report of Quality, containing the final reports, is published every year.

There is also a quality project of the courts in the jurisdiction of the Court of Appeal of Helsinki. Quality Project consists of working methods of two kind: cooperation with the University of Helsinki and working groups. Working groups for quality are set up for each year. The membership consists of judges from District Courts, members of the Court of Appeal, referendaries of the Court of Appeal, prosecutors and lawyers. Each working group for quality is tasked to address to one of the development themes which have been selected. The reports of the working groups are presented at the conference called 'Day of Jurisdiction'.

In addition there is a cooperation project between administrative courts. Some topics of the project have related to the quality standards. The reports of the project have discussed the matters like the factors of quality at administrative courts and the collection of information on quality.

It is also worth mentioning that on 15 October 2009, the presidents of Finnish Courts of Appeal proposed that the Finnish Association of Judges should begin work on drafting ethical guidelines for judges. A working group was set and the draft on ethical principles was discussed widely. The principles were formally released at the Judge Day event held in Helsinki on 12 October 2012.

Q073-0 (2020): During the annual budget negotiations the performance of each court is evaluated. However, the general performance of the courts as a whole (for example disposition times) is monitored more frequently.

Q073-2 (2020): The evaluation is used for later allocation of resources in the courts but the evaluation is not the main criteria when allocating the resources.

Q073-2 (2019): The evaluation is used for later allocation of resources in the courts but the evaluation is not the main criteria when allocating the resources.

Q073-2 (2018): The evaluation is used for later allocation of resources in the courts but the evaluation is not the main criteria when allocating the resources.

Q070 (General Comment): All courts keep statistics of the mentioned court activities in the operational case management systems. The National Courts Administration can access these figures through a reporting system.

Q070 (2019): satisfaction of court staff is monitored with job satisfaction surveys which are taken every second year

Q077-1 (2020): Performance yes, quality no - See answer 066

Q073-4 (2020): Biannually. The prosecution services are evaluated twice a year.

Q073-4 (2018): When necessary.

Q070-1 (2020): "Backlogs": cases that have been pending for longer than a year are monitored.

Q072 (2020): Within the courts, the time the case is pending in a court is monitored.

Q072 (2018): Within the courts, the time the case is pending in a court is monitored.

Q077 (2019): Statistics Finland no longer collects statistical data regarding the functioning of the courts and the judiciary. The Ministry of

Justice/National Courts Administration collects data and publishes the annual operational statistics, please see for example Courts statistics 2019 (in Finnish): <http://urn.fi/URN:ISBN:978-952-259-912-4>

Q078 (2020): Statistics Finland (until 2013) or Ministry of Justice (until 2019) no longer collect statistical data regarding the functioning of the courts and the judiciary. From 2020 onward the National Courts Administration collects data and publishes the annual operational statistics.

Q078 (2018): Statistics Finland no longer collects statistical data regarding the functioning of the courts and the judiciary. The Ministry of Justice collects data and publishes the annual operational statistics, please see for example Courts statistics 2018 (in Finnish): <http://urn.fi/URN:ISBN:978-952-259-745-8>

France

Q066 (2020): "If yes, please specify: Quality standards developed for public administration are used in the judicial system. The charter of the administrations thus sets the rules for the reception of litigants in all the courts and can lead to certification. There are also local initiatives aimed at setting up a "quality system" based on certification by an external body, which consist in establishing procedures describing the reception process, the organization of work and the management of a case. With regard to administrative justice: the rate of annulment and reversal of jurisdictional decisions must be kept below 15% and the stock of cases older than two years below 7.5% of the total stock."

Q066 (2019):

Quality standards developed for public administration are used in the judicial system. The charter of administrations thus sets out the rules for the reception of litigants in all courts and may give rise to certification. There are also local initiatives to set up a "quality system" based on certification by an external body, which consists of establishing procedures describing the process of reception, work organisation and management of a case.

Administrative justice: the rate of annulment of court decisions must be kept below 15% and the number of cases pending for more than two years.

Q066 (2016): Quality standards developed for public administration are used in the judicial system. The charter of the administrations determines the rules for the reception of litigants in all courts and may give rise to certification. There are also local initiatives aimed at setting up a "quality system" based on certification by an external body, which consists in establishing procedures describing the process of reception, organisation of work and management of a case.

Q067 (2020): The answer is no for the administrative justice.

Q067 (2014): 2010: State prosecutors draw an annual report on the activity, management of their public prosecution office and on the enforcement of the law, as well as an annual report concerning the measures of custody and the condition of the custody facilities.

Q067 (2012): 2012: in French law on the judicial organisation, there is no statutory or regulatory requirement providing specialised staff in courts responsible for quality norms.

However, as part of the maintenance dialog to have operational resources, each court fills a document for the Ministry of Justice, comprising informations such as the number of handled cases, pending cases, the number of judges and administrative staff, as well as the performance objectives to reach. This document is not available on the intranet to all of the staff. Only agents of the Ministry in charge of the maintenance dialog have access to these figures thanks to appropriate softwares.

Q073 (2016): Administrative courts also use dashboards on monthly basis, while civil and criminal courts receive quarterly management activity reports via a business application.

Q073 (2014): 2012, 2013, 2014: for the administrative courts, the performance indicators comprised an estimate and objectives updated every three months. The activity is assessed every year in the administrative jurisdictions during management conferences. A monitoring board for the activity is transmitted every month to the heads of administrative jurisdictions.

Q073 (2013): 2012, 2013, 2014: for the administrative courts, the performance indicators comprised an estimate and objectives updated every three months. The activity is assessed every year in the administrative jurisdictions during management conferences. A monitoring board for the activity is transmitted every month to the heads of administrative jurisdictions.

Q073 (2012): 2012, 2013, 2014: for the administrative courts, the performance indicators comprised an estimate and objectives updated every three months. The activity is assessed every year in the administrative jurisdictions during management conferences. A monitoring board for the activity is transmitted every month to the heads of administrative jurisdictions.

Q073-0 (2020):

With regard to the courts of the judicial order, there are two objectives for evaluating the performance of the courts. The first is the need to provide the heads of courts with steering elements via monthly dashboards (civil and criminal); the second consists, in the context of annual management dialogues, in proposing dashboards covering a whole year. These dashboards are freely accessible in order to allow for a very wide distribution to all the actors and thus encourage comparison, the first vector of performance analysis.

Q073-0 (2019): Concerning civil and criminal branches, there are two objectives for evaluating courts' performance. The first lies in the need to provide the heads of courts with steering elements via monthly dashboards (Civil and Criminal), the second in the context of annual management dialogues, the dashboard covering this time a whole year. These dashboards are freely accessible so that they can be widely diffused to all stakeholders and thus facilitate comparison, the latter being the primary means of analysing performance. Administrative courts also use monthly dashboards and civil and criminal courts receive quarterly reports on steering activities via a business application.

Q073-0 (2018): For judicial courts, the performance analysis is based on the PHAROS information centre used by courts (courts and prosecution services) and central administration.

The results of the management dialogues are published in July. The so-called steering returns can be updated every quarter and every month according to the disputes monitored.

For administrative courts, the frequency is annual

Q073-1 (2017): Annual management conferences (management dialogues) are held between the Ministry or the General Secretariat of the Council of State, depending on whether the court is judicial or administrative, during which the activity indicators of each court are analysed for the previous year and, in the light of the objectives achieved, the objectives and the resources in terms of credits and personnel granted for the coming year are set.

Q073-1 (2016): Annual management conferences (management dialogues) are held between the Ministry or the General Secretariat of the State Council (Conseil d'Etat), depending on whether the court is civil, criminal or administrative, during which, the activity indicators of each court are analysed for the past year, and, in the light of the objectives achieved, the objectives and the means in terms of credits and staff granted are set for the coming year.

Q073-2 (2020): No comment

Q073-2 (2019): Annual management conferences (management dialogues) are held between the Ministry or the General Secretariat of the Supreme Administrative Court (Conseil d'Etat), depending on whether the court is civil/criminal or administrative, during which the activity indicators of each court are analysed for the past year and, in the light of the objectives achieved, the objectives and the resources in terms of credits and personnel granted are set for the coming year.

Q073-2 (2018): The evaluation of a court's activity contributes in part to the subsequent allocation of resources to that court, in particular for the location of jobs for judges and civil servants.

However, the performance indicators are cross-referenced with other data (HR data, budgetary data, etc.) in the context of the allocation of human resources and the distribution of appropriations.

Q070 (2020): Judicial and administrative jurisdictions combined.

Q070 (2019): Civil and criminal justice: After the deployment of innovative applications, satisfaction questionnaires are sent to users in the courts (heads of courts, directors of registries, judges and registry officials) in order to improve change support actions and the implementation.

In addition, with regard to victims, the Ministry of Justice will conduct a satisfaction survey in the second half of 2019 among victims of criminal offences who resort to victim support associations. The results of this survey, similar to a previous survey conducted in 2011, could be published in 2020. Likewise, the Ministry of Justice is attentive to citizens' views on the way they are received in the courts. For several years now, surveys have been conducted on the reception in the courts by a service provider pretending being a litigant. In 2018, an online survey, coupled with a face-to-face survey, was conducted in seven 1st instance courts "tribunaux de grande instance" among litigants appearing in these courts. In 2019, the satisfaction survey will be carried out in all "tribunaux de grande instance" via an online survey accessible by internet address or QR code. Finally, a national survey is also under way on the reception of litigants in the courts in the specific context of the implementation of social centres within the "tribunaux de grande instance" and the integration within these courts of the three separate courts that previously dealt with these types of litigation. The survey, carried out among court staff, aims to assess the difficulties encountered by persons presenting themselves at the reception desk and to identify any corrections that could be included in the texts.

The reply to the question encompasses replies from administrative justice and civil and criminal justice.

Q070 (2018): The coverage rate of cases as well as the structure of civil or criminal litigation are used by the courts.

In addition, other indicators usefully complete the analysis: .

Share of decisions on the merits in completed cases (civil activity).

Share of referrals in completed cases (civil activity).

Theoretical time to sell off the stock.

Average age of the stock.

Percentage of cases over 12 months in stock (civil activity).

Q070 (2017): The number of cases referred is an indicator used only by administrative courts.

The courts have business applications to monitor their civil and criminal activities. At national level, data from these applications is

from these applications are collected automatically via infocentres, reprocessed and cross-referenced, then in the form of tables or graphs. These reports can be generated on a monthly basis, except for certain activity data (court of appeal).

These reports can be generated on a monthly basis, except for certain activity data (criminal courts, juvenile court judges, enforcement of sentences), for which reports are generated annually.

These infocentres enable the courts to monitor statistics and manage their activity. They enable the central administration to They enable the central administration to prepare management dialogues from a performance perspective.

Q070 (2016): The number of cases subject to referral is an indicator used only by administrative courts.

Courts have business applications to monitor their civil and criminal activities. At national level, data from these applications are collected automatically via info-centres, processed and cross-referenced, and then presented in the form of tables or graphs. These refunds can be generated monthly, except for certain activity data (assize court, juvenile judges, enforcement of sentences), for which the refunds are annual.

These info-centres enable courts to carry out a statistical follow-up and to monitor their activities. They allow the central administration to prepare management dialogues from a performance perspective.

Q070 (2015): The number of cases being referred is used only by administrative courts.

The rate of coverage of cases is used by judicial courts.

The state of stocks by age group is used by administrative courts.

Q070 (2014): 2013, 2014, the category "others" includes:

- the coverage rate of cases (used by judicial courts)
- the state of the stocks per age group (used by administrative courts)

It should be noted that concerning the indicators mentioned in the question, the number of appealed cases is only used by administrative courts.

Q070 (2013): 2013, 2014, the category "others" includes:

- the coverage rate of cases (used by judicial courts)
- the state of the stocks per age group (used by administrative courts)

It should be noted that concerning the indicators mentioned in the question, the number of appealed cases is only used by administrative courts.

Q070 (2012): 2010, 2012: the category "others" includes the state of the stocks per age group. It should be noted that concerning the indicators mentioned in the question, the number of appealed cases is only used by administrative courts

Q078-1 (2020):

This data is not available.

Q073-6 (2020): No additional information is available.

Q070-1 (2020): Judicial jurisdiction.

Q071 (2020): No further indication.

Q071 (2016): In civil matters, courts of first instance (TGI), labour courts (conseils de prud'hommes) and courts of appeal can measure their stock on the basis of business applications or data returns carried out by info-centers.

The identification of cases not processed within a reasonable time is easier through business applications that offer dashboards breaking down cases in stock by age group.

In criminal matters, first instance courts (TGI) can use the Cassiopée business application to record cases in stock at the registry and the number of unedited judgments. The situation of cases in stock at the registry office cannot be measured via the info-centre, which only allows establishing the number of cases registered with the Public Prosecutor's Office and the Correctional Service.

Q072 (2020): Answer for the court.

Q078 (2020): No comment.

Q078 (2019): Replies from both the Directorate of Civil and Criminal Services (Direction des services judiciaires) and the Supreme Administrative Court (Conseil d'Etat) on civil, criminal and administrative justice.

Q078 (2018): The coverage rate of cases as well as the structure of civil or criminal litigation are used by the courts.

In addition, other indicators usefully complete the analysis: .

Share of decisions on the merits in completed cases (civil activity).

Share of referrals in completed cases (civil activity).

Theoretical time to sell off the stock.

Average age of the stock.

Percentage of cases over 12 months in stock (civil activity).

Q078 (2014): In 2014, the category "others" refers to the civil and criminal cassation rate for judicial justice and the annulment rate for administrative justice. Among the main performance indicators of these jurisdictions, are the rate and the time of enforcement of sentences, the criminal response rate, the use of ADR rate, the dismissal of national criminal record rate, the number of dematerialised exchanges for judicial jurisdictions. Regarding the administrative jurisdictions, there is an anticipated average time for the judgement of cases and the proportion of pending cases for more than 2 years.

Concerning the enforcement of criminal decisions, it has been decided to make a performance indicator out of it in 2014, but the available statistical tools make it impossible to produce it.

Germany

Q066 (General Comment): Since 2012, the reply "No" is provided depending on the answer of the majority of the respondent Landers.

Q066 (2013): For 2010, 2012 and 2013, no information was provided from Mecklenburg-Western Pomerania and Thuringia. Four Landers replied “Yes”, while the remaining Landers answered “No”.

In Baden-Württemberg, the performance of each court is compared against the others in regard to number and duration of proceedings. Key performance indicators on performance ability of the courts are ascertained and compared at the Lander level.

A comprehensive quality management system has been introduced in Schleswig-Holstein at all courts and public prosecution offices. All of the accessible areas of the court administration are subject to quality management. Judicial independence and the professional independence of Rechtspfleger present natural constitutional and statutory boundaries that must always be considered.

In Brandenburg, a quality management system seeks to guarantee that quality demands that are statutorily prescribed, self-imposed, or demanded by users of the system are fulfilled with an optimal use of resources. These last years, a number of strategies have been implemented for ensuring quality in the justice system by means of cost and performance accounting, a controlling system, budgeting of personnel costs, benchmark procedures, balanced scorecard, the EFQM Model, various instruments for personnel and organisation development, calculation of personnel requirements, optimisation of business processes, surveys of attorneys, citizens, and employees, and evaluation instruments both for individual judicial and public prosecution work as well as for the courts and public prosecution offices as organisational units. The increased use of modern technology (e.g. Internet) has opened up the possibility for the justice system to reach a large number of citizens and, thus, to offer court users the best possible service. Likewise, the continuous expansion of electronic legal transactions offers new opportunities for improvement in the quality of the justice system with regard to the performance characteristics public accessibility and public service. However, the developments and models named are not uniformly established in the Lander. In Lower Saxony, a quality strategy was developed through the surveys AgiL (performance comparison of local courts) and LiVE (performance comparison of regional courts). This is based on the assumption that it is possible to compare courts by the collection of data. Following the comparison, an analysis is conducted to determine the reasons for which better numbers are achieved at one court location over another. These are then discussed in expert groups and measures are developed to promote those tools that seem likely to succeed for the duties at all court locations. The surveys do not serve to evaluate individual employees but rather to uncover structures that promote performance, which can then be transposed. This quality management concept takes place together with judicial councils and personnel representatives.

Q067 (2020): Due to judicial independence, there are no national level quality standards.

Q073 (2013): In respect of the 2010, 2012 and 2013 exercises no information was provided from Mecklenburg-Western Pomerania and Thuringia. Five States provided a positive reply, while the remaining Landers answered “NO”. As to Bavaria, the information varied depending on the individual court jurisdiction for which information was provided: “YES” for Bavarian fiscal courts and “NO” for the remaining Bavarian courts.

In Brandenburg, the analysis is only subject to the figures provided regarding incoming cases, conclusions, duration of proceedings, number of court persons working, etc., which could possibly be used as indicators for the assessment of the performance abilities and the quality standards of the court. In Bremen, there is a benchmarking based upon key performance indicators.

In Lower Saxony regular assessments of the activities of the courts and public prosecution offices take place through administrative supervision. Qualitative evaluation of court activities is not possible through the implemented statistics and, based upon the constitutional law guarantee of judicial independence, is not desired. Likewise, the current view in Saarland is that such an evaluation system is incompatible with judicial independence protected by the Basic Law. Moreover, in North-Rhine/Westphalia, monitoring adjudicative activities is prohibited based upon constitutional law grounds. In this Lander there is a comprehensive system for assessing internal business. In certain areas there is also a management information system with statistical core data relevant to management on the number of incoming cases, duration of proceedings, and numbers of conclusions.

Saxony-Anhalt specified that the instrument for operative and strategic management of the courts is the management report. In the conceptual (as regards content) design of the management reports, the department comparison is defined as central criteria. This approach results, on the one hand, in a comparison of one's own department with the average of all departments and, on the other hand, in taking account of the basic idea behind benchmarking, with the average of the three best departments. Concrete measures with calculable targets are set forth in target agreements between the Ministry for Finance and the Ministry for Justice and Equality as well as in how they are structured with each budgeted department. The bases for this, among others, are indicators in the management reports.

Q073 (2012): In respect of the 2010, 2012 and 2013 exercises no information was provided from Mecklenburg-Western Pomerania and Thuringia. Five States provided a positive reply, while the remaining Landers answered "NO". As to Bavaria, the information varied depending on the individual court jurisdiction for which information was provided: "YES" for Bavarian fiscal courts and "NO" for the remaining Bavarian courts.

In Brandenburg, the analysis is only subject to the figures provided regarding incoming cases, conclusions, duration of proceedings, number of court persons working, etc., which could possibly be used as indicators for the assessment of the performance abilities and the quality standards of the court. In Bremen, there is a benchmarking based upon key performance indicators.

In Lower Saxony regular assessments of the activities of the courts and public prosecution offices take place through administrative supervision. Qualitative evaluation of court activities is not possible through the implemented statistics and, based upon the constitutional law guarantee of judicial independence, is not desired. Likewise, the current view in Saarland is that such an evaluation system is incompatible with judicial independence protected by the Basic Law. Moreover, in North-Rhine/Westphalia, monitoring adjudicative activities is prohibited based upon constitutional law grounds. In this Lander there is a comprehensive system for assessing internal business. In certain areas there is also a management information system with statistical core data relevant to management on the number of incoming cases, duration of proceedings, and numbers of conclusions.

Saxony-Anhalt specified that the instrument for operative and strategic management of the courts is the management report. In the conceptual (as regards content) design of the management reports, the department comparison is defined as central criteria. This approach results, on the one hand, in a comparison of one's own department with the average of all departments and, on the other hand, in taking account of the basic idea behind benchmarking, with the average of the three best departments. Concrete measures with calculable targets are set forth in target agreements between the Ministry for Finance and the Ministry for Justice and Equality as well as in how they are structured with each budgeted department. The bases for this, among others, are indicators in the management reports.

Q070 (General Comment): At the level of the Federal Government, statistics on proceedings encompass the number of incoming cases, the type of proceeding, the form of conclusion, and the time needed for conclusion. Moreover, information regarding other characteristics is also collected (legal aid in litigation and legal aid for proceedings, value of dispute, subject area, remedies, etc.) All of this information can be correlated to one another upon evaluation. The regular evaluations can be found in the publications of the Federal Statistical Office. Data regarding the business overviews usually does not contain – in that it involves manual statistics – additional information beyond the business workload, particularly as regards the duration of proceedings.

Q070 (2020): The monitoring activities mentioned under "other" were reported only by some of the Länder.

Q070 (2019): Some of the Länder did mention a monitoring system concerning other court activities such as statistics on the nature of resolution are kept (e.g. in civil cases: dealt with by contentious judgment/by acknowledgement/by settlement, etc.).

Q070 (2018): Some of the Länder did mention a monitoring system concerning other court activities such as statistics on the nature of resolution are kept (e.g. in civil cases: dealt with by contentious judgment/by acknowledgement/by settlement, etc.).

Q070 (2016): other: Some of the Länder did mention a monitoring system concerning other court activities such as statistics on the nature of resolution are kept (e.g. in civil cases: dealt with by contentious judgment/by acknowledgement/by settlement, etc.).

Q070 (2014): In 2014, some of the Landers did mention a monitoring system concerning other court activities, namely statistics on the nature of resolution (e.g. in civil matters cases are dealt with by contentious judgment/by acknowledgement/by settlement, etc.).

Q070 (2013): In 2013, seven Landers communicated information on their regular monitoring system. For example, Baden-Württemberg refereed to calculation of the specific personnel requirements on a mathematical-analytical basis. Bavaria mentioned the type of proceedings, form of decision, etc. for courts of labour and social jurisdiction and workload, ratio of part-time employees; average age of employees, training and sick days, duration of proceedings in months, ratio of appeals for courts of general jurisdiction. In Brandenburg, the number of pending cases and the ratio of terminated proceedings as against incoming cases are monitored.

Q070 (2012): For 2010 and 2012, five Landers did not provide any reply. Seven Landers communicated detailed information on their regular monitoring system of courts' activity. Among the main other monitored parameters are the deadlines for the drafting of judgments (Bavaria), the number of pending cases and the ratio of terminated proceedings as against incoming cases (Brandenburg), the nature of resolution – cases dealt with by contentious judgment, by acknowledgment, by settlement etc. (Hamburg), cases allocated among staff, i.e. caseload quota (Hesse); finance benchmarks, item costs, standardized deployment of person hours related to product (Saxony-Anhalt).

Q078-1 (2020): Just over half of the Länder answered that quality indicators have been defined for backlogs, a few reported that quality indicators for satisfaction of users, costs, clearance rate or disposition time have also been defined.

Q070-1 (2020): A few Länder answered that they have also been monitoring productivity and costs.

Q071 (2020): The majority, but not all of the Länder have reported to monitor pending cases and backlogs.

Q071 (2018): In 2018, Länder have monitored the number of pending cases and the backlogs.

Q078 (2020): Scarcely half of the Länder answered that quality indicators have been defined for backlogs, a few reported that quality indicators for costs, number of appeals, appeal ratio, clearance rate or disposition time have also been defined.

Q083-3 (2020): There are no quantitative performance targets for each public prosecutor

Greece

Q066 (General Comment): Quality standards are set by the Code of Organization of Courts and Status of Judicial Officers (Law 1756/1988).

Q066 (2017): Most of the measures taken recently in Greece aim at speeding up Justice. However the Law provides a set of quality criteria that must be taken into account when inspectors check the performance of each judge.

Q067 (2017): The Law provides a set of quality criteria that must be taken into account when inspectors check the performance of each judge.

Q073 (2017): According to L. 1756/1988 (art. 85), supreme judges appointed as inspectors for one year's term redact every year General Reports on the operation of each Court and prosecutor's Office in their district and recommend the necessary measures for the proper functioning of the service. Furthermore, data regarding the flow of cases collected by the Ministry of Justice is used for ad hoc analysis (e.g. to provide a basis for decisions regarding the function of courts or answers to questions of parliamentary control).

Q073-0 (2017): The regular evaluation activity is performed every year. Besides, the Law 1756/1988 provides for inspections. Namely, according to art. 85, supreme judges appointed as inspectors for one year term redact every year General Reports on the operation of each Court and prosecutor's Office in their district and recommend the necessary measures for the proper functioning of the service. Furthermore, data regarding the performance of courts is collected as follows: Regarding Administrative courts and Civil procedure the data is collected every quarter. Regarding penal procedure this is collected every semester.

Furthermore, ad hoc evaluations are conducted, based on the data collected every quarter and semester respectively.

Q073-1 (2017): Concerning the staff of the court, under certain circumstances, this evaluation of the Court activity could lead to a decision to increase or diminish it.

Q070 (General Comment): According to Law 1756/1988 (art. 85), supreme judges appointed as inspectors for one year's term, redact every year general reports on the operation of each court and prosecutor's office in their district and recommend the necessary measures for the proper functioning of the service. Regarding administrative courts, this task is fulfilled by the General Commission of the State for ordinary administrative courts

Q070 (2019): The Greek government has introduced a new system for organizing and evaluating the planning and implementation of public sector actions and projects, which introduces among others, monitoring court activities. (L. 4622/2019 art. 49 foll.)

Q070 (2017): Regarding Administrative Courts, this task is fulfilled by the General Commission of the State for ordinary administrative courts. In the near future there will be a possibility for the General Commission of the state to use a business intelligence program, in order to extract composite statistical data without contacting any court [E-mail: g-epitropia-d-d@otenet.gr]

Q072 (General Comment): The waiting time during court procedures is monitored annually through the inspection process. The interval between the adjudication of the case and the issuance of the decision is watched, so that the judge does not have much pending and there is a quick delivery of justice.

Q072 (2018): There is a monitoring system regarding the length of the judicial procedure, but it does not include such kind of information.

Q072 (2016): There is a monitoring system regarding the length of the judicial procedure, but it does not include such kind of information.

Q077 (2017): N/A

Q078 (2019): The Greek government has introduced a new system for organizing and evaluating the planning and implementation of public sector actions and projects, which envisages, among other things, the preparation of action plans that include various performance indicators. (L. 4622/2019 art. 49 foll.)

Q120 (General Comment): The court and prosecution offices Inspection and the Inspection of judges and prosecutors is being carried out by a Council and Inspection bodies, staffed by judicial officers. Inspectors draw up a separate, detailed and substantiated report for each judge of their court district. This report evaluates: the moral quality, vigor and character, scientific qualifications, judicial judgment and perception, diligence, hardworking and service (qualitative and quantitative) performance, Justice administration, wording of court decisions and procedure management capacity and concerning Prosecutors, the capacity to administer justice, both in the pre-litigation procedure and hearing, as well as their oral speech capacity, the judges' behavior in general and in the audience, as well as his social status. The inspector shall also indicate in the report whether s/he considers as eligible for promotion, the Judges of First Instance and the Deputy Prosecutors of First Instance who have completed five years of service in their grade, as well as the judges and prosecutors from the rank of the Judge President to the Court of First Instance and Prosecutor of First Instance and above, after the completion of one year in their grade. Inspectors' reports shall be submitted to the Chairman of the Council of Inspectors within two months from the end of their term of office. In the event of an extraordinary or additional inspection, the report shall be submitted immediately after it has been carried out. A copy of each report shall be submitted by the Chairman of the Inspection Council to the Minister of Justice and, as the case may be, to the President and the Prosecutor of the Supreme Court, the President of the Council of State, the President of the Court of Auditors and the Auditor General of the Court of Auditors and the General Commissioner of the General Commission of the State. A copy of the inspection report shall be placed on the individual file of the inspected person. Another copy is being handed over to the inspected person by the competent department of the Ministry of Justice.

Hungary

Q066 (General Comment): Second instance courts have to prepare a note on the decision and the trial procedure of the first instance court, based on professional criteria in every case. In this note, the court of appeal has to examine: the application of substantive, procedural and administrative regulations; the preparation of the hearings; the quality of the judges trial leading practice; if the coercive measures were well founded; if the hearings were set timely; if the ruling was transcribed in time; if the decision was edited correctly. The conclusions are summarized and judges of first instance courts are informed about them at least once a year.

Furthermore, the departments of the Supreme Court (Kúria) responsible for examining the judicial practice evaluates the practice of the courts and regularly inform judges about their experience.

Q073 (2014): On the occasion of the 2013 and 2014 evaluations, it has been stressed that the statistics of the court system are carried out every quarter, semi-annually and annually. It is published on the central internet website of the courts every half year.

If some elements of the IT system described in 2012 have been implemented, this system is not yet able to replace the regular methods of measuring workload.

Q073 (2013): On the occasion of the 2013 and 2014 evaluations, it has been stressed that the statistics of the court system are carried out every quarter, semi-annually and annually. It is published on the central internet website of the courts every half year.

If some elements of the IT system described in 2012 have been implemented, this system is not yet able to replace the regular methods of measuring workload.

Q073 (2012): On the occasion of the 2012 exercise, it has been mentioned that the development of an IT system was under way which would make it possible to automatically measure and evaluate the workload of judges.

Q073-0 (2020): The statistics of the court system are composed in every quarter, half and whole year. It is published on the central internet website of the courts in every half year.

Q073-0 (2019): The statistics of the court system are composed in every quarter, half and whole year. It is published on the central internet website of the courts in every half year.

Q073-0 (2018): The statistics of the court system are composed in every quarter, half and whole year. It is published on the central internet website of the courts in every half year.

Q073-0 (2017): The statistics of the court system are composed in every quarter, half and whole year. It is published on the central internet website of the courts in every half year.

Q073-1 (General Comment): The statistical output of a court (mainly the number of incoming and pending cases) is taken into consideration during the distribution of human resources.

Q073-2 (2019): The statistical output of a court (mainly the number of incoming and pending cases) is taken into consideration during the distribution of human resources.

Q070 (General Comment): Among others:

- individual judge's statistics, - statistics on the reasons of the postpone of the trials,
- number of trial days in cases, - number of tried cases per day,
- pending cases of an individual judge / court,
- the time frame of pending cases
- number of appealed cases,
- the subject of incoming / finished / pending cases,
- the ratio of litigious and non-litigious cases,
- cases that are pending over 2 or 5 years have a separated statistical report every month
- cases in which there were no actions taken in the last 30 days by the court have a separated statistical report every month

Q070 (2020): - statistics on the reasons of the postpone of the trials,

- number of trial days in cases, - number of tried cases per day,
- the subject of incoming / finished / pending cases,
- the ratio of litigious and non-litigious cases,
- cases that are pending over 2 or 5 years have a separated statistical report every month
- cases in which there were no actions taken in the last 30 days by the court have a separated statistical report every month

Q070 (2019): Other:

- statistics on the reasons of the postpone of the trials,
- number of trial days in cases, - number of tried cases per day,
- the subject of incoming / finished / pending cases,
- the ratio of litigious and non-litigious cases,
- cases that are pending over 2 or 5 years have a separated statistical report every month
- cases in which there were no actions taken in the last 30 days by the court have a separated statistical report every month

Q070 (2018): Other:

- statistics on the reasons of the postpone of the trials,
- number of trial days in cases, - number of tried cases per day,
- the subject of incoming / finished / pending cases,
- the ratio of litigious and non-litigious cases,
- cases that are pending over 2 or 5 years have a separated statistical report every month
- cases in which there were no actions taken in the last 30 days by the court have a separated statistical report every month

Q070 (2015): Among others:

- individual judge's statistics,
- statistics on the reasons of the postpone of the trials,
- number of trial days in cases,
- number of tried cases per day,
- pending cases of an individual judge / court,
- the time frame of pending cases
- number of appealed cases,
- the subject of incoming / finished / pending cases,
- the ratio of litigious and non-litigious cases,
- cases that are pending over 2 or 5 years have a separated statistical report every month
- cases in which there were no actions taken in the last 30 days by the court have a separated statistical report every month

Q070 (2014): In 2013 and 2014, among other are quoted individual judge's statistics, statistics on the reasons of postponing trials, the number of trial days, the number of tried cases per day, the number of pending cases of an individual judge/court, the time frame of pending cases, the number of appealed cases, the subject of incoming/resolved/pending cases, the ratio of litigious and non-litigious cases. Cases that are pending over 2 or 5 years have a separated statistical report every month, as well as cases in which there were no actions taken in the last 30 days by the court.

Q070 (2013): In 2013 and 2014, among other are quoted individual judge's statistics, statistics on the reasons of postponing trials, the number of trial days, the number of tried cases per day, the number of pending cases of an individual judge/court, the time frame of pending cases, the number of appealed cases, the subject of incoming/resolved/pending cases, the ratio of litigious and non-litigious cases. Cases that are pending over 2 or 5 years have a separated statistical report every month, as well as cases in which there were no actions taken in the last 30 days by the court.

Q070 (2012): In 2010 and 2012, a reference is made to individual judge's statistics, statistics on the reasons of postponing trials, the number of trial days, the number of resolved cases, the number of cases scheduled within one day, the number of pending cases of an individual judge.

Q071 (General Comment): Judges have to report those cases on a monthly basis that are pending for more than 2 years. The president of the court can order a fast-track procedure for a case based on the report.

Q071 (2018): Judges have to report those cases on a monthly basis that are pending for more than 2 years. The president of the court can order a fast-track procedure for a case based on the report.

Q072 (General Comment): The administrative office of the court reports those cases to the president in which there was no judicial activity in the last 30 days.

Q072 (2018): The administrative office of the court reports those cases to the president in which there was no judicial activity in the last 30 days.

Q078 (General Comment): Measuring the satisfaction of court users has been introduced in 2014.

Q078 (2020): Among others: individual judge's statistics; statistics on the reasons of the postpone of the trials; number of trial days in cases;

number of cases heard per day; pending cases of an individual judge / court; the time frame of pending cases; number of appealed cases; the subject of incoming / finished / pending cases; the ratio of litigious and non-litigious cases; cases that are pending over 2 or 5 years have a separated statistical report every month; cases in which there were no actions taken in the last 30 days by the court have a separated statistical report every month

Q078 (2019): Among others: individual judge's statistics; statistics on the reasons of the postpone of the trials; number of trial days in cases;

number of cases heard per day; pending cases of an individual judge / court; the time frame of pending cases; number of appealed cases; the subject of incoming / finished / pending cases; the ratio of litigious and non-litigious cases; cases that are pending over 2 or 5 years have a separated statistical report every month; cases in which there were no actions taken in the last 30 days by the court have a separated statistical report every month

Q078 (2018): Among others: individual judge's statistics; statistics on the reasons of the postpone of the trials; number of trial days in cases; number of cases heard per day; pending cases of an individual judge / court; the time frame of pending cases; number of appealed cases; the subject of incoming / finished / pending cases; the ratio of litigious and non-litigious cases; cases that are pending over 2 or 5 years have a separated statistical report every month; cases in which there were no actions taken in the last 30 days by the court have a separated statistical report every month

Q120 (General Comment): The evaluation system is defined by Articles 50-52 of the Act on the Legal Status of Prosecutors. The purpose is to assess the quality of the prosecutor's activities, his/her skills, abilities and character traits with an impact thereon and to facilitate professional development. Prosecutors, with the exception of the Prosecutor General and the Deputy Prosecutor General, are assessed before the expiry of the fixed term of the first appointment, while in the case of a first appointment for an indefinite term, before the expiry of a period of 3 years following the appointment, and thereafter every 8 years. Prosecutors need not be assessed during the 6 years preceding the completion of the applicable old-age pension age. A prosecutor shall also be assessed if: requested by the prosecutor; circumstances have emerged that indicate the prosecutor's professional ineligibility or the necessity to alter the evaluation of the previous assessment; in the extraordinary proceeding to be completed without delay, s/he fails to meet the deadline extended by the superior prosecutor. The assessment is the duty of the person exercising the employer's rights. The official work of prosecutors assigned to the Ministry is evaluated by the Minister responsible for justice in accordance with the rules applicable to government officials. As a result, prosecutors may be awarded the following grades: excellent, suitable for promotion; excellent and fully eligible; eligible; eligible, subsequent assessment required; ineligible. In the event of an ineligible grade, the prosecutor shall be called upon to resign his/her office within thirty days. If the prosecutor is awarded a grade "eligible, subsequent assessment required", the person exercising the employer's rights identifies the deficiencies and irregularities and states the main criteria of the desired changes which shall be reviewed prior to the next assessment (within 2 years). A prosecutor shall be awarded an ineligible grade upon the next assessment if he/she fails to obtain an eligible grade. S/he may request a court of law to quash any erroneous or untrue finding.

Q120-1 (2018): The evaluation system is defined by Articles 50-52 of the Act on the Legal Status of Prosecutors. The purpose is to assess the quality of the prosecutor's activities, his/her skills, abilities and character traits with an impact thereon and to facilitate professional development. Prosecutors, with the exception of the Prosecutor General and the Deputy Prosecutor General, are assessed before the expiry of the fixed term of the first appointment, while in the case of a first appointment for an indefinite term, before the expiry of a period of 3 years following the appointment, and thereafter every 8 years. Prosecutors need not be assessed during the 6 years preceding the completion of the applicable old-age pension age. A prosecutor shall also be assessed if: requested by the prosecutor; circumstances have emerged that indicate the prosecutor's professional ineligibility or the necessity to alter the evaluation of the previous assessment; in the extraordinary proceeding to be completed without delay, s/he fails to meet the deadline extended by the superior prosecutor. Ireland

Q070 (2014): 2014: Since 2014 Ireland introduced a monitoring system for the length of proceedings and it is now capable of calculating average length of proceedings in first instance jurisdictions.

Q077-1 (2018): Prosecutors adhere to Code of Ethics and Guidelines of respective professional bodies .There are file reviews and regular periodic management reports in place

Q070-1 (2020): information is published in Annual Report available at: <https://www.dppireland.ie/app/uploads/2020/10/AR-2019-eng.pdf>

Q070-1 (2018): Information is published in Annual Report available at [https://www.dppireland.ie/filestore/documents/AR2017_\[eng\].pdf](https://www.dppireland.ie/filestore/documents/AR2017_[eng].pdf)

Q071 (2020): NAP

Q071 (2018): NAP

Q071 (2016): NAP

Q077 (2017): Waiting times for proceedings categories in the various jurisdictions are recorded and published in the Courts Service Annual Report.

Q083-2 (2018): Work is demand led by number of files submitted by external investigating agencies

Q120 (General Comment): In addition to reporting directly to their line managers in relation to their work as prosecutors, they are required to participate in the Office-and-Public-Service-wide process of Performance Management and Development conducted during each year on an individual basis between Management and Staff.

Q120-1 (2018): Prosecutors working in-house are required to participate in Public service wide Performance Management and Development System (PMDS).

Italy

Q066 (General Comment): In Italy there is not a strict quality system as such. However, there is a regular monitoring system in place which tracks the performance of court activities.

Q073-0 (2020): Quarterly

Q073-0 (2019): Quarterly

Q073-0 (2018): Quarterly

Q073-0 (2017): Quarterly

Q073-0 (2016): Quarterly

Q073-2 (2020): The evaluation of the court activity (case flow, DT, CR, etc.) are used to draw up the staffing plan ("pianta organica") i.e. the ideal allocation of judges and court staff among the courts. More recently, this data is used for monitoring the implementation of reforms and investments related to the Recovery and Resilience Plan (PNRR) and the related EU Next Generation funds.

Q073-4 (2020): Quarterly

Q073-4 (2018): Quarterly

Q072 (2018): Waiting time is monitored only for Administrative Justice.

Q077 (General Comment): The performance of each court is given by different indicators such as the clearance rate, the variation of backlogs and the age of the proceeding.

Q120 (General Comment): The assessment procedure applies to both judges and public prosecutors. Every four years, the High Judicial Council (CSM) conducts a professional appraisal based on the professional skills of judges/prosecutors. The professional status of both judges and prosecutors is organized into 7 different levels. Several criteria are taken into consideration: independence, impartiality, balance, professional capacity, hardworkingness, diligence and commitment. The assessment is based on a number of acts and documents that describe all the professional aspects of the magistrate to be evaluated. The most significant are: • a "self report" where the magistrate illustrates all the elements that he/she believes are necessary or useful to be considered for the purpose of his/her appraisal; • a random sample of acts and documents produced by the magistrate during the evaluation period; • an "informative report" prepared by a superior of the magistrate; • the statistics concerning activity of the magistrate: the number of provisions drafted, the processing times of the proceedings, the time for filing the documents (even in comparison with the other magistrates of the office); • scientific publications, if any; • reports from the lawyers' council, if any.

Latvia

Q066 (General Comment): In January 15, 2020 the "Visitors service standards of the district (city) courts and regional courts" were approved. This document summarizes the general principles related to functions such as judicial reception and providing with information. The standards help court staff to raise their professionalism and understand the court visitors servicing values.

The reply is partly "yes" because according to the Law on Judicial Power Section 27.1., a Chief Judge of a court shall plan and determine the objectives of the court work in relation to average time periods for adjudication of matters in a court (standard of time periods for adjudication of matters) prior to the beginning of each calendar year, in co-operation with court judges. This standard shall be determined, taking into account the court resources and the necessity to ensure the right of a person to adjudication of a matter in a reasonable time period and other basic principles related to the guarantee of fair trial. A Chief Judge of a court shall approve the standard and supervise the actual time periods of examining matters in a court. He/she shall submit information to the Board of Justice regarding the approved standard until 1 February of each year.

Q066 (2020): Partly yes, according to the Law on Judicial Power Section 27.1. the Court President before the beginning of each calendar year, shall plan and determine the objectives of the court work in relation to average time periods for the examination of cases in a court (the standard of time periods for the examination of cases) in cooperation with court judges. The standard of time periods for the examination of cases shall be determined by taking into account the court resources and the necessity to ensure the right of a person to the examination of a case in a reasonable time period and in conformity with other basic principles for the examination of cases. The Court President shall submit the standard case examination time limits for approval to the Judicial Council until 1 February of each year.

Q066 (2019): In January 15, 2020 the "Visitors service standards of the district (city) and regional court" is adopted. This document defines the procedure by which the employee of the district (city) and regional court shall ensure the servicing of the court visitor, the participant in the proceedings, its representative (hereinafter - customer) (the acceptance of the client, the provision of information and communication in person, by telephone and by electronic means) and basic customer service values, general principles and basic rules for customer service.

Q066 (2017): According to the Law on Judicial Power Art 27.1. chief judge of a court shall plan and determine the objectives of the court work in relation to average time periods for adjudication of matters in a court (the standard of time periods for adjudication of matters) prior to the beginning of each calendar year in co-operation with court judges. The standard of time periods for adjudication of matters shall be determined, taking into account the court resources and the necessity to ensure the right of a person to adjudication of a matter in a reasonable time period and in conformity with other basic principles for examination of matters. A Chief Judge of a court shall approve the standard of time periods for adjudication of matters in a court and supervise the actual time periods of examining matters in a court. A Chief Judge of a court shall submit information to the Board of Justice regarding the approved standard of time periods for adjudication of matters until 1 February of each year. First standards of time periods for adjudication of matters were submitted to the Board of Justice in 2014.

Q066 (2016): Partly yes, according to the Law on Judicial Power Section 27.1. chief judge of a court shall plan and determine the objectives of the court work in relation to average time periods for adjudication of matters in a court (the standard of time periods for adjudication of matters) prior to the beginning of each calendar year in co-operation with court judges. The standard of time periods for adjudication of matters shall be determined, taking into account the court resources and the necessity to ensure the right of a person to adjudication of a matter in a reasonable time period and in conformity with other basic principles for examination of matters. A Chief Judge of a court shall approve the standard of time periods for adjudication of matters in a court and supervise the actual time periods of examining matters in a court. A Chief Judge of a court shall submit information to the Board of Justice regarding the approved standard of time periods for adjudication of matters until 1 February of each year.

First standards of time periods for adjudication of matters were submitted to the Board of Justice in 2014.

Q066 (2015): Since 2008 courts apply 'The visitors service standards of the district (city) courts and regional courts'. This courts visitor's service standard summarizes the general principles of judicial reception and providing with information. Standard helps court staff to raise their professionalism and understand the court visitors servicing values. On 2015 May 18 Council of Justice approved guidelines on communication of the court system. The aim of the guidelines is to promote the effective functioning of the judiciary and promote the public confidence in the judiciary, creating a positive Court's image and enhance its' authority in society.

Q066 (2014): In 2014, for the first time, standards of time periods for adjudication of matters were submitted to the Board of Justice.

Q073 (2015): Latvia has the Court Information System it contains statistical data about court performance. The statistical data have been published in the e-portal: www.manas.tiesas.lv and regularly analysed by Court administration and Ministry of Justice (MoJ).

Q073-0 (2020): Evaluation of courts activities are done mainly in two ways: every month and on a basis of request. The evaluation can happen for a single court or instance at any time for a number of reasons. An Annual evaluation of court staff is also carried out, which is essential for high-quality work of courts.

Q073-0 (2019): Evaluation happens on a basis of request. The evaluation can happen for a single court or instance at any time for a number of reasons.

Q073-0 (2018): Evaluation happens on a basis of request. The evaluation can happen for a single court or instance at any time for a number of reasons.

Q073-0 (2017): Latvia has the Court Information System it contains statistical data about court performance. The statistical data have been published in the e-portal: www.tiesas.lv and regularly analysed by Court administration and MoJ.

Q073-0 (2016): Latvia has the Court Information System it contains statistical data about court performance. The statistical data have been published in the e-portal: www.tiesas.lv and regularly analysed by Court administration and MoJ.

Q073-1 (2020): Not currently, but there is a suggestion from State Audit Office and a subsequent proposition from Ministry of Justice and Court administration to the Judiciary Council to start to take court work statistical indicators into account when planning annual budget. If necessary, based on workload data resources can be allocated later within a court.

Q073-1 (2019): Not currently, but there is a suggestion from State Audit Office and a subsequent proposition from Ministry of Justice and Court administration to the Judiciary Council to start to take court work statistical indicators into account when planning annual budget. If necessary, based on workload data resources can be allocated later within a court.

Q073-1 (2018): Not currently, but there is a suggestion from State Audit Office and a subsequent proposition from Ministry of Justice and Court administration to the Judiciary Council to start to take court work statistical indicators into account when planning annual budget. If necessary, based on workload data resources can be allocated later within a court.

Q070 (General Comment): Implemented business intelligence solution allows to very closely monitor all the mentioned court activities.

Satisfaction of court staff and users is being evaluated by regular questionnaires in courts.

Q070 (2017): Decision stability (proportion of decisions appealed in higher instance)

Q070 (2016): Decision stability (proportion of decisions appealed in higher instance)

Q073-4 (2020): In accordance with the order of the Prosecutor General, a monthly report is prepared on the results of the public prosecutor's work in pre-trial criminal proceedings and the results of the work, which are not related to the progress of pre-trial criminal proceedings.

Q073-4 (2018): Monthly reports on the results of the public prosecutor's work in pre-trial criminal proceedings and the results of work which are not related to the conduct of pre-trial criminal proceedings shall be drawn up in accordance with the order of the Prosecutor General.

Q071 (2018): We have created a specific tool for this purpose that is available also in public from <https://dati.gov.lv/>

Q077 (2014): First standards of time periods for adjudication of matters were submitted to the Board of Justice in 2014.

Q078 (2020): The indicators "productivity of judges and court staff" and "number of appeals" are taken into account when assessing the professional activity of a judge, because the objective of the assessment of the professional activities of a judge is to promote the continuous professional growth of a judge throughout his or her career, thereby improving the quality of the work of the judge and the court. An Annual evaluation of court staff is also carried out, which is essential for high-quality work of courts.

Q078 (2019): All of these indicators can and are used to evaluate different aspects of court work from efficiency, quality and stability to decision of filling out a vacancy.
First four modalities are included in the report that courts have to prepare for the Judiciary Council before the end of January.

Q078 (2018): All of these indicators can and are used to evaluate different aspects of court work from efficiency, quality and stability to decision of filling out a vacancy.
First four modalities are included in the report that courts have to prepare for the Judiciary Council before the end of January.

Q078 (2014): According to the Law on Judicial Power as amended in 2014, the chief judge of a court, in cooperation with court judges, determines prior to the beginning of each calendar year targets in relation to the average length of court proceedings.

The standard in terms of length of proceedings is determined, taking into account the court resources and the necessity to ensure the right of a person to have his/her matter adjudicated within a reasonable time period and in compliance with other basic principles guaranteeing the right to a fair trial. A chief judge of a court must approve the standard of time periods and supervise the actual time periods of examining matters in a court.

The guidelines approved by the Judicial Council are used to establish standards of time periods for adjudication of matters.

Q083-2 (General Comment): The prosecutor provides a monthly report on the statistical indicators of his or her work. In addition, the statistical indicators of the individual work of the public prosecutor (statistical indicators for the monitoring of the investigation, prosecution, maintenance of the State prosecution and other functions of the public prosecutor) are also analysed during the process of assessing the professional activities of prosecutors (not less than once every five years).

Q120-1 (General Comment): The assessment of the professional activities of prosecutors have been commenced and is operational from 1 January 2014, within which, as for judges, the professional activities of prosecutors are assessed on a regular basis (not less than once every five years).

Q120-1 (2020): Not less than once every five years

Lithuania

Q070 (General Comment): All of these data are recorded in the Lithuanian Court Information System (LITEKO), as well as other data, related to the case, its process and the parties to the proceedings.

Q073-4 (2020): Chief prosecutors of the departments of the prosecutor's offices are regularly provided with monthly data based on basic indicators of the performance of public prosecution offices, every 3 months – with the larger scale of performance data.

Q073-4 (2018): Every 6 months.

Q072 (2020): courts: through administrative supervision mechanism

Q083-2 (2018): The quantitative performance targets are defined for the Prosecutor General's Office and 5 regional Prosecutor's Offices, but not for individual public prosecutors.

Q083-3 (2018): The quantitative performance targets are defined for the Prosecutor's Offices, but not for individual public prosecutors.

Q120-1 (General Comment): According to Article 33 of the Law on Prosecution Service, evaluation of prosecutor's individual performance, qualification and suitability is carried out by the Attestation Commission. Performance of a prosecutor who has received a positive evaluation after his/her internship, is thereafter evaluated every five years during the regular evaluation of the service. The extraordinary evaluation can be carried out by decision of the Prosecutor General: at the request of the public prosecutor him/herself, if at least half a year has passed since his/her last evaluation; in the case the prosecutor is applying for a higher position, or to the same or an equivalent post after the expiry of the term of appointment; if three years have passed since the last evaluation of his/her service; if the prosecutor's performance has repeatedly been deficient, giving rise to reasonable doubts as to his/her suitability for the position in question.

Luxembourg

Q073 (2020): "Although the technically correct answer is "no", the Judiciary edits every year an annual report on its activities during the previous year. This reports is available to the public (report 2020, see <https://justice.public.lu/fr/publications/juridictions-judiciaires/rapports-juridictions-judiciaires-2020.html>)."

Q073 (2019): Although the technically correct answer is "no", the Judiciary edits every year an annual report on its activities during the previous year. This report is available to the public (report 2019, see <https://justice.public.lu/dam-assets/fr/publications/rapport-activites-judiciaires/Rapports-juridictions-judiciaires-2019.pdf>).

Q073 (2018): Although the technically correct answer is "no", the Judiciary edits every year an annual report on its activities during the previous year. This reports is available to the public (report 2018, see <https://justice.public.lu/dam-assets/fr/publications/rapport-activites-judiciaires/Rapport-juridictions-judiciaires-2018.pdf>) .

Q073 (2014): 2014: There is no regular monitoring system. Statistical tools and the court management system may be used to monitor the activity but this is not their primary function.

Q073-1 (General Comment): The figures presented by the SSJ are used on a regular basis to allocate (and ask for) means to the courts and prosecutorial services.

Q073-1 (2020):

The annual report is used to the effect set out in Q. 073-1 (report 2020, see <https://justice.public.lu/fr/publications/juridictions-judiciaires/rapports-juridictions-judiciaires-2020.html>).

Q073-1 (2019): The annual report is used to the effect set out in Q. 073-1

Q073-1 (2018): The annual report is used to the effect set out in Q. 073-1

Q073-1 (2016): The figures presented by the SSJ are used on a regular basis to allocate (and ask for) means to the courts and prosecutorial services.

Q070 (General Comment): No regular system has been implemented up to today. However, a monitoring can be done through the statistical service of the judiciary (SSJ) on an punctual basis and upon request by the competent authorities.

Q070 (2017): ??? (see comments to parent campaign)

Q070 (2016): No regular system has been implemented up to today. However, a monitoring can be done through the statistical service of the judiciary (SSJ) on an punctual basis and upon request by the competent authorities.

Q070 (2015): By using the newly implemented statistical tools, the information ticked in addition to last year's questionnaire can now be retrieved by the statistical service on an as needed basis at least for criminal cases. Identical markers are being implemented for civil and commercial cases and will available in a foreseeable future.

Q070 (2014): 2014: There is no regular monitoring system. However, new statistical tools are implemented and can provide monitoring elements when necessary without daily measurement current affairs.

Q073-3 (2020): The annual report covers both judges and prosecutors (report 2020, see <https://justice.public.lu/fr/publications/juridictions-judiciaires/rapports-juridictions-judiciaires-2020.html>).

Q073-3 (2018): The annual report covers both judges and prosecutors.

Q073-5 (2020):

The annual report covers both judges and prosecutors (report 2020, see <https://justice.public.lu/fr/publications/juridictions-judiciaires/rapports-juridictions-judiciaires-2020.html>).

Q073-5 (2018): The annual report covers both judges and prosecutors.

Q071 (2018): New systems of monitoring have been implemented since 2016 (JUCIV for the civil law cases and JANGA for administrative law cases)

Q071 (2016): No regular system has been implemented up to today. However, a monitoring can be done through the statistical service of the judiciary (SSJ) on an punctual basis and upon request by the competent authorities.

Q072 (2014): According to 2014 data, the newly set up statistical tools, as well as the courts' CMS, allow an "as needed" check of the waiting time.

Q083-2 (2018): NAP

Q083-3 (2018): NAP

Malta

Q066 (General Comment): There exists a Code of Ethics for the members of the Judiciary which, though not providing for the organisation and quality of the judicial work, does lay upon the members of the Judiciary certain obligations which are important in ensuring the transparency and independence of the judicial process.

Q066 (2017): There exists a Code of Ethics for the members of the Judiciary which, though not providing for the organisation and quality of the judicial work, does lay upon the members of the Judiciary certain obligations which are important in ensuring the transparency and independence of the judicial process.

Q066 (2016): There exists a Code of Ethics for the Judiciary which, though not providing for the organisation and quality of judicial work, does lay upon the members of the Judiciary, certain obligations which are important in ensuring the transparency and independence of the judicial process.

Q067 (2018): There are general quality standards that apply to the public sector, but not specific quality standards that monitor the implementation of quality standards within the judiciary or the prosecution services.

Q073 (2015): Currently, Malta carries out systematic quantitative analysis of the performance of the courts, based on established international indicators. Furthermore, ongoing internal reports, commissioned specifically to study areas of interest in the performance of certain courts, also complement the quantitative analysis, and serve to further address identified shortcomings in a more strategic manner.

Q073 (2014): On the occasion of the 2014 exercise, it has been indicated that since 2015, a system of monitoring court performance through quantitative means, using established performance indicators such as Clearance Rate and Pending caseload, has been initiated.

Q073-0 (2020): Court performance is evaluated on a quarterly basis, or as the need arises.

Q073-0 (2018): Court evaluation in terms of performance is carried out on a monthly basis, or on a case by need basis.

Q073-0 (2017): The activity of the courts is monitored on a monthly basis.

Q073-0 (2016): Court evaluation in terms of performance is carried out on a monthly basis.

Q073-1 (2017): Court performance evaluation is brought to the attention of both the Minister for Justice, Culture and Local Government as well as to the attention of the Chief Justice. The Chief Justice, who is vested with the authority to effect changes in judicial duties, does make use of such performance data in the better interest of increased efficiency and expediency of the judicial process.

Q073-1 (2016): Court performance evaluation is brought to the attention of both the Minister for Justice, Culture and Local Government as well as to the attention of the Chief Justice. The Chief Justice, who is vested with the authority to effect changes in judicial duties, does make use of such performance data in the better interest of increased efficiency and expediency of the judicial process.

Q073-2 (General Comment): Court performance evaluation is brought to the attention of both the Minister for Justice as well as to the attention of the Chief Justice. The Chief Justice, who is vested with the authority to effect changes in judicial duties, does make use of such performance data in the better interest of increased efficiency and expediency of the judicial process.

Q073-2 (2020): Other refers to the Court's ability to request more financial and human resources in a bid to improve the performance on the selected indicators

Q073-2 (2018): Court performance evaluation is brought to the attention of both the Minister for Justice, Culture and Local Government as well as to the attention of the Chief Justice. The Chief Justice, who is vested with the authority to effect changes in judicial duties, does make use of such performance data in the better interest of increased efficiency and expediency of the judicial process. On the other hand, the Ministry also monitors these performance evaluations and tries to assist through legislative amendments or other interventions that lie within its powers and that do not impinge on the independence of the judiciary.

Q070 (2019): Other: age of pending caseload

Q070 (2017): other: clearance rate

Q070 (2015): The monitoring of court activities also takes place through the ongoing analysis of the Clearance Rate and Disposition Time of the various courts. This data is also being published online on a monthly basis.

The category "other" refers to the monitoring of the Clearance Rate and Disposition Time of all civil courts, boards and tribunals. This exercise was started in 2015.

Q070 (2014): In 2014, the court administration was monitoring length of proceedings through the number of incoming and resolved cases, as well as through the pending caseload. The age of civil cases was another parameter that was being assessed.

On the occasion of the 2014 exercise, it has been indicated that since 2015, Malta started computing the Disposition Time and Clearance Rate of all the civil and criminal courts. By the end of 2015, for the civil courts, this information will be made available online.

Q077-1 (2018): The Office of the AG does keep a record of the number of incoming cases as well as those cases that can be considered as terminated from the Office because for example, a bill of indictment is issued. However no official statistics are kept.

Q073-3 (2020): The Office of the AG has started setting up a system to assess the performance of the prosecution service, but this is still in its initial phases and more work is being planned on it to make it more integrated.

Q073-6 (2018): The workload of the Office of the AG is used for the recruitment of additional human resources.

Q070-1 (2018): The Office of the AG does hold a record of the number of incoming cases and terminated cases, but these are not as yet organised into official performance indicators.

Q072 (2016): In Malta, there is no formal monitoring system. However, an “informal” monitoring used to take place. It falls mostly within the remit of the Chief Justice and the respective members of the judiciary.

Q077 (2017): Despite the on-going monitoring and evaluation of the court activities and performance, we do not have defined target indicators against which to monitor performance. In general terms, we seek to ensure that the performance of the courts improves in efficiency year after year, and we try to address various aspects of the system in order to facilitate this improvement.

Q077 (2016): Currently Malta carries out systematic quantitative analysis of the performance of the different courts, based on international standards. We are also addressing measures of quality as defined by recognised international institutions, supplemented by internal reports that are purposely commissioned to focus on specific aspects of the functioning of the justice system. These ongoing efforts at measuring the efficiency and quality of our justice system is compared with past performance, but as yet, not with established targets.

Malta does not have defined 'targets' but assesses its performance in terms of indicators defined by international institutions

Q078 (2020): Other: age of pending cases

Q078 (2019): Other: age of pending caseload

Q083-3 (2018): NA

Q120-1 (2020): The work of public prosecutors is constantly monitored by the Deputy AG and the AG herself. The monitoring is not scheduled at specific annual intervals but it is ingrained in the daily work processes in the Office.

Q120-1 (2018): The work of public prosecutors is constantly monitored by the Deputy Attorney General (in charge of the criminal field) and the Attorney General. The monitoring is not scheduled at specific annual intervals, but is ongoing and ingrained in the daily work processes of the Office.

Netherlands

Q066 (General Comment): There are quality standards which are measured by annual statistical figures per individual court. Examples are the scores of customer satisfaction surveys, the percentage of cases judged by three instead of one judge and case processing times (the so called 'Kengetallen gerechten'). There is a Team Judicial Quality (Team Juridische Kwaliteit) which studies topics in a theme-wise manner, on a structural basis. A team of public prosecutors participates in TKJ and assesses the judicial work of colleagues in a structured and systematic way. Often there is a baseline assessment and a follow-up, sometimes a second follow-up. If necessary, the assessment framework is adjusted.

www.tweedekamer.nl/kamerstukken/detail?id=2018D52900&did=2018D52900

There are also professional standards, developed to show what good justice entails. These are publically available on the website of the Judiciary (<https://www.rechtspraak.nl/Organisatie-en-contact/Rechtspraak-in-Nederland/Rechters/Paginas/De-professionele-standaarden-van-de-rechters.aspx>)

Q066 (2019): There is a so-called Team Judicial Quality (Team Juridische Kwaliteit), which studies topics in a theme-wise manner. This is part of the program 'Programma OM Strafvordering 2020'. A team of public prosecutors participates in TKJ and assesses the judicial work of colleagues in a structured and systematic way. There is often a first assessment (baseline) and a first follow-up assessment, and sometimes even a second follow-up. If necessary, the assessment framework is adjusted.

Q067 (2017): yes

Q073-0 (2020): Along with monthly reports and quarterly reports, there are annual reports which are more thorough and elaborate.

Q073-0 (2019): Along with the monthly reports and quarterly reports, there are annual reports which are more thorough and elaborate.

Q073-1 (2020): This is not a 'hard' rule, the outcomes of the evaluation do not directly influence the allocation of resources in the next years.

Q070 (2020): There is an annual publication that includes the appeal ratio for some case types. To call it 'monitoring' would be a bit too much, but it is annually checked and reported on.

Incoming cases and length of proceedings have not previously been mentioned, but these are monitored.

Q073-4 (2020): Along with the monthly reports and quarterly reports, there are annual reports which are more thorough and elaborate.

Q073-6 (2020): In 2019, the system Directing and Funding (Besturen en Bekostigen) was formally introduced. This system introduced more measurements and questions about allocation. Also in 2019 an internal budget allocation model was introduced for allocation of resources between parts of the public prosecution.

Q073-6 (2018): Each three years, the amount of money is defined. The public prosecutors got a fixed amount and an amount of resources based on the amount of cases they dealt with.

Q072 (2020): Within the courts: Registration in the court system gives the opportunity to monitor waiting time. Within the public prosecution services: Across the justice chain, agreements have been made on the timeframes in which particular caseloads (sexual offences, youth cases and specific traffic violations) should be handled. These agreements are monitored. Annually, the government (Second Chamber) is informed on this via the factsheet 'Strafrechtketen'. Besides this, timeframe-agreements have been reached within the public prosecution on speed with which penal orders are to be issued, terms in which an objection is to be judged and the speed with which the first decision with attachment is to be taken (eerste beslissing bij beslag).

Q072 (2013): All steps and dates are recorded in information systems of the court. But this registration does not show 'waiting times' as such.

Q078 (2020): Satisfaction is monitored, but courts are not necessarily judged for that.

Q083-2 (2020): There is no national policy on targets for every prosecutor. An office (parket) could choose to set targets for their prosecutors (see next question), but this may vary across offices.

Q120 (2020): The public prosecution has a team Judicial Quality at the General Office (Parket Generaal) that studies the quality of the criminal proceedings of the public prosecution. As part of these studies and assessments, a pool of prosecutors has been compiled, and they study the work of other public prosecutors. The results of these studies are used for quality enhancement trajectories. The studies are repeated periodically.

Poland

Q066 (General Comment): The Ministry of Justice collects statistical data sent by common courts concerning their current activity, and also evaluates annual information on the activity of courts, prepared by presidents of courts of appeal about the activity of courts within the area of appeals, within the scope of tasks entrusted to them. In addition, the Minister of Justice convenes a meeting with presidents of courts of appeal at least once a year to discuss issues related to exercising supervision. Within the framework of that evaluation, a multifaceted analysis of collected statistical data is conducted, inter alia, an indicator of stability of jurisprudence, an indicator of control over the inflow of court cases or time of adjudication in incoming cases. However, no legal provision defines specific quality standards for individual indicators, concerning organisational quality and/or justice quality policy, to be formulated for the justice system as a whole.

Q066 (2016): The most important indicator comes from evaluation of judgements through second instance procedure. In this purpose "judgement stability" ratio are in use as a ratio of judgements reversed or annulled in procedure of appeal.

Q067 (General Comment): Inspection departments operate in the appellate and regional courts. The task of the judges working in these departments is to perform on behalf of the president of the court activities in the scope of supervision over the administrative activity of the courts in the area of the operation of a given appellate or district court. Supervision consists in taking actions to improve the office of the courts or increase the efficiency and level of work organization culture in the courts. For this purpose, visits of departments in courts or surveys of recognized cases of a given category are carried out, the secretariats of departments in the courts are controlled.

Activities in the scope of administrative supervision can not enter the field in which judges and assessors are independent.

Q073 (2019): Every year, an analysis is made of the annual information of the presidents of the courts of appeal about the activities of the courts operating in the area of appeals containing statistical data from individual appeals and information on actions taken to ensure the best activity of the courts in the area of appeal. The Minister of Justice assesses the annual information and accepts or refuses to accept this information

The analysis of the work of courts in the areas of operation of individual appeals is also based on statistical data for the first half of each year.

Based on the obtained statistical data, the Department of Administrative Surveillance carries out, as required, data on judicial units, in particular in the context of the efficiency of proceedings and the need for appropriate action by court presidents to ensure the most effective work of their subordinate units.

Q073 (2017): The Minister of Justice regularly assesses the activities of the courts as part of external administrative supervision, by analysing the annual information provided by the Presidents of the appellate courts pursuant to art. 37b § 2 point 1 of the Act of July 27, 2001. The law on the system of common courts (i.e. Journal of Laws of 2018.23), in turn as part of internal supervision, regularly evaluates the activities of courts by presidents, by visiting and reviewing selected issues.

Q073-0 (General Comment): Annual information of the presidents of courts of appeal on the activity of courts operating within the area of appellate courts, containing statistical data from particular appellate courts and information on actions taken to ensure the best possible activity of courts within the area of appellate courts, is analyzed every year. The Minister of Justice evaluates annual information and either accepts it or refuses to accept it

The analysis of work of courts within the jurisdiction of particular appellate courts is also carried out on the basis of statistical data for the first half of each year. On the basis of statistical data collected, the Department of Administrative Supervision performs, according to the needs, an analysis of data concerning judicial units, in particular in the context of efficiency of proceedings and the need to undertake appropriate actions by presidents of courts in order to ensure the most efficient work of units subordinate to them.

Q073-0 (2019): The analysis of the work of all courts is carried out cyclically for the first half of each year and after its completion, in particular based on the average duration of the procedure, control of influence and degree of residue, influence, settlement and remaining case, influence and settlement of cases on a judge according to the limit as at the last day of the statistical period, impact, settlement and remainder on staffing in versions 1 and 3. In addition, data on individual units are analyzed as required.

Q070 (2017): Supervision covers only the administrative activities of the courts. There are the internal supervision exercised by the presidents of the courts and the external supervision exercised by the Minister of Justice within the narrow scope specified in the law.

Q070 (2016): Supervision covers only the administrative activities of the courts. There are the internal supervision exercised by the presidents of the courts and the external supervision exercised by the Minister of Justice within the narrow scope specified in the law.

Q073-3 (General Comment): Pursuant to Article 30 of the Act on the Public Prosecutor's Office, the National Public Prosecutor, but also regional and circuit public prosecutors within the area of their activities, may order a visit to an organisational unit of the public prosecution services in order to control the performance of statutory tasks by this unit within a specified scope. Pursuant to § 77 item 1 of the Ordinance of the Minister of Justice - Rules of Procedure of the universal prosecutorial bodies of the public prosecution services, visitation and inspection shall be carried out as appropriate, in particular when there are signals of significant irregularities in the activities of a given body. Visitations should be carried out at least every 5 years.

2. An inspection may be carried out to check the correctness of practices in selected sections of the operation or when there is a need to investigate the causes of shortcomings in the operation or irregularities in the operation of the given body.

3 Visitation and inspection includes:

1) the control of the performance of the statutory tasks by the bodies, and in particular the examination of the correctness of the activities undertaken and the level of work;

2) assessing the performance of professional duties by prosecutors and administration staff and their professional qualifications and work culture;

3) an assessment of the way in which the body is managed, the organisation of work and the division of tasks.

4) In the course of visitations and inspections, instructions shall be given as necessary to improve the operation of the audited bodies and to help solve current problems.

Conclusions from the visitations and inspections of public prosecutor's offices are considered by the regional prosecutor's office board [kolegium prokuratury regionalnej] (Article 49 of the Act on the Public Prosecutor's Office).

Q073-4 (2020): Once a month, the head of the organizational unit of the prosecutor's office shall submit to his or her superior prosecutor a report containing the number of incoming cases and the number of cases disposed of .

Q073-4 (2018): Once a month a head of the organisational unit of the public prosecution service presents to their superior public prosecutor a report which contains a number of incoming cases and number of resolved cases.

Q072 (General Comment): Public Prosecution services

The issue of the duration of pre-trial proceedings is defined in the Code of Criminal Procedure, in Article 310 § 1 and § 2 and Article 325i § 1. Article 310 § 1 and § 2 states that the investigation shall be completed within 3 months. In justified cases the investigation period may be extended by a specified period of time by the public prosecutor supervising the investigation or the public prosecutor directly superior to the public prosecutor leading the investigation, but not longer than one year. In particularly justified cases a competent public prosecutor superior to the prosecutor supervising or leading the investigation may extend the investigation by a specified period of time.

Article 325i § 1 states that an investigation should be completed within 2 months. The prosecutor may extend this period to 3 months, and in particularly justified cases – to a longer specified period of time.

The authority empowered to order the extension of an investigation or an inquiry by a specified period of time shall monitor such proceedings with respect to their proper conduct in view of their possible length and shall assess the validity of the procedural steps taken or to be taken.

The request for the extension of an investigation or an inquiry must include the steps that need to be taken in the further course of the proceedings and indicate the reasons why they have not yet been taken.

Courts:

The presidents of the courts, in exercising internal administrative supervision over the administrative activity of the courts, control the taking of actions by judges within appropriate time limits; direct control is also exercised by the presidents of the divisions. Monitored also within the framework of management control and analysis of annual information on activities of courts operating within the area of appellate courts prepared by presidents of courts of appeal

Q072 (2018): In the mode of external and internal administrative supervision over the administrative activity of courts by analyzing the results of the courts or departments and monitoring the efficiency of individual cases in the case of detected lengthiness.

Q083-3 (2020): Individual goals are set by prosecutors themselves in a way that enables them to carry out their duties effectively

Portugal

Q066 (General Comment): Law on the organisation of the judicial system (Law 62/2013 of 26 August) sets out that the High Council for the Judiciary and the Prosecutor-General, in liaison with the member of Government responsible for the justice, establish, within their respective competences, the strategic objectives for first instance courts for a three year period. These entities are also responsible for setting, every year, the strategic objectives of first instance courts for the following judicial year. Taking into account the results obtained in the previous year and the strategic objectives formulated for the subsequently year, the president of the court and the public prosecutor coordinator, after hearing the judiciary administrator, articulate proposals for the procedural objectives for each court. This system is very recent, is currently being implemented, subject to improvements, and only covers civil and commercial cases.

Q066 (2020): For instance, the Prosecutor General's Directives and Instructions define good practices of functional performance at national level and their compliance may be viewed an indicator of the quality of the work developed (example, Directive 5/2019, on acting in cases of domestic violence (<https://dre.pt/home/-/dre/126870404/details/maximized> - text in Portuguese).

In addition to Directives and Instructions, the performance assessment system for prosecutors is based on quality criteria/performance parameters, as a rule, uniformly applied at national level.

Q067 (2020): The High Council of the Public Prosecution Service has “inspectors” (“inspectores”) who assess the quality of the work carried out by the prosecutors, applying national quality criteria or standards.

Q073 (General Comment): Besides an annual report, there are also a trimestral and semestral statistics to evaluate judge's performance.

In the case of the Administrative and Tax Courts the reports are semestral.

Q073 (2015): Every month a data collection of all courts is assembled. In addition, in first degree courts the electronical procedures allow a daily basis analysis. The website is very exhaustive and can be consulted in

http://www.siej.dgpgj.mj.pt/webgis/index.jsp?username=Publico&pgmWindowName=pgmWindow_633918141195530467.

Every 4 years we have a complete analysis to the work of all courts, with the local inspectors made by judges appointed by the Judicial Council.

Q073-0 (2018): Besides an annual report, there are also a trimestral and semestral statistics to evaluate judge's performance. In the case of the Administrative and Tax Courts the reports are semestral.

Q073-0 (2017): Every 4 months.

Q073-0 (2016): Every 6 months.

Q070 (2020): we included "satisfaction of users" because one of the tasks of the president judge of the court is to monitor and evaluate the activity of the court, in particular the quality of the justice service provided to citizens, taking into account particular complaints or responses to satisfaction questionnaires. "Article 94 of Law 62/2013, 26th August, on the judicial organization"

Q070 (2019): In this evaluation cycle we included "satisfaction of users" because one of the tasks of the president judge of the court is to monitor and evaluate the activity of the court, in particular the quality of the justice service provided to citizens, taking into account particular complaints or responses to satisfaction questionnaires. "Article 94 of Law 62/2013, 26th August, on the judicial organization"

Q070 (2017): Scheduling; delays of judges and sections.

Q070 (2016): Scheduling; delays of judges and sections.

Q070 (2015): Scheduling: time delays of judges and sections of the court.

Q070-1 (2020): We included "clearance rate" and "disposition time" because one of the tasks of the public prosecutor coordinator is to monitor and evaluate the activity of the public prosecutors services, including the efficiency of procedures. Article 101 of Law 62/2013, 26th August on judicial organization.

Q072 (General Comment): Through SITAF and CITIUS (case management systems for administrative and tax courts and judicial courts, respectively) it is possible to check waiting times during judicial proceedings.

The Portuguese Code of Criminal Procedure establishes no binding timeframes for criminal investigations. At a national level, within the public prosecution services, there is only monitoring of the judicial proceedings time during on criminal investigations, with reference to this timeframe.

At a local level, some other proceedings (such as the initial intervention of public prosecutors on protection of adults with some incapacity, requesting accompanying measures – under the legal framework of the accompanied adult [Regime Jurídico do Maior Acompanhado]) are also monitored on time duration.

Q072 (2018): Through SITAF and CITIUS (case management systems) it is possible to check waiting times during judicial proceedings.

Q083-2 (General Comment): Yes for some District Prosecution's Office and No at a national level. At national level, only reference values are fixed for the purpose of placing prosecutors. Also at a national level, the fact that a prosecutor has finished more proceedings than those that he/she started is a general criterion of evaluation and compliance with general objectives, in the qualitative individual assessment of the public prosecutors' work.

Q083-3 (2020): The local hierarchically superior public prosecutor can set individual targets for each public prosecutor.

The High Council of the Public Prosecution Service only sets reference values for the purpose of placing prosecutors and establishing how many prosecutors are needed for a particular Public Prosecution Office.

Q120 (General Comment): According to articles 141 and 143 of the Statute of the Public Prosecution Service, as a rule, a first assessment takes place three years after the beginning of the functions as a public prosecutor, then after four years and then every five years.

If a prosecutor has twice the maximum grade, he/she may be waived of the next assessment.

After the period of long-term leave, the public prosecutor is subject to a new inspection, one year after the resumption of functions

Romania

Q066 (General Comment): There are no formal standards for quality established for the whole judiciary. However, informal standards are being used (such as training, quality of the reasoning, assessment of the activity of the judges, assessment of the good reputation of the judges etc.).

More precisely, the activity of courts is evaluated and monitored periodically, on the basis of certain statistical data/performance indicators, such as those presented at question 70. The evaluation is achieved by verifications carried out by inspectors of the Judicial Inspection of the SCM, by elaborating periodical reports. The schedule and thematic of those verifications are approved every year by the SCM.

At organizational level, there are no quality standards established for courts. It may be considered that such standards exist at individual level, for each judge, by the indicators for the evaluation of professional activity.

Q066 (2012): In the frame of the 2012 exercise, a reference was made to the "Court Optimisation Project" financed by the World Bank, implemented from October 2011 to March 2013. The final recommendation included the introduction of Key Performance Indicators (KPIs), such as the clearance rate, the number of cases older than one year, the number of cases solved within 1 year, and the comparative measurement system.

Q073 (2015): The courts have to carry out a monthly assessment and the Superior Council of Magistracy on the basis of individual reports as well as on the basis of the overall indicators carries out a half-yearly assessment of the judicial system.

Q073-0 (2020): biannual (twice a year)

Q073-0 (2018): BIANUAL

Q073-0 (2017): The system may be inquired and offer information in real time. On a regular basis, the information is used within the annual report of the judiciary.

Q073-0 (2016): The system may be inquired and offer information in real time. On a regular basis, the information is used within the annual report of the judiciary.

Q073-1 (2017): A periodic evaluation system of the activity (performance and result) of the court is not formally adopted (by law or by a subsequent regulatory act). SCM uses a series of performance indicators (see questions 71 and 74 below) concerning the activity of the courts. Periodical assessments are being carried out and further measures are being implemented on the highlighted results. By the decisions 1305/2014 and 149/2015, SCM has approved the reports on implementing these indicators and there were established new margins for their implementation.

Q073-1 (2016): A periodic evaluation system of the activity (performance and result) of the court is not formally adopted (by law or by a subsequent regulatory act). SCM uses a series of performance indicators (see questions 71 and 74 below) concerning the activity of the courts. Periodical assessments are being carried out and further measures are being implemented on the highlighted results. By the decisions 1305/2014 and 149/2015, SCM has approved the reports on implementing these indicators and there were established new margins for their implementation.

Q070 (General Comment): Since 2012, the category "other" subsumes the length of administrative procedures, the number of final convictions, legal aid, suspended cases etc.

Q070 (2020): ECRIS - case management and STATIS - statistics monitoring application including for court's efficiency assessment

Q070 (2019): ECRIS - case management and STATIS - statistics monitoring application including for court's efficiency assessment

Q070 (2017): - e.g. suspended cases

Q070 (2016): - suspended cases etc.

Q071 (2020): STATIS - statistics monitoring application including for court's efficiency assessment

Q072 (2020): There are statistical reports developed by an IT application called Statis that monitor the duration of a court trial on different levels - total time, preliminary proceedings, delays between the sessions, time for drafting the decision etc.

Q072 (2018): There are statistical reports developed by an IT application called Statis that monitor the duration of a court trial on different levels - total time, preliminary proceedings, delays between the sessions, time for drafting the decision etc.

Q072 (2016): There are statistical reports developed by an IT application called Statis that monitor the duration of a court trial on different levels - total time, preliminary proceedings, delays between the sessions, time for drafting the decision etc.

Q072 (2014): According to 2014 data, there are statistical reports developed by Statis IT application monitoring the duration of a court trial on different levels - total time, preliminary proceedings, delays between the sessions, time for drafting the decision etc. More precisely, in 2014, the Superior Council of Magistracy has established a working group that has analyzed several national and international documents on the efficiency of the courts and has developed a set of indicators that are used to make an overall assessment of the efficiency of courts, sections and, if needed panels of judges. These indicators were implemented and used in the Statis application.

Q078 (2020): - e.g. suspended cases

Q078 (2019): e.g. Suspended cases

Q078 (2018): - e.g. suspended cases

Q120-1 (2020): According to the provisions of art. 39 of the Law no. 303/2004, amended and republished in 2018, judges and prosecutors are being periodically evaluated under the observance of the professional and performance criteria. The evaluation shall envisage the quality of their activity, efficiency, integrity as well as the fulfillment of the obligation to take part in in-service professional training and on managerial activity for those judges and prosecutors in leadership positions. The periodical evaluation shall be first carried out by the end of the first 2 years of activity after the entering in profession and shall be continued every 3/4/5 years depending on the seniority in profession (5-10 years, 10-15 years, over 15 years of seniority).

Q120-1 (2018): similar to judges, see Q114, 114.1 and the additional comments

Slovakia

Q066 (2020): Internal revision of the court is a type of control of the court and judges, which aims to check the current state of the judiciary, to identify the causes of shortcomings in the performance of the judiciary and to propose measures to eliminate them.

Q066 (2014): There is a system to evaluate the overall functioning of courts with respect to the Manifesto of the Government of the Slovak Republic for the period of 2010-2014:

http://www.vlada.gov.sk/data/files/855_the-manifesto-of-the-governmentof-the-slovak-republic-for-the-period-of-2010-2014.pdf

Q067 (General Comment): Judicial Council, Council of Prosecutors and disciplinary commissions.

Q067 (2020): Judicial Council, Council of Prosecutors and disciplinary commissions.

Q067 (2019): Judicial Council, Council of Prosecutors and disciplinary commissions

Q073 (2018): See general comment

Q070 (General Comment): The category “other” encompasses: the number of cases according to types of disputes, the result of the case

(reconciliation, dismissals, full satisfaction, partial satisfaction, etc.). Statistical data of the Ministry of Justice of the Slovak Republic are

detailed and regularly collected and published in a yearbook which is publicly accessible at the website of the Analytical centre of MoJ

<https://www.justice.gov.sk/Stranky/Informacie/Analyticke-centrum.aspx>

<http://web.ac-mssr.sk/statisticka-rocenka-2018/>. Data on the activity of the courts are published every month in interactive Dashboard on

the <http://web.ac-mssr.sk/dashboard/>.

Q077 (2020): The main performance and quality indicators that have been defined for courts and used in the selfevaluation reports of some

pilot courts involved Number of appeals as well. The selfevaluation reports of the courts were not repeated with the data 2019.

The other indicators are used and made public in dashboards and statistical reports. The number of the appeals is published but not as a indicator of quality, only as a statistical number.

Q078 (2019): The main performance and quality indicators that have been defined for courts and used in the selfevaluation reports of some pilot courts involved Number of appeals as well. The selfevaluation reports of the courts were not repeated with the data 2019. The other indicators are used and made public in dashboards and statistical reports. The number of the appeals is published but not as a indicator of quality, only as a statistical number.

Slovenia

Q066 (General Comment): The Supreme Court's Data warehouse, containing all court cases, as well as financial data and human resources data was implemented in 2011. The data are collected based on CEPEJ Guidelines on Judicial statistics (GOJUST). A special office at the Supreme Court with specialised knowledge was introduced in order to monitor the quality and define quality policies on the level of entire judiciary and individual courts. Quality standards based on SATURN guidelines are taken into account in several predefined BI system reports.

The important role in the determination of quality standards is played by the Supreme Court's „Opening of the judicial year“ document, in which a set of priorities is determined. The priorities are subsequently monitored throughout the judicial year by automated BI tools and customised analysis at the Supreme Court.

The 2013 amendment to the Courts Act provides that the Supreme Court shall adopt the Criteria for quality of work for courts for the next (judicial) year, based on its Yearly report on efficiency and effectiveness of courts. Since 2015, the Supreme Court has been adopting the timeframes for different types of procedures as well as for different procedural phases for next year (as a part of the Criteria for quality of work).

As for public prosecution, the criteria for quality of work are defined in the Prosecution Policy (adopted by the Prosecutor General), while the quantitative aspects of work are defined in the Criteria for evaluating the performance of the state prosecutor's offices adopted by the State Prosecutorial Council.

Q066 (2015): The Supreme Court's Data warehouse, containing all court cases, as well as financial data and human resources data was implemented in 2011. The data are collected based on CEPEJ Guidelines on Judicial statistics (GOJUST). The system was awarded with Special mention in the 2012 Crystal Scales of Justice Competition and was defined as "Inspiring example" in the EC document Quality of Public Administration - A Toolbox for Practitioners - <http://ec.europa.eu/social/main.jsp?catId=738&langId=sl&pubId=7757>.

A special office at the Supreme Court with specialised knowledge was introduced in order to monitor the quality and define quality policies on the level of entire judiciary and individual courts.

Quality standards based on SATURN guidelines are taken into account in several predefined BI system reports.

The important role in the determination of quality standards is played by the Supreme Court's „Opening of the judicial year“ document, in which a set of priorities is determined. The priorities are subsequently monitored throughout the judicial year by automated BI tools and customised analysis at the Supreme Court.

The 2013 amendment to the Courts Act provides that the Supreme Court shall adopt the Criteria for quality of work for courts for the next (judicial) year, based on its Yearly report on efficiency and effectiveness of courts. In 2015 the Supreme Court adopted the timeframes for different types of procedures as well as for different procedural phases for 2016 (as a part of the Criteria for quality of work).

Q066 (2014): 2014 A dedicated office at the Supreme Court with specialised knowledge was introduced in order to monitor the quality and define quality policies at the level of entire judiciary and individual courts level.

Quality standards based on SATURN guidelines are taken into account in several predefined BI system reports.

The recent amendment of the Courts Act provides that the Supreme Court shall adopt the Criteria for quality of work for courts for the next (judicial) year, based on its Yearly report on efficiency and effectiveness of courts. Since the amendment was adopted in the middle of 2013, the first Annual report of Supreme Court will be for 2014 (to be published in 2015).

Consequently, only 2015 will be the (first) year to formally adopt the aforementioned Criteria.

The important role in the determination of quality standards is played by the Supreme Court's „Opening of the judicial year“ document, in which a set of priorities is determined. The priorities are subsequently monitored throughout the judicial year by automated BI tools and customised analysis at the Supreme Court.

Q066 (2013): 2013 According to the priorities for the whole judiciary, set by the Supreme Court in the „Opening of the judicial year“ document for judicial year 2013, specific areas were monitored and the standards determined for the following areas:

1. Management of courts
2. Solving of oldest unresolved cases
3. Business process – Time management of judicial procedures and the reform of civil enforcement procedure
4. Disburdening the judges
5. Levelling of human resources

Q066 (2012): 2012: The Supreme court's Data warehouse, containing all court cases, as well as financial data and human resources data was implemented in 2011. The data are collected based on CEPEJ Guidelines on Judicial statistics (GOJUST). The system was awarded with Special mention in the 2012 Crystal Scales of Justice Competition and was defined as Inspiring example in the EC document Quality of Public Administration - A Toolbox for Practitioners – <http://ec.europa.eu/social/main.jsp?catId=738&langId=sl&pubId=7757>.

Q067 (General Comment): The Office for Court Management Development at the Supreme Court promotes the improvement in leadership and management of courts and the increase in effectiveness and efficiency. It is responsible for the preparation of different reports and analysis regarding work of courts and the promotion of best practices. The Department for the Organization and Development of Management of the Supreme State Prosecutor's Office of the Republic of Slovenia is responsible for monitoring the implementation of the Prosecution Policy and the Criteria for the Success of Prosecution of State Prosecutor's Offices.

Q073 (2014): 2014: Until, the 2013 the Judicial Council was entrusted with monitoring and evaluating the performance of courts and issuing a yearly report on the execution of judicial power (Courts Act, Article 28). With the amendment to the Courts Act (ZS-K) of the Courts Act that came in force in 2014 this responsibility is transferred to the Supreme Court.

Q070 (General Comment): In Slovenia there is a regular monitoring system in a form of collecting data on court statistics. Court statistics are collected and published four times a year by the Ministry of Justice. They include the data on the number of judges and court staff, number of incoming, resolved and pending cases, age of unresolved cases, length of proceedings, average time to resolve a case, type of decision, court backlogs, legal remedies and time to issue a court decision. Besides that, the data on court activities are automatically on national level, thus statistical analysis are made possible. All courts have access to a wide range of special reports, generated in the Court management information system. Reports include detailed information on court activities (for example length of specific phases of a court proceeding, top 20 oldest cases in certain area of law, etc.), human resources, court performance indicators (the critical indicators are marked red for unsatisfactory performance and green when meeting the standards) that provide guidance to presidents and directors of courts. The business intelligence system that creates priority reports derives the data from the Data warehouse of the Supreme Court. The same source is used for Court statistics publications by the Ministry of Justice. Each court is able to access the above mentioned reports at any moment, while some data are quarterly collected and published on national level (as prescribed by the Court rules).
The satisfaction surveys are performed and results published bi-annually.

Q070 (2015): The data on court activities are automatically collected on national level, thus statistical analysis is made possible.

All courts have access to a wide range of special reports, generated in the Court management information system. Reports include detailed information on court activities (e.g. length of specific phases of a court proceeding, top 20 oldest cases per legal area etc.), human resources, court performance indicators (the critical indicators are marked red for unsatisfactory performance and green when meeting the standards) that provide guidance to presidents and directors of courts. These additional data available to court management officials are the reason, why we put check before "other elements".

The business intelligence system that creates priority reports derives the data from the Data warehouse of the Supreme Court. The same source is used for Court statistics publications by the Ministry of Justice.

Each court is able to access the above mentioned reports at any moment, while some data are quarterly collected and published on national level (as prescribed by the Court rules).

Q077-1 (General Comment): The State Prosecutorial Council adopts the Criteria for evaluating the performance of the state prosecutor's offices on the proposal of the State Prosecutor General. The criteria define indicators and their target values for the appraisal of the work efficiency and realization of prosecution policy.

Q078-1 (General Comment): The criteria for the success of the prosecution of public prosecutors determine the following indicators: the number of unresolved cases at the end of the period, clearance rate, expected solution time, time criteria for typical process actions, (from the initiative of the police to the submission of a proposal to carry out urgent investigative actions, from the receipt to the rejection of the criminal complaint, from the receipt of the criminal complaint to the submission of a request for investigation or a proposal for individual investigative actions, from the receipt of the criminal complaint (without investigation) to the filing of the indictment, from the end of the investigation or individual investigative actions until the filing of the indictment, from the receipt of the complaint to the decision of the public prosecutor on the postponed prosecution and settlement, efficiency indicator, cost-effectiveness indicator, proportions of prosecution decisions, shares of rejected complaints according to individual reasons, shares of decisions alternative to criminal prosecution, share of penal orders, share of convictions, shares of imposed criminal sanctions.

Q073-3 (General Comment): The quantitative indicators are defined in the Criteria for evaluating the performance of the state prosecutor's offices adopted by the State Prosecutorial Council. General guidelines for the work of state prosecutors and priority fields of prosecution are defined in a Prosecution Policy by prosecutor general. Heads of offices implement both criteria in their Annual Work Program. Twice a year the prosecutor general, the State Prosecutorial Council and the Minister discuss the performance of state prosecutor's offices at joint meetings held with the heads of state prosecutor's offices and adopt and/or coordinate the measures required for implementation of annual work programmes. An evaluation of attained goals set in the adopted Annual Work Programme, Criteria and Prosecution Policy are an integral part of Annual Report of each prosecution office. The prosecutor general compiles Joint Annual Report on the work of the whole state prosecutor offices. The Minister and State Prosecutorial Council may submit their opinion to this report.

Q073-4 (2020): See general comment.

Q073-4 (2018): The quantitative indicators are defined in the Criteria for evaluating the performance of the state prosecutor's offices adopted by the State Prosecutorial Council. General guidelines for the work of state prosecutors and priority fields of prosecution are defined in a Prosecution Policy by prosecutor general. Heads of offices implement both criteria in their Annual Work Program. Twice a year the prosecutor general, the State Prosecutorial Council and the Minister discuss the performance of state prosecutor's offices at joint meetings held with the heads of state prosecutor's offices and adopt and/or coordinate the measures required for implementation of annual work programmes. An evaluation of attained goals set in the adopted Annual Work Programme, Criteria and Prosecution Policy are an integral part of Annual Report of each prosecution office. The prosecutor general compiles Joint Annual Report on the work of the whole state prosecutor offices. The Minister and State Prosecutorial Council may submit their opinion to this report.

Q073-6 (General Comment): Based on the data and analysis from the previous paragraph, the joint annual report shall contain: (1) Measures for improving the efficiency, performance and economy of work and implementation of the prosecution policy for particular and for all state prosecutor's offices together; (2) Measures for improving the efficiency of state prosecutor's offices whose results deviate considerably from the planned ones; (3) Assessment of suitability of the number of state prosecutor posts and state prosecutor personnel and other conditions including the appropriate proposals for their improvement.

Q073-6 (2018): Based on the data and analysis from the previous paragraph, the joint annual report shall contain: -Measures for improving the efficiency, performance and economy of work and implementation of the prosecution policy for particular and for all state prosecutor's offices together; -Measures for improving the efficiency of state prosecutor's offices whose results deviate considerably from the planned ones; -Assessment of suitability of the number of state prosecutor posts and state prosecutor personnel and other conditions including the appropriate proposals for their improvement.

Q070-1 (General Comment): The BI tools that use data gathered in information system of the State Prosecutor's Office provide the heads of prosecution offices with up-to-date overview of the performance of state prosecutors and the functioning of the office. Heads can customize the level and content of information presented to them for the purpose of making quantitative data supported decisions on allocation of work among prosecutors, control of the case-flow.

Q070-1 (2020): "Other": percentage of different types of decisions, value of proceeds of crime under freezing order, pronounced criminal sanctions...

Q072 (General Comment): In accordance with the Prosecution Policy adopted in 2017, cases in which a final court decision at first instance has not been adopted within 3 years of filing a written charge with the court, are monitored in particular.

Q077 (General Comment): The Annual work programme (see Q75) consists of the assessment of the expected number of incoming cases, timeframes for typical procedural acts and solving the cases and the plan of operating results. The latter includes the expected number of resolved cases and criteria of efficiency (resolved cases to staff ratio), effectiveness (expected time to resolution) and economy (budgetary funds to solved cases ratio) (the Courts Act, art. 71.b). The number of complaints is monitored as a performance indicator, however it is not directly considered as a measure of quality of work.

The data on satisfaction of court staff and users is also collected, however it is not yet used as quality indicator.

Q078 (2014): According to 2014 data, the Annual work programme established by court presidents consists of the assessment of the expected number of incoming cases, timeframes for typical procedural acts and solving the cases and the plan of operating results. The latter includes the expected number of resolved cases and criteria of efficiency (resolved cases to staff ratio), effectiveness (expected time to resolution) and economy (budgetary funds to solved cases ratio). The number of complaints is monitored as a performance indicator, however it is not directly considered as a measure of quality of work.

Q078 (2012): According to 2012 data, the Judicial Council has monitored performance of courts mainly through indicators such as incoming, closed and pending cases and backlogs, productivity of judges and court staff. With the development of justice administration the attention has shifted towards indicators prescribed by the Courts Act to draft a yearly plan of operating results: criterion of efficiency – number of closed cases, divided with the number of judges and non-judge staff; criterion of effectiveness – timeframes of proceedings; criterion of economy – budget, divided with the number of closed cases.

Q083-2 (General Comment): State Prosecutorial Council adopts Criteria for the assessment of state prosecutors' performance which define quality and quantity indicators. The quantitative criteria define expected time for the resolution of cases and for typical procedural acts. The performance of the evaluated prosecutor is compared to other prosecutors at his/her office concerning the number of assigned, resolved and unresolved cases, number of attendances at the court hearings, conviction rate, pronounced sanctions and number of logged appeals.

Q083-3 (General Comment): State Prosecutorial Council adopts the Criteria for the assessment of state prosecutors' performance on the proposal of the state prosecutor general.

Q120 (General Comment): Qualitative indicators are professional knowledge, capability of logical and analytical deliberation, protection of the reputation of prosecutor's office and his/her function and the proficiency of verbal and written communication.

Q120-1 (General Comment): Regular individual assessment of the public prosecutors' work is carried out every three years. The assessment can also be carried out on demand of the State Prosecutorial Council, head of prosecutor's office, Minister or the prosecutor himself. In first three years after the appointment for the state prosecutor the assessment is carried out every single year.

Q120-1 (2018): Every three years

Spain

Q066 (2015): Every three months each Court sends statistics to the Council for the Judiciary with complete information about the activity of the Court.

Q067 (2015): Every three months each Court sends statistics to the Council for the Judiciary with complete information about the activity of the Court.

Q073-0 (2016): Every six months there is a virtual (on line) inspection of the work of the Courts.

Q070 (General Comment): The category "other" encompasses: number of enforcement procedures, number of decisions appealed, number of rogatory letters issued, received and resolved, aid between courts, pending writings, form of termination of trials, etc.

Q070 (2017): The category "other" includes many other data such appeals, aid between courts, pending writings, etc.

Q070 (2016): The category "other" includes many other data such appeals, aid between courts, pending writings, enforcement proceedings, form of termination of trials, etc.

Q077 (General Comment): The statistic report that the Court sends every three months to the Inspection Service, and the reports and studies that the General Council for the Judiciary carry out with the information provided, serve to measure and control the burden of work of the Judges, Letrados de la Administración de Justicia, and Courts in general. On the other hand, the "Citizens' bill of rights before the law" is the document approved by the Parliament at 2002 that includes the list of rights of the citizen in their relation with the administration of justice, and the principles and good practices that must guide the service of the Justice to the citizens. It sets the principles of transparency, appropriate attention and information, gives special care and attention to the citizens who are most vulnerable (victims of crime, gender violence, minors, and other). The document is compulsory for all the professionals involved in Justice. According to this Bill of rights, the Parliament, through the Committee for Justice, will carry out a follow-up monitoring and continuous evaluation of the evolution of, and compliance with this Bill. The annual report submitted by the Council for the Judiciary to the Parliament will include a specific and sufficiently detailed reference to the claims, complaints, and suggestions made by citizens about the running of the Administration of Justice.

In addition to that, during the beginning of the implementation of the judicial offices (2010), a map of procedures and a quality management system with own indicators for this kind of offices were implemented. The model has been under review and is expected to be reviewed on the basis of electronic processing.

Finally, the hierarchical structure of the Letrados de la Administración de Justicia allow the Ministry of Justice control and ensure the compliance of standards and parameters of quality fixed, and achieve the new objectives fixed for the implementation of new measures (such the digitalization of Justice or the implementation of electronic tools right now).

Q077 (2017): On September 6 2018, the Ministry of Justice has announced a project to develop a quality plan to improve the administrative management of all the judicial offices in the territory over its competence.

In a second phase, the Ministry will apply the Evaluation, Learning and Improvement Model (EVAM) designed by the Ministry of Territorial Policy and Public Function, a model of excellence for organizations that begin their process towards the management of quality.

The culminating element of the process of implementation of quality management will be the certification of the level of excellence according to a model yet to be determined.

Q078 (2014): Judicial counsellors of each court fill a questionnaire every six months in which the personal performance is evaluated with data regarding the following: number of definitive rulings, number of cost proceedings appraisals, number of payments made to the parties, number of court fees managed and communicated to the Tax Authority, number of communications issued to the Land and Business Registries and number of seizures.

Q078 (2013): For 2014, the category "other" refers to the number of enforcement procedures, appealed decisions, rogatory letters issued, received and resolved.

Q083-3 (General Comment): In accordance with Royal Decree 432/2004, of March 12, which regulates the variable complement by objectives of the members of the Prosecution service, the State Attorney General, at the proposal of the Prosecution Inspection, after hearing the Prosecutor Council and prior the report from the Ministry of Justice, will determine for each annual period the objectives whose fulfillment will lead to the perception of the variable remuneration.

Indicator 1: Systems for measuring and evaluating the performance of courts and prosecution services

Comments provided by the national correspondents

organised by question no.

Question 066. Are quality standards determined for the judicial system at national level (are there quality systems for the judiciary and/or judicial quality policies)?

Question 067. Do you have specialised personnel entrusted with implementation of these national level quality standards?

Question 073. Do you have a system to evaluate regularly court performance based primarily on the defined indicators?

Question 073-0. If yes, please specify the frequency:

Question 073-1. Is this evaluation of the court activity used for the later allocation of resources within this court?

Question 073-2. If yes, which courses of action are taken?

Question 070. Do you regularly monitor court activities (performance and quality) concerning:

Question 077-1. Concerning public prosecution activities, have you defined performance and quality indicators?

Question 078-1. If yes, please select the main performance and quality indicators for the public prosecution services that have been defined:

Question 073-3. Do you have a system to evaluate regularly the performance of the public prosecution services based primarily on the defined indicators?

Question 073-4. If yes, please specify the frequency:

Question 073-5. Is this evaluation of the activity of public prosecution services used for the later allocation of resources within this public prosecution service?

Question 073-6. If yes, which courses of action are taken?

Question 070-1. Do you regularly monitor public prosecution activities (performance and quality) concerning:

Question 071. Do you monitor the number of pending cases and cases that are not processed within a reasonable timeframe (backlogs) for:

Question 072. Do you monitor waiting time during judicial proceedings?

Question 077. Concerning court activities, have you defined performance and quality indicators?

Question 078. If yes, please select the main performance and quality indicators that have been defined for courts:

Question 083-2. Are there quantitative performance targets defined for each public prosecutor (e.g. the number of decisions in a month or year)?

Question 083-3. Who is responsible for setting the individual targets for each public prosecutor?

Question 120. Is there a system of qualitative individual assessment of the public prosecutors' work?

Question 120-1. If yes, please specify the frequency of this assessment:

Question 066

Bulgaria

(General Comment): Ordinance № 2 from 23.02.2017 on the indicators, methodology and procedure for appraisal of a judge, chairman and deputy chairman of a court

Article. 4. The Ordinance aims: 1. to affirm the rule of law and ensure effective protection of the rights of judges; 2. to ensure a lawful, transparent and fair procedure for career growth; 3. to increase the personal motivation for professional development of the judges, to maintain and improve the quality of their work; 4. to prevent corruption in the system of the judiciary; 5. to contribute to increasing the trust in the judiciary. Article 5. (1) The appraisal is an objective assessment of the professional, business and moral qualities of a judge, chairman and deputy chairman of a court, demonstrated in the performance of his position. (2) A unified appraisal form for a judge, chairman and deputy chairman of a court shall be filled in according to a sample pursuant to the appendix for the assessment as a result of the appraisal. Article 6. The appraisal guarantees professional self-improvement, equal and fair opportunities for the career growth of judges, based on the principles of legality, equality, objectivity and transparency.

Article 7. The appraisal may not affect the independence and fundamental rights of judges. Article 8. (1) The appraisal shall refer to the qualification, the achievements and the professional suitability, as well as the observance of the rules for ethical behavior by a judge, chairman and deputy chairman of a court. (2) The qualification is a set of the acquired professional knowledge, skills and personal abilities of the appraised. (3) The achievements are the personal qualitative and quantitative results, achieved by the appraised in his practical activity. (4) Professional suitability is the specific qualification for a specifically defined position. (5) The observance of the rules for ethical conduct is a conduct, compliant with the rules of the respective code of ethics.

Judiciary System Act Article. 196. (1) Appraisal shall be carried out:

1. initial - for a three-year period as of the appointment of a judge, prosecutor or investigator - when participating in a competition or in case of a proposal for promotion in ranking;
2. for the purpose of acquiring tenure: upon completion of five years service as a judge, prosecutor or investigating magistrate;
3. periodic - for a 5-year period as of the attestation for tenure of a judge, prosecutor and investigator, of an administrative head and a deputy administrative head;
4. extraordinarily: in the cases under Article 197 (5).

(2) Junior judges, junior prosecutors and junior investigators shall not undergo initial appraisal. A report on their work shall be drawn up by the supervisor for the second year of their appointment.

(2020): Judiciary system Act:

Article. 198 (1) The criteria for the appraisal of a judge, prosecutor or an investigating magistrate shall be:

1. legal knowledge and skills of applying it;
2. skill of analysing legally relevant facts;
3. skill of making optimum working arrangements;
4. efficiency and discipline;
5. compliance with the rules of ethical behaviour.

(2) In the course of the appraisal under Paragraph (1) the following indicators shall be taken into account:

1. keeping deadlines;
2. number of instruments upheld and reversed and the grounds for this;
3. the results of inspections carried out by the Inspectorate with the Supreme Judicial Council,
4. the overall caseload of the respective judicial district and judicial authority, as well as the workload of the appraised judge, prosecutor or investigating magistrate compared to other judges, prosecutors or investigating magistrates in the same judicial authority.

(4) The time served by the judge, prosecutor or investigating magistrate as a permanent trainer at the National Institute of Justice shall also be included in the appraisal period. The evaluation of the work performance as a trainer shall be given by the Managing Board.

(5) The time served by the judge, prosecutor or investigating magistrate as an European Delegated Prosecutor shall also be included in the appraisal period. The evaluation of the results of their work under Regulation (EU) 2017/1939 shall become part of their appraisal.

Article. 199. (1) A judge shall be appraised under the following specific criteria:

1. complying with the schedule for conduct of court hearings;
2. skill of conducting a court hearing and drawing up a record of proceedings;
3. administrating cases and appeals, preparing for a court hearing;
4. number of appealed judicial instruments from among the appealable judicial instruments, appealed judicial instruments upheld, judicial instruments reversed or invalidated, in whole or in part, and the grounds for it; the ability to reason and justify judicial instruments and to analyse evidence shall be subject to evaluation.

(2) A prosecutor shall be appraised under the following specific criteria:

1. skills of planning and structuring steps in pre-trial and trial proceedings;
2. complying with the written instructions and orders of the superior prosecutor;
3. ability to make working arrangements and direct the investigating authorities and the teams participating in pre-trial proceedings;
4. number of unappealed prosecutorial instruments, including warrants to terminate and suspend criminal proceedings, number of final judicial instruments rendered on instruments submitted by the prosecutor appraised, as well as the final judicial instruments returning cases for the rectification of procedural breaches, and the reasons for this, number of appeals granted, the prosecutorial instruments upheld, modified and reversed upon an instance and on official review. (3) An investigating

Croatia

(General Comment): According to the Courts Act (Official Gazette, No. 28/13, 33/15, 82/15, 67/18), the president of the court evaluates the work of every judge according to Framework Criteria for the work of judges in the period of one year following the standards on the number of judgements delivered by a judge compared with the number of judgements that should have been delivered, according to the Framework Criteria for the work of judges, result of work in different kinds of cases, respecting deadlines in delivery of judgements and drafting of judgements, quality of judgements on the grounds of expressed remedies in legal actions and other activities of judges.

Framework criteria are adopted by the Minister of Justice on the proposal of the General Assembly of Supreme Court. The Criteria prescribe the number of decisions that need to be rendered every year by a judge.

According to the State Attorney Office Act (Official Gazette, No. 67/18), State Attorneys' and Deputy State Attorneys' performance is evaluated every three years according to the following criteria: achieved results in resolving cases (based on the number of cases assigned to work on the basis of the Framework Criteria for the Work of Deputy State Attorneys and the average work results of county or municipal state attorney's offices for the previous three-year period), the quality of decisions and the justified use of legal remedies, proper performance of the state attorney's duty - observance of deadlines during the procedure, other activities of the State Attorney and the Deputy State Attorney, experience in performing the duty of state attorney and compliance of conduct with the Code of Ethics of State Attorneys and Deputy State Attorneys. The Framework criteria are adopted by the Minister in charge of judicial affairs, with the prior opinion of the Chief State Attorney of the Republic of Croatia.

(2018): According to the Courts Act (Official Gazette, number 28/13, 33/15, 82/15), the president of the court evaluates the work of every single judge according to Framework for the workload of judges in the period of one year following the standards on the number of judgements delivered by a judge compared with the number of judgements that should have been delivered, according to the Framework for the workload of judges, result of work in different kinds of cases, respecting deadlines in delivery of judgements and drafting of judgements, quality of judgements on the grounds of expressed remedies in legal actions and other activities of judges.

Framework criteria are adopted by the Minister of Justice on the proposal of the General Assembly of Supreme Court. The Criteria prescribe the number of decisions that need to be rendered every year by a judge.

(2017): According to the Courts Act (Official Gazette, No. 28/13, 33/15, 82/15), the president of the court evaluates the work of every single judge in his/her court for the previous year on the basis of the following standards: the number of judgements delivered by a judge compared with the number of judgements that should have been delivered, according to the Framework for the workload of judges, result of work in different kinds of cases in absolute numbers and percentages, respecting deadlines in delivery of judgements and drafting of judgements, quality of judgements on the grounds of expressed remedies in legal actions and other activities of judges.

Framework criteria are adopted by the Minister of Justice on the proposal of the General Assembly of Supreme Court. The Criteria prescribe the number of decisions that need to be rendered every year by a judge.

Cyprus

(General Comment): Quality standards are applied in practice

(2017): Quality standards are applied in practice

(2016): There are no written standards but in practice there are quality standards.

(2015): In practice there are quality standards

(2014): In practice there are quality standards

Denmark

(2019): No, we use quantitative measures. Quality is usually measured as length of time to finalize a case.

(2016): No, we use quantitative measures. Quality is measured as length of time to finalize a case.

(2015): The only standards are objective standards for example acceptable timeframes to finalize a case.

Estonia

(General Comment): Estonia has developed a quality system consisting of 3 parts. The first part contains the quality standards (good practice) for the management of the court that describe activities related to the chairman of the court. The second part contains the quality standards for the administration of courts and is focused on the different roles of the parties involved in the administration of courts: directors, Ministry of Justice, Council for the Administration of Courts. The third part contains quality standards for the court proceedings and is addressed to all the judges. All of the three parts of the quality standards have been discussed and approved by the Council for Administration of Courts, respectively in 2012, 2013 and 2015.

Finland

(General Comment): There are quality projects covering both civil and criminal cases in the Court of Appeal of Rovaniemi judicial district and in the Helsinki Court of Appeal judicial district. In a quality project, one or several working groups are set up usually for a year. There are judges from each district court within the judicial district of a court of appeal and court of appeal judges and referendaries in the working group. Depending on the topic, prosecutors, attorneys-at-law and other lawyers, public legal aid lawyers and police may also participate in the working group's work. The working group writes a report on a specific theme, for example developing conduct of the court proceedings or legal costs in criminal and civil cases. The written report is presented and discussed in a formal event and published. The aim is to provide legal professionals with practical information and guidelines on a certain topic.

In addition, there are co-operation projects between administrative courts.

Prosecution Services' system quality improvement project is underway.

The Finnish Association of Judges compiled and published Ethical Principles for Judges in 2012.

(2020): Prosecution Services' system quality improvement project is underway.

(2015): There is a Quality Project of the courts in the jurisdiction of the Court of Appeal of Rovaniemi. (The jurisdiction of the Court of Appeal of Rovaniemi is the northernmost of the six appellate jurisdictions in Finland.) In 1999, the courts in the jurisdiction of the Court of Appeal of Rovaniemi launched a project for improvement of quality in adjudication. The quality project covers both civil cases and criminal cases. The objective of the quality project is to develop the functioning of the courts further and further so that the proceedings meet the criteria of a fair trial, that the decisions are well reasoned and justified, and that the services of the courts are affordable to the individual customers. The main working method consists of systematic discussions among the judges and also between the judges and stakeholders. The development work is steered by the development committee of the quality project. Normally four working groups for quality are set up for each year. The membership consists of judges from each of the District Courts in the appellate jurisdiction, members of the Court of Appeal, and referendaries of the Court of Appeal. Also prosecutors, private attorneys, public legal aid attorneys and heads of pre-trial investigation may serve as members in the working groups for quality. Each working group for quality is tasked to deal with one of the development themes which have been selected. The reports of the working groups are presented at the Quality Conference, they are discussed, and quality objectives based on the reports are set for the following year. The Report of Quality, containing the final reports, is published every year.

There is also a quality project of the courts in the jurisdiction of the Court of Appeal of Helsinki. Quality Project consists of working methods of two kind: cooperation with the University of Helsinki and working groups. Working groups for quality are set up for each year. The membership consists of judges from District Courts, members of the Court of Appeal, referendaries of the Court of Appeal, prosecutors and lawyers. Each working group for quality is tasked to address to one of the development themes which have been selected. The reports of the working groups are presented at the conference called 'Day of Jurisdiction'.

In addition there is a cooperation project between administrative courts. Some topics of the project have related to the quality standards. The reports of the project have discussed the matters like the factors of quality at administrative courts and the collection of information on quality.

It is also worth mentioning that on 15 October 2009, the presidents of Finnish Courts of Appeal proposed that the Finnish Association of Judges should begin work on drafting ethical guidelines for judges. A working group was set and the draft on ethical principles was discussed widely. The principles were formally released at the Judge Day event held in Helsinki on 12 October 2012.

France

(2020): "If yes, please specify: Quality standards developed for public administration are used in the judicial system. The charter of the administrations thus sets the rules for the reception of litigants in all the courts and can lead to certification. There are also local initiatives aimed at setting up a "quality system" based on certification by an external body, which consist in establishing procedures describing the reception process, the organization of work and the management of a case. With regard to administrative justice: the rate of annulment and reversal of jurisdictional decisions must be kept below 15% and the stock of cases older than two years below 7.5% of the total stock."

(2019):

Quality standards developed for public administration are used in the judicial system. The charter of administrations thus sets out the rules for the reception of litigants in all courts and may give rise to certification. There are also local initiatives to set up a "quality system" based on certification by an external body, which consists of establishing procedures describing the process of reception, work organisation and management of a case.

Administrative justice: the rate of annulment of court decisions must be kept below 15% and the number of cases pending for more than two years.

(2016): Quality standards developed for public administration are used in the judicial system. The charter of the administrations determines the rules for the reception of litigants in all courts and may give rise to certification. There are also local initiatives aimed at setting up a "quality system" based on certification by an external body, which consists in establishing procedures describing the process of reception, organisation of work and management of a case.

Germany

(General Comment): Since 2012, the reply "No" is provided depending on the answer of the majority of the respondent Landers.

(2013): For 2010, 2012 and 2013, no information was provided from Mecklenburg-Western Pomerania and Thuringia. Four Landers replied "Yes", while the remaining Landers answered "No".

In Baden-Württemberg, the performance of each court is compared against the others in regard to number and duration of proceedings. Key performance indicators on performance ability of the courts are ascertained and compared at the Lander level.

A comprehensive quality management system has been introduced in Schleswig-Holstein at all courts and public prosecution offices. All of the accessible areas of the court administration are subject to quality management. Judicial independence and the professional independence of Rechtspfleger present natural constitutional and statutory boundaries that must always be considered.

In Brandenburg, a quality management system seeks to guarantee that quality demands that are statutorily prescribed, self-imposed, or demanded by users of the system are fulfilled with an optimal use of resources. These last years, a number of strategies have been implemented for ensuring quality in the justice system by means of cost and performance accounting, a controlling system, budgeting of personnel costs, benchmark procedures, balanced scorecard, the EFQM Model, various instruments for personnel and organisation development, calculation of personnel requirements, optimisation of business processes, surveys of attorneys, citizens, and employees, and evaluation instruments both for individual judicial and public prosecution work as well as for the courts and public prosecution offices as organisational units. The increased use of modern technology (e.g. Internet) has opened up the possibility for the justice system to reach a large number of citizens and, thus, to offer court users the best possible service. Likewise, the continuous expansion of electronic legal transactions offers new opportunities for improvement in the quality of the justice system with regard to the performance characteristics public accessibility and public service. However, the developments and models named are not uniformly established in the Lander. In Lower Saxony, a quality strategy was developed through the surveys AgiL (performance comparison of local courts) and LiVE (performance comparison of regional courts). This is based on the assumption that it is possible to compare courts by the collection of data. Following the comparison, an analysis is conducted to determine the reasons for which better numbers are achieved at one court location over another. These are then discussed in expert groups and measures are developed to promote those tools that seem likely to succeed for the duties at all court locations. The surveys do not serve to evaluate individual employees but rather to uncover structures that promote performance, which can then be transposed. This quality management concept takes place together with judicial councils and personnel representatives.

Greece

(General Comment): Quality standards are set by the Code of Organization of Courts and Status of Judicial Officers (Law 1756/1988).

(2017): Most of the measures taken recently in Greece aim at speeding up Justice. However the Law provides a set of quality criteria that must be taken into account when inspectors check the performance of each judge.

Hungary

(General Comment): Second instance courts have to prepare a note on the decision and the trial procedure of the first instance court, based on professional criteria in every case. In this note, the court of appeal has to examine: the application of substantive, procedural and administrative regulations; the preparation of the hearings; the quality of the judges trial leading practice; if the coercive measures were well founded; if the hearings were set timely; if the ruling was transcribed in time; if the decision was edited correctly. The conclusions are summarized and judges of first instance courts are informed about them at least once a year.

Furthermore, the departments of the Supreme Court (Kúria) responsible for examining the judicial practice evaluates the practice of the courts and regularly inform judges about their experience.

Italy

(General Comment): In Italy there is not a strict quality system as such. However, there is a regular monitoring system in place which tracks the performance of court activities.

Latvia

(General Comment): In January 15, 2020 the "Visitors service standards of the district (city) courts and regional courts" were approved. This document summarizes the general principles related to functions such as judicial reception and providing with information. The standards help court staff to raise their professionalism and understand the court visitors servicing values. The reply is partly "yes" because according to the Law on Judicial Power Section 27.1., a Chief Judge of a court shall plan and determine the objectives of the court work in relation to average time periods for adjudication of matters in a court (standard of time periods for adjudication of matters) prior to the beginning of each calendar year, in co-operation with court judges. This standard shall be determined, taking into account the court resources and the necessity to ensure the right of a person to adjudication of a matter in a reasonable time period and other basic principles related to the guarantee of fair trial. A Chief Judge of a court shall approve the standard and supervise the actual time periods of examining matters in a court. He/she shall submit information to the Board of Justice regarding the approved standard until 1 February of each year.

(2020): Partly yes, according to the Law on Judicial Power Section 27.1. the Court President before the beginning of each calendar year, shall plan and determine the objectives of the court work in relation to average time periods for the examination of cases in a court (the standard of time periods for the examination of cases) in cooperation with court judges. The standard of time periods for the examination of cases shall be determined by taking into account the court resources and the necessity to ensure the right of a person to the examination of a case in a reasonable time period and in conformity with other basic principles for the examination of cases. The Court President shall submit the standard case examination time limits for approval to the Judicial Council until 1 February of each year.

(2019): In January 15, 2020 the "Visitors service standards of the district (city) and regional court" is adopted. This document defines the procedure by which the employee of the district (city) and regional court shall ensure the servicing of the court visitor, the participant in the proceedings, its representative (hereinafter - customer) (the acceptance of the client, the provision of information and communication in person, by telephone and by electronic means) and basic customer service values, general principles and basic rules for customer service.

(2017): According to the Law on Judicial Power Art 27.1. chief judge of a court shall plan and determine the objectives of the court work in relation to average time periods for adjudication of matters in a court (the standard of time periods for adjudication of matters) prior to the beginning of each calendar year in co-operation with court judges. The standard of time periods for adjudication of matters shall be determined, taking into account the court resources and the necessity to ensure the right of a person to adjudication of a matter in a reasonable time period and in conformity with other basic principles for examination of matters. A Chief Judge of a court shall approve the standard of time periods for adjudication of matters in a court and supervise the actual time periods of examining matters in a court. A Chief Judge of a court shall submit information to the Board of Justice regarding the approved standard of time periods for adjudication of matters until 1 February of each year. First standards of time periods for adjudication of matters were submitted to the Board of Justice in 2014.

(2016): Partly yes, according to the Law on Judicial Power Section 27.1. chief judge of a court shall plan and determine the objectives of the court work in relation to average time periods for adjudication of matters in a court (the standard of time periods for adjudication of matters) prior to the beginning of each calendar year in co-operation with court judges. The standard of time periods for adjudication of matters shall be determined, taking into account the court resources and the necessity to ensure the right of a person to adjudication of a matter in a reasonable time period and in conformity with other basic principles for examination of matters. A Chief Judge of a court shall approve the standard of time periods for adjudication of matters in a court and supervise the actual time periods of examining matters in a court. A Chief Judge of a court shall submit information to the Board of Justice regarding the approved standard of time periods for adjudication of matters until 1 February of each year.

First standards of time periods for adjudication of matters were submitted to the Board of Justice in 2014.

(2015): Since 2008 courts apply 'The visitors service standards of the district (city) courts and regional courts'. This courts visitor's service standard summarizes the general principles of judicial reception and providing with information. Standard helps court staff to raise their professionalism and understand the court visitors servicing values.

On 2015 May 18 Council of Justice approved guidelines on communication of the court system. The aim of the guidelines is to promote the effective functioning of the judiciary and promote the public confidence in the judiciary, creating a positive Court's image and enhance its' authority in society.

(2014): In 2014, for the first time, standards of time periods for adjudication of matters were submitted to the Board of Justice.

Malta

(General Comment): There exists a Code of Ethics for the members of the Judiciary which, though not providing for the organisation and quality of the judicial work, does lay upon the members of the Judiciary certain obligations which are important in ensuring the transparency and independence of the judicial process.

(2017): There exists a Code of Ethics for the members of the Judiciary which, though not providing for the organisation and quality of the judicial work, does lay upon the members of the Judiciary certain obligations which are important in ensuring the transparency and independence of the judicial process.

(2016): There exists a Code of Ethics for the Judiciary which, though not providing for the organisation and quality of judicial work, does lay upon the members of the Judiciary, certain obligations which are important in ensuring the transparency and independence of the judicial process.

Netherlands

(General Comment): There are quality standards which are measured by annual statistical figures per individual court. Examples are the scores of customer satisfaction surveys, the percentage of cases judged by three instead of one judge and case processing times (the so called 'Kengetallen gerechten'). There is a Team Judicial Quality (Team Juridische Kwaliteit) which studies topics in a theme-wise manner, on a structural basis. A team of public prosecutors participates in TKJ and assesses the judicial work of colleagues in a structured and systematic way. Often there is a baseline assessment and a follow-up, sometimes a second follow-up. If necessary, the assessment framework is adjusted.

www.tweedekamer.nl/kamerstukken/detail?id=2018D52900&did=2018D52900

There are also professional standards, developed to show what good justice entails. These are publically available on the website of the Judiciary (<https://www.rechtspraak.nl/Organisatie-en-contact/Rechtspraak-in-Nederland/Rechters/Paginas/De-professionele-standaarden-van-de-rechters.aspx>)

(2019): There is a so-called Team Judicial Quality (Team Juridische Kwaliteit), which studies topics in a theme-wise manner. This is part of the program 'Programma OM Strafvordering 2020'. A team of public prosecutors participates in TKJ and assesses the judicial work of colleagues in a structured and systematic way. There is often a first assessment (baseline) and a first follow-up assessment, and sometimes even a second follow-up. If necessary, the assessment framework is adjusted.

Poland

(General Comment): The Ministry of Justice collects statistical data sent by common courts concerning their current activity, and also evaluates annual information on the activity of courts, prepared by presidents of courts of appeal about the activity of courts within the area of appeals, within the scope of tasks entrusted to them. In addition, the Minister of Justice convenes a meeting with presidents of courts of appeal at least once a year to discuss issues related to exercising supervision. Within the framework of that evaluation, a multifaceted analysis of collected statistical data is conducted, inter alia, an indicator of stability of jurisprudence, an indicator of control over the inflow of court cases or time of adjudication in incoming cases. However, no legal provision defines specific quality standards for individual indicators, concerning organisational quality and/or justice quality policy, to be formulated for the justice system as a whole.

(2016): The most important indicator comes from evaluation of judgements through second instance procedure. In this purpose "judgement stability" ratio are in use as a ratio of judgements reversed or annulled in procedure of appeal.

Portugal

(General Comment): Law on the organisation of the judicial system (Law 62/2013 of 26 August) sets out that the High Council for the Judiciary and the Prosecutor-General, in liaison with the member of Government responsible for the justice, establish, within their respective competences, the strategic objectives for first instance courts for a three year period. These entities are also responsible for setting, every year, the strategic objectives of first instance courts for the following judicial year. Taking into account the results obtained in the previous year and the strategic objectives formulated for the subsequently year, the president of the court and the public prosecutor coordinator, after hearing the judiciary administrator, articulate proposals for the procedural objectives for each court. This system is very recent, is currently being implemented, subject to improvements, and only covers civil and commercial cases.

(2020): For instance, the Prosecutor General's Directives and Instructions define good practices of functional performance at national level and their compliance may be viewed as an indicator of the quality of the work developed (example, Directive 5/2019, on acting in cases of domestic violence (<https://dre.pt/home/-/dre/126870404/details/maximized> - text in Portuguese). In addition to Directives and Instructions, the performance assessment system for prosecutors is based on quality criteria/performance parameters, as a rule, uniformly applied at national level.

Romania

(General Comment): There are no formal standards for quality established for the whole judiciary. However, informal standards are being used (such as training, quality of the reasoning, assessment of the activity of the judges, assessment of the good reputation of the judges etc.).

More precisely, the activity of courts is evaluated and monitored periodically, on the basis of certain statistical data/performance indicators, such as those presented at question 70. The evaluation is achieved by verifications carried out by inspectors of the Judicial Inspection of the SCM, by elaborating periodical reports. The schedule and thematic of those verifications are approved every year by the SCM.

At organizational level, there are no quality standards established for courts. It may be considered that such standards exist at individual level, for each judge, by the indicators for the evaluation of professional activity.

(2012): In the frame of the 2012 exercise, a reference was made to the “Court Optimisation Project” financed by the World Bank, implemented from October 2011 to March 2013. The final recommendation included the introduction of Key Performance Indicators (KPIs), such as the clearance rate, the number of cases older than one year, the number of cases solved within 1 year, and the comparative measurement system.

Slovakia

(2020): Internal revision of the court is a type of control of the court and judges, which aims to check the current state of the judiciary, to identify the causes of shortcomings in the performance of the judiciary and to propose measures to eliminate them.

(2014): There is a system to evaluate the overall functioning of courts with respect to the Manifesto of the Government of the Slovak Republic for the period of 2010-2014:

http://www.vlada.gov.sk/data/files/855_the-manifesto-of-the-government-of-the-slovak-republic-for-the-period-of-2010-2014.pdf

Slovenia

(General Comment): The Supreme Court's Data warehouse, containing all court cases, as well as financial data and human resources data was implemented in 2011. The data are collected based on CEPEJ Guidelines on Judicial statistics (GOJUST). A special office at the Supreme Court with specialised knowledge was introduced in order to monitor the quality and define quality policies on the level of entire judiciary and individual courts. Quality standards based on SATURN guidelines are taken into account in several predefined BI system reports.

The important role in the determination of quality standards is played by the Supreme Court's „Opening of the judicial year“ document, in which a set of priorities is determined. The priorities are subsequently monitored throughout the judicial year by automated BI tools and customised analysis at the Supreme Court.

The 2013 amendment to the Courts Act provides that the Supreme Court shall adopt the Criteria for quality of work for courts for the next (judicial) year, based on its Yearly report on efficiency and effectiveness of courts. Since 2015, the Supreme Court has been adopting the timeframes for different types of procedures as well as for different procedural phases for next year (as a part of the Criteria for quality of work).

As for public prosecution, the criteria for quality of work are defined in the Prosecution Policy (adopted by the Prosecutor General), while the quantitative aspects of work are defined in the Criteria for evaluating the performance of the state prosecutor's offices adopted by the State Prosecutorial Council.

(2015): The Supreme Court's Data warehouse, containing all court cases, as well as financial data and human resources data was implemented in 2011. The data are collected based on CEPEJ Guidelines on Judicial statistics (GOJUST). The system was awarded with Special mention in the 2012 Crystal Scales of Justice Competition and was defined as "Inspiring example" in the EC document Quality of Public Administration - A Toolbox for Practitioners - <http://ec.europa.eu/social/main.jsp?catId=738&langId=sl&pubId=7757>.

A special office at the Supreme Court with specialised knowledge was introduced in order to monitor the quality and define quality policies on the level of entire judiciary and individual courts.

Quality standards based on SATURN guidelines are taken into account in several predefined BI system reports.

The important role in the determination of quality standards is played by the Supreme Court's „Opening of the judicial year“ document, in which a set of priorities is determined. The priorities are subsequently monitored throughout the judicial year by automated BI tools and customised analysis at the Supreme Court.

The 2013 amendment to the Courts Act provides that the Supreme Court shall adopt the Criteria for quality of work for courts for the next (judicial) year, based on its Yearly report on efficiency and effectiveness of courts. In 2015 the Supreme Court adopted the timeframes for different types of procedures as well as for different procedural phases for 2016 (as a part of the Criteria for quality of work).

(2014): 2014 A dedicated office at the Supreme Court with specialised knowledge was introduced in order to monitor the quality and define quality policies at the level of entire judiciary and individual courts level.

Quality standards based on SATURN guidelines are taken into account in several predefined BI system reports.

The recent amendment of the Courts Act provides that the Supreme Court shall adopt the Criteria for quality of work for courts for the next (judicial) year, based on its Yearly report on efficiency and effectiveness of courts. Since the amendment was adopted in the middle of 2013, the first Annual report of Supreme Court will be for 2014 (to be published in 2015).

Consequently, only 2015 will be the (first) year to formally adopt the aforementioned Criteria.

The important role in the determination of quality standards is played by the Supreme Court's „Opening of the judicial year“ document, in which a set of priorities is determined. The priorities are subsequently monitored throughout the judicial year by automated BI tools and customised analysis at the Supreme Court.

(2013): 2013 According to the priorities for the whole judiciary, set by the Supreme Court in the „Opening of the judicial year“ document for judicial year 2013, specific areas were monitored and the standards determined for the following areas:

1. Management of courts
2. Solving of oldest unresolved cases
3. Business process – Time management of judicial procedures and the reform of civil enforcement procedure
4. Disburdening the judges
5. Levelling of human resources

(2012): 2012: The Supreme court's Data warehouse, containing all court cases, as well as financial data and human resources data was implemented in 2011. The data are collected based on CEPEJ Guidelines on Judicial statistics (GOJUST). The system was awarded with Special mention in the 2012 Crystal Scales of Justice Competition and was defined as Inspiring example in the EC document Quality of Public Administration - A Toolbox for Practitioners – <http://ec.europa.eu/social/main.jsp?catId=738&langId=sl&pubId=7757>.

Spain

(2015): Every three months each Court sends statistics to the Council for the Judiciary with complete information about the activity of the Court.

Question 067

Bulgaria

(2020): The Supreme Judicial Council, through its Commission for Attestation/Appraisal and Competitions at the Judges College/Chamber of the Supreme Judicial Council and the Commission for Attestation/Appraisal and Competitions at the Prosecutorial College/Chamber, are the bodies that perform an objective assessment of the professional, business and moral qualities of magistrates.

Denmark

(2019): As above

(2018): The public prosecution is not part of Danish Court Administration.

(2017): Because judges are independent, we do not interfere with a judge decision. However, there is always the possibility to appeal a court decision if either of the parties disagree with the verdict.

(2016): As above.

France

(2020): The answer is no for the administrative justice.

(2014): 2010: State prosecutors draw an annual report on the activity, management of their public prosecution office and on the enforcement of the law, as well as an annual report concerning the measures of custody and the condition of the custody facilities.

(2012): 2012: in French law on the judicial organisation, there is no statutory or regulatory requirement providing specialised staff in courts responsible for quality norms.

However, as part of the maintenance dialog to have operational resources, each court fills a document for the Ministry of Justice, comprising informations such as the number of handled cases, pending cases, the number of judges and administrative staff, as well as the performance objectives to reach. This document is not available on the intranet to all of the staff. Only agents of the Ministry in charge of the maintenance dialog have access to these figures thanks to appropriate softwares.

Germany

(2020): Due to judicial independence, there are no national level quality standards.

Greece

(2017): The Law provides a set of quality criteria that must be taken into account when inspectors check the performance of each judge.

Malta

(2018): There are general quality standards that apply to the public sector, but not specific quality standards that monitor the implementation of quality standards within the judiciary or the prosecution services.

Netherlands

(2017): yes

Poland

(General Comment): Inspection departments operate in the appellate and regional courts. The task of the judges working in these departments is to perform on behalf of the president of the court activities in the scope of supervision over the administrative activity of the courts in the area of the operation of a given appellate or district court. Supervision consists in taking actions to improve the office of the courts or increase the efficiency and level of work organization culture in the courts. For this purpose, visits of departments in courts or surveys of recognized cases of a given category are carried out, the secretariats of departments in the courts are controlled.

Activities in the scope of administrative supervision can not enter the field in which judges and assessors are independent.

Portugal

(2020): The High Council of the Public Prosecution Service has “inspectors” (“inspctores”) who assess the quality of the work carried out by the prosecutors, applying national quality criteria or standards.

Slovakia

(General Comment): Judicial Council, Council of Prosecutors and disciplinary commissions.

(2020): Judicial Council, Council of Prosecutors and disciplinary commissions.

(2019): Judicial Council, Council of Prosecutors and disciplinary commissions

Slovenia

(General Comment): The Office for Court Management Development at the Supreme Court promotes the improvement in leadership and management of courts and the increase in effectiveness and efficiency. It is responsible for the preparation of different reports and analysis regarding work of courts and the promotion of best practices. The Department for the Organization and Development of Management of the Supreme State Prosecutor's Office of the Republic of Slovenia is responsible for monitoring the implementation of the Prosecution Policy and the Criteria for the Success of Prosecution of State Prosecutor's Offices.

Spain

(2015): Every three months each Court sends statistics to the Council for the Judiciary with complete information about the activity of the Court.

Question 073

Belgium

(2017): There are ad hoc evaluation systems within the courts. But there is not yet a central or coordinated system.

(2016): There are ad hoc evaluation systems within the courts. But there is no central or coordinated system.

Bulgaria

(General Comment): The Inspectorate to the Supreme Judicial Council (ISJC) is a body of the judicial system of the Republic of Bulgaria established under the art. 132a of the Constitution of the Republic of Bulgaria /published in State Gazette N.12 from 6th February 2007/. The Inspectorate to the Supreme Judicial Council is an independent body with the primary function of examining the operation of the judicial bodies without affecting their independence. Art. 54, para. 1 of the Judicial Power Act assigns powers to the Inspectorate to the Supreme Judicial Council.
The Inspectorate annually, not later than the end of March of the current year, adopts a program for the planned inspections.

(2019): The Inspectorate to the Supreme Judicial Council (ISJC) is a body of the judicial system of the Republic of Bulgaria created with art. 132a of the Constitution of the Republic of Bulgaria /published in State Gazette N.12 from 6th February 2007/. The Inspectorate to the Supreme Judicial Council is an independent body with the primary function of examining the operation of the judicial bodies without affecting their independence. The powers of the Inspectorate to the Supreme Judicial Council are provided for in Art. 54, para. 1 of the Judiciary System Act.

Rules for the organization of the activities of the Inspectorate with the Supreme Judicial Council and for the activity of the administration and the experts

Section II Organization and procedure for conducting plan checks

Art. 53. (1) The Inspectorate annually, not later than the end of March of the current year, adopts a program for the planned inspections.

(2) The Annual Program for the planned inspections contains:

1. the appellate areas and the bodies of the judiciary in which a complex inspection will be carried out;
2. the bodies of the judiciary in which thematic and control inspections will be carried out;
3. an indicative timetable for carrying out the inspections.

(3) The annual program may be supplemented and amended by a decision of the Inspectorate. (4) The annual program is announced on the website of the Inspectorate.

Art. 54. (1) The planned inspections may be complex, thematic and control inspections. (2) The complex inspections relate to the overall activity of the body of the judiciary. (3) Thematic inspections are conducted on a specific topic on the application of the law by a judicial authority during the period under review, a judge, a prosecutor or an investigating magistrate.

(4) Control inspections are carried out after a complex or thematic inspection, which provides recommendations for overcoming negative practices. Art. 55. (1) Immediately after the adoption of the annual program, by lot ensuring random allocation, the chief inspector in the presence of all inspectors determines the specific judicial authority that will be inspected, and the teams that will carry out the inspection.

Croatia

(2015): According to the Court Act, the president of court supervises accurate performance of court activities in due time. The president of court has a duty to write a report on the performed supervision and its results, as well as on the measures taken, at least once a month. The report has to be inserted into a case file of judicial administration. The president of court is obliged to ensure court efficiency in the resolution of cases, especially when it comes to the resolution of cases the procedure of which lasts more than three years.

The president of court, except for the president of the Supreme Court of the Republic of Croatia, has a duty to submit a report on the performed tasks of judicial administration, measures and activities undertaken to improve work and efficiency of the court in the resolution of cases. The report is to be submitted directly to a court of higher instance, to the State Judicial Council and the Ministry of Justice, once a year, at least before 31 March for the previous year.

The courts use special information systems for the management and operation of the courts' cases, which consist of standard applications, computer and telecommunications equipment and infrastructure, system software and tools and all the data that are entered, stored and transmitted in all of the registers of the system. Misdemeanour courts operate using JCMS (Joint Case Management System), while other courts of general jurisdiction and commercial courts use ICMS (Integrated Case Management System). Through these systems it is possible to regularly monitor and evaluate the activity, performance and output of courts.

Denmark

(2019): Weighted cases is also a way to see how much activity a court has.

France

(2016): Administrative courts also use dashboards on monthly basis, while civil and criminal courts receive quarterly management activity reports via a business application.

(2014): 2012, 2013, 2014: for the administrative courts, the performance indicators comprised an estimate and objectives updated every three months. The activity is assessed every year in the administrative jurisdictions during management conferences. A monitoring board for the activity is transmitted every month to the heads of administrative jurisdictions.

(2013): 2012, 2013, 2014: for the administrative courts, the performance indicators comprised an estimate and objectives updated every three months. The activity is assessed every year in the administrative jurisdictions during management conferences. A monitoring board for the activity is transmitted every month to the heads of administrative jurisdictions.

(2012): 2012, 2013, 2014: for the administrative courts, the performance indicators comprised an estimate and objectives updated every three months. The activity is assessed every year in the administrative jurisdictions during management conferences. A monitoring board for the activity is transmitted every month to the heads of administrative jurisdictions.

Germany

(2013): In respect of the 2010, 2012 and 2013 exercises no information was provided from Mecklenburg-Western Pomerania and Thuringia. Five States provided a positive reply, while the remaining Lander answered "NO". As to Bavaria, the information varied depending on the individual court jurisdiction for which information was provided: "YES" for Bavarian fiscal courts and "NO" for the remaining Bavarian courts.

In Brandenburg, the analysis is only subject to the figures provided regarding incoming cases, conclusions, duration of proceedings, number of court persons working, etc., which could possibly be used as indicators for the assessment of the performance abilities and the quality standards of the court. In Bremen, there is a benchmarking based upon key performance indicators.

In Lower Saxony regular assessments of the activities of the courts and public prosecution offices take place through administrative supervision. Qualitative evaluation of court activities is not possible through the implemented statistics and, based upon the constitutional law guarantee of judicial independence, is not desired. Likewise, the current view in Saarland is that such an evaluation system is incompatible with judicial independence protected by the Basic Law. Moreover, in North-Rhine/Westphalia, monitoring adjudicative activities is prohibited based upon constitutional law grounds. In this Lander there is a comprehensive system for assessing internal business. In certain areas there is also a management information system with statistical core data relevant to management on the number of incoming cases, duration of proceedings, and numbers of conclusions.

Saxony-Anhalt specified that the instrument for operative and strategic management of the courts is the management report. In the conceptual (as regards content) design of the management reports, the department comparison is defined as central criteria. This approach results, on the one hand, in a comparison of one's own department with the average of all departments and, on the other hand, in taking account of the basic idea behind benchmarking, with the average of the three best departments. Concrete measures with calculable targets are set forth in target agreements between the Ministry for Finance and the Ministry for Justice and Equality as well as in how they are structured with each budgeted department. The bases for this, among others, are indicators in the management reports.

(2012): In respect of the 2010, 2012 and 2013 exercises no information was provided from Mecklenburg-Western Pomerania and Thuringia. Five States provided a positive reply, while the remaining Landers answered "NO". The bases for this, among others, are indicators in the management reports.

Greece

(2017): According to L. 1756/1988 (art. 85), supreme judges appointed as inspections for one year's term redact every year General Reports on the operation of each Court and prosecutor's Office in their district and recommend the necessary measures for the proper functioning of the service. Furthermore, data regarding the flow of cases collected by the Ministry of Justice is used for ad hoc analysis (e.g. to provide a basis for decisions regarding the function of courts or answers to questions of parliamentary control).

Hungary

(2014): On the occasion of the 2013 and 2014 evaluations, it has been stressed that the statistics of the court system are carried out every quarter, semi-annually and annually. It is published on the central internet website of the courts every half year.

If some elements of the IT system described in 2012 have been implemented, this system is not yet able to replace the regular methods of measuring workload.

(2013): On the occasion of the 2013 and 2014 evaluations, it has been stressed that the statistics of the court system are carried out every quarter, semi-annually and annually. It is published on the central internet website of the courts every half year.

If some elements of the IT system described in 2012 have been implemented, this system is not yet able to replace the regular methods of measuring workload.

(2012): On the occasion of the 2012 exercise, it has been mentioned that the development of an IT system was under way which would make it possible to automatically measure and evaluate the workload of judges.

Latvia

(2015): Latvia has the Court Information System it contains statistical data about court performance. The statistical data have been published in the e-portal: www.manas.tiesas.lv and regularly analysed by Court administration and Ministry of Justice (MoJ).

Luxembourg

(2020): "Although the technically correct answer is ""no"", the Judiciary edits every year an annual report on its activities during the previous year. This reports is available to the public (report 2020, see <https://justice.public.lu/fr/publications/juridictions-judiciaires/rapports-juridictions-judiciaires-2020.html>)."

(2019): Although the technically correct answer is "no", the Judiciary edits every year an annual report on its activities during the previous year. This report is available to the public (report 2019, see <https://justice.public.lu/dam-assets/fr/publications/rapport-activites-judiciaires/Rapports-juridictions-judiciaires-2019.pdf>).

(2018): Although the technically correct answer is "no", the Judiciary edits every year an annual report on its activities during the previous year. This reports is available to the public (report 2018, see <https://justice.public.lu/dam-assets/fr/publications/rapport-activites-judiciaires/Rapport-juridictions-judiciaires-2018.pdf>) .

(2014): 2014: There is no regular monitoring system. Statistical tools and the court management system may be used to monitor the activity but this is not their primary function.

Malta

(2015): Currently, Malta carries out systematic quantitative analysis of the performance of the courts, based on established international indicators. Furthermore, ongoing internal reports, commissioned specifically to study areas of interest in the performance of certain courts, also complement the quantitative analysis, and serve to further address identified shortcomings in a more strategic manner.

(2014): On the occasion of the 2014 exercise, it has been indicated that since 2015, a system of monitoring court performance through quantitative means, using established performance indicators such as Clearance Rate and Pending caseload, has been initiated.

Poland

(2019): Every year, an analysis is made of the annual information of the presidents of the courts of appeal about the activities of the courts operating in the area of appeals containing statistical data from individual appeals and information on actions taken to ensure the best activity of the courts in the area of appeal. The Minister of Justice assesses the annual information and accepts or refuses to accept this information

The analysis of the work of courts in the areas of operation of individual appeals is also based on statistical data for the first half of each year.

Based on the obtained statistical data, the Department of Administrative Surveillance carries out, as required, data on judicial units, in particular in the context of the efficiency of proceedings and the need for appropriate action by court presidents to ensure the most effective work of their subordinate units.

(2017): The Minister of Justice regularly assesses the activities of the courts as part of external administrative supervision, by analysing the annual information provided by the Presidents of the appellate courts pursuant to art. 37b § 2 point 1 of the Act of July 27, 2001. The law on the system of common courts (i.e. Journal of Laws of 2018.23), in turn as part of internal supervision, regularly evaluates the activities of courts by presidents, by visiting and reviewing selected issues.

Portugal

(General Comment): Besides an annual report, there are also a trimestral and semestral statistics to evaluate judge's performance.

In the case of the Administrative and Tax Courts the reports are semestral.

(2015): Every month a data collection of all courts is assembled. In addition, in first degree courts the electronical procedures allow a daily basis analysis. The website is very exhaustive and can be consulted in http://www.siej.dgpj.mj.pt/webeis/index.jsp?username=Publico&pgmWindowName=pgmWindow_633918141195530467. Every 4 years we have a complete analysis to the work of all courts, with the local inspectors made by judges appointed by the Judicial Council.

Romania

(2015): The courts have to carry out a monthly assessment and the Superior Council of Magistracy on the basis of individual reports as well as on the basis of the overall indicators carries out a half-yearly assessment of the judicial system.

Slovakia

(2018): See general comment

Slovenia

(2014): 2014: Until, the 2013 the Judicial Council was entrusted with monitoring and evaluating the performance of courts and issuing a yearly report on the execution of judicial power (Courts Act, Article 28). With the amendment to the Courts Act (ZS-K) of the Courts Act that came in force in 2014 this responsibility is transferred to the Supreme Court.

Question 073-0

Austria

(2020): monthly statistics about incoming and closed cases (more frequent)
Periodic check lists (annual)
Internal audit examination all 4 to 7 years (less frequent)

(2019): Operational Information System (BIS) annually
Periodic check lists
Less frequent:
Internal Audit all 4 to 7 years
More frequent:
Monthly statistics about incoming and closed cases ("Kurzstatistik")

(2018): Operational Information System (BIS) annually
Periodic check lists (on October 1st of every year)
Internal audit examination all 4 to 7 years (less frequent)
Monthly statistics about incoming and closed cases ("Kurzstatistik") (more frequent)

(2017): Operational Information System (BIS) annually
Periodic check lists (on October 1st of every year)
Internal audit examination all 4 to 7 years (less frequent)
Monthly statistics about incoming and closed cases ("Kurzstatistik") (more frequent)

(2016): Operational Information System (BIS) annually
Periodic check lists (on October 1st of every year)
Internal audit examination all 4 to 7 years (less frequent)
Monthly statistics about incoming and closed cases ("Kurzstatistik") (more frequent)

Bulgaria

(2017): The Inspectorate to the Supreme Judicial Council (ISJC) is a body of the judicial system of the Republic of Bulgaria created with art. 132a of the Constitution of the Republic of Bulgaria /published in State Gazette N.12 from 6th February 2007/. The Inspectorate to the Supreme Judicial Council is an independent body with the primary function of examining the operation of the judicial bodies without affecting their independence. Art. 54, para. 1 of the Judicial Power Act assigns to the Inspectorate to the Supreme Judicial Council the following powers:

1. check the organisation of administrative operation of the courts, prosecution offices and investigating authorities;
2. check the arrangements made for the institution and progress of court, prosecutorial and investigative cases, as well as the disposal thereof within the established time limits;
3. analyse and summarise the cases that have been disposed of by virtue of an enforceable judicial instrument, as well as the case files and cases disposed of by prosecutors and investigating magistrates;
4. in the presence of conflicting case-law, the existence of which has been found in carrying out the activity under Paragraph (3), it shall alert the competent authorities of the need to request the rendition of interpretative judgements or interpretative decrees;
5. upon breaches identified in the implementation of the activities under Items 1 to 3, it shall alert the administrative head of the judicial authority concerned and the respective chamber of the Supreme Judicial Council;
6. make proposals for the imposition of disciplinary sanctions on judges, prosecutors and investigating magistrates and on the administrative heads of judicial authorities;
7. address alerts, proposals and reports to other state bodies, including the competent judicial authorities;
8. carry out integrity testing and examinations for conflict of interest of judges, prosecutors and investigating magistrates, verifications of the financial interests disclosure declarations, as well as checks for identifying actions damaging the prestige of the Judiciary and such related to impairment of the independence of judges, prosecutors and investigating magistrates;
9. examine applications against an infringement of the right to have a case examined and disposed of within a reasonable time;
10. adopt internal rules for carrying out the testing and examinations under Items 1 to 3 and Item 8 in the judicial authorities;
11. adopt internal rules for conduct of the integrity testing of experts with the Inspectorate and organise the conduct of such testing;
12. draw up an annual programme for scheduled inspections and an annual report on the activity thereof, which it shall submit to the Plenum of the Supreme Judicial Council;
13. discuss the draft budget for the Judiciary proposed by the Minister of Justice with regard to the budget of the Inspectorate and submit it to the Supreme Judicial Council;
14. make publicly available information on the activity thereof and publish the annual report on the activity thereof on the website thereof.

Rules for the organization of the activities of the Inspectorate with the Supreme Judicial Council and for the activity of the administration and the experts

Prom., SG, no. 103 of 27.12.2016, in force as of 01.01.2017.

Section II Organization and procedure for conducting plan checks

Croatia

(General Comment): According to the Courts Act (Official Gazette, No. 28/13, 33/15, 82/15, 67/18), the president of court supervises accurate performance of court activities in due time. The president of court has a duty to write a report on the performed supervision and its results, as well as on the measures taken, at least once a month. The report has to be inserted into a case file of judicial administration. The president of court is obliged to ensure court efficiency in the resolution of cases, especially when it comes to the resolution of cases the procedure in which lasts more than three years. The president of court, except for the president of the Supreme Court of the Republic of Croatia, has a duty to submit a report on the performed tasks of judicial administration, measures and activities undertaken to improve work and efficiency of the court in the resolution of cases. The report is to be submitted directly to a court of higher instance, to the State Judicial Council and the Ministry in charge for Justice, once a year, at the latest by the 31 March for the previous year.

The president of the Supreme Court submits the report on the state of judiciary to the Croatian Parliament, once a year, at the latest by the 30th April for the previous year. In this yearly report the president of the Supreme Court can report on the state and actions of the judiciary, organizational problems in courts and legislation shortcomings as well as give suggestions for the improvement of the work of courts. The courts use special information systems for the management and operation of the courts' cases, which consist of standard applications, computer and telecommunications equipment and infrastructure, system software and tools and all the data that are entered, stored and transmitted in all of the registers of the system. Through Case Management system it is possible to regularly monitor and evaluate the activity, performance and output of courts for the Ministry of Justice and the courts themselves.

(2019): According to the Courts Act (Official Gazette, number 28/13, 33/15, 82/15, 82/16, 67/18, 126/19), the president of court supervises accurate performance of court activities in due time. The president of court has a duty to write a report on the performed supervision and its results, as well as on the measures taken, at least once a month. The report has to be inserted into a case file of judicial administration. The president of court is obliged to ensure court efficiency in the resolution of cases, especially when it comes to the resolution of cases the procedure of which lasts more than three years. The president of the court is obliged to take special care to respect the rights and protect children in proceedings before the courts in accordance with international standards. The president of court, except for the president of the Supreme Court of the Republic of Croatia, has a duty to submit a report on the performed tasks of judicial administration, measures and activities undertaken to improve work and efficiency of the court in the resolution of cases. The report is to be submitted directly to a court of higher instance, to the State Judicial Council and the Ministry of Justice, once a year, at least before 31 January for the previous year. The president of the Supreme Court submits the report on the state of judiciary to the Croatian Parliament, once a year, at the latest by the 30 April for the previous year. In this yearly report the president of the Supreme Court can report on the state and actions of the judiciary, organizational problems in courts and legislation shortcomings as well as give suggestions for the improvement of the work of courts.

The courts use special information systems for the management and operation of the courts' cases, which consist of standard applications, computer and telecommunications equipment and infrastructure, system software and tools and all the data that are entered, stored and transmitted in all of the registers of the system. Misdemeanour courts operate using JCMS (Joint Case Management System), while other courts of general jurisdiction and commercial courts use ICMS (Integrated Case Management System). Through these systems it is possible to regularly monitor and evaluate the activity, performance and output of courts for the Ministry of Justice and the courts themselves.

(2018): According to the Courts Act (Official Gazette, number 28/13, 33/15, 82/15), the president of court supervises accurate performance of court activities in due time. The president of court has a duty to write a report on the performed supervision and its results, as well as on the measures taken, at least once a month. The report has to be inserted into a case file of judicial administration. The president of court is obliged to ensure court efficiency in the resolution of cases, especially when it comes to the resolution of cases the procedure of which lasts more than three years. The president of court, except for the president of the Supreme Court of the Republic of Croatia, has a duty to submit a report on the performed tasks of judicial administration, measures and activities undertaken to improve work and efficiency of the court in the resolution of cases. Cyprus

(2020): monthly and annually

(2019): monthly

(2018): monthly and annually

(2017): monthly and annually

(2016): monthly and annually statistics

Denmark

(2020): Monthly, quarterly, half yearly and yearly.

(2019): Monthly for the district courts quarterly for other courts.

(2018): Monthly for the district courts. quarterly for other courts.

(2017): Monthly for the district courts. Quarterly for the High Courts, the Maritime and Commercial Court and the Supreme Court.

Estonia

(2020): 4 times a year.

(2019): 4 times a year.

(2017): Every 4 months but if necessary even more frequent.

Finland

(2020): During the annual budget negotiations the performance of each court is evaluated. However, the general performance of the courts as a whole (for example disposition times) is monitored more frequently.

France

(2020):

With regard to the courts of the judicial order, there are two objectives for evaluating the performance of the courts. The first is the need to provide the heads of courts with steering elements via monthly dashboards (civil and criminal); the second consists, in the context of annual management dialogues, in proposing dashboards covering a whole year. These dashboards are freely accessible in order to allow for a very wide distribution to all the actors and thus encourage comparison, the first vector of performance analysis.

(2019): Concerning civil and criminal branches, there are two objectives for evaluating courts' performance. The first lies in the need to provide the heads of courts with steering elements via monthly dashboards (Civil and Criminal), the second in the context of annual management dialogues, the dashboard covering this time a whole year. These dashboards are freely accessible so that they can be widely diffused to all stakeholders and thus facilitate comparison, the latter being the primary means of analysing performance. Administrative courts also use monthly dashboards and civil and criminal courts receive quarterly reports on steering activities via a business application.

(2018): For judicial courts, the performance analysis is based on the PHAROS information centre used by courts (courts and prosecution services) and central administration.

The results of the management dialogues are published in July. The so-called steering returns can be updated every quarter and every month according to the disputes monitored.

For administrative courts, the frequency is annual

Greece

(2017): The regular evaluation activity is performed every year. Besides, the Law 1756/1988 provides for inspections. Namely, according to art. 85, supreme judges appointed as inspectors for one year term redact every year General Reports on the operation of each Court and prosecutor's Office in their district and recommend the necessary measures for the proper functioning of the service. Furthermore, data regarding the performance of courts is collected as follows: Regarding Administrative courts and Civil procedure the data is collected every quarter. Regarding penal procedure this is collected every semester.

Furthermore, ad hoc evaluations are conducted, based on the data collected every quarter and semester respectively.

Hungary

(2020): The statistics of the court system are composed in every quarter, half and whole year. It is published on the central internet website of the courts in every half year.

(2019): The statistics of the court system are composed in every quarter, half and whole year. It is published on the central internet website of the courts in every half year.

(2018): The statistics of the court system are composed in every quarter, half and whole year. It is published on the central internet website of the courts in every half year.

(2017): The statistics of the court system are composed in every quarter, half and whole year. It is published on the central internet website of the courts in every half year.

Italy

(2020): Quarterly

(2019): Quarterly

(2018): Quarterly

(2017): Quarterly

(2016): Quarterly

Latvia

(2020): Evaluation of courts activities are done mainly in two ways: every month and on a basis of request.

The evaluation can happen for a single court or instance at any time for a number of reasons.

An Annual evaluation of court staff is also carried out, which is essential for high-quality work of courts.

(2019): Evaluation happens on a basis of request. The evaluation can happen for a single court or instance at any time for a number of reasons.

(2018): Evaluation happens on a basis of request. The evaluation can happen for a single court or instance at any time for a number of reasons.

(2017): Latvia has the Court Information System it contains statistical data about court performance. The statistical data have been published in the e-portal: www.tiesas.lv and regularly analysed by Court administration and MoJ.

(2016): Latvia has the Court Information System it contains statistical data about court performance. The statistical data have been published in the e-portal: www.tiesas.lv and regularly analysed by Court administration and MoJ.

Malta

(2020): Court performance is evaluated on a quarterly basis, or as the need arises.

(2018): Court evaluation in terms of performance is carried out on a monthly basis, or on a case by need basis.

(2017): The activity of the courts is monitored on a monthly basis.

(2016): Court evaluation in terms of performance is carried out on a monthly basis.

Netherlands

(2020): Along with monthly reports and quarterly reports, there are annual reports which are more thorough and elaborate.

(2019): Along with the monthly reports and quarterly reports, there are annual reports which are more thorough and elaborate.

Poland

(General Comment): Annual information of the presidents of courts of appeal on the activity of courts operating within the area of appellate courts, containing statistical data from particular appellate courts and information on actions taken to ensure the best possible activity of courts within the area of appellate courts, is analyzed every year. The Minister of Justice evaluates annual information and either accepts it or refuses to accept it

The analysis of work of courts within the jurisdiction of particular appellate courts is also carried out on the basis of statistical data for the first half of each year. On the basis of statistical data collected, the Department of Administrative Supervision performs, according to the needs, an analysis of data concerning judicial units, in particular in the context of efficiency of proceedings and the need to undertake appropriate actions by presidents of courts in order to ensure the most efficient work of units subordinate to them.

(2019): The analysis of the work of all courts is carried out cyclically for the first half of each year and after its completion, in particular based on the average duration of the procedure, control of influence and degree of residue, influence, settlement and remaining case, influence and settlement of cases on a judge according to the limit as at the last day of the statistical period, impact, settlement and remainder on staffing in versions 1 and 3. In addition, data on individual units are analyzed as required.

Portugal

(2018): Besides an annual report, there are also a trimestral and semestral statistics to evaluate judge's performance. In the case of the Administrative and Tax Courts the reports are semestral.

(2017): Every 4 months.

(2016): Every 6 months.

Romania

(2020): biannual (twice a year)

(2018): BIANUAL

(2017): The system may be inquired and offer information in real time. On a regular basis, the information is used within the annual report of the judiciary.

(2016): The system may be inquired and offer information in real time. On a regular basis, the information is used within the annual report of the judiciary.

Spain

(2016): Every six months there is a virtual (on line) inspection of the work of the Courts.

Question 073-1

Czech Republic

(2016): In 2015, a new policy from the Ministry of Justice resulted in the fact that the evaluation of the court activity is used for the later allocation of means to this court.

(2015): In 2015, a new policy from the Ministry of Justice resulted in the fact that the evaluation of the court activity is used for the later allocation of means to this court.

Denmark

(2017): Definitely. Both in relation to funds but also in relation to appointment of new judges in case of vacancy. In case of vacancy, it is not necessarily the same district court where the judge will be placed. It may change to another court. At the high court and the Supreme court the law defines a fixed number of judges at each court.

Estonia

(2016): It can be part of it but it's not a rule.

France

(2017): Annual management conferences (management dialogues) are held between the Ministry or the General Secretariat of the Council of State, depending on whether the court is judicial or administrative, during which the activity indicators of each court are analysed for the previous year and, in the light of the objectives achieved, the objectives and the resources in terms of credits and personnel granted for the coming year are set.

(2016): Annual management conferences (management dialogues) are held between the Ministry or the General Secretariat of the State Council (Conseil d'Etat), depending on whether the court is civil, criminal or administrative, during which, the activity indicators of each court are analysed for the past year, and, in the light of the objectives achieved, the objectives and the means in terms of credits and staff granted are set for the coming year.

Greece

(2017): Concerning the staff of the court, under certain circumstances, this evaluation of the Court activity could lead to a decision to increase or diminish it.

Hungary

(General Comment): The statistical output of a court (mainly the number of incoming and pending cases) is taken into consideration during the distribution of human resources.

Latvia

(2020): Not currently, but there is a suggestion from State Audit Office and a subsequent proposition from Ministry of Justice and Court administration to the Judiciary Council to start to take court work statistical indicators into account when planning annual budget. If necessary, based on workload data resources can be allocated later within a court.

(2019): Not currently, but there is a suggestion from State Audit Office and a subsequent proposition from Ministry of Justice and Court administration to the Judiciary Council to start to take court work statistical indicators into account when planning annual budget. If necessary, based on workload data resources can be allocated later within a court.

(2018): Not currently, but there is a suggestion from State Audit Office and a subsequent proposition from Ministry of Justice and Court administration to the Judiciary Council to start to take court work statistical indicators into account when planning annual budget. If necessary, based on workload data resources can be allocated later within a court.

Luxembourg

(General Comment): The figures presented by the SSJ are used on a regular basis to allocate (and ask for) means to the courts and prosecutorial services.

(2020):
The annual report is used to the effect set out in Q. 073-1 (report 2020, see <https://justice.public.lu/fr/publications/juridictions-judiciaires/rapports-juridictions-judiciaires-2020.html>).

(2019): The annual report is used to the effect set out in Q. 073-1

(2018): The annual report is used to the effect set out in Q. 073-1

(2016): The figures presented by the SSJ are used on a regular basis to allocate (and ask for) means to the courts and prosecutorial services.

Malta

(2017): Court performance evaluation is brought to the attention of both the Minister for Justice, Culture and Local Government as well as to the attention of the Chief Justice. The Chief Justice, who is vested with the authority to effect changes in judicial duties, does make use of such performance data in the better interest of increased efficiency and expediency of the judicial process.

(2016): Court performance evaluation is brought to the attention of both the Minister for Justice, Culture and Local Government as well as to the attention of the Chief Justice. The Chief Justice, who is vested with the authority to effect changes in judicial duties, does make use of such performance data in the better interest of increased efficiency and expediency of the judicial process.

Netherlands

(2020): This is not a 'hard' rule, the outcomes of the evaluation do not directly influence the allocation of resources in the next years.

Romania

(2017): A periodic evaluation system of the activity (performance and result) of the court is not formally adopted (by law or by a subsequent regulatory act). SCM uses a series of performance indicators (see questions 71 and 74 below) concerning the activity of the courts. Periodical assessments are being carried out and further measures are being implemented on the highlighted results. By the decisions 1305/2014 and 149/2015, SCM has approved the reports on implementing these indicators and there were established new margins for their implementation.

(2016): A periodic evaluation system of the activity (performance and result) of the court is not formally adopted (by law or by a subsequent regulatory act). SCM uses a series of performance indicators (see questions 71 and 74 below) concerning the activity of the courts. Periodical assessments are being carried out and further measures are being implemented on the highlighted results. By the decisions 1305/2014 and 149/2015, SCM has approved the reports on implementing these indicators and there were established new margins for their implementation.

Question 073-2

Denmark

(2020): Half yearly weighted cases and productivity figures are worked out. These data are used to allocate resources and to find which court should have the next free judge position.

Finland

(2020): The evaluation is used for later allocation of resources in the courts but the evaluation is not the main criteria when allocating the resources.

(2019): The evaluation is used for later allocation of resources in the courts but the evaluation is not the main criteria when allocating the resources.

(2018): The evaluation is used for later allocation of resources in the courts but the evaluation is not the main criteria when allocating the resources.

France

(2020): No comment

(2019): Annual management conferences (management dialogues) are held between the Ministry or the General Secretariat of the Supreme Administrative Court (Conseil d'Etat), depending on whether the court is civil/criminal or administrative, during which the activity indicators of each court are analysed for the past year and, in the light of the objectives achieved, the objectives and the resources in terms of credits and personnel granted are set for the coming year.

(2018): The evaluation of a court's activity contributes in part to the subsequent allocation of resources to that court, in particular for the location of jobs for judges and civil servants. However, the performance indicators are cross-referenced with other data (HR data, budgetary data, etc.) in the context of the allocation of human resources and the distribution of appropriations.

Hungary

(2019): The statistical output of a court (mainly the number of incoming and pending cases) is taken into consideration during the distribution of human resources.

Italy

(2020): The evaluation of the court activity (case flow, DT, CR, etc.) are used to draw up the staffing plan ("pianta organica") i.e. the ideal allocation of judges and court staff among the courts. More recently, this data is used for monitoring the implementation of reforms and investments related to the Recovery and Resilience Plan (PNRR) and the related EU Next Generation funds.

Malta

(General Comment): Court performance evaluation is brought to the attention of both the Minister for Justice as well as to the attention of the Chief Justice. The Chief Justice, who is vested with the authority to effect changes in judicial duties, does make use of such performance data in the better interest of increased efficiency and expediency of the judicial process.

(2020): Other refers to the Court's ability to request more financial and human resources in a bid to improve the performance on the selected indicators

(2018): Court performance evaluation is brought to the attention of both the Minister for Justice, Culture and Local Government as well as to the attention of the Chief Justice. The Chief Justice, who is vested with the authority to effect changes in judicial duties, does make use of such performance data in the better interest of increased efficiency and expediency of the judicial process. On the other hand, the Ministry also monitors these performance evaluations and tries to assist through legislative amendments or other interventions that lie within its powers and that do not impinge on the independence of the judiciary.

Question 070

Austria

(General Comment): .

(2017): "other": e.g. certain kinds of decisions, clearance rate (annually)

Belgium

(2017): There are ad hoc systems for monitoring activities within the courts. There is a central service responsible for the collection of statistics which ensures the annual publication of statistics. The Central Statistical Service is developing a uniform and coordinated policy, but there is (as yet) no central system for regular monitoring of activities.

(2016): There are ad hoc systems for monitoring activities within the courts. There is a central service responsible for the collection of statistics which ensures the annual publication of statistics. But there is no (yet) central system for regular monitoring of activities.

Croatia

(2019): As regards "number of appeals", from 2019 we are able to get this data from our case management system.

Denmark

(2020): We value independence high. Therefore Danish Court Administration does not evaluate the performance or productivity of individual judges. We follow overall productivity and case flow though as that is used to allocate resources and to find the court most in need of vacant judge positions.

(2019): Courts are followed yearly in a yearly report. District courts receive monthly a report about case flow, pending cases, backlogs, weighted cases and the time it takes to finalize cases.

(2017): In Denmark we have a management system which information is updated monthly for the district courts where the points above are shown. For the High Courts and the Supreme Court, the case flow is not followed so often and in a so detailed way, but there are also much fewer cases. "Other": activity in terms of weighted cases and also pending cases

(2016): The so called "weighted cases" are measured in order to have a measure for the activity.

Estonia

(General Comment): The scope of the monitoring system is extended to the results of proceedings; the categories of cases; the number of decisions appealed and revoked, fully or partially. The waiting time and the 'age' of pending (not solved) cases are also monitored. It is worthy of mention that every year all the courts and the Ministry of Justice enter into an agreement according to which courts should aim to carry out structural changes and to make changes in case-flow management that will ultimately ensure efficient proceedings. The content of the agreement has changed since 2017. The goals are more general and the same for all the courts (except The Supreme Court).

(2017): See previous general comments.

(2016): see general comments

Finland

(General Comment): All courts keep statistics of the mentioned court activities in the operational case management systems. The National Courts Administration can access these figures through a reporting system.

(2019): satisfaction of court staff is monitored with job satisfaction surveys which are taken every second year

France

(2020): Judicial and administrative jurisdictions combined.

(2019): Civil and criminal justice: After the deployment of innovative applications, satisfaction questionnaires are sent to users in the courts (heads of courts, directors of registries, judges and registry officials) in order to improve change support actions and the implementation.

In addition, with regard to victims, the Ministry of Justice will conduct a satisfaction survey in the second half of 2019 among victims of criminal offences who resort to victim support associations. The results of this survey, similar to a previous survey conducted in 2011, could be published in 2020. Likewise, the Ministry of Justice is attentive to citizens' views on the way they are received in the courts. For several years now, surveys have been conducted on the reception in the courts by a service provider pretending being a litigant. In 2018, an online survey, coupled with a face-to-face survey, was conducted in seven 1st instance courts "tribunaux de grande instance" among litigants appearing in these courts. In 2019, the satisfaction survey will be carried out in all "tribunaux de grande instance" via an online survey accessible by internet address or QR code. Finally, a national survey is also under way on the reception of litigants in the courts in the specific context of the implementation of social centres within the "tribunaux de grande instance" and the integration within these courts of the three separate courts that previously dealt with these types of litigation. The survey, carried out among court staff, aims to assess the difficulties encountered by persons presenting themselves at the reception desk and to identify any corrections that could be included in the texts.

The reply to the question encompasses replies from administrative justice and civil and criminal justice.

(2018): The coverage rate of cases as well as the structure of civil or criminal litigation are used by the courts.

In addition, other indicators usefully complete the analysis: .

Share of decisions on the merits in completed cases (civil activity).

Share of referrals in completed cases (civil activity).

Theoretical time to sell off the stock.

Average age of the stock.

Percentage of cases over 12 months in stock (civil activity).

(2017): The number of cases referred is an indicator used only by administrative courts.

The courts have business applications to monitor their civil and criminal activities. At national level, data from these applications is

from these applications are collected automatically via infocentres, reprocessed and cross-referenced, then in the form of tables or graphs. These reports can be generated on a monthly basis, except for certain activity data (court of appeal).

These reports can be generated on a monthly basis, except for certain activity data (criminal courts, juvenile court judges, enforcement of sentences), for which reports are generated annually.

These infocentres enable the courts to monitor statistics and manage their activity. They enable the central administration to They enable the central administration to prepare management dialogues from a performance perspective.

(2016): The number of cases subject to referral is an indicator used only by administrative courts.

Courts have business applications to monitor their civil and criminal activities. At national level, data from these applications are collected automatically via info-centres, processed and cross-referenced, and then presented in the form of tables or graphs. These refunds can be generated monthly, except for certain activity data (assize court, juvenile judges, enforcement of sentences), for which the refunds are annual.

These info-centres enable courts to carry out a statistical follow-up and to monitor their activities. They allow the central administration to prepare management dialogues from a performance perspective.

(2015): The number of cases being referred is used only by administrative courts.

The rate of coverage of cases is used by judicial courts.

The state of stocks by age group is used by administrative courts.

(2014): 2013, 2014, the category "others" includes:

- the coverage rate of cases (used by judicial courts)
- the state of the stocks per age group (used by administrative courts)

It should be noted that concerning the indicators mentioned in the question, the number of appealed cases is only used by administrative courts.

(2013): 2013, 2014, the category "others" includes:

- the coverage rate of cases (used by judicial courts)
- the state of the stocks per age group (used by administrative courts)

It should be noted that concerning the indicators mentioned in the question, the number of appealed cases is only used by administrative courts.

(2012): 2010, 2012: the category "others" includes the state of the stocks per age group. It should be noted that concerning the indicators mentioned in the question, the number of appealed cases is only used by administrative courts

Germany

(General Comment): At the level of the Federal Government, statistics on proceedings encompass the number of incoming cases, the type of proceeding, the form of conclusion, and the time needed for conclusion. Moreover, information regarding other characteristics is also collected (legal aid in litigation and legal aid for proceedings, value of dispute, subject area, remedies, etc.) All of this information can be correlated to one another upon evaluation. The regular evaluations can be found in the publications of the Federal Statistical Office. Data regarding the business overviews usually does not contain – in that it involves manual statistics – additional information beyond the business workload, particularly as regards the duration of proceedings.

(2020): The monitoring activities mentioned under "other" were reported only by some of the Länder.

(2019): Some of the Länder did mention a monitoring system concerning other court activities such as statistics on the nature of resolution are kept (e.g. in civil cases: dealt with by contentious judgment/by acknowledgement/by settlement, etc.).

(2018): Some of the Länder did mention a monitoring system concerning other court activities such as statistics on the nature of resolution are kept (e.g. in civil cases: dealt with by contentious judgment/by acknowledgement/by settlement, etc.).

(2016): other: Some of the Länder did mention a monitoring system concerning other court activities such as statistics on the nature of resolution are kept (e.g. in civil cases: dealt with by contentious judgment/by acknowledgement/by settlement, etc.).

(2014): In 2014, some of the Landers did mention a monitoring system concerning other court activities, namely statistics on the nature of resolution (e.g. in civil matters cases are dealt with by contentious judgment/by acknowledgement/by settlement, etc.).

(2013): In 2013, seven Landers communicated information on their regular monitoring system. For example, Baden-Württemberg refereed to calculation of the specific personnel requirements on a mathematical-analytical basis. Bavaria mentioned the type of proceedings, form of decision, etc. for courts of labour and social jurisdiction and workload, ratio of part-time employees; average age of employees, training and sick days, duration of proceedings in months, ratio of appeals for courts of general jurisdiction. In Brandenburg, the number of pending cases and the ratio of terminated proceedings as against incoming cases are monitored.

(2012): For 2010 and 2012, five Landers did not provide any reply. Seven Landers communicated detailed information on their regular monitoring system of courts' activity. Among the main other monitored parameters are the deadlines for the drafting of judgments (Bavaria), the number of pending cases and the ratio of terminated proceedings as against incoming cases (Brandenburg), the nature of resolution – cases dealt with by contentious judgment, by acknowledgment, by settlement etc. (Hamburg), cases allocated among staff, i.e. caseload quota (Hesse); finance benchmarks, item costs, standardized deployment of person hours related to product (Saxony-Anhalt).

Greece

(General Comment): According to Law 1756/1988 (art. 85), supreme judges appointed as inspectors for one year's term, redact every year general reports on the operation of each court and prosecutor's office in their district and recommend the necessary measures for the proper functioning of the service. Regarding administrative courts, this task is fulfilled by the General Commission of the State for ordinary administrative courts

(2019): The Greek government has introduced a new system for organizing and evaluating the planning and implementation of public sector actions and projects, which introduces among others, monitoring court activities. (L. 4622/2019 art. 49 foll.)

(2017): Regarding Administrative Courts, this task is fulfilled by the General Commission of the State for ordinary administrative courts. In the near future there will be a possibility for the General Commission of the state to use a business intelligence program, in order to extract composite statistical data without contacting any court [E-mail: g-epitropia-d-d@otenet.gr]

Hungary

(General Comment): Among others:

- individual judge's statistics, - statistics on the reasons of the postpone of the trials,
- number of trial days in cases, - number of tried cases per day,
- pending cases of an individual judge / court,
- the time frame of pending cases
- number of appealed cases,
- the subject of incoming / finished / pending cases,
- the ratio of litigious and non-litigious cases,
- cases that are pending over 2 or 5 years have a separated statistical report every month
- cases in which there were no actions taken in the last 30 days by the court have a separated statistical report every month

(2020): - statistics on the reasons of the postpone of the trials,

- number of trial days in cases, - number of tried cases per day,
- the subject of incoming / finished / pending cases,
- the ratio of litigious and non-litigious cases,
- cases that are pending over 2 or 5 years have a separated statistical report every month
- cases in which there were no actions taken in the last 30 days by the court have a separated statistical report every month

(2019): Other:

- cases in which there were no actions taken in the last 30 days by the court have a separated statistical report every month

(2014): In 2013 and 2014, among other are quoted individual judge's statistics, statistics on the reasons of postponing trials, the number of trial days, the number of tried cases per day, the number of pending cases of an individual judge/court, the time frame of pending cases, the number of appealed cases, the subject of incoming/resolved/pending cases, the ratio of litigious and non-litigious cases. Cases that are pending over 2 or 5 years have a separated statistical report every month, as well as cases in which there were no actions taken in the last 30 days by the court.

(2013): In 2013 and 2014, among other are quoted individual judge's statistics, statistics on the reasons of postponing trials, the number of trial days, the number of tried cases per day, the number of pending cases of an individual judge/court, the time frame of pending cases, the number of appealed cases, the subject of incoming/resolved/pending cases, the ratio of litigious and non-litigious cases. Cases that are pending over 2 or 5 years have a separated statistical report every month, as well as cases in which there were no actions taken in the last 30 days by the court.

(2012): In 2010 and 2012, a reference is made to individual judge's statistics, statistics on the reasons of postponing trials, the number of trial days, the number of resolved cases, the number of cases scheduled within one day, the number of pending cases of an individual judge.

Ireland

(2014): 2014: Since 2014 Ireland introduced a monitoring system for the length of proceedings and it is now capable of calculating average length of proceedings in first instance jurisdictions.

Latvia

(General Comment): Implemented business intelligence solution allows to very closely monitor all the mentioned court activities.

Satisfaction of court staff and users is being evaluated by regular questionnaires in courts.

(2017): Decision stability (proportion of decisions appealed in higher instance)

(2016): Decision stability (proportion of decisions appealed in higher instance)

Lithuania

(General Comment): All of these data are recorded in the Lithuanian Court Information System (LITEKO), as well as other data, related to the case, it's process and the parties to the proceedings.

Luxembourg

(General Comment): No regular system has been implemented up to today. However, a monitoring can be done through the statistical service of the judiciary (SSJ) on an punctual basis and upon request by the competent authorities.

(2017): ??? (see comments to parent campaign)

(2016): No regular system has been implemented up to today. However, a monitoring can be done through the statistical service of the judiciary (SSJ) on an punctual basis and upon request by the competent authorities.

(2015): By using the newly implemented statistical tools, the information ticked in addition to last year's questionnaire can now be retrieved by the statistical service on an as needed basis at least for criminal cases. Identical markers are being implemented for civil and commercial cases and will available in a foreseeable future.

(2014): 2014: There is no regular monitoring system. However, new statistical tools are implemented and can provide monitoring elements when necessary without daily measurement current affairs.

Malta

(2019): Other: age of pending caseload

(2017): other: clearance rate

(2015): The monitoring of court activities also takes place through the ongoing analysis of the Clearance Rate and Disposition Time of the various courts. This data is also being published online on a monthly basis.

The category "other" refers to the monitoring of the Clearance Rate and Disposition Time of all civil courts, boards and tribunals. This exercise was started in 2015.

(2014): In 2014, the court administration was monitoring length of proceedings through the number of incoming and resolved cases, as well as through the pending caseload. The age of civil cases was another parameter that was being assessed. On the occasion of the 2014 exercise, it has been indicated that since 2015, Malta started computing the Disposition Time and Clearance Rate of all the civil and criminal courts. By the end of 2015, for the civil courts, this information will be made available online.

Netherlands

(2020): There is an annual publication that includes the appeal ratio for some case types. To call it 'monitoring' would be a bit too much, but it is annually checked and reported on. Incoming cases and length of proceedings have not previously been mentioned, but these are monitored.

Poland

(2017): Supervision covers only the administrative activities of the courts. There are the internal supervision exercised by the presidents of the courts and the external supervision exercised by the Minister of Justice within the narrow scope specified in the law.

(2016): Supervision covers only the administrative activities of the courts. There are the internal supervision exercised by the presidents of the courts and the external supervision exercised by the Minister of Justice within the narrow scope specified in the law.

Portugal

(2020): we included "satisfaction of users" because one of the tasks of the president judge of the court is to monitor and evaluate the activity of the court, in particular the quality of the justice service provided to citizens, taking into account particular complaints or responses to satisfaction questionnaires. "Article 94 of Law 62/2013, 26th August, on the judicial organization"

(2019): In this evaluation cycle we included "satisfaction of users" because one of the tasks of the president judge of the court is to monitor and evaluate the activity of the court, in particular the quality of the justice service provided to citizens, taking into account particular complaints or responses to satisfaction questionnaires. "Article 94 of Law 62/2013, 26th August, on the judicial organization"

(2017): Scheduling; delays of judges and sections.

(2016): Scheduling; delays of judges and sections.

(2015): Scheduling; time delays of judges and sections of the court.

Romania

(General Comment): Since 2012, the category "other" subsumes the length of administrative procedures, the number of final convictions, legal aid, suspended cases etc.

(2020): ECRIS - case management and STATIS - statistics monitoring application including for court's efficiency assessment

(2019): ECRIS - case management and STATIS - statistics monitoring application including for court's efficiency assessment

(2017): - e.g. suspended cases

(2016): - suspended cases etc.

Slovakia

(General Comment): The category “other” encompasses: the number of cases according to types of disputes, the result of the case (reconciliation, dismissals, full satisfaction, partial satisfaction, etc.). Statistical data of the Ministry of Justice of the Slovak Republic are detailed and regularly collected and published in a yearbook which is publicly accessible at the website of the Analytical centre of MoJ
<https://www.justice.gov.sk/Stranky/Informacie/Analyticke-centrum.aspx>
<http://web.ac-mssr.sk/statisticka-rocenka-2018/>. Data on the activity of the courts are published every month in interactive Dashboard on the <http://web.ac-mssr.sk/dashboard/>.

Slovenia

(General Comment): In Slovenia there is a regular monitoring system in a form of collecting data on court statistics. Court statistics are collected and published four times a year by the Ministry of Justice. They include the data on the number of judges and court staff, number of incoming, resolved and pending cases, age of unresolved cases, length of proceedings, average time to resolve a case, type of decision, court backlogs, legal remedies and time to issue a court decision. Besides that, the data on court activities are automatically on national level, thus statistical analysis are made possible. All courts have access to a wide range of special reports, generated in the Court management information system. Reports include detailed information on court activities (for example length of specific phases of a court proceeding, top 20 oldest cases in certain area of law, etc.), human resources, court performance indicators (the critical indicators are marked red for unsatisfactory performance and green when meeting the standards) that provide guidance to presidents and directors of courts. The business intelligence system that creates priority reports derives the data from the Data warehouse of the Supreme Court. The same source is used for Court statistics publications by the Ministry of Justice. Each court is able to access the above mentioned reports at any moment, while some data are quarterly collected and published on national level (as prescribed by the Court rules).
The satisfaction surveys are performed and results published bi-annually.

(2015): The data on court activities are automatically collected on national level, thus statistical analysis is made possible.

All courts have access to a wide range of special reports, generated in the Court management information system. Reports include detailed information on court activities (e.g. length of specific phases of a court proceeding, top 20 oldest cases per legal area etc.), human resources, court performance indicators (the critical indicators are marked red for unsatisfactory performance and green when meeting the standards) that provide guidance to presidents and directors of courts. These additional data available to court management officials are the reason, why we put check before “other elements”.

The business intelligence system that creates priority reports derives the data from the Data warehouse of the Supreme Court. The same source is used for Court statistics publications by the Ministry of Justice.

Each court is able to access the above mentioned reports at any moment, while some data are quarterly collected and published on national level (as prescribed by the Court rules).

Spain

(General Comment): The category “other” encompasses: number of enforcement procedures, number of decisions appealed, number of rogatory letters issued, received and resolved, aid between courts, pending writings, form of termination of trials, etc.

(2017): The category “other” includes many other data such appeals, aid between courts, pending writings, etc.

(2016): The category “other” includes many other data such appeals, aid between courts, pending writings, enforcement proceedings, form of termination of trials, etc.

Question 077-1

Finland

(2020): Performance yes, quality no - See answer 066

Ireland

(2018): Prosecutors adhere to Code of Ethics and Guidelines of respective professional bodies .There are file reviews and regular periodic management reports in place

Malta

(2018): The Office of the AG does keep a record of the number of incoming cases as well as those cases that can be considered as terminated from the Office because for example, a bill of indictment is issued. However no official statistics are kept.

Slovenia

(General Comment): The State Prosecutorial Council adopts the Criteria for evaluating the performance of the state prosecutor's offices on the proposal of the State Prosecutor General. The criteria define indicators and their target values for the appraisal of the work efficiency and realization of prosecution policy.

Question 078-1

Bulgaria

(2020): With the Guidance of Organization of the Information Activities at the Prosecutor's Office, issued by the Prosecutor General, the performance and quality indicators were defined, outside of the given ones, and covered the acts and actions of the public prosecutor for all types of supervisions that are carried out by the Prosecutor's Office:

In criminal proceedings, including the supervision of the enforcement of penalties, the following may be additionally, but not exhaustively mentioned: prosecutor's acts filed with the court; terminated cases; objections against judicial acts; acts for the enforcement of sentences that have already entered into force; acts for supervision over the sentence enforcement.

Actions for resolving the competition between administrative criminal liability and criminal liability;

Within civil proceedings – claims submitted under the cases provided by the law; Within administrative proceedings – participation in trials under the cases provided by the law; Acts on the supervision of legality

(2018): With the Guidance for the Organization of the Information Activities at the Prosecutor's Office, issued by the Prosecutor General, the performance and quality indicators were defined, outside of the given ones, and covered the acts and actions of the public prosecutor for all types of supervisions that are carried out by the Prosecutor's Office:

In criminal proceedings, including the supervision of the enforcement of penalties, the following may be additionally, but not exhaustively mentioned: prosecutor's acts filed with the court; terminated cases; objections against judicial acts; acts for the enforcement of sentences that have already entered into force; acts for supervision over the sentence enforcement.

Actions for resolving the competition between administrative criminal liability and criminal liability;

Within civil proceedings – claims submitted under the cases provided by the law; Within administrative proceedings – participation in trials under the cases provided by the law; Acts on the supervision of legality

Denmark

(2020): We do not have performance indicators that measure length of proceedings directly. However, we measure them indirectly, since we have performance measures on the time from a case is given to the public prosecution until the case is resolved. Earlier we have interpreted this as an indirect measure of time-frames, but we have come to the conclusion that it is more correct to say, that we do not measure timeframes.

France

(2020):

This data is not available.

Germany

(2020): Just over half of the Länder answered that quality indicators have been defined for backlogs, a few reported that quality indicators for satisfaction of users, costs, clearance rate or disposition time have also been defined.

Slovenia

(General Comment): The criteria for the success of the prosecution of public prosecutors determine the following indicators: the number of unresolved cases at the end of the period, clearance rate, expected solution time, time criteria for typical process actions, (from the initiative of the police to the submission of a proposal to carry out urgent investigative actions, from the receipt to the rejection of the criminal complaint, from the receipt of the criminal complaint to the submission of a request for investigation or a proposal for individual investigative actions, from the receipt of the criminal complaint (without investigation) to the filing of the indictment, from the end of the investigation or individual investigative actions until the filing of the indictment, from the receipt of the complaint to the decision of the public prosecutor on the postponed prosecution and settlement, efficiency indicator, cost-effectiveness indicator, proportions of prosecution decisions, shares of rejected complaints according to individual reasons, shares of decisions alternative to criminal prosecution, share of penal orders, share of convictions, shares of imposed criminal sanctions.

Question 073-3

Bulgaria

(General Comment): With the Guidance for the Organization of the Information Activities at the Prosecutor's Office of the Republic of Bulgaria, all indicators for the activity of the Prosecutor's Office of the Republic of Bulgaria are regulated, as well as the obligation of all prosecutor's offices to prepare only a statistical report for the first half of the year, as well as analytical annual reports for their activity. The Rules for Measuring the Workload of the Prosecutor's Offices and the Individual Workload of Each Prosecutor and Investigator, adopted by a Decision of the Supreme Judicial Council under Protocol No. 60/11.12.2014, are applied in all prosecutor's offices, investigation departments and in the National Investigation Service. The use of the Unified Information System of the Prosecutor's Office ensures that the data is retrieved in real time and allows for its verification and reliability. Data on the administrative and managerial workload of the administrative heads, their deputies and the heads of the investigation departments is also provided through the system. The ratio of the number of law enforcement acts to one administrative act at the levels of the prosecutor's offices is also taken into account. The analysis of this relation is important for the efficiency/resource ratio analysis.

Within the Prosecutor's Office's Annual Report, an analysis is made for the workload of the public prosecutor's offices and the investigative bodies and it is compared to the workload of authorities of the same type and degree.

Data on the workload of public prosecutor's offices and investigative bodies is also collected every six months.

Ordinance No. 3 of 23.02.2017 on the Indicators and Methods for Assessment and the Criteria for Reporting the Workload Degree of Prosecutors, Investigators, Administrative Heads and Their Deputies can also be mentioned (adopted by a decision of the Plenum of the Supreme Judicial Council under Protocol No. 7 of 23.02.2017, promulgated in SG 21/10.03.2017).

Workload reporting is designated to ensure fairness of the assessment in terms of the volume of actual work. (The evaluation takes into account the actual workload of the relevant judicial authority, as well as the individual workload of the assessed prosecutor, investigator, administrative head, deputy administrative head and head of department. The workload of the respective judicial authority is compared to the workload of the bodies of the same type and degree, and the individual workload is compared to the set out workload norm and the workload of other prosecutors or investigators from the same body of the judiciary).

Croatia

(General Comment): According to the State Attorney's Act (Official Gazette, No. 67/18), a state attorney supervises accurate performance of all state attorney office activities in due time. A state attorney submits reports to the higher state attorney on his state attorney office performance each month and annually and reports on undertaken and planned actions in cases of special state interest or in cases with complex factual or legal issues. The General State Attorney Office submits the report on the status and trends of reported crime in the previous year, on cases related to the protection of property interests of the Republic of Croatia, legal issues in particular areas and a review of the organization and personnel in state attorney organization to the Croatian Parliament, once a year, at the latest by the 30 April for the previous year. In this yearly report, there can be a warning on the state and functioning of the legal system, deficiencies in the legislation and internal affairs of the state attorney's office and suggestions for improving the work.

The state attorney offices use a special information system for the management and operation of the state attorney cases, as an interactive data base in real time. Through the CTS (Case tracking system) it is possible to regularly monitor and evaluate the activity, performance and output of state attorney offices.

Luxembourg

(2020): The annual report covers both judges and prosecutors (report 2020, see <https://justice.public.lu/fr/publications/juridictions-judiciaires/rapports-juridictions-judiciaires-2020.html>).

(2018): The annual report covers both judges and prosecutors.

Malta

(2020): The Office of the AG has started setting up a system to assess the performance of the prosecution service, but this is still in its initial phases and more work is being planned on it to make it more integrated.

Poland

(General Comment): Pursuant to Article 30 of the Act on the Public Prosecutor's Office, the National Public Prosecutor, but also regional and circuit public prosecutors within the area of their activities, may order a visit to an organisational unit of the public prosecution services in order to control the performance of statutory tasks by this unit within a specified scope. Pursuant to § 77 item 1 of the Ordinance of the Minister of Justice - Rules of Procedure of the universal prosecutorial bodies of the public prosecution services, visitation and inspection shall be carried out as appropriate, in particular when there are signals of significant irregularities in the activities of a given body. Visitations should be carried out at least every 5 years.

2. An inspection may be carried out to check the correctness of practices in selected sections of the operation or when there is a need to investigate the causes of shortcomings in the operation or irregularities in the operation of the given body.

3 Visitation and inspection includes:

1) the control of the performance of the statutory tasks by the bodies, and in particular the examination of the correctness of the activities undertaken and the level of work;

2) assessing the performance of professional duties by prosecutors and administration staff and their professional qualifications and work culture;

3) an assessment of the way in which the body is managed, the organisation of work and the division of tasks.

4) In the course of visitations and inspections, instructions shall be given as necessary to improve the operation of the audited bodies and to help solve current problems.

Conclusions from the visitations and inspections of public prosecutor's offices are considered by the regional prosecutor's office board [kolegium prokuratury regionalnej] (Article 49 of the Act on the Public Prosecutor's Office).

Slovenia

(General Comment): The quantitative indicators are defined in the Criteria for evaluating the performance of the state prosecutor's offices adopted by the State Prosecutorial Council. General guidelines for the work of state prosecutors and priority fields of prosecution are defined in a Prosecution Policy by prosecutor general. Heads of offices implement both criteria in their Annual Work Program. Twice a year the prosecutor general, the State Prosecutorial Council and the Minister discuss the performance of state prosecutor's offices at joint meetings held with the heads of state prosecutor's offices and adopt and/or coordinate the measures required for implementation of annual work programmes. An evaluation of attained goals set in the adopted Annual Work Programme, Criteria and Prosecution Policy are an integral part of Annual Report of each prosecution office. The prosecutor general compiles Joint Annual Report on the work of the whole state prosecutor offices. The Minister and State Prosecutorial Council may submit their opinion to this report.

Question 073-4

Austria

(2020): Monthly statistics about incoming and closed cases (more frequent)

Periodic check lists (annual)

Internal audit examination all 4 to 7 years (less frequent)

(2018): Operational Information System (Sta-BIS) annually

Periodic check lists (on October 1st of every year)

Internal audit examination all 4 to 7 years (less frequent)

Monthly statistics about incoming and closed cases ("Kurzstatistik") (more frequent)

Belgium

(2020): "More frequent :

- by means of monthly statistics on the number of cases handled (general prosecutors' offices)
- on the basis of bi-monthly dashboards (public prosecutors' offices)
- quarterly at the meetings of the public prosecutor with the public prosecutors and the labour auditors".

Bulgaria

(2020): The answer here is both "Annual" and "More frequent" With the Direction of Organization of the Information Activities at the Prosecutor's Office of the Republic of Bulgaria, all indicators for the activity of the Prosecutor's Office of the Republic of Bulgaria are regulated, as well as the obligation of all prosecutor's offices to prepare only a statistical report for the first half of the year, as well as analytical annual reports for their activity. The Rules for Measuring the Workload of the Prosecutor's Offices and the Individual Workload of Each Prosecutor and Investigator, adopted by a Decision of the Supreme Judicial Council under Protocol No. 60/11.12.2014, are applied in all prosecutor's offices, investigation departments and in the National Investigation Service. The use of the Unified Information System of the Prosecutor's Office ensures that the data is retrieved in real time and allows for its verification and reliability. Data on the administrative and managerial workload of the administrative heads, their deputies and the heads of the investigation departments is also provided through the system. The ratio of the number of law enforcement acts to one administrative act at the levels of the prosecutor's offices is also taken into account. The analysis of this relation is important for the efficiency/resource ratio analysis.

Within the Prosecutor's Office's Annual Report, an analysis is made for the workload of the public prosecutor's offices and the investigative bodies and it is compared to the workload of authorities of the same type and degree.

Data on the workload of public prosecutor's offices and investigative bodies is also collected every six months.

Ordinance No. 3 of 23.02.2017 on the Indicators and Methods for Assessment and the Criteria for Reporting the Workload Degree of Prosecutors, Investigators, Administrative Heads and Their Deputies can also be mentioned (adopted by a decision of the Plenum of the Supreme Judicial Council under Protocol No. 7 of 23.02.2017, promulgated in SG 21/10.03.2017).

Workload reporting is designated to ensure fairness of the assessment in terms of the volume of actual work. (The evaluation takes into account the actual workload of the relevant judicial authority, as well as the individual workload of the assessed prosecutor, investigator, administrative head, deputy administrative head and head of department. The workload of the respective judicial authority is compared to the workload of the bodies of the same type and degree, and the individual workload is compared to the set out workload norm and the workload of other prosecutors or investigators from the same body of the judiciary).

Croatia

(2018): According to the State Attorney's Act (Official Gazette, number 76/09, 153/09, 116/10, 145/10, 57/11, 130/11, 72/13, 148/13, 33/15, 82/15), a state attorney supervises accurate performance of all state attorney office activities in due time. A state attorney submits reports to the higher state attorney on his state attorney office performance each month and annually and reports on undertaken and planned actions in cases of special state interest or in cases with complex factual or legal issues. The General State Attorney Office submits the report on the status and trends of reported crime in the previous year, on cases related to the protection of property interests of the Republic of Croatia, legal issues in particular areas and a review of the organization and personnel in state attorney organization to the Croatian Parliament, once a year, at the latest by the 30 April for the previous year. The state attorney offices use special information systems for the management and operation of the state attorney cases, as an interactive data base in real time. Through the CTS (Case tracking system) it is possible to regularly monitor and evaluate the activity, performance and output of state attorney offices.

Denmark

(2020): Monthly

(2018): Monthly

Finland

(2020): Biannually. The prosecution services are evaluated twice a year.

(2018): When necessary.

Italy

(2020): Quarterly

(2018): Quarterly

Latvia

(2020): In accordance with the order of the Prosecutor General, a monthly report is prepared on the results of the public prosecutor's work in pre-trial criminal proceedings and the results of the work, which are not related to the progress of pre-trial criminal proceedings.

(2018): Monthly reports on the results of the public prosecutor's work in pre-trial criminal proceedings and the results of work which are not related to the conduct of pre-trial criminal proceedings shall be drawn up in accordance with the order of the Prosecutor General.

Lithuania

(2020): Chief prosecutors of the departments of the prosecutor's offices are regularly provided with monthly data based on basic indicators of the performance of public prosecution offices, every 3 months – with the larger scale of performance data.

(2018): Every 6 months.

Netherlands

(2020): Along with the monthly reports and quarterly reports, there are annual reports which are more thorough and elaborate.

Poland

(2020): Once a month, the head of the organizational unit of the prosecutor's office shall submit to his or her superior prosecutor a report containing the number of incoming cases and the number of cases disposed of .

(2018): Once a month a head of the organisational unit of the public prosecution service presents to their superior public prosecutor a report which contains a number of incoming cases and number of resolved cases.

Slovenia

(2020): See general comment.

(2018): The quantitative indicators are defined in the Criteria for evaluating the performance of the state prosecutor's offices adopted by the State Prosecutorial Council. General guidelines for the work of state prosecutors and priority fields of prosecution are defined in a Prosecution Policy by prosecutor general. Heads of offices implement both criteria in their Annual Work Program. Twice a year the prosecutor general, the State Prosecutorial Council and the Minister discuss the performance of state prosecutor's offices at joint meetings held with the heads of state prosecutor's offices and adopt and/or coordinate the measures required for implementation of annual work programmes. An evaluation of attained goals set in the adopted Annual Work Programme, Criteria and Prosecution Policy are an integral part of Annual Report of each prosecution office. The prosecutor general compiles Joint Annual Report on the work of the whole state prosecutor offices. The Minister and State Prosecutorial Council may submit their opinion to this report.

Question 073-5

Bulgaria

(2020): The implementation of optimization within the Prosecutor's Office is in view of the data on the volume of prosecutorial activity, the workload of prosecutors, as well as the territorial scope and specifics of the region served by the respective prosecutor's office. Decisions on this optimization are made by the Supreme Judicial Council (SJC) on the basis of information periodically provided by the prosecution. On the basis of an analysis of the above indicators, the staff for the respective prosecutor's office is determined (in case of need for increase or reduction of staff, resp. in case of transfer of a full-time position from one to another prosecutor's office). The answer to questions 73-5 and 73-6 for 2020 takes into account the process of optimization of the court card started on 01.01.2019, as the Prosecutor's Office started the transformation of district prosecutor's offices into territorial divisions to district prosecutor's offices in the regional centers. Out of a total of 113 district prosecutor's offices at the end of 2018 - 11 were transformed into territorial departments from 01.01.2019, 28 were transformed into territorial departments from 01.01.2020, and as of January 1, 2021 another 38 district prosecutor's offices have been transformed into territorial divisions. The data on the workload and a set of other indicators were used for decision-making by the SJC for the indicated consolidation.

Luxembourg

(2020):

The annual report covers both judges and prosecutors (report 2020, see <https://justice.public.lu/fr/publications/juridictions-judiciaires/rapports-juridictions-judiciaires-2020.html>).

(2018): The annual report covers both judges and prosecutors.

Question 073-6

Belgium

(2020): "comments for question 73-5:

Evaluation used at the local level (public prosecutor's offices, labor auditorates, general prosecutor's offices)"

France

(2020): No additional information is available.

Malta

(2018): The workload of the Office of the AG is used for the recruitment of additional human resources.

Netherlands

(2020): In 2019, the system Directing and Funding (Besturen en Bekostigen) was formally introduced. This system introduced more measurements and questions about allocation. Also in 2019 an internal budget allocation model was introduced for allocation of resources between parts of the public prosecution.

(2018): Each three years, the amount of money is defined. The public prosecutors got a fixed amount and an amount of resources based on the amount of cases they dealt with.

Slovenia

(General Comment): Based on the data and analysis from the previous paragraph, the joint annual report shall contain: (1) Measures for improving the efficiency, performance and economy of work and implementation of the prosecution policy for particular and for all state prosecutor's offices together; (2) Measures for improving the efficiency of state prosecutor's offices whose results deviate considerably from the planned ones; (3) Assessment of suitability of the number of state prosecutor posts and state prosecutor personnel and other conditions including the appropriate proposals for their improvement.

(2018): Based on the data and analysis from the previous paragraph, the joint annual report shall contain: -Measures for improving the efficiency, performance and economy of work and implementation of the prosecution policy for particular and for all state prosecutor's offices together; -Measures for improving the efficiency of state prosecutor's offices whose results deviate considerably from the planned ones; -Assessment of suitability of the number of state prosecutor posts and state prosecutor personnel and other conditions including the appropriate proposals for their improvement.

Question 070-1

Bulgaria

(General Comment): Monitoring, through the reports and analyzes of the Prosecutor's Office of the Republic of Bulgaria and individual prosecutors, of the activities of the Prosecutor's Office is carried out only in terms of number of incoming cases, length of proceedings (timeframes), number of resolved cases, number of pending cases, backlogs and percentage of convictions and acquittals.

(2018): "Other": percentage of returned cases

Denmark

(2020): The methodology of replying changed in this question.

The prosecution makes quarterly reports to the Ministry of Justice on data regarding number of cases, clearance rate, etc. Disposition time is measured indirectly through a report that measures all steps in a criminal case from arrest to imprisonment. There is no direct measure of disposition time, but it can be read from this report. Therefore we find it more correct to check this option. Satisfaction of the prosecution staff has always been measured but not by the ministry of justice. Therefore it was not checked last time. However, it is measured, and we therefore find it correct to check this option. The prosecution makes an annual survey on the satisfaction of the prosecution staff.

Finland

(2020): "Backlogs": cases that have been pending for longer than a year are monitored.

France

(2020): Judicial jurisdiction.

Germany

(2020): A few Länder answered that they have also been monitoring productivity and costs.

Ireland

(2020): information is published in Annual Report available at: <https://www.dppireland.ie/app/uploads/2020/10/AR-2019-eng.pdf>

(2018): Information is published in Annual Report available at [https://www.dppireland.ie/filestore/documents/AR2017_\[eng\].pdf](https://www.dppireland.ie/filestore/documents/AR2017_[eng].pdf)

Malta

(2018): The Office of the AG does hold a record of the number of incoming cases and terminated cases, but these are not as yet organised into official performance indicators.

Portugal

(2020): We included "clearance rate" and "disposition time" because one of the tasks of the public prosecutor coordinator is to monitor and evaluate the activity of the public prosecutors services, including the efficiency of procedures. Article 101 of Law 62/2013, 26th August on judicial organization.

Slovenia

(General Comment): The BI tools that use data gathered in information system of the State Prosecutor's Office provide the heads of prosecution offices with up-to-date overview of the performance of state prosecutors and the functioning of the office. Heads can customize the level and content of information presented to them for the purpose of making quantitative data supported decisions on allocation of work among prosecutors, control of the case-flow.

(2020): "Other": percentage of different types of decisions, value of proceeds of crime under freezing order, pronounced criminal sanctions...

Question 071

Belgium

(2016): There are ad hoc evaluation systems within the courts. But there is no central or coordinated system.

Bulgaria

(General Comment): The duration of the court proceedings initiated by the Prosecutor's Office of the Republic of Bulgaria is monitored, as in case of excessive delay there is a possibility to request acceleration of these proceedings through the procedure under Chapter 26 of the PPC.

Denmark

(2020): Danish Court Administration is not doing it as a general thing. If a specific court needs help, Danish Court Administration can work out list of pending cases and list them according to age to give the court a tool to locate cases that need attention.

France

(2020): No further indication.

(2016): In civil matters, courts of first instance (TGI), labour courts (conseils de prud'hommes) and courts of appeal can measure their stock on the basis of business applications or data returns carried out by info-centers.

The identification of cases not processed within a reasonable time is easier through business applications that offer dashboards breaking down cases in stock by age group.

In criminal matters, first instance courts (TGI) can use the Cassiopée business application to record cases in stock at the registry and the number of unedited judgments. The situation of cases in stock at the registry office cannot be measured via the info-centre, which only allows establishing the number of cases registered with the Public Prosecutor's Office and the Correctional Service.

Germany

(2020): The majority, but not all of the Länder have reported to monitor pending cases and backlogs.

(2018): In 2018, Länder have monitored the number of pending cases and the backlogs.

Hungary

(General Comment): Judges have to report those cases on a monthly basis that are pending for more than 2 years. The president of the court can order a fast-track procedure for a case based on the report.

(2018): Judges have to report those cases on a monthly basis that are pending for more than 2 years. The president of the court can order a fast-track procedure for a case based on the report.

Ireland

(2020): NAP

(2018): NAP

(2016): NAP

Latvia

(2018): We have created a specific tool for this purpose that is available also in public from <https://dati.gov.lv/>

Luxembourg

(2018): New systems of monitoring have been implemented since 2016 (JUCIV for the civil law cases and JANGA for administrative law cases)

(2016): No regular system has been implemented up to today. However, a monitoring can be done through the statistical service of the judiciary (SSJ) on an punctual basis and upon request by the competent authorities.

Romania

(2020): STATIS - statistics monitoring application including for court's efficiency assessment

Question 072

Austria

(2016): Supreme administrative Court: Statistic of incoming cases, number of decisions delivered, number of postpones cases, length of proceedings (timeframes) and age of cases

Belgium

(2020): Monitoring mechanism via dashboards for prosecution services.

Denmark

(2020): Danish Court Administration is typically not doing this. A responsible court follow their cases though.

(2018): We monitor the overall time from the courts receive a case until it is finalized, but not what happen in between. The same goes for the prosecution

Finland

(2020): Within the courts, the time the case is pending in a court is monitored.

(2018): Within the courts, the time the case is pending in a court is monitored.

France

(2020): Answer for the court.

Greece

(General Comment): The waiting time during court procedures is monitored annually through the inspection process. The interval between the adjudication of the case and the issuance of the decision is watched, so that the judge does not have much pending and there is a quick delivery of justice.

(2018): There is a monitoring system regarding the length of the judicial procedure, but it does not include such kind of information.

(2016): There is a monitoring system regarding the length of the judicial procedure, but it does not include such kind of information.

Hungary

(General Comment): The administrative office of the court reports those cases to the president in which there was no judicial activity in the last 30 days.

(2018): The administrative office of the court reports those cases to the president in which there was no judicial activity in the last 30 days.

Italy

(2018): Waiting time is monitored only for Administrative Justice.

Lithuania

(2020): courts: through administrative supervision mechanism

Luxembourg

(2014): According to 2014 data, the newly set up statistical tools, as well as the courts' CMS, allow an "as needed" check of the waiting time.

Malta

(2016): In Malta, there is no formal monitoring system. However, an "informal" monitoring used to take place. It falls mostly within the remit of the Chief Justice and the respective members of the judiciary.

Netherlands

(2020): Within the courts: Registration in the court system gives the opportunity to monitor waiting time.

Within the public prosecution services: Across the justice chain, agreements have been made on the timeframes in which particular caseloads (sexual offences, youth cases and specific traffic violations) should be handled. These agreements are monitored. Annually, the government (Second Chamber) is informed on this via the factsheet 'Strafrechtketen'. Besides this, timeframe-agreements have been reached within the public prosecution on speed with which penal orders are to be issued, terms in which an objection is to be judged and the speed with which the first decision with attachment is to be taken (eerste beslissing bij beslag).

(2013): All steps and dates are recorded in information systems of the court. But this registration does not show 'waiting times' as such.

Poland

(General Comment): Public Prosecution services

The issue of the duration of pre-trial proceedings is defined in the Code of Criminal Procedure, in Article 310 § 1 and § 2 and Article 325i § 1. Article 310 § 1 and § 2 states that the investigation shall be completed within 3 months. In justified cases the investigation period may be extended by a specified period of time by the public prosecutor supervising the investigation or the public prosecutor directly superior to the public prosecutor leading the investigation, but not longer than one year. In particularly justified cases a competent public prosecutor superior to the prosecutor supervising or leading the investigation may extend the investigation by a specified period of time.

Article 325i § 1 states that an investigation should be completed within 2 months. The prosecutor may extend this period to 3 months, and in particularly justified cases – to a longer specified period of time.

The authority empowered to order the extension of an investigation or an inquiry by a specified period of time shall monitor such proceedings with respect to their proper conduct in view of their possible length and shall assess the validity of the procedural steps taken or to be taken.

The request for the extension of an investigation or an inquiry must include the steps that need to be taken in the further course of the proceedings and indicate the reasons why they have not yet been taken.

Courts:

The presidents of the courts, in exercising internal administrative supervision over the administrative activity of the courts, control the taking of actions by judges within appropriate time limits; direct control is also exercised by the presidents of the divisions. Monitored also within the framework of management control and analysis of annual information on activities of courts operating within the area of appellate courts prepared by presidents of courts of appeal

(2018): In the mode of external and internal administrative supervision over the administrative activity of courts by analyzing the results of the courts or departments and monitoring the efficiency of individual cases in the case of detected lengthiness.

Portugal

(General Comment): Through SITAF and CITIUS (case management systems for administrative and tax courts and judicial courts, respectively) it is possible to check waiting times during judicial proceedings.

The Portuguese Code of Criminal Procedure establishes no binding timeframes for criminal investigations. At a national level, within the public prosecution services, there is only monitoring of the judicial proceedings time during on criminal investigations, with reference to this timeframe.

At a local level, some other proceedings (such as the initial intervention of public prosecutors on protection of adults with some incapacity, requesting accompanying measures – under the legal framework of the accompanied adult [Regime Jurídico do Maior Acompanhado]) are also monitored on time duration.

(2018): Through SITAF and CITIUS (case management systems) it is possible to check waiting times during judicial proceedings.

Romania

(2020): There are statistical reports developed by an IT application called Statis that monitor the duration of a court trial on different levels - total time, preliminary proceedings, delays between the sessions, time for drafting the decision etc.

(2018): There are statistical reports developed by an IT application called Statis that monitor the duration of a court trial on different levels - total time, preliminary proceedings, delays between the sessions, time for drafting the decision etc.

(2016): There are statistical reports developed by an IT application called Statis that monitor the duration of a court trial on different levels - total time, preliminary proceedings, delays between the sessions, time for drafting the decision etc.

(2014): According to 2014 data, there are statistical reports developed by Statistika application monitoring the duration of a court trial on different levels - total time, preliminary proceedings, delays between the sessions, time for drafting the decision etc. More precisely, in 2014, the Superior Council of Magistracy has established a working group that has analyzed several national and international documents on the efficiency of the courts and has developed a set of indicators that are used to make an overall assessment of the efficiency of courts, sections and, if needed panels of judges. These indicators were implemented and used in the Statistika application.

Slovenia

(General Comment): In accordance with the Prosecution Policy adopted in 2017, cases in which a final court decision at first instance has not been adopted within 3 years of filing a written charge with the court, are monitored in particular.

Question 077

Bulgaria

(2017): incoming cases; duration of proceedings /deadlines/; completed cases; pending cases; result of appealed and protested cases.

Czech Republic

(2016): The answer should be YES - there are performance indicators such as number of cases that the judge should resolve within a month, but these are not so strictly binding.

Denmark

(General Comment): The data is collected for all parts of the judicial system, eg. Police, Public prosecution, courts and the prison system. The data is used to measure the performance of the individual agencies/administrations, but also - and perhaps most importantly - to measure the interplay between these.

(2017): We have for a number of categories of cases defined that a certain percentage of cases should be solved within a certain time span. It varies for the different categories of cases.

(2016): In terms of productivity figures, weighted cases and target attainments.

Finland

(2019): Statistics Finland no longer collects statistical data regarding the functioning of the courts and the judiciary. The Ministry of Justice/National Courts Administration collects data and publishes the annual operational statistics, please see for example Courts statistics 2019 (in Finnish): <http://urn.fi/URN:ISBN:978-952-259-912-4>

Greece

(2017): N/A

Ireland

(2017): Waiting times for proceedings categories in the various jurisdictions are recorded and published in the Courts Service Annual Report.

Italy

(General Comment): The performance of each court is given by different indicators such as the clearance rate, the variation of backlogs and the age of the proceeding.

Latvia

(2014): First standards of time periods for adjudication of matters were submitted to the Board of Justice in 2014.

Malta

(2017): Despite the on-going monitoring and evaluation of the court activities and performance, we do not have defined target indicators against which to monitor performance. In general terms, we seek to ensure that the performance of the courts improves in efficiency year after year, and we try to address various aspects of the system in order to facilitate this improvement.

(2016): Currently Malta carries out systematic quantitative analysis of the performance of the different courts, based on international standards. We are also addressing measures of quality as defined by recognised international institutions, supplemented by internal reports that are purposely commissioned to focus on specific aspects of the functioning of the justice system. These ongoing efforts at measuring the efficiency and quality of our justice system is compared with past performance, but as yet, not with established targets.

Malta does not have defined 'targets' but assesses its performance in terms of indicators defined by international institutions

Slovakia

(2020): The main performance and quality indicators that have been defined for courts and used in the selfevaluation reports of some pilot courts involved Number of appeals as well. The selfevaluation reports of the courts were not repeated with the data 2019. The other indicators are used and made public in dashboards and statistical reports. The number of the appeals is published but not as a indicator of quality, only as a statistical number.

Slovenia

(General Comment): The Annual work programme (see Q75) consists of the assessment of the expected number of incoming cases, timeframes for typical procedural acts and solving the cases and the plan of operating results. The latter includes the expected number of resolved cases and criteria of efficiency (resolved cases to staff ratio), effectiveness (expected time to resolution) and economy (budgetary funds to solved cases ratio) (the Courts Act, art. 71.b). The number of complaints is monitored as a performance indicator, however it is not directly considered as a measure of quality of work.

The data on staisfaction of court staff and users is also colletcted, however it si not yet used as quality indicator.

Spain

(General Comment): The statistic report that the Court sends every three months to the Inspection Service, and the reports and studies that the General Council for the Judiciary carry out with the information provided, serve to measure and control the burden of work of the Judges, Letrados de la Administración de Justicia, and Courts in general.

On the other hand, the "Citizens' bill of rights before the law" is the document approved by the Parliament at 2002 that includes the list of rights of the citizen in their relation with the administration of justice, and the principles and good practices that must guide the service of the Justice to the citizens. It sets the principles of transparency, appropriate attention and information, gives special care and attention to the citizens who are most vulnerable (victims of crime, gender violence, minors, and other). The document is compulsory for all the professionals involved in Justice. According to this Bill of rights, the Parliament, through the Committee for Justice, will carry out a follow-up monitoring and continuous evaluation of the evolution of, and compliance with this Bill. The annual report submitted by the Council for the Judiciary to the Parliament will include a specific and sufficiently detailed reference to the claims, complaints, and suggestions made by citizens about the running of the Administration of Justice.

In addition to that, during the beginning of the implementation of the judicial offices (2010), a map of procedures and a quality management system with own indicators for this kind of offices were implemented. The model has been under review and is expected to be reviewed on the basis of electronic processing.

Finally, the hierarchical structure of the Letrados de la Administración de Justicia allow the Ministry of Justice control and ensure the compliance of standards and parameters of quality fixed, and achieve the new objectives fixed for the implementation of new measures (such the digitalization of Justice or the implementation of electronic tools right now).

(2017): On September 6 2018, the Ministry of Justice has announced a project to develop a quality plan to improve the administrative management of all the judicial offices in the territory over its competence.

In a second phase, the Ministry will apply the Evaluation, Learning and Improvement Model (EVAM) designed by the Ministry of Territorial Policy and Public Function, a model of excellence for organizations that begin their process towards the management of quality.

The culminating element of the process of implementation of quality management will be the certification of the level of excellence according to a model yet to be determined.

Question 078

Croatia

(2019): As regards "number of appeals", from 2019 we are able to get this data from our case management system.

(2014): On the occasion of the 2014 evaluation, it has been explained that the productivity as a performance and quality indicator, applies only to judges (not court staff).

Denmark

(2019): Backlogs is qualified by showing the average age of pending cases to the district courts.

Estonia

(2014): In 2014, the number of old cases has been considered among the main performance and quality indicators that have been defined. In 2012, this was not an official policy. In 2014, according to the decree adopted by the Minister of Justice, any case that has been pending for longer than two years is considered as an "old case".

Finland

(2020): Statistics Finland (until 2013) or Ministry of Justice (until 2019) no longer collect statistical data regarding the functioning of the courts and the judiciary. From 2020 onward the National Courts Administration collects data and publishes the annual operational statistics.

(2018): Statistics Finland no longer collects statistical data regarding the functioning of the courts and the judiciary. The Ministry of Justice collects data and publishes the annual operational statistics, please see for example Courts statistics 2018 (in Finnish): <http://urn.fi/URN:ISBN:978-952-259-745-8>

France

(2020): No comment.

(2019): Replies from both the Directorate of Civil and Criminal Services (Direction des services judiciaires) and the Supreme Administrative Court (Conseil d'Etat) on civil, criminal and administrative justice.

(2018): The coverage rate of cases as well as the structure of civil or criminal litigation are used by the courts.

In addition, other indicators usefully complete the analysis: .

Share of decisions on the merits in completed cases (civil activity).

Share of referrals in completed cases (civil activity).

Theoretical time to sell off the stock.

Average age of the stock.

Percentage of cases over 12 months in stock (civil activity).

(2014): In 2014, the category "others" refers to the civil and criminal cassation rate for judicial justice and the annulment rate for administrative justice. Among the main performance indicators of these jurisdictions, are the rate and the time of enforcement of sentences, the criminal response rate, the use of ADR rate, the dismissal of national criminal record rate, the number of dematerialised exchanges for judicial jurisdictions. Regarding the administrative jurisdictions, there is an anticipated average time for the judgement of cases and the proportion of pending cases for more than 2 years.

Concerning the enforcement of criminal decisions, it has been decided to make a performance indicator out of it in 2014, but the available statistical tools make it impossible to produce it.

Germany

(2020): Scarcely half of the Länder answered that quality indicators have been defined for backlogs, a few reported that quality indicators for costs, number of appeals, appeal ratio, clearance rate or disposition time have also been defined.

Greece

(2019): The Greek government has introduced a new system for organizing and evaluating the planning and implementation of public sector actions and projects, which envisages, among other things, the preparation of action plans that include various performance indicators. (L. 4622/2019 art. 49 foll.)

Hungary

(General Comment): Measuring the satisfaction of court users has been introduced in 2014.

(2020): Among others: individual judge's statistics; statistics on the reasons of the postpone of the trials; number of trial days in cases;

number of cases heard per day; pending cases of an individual judge / court; the time frame of pending cases; number of appealed cases; the subject of incoming / finished / pending cases; the ratio of litigious and non-litigious cases; cases that are pending over 2 or 5 years have a separated statistical report every month; cases in which there were no actions taken in the last 30 days by the court have a separated statistical report every month

(2019): Among others: individual judge's statistics; statistics on the reasons of the postpone of the trials; number of trial days in cases; number of cases heard per day; pending cases of an individual judge / court; the time frame of pending cases; number of appealed cases; the subject of incoming / finished / pending cases; the ratio of litigious and non-litigious cases; cases that are pending over 2 or 5 years have a separated statistical report every month; cases in which there were no actions taken in the last 30 days by the court have a separated statistical report every month

(2018): Among others: individual judge's statistics; statistics on the reasons of the postpone of the trials; number of trial days in cases; number of cases heard per day; pending cases of an individual judge / court; the time frame of pending cases; number of appealed cases; the subject of incoming / finished / pending cases; the ratio of litigious and non-litigious cases; cases that are pending over 2 or 5 years have a separated statistical report every month; cases in which there were no actions taken in the last 30 days by the court have a separated statistical report every month

Latvia

(2020): The indicators "productivity of judges and court staff" and "number of appeals" are taken into account when assessing the professional activity of a judge, because the objective of the assessment of the professional activities of a judge is to promote the continuous professional growth of a judge throughout his or her career, thereby improving the quality of the work of the judge and the court. An Annual evaluation of court staff is also carried out, which is essential for high-quality work of courts.

(2019): All of these indicators can and are used to evaluate different aspects of court work from efficiency, quality and stability to decision of filling out a vacancy.

First four modalities are included in the report that courts have to prepare for the Judiciary Council before the end of January.

(2018): All of these indicators can and are used to evaluate different aspects of court work from efficiency, quality and stability to decision of filling out a vacancy.

First four modalities are included in the report that courts have to prepare for the Judiciary Council before the end of January.

(2014): According to the Law on Judicial Power as amended in 2014, the chief judge of a court, in cooperation with court judges, determines prior to the beginning of each calendar year targets in relation to the average length of court proceedings.

The standard in terms of length of proceedings is determined, taking into account the court resources and the necessity to ensure the right of a person to have his/her matter adjudicated within a reasonable time period and in compliance with other basic principles guaranteeing the right to a fair trial. A chief judge of a court must approve the standard of time periods and supervise the actual time periods of examining matters in a court.

The guidelines approved by the Judicial Council are used to establish standards of time periods for adjudication of matters.

Malta

(2020): Other: age of pending cases

(2019): Other: age of pending caseload

Netherlands

(2020): Satisfaction is monitored, but courts are not necessarily judged for that.

Romania

(2020): - e.g. suspended cases

(2019): e.g. Suspended cases

(2018): - e.g. suspended cases

Slovakia

(2019): The main performance and quality indicators that have been defined for courts and used in the selfevaluation reports of some pilot courts involved Number of appeals as well. The selfevaluation reports of the courts were not repeated with the data 2019. The other indicators are used and made public in dashboards and statistical reports. The number of the appeals is published but not as a indicator of quality, only as a statistical number.

Slovenia

(2014): According to 2014 data, the Annual work programme established by court presidents consists of the assessment of the expected number of incoming cases, timeframes for typical procedural acts and solving the cases and the plan of operating results. The latter includes the expected number of resolved cases and criteria of efficiency (resolved cases to staff ratio), effectiveness (expected time to resolution) and economy (budgetary funds to solved cases ratio). The number of complaints is monitored as a performance indicator, however it is not directly considered as a measure of quality of work.

(2012): According to 2012 data, the Judicial Council has monitored performance of courts mainly through indicators such as incoming, closed and pending cases and backlogs, productivity of judges and court staff. With the development of justice administration the attention has shifted towards indicators prescribed by the Courts Act to draft a yearly plan of operating results: criterion of efficiency – number of closed cases, divided with the number of judges and non-judge staff; criterion of effectiveness – timeframes of proceedings; criterion of economy – budget, divided with the number of closed cases.

Spain

(2014): Judicial counsellors of each court fill a questionnaire every six months in which the personal performance is evaluated with data regarding the following: number of definitive rulings, number of cost proceedings appraisals, number of payments made to the parties, number of court fees managed and communicated to the Tax Authority, number of communications issued to the Land and Business Registries and number of seizures.

(2013): For 2014, the category “other” refers to the number of enforcement procedures, appealed decisions, rogatory letters issued, received and resolved.

Question 083-2

Denmark

(General Comment): There is a productivity target for the prosecution as a whole, but not for each public prosecutor.

Ireland

(2018): Work is demand led by number of files submitted by external investigating agencies

Latvia

(General Comment): The prosecutor provides a monthly report on the statistical indicators of his or her work. In addition, the statistical indicators of the individual work of the public prosecutor (statistical indicators for the monitoring of the investigation, prosecution, maintenance of the State prosecution and other functions of the public prosecutor) are also analysed during the process of assessing the professional activities of prosecutors (not less than once every five years).

Lithuania

(2018): The quantitative performance targets are defined for the Prosecutor General's Office and 5 regional Prosecutor's Offices, but not for individual public prosecutors.

Luxembourg

(2018): NAP

Netherlands

(2020): There is no national policy on targets for every prosecutor. An office (parket) could choose to set targets for their prosecutors (see next question), but this may vary across offices.

Portugal

(General Comment): Yes for some District Prosecution's Office and No at a national level. At national level, only reference values are fixed for the purpose of placing prosecutors. Also at a national level, the fact that a prosecutor has finished more proceedings than those that he/she started is a general criterion of evaluation and compliance with general objectives, in the qualitative individual assessment of the public prosecutors' work.

Slovenia

(General Comment): State Prosecutorial Council adopts Criteria for the assessment of state prosecutors' performance which define quality and quantity indicators. The quantitative criteria define expected time for the resolution of cases and for typical procedural acts. The performance of the evaluated prosecutor is compared to other prosecutors at his/her office concerning the number of assigned, resolved and unresolved cases, number of attendances at the court hearings, conviction rate, pronounced sanctions and number of logged appeals.

Question 083-3

Austria

(2018): There are no specific targets given to public prosecutors.

Croatia

(2020): According to the State Attorney Office Act (Official Gazette No. 67/18) , the Minister in charge for Justice, upon the proposal of Prosecutor General, adopts the Framework criteria for the work of public prosecutors (Deputy State Attorneys).

(2018): According to the State Attorney's Act, the Minister of Justice, upon the proposal of Prosecutor General, adopts the Framework criteria for the work of public prosecutors.

Germany

(2020): There are no quantitative performance targets for each public prosecutor

Lithuania

(2018): The quantitative performance targets are defined for the Prosecutor's Offices, but not for individual public prosecutors.

Luxembourg

(2018): NAP

Malta

(2018): NA

Poland

(2020): Individual goals are set by prosecutors themselves in a way that enables them to carry out their duties effectively

Portugal

(2020): The local hierarchically superior public prosecutor can set individual targets for each public prosecutor.

The High Council of the Public Prosecution Service only sets reference values for the purpose of placing prosecutors and establishing how many prosecutors are needed for a particular Public Prosecution Office.

Slovenia

(General Comment): State Prosecutorial Council adopts the Criteria for the assessment of state prosecutors' performance on the proposal of the state prosecutor general.

Spain

(General Comment): In accordance with Royal Decree 432/2004, of March 12, which regulates the variable complement by objectives of the members of the Prosecution service, the State Attorney General, at the proposal of the Prosecution Inspection, after hearing the Prosecutor Council and prior the report from the Ministry of Justice, will determine for each annual period the objectives whose fulfillment will lead to the perception of the variable remuneration.

Question 120

Belgium

(General Comment):

This is the evaluation system in the judicial system

Bulgaria

(General Comment): The assessment is carried out in compliance with the Judicial System Act and Ordinance No. 3/23.02.2017 on the Indicators and Methods for Assessment and the Criteria for Reporting the Workload Degree of Prosecutors, Investigators, Administrative Heads and Their Deputies (adopted by a decision of the Plenum of the Supreme Judicial Council under Protocol No. 7/23.02.2017, promulgated in SG 21/10.03.2017). The Prosecutor's Office of the Republic of Bulgaria has established an order for its implementation and for the retrieval and provision of data on prosecutors and investigators in accordance with validated performance indicators.

Denmark

(2020): Public prosecutors go through intensive education for the first three years of them being recruited and this evaluation is structured centrally with HR at the Attorney Generals office. During that period they are individually being assessed through exams and through working with mentors. Thus they are continuously being assessed both centrally through exams as well as locally through the daily work that the mentor sees. Later in the career the assessment is not structured in such a way but all through their career the prosecutors are evaluated through their daily work and how they perform in court.

Greece

(General Comment): The court and prosecution offices Inspection and the Inspection of judges and prosecutors is being carried out by a Council and Inspection bodies, staffed by judicial officers. Inspectors draw up a separate, detailed and substantiated report for each judge of their court district. This report evaluates: the moral quality, vigor and character, scientific qualifications, judicial judgment and perception, diligence, hardworking and service (qualitative and quantitative) performance, Justice administration, wording of court decisions and procedure management capacity and concerning Prosecutors, the capacity to administer justice, both in the pre-litigation procedure and hearing, as well as their oral speech capacity, the judges' behavior in general and in the audience, as well as his social status. The inspector shall also indicate in the report whether s/he considers as eligible for promotion, the Judges of First Instance and the Deputy Prosecutors of First Instance who have completed five years of service in their grade, as well as the judges and prosecutors from the rank of the Judge President to the Court of First Instance and Prosecutor of First Instance and above, after the completion of one year in their grade. Inspectors' reports shall be submitted to the Chairman of the Council of Inspectors within two months from the end of their term of office. In the event of an extraordinary or additional inspection, the report shall be submitted immediately after it has been carried out. A copy of each report shall be submitted by the Chairman of the Inspection Council to the Minister of Justice and, as the case may be, to the President and the Prosecutor of the Supreme Court, the President of the Council of State, the President of the Court of Auditors and the Auditor General of the Court of Auditors and the General Commissioner of the General Commission of the State. A copy of the inspection report shall be placed on the individual file of the inspected person. Another copy is being handed over to the inspected person by the competent department of the Ministry of Justice.

Hungary

(General Comment): The evaluation system is defined by Articles 50-52 of the Act on the Legal Status of Prosecutors. The purpose is to assess the quality of the prosecutor's activities, his/her skills, abilities and character traits with an impact thereon and to facilitate professional development. Prosecutors, with the exception of the Prosecutor General and the Deputy Prosecutor General, are assessed before the expiry of the fixed term of the first appointment, while in the case of a first appointment for an indefinite term, before the expiry of a period of 3 years following the appointment, and thereafter every 8 years. Prosecutors need not be assessed during the 6 years preceding the completion of the applicable old-age pension age. A prosecutor shall also be assessed if: requested by the prosecutor; circumstances have emerged that indicate the prosecutor's professional ineligibility or the necessity to alter the evaluation of the previous assessment; in the extraordinary proceeding to be completed without delay, s/he fails to meet the deadline extended by the superior prosecutor. The assessment is the duty of the person exercising the employer's rights. The official work of prosecutors assigned to the Ministry is evaluated by the Minister responsible for justice in accordance with the rules applicable to government officials. As a result, prosecutors may be awarded the following grades: excellent, suitable for promotion; excellent and fully eligible; eligible; eligible, subsequent assessment required; ineligible. In the event of an ineligible grade, the prosecutor shall be called upon to resign his/her office within thirty days. If the prosecutor is awarded a grade "eligible, subsequent assessment required", the person exercising the employer's rights identifies the deficiencies and irregularities and states the main criteria of the desired changes which shall be reviewed prior to the next assessment (within 2 years). A prosecutor shall be awarded an ineligible grade upon the next assessment if he/she fails to obtain an eligible grade. S/he may request a court of law to quash any erroneous or untrue finding.

Ireland

(General Comment): In addition to reporting directly to their line managers in relation to their work as prosecutors, they are required to participate in the Office-and-Public-Service-wide process of Performance Management and Development conducted during each year on an individual basis between Management and Staff.

Italy

(General Comment): The assessment procedure applies to both judges and public prosecutors. Every four years, the High Judicial Council (CSM) conducts a professional appraisal based on the professional skills of judges/prosecutors. The professional status of both judges and prosecutors is organized into 7 different levels. Several criteria are taken into consideration: independence, impartiality, balance, professional capacity, hardworkingness, diligence and commitment. The assessment is based on a number of acts and documents that describe all the professional aspects of the magistrate to be evaluated. The most significant are: • a "self report" where the magistrate illustrates all the elements that he/she believes are necessary or useful to be considered for the purpose of his/her appraisal; • a random sample of acts and documents produced by the magistrate during the evaluation period; • an "informative report" prepared by a superior of the magistrate; • the statistics concerning activity of the magistrate: the number of provisions drafted, the processing times of the proceedings, the time for filing the documents (even in comparison with the other magistrates of the office); • scientific publications, if any; • reports from the lawyers' council, if any.

Netherlands

(2020): The public prosecution has a team Judicial Quality at the General Office (Parket Generaal) that studies the quality of the criminal proceedings of the public prosecution. As part of these studies and assessments, a pool of prosecutors has been compiled, and they study the work of other public prosecutors. The results of these studies are used for quality enhancement trajectories. The studies are repeated periodically.

Portugal

(General Comment): According to articles 141 and 143 of the Statute of the Public Prosecution Service, as a rule, a first assessment takes place three years after the beginning of the functions as a public prosecutor, then after four years and then every five years.

If a prosecutor has twice the maximum grade, he/she may be waived of the next assessment.

After the period of long-term leave, the public prosecutor is subject to a new inspection, one year after the resumption of functions

Slovenia

(General Comment): Qualitative indicators are professional knowledge, capability of logical and analytical deliberation, protection of the reputation of prosecutor's office and his/her function and the proficiency of verbal and written communication.

Question 120-1

Czech Republic

(2018): The individual assessment of the public prosecutors' work take place at least once every two years.

Denmark

(2020): See response to 120: More frequent during the first three years of their career. Less frequent after that.

Hungary

(2018): The evaluation system is defined by Articles 50-52 of the Act on the Legal Status of Prosecutors. The purpose is to assess the quality of the prosecutor's activities, his/her skills, abilities and character traits with an impact thereon and to facilitate professional development. Prosecutors, with the exception of the Prosecutor General and the Deputy Prosecutor General, are assessed before the expiry of the fixed term of the first appointment, while in the case of a first appointment for an indefinite term, before the expiry of a period of 3 years following the appointment, and thereafter every 8 years. Prosecutors need not be assessed during the 6 years preceding the completion of the applicable old-age pension age. A prosecutor shall also be assessed if: requested by the prosecutor; circumstances have emerged that indicate the prosecutor's professional ineligibility or the necessity to alter the evaluation of the previous assessment; in the extraordinary proceeding to be completed without delay, s/he fails to meet the deadline extended by the superior prosecutor. The assessment is the duty of the person exercising the employer's rights. The official work of prosecutors assigned to the Ministry is evaluated by the Minister responsible for justice in accordance with the rules applicable to government officials. As a result, prosecutors may be awarded the following grades: excellent, suitable for promotion; excellent and fully eligible; eligible; eligible, subsequent assessment required; ineligible. In the event of an ineligible grade, the prosecutor shall be called upon to resign his/her office within thirty days. If the prosecutor is awarded a grade "eligible, subsequent assessment required", the person exercising the employer's rights identifies the deficiencies and irregularities and states the main criteria of the desired changes which shall be reviewed prior to the next assessment (within 2 years). A prosecutor shall be awarded an ineligible grade upon the next assessment if he/she fails to obtain an eligible grade. S/he may request a court of law to quash any erroneous or untrue finding.

Ireland

(2018): Prosecutors working in-house are required to participate in Public service wide Performance Management and Development System (PMDS).

Latvia

(General Comment): The assessment of the professional activities of prosecutors have been commenced and is operational from 1 January 2014, within which, as for judges, the professional activities of prosecutors are assessed on a regular basis (not less than once every five years).

(2020): Not less than once every five years

Lithuania

(General Comment): According to Article 33 of the Law on Prosecution Service, evaluation of prosecutor's individual performance, qualification and suitability is carried out by the Attestation Commission. Performance of a prosecutor who has received a positive evaluation after his/her internship, is thereafter evaluated every five years during the regular evaluation of the service. The extraordinary evaluation can be carried out by decision of the Prosecutor General: at the request of the public prosecutor him/herself, if at least half a year has passed since his/her last evaluation; in the case the prosecutor is applying for a higher position, or to the same or an equivalent post after the expiry of the term of appointment; if three years have passed since the last evaluation of his/her service; if the prosecutor's performance has repeatedly been deficient, giving rise to reasonable doubts as to his/her suitability for the position in question.

Malta

(2020): The work of public prosecutors is constantly monitored by the Deputy AG and the AG herself. The monitoring is not scheduled at specific annual intervals but it is ingrained in the daily work processes in the Office.

(2018): The work of public prosecutors is constantly monitored by the Deputy Attorney General (in charge of the criminal field) and the Attorney General. The monitoring is not scheduled at specific annual intervals, but is ongoing and ingrained in the daily work processes of the Office.

Romania

(2020): According to the provisions of art. 39 of the Law no. 303/2004, amended and republished in 2018, judges and prosecutors are being periodically evaluated under the observance of the professional and performance criteria. The evaluation shall envisage the quality of their activity, efficiency, integrity as well as the fulfillment of the obligation to take part in in-service professional training and on managerial activity for those judges and prosecutors in leadership positions. The periodical evaluation shall be first carried out by the end of the first 2 years of activity after the entering in profession and shall be continued every 3/4/5 years depending on the seniority in profession (5-10 years, 10-15 years, over 15 years of seniority).

(2018): similar to judges, see Q114, 114.1 and the additional comments

Slovenia

(General Comment): Regular individual assessment of the public prosecutors' work is carried out every three years. The assessment can also be carried out on demand of the State Prosecutorial Council, head of prosecutor's office, Minister or the prosecutor himself. In first three years after the appointment for the state prosecutor the assessment is carried out every single year.

(2018): Every three years

Indicator 2: The judicial organisation

* Due to clarifications in the methodology, in 2020 the number of courts of different instances that operate in the same site are separately counted

Belgium: Starting from 2020, a new methodology of presentation of data is used as to the distinction between 1st instance courts of general jurisdiction and 1st instance specialised courts

Italy: Before 2014 only courts financed by Ministry of justice were included

Latvia: Different presentation of number of specialised courts in 2015. In reality there is one administrative court with 5 court houses

Luxembourg: The methodology of presentation of data concerning 1st instance specialised courts was improved in 2020

Slovakia: Starting from 2020, the number of administrative courts is excluded from the count of specialised courts, since they are part of general courts of appeal

Table 2.2b Number of first instance general jurisdiction and specialised courts as legal entities and number of all courts as geographic locations per 100 000 inhabitants from 2012 to 2020 (Q1, Q42, Q43 and Q44)

| States | Total number of first instance courts (legal entities) in 2020 (1) + (2) | First instance courts of general jurisdiction (legal entities) | | | | | | | | | Specialised first instance courts (legal entities) | | | | | | | | | All the courts (geographic locations) | | | | | | | | |
|----------------|--|--|------|------|------|------|------|------|------|----------|--|------|------|------|------|------|------|------|----------|---------------------------------------|------|------|------|------|------|------|------|------|

Slovakia: Starting from 2020, the number of administrative courts is excluded from the count of specialised courts, since they are part of general courts of appeal

* Due to clarifications in the methodology, in 2020 the number of courts of different instances that operate in the same site are separately counted
Croatia: in 2019, misdemeanor courts were merged into municipal courts.

Indicator 2: The judicial organisation

Comments provided by the national correspondents

organised by country

Question 042. Number of courts - legal entities.

Question 043. Number of specialised courts – legal entities.

Question 044. Number of courts - geographic locations.

Austria

Q042 (2020): In 2020 in Austria, the number of courts considered as legal entities is 152. Namely, there are 133 courts of general jurisdiction and 19 specialised courts. Among the 133 legal entities of general jurisdiction, 128 act at first instance, 4 at second instance and one at third instance. More precisely, the 115 District courts and the 13 Regional courts of general jurisdiction intervene as first instance courts. It is noteworthy that the 7 other regional courts that have specialised jurisdiction are not taken into consideration here, but are counted as specialised first instance courts (infra). It is to be mentioned that the peculiarity of the 20 Austrian Regional courts is that even though these are first instance courts, some of them are also competent in respect of appeals against District courts' decisions. The 4 Higher Regional Courts have appeal competence in respect of all civil and criminal cases.

The Supreme court is the highest instance court in civil and criminal matters.

Q042 (2014): From January 1st 2013 to July 1st, 2014 a number of district courts merged. In 2014, there are 129 first instance district courts which is less than 132 (number communicated for 2013) but still not complying with the aim of 115.

Q043 (General Comment): The other specialized first instance courts are 2 criminal courts and 2 civil law courts (in Vienna and Graz). The sum of the numbers in the categories exceeds the total number of specialised courts because the labour and social court in Vienna is one court that is competent for labour and (some) social welfare cases. From January 1st, 2014 there are 11 newly found courts for administrative law in Austria, namely 9 regional administrative courts, 1 Federal administrative court and 1 Federal Tax Court.

Q043 (2020): As a rule every court has to deal with all judicial issues; in the biggest Austrian cities certain courts are specialised, i.e. five in Vienna (civil cases, criminal cases, commercial cases [2 x], labour and social welfare cases) and two in Graz (civil cases, criminal cases);

Because of the Court for labour and social welfare cases in Vienna (Arbeits- und Sozialgericht Wien) the sum of the individual courts does not correspond to the total number of specialised courts.

One commercial court in Vienna, both courts (in Vienna and Graz) specialised on civil cases and both courts (in Vienna and Graz) specialised on the enforcement of criminal sanctions also act as second instance courts.

Q043 (2019): On principal every court has to deal with all judicial issues; in the biggest Austrian cities certain courts are specialized, i.e. eight in Vienna (civil cases, criminal cases, commercial cases [2x], employment- and social welfare cases, administrative cases) and two in Graz (criminal cases, remaining cases). There is also a regional administrative court in every federal state (9 in total). Because of the Court for labour and social welfare cases in Vienna (Arbeits- und Sozialgericht Wien) the sum of the individual courts equals nineteen.

Q043 (2018): On principal every court has to deal with all judicial issues; in the biggest Austrian cities certain courts are specialised, i.e. five in Vienna (civil cases, criminal cases, commercial cases [2 x], employment- and social welfare cases) and two in Graz (criminal cases, remaining cases)

Q043 (2017): On principal every court has to deal with all judicial issues; in the biggest Austrian cities certain courts are specialised, i.e. five in Vienna (civil cases, criminal cases, commercial cases [2 x], employment- and social welfare cases) and two in Graz (criminal cases, remaining cases)

Q043 (2016): On principal every court has to deal with all judicial issues; in the biggest Austrian cities certain courts are specialised, i.e. five in Vienna (civil cases, criminal cases, commercial cases [2 x], employment- and social welfare cases) and two in Graz (criminal cases, remaining cases)

Q044 (2020): For this cycle, data on geographic locations is presented in respect of different locations for different instances, in compliance with the methodology developed in the Explanatory Note. The variation observed with previous cycles is only of a methodological nature.

Q044 (2016): It is planned to reduce the number of courts by 3 in 2018 (-1) and 2019 (-2)

Belgium

Q042 (General Comment): The reform of the justices of the peace, with a decrease in geographical locations, was consolidated by the law of December 25, 2017. The implementation of the reform is carried out between 2016 and 2019.

Q042 (2020): "1.1 First instance Courts of general jurisdiction: 13 first instance courts, 162 justices of the peace, 11 assize courts (one per province and two in Brussels) and 15 police courts. "Second instance Courts of general jurisdiction": 13 courts of first instance that rule as appeal courts on the decisions of the justices of the peace and 5 appeal courts. Vertical consistency in the table is not ensured, as the 13 courts of first instance with dual jurisdiction (1 and 2 instances) have been counted only once in the totals.

For the current evaluation round (2020 data), justices of the peace and police courts are counted as general courts. In previous cycles, they were categorized as specialized courts of first instance. As of 2020, the 11 assize courts are also included in the data. Insofar as the Conseil d'Etat intervenes both in first instance and on appeal, it has been taken into account in both columns of Q43, but only once in the total of Q42.2."

Q042 (2017): The law of 25 December 2017 amended the number of cantons of justices of the peace from 187 to 162. The implementation of this reform will take place until 2019.

Q042 (2016): A reform of the justices of the peace is under way, leading to a reduction in the number of hearing locations.

Q042 (2014): Following a reform of the judicial map, the number of legal entities decreased: from 27 to 13 first instance courts, from 27 to 9 labour courts, from 27 to 9 commercial courts, and from 34 to 15 police courts.

Q043 (General Comment): Administrative courts: Council of State, Aliens Litigation Council, Raad voor Vergunningsbetwistingen, het Milieuhandhavingscollege and Raad voor Verkiezingsbetwistingen.

Six first instance courts have specialized enforcement chambers. The name 'enforcement court' is used, but in reality it is a specialized chamber.

All first instance courts (13) have a specialized family and youth section. The name 'family court' is used, but in reality it is a specialized section.

Q043 (2020):

For the current evaluation round (2020 data), justices of the peace and police courts are counted as general courts. In previous cycles, they were categorized as specialized courts of first instance.

Q043 (2019): Other: 162 justices of the peace and 15 police courts. Administrative courts: Council of State, Council for Aliens Litigation, de Raad voor Vergunningsbetwistingen, het Milieuhandhavingscollege en de Raad voor Verkiezingsbetwistingen (these courts are under the authority of the Minister for Home Affairs and the Flemish Regional Government, and not the Minister of Justice).

Six courts of first instance have specialized chambers for the application of sentences. The denomination 'court for the enforcement of sentences' is used, but in reality it is a specialized chamber.

All the courts of first instance (13) have a special family and youth section. The denomination 'family court' is used, but in reality it is a specialized section.

Q043 (2017): Others: justices of the peace and police courts. The law of 25 December 2017 amended the number of cantons of justices of the peace from 187 to 162 (162 justices of the peace and 15 police courts).

Administrative courts: Council of State, Aliens Litigation Council, Raad voor Vergunningsbetwistingen, het Milieuhandhavingscollege en de Raad voor Verkiezingsbetwistingen.

Five courts of first instance have specialized chambers for the enforcement of sentences. Despite the term used in their respect - "court for the enforcement of sentences", those are specialised chambers.

All courts of first instance (13) have a specialised family and youth section. The term "family court" is used, but these are also specialised sections.

Q043 (2016): Other: justices of the peace and police courts

Administrative courts: Council of State, Aliens Litigation Council, Raad voor Vergunningsbetwistingen, het Milieuhandhavingscollege en de Raad voor Verkiezingsbetwistingen.

Five courts of first instance have specialized chambers for the enforcement of sentences. The name "court for the enforcement of sentences" is used, but in reality it is a specialized chamber.

All courts of first instance (13) have a specialized family and youth section. The name "family court" is used, but in reality it is a specialized section.

Q043 (2015): Other: justices of the peace and police courts

Administrative courts: the Council of State, the Council of the Litigation of Foreigners, Milieuhandhavingscollege, de Raad voor Vergunningsbetwistingen en de Raad voor Verkiezingsbetwistingen.

Q043 (2014): The other specialised courts are 15 police courts and 187 justices of peace. Family courts are a section within the 13 first instance courts. The administrative courts (the Council of State, the Alien Litigation Council, "(Vlaamse)Raad voor Vergunningsbetwistingen", "het (Vlaamse) Milieuhandhavingscollege") are not part of the judicial system administered by the Ministry of Justice. Following a reform of the judicial map, the number of labour, commercial and police courts was reduced.

Q044 (2020): Deduction made on the basis of the number of buildings in which the courts are housed: 225 buildings in which all our premises are housed. In Eupen, the first instance courts combines the court of first instance, the labour court and the company court, which gives 8 for the labour and company courts (Law of 14 February 2014)

Q044 (2016): A reform of the justices of the peace is under way: 1. a reduction in the number of geographical settlements 2. expansion of their jurisdiction by increasing the amount of claims.

The reform of the cantons (justices of the peace) was launched in 2016 and resulted in the law of 25 December 2017 which formally amended or abolished the cantons. The amendments come into force over 1.5 years.

Q044 (2014):

According to 2014 data, a change in the number of seats of the justices of the peace is ongoing. Similarly, from 1 April 2014, the statutory number of courts has been decreased for commercial, labour and police first instance courts while keeping the existing geographical seats.

Bulgaria

Q042 (General Comment): There are the following courts in Bulgaria: District Courts- 113- The District Court is the main court of first instance. It has jurisdiction over all cases except those which are statutorily assigned to another court. It deals with civil, criminal and administrative-criminal cases. The decisions of the district courts are subject to appeal before the respective Regional court. Provincial/Regional Courts- 28- The Provincial Courts act as courts of first and second instance. As courts of first instance, they examine a precisely defined category of cases involving significant sums or substantial societal interest. When acting as a second (appellate) instance, they re-examine decisions taken by the district courts. Administrative Courts- 28 Specialized Criminal Court -1 Courts of Appeals - 5 Specialized Court of Appeal - 1 Military Courts - 3 - The Military courts consider criminal cases of crimes committed by servicemen or officials of the Interior Ministry at first instance. Military Court of Appeal - 1 Supreme Court of Cassation - 1 Supreme Administrative Court - 1

Q042 (2020): Judiciary System Act

Article 65

All courts are legal entities funded by the budget and shall be represented by the administrative head or another designated person. In the discharge of the functions of administrative head, orders, instructions and rules shall be issued in accordance with the statutory competence. The general assembly, the plenum of the Supreme Cassation Court and the Plenum of the Supreme Administrative Court shall be bodies of the respective court, which rule only in the cases specified in the law, give opinions, adopt rules and decisions by open ballot and a majority of more than half of the judges present.

Q042 (2019): There are the following courts in Bulgaria: District Courts- 113- The District Court is the main court of first instance. It has jurisdiction over all cases except those which are statutorily assigned to another court. It deals with civil, criminal and administrative-criminal cases. The decisions of the district courts are subject to appeal before the respective Regional court.

Provincial/Regional Courts- 28- The Provincial Courts act as courts of first and second instance. As courts of first instance, they examine a precisely defined category of cases involving significant sums or substantial societal interest. When acting as a second (appellate) instance, they re-examine decisions taken by the district courts.

Administrative Courts- 28

Specialized Criminal Court -1

Courts of Appeals - 5

Specialized Court of Appeal - 1

Military Courts - 3 - The Military courts consider criminal cases of crimes committed by servicemen or officials of the Interior Ministry at first instance.

Military Court of Appeal - 1

Supreme Court of Cassation - 1

Supreme Administrative Court - 1

Q042 (2018): 42.1. District Court - 113

The District Court is the main court of first instance. It has jurisdiction over all cases except those which are statutorily assigned to another court. It deals with civil, criminal and administrative-criminal cases. The decisions of the district courts are subject to appeal before the respective Regional court.

Provincial/ regional courts- 28

The provincial courts act as courts of first and second instance. As courts of first instance, they examine a precisely defined category of cases involving significant sums or substantial societal interest. When acting as a second (appellate) instance, they re-examine decisions taken by the district courts.

Military first instance courts- 3

Military courts consider criminal cases of crimes committed by servicemen or officials of the Interior Ministry at first instance.

Q043 (General Comment): Administrative Courts- 28

Supreme Administrative Court - 1

Military Courts - 3

Military Court of Appeal - 1 Specialized Criminal Court -1 Specialized Court of Appeal - 1

Q043 (2020): The category "other specialised courts" encompasses the Specialized Criminal Court of Republic of Bulgaria, established in 2011, situated in Sofia and treated as a Provincial/Regional Court. Its jurisdiction covers criminal cases of a general nature for crimes carried out throughout the Republic of Bulgaria. Its competence is determined on the basis of the subject of the case and not the quality of the perpetrator. The Criminal Procedure Code exhaustively enumerates cases within the competence of this Court, namely crimes committed by organized criminal groups, or on behalf of them and following their decision.

Q043 (2019): The cases under the jurisdiction of Specialized Criminal Court are specified in Art. 411a of the Penal Procedure Code

Q043 (2018): The category "other" encompasses the Specialized Criminal Court of Republic of Bulgaria (see the general comment).

Q043 (2017): Specialized Criminal Court

Q043 (2016): 'Other specialised 1st instance courts' - 1 Specialized Criminal Court.

Q044 (2018): Proposals for amendments to the Code of Administrative Procedure and Code of Civil Procedure to change the jurisdiction of the district and administrative courts with a view to regulating their workload. A model for the optimization of the judicial map at the level of district courts will be developed in implementation of a project under the Operational Program "Good Governance" 2014-2020.

Q044 (2016): Proposals for amendments to the Administrative Procedure Code and the Code of Civil Procedure are intended to reform the jurisdiction of regional and administrative courts in order to regulate their workload. Within the implementation of a project under "Good governance" Operational Programme 2014-2020 a model for optimization of the judicial map on regional courts level will be developed.

Croatia

Q042 (General Comment): The reform of judicial map implemented in 2015 decreased the number of Misdemeanour Courts from 63 to 22. Therefore, in accordance with the Act on Territorial Jurisdiction and Seats of Courts (Official Gazette, No. 128/14) in force, there are currently 22 Misdemeanour Courts in function. On the 1st of January 2019. new Courts Areas and Seats Act came into force. From the organizational aspect, the most important organizational measure was the merging of misdemeanor courts into municipal courts, and few municipal courts were reopened after 2015. That is why we have now less first instance specialized courts than in 2018. and more courts of general jurisdiction (22 courts which were in 2018. plus 8 courts which were reopened after the new law came into force).

Q042 (2020): On the 1st of January 2019. new Courts Areas and Seats Act came into force. From the organizational aspect, the most important organizational measure was the merging of misdemeanor courts into municipal courts, and few municipal courts were reopened after 2015. That is why we have now less first instance specialized courts than in 2018. and more courts of general jurisdiction (22 courts which were in 2018. plus 8 courts which were reopened after the new law came into force).

Q042 (2019): On the 1st of January 2019. new Courts Areas and Seats Act came into force. From the organizational aspect, the most important organizational measure was the merging of misdemeanor courts into municipal courts, and few municipal courts were reopened after 2015. That is why we have now less first instance specialized courts than in 2018. and more courts of general jurisdiction (22 courts which were in 2018. plus 8 courts which were reopened after the new law came into force).

Q042 (2016): There was a reform of judicial map implemented in 2015 in which the number of Misdemeanour Courts has decreased from 63 to 22. Therefore, in accordance with the Act on Territorial Jurisdiction and Seats of Courts (Official Gazette, No. 128/14) in force, there are currently 22 Misdemeanour Courts in function.

Q042 (2014): In 2014, according to the Act on Territorial Jurisdiction and Seats of Courts, there are 67 first instance courts but the Municipal Court in Novi Zagreb is not in function while the Municipal Criminal Court in Zagreb is a specialized court counted in Q42.2. Accordingly, there are 65 actually functioning first instance courts of a general jurisdiction.

Q042 (2013): For 2013, the Ministry of Justice added to the number of geographic locations all offices of a specific court that are located outside of the seat of the court, in which judicial activities are undertaken. The number of courts did not increase in 2013. Also, 66 municipal courts (65 municipal courts and 1 Municipal Criminal Court in Zagreb) were in function out of total 67 first instance courts prescribed by the Act on Territorial Jurisdiction and Seats of Courts. The Municipal Court in Novi Zagreb is still not in function.

Q043 (General Comment): The term “other specialized first instance courts” in the Republic of Croatia refers to misdemeanour courts and the Municipal Criminal Court in Zagreb. There was a reform of judicial map implemented in 2015 in which the number of Misdemeanour Courts has decreased from 63 to 22. Therefore, in accordance with the Act on Territorial Jurisdiction and Seats of Courts (Official Gazette, No. 128/14) in force, there are currently 22 Misdemeanour Courts in function.

Q043 (2020): In Croatian Judicial system there is a higher instances of 3 specialized courts: commercial, administrative and other (misdemeanour).

Q043 (2019): One criminal and two misdemeanour courts. After the reorganization of courts in 2019 we do not have 22 misdemeanour courts. Only two courts specialized only for misdemeanor cases were left in two largest cities (Zagreb and Split). Third specialized court is court in Zagreb specialized only for criminal cases.

Q043 (2018): Other specialised 1st instance courts are Misdemeanour courts and Municipal Criminal Court in Zagreb.

Q043 (2017): 23 other specialised 1st instance courts are 22 Misdemeanour courts and 1 Municipal Criminal Court in Zagreb

Q043 (2016): According to the Act on the Jurisdiction and Seats of Courts (Official Gazette 128/14) as of 1 April 2015 the number of municipal courts has been reduced, as of 1 July 2015 reduced the number of misdemeanour courts has been reduced and as of 1 April 2015 a new commercial court has been established.

Other specialised 1st instance courts are 22 Misdemeanour courts and a Municipal Criminal Court in Zagreb.

Q044 (2020): The reorganisation of judicial map that started in 2015 in which the number of municipal and misdemeanour courts as well as the number of municipal state attorneys' offices has been reduced continued in 2019 with the merger of municipal and misdemeanour courts into municipal courts.

The reasons for the merger were a significant decrease in the number of misdemeanour cases and overburdened municipal courts with civil cases. In the new judicial map, instead of 46 municipal and misdemeanour courts, there are now 34 municipal courts - all misdemeanour and municipal courts were merged in the same cities except in 2 largest cities, Zagreb and Split, in which specialised municipal courts for misdemeanour cases were retained, and due to geographical specificities and size of certain municipal courts they were separated and new municipal courts were established (10). Also, a new commercial court was established in Dubrovnik. The aim of this new judicial map with new courts in the network and increased jurisdiction of permanent services is to increase the efficiency of the courts, improve access to court services, ensure even distribution of the workload of judges, shorten the length of court proceedings, reduce the number of unresolved cases in municipal courts, and ensure optimisation and easier management of human resources in courts.

Q044 (2018): The reorganisation of judicial map that started in 2015 in which the number of municipal and misdemeanour courts as well as the number of municipal state attorneys' offices has been reduced continued in 2019 with the merger of municipal and misdemeanour courts into municipal courts.

The reasons for the merger were a significant decrease in the number of misdemeanour cases and overburdened municipal courts with civil cases. In the new judicial map, instead of 46 municipal and misdemeanour courts, there are now 34 municipal courts - all misdemeanour and municipal courts were merged in the same cities except in 2 largest cities, Zagreb and Split, in which specialised municipal courts for misdemeanour cases were retained, and due to geographical specificities and size of certain municipal courts they were separated and new municipal courts were established (10). Also, a new commercial court was established in Dubrovnik. The aim of this new judicial map with new courts in the network and increased jurisdiction of permanent services is to increase the efficiency of the courts, improve access to court services, ensure even distribution of the workload of judges, shorten the length of court proceedings, reduce the number of unresolved cases in municipal courts, and ensure optimisation and easier management of human resources in courts.

Q044 (2016): There is a new judicial reform in plan in which the misdemeanour courts will be merged with municipal courts (both 1st instance courts).

Q044 (2014): According to the new Act on Territories and Seats of Courts (Official Gazette 128/14), that entered into force on the 1st of April 2015, a further rationalization of the network of municipal (from 67 to 24) and misdemeanour courts (from 63 to 22) and the establishment of an additional commercial court (8 instead of 7) are to be carried out from 1st of April and 1st of July.

As well, the new Act introduces changes regarding the territorial jurisdiction with regard to dealing with appeals. In criminal cases, any county court can decide on appeals lodged against judgments, while only few county courts may decide on appeals in land, labor and family matters.

Cyprus

Q042 (2020): Cyprus has a two-tier system, therefore the Supreme Court is the second, highest and final instance court. The data for Supreme Court in this question are included in the highest instance courts, but the case flow data of the Supreme Court are included in the second instance cases - questions 97 and 98.

Q042 (2017): x

Q042 (2014): The number of courts changed in 2014. Instead one labour court in the district of Nicosia, there are 3 separate courts in different districts. This applies as well as for rent and tenancies court. One more family court was also established. The Assize court deals with serious criminal offences only.

Q043 (2020): 5 Assize courts

1 Administrative court for international Protection

Q043 (2019): Other specialised 1st instance courts: 1 International Protection Administrative Court and 5 Assize Court. In 2019 the new administrative court for international protection was established to hear cases concerning asylum applications and international protection matters.

Q043 (2018): 5 Assize courts

Q043 (2017): Assize Courts

Q043 (2016): Assize Courts

Q043 (2015): In 2015, two new Assize courts and one administrative court were established and one Rent Control Tribunal was removed.

Q044 (2018): In 2019 a New administrative court of international protection has been established that will deal with asylum cases.

Q044 (2016): Bills are being drafted for the creation of a commercial court and a first instance asylum administrative court.

Q044 (2014): In the frame of the 2014 exercise, it has been pointed out that an Administrative court has been established in Cyprus and started functioning on the 7th of January 2016.

Czech Republic

Q042 (2020): 2. Supreme Administrative Court

Q042 (2017): There are no specialised first instance courts, but judges within individual courts are specialised (e.g. for family, labour and enforcement cases at district courts, and insolvency and administrative cases at regional courts as first instance courts).

Q042 (2016): There are no specialised first instance courts, but judges within individual courts are specialised (e.g. for family, labour and enforcement cases at district courts, and insolvency and administrative cases at regional courts as first instance courts).

Q043 (General Comment): There are no specialised first instance courts, but judges within individual courts are specialised (e.g. for family, labour and enforcement cases at district courts, and insolvency and administrative cases at regional courts as first instance courts).

Q044 (2020): 6 regional courts and 3 district courts have their branches in other cities.

Denmark

Q042 (General Comment): District courts are called 1st instance courts, the Land Registration court and the Maritime and Commercial Court are considered as first instance specialized courts. Second and third instance courts are the two High Courts and the Supreme Court.

Q042 (2019): Commercial and naval court
Land Registration court.

Q042 (2018): Data has not changed on this point.

Q042 (2017): District courts are called 1st instance courts, the Land Registration court and the Maritime and Commercial Court are considered as first instance specialized courts. Second and third instance courts are the two High Courts and the Supreme Court.

Q043 (General Comment): Re "Juvenile Courts" such courts do not exist. Juveniles are dealt with by district courts as any other case. There are taken special care though of juveniles in a Juvenile Board. The category "other" concerns the Land Registration Court that has been established in 2009. As for the Commercial Court, in Denmark, it is called Maritime and Commercial Court and it presents the peculiarity to also deal, to a great extent but not exclusively, with insolvency cases (bankruptcies etc.). Accordingly, there is an overlap with the category "Insolvency courts". Family courts are administered as part of District courts. There is one military court but military courts are not part of the Danish Courts Administration.

Q043 (2020): Land Registration Court (see also general comments). The other specialized court is Maritime and Commercial Court. The latter do some degree deals with insolvency cases similar to district courts.

Q043 (2019): Other specialised 1st instance court is the Land Registration Court. The Maritime and Commercial Court is a commercial court which ALSO deals with insolvency cases. Although it looks like there are two courts there is only one! As the district courts outside Greater Copenhagen deal with insolvency cases, and the Maritime and Commercial Court deals with insolvency cases inside Greater Copenhagen, but at the same time is a specialized commercial court, the Maritime and Commercial Court is marked as a specialized Commercial Court and insolvency court.

Q043 (2018): Military courts exist but they are not part of the Danish Courts Administration. The 24 district courts have always dealt with family cases. From 1 April 2019 family issues are a section of the court.

Q043 (2017): The category "other" concerns the Land Registration Court that has been established in 2009. As for the Commercial Court, in Denmark, it is called Maritime and Commercial Court and it presents the peculiarity to also deal, to a great extent but not exclusively, with insolvency cases (bankruptcies etc.). Accordingly, there is an overlap with the category "Insolvency courts". Of course Military courts exist but they are not part of the Danish Courts Administration.

Q043 (2016): Land Registration Court.

Q044 (2020): Included in first instance courts are district courts, Land Registration Court and the Maritime and Commercial Court.

Estonia

Q042 (General Comment): Estonia has 17 courthouses of county courts (first instance courts), 4 courthouses of administrative courts (first instance courts), 2 courthouses of appellate courts (second instance courts) and 1 courthouse of the Supreme Court (highest instance court), all together 24 courthouses. However, as some of the courts are situated in the same house (e.g Tallinn Administrative Court and Tallinn Circuit Court) and taking into account the fact that Pärnu County Court has a courthouse that is divided between two locations, there are 20 actual geographical locations of Estonian courts.

Q042 (2019): A small courthouse was adjoined with another small courthouse. The distance between them was less than 50 km.

Q042 (2016): A small courthouse was adjoined with another small courthouse. The distance between them was less than 50 km.

Q043 (General Comment): In Estonia, there are no specialized first instance courts, other than administrative courts. All the cases are dealt with by ordinary courts of first instance. The two administrative courts of first instance are situated in Tallinn and Tartu. Nevertheless, for guaranteeing wider access to justice, these two courts have several court buildings in other cities, namely in Pärnu and Jõhvi, where judges and their supporting legal staff work.

Q044 (General Comment): Estonia has 17 courthouses of county courts (first instance courts), 4 courthouses of administrative courts (first instance courts), 2 courthouses of appellate courts (second instance courts) and 1 courthouse of the Supreme Court (highest instance court), all together 24 courthouses. However, as some of the courts are situated in the same house (e.g Tallinn Administrative Court and Tallinn Circuit Court) and taking into account the fact that Pärnu County Court has a courthouse that is divided between two locations, there are 20 actual geographical locations of Estonian courts.

Q044 (2020): Tartu county court closed one courthouse, so now there's 20 geographic locations.

Q044 (2014): In the end of 2015 the Council for Administration of Courts devised the merger of two courthouses in Estonia that are situated very close to each other (20 km). Both houses will remain open but will have joint territorial jurisdiction and administration.

Finland

Q042 (General Comment): In Finland, there are 20 district courts with 36 offices, five courts of appeal, the Supreme Court, six administrative courts, the Supreme Administrative Court, the Market Court, the Labour Court and the Insurance Court. One of the administrative courts, the Labour Court and the Market Court are located in the same location. In total there are 36 courts in 52 geographic locations.

Q042 (2020): The number of district courts was reduced at the re-structuring on 1.1.2019.

Q042 (2019): The Court Network has been modified.

Q042 (2016): Some geographic locations of the District Courts have been shut down.

Q042 (2014): In 2014, in Finland there are 81 courts as geographic locations, namely 27 District Courts, 13 Branch offices of District Courts, 25 Auxiliary courtrooms of District Courts (23 till 2014), 3 specialized courts, 6 Administrative Courts (8 till 2014), 5 Courts of Appeal (6 till 2014), the Supreme Court and the Supreme Administrative Court.

Q043 (General Comment): In Finland, there are six regional administrative courts, the Market Court, the Labour Court and the Insurance Court.

Another specialised court is the High Court of Impeachment that hears charges against ministers (i.e. members of the Government), the Chancellor of Justice, the Parliamentary Ombudsman and members of the Supreme Court or the Supreme Administrative Court for unlawful conduct in office. In addition, the High Court of Impeachment deals with charges concerning the criminal liability of the President of the Republic. However, it is convened only when necessary.

Q043 (2016): In Finland there are 6 Administrative Courts, 1 Market Court, 1 Labour Court and 1 Insurance Court. Then there is the High Court of Impeachment that hears charges against Ministers (i.e. Members of the State Council), Chancellor of Justice, Parliamentary Ombudsman and Supreme Court Justices for unlawful conduct in office but it is convened only when necessary.

Q044 (2018): As of 1 January 2019, the district courts will be centralised by decreasing the number of the courts from 27 to 20. A court can have more than one office. The number of the district courts' offices will be reduced from 57 to 36 offices.

As of 1 September 2019, undisputed civil cases (for example debt collection, unpaid rents, other small debts and eviction cases) which are handled and decided in summary proceedings will be centralised from all 20 district courts to nine district courts.

Q044 (2016): In Finland is ongoing structural reform of the District Courts in which the number of the courts will be decreased from 27 to 20. The main target is to merge smaller courts in to bigger units that would be more efficient and profitable and also maintain high quality. At the same time the geographical locations of the District Courts will be decreased from 57 to 36. This means that in addition to the 7 administrative offices that will be shut down, 5 side offices and 13 separate locations for hearing will be closed. Instead the use of video conference, electronic services and other IT-solutions would be increased. Deadline for the new project is 31.12.2018 so that the reform would be in force in the beginning of the year 2019. The government's proposal has been given at January 2017. The handling of the proposal in the parliament is unfinished.

Q044 (2014): According to 2014 data, for the foreseeable future the next reform is the developing of the structure of the District Court network. The foreseen change is a reduction of the number of District Courts.

France

Q042 (2020):

There are 168 first instance courts of general jurisdiction, 37 second instance courts of general jurisdiction, and 1 highest instance court of general jurisdiction in the French judicial system.

Q042 (2019): See the comment on specialised first instance courts in the frame of Q43.

Q042 (2018): With regard to the ordinary courts, the number indicated in the 2016 questionnaire includes the local courts that have been abolished since 1 July 2017 (Act No. 2011-1862 of 13 December 2011), their powers having been taken over by the courts of first instance in civil matters and by the police courts attached to the courts of first instance in criminal matters. The number of 786 corresponded to: 164 TGI + 4 TPI + 307 TI + 311 jprox. Since then, TIs have been removed from the category of ordinary courts of first instance since they constitute specialised courts of first instance. The number of 479 ordinary courts of first instance therefore corresponded to 164 TGI + 4 TPI + 311 TPROX. The figure of 168 is thus explained by the abolition of the 311 local courts since 1 July 2017, as indicated in the comments in the questionnaire. Thus: $479 - 311 = 168$ ordinary courts of first instance (164 TGI + 4 TPI).

Q043 (General Comment): "With regard to the courts for the enforcement of criminal sanctions: In matters of enforcement of sentences, the enforcement judge (JAP) is a court of first instance for the enforcement of sentences, being at the same time a decision-making, monitoring and follow-up body. There is at least one JAP per department (article 712-2 of the CPP). The JAP is competent for adult convicts, and his field of intervention is the following: For measures to individualize custodial sentences, he or she has general jurisdiction (except for a few measures that fall under the special jurisdiction of the court for the enforcement of sentences), For custodial sentences, when a specific text so provides,

For the follow-up of security measures. Established by the law of March 9, 2004, the Court for the Enforcement of Sentences (TAP) is a court of first instance, composed of three JAPs of the judicial courts, appointed by order of the First President of the second instance Court. In each second instance Court, a TAP is established whose territorial jurisdiction extends to the jurisdiction of this court (articles 712-3 and D 49-2 of the CPP, article indicating the list of TAPs by second instance Court and the territorial jurisdiction). The seat of the TAP is in principle "that of the judicial court of the seat of the second instance Court" (article D. 49-3 CPP).

The objective is to entrust the most complex and sensitive cases to a collegiality. Thus, the TAP has jurisdiction over - by the effect of the law for those sentenced to the heaviest penalties: applications for parole and suspension of "medical" sentences for persons sentenced to imprisonment or imprisonment of more than 10 years and whose remaining sentence to be served exceeds 3 years; applications for an increase in the security period; placement under judicial supervision of dangerous persons...) by decision of the JAP, in particular because of the complexity of the case or the personality of the convicted person (article 712-6 al. 3 of the CPP).

In matters of terrorism, a derogatory jurisdiction is provided for under ordinary law (articles 706-22-1 and D 49-75 to D49-81-5 of the CPP). The Paris enforcement courts specialized in terrorist matters (JAPAT, the TAPAT and the enforcement chamber) have -exclusive jurisdiction to monitor persons convicted by specialized terrorism trial courts pursuant to Article 706-17 of the CPP; -competing jurisdiction with ordinary law enforcement courts to monitor persons convicted of acts of terrorism and other offenses falling within the scope of Article 706-16 of the CPP by ordinary law courts.
source DACG. "

Q043 (2020): Despite the provisional NA answer for the category " Courts for the execution of criminal sanctions ", the total is available, as it is a small number that will not significantly affect the total. On labor courts: 210 CPHs + 6 labor courts = 216 courts Industrial tribunals have jurisdiction, according to Article L. 1411-1 of the Labor Code, to hear individual disputes that arise between employees or apprentices and their employers during the execution of an employment or apprenticeship contract. There are 210 industrial tribunals and 6 labor courts in the French overseas territories. Same figure as in 2020 On commercial courts: 134 TCs, 9 TMCs, 2 TPJs with commercial jurisdiction, 7 TJs with commercial jurisdiction = 152 courts Commercial courts are specialized courts with jurisdiction to hear disputes relating to commitments between traders, between credit institutions or between them, disputes relating to commercial companies and commercial acts by their form (Art. L. 721-1 et seq. of the Commercial Code) On social jurisdictions:

-Since November 1, 2019, litigation concerning military disability pensions has been transferred to the jurisdiction of the administrative courts, doing away with the military disability pension courts and the regional military disability pension courts that rule on appeal.

- Since January 1, 2019, as a result of Law No. 2016-1547 of November 18, 2016 on the modernization of justice in the 21st century, social litigation, formerly divided between the social security courts (TASS), the courts of disability litigation (TCI) and the departmental social assistance commissions (CDAS), was merged and transferred to the "tribunaux de grande instance", ordinary courts of first instance, which became, as of January 1, 2020, by effect of law n° 2019-222 of March 23, 2019 on programming 2018-2022 and reform for the justice system, Judicial Courts. Consequently, these specialized jurisdictions have been abolished. On appeal, the litigation was only under the jurisdiction of the CNITAAT (extended until December 31, 2022; but now it is under the jurisdiction of specially designated courts of appeal, which allows for better accessibility to justice. There are 134 commercial courts whose judges are exclusively consular. With regard to the judicial organization in overseas France, there are 2 courts of first instance with jurisdiction in commercial matters and 9 mixed commercial courts. In addition, 7 judicial courts have a commercial chamber in Alsace-Moselle. In 2020 it was written 143 commercial courts because I think that only the TC and TMC were counted and not the TJ with commercial jurisdiction nor the TPI with commercial jurisdiction. About the other specialized courts :

The tribunaux paritaires des baux ruraux (TPBR) are autonomous (L. 491-1 of the Code rural et de la pêche maritime). The 2018-2022 programming and reform law for justice sets the seats and jurisdictions of the TPBRs no longer with reference to the seats of the former magistrate's courts but according to the seats of the judicial courts and their proximity chamber. On social jurisdictions:

-Since November 1, 2019, the litigation of military disability pensions has been transferred to the jurisdiction of the administrative courts, making the military disability pension courts and the regional military disability pension courts, which rule on appeal, disappear.

- Since January 1, 2019, as a result of law no. 2016-1547 of November 18, 2016 on the modernization of justice in the 21st century, social litigation, which was previously divided between the social security courts (TASS), the disability litigation courts (TCI) and the departmental social assistance commissions (CDAS), was merged and transferred to the "tribunaux de grande instance", courts of first instance under ordinary law, which became, as of January 1, 2020, the "Tribunaux Judiciaires" (Judicial Courts) under Law No. 2019-222 of March 23, 2019, on programming for 2018-2022 and reform of the justice system

Q043 (2019): Since 1 January 2019, social litigation, formerly divided between the social security courts (TASS), the incapacity courts (TCI) and the departmental social assistance commissions (CDAS), has been merged and transferred to the “tribunaux de grande instance” (first instance courts of general jurisdiction). As a result, these specialised courts have been abolished. As of 1 November 2019, litigation concerning military invalidity pensions will be transferred to the administrative courts, eliminating the military invalidity pension courts and the regional military invalidity pension courts which rule on appeal. These changes explain the variation in the number of courts compared to the previous year. The other specialised courts are: - joint courts for rural leases: 274; juvenile courts: 155; court for navigation on the Rhine: 1; maritime courts: 6; national asylum court: 1; court of first instance for navigation on the Moselle: 1.

Q043 (2018): The other specialized courts are: - joint courts for rural leases: 272 ;
- juvenile courts: 155; - military pension courts: 36;
- court for navigation on the Rhine: 1;
- Maritime courts: 6;
- national court of asylum: 1; - court of first instance for navigation on the Moselle: 1.

In the previous questionnaire, the Joint Rural Lease Courts (JRTs) were indicated, with the District Courts (TIs) within the "Rental Courts", the figure of 307 corresponding to the District Courts, since the seats and jurisdictions of the JRTs were linked to those of the TI. However, the TPBRs are, and have always been, autonomous courts. However, as decrees have been issued to remove some TPBRs, there is no longer a correlation between their number and that of IT. We have therefore indicated here in the "rental courts", only IT (289), and by including TPBRs in a separate item, which is legally more accurate. The total number of TPBRs is 274. On the insurance and social security courts: in the requested reference year, there are 26 disability courts, 115 social security courts (TASS) and 100 departmental social assistance commissions (CDAS). The differential of 100 corresponds to the addition of the 100 CDASs which are administrative courts.

The Paris Court, created on 14 May 2018, brought together all the services of the Regional Court, formerly dispersed over 5 sites, including Ile de la Cité, the Police Court and the 20 District Courts. The number of TIs had to be reduced by 19. In addition, the reform of the transfer of the police court under the 21st century Justice Act had the effect of removing 3 of them from the 307 TIs. The number of IT has therefore increased from 304 (307-3) to 285 district courts (304-19). We have added to these 285 TI the 4 TPIs because of their dual IT and TGI skills. Thus: 285 TI + 4 TPI = 289 TI in total.

Q043 (2017): The other specialized courts are:
- juvenile courts 155
- military pensions tribunals 36
- the court for navigation on the Rhine 1
- the court for navigation on the Moselle 1
- maritime trade courts 6
- national court of asylum 1

Q043 (2016): The other specialised courts are: 155 juvenile courts; 36 military pension courts; 1 court for navigation on the Rhine; 1 court for navigation on the Moselle; 6 maritime trade courts; 1 national asylum court.

As a matter of fact, the following reforms are on-going:

- The future Tribunal of Paris, whose establishment is scheduled for 14 May 2018, will unify all the services of the TGI (Tribunal de grande instance) currently dispersed over 5 sites, including “Ile de la Cité”, the police court and the first instance courts (tribunaux d’instance);
- Since 1 July 2017, the hearings of the Police Court, previously under the jurisdiction of the “tribunaux d’instance”, have been transferred to the TGI. The aim of this reform is to refocus the tribunaux d’instance on day-to-day civil justice and to centralise criminal litigation at the seat of the TGI.
- Since 1 July 2017, the 311 local courts have been abolished (Law No. 2011-1862 of 13 December 2011), their powers being taken over by the tribunaux d’instance in civil matters and by the police courts attached to the TGI in criminal matters.
- As of 1 January 2019, social litigation, currently divided between the Social Security Courts (TASS), the Disability Dispute Courts (TCI) and the Departmental Social Assistance Commissions (CDAS), will be unified and transferred to the TGI (first instance courts of general jurisdiction). These specialised courts will then be abolished.

Q043 (2015): Other specialised courts are:

Juvenile courts : 155
Military Pensions Courts: 36
Court for navigation on the Rhine: 1
Maritime Courts: 14
National Court of Asylum: 1
Court of First Instance for navigation on the Moselle: 1

Q043 (2014): The reduction of the number of specialised courts is primarily due to the suppression of 70 military pensions courts. The other specialised courts are: Children courts (155); Military pensions courts (36); the Rhine navigation court; commercial maritime courts (14); the National court for asylum right; the Court for the navigation on the Moselle. In contrast with 2010 and 2012 data, a part of the "other specialised courts" was distributed in the proposed categories, namely the agricultural land courts, the courts of rental cases, the Courts for enforcement of criminal sanctions and the courts of incapability litigation. The specialised interregional courts, competent to judge cases of organised crime were added.

Q043 (2013): The reduction of the number of specialised courts is primarily due to the suppression of 70 military pensions courts. The other specialised courts are: Children courts (155); Military pensions courts (36); the Rhine navigation court; commercial maritime courts (14); the National court for asylum right; the Court for the navigation on the Moselle. In contrast with 2010 and 2012 data, a part of the "other specialised courts" was distributed in the proposed categories, namely the agricultural land courts, the courts of rental cases, the Courts for enforcement of criminal sanctions and the courts of incapability litigation. The specialised interregional courts, competent to judge cases of organised crime were added.

Q043 (2012): There are 135 Commercial Courts and 8 mixed commercial courts (this of Mayotte is not included). The category "labour courts" subsumes 210 industrial courts and 6 labour courts. The category "insurance and/or social security courts" refers to the courts responsible for social security cases. The other specialised courts are: Police courts (3); local Police courts (3); Children courts (155); Incapacity Dispute courts (26); Agricultural land courts (281); Sentence enforcement courts (50); Military pensions courts (106); the Rhine navigation court; Commercial maritime courts (14); the Court for the navigation on Moselle. The military court of Paris was discontinued in January 2012. Its functions were transferred to a pole specialised in military matters in the High Court of Paris.

Q044 (2020): "With regard to the judiciary, there are 576 courts of first instance - geographic locations. This figure takes into account, by number of sites, all the courts of first instance, excluding the second instance court. Sites hosting exclusively a second instance court have therefore been excluded from this count. Sites hosting both a CA and a trial court were counted only once. There were 619 Courts geographic locations counted. This figure takes into account, by number of sites, all the jurisdictions whether they are appeal or first instance. Moreover, when a first instance court and a second instance court are located on the same site, they have been counted twice (hence the difference of 43 with the previous question: 37 CA which occupy 43 sites).

As regards the administrative order, there are 42 first instance courts for the administrative order and 53 all courts for the administrative order. "

Q044 (2016): A reform could take place within the framework of the bill on Justice programming presented in 2018. If no court site should be closed, the organization could be modified, particularly at the level of the courts of appeal, whose map is very different from those of the current administrative regions. There could also be only one first instance court per department.

Q044 (2014): As of 1 September 2014, the high courts (TGI) were resettled in the towns of Saint-Gaudens, Saumur and Tulle. Moreover, seconded chambers (geographic locations) were created on the same date in Guingamp and Marmande and on 1 January 2015 in Millau. A draft law to modernise the justice provides that the litigation of social security affairs and disability will be brought together before the TGI. Small offences ruled before the District Court will be transferred to TGI; similarly, compensation for personal injury will be entirely the responsibility of the TGI.

Germany

Q042 (General Comment): Eventhough the German legal system generally knows three instances (first instance, appeal on questions of fact and law, appeal on questions of law only), the different kinds of courts do not correspond directly to the stages of appeal. Local Courts (Amtsgerichte) are first instance courts with the Regional Courts (Landgerichte) as next stage of appeal (exceptions apply in family matters). However, Regional Courts do not only serve as second instance courts but also deal with first instance cases. Whether a case is initially dealt with at a Local or Regional Court depends (among other things) on the value at dispute (civil cases) or on the kind of the suspected offence (criminal cases). Similarly the Higher Regional Courts may serve as Second Instance courts (for cases that were initially dealt with at Regional Courts or for cases in family matters) and as Highest Instance Courts for cases that were initiated at the Local Courts (especially in criminal cases). The Constitutional Courts of the Länder and the Federal Constitutional Court (Bundesverfassungsgericht) are not part of the the stages of appeal. Constitutional jurisdiction is also seen as seperate from general and specialised jurisdiction. Constitutional Courts review legislation with regard to constitutional provisions. The Federal Constitutional Court mainly assess alleged violations of base rights by public authorities. However, in order to have access to the Constitutional Courts, the regular path of legal proceedings must generally be exhausted.

Q042 (2020): 1.1 First instance courts include: 638 Local Courts, 115 Regional Courts

1.2 Second instance courts include: 115 Regional Courts, 24 Higher Regional Courts

1.3 Highest instance courts include: 24 Higher Regional Courts, Federal Supreme Court

The vertical consistency is not fulfilled, since the 115 Regional Courts appear as "First instance courts" (1.1) as well as "Second instance courts" (1.2) and 24 Higher Regional Courts appear as "Second Instance Courts"(1.2) as well as "Highest Instance Courts" (1.3).

For further information please consult the General Comment.

The total number of specialised courts includes 16 Constitutional Courts of the Länder.

Q043 (General Comment): It is noteworthy that depending on the value at dispute, commercial cases are dealt with at Local or Regional Courts, on application in a chamber established at the Regional Court for commercial cases. There are no separate commercial courts. Likewise, there are no independent rent and tenancies courts, enforcement courts or courts for insurance cases. Depending on the caseload, special panels of judges are established for this purpose at the Local and Regional Courts. Family cases are dealt with at first instance in special departments of the Local Courts (second instance: Higher Regional Courts). The Federal Armed Forces do not have any military courts of their own; its members are subject to civil jurisdiction. Juvenile courts do not exist as independent courts either. They are established at the Local Courts or Regional Courts, depending on the severity of the expected sentence and the type of offence. The Juvenile Courts may be composed of a single criminal judge sitting as youth judge or one or more jugdes together with lay youth assessors.

Q043 (2020): The category "other" covers:

18 Finance Courts (first instance)

16 Constitutional Courts of the Länder, the Federal Constitutional Court, Federal Patent Court, Federal Labour Court, Federal Administrative Court, Federal Social Court and the Federal Finance Court (higher instances)

With regard to the Constitutional Courts please see General Comment Q 42.

Q043 (2019): finance courts

Q043 (2018): Finance Courts

Q043 (2017): Finance courts

Q043 (2016): Other specialised 1st instance courts: Finance Courts

Q043 (2015): The data refer to the year 2014. At present, no more recent data are available.

Q043 (2014): In 2014, in comparison with 2012, the number of specialized first instance courts decreased of three labour courts in two Landers.

Q044 (General Comment): The figures in this section are taken from the chart "Number of Federal and State Courts" (https://www.bmjbv.de/SharedDocs/Downloads/DE/PDF/Anzahl_der_Gerichte_des_Bundes_und_der_Laender.html) that does not distinguish between legal entities and geographic location of the courts. Generally, one legal entity equals one geographic location. A small number of courts may have a additional points of presence in other geographic locations. Since the exact number of geographic locations in comparison to legal entities is unknown, the figures from the chart "Number of Federal and State Courts" were used to answer this question as well.

Q044 (2018): The possibility of combining courts is being considered by individual Länder in order to reduce costs. The regional structures have proven effective.

On 5 November 2019, the Land Government of Schleswig-Holstein adopted a statutory instrument on the concentration of jurisdiction which combines existing concentrations of jurisdiction while adding further concentration provisions. The instrument will be promulgated at the end of the month.

Q044 (2016): The possibility of combining courts is being considered by individual Länder in order to reduce costs.

Greece

Q042 (2020): In highest instance courts include the Supreme Court(Areios Pagos). In First instance courts of general jurisdiction are included in the number 259, 196 local and District Criminal Courts and 63 courts of first degree.

Q043 (General Comment): In Greece, there are no special courts for the fields of law described in the question 43, besides those already mentioned. The Greek Constitution is reluctant to provide in the Greek legal system special courts. Instead, within the Courts of First Instance and Courts of Appeal of large cities, we have special Chambers, where the task of adjudicating in special categories of law (e.g. family law, commercial law, etc.) is assigned. Judges entrusted with such duties have usually the correspondent specific studies. As far as other special courts are concerned, special provisions regulate the operation of courts for juveniles, military, navy and air force courts. We clarify that the military, navy and air force courts are under the jurisdiction of the Ministry of National Defense, therefore we have no further information.

Q043 (2020): Administrative courts include: in the first instance 30, in the second instance 9 and 1 Supreme Court(the Council of State).

Juvenile courts are subject to the Courts of First Instance, according to your instructions the choice changed from non-available to non applicable.

The military courts are under a different ministry, specifically the National Defense.

The higher instance other specialized courts is the Court of Auditors that is considered one of three supreme courts in Greece.

Q043 (2017): In Greece, there are no special courts for the fields of law described in the question 43, besides those already mentioned. The Greek Constitution is reluctant to provide in the Greek legal system special courts. Instead, within the Courts of First Instance and Courts of Appeal of large cities, we have special Chambers, where the task of adjudicating in special categories of law (e.g. family law, commercial law, etc.) is assigned. Judges entrusted with such duties have usually the correspondent specific studies. As far as other special courts are concerned, special provisions regulate the operation of courts for juveniles, military, navy and air force courts.

Q044 (2020): The total number of courts includes the Court of Auditors

Q044 (2014): According to 2014 data, the Law 1756/1988, article 2, as modified by the Law 4123/2013, provides for a reduction of the number of courts. Besides, the Law 1756/1988, article 4, as modified by the Law 4264/2014, provides for a change in the powers of courts.

Hungary

Q042 (General Comment): The Hungarian court system is as follows: Kúria (1) – the Hungarian Supreme Court - its jurisdiction in criminal, civil and administrative cases covers adjudication of extraordinary remedies and appeals, adopting uniformity decisions. It also decides if municipal decrees are in compliance with higher level legislation. Regional courts of appeal (5) – their jurisdiction in criminal and civil cases covers the adjudication of appeals received from the regional courts (third instance in criminal cases). Regional courts (20) – their jurisdiction in criminal, civil and administrative cases covers the adjudication of appeals received from district courts, administrative and labour courts, and procedure at first instance in certain criminal and civil cases. District courts (113) – their jurisdiction in criminal and civil cases covers the procedures at first instance. The number of judges in the largest district court is 357, whereas the smallest court operates with one judge. Out of the 113 district courts, the district courts in the seat of the regional courts have special competences in many cases.

Q042 (2020): The Hungarian court system is as follows: Kúria (1) – the Hungarian Supreme Court - its jurisdiction in criminal, civil and administrative cases covers adjudication of extraordinary remedies and appeals, adopting uniformity decisions. It also decides if municipal decrees are in compliance with higher level legislation. Regional courts of appeal (5) – their jurisdiction in criminal and civil cases covers the adjudication of appeals received from the regional courts (third instance in criminal cases). Regional courts (20) – their jurisdiction in criminal, civil and administrative cases covers the adjudication of appeals received from district courts, administrative and labour courts, and procedure at first instance in certain criminal and civil cases. District courts (113) – their jurisdiction in criminal and civil cases covers the procedures at first instance. Out of the 113 district courts, the district courts in the seat of the regional courts have special competences in many cases. Administrative and labour courts (20) were dismissed on the 31st of March 2020. From this date Regional Courts deal with labour cases on first instance while administrative cases are dealt with by eight Regional Court on a regional level.

Q042 (2019): 113 District Courts (first instance courts of general jurisdiction)

20 Administrative and Labour Courts (specialized first instance courts)

20 Regional Courts (second instance courts of general jurisdiction + first instance courts in cases of higher importance)

5 Regional Courts of Appeal (second instance courts in cases of higher importance)

1 Supreme Court ("Kúria" - special judicial review)

It has to be noted that Administrative and Labour Courts are merged into the regional courts on the 31st of March 2020. Since 1st of April 2020 every regional court deals with labour cases on first instance (second instance are the regional courts of appeal) and 8 regional courts have special administrative law department dealing with first instance cases (second instance is the Supreme Court).

Q042 (2018): Two new district courts were established (one in 2017 in the city of Szigetszentmiklós, another one in 2019 in the city of Érd).

113 District Courts (first instance courts of general jurisdiction)

20 Administrative and Labour Courts (specialized first instance courts)

20 Regional Courts (second instance courts of general jurisdiction + first instance courts in cases of higher importance)

5 Regional Courts of Appeal (second instance courts in cases of higher importance)

1 Supreme Court (special judicial review)

Q042 (2017): All courts include :

112 District Courts

20 Regional Courts

20 Administrative and Labour Courts

5 Regional Courts of Appeal

1 Supreme Court (Kúria)

The Hungarian court system is as follows: Kúria (1) – the Hungarian Supreme Court - its jurisdiction in criminal, civil and administrative cases covers adjudication of extraordinary remedies and appeals, adopting uniformity decisions. It also decides if municipal decrees are in compliance with higher level legislation. Regional courts of appeal (5) – their jurisdiction in criminal and civil cases covers the adjudication of appeals received from the regional courts (third instance in criminal cases). Regional courts (20) – their jurisdiction in criminal, civil and administrative cases covers the adjudication of appeals received from district courts, administrative and labour courts, and procedure at first instance in certain criminal and civil cases. District courts (112) – their jurisdiction in criminal and civil cases covers the procedures at first instance. The number of judges in the largest district court is 357, whereas the smallest court operates with one judge. Out of the 111 district courts, the district courts in the seat of the regional courts have special competences in many cases. Administrative and labour courts (20) – their jurisdiction covers procedures at first instance in individual and collective labour disputes and in administrative cases. First instance administrative and labour courts (20) started operating on 1 January 2013 as first instance specialized courts. Thus from this date the number of first instance courts of general jurisdiction is 112.

Q043 (General Comment): There are military departments at five Regional Courts and at one Regional Court of Appeal.

Although they only deal with military related criminal cases, they are not considered as specialized courts as they are a part of the ordinary court system both in administrative and professional management.

Q043 (2020): "Administrative and labour courts (20) were dismissed on the 31st of March 2020. From this date Regional Courts deal with labour cases on first instance while administrative cases are dealt with by eight Regional Court on a regional level".

Q044 (2018): According to proposed legislation an independent administrative court system may be established in the future.

Q044 (2016): Two new district courts will be established (one in 2017 in the city of Szigetszentmiklós, another one in 2019 in the city of Érd).

Q044 (2014): According to 2014 data, a new first instance (district) court will be established in the city of Érd on 01/01/2018.

Ireland

Q042 (General Comment): In Ireland, there are only three first instance courts (as legal entities) exercising general jurisdiction for the entire State (the High Court, the Circuit Court and the District Court). Each of those three courts has a single court president only, who exercises a nationwide remit for his/her court. The number of geographic locations reflects the physical location serving as seats or venues for the three jurisdictions.

Q042 (2016): The specialised courts referred to are the two Special Criminal Courts the jurisdiction of which generally relates to trial of terrorism- and organised crime-related offences.

The increase of one location over the figure provided for 2014 refers to the temporary relocation of the Dublin District Court's Drug Treatment Court in 2016.

Q043 (General Comment): The two specialised first instance courts listed above are Special Criminal Court No. 1 and Special Criminal Court No. 2. The latter was established in October 2015 and came into operation, sitting for the first time, in 2016. In previous cycles the category "other" (1) was referring to Special Criminal Court No. 1.

Other than distinctions between jurisdictional levels there is no specialisation - all judges within a court jurisdiction may be allocated to any category of case falling within the jurisdictional remit of the court concerned. Starting in 2013 a new cadre of specialist judges was created in the Circuit Court with specific jurisdiction in relation to certain types of personal insolvency remedy and certain pre-trial order making powers.

Ireland has a specialist regime for the trial of commercial proceedings in the form of the Commercial List of the High Court (known as the 'Commercial Court') but, as it is not a separate legal entity, being a list within and formally a part of the High Court, it is not included as a specialist court as such.

Q043 (2019): Legislation to provide for a Family Court has been proposed

Q044 (2018): The Assisted Decision-Making (Capacity) Act 2015 will, when commenced, replace the existing wardship regime for persons with capacity issues and introduce new decision support arrangements for such persons. New jurisdiction will, in particular, be conferred on the Circuit Court in respect of such arrangements. The current situation is that while some parts of the 2015 Act are commenced, others remain to be commenced.

Q044 (2016): The Assisted Decision-Making (Capacity) Act 2015 will, when commenced, replace the existing wardship regime for persons with capacity issues and introduce new decision support arrangements for such persons. New jurisdiction will, in particular, be conferred on the Circuit Court in respect of such arrangements.

Q044 (2014): According to 2014 data, legislation is in preparation for the creation of specialised family courts within the High, Circuit and District Courts.

Italy

Q042 (2018): In 2012-2013 we went through a major reform of the judicial map. In particular, a great number of justice of peace offices (initially 846) were shut down. However, each Italian municipality had (and still has) the opportunity to preserve the office at their own expenses. For this reason, each year a series of Justice of Peace offices administered by the municipality might be re-opened or closed. 3 justice of peace offices closed between 2017 and 2018.

Q042 (2017): In 2012-2013 we went through a major reform of the judicial map. In particular, a great number of justice of peace offices (initially 846) were shut down. However, each Italian municipality had (and still has) the opportunity to preserve the office at their own expenses. For this reason, each year a series of Justice of Peace offices administered by the municipality might be re-opened or closed.

Q043 (General Comment): Since 2014 in Italy there are 22 Brand Commercial courts (Tribunali delle imprese) that are legal entities of their own and not just internal court divisions for organizational purpose (such as labour, family etc.). It is noteworthy that in Italy, some of the specialized first instance courts are not administered and financed by the Ministry of Justice. This is the case for the regional administrative courts, the regional audit commissions, the local tax commissions and military courts. These courts are not taken into consideration for the replies to questions 6, 46 and 52 for none of the exercises.

In respect of the 20 first instance administrative courts (legal entities) and their supreme court, it should be stressed that they have been encompassed within the total under question 43 for the last four exercises, but only since 2014 this approach is reflected in questions 91 and 99 (number of administrative law cases).

Moreover, in Italy specific matters (such as labour, family etc.) are dealt by specific divisions within the same Court. There are also 26 divisions called DDA (Direzioni Distrettuali Antimafia) which deal specifically with mafia and organized crime.

Q043 (2020): Tax courts fall into the "Other" category.

The appeal of some specialized courts (e.g. commercial courts, juvenile courts) are dealt by the general jurisdiction appeal courts.

Specific subject matters (e.g. labour, insolvency, family, fight against terrorism and organised crime) are dealt by specific divisions within general jurisdiction courts. See general comment for details.

Q043 (2019): The category "other" subsumes 29 Minor (or Juvenile) Courts and 103 Tax Courts

Q043 (2018): The category "other" category subsumes 29 Minor (or Juvenile) Courts and 103 Tax Courts.

Q043 (2017): Other: 29 Minor (or Juvenile) Courts + 103 provincial tax commissions

Q043 (2016): OTHER: 29 Minor (or Juvenile) Courts + 103 Local Tax Commissions

Q043 (2013): In September 2013, the Italian judicial system implemented an extensive reorganization of the territorial distribution of offices with the closing (by merger) of 30 Tribunals, 30 Prosecution offices, 220 branches of Tribunals and 346 Peace Judges.

Q044 (2016): Enhancing the specialization of judges / courts. In particular, the judiciary authorities are evaluating the introduction of specific courts for family and personal matters ("Berruti" reform). Increased competence of Business Courts. Establishment of specialized sections on matters such as immigration, international protection and free movement of citizens of the European Union.
Revision of the appeal system in order to reduce the appeal rate.

Latvia

Q042 (2020): In the total number of specialised courts - legal entities are included 1 Administrative court and 1 Administrative Regional (appeal) court. Starting from 31.03.2021. in Latvia is created and operates the Economic Court. The Economic Court is not included in the total number of specialized courts. In Latvia is also Constitutional court - which within the jurisdiction specified in the Constitution of the Republic of Latvia and in this Law, shall adjudicate matters regarding the conformity of laws and other regulatory enactments with the Constitution, as well as other matters regarding which jurisdiction is conferred upon it by this Law. The Constitutional court is not included in the total number of the courts.

Q042 (2019): Since the reform of March, 2018, the number of first instance courts has been reduced to 10 legal entities at first instance (9 general + 1 administrative). There are also 6 appellate courts and Supreme court. In 2019 was completed reform of Land Register Units, which are included in the composition of district (city) courts. The number of legal entities doesn't changes, but number of courts per geographic locations therefore differs.
The data regarding the geographic locations are indicated on 31.12.2019.

Q042 (2018): Since the reform of March, 2018, the number of first instance courts has been reduced to 10 legal entities at first instance (9 general + 1 administrative). There are also 6 appellate courts and Supreme court.

Q042 (2017): The number of first instance courts (legal entities) is indicated on 31.12.2017., in Latvia starting from 2015 till March, 2018 was a reform where court map was revised. The number of first instance courts (legal entities) starting from March, 2018 is 9. As regards the specialised court - there is only one specialised court the Administrative court with 5 court houses.

Q042 (2016): There is only one specialised court the administrative court with 5 court houses

Q043 (General Comment): In Latvia, only the Administrative court can be considered as a 1st instance specialized court (which is divided into 5 court houses). As to the category "military courts", the reply NA is justified by the fact that according to the Law on Judicial Power, judicial power in the Republic of Latvia is vested in district (city) courts, regional courts, the Supreme Court and the Constitutional Court, but in state of emergencies or during war – also military courts. The rest of the courts in Latvia are not established, and therefore in this case should be NAP. Latvia has also one Court, which is specialized on Commercial cases, but that court working with other civil cases and is first instance court. This court is unchecked separately on Question 43 because it is not a separate commercial court, but just few judges are specialized on commercial cases.

Q043 (2020): Military courts is established in state of emergency or during a war. On 1 July 2020, amendments to the Law on Judicial Power came into force, providing for the establishment of the Economic Court, which is competent for both certain types of civil and criminal cases. Accordingly, the Court is competent for specific commercial disputes and criminal cases, which cause significant damage to the business environment and economic development. The Economic Court is not counted yet in the total number of specialized courts, because it will start its action on 31st March 2021. As for Administrative court - first instance court is Administrative District Court and for higher instance is indicated Administrative Regional (appeal) instance Court.

Q043 (2019): There is only Administrative court in Latvia. On July 1, 2020, amendments to the Law "On Judicial Power" entered into force. The Amendments provides for the establishment of the Court of Economic Affairs. The Economic Court will take office on 1 January 2021.

Q043 (2018): There is only Administrative court in Latvia.

Q043 (2016): There is only one specialised court the administrative court with 5 court houses

Q044 (2018): Reform was finished in March 2018. In its course first instance court count was reduced to 10 (9 first instance + 1 first instance Administrative court).

In year 2020/2021 there is a plan of creating a court for economical cases that would be a specialised 1st instance court.

Q044 (2016): Starting from 1 of February 2016, the reform has been introduced in Latgale (administrative region of Latvia). A number of district (city) courts in territory of Latgale regional court was decreased from six to two district (city) courts (Balvi District Court and Ludza District Court had been incorporated into Rezekne District Court; Kraslava district court and Preiļi District Court had been incorporated into Daugavpils District Court).

in 2016, Ministry of Justice make preparatory work to make court house reform in two district (city) court in the Rīgas region. Accordingly, starting from 1 of February 2017, the City of Rīga Zemgale Urban District Court has been reorganized and conjoined with the City of Rīga Kurzeme District Court and changed the name of this court to City of Rīga Pārdaugavas Court.

Q044 (2014): In the frame of the 2014 evaluation, it has been stressed that the Judicial Council and the Cabinet of Ministers have initiated the gradual unification of the territory of operation of district (city) courts, through the implementation of the reform of the Riga court region. From March 2015, the Sigulda Court is attached to the Riga District Court, while the Riga City Central District Court was attached to the Riga City Vidzeme District Court.

The Judicial Council's decision of 8 June 2015 confirmed the restructuring plan concerning the Jūrmala City Court. According to the plan, the latter must be attached to the Riga District Court from August 2015. The review of the judicial map is intended to increase the efficiency of the court system and the quality of the judicial activity, to reduce the processing times and to even out the judicial capacity. The reform is still going on.

Lithuania

Q042 (General Comment): Regional courts are first instance courts for criminal and civil cases assigned to their jurisdiction by law, also, these regional courts are appeal instance for judgments, decisions, rulings and orders of district courts. Taking this into account, regional courts are counted as first instance courts of general jurisdiction (1.1) and as second instance courts of general jurisdiction (1.2), but in the totals (1) regional courts are counted only once as one legal entity.

Q042 (2020): 1.1. 12 district courts and 5 regional courts (the latter are adjudicating certain categories of cases as first instance courts);

1.2. 5 regional courts and the Court of Appeal of Lithuania;

2. 2 regional administrative courts and the Supreme Administrative Court of Lithuania.

Q042 (2018): Number of courts (as legal entities) in Lithuania decreased from 1st January 2018 according to the Law on Reorganization of Courts of the Republic of Lithuania (Law of 23rd June, 2016 No. XII-2474). Instead of 49 district courts (as legal entities) there are now 12 district courts (some of them have court houses), instead of 5 regional administrative courts there are now 2 of them (one has houses). The number of first instance courts of general jurisdiction (legal entities) in point 42.1 implies 5 regional courts (of general jurisdiction) which are first instance for criminal and civil cases assigned to its jurisdiction by law. These courts also are appeal instance for judgements, decisions, rulings and orders of district courts, so their number is also included in the number of all courts at point 42.3.

Q042 (2017): From January 1, 2018, there are 22 left (17 first instance courts, 2 first instance courts of special jurisdiction, 2 courts of appeal (1 of them is specialized court) and 1 court of cassation).

Q042 (2014): As regional courts of Lithuania function not only as courts of appeal, but also as courts of first instance, for 2014, the number of these courts is also included in the number of first instance courts of general jurisdiction. This was not the case in earlier years.

Q044 (2020): There are 59 1st instance courts locations: 12 district courts (49 locations), 5 regional courts (5 locations) of general jurisdiction and 2 regional administrative courts (5 locations).

For all the courts 62 courts locations: The Supreme Court of Lithuania, the Court of Appeal of Lithuania, the Supreme Administrative Court of Lithuania and 59 1st instance courts locations.

Q044 (2018): Analysis and discussion on the need and possibility to decrease the number of court houses are initiated.

Q044 (2016): From January 1, 2018, there shall be 12 district courts (instead of 49) and 2 regional administrative courts (instead of 5).

Luxembourg

Q042 (General Comment): "42.1.1: three justices of the peace and two district courts

42.1.2: one Court of Appeal 42.1.3: one Court of Cassation

42.2: Total specialized courts (all instances) Q43"

Q042 (2020): "In addition to the courts proper, the law of 27 July 1997 on the organization of the Constitutional Court established this court, which is seized, on a preliminary basis, when a question relating to the conformity of a law to the Constitution arises before a court of the judicial or administrative order. It rules, by means of a judgment, on the conformity of laws with the Constitution, with the exception of those concerning the approval of treaties.

When a party raises a question concerning the conformity of a law with the Constitution before a court of the judicial or administrative order, that court is obliged to refer the matter to the Constitutional Court, except when it considers that a decision on the question raised is not necessary to render its judgment, that the question is unfounded or that the Constitutional Court has already ruled on a question with the same object.

If a court considers that a question of conformity of a law with the Constitution arises and that a decision on this point is necessary to render its judgment, it must raise it of its own motion after first inviting the parties to present their observations. The parties are admitted to conclude and plead before the Constitutional Court through the ministry of a lawyer registered in list I of the tables drawn up annually by the Bar Associations.

The judgments of the Constitutional Court are published in the Official Journal of the Grand Duchy of Luxembourg within thirty days of their delivery. (Portal of Justice: <https://justice.public.lu/fr/organisation-justice/cour-constitutionnelle.html>) "

Q042 (2017): 42.1: 3 justices of the peace and 2 district courts

42.2: Please note that the total of 043 is not identical to the total in 042, as most of the specialized courts are in fact specialized sections of a general court. E.g. the commercial courts (which also deal with insolvency cases) are specialized sections of the district court (tribunal d'arrondissement). Only the administrative, military and 1st instance social security courts are selfstanding.

Q042 (2016): 42.1: 3 justices of the peace and 2 district courts

42.2: Please note that the total of 043 is not identical to the total in 042, as most of the specialized courts are in fact specialized sections of a general court. E.g. the commercial courts (which also deal with insolvency cases) are specialized sections of the district court (tribunal d'arrondissement). Only the administrative, military and 1st instance social security courts are selfstanding.

Q043 (General Comment):

General courts are organized into specialized sections of a court. For example, the commercial courts (which also deal with insolvency cases) are specialized sections of the district court. Only the administrative, military and social security courts of first instance are autonomous.

Q043 (2020): Pour 2020, seules les entités juridiques ont été prises en considération dans le tableau.

Q043 (2017): Please note that the total of 043 is not identical to the total in 042, as most of the specialized courts are in fact specialized sections of a general court. E.g. the commercial courts (which also deal with insolvency cases) are specialized sections of the district court (tribunal d'arrondissement). Only the administrative, military and 1st instance social security courts are selfstanding.

Q043 (2016): Please note that the total of 043 is not identical to the total in 042, as most of the specialized courts are in fact specialized sections of a general court. E.g. the commercial courts (which also deal with insolvency cases) are specialized sections of the district court (tribunal d'arrondissement). Only the administrative, military and 1st instance social security courts are selfstanding.

Q043 (2014): Most of the areas mentioned in the question are within the competence of district courts (commercial cases, insolvency cases, family law cases and all criminal cases except for offenses that are under the jurisdiction of justices of peace) and justices of peace (labour law cases, rental cases). The indicated total is a purely statistical information which does not reflect the reality.

Q043 (2012): Matters concerning trade and family law are dealt with at the level of district courts, while matters pertaining to labour law and rental cases are within the competence of the justices of peace.

Malta

Q042 (2020): The 1st instance courts of general jurisdiction are:

- the Court of Magistrates, Civil Jurisdiction (competency up to Euros 15,000)
- the Civil Court, First Hall (civil cases above Euros 15,000)

The 2nd instance courts of general jurisdiction are:

- the Civil Court of Appeal, Inferior Jurisdiction - the Civil Court of Appeal, Superior Jurisdiction

In the Maltese judicial system, there are only 2 instances of courts, hence Q1.3 is marked as NAP.

The increase in the number of courts as legal entities reflects the addition of the criminal courts to the above data, namely:

- 1st Instance Courts: Court of Magistrates Criminal Jurisdiction and Criminal Court
- 2nd Instance Courts: Criminal Court of Appeal in its Inferior and Superior Jurisdiction

Q042 (2018): In 2018, the Commercial Division was set up in order to hear cases filed under the Companies Act that include Insolvency cases. This new specialised first instance court is the reason behind the increase in the number of courts quoted at 42.2 above.

Q043 (General Comment): The number of specialised courts includes non-criminal, administrative and criminal courts established as legal entities in line with the CEPEJ methodology. The seven (7) specialised courts referred to in Q43 are the Rent Regulation Board, the Land Arbitration Board, the Rural Leases Control Board, the Small Claims Tribunal, the Court of Voluntary Jurisdiction, the Administrative Review Tribunal and the Juvenile Court. Other courts previously counted as specialised courts, such as the Family Court and the Commercial Court, are divisions of the Civil Court, First Hall, and as such are now being included with the 1st Instance Courts of General Jurisdiction.

Q043 (2020): A number of courts that used to be previously identified as specialised courts, are not being categorised this time, given that they all make part of the First Hall, General Jurisdiction Court. These are:

- The Commercial Court (including insolvency cases)
- The Family Court

The identified specialised courts listed under 'Other specialised courts' are:

- the Land Arbitration Board
- the Rural Leases Control Board
- the Small Claims Tribunal
- the Court of Voluntary Jurisdiction

The Juvenile Court is a specialised criminal court.

Q043 (2019): The courts referred to under 'Other specialised 1st Instance courts' include:

- The Civil Court, First Hall
- the Land Arbitration Board
- the Rural Leases Control Board
- the Small Claims Tribunal
- the Court of Voluntary Jurisdiction

Q043 (2018): The courts referred to under 'Other specialised 1st Instance courts' include:

- The Civil Court, First Hall
- the Land Arbitration Board
- the Rural Leases Control Board
- the Small Claims Tribunal
- the Court of Voluntary Jurisdiction

Q043 (2017): The other specialised 1st Instance courts include:

- the Civil Court, First Hall
- the Court of Voluntary Jurisdiction - the Land Arbitration Board
- the Rural Leases Control Board
- the Small Claims Tribunal

Q043 (2016): The other specialised 1st Instance courts include:

- the Civil Court, First Hall
- the Land Arbitration Board
- the Rural Leases Control Board
- the Small Claims Tribunal

Q044 (2016): Throughout 2017, work was carried out in order to introduce a commercial division within the Civil Court in order to facilitate cases filed under the Companies Act. The bill is currently undergoing the legislative process that would see it being enacted as law by the end of the year. The Commercial Division will become operative in 2018.

Netherlands

Q042 (General Comment): Since 2013 and following the implementation of the reform related to the reorganization of the judicial map, the number of district courts was reduced from 19 in 2010 to 11 in 2013 and 2014. Moreover, this reform resulted in the closure of sub-district court locations due to which the number of geographic locations decreased from 64 in 2010 to 40 in 2013 and 2014.

Q042 (2020): There are 11 first instance courts (Rechtbanken).

There are 4 second instance courts of general jurisdiction: 4 courts of appeal (Second instance, Gerechtshoven) that handle civil cases, criminal cases and tax cases.

There is 1 highest instance court of general jurisdiction, the Supreme Court (Hoge Raad), the highest instance court in The Netherlands.

There are three specialized courts (see comment Q43).

Q042 (2017): same as last year

Q043 (General Comment): There is only one specialized first instance court, namely the Trade and Industry Appeals Tribunal, also known as Administrative High Court for Trade and Industry. The other specialized jurisdictions are not legal entities (Natte kamer, Ondernemingskamer, Militaire kamer) but only chambers within the courts.
There is no separate military court, but there is a military chamber in one of the district courts.

Q043 (2020): The specialized courts are:

Trade and Industry Appeals Tribunal: the administrative High Court for trade and industry. This tribunal is a specialized administrative court that rules on disputes in the area of social-economic administrative law. Categorized as administrative court.

The Central Appeals Tribunal is the highest judicial authority in areas of social security and civil service. Categorized as other.

Q043 (2017): same as last year

Q043 (2015): Currently the commercial court in the Netherlands is the specialized court CBb. Per January first 2017 starts the Netherlands Commercial Court (NCC).

Q044 (2020): In one case (of 43), a first instance court of general jurisdiction, a specialized first instance court, and a court of appeal are housed at the same site (adding 2 sites according to the explanatory note).

In 3 cases, a first instance court of gen.jur. and a court of appeal are housed at the same site (adding 3 sites according to the explanatory note).

In 1 case, a f.i. court of gen.jur. and a specialized second instance court are housed at the same site (adding 1 site according to the explanatory note).

Finally, the Supreme Court, 1 specialized second instance court, and 2 appeal courts are housed at unique locations (adding 4 sites according to the explanatory note).

Q044 (2016): Possibility of closing subdistrict court facility?

Q044 (2014): According to 2014 data, the reforms regarding the merging of courts mentioned on the occasion of the 2012 evaluation have been implemented.

Poland

Q042 (General Comment): The Polish court structure is characterized by four levels of courts but only three instances. Basically, there are district courts which are first instance courts, regional courts which are first and second instance courts, and appellate courts which are second instance courts. The highest instance courts are the Supreme Court, the Supreme Administrative Court and the Constitutional Tribunal.

Q042 (2020): The table indicating the content of:

1.1 first instance courts (district + regional courts), 1.2 second (appellate courts) , 1.3 third instance courts (cassation of the judgment) (Supreme Court) of general jurisdiction.

Q042 (2018): .

Q042 (2017): 42.1 First instance courts of general jurisdiction - common courts (318 regional courts, 45 district courts).

42.2 First instance specialised courts - 16 administrative courts, 9 military courts.

42.3 All the courts - the Supreme Court, common courts (318 regional courts, 45 district courts, 11 appeal courts), administrative courts (voivodship administrative courts (16), the Supreme Administrative Court), military courts (regional military courts (7), district military courts (2)).

Q042 (2016): 42.1 First instance courts of general jurisdiction - common courts (318 regional courts, 45 district courts).

42.2 First instance specialised courts - 16 administrative courts, 9 military courts.

42.3 All the courts - the Supreme Court, common courts (318 regional courts, 45 district courts, 11 appeal courts), administrative courts (16 voivodship administrative courts. the Supreme Administrative Court), military courts (9 regional military courts, 2 district military courts). The differences between presented data and the data from 2014 edition is likely to be due to the restoration of District Courts, abolished and converted to divisions of larger units in 2013.

The difference in courts number between this (363) and previous evaluation cycle (287) is probably caused by a significant organizational reform of polish court system, which took place in 2013. Almost eighty small district courts were merged with larger entities. Since 2015 the reform has been reversing, which has resulted in an increase in the number of the courts.

Q042 (2012): In 2012, there was a structural change concerning District courts. Some of them were transformed into divisions of other courts.

Q043 (2020): There are 7 military courts of first instance and 2 military courts of higher instance in Poland.

Q043 (2019): It is noteworthy that the Land and Mortgage Courts which are within the structure of the common court system deal with specific topics, but they are departments.

Besides, the National Court Register and Pledge Registry Departments are business divisions.

The EU Trademark and Community Design Court (which existed in the XXII Division of the District Court in Warsaw)-functioned from 2004 until the creation of intellectual property courts, which took place on 1 July 2020. Cases in the field of intellectual property belong to the jurisdiction of selected District Courts (Article 47990 of the Code of Civil Procedure), while the District Court in Warsaw (XXII Division) has exclusive jurisdiction in matters of intellectual property concerning computer programs, inventions, utility models, topography of integrated circuits, plant varieties and company secrets of a technical nature.

The Court of Competition and Consumer Protection is a special department functioning within the District Court in Warsaw. In the current state of law, the scope of activity of the 17th Department of the Court of Competition and Consumer Protection includes the handling of the following cases in court proceedings of appeals and complaints against decisions and orders issued by the government: the President of the Office of Competition and Consumer Protection, the President of the Energy Regulatory Office, the President of the Railway Transport Office, the President of the Office of Electronic Communications. When it comes to matters from lease or tenancy agreements - as long as these matters are of an economic nature, they are recognized by business departments, as are matters related to new technologies and the Internet space.

Q044 (2020): Regarding point 44, it should be noted that in the previous evaluation cycles (2016, 2017, 2018, 2019) the answer in terms of the number of all courts as geographical locations was 401, while in 2020 it is 494.

The figure of 494 indicated in 2020 is the sum of the common, administrative and military courts of first and second instance and the Supreme Court by geographic location (i.e. including the subdivisions). To the number of courts of first instance by geographical location (item 44 in line 1 - all common, administrative, military courts of first instance with localised divisions: number of courts 433) was added the number of 61 courts: - regional courts: 46; - courts of appeal: 11; - military courts: 2; - Supreme Administrative Court: 1; - Supreme Court: 1;

Total: 494 (433 + 61).

The discrepancy is due to the adoption of a different method of data presentation in 2020 (by geographical location). In compliance with the Explanatory note, the 2020 data show first-instance courts (line 1), and further all courts (line 2) together with all seats in different locations, which in the realities of the Polish legal system should be understood as a necessity to show the number of courts together with local divisions.

Q044 (2016): It is considered to reduce the number of district courts which are responsible for land and mortgage registers or abolishing external branches in district courts.

Portugal

Q042 (2020): 1.1 Courts of general jurisdiction and proximity divisions;

1.2. 2nd Instance Courts (Tribunal Relação de Lisboa, Coimbra, Porto, Évora e Guimarães).

1.3. Supreme Justice Court

Q042 (2019): Regarding Q 42.1 the decrease of the total number of first instance courts of general jurisdiction is accompanied by an increase of certain types of first instance courts (please consult answers provided to Q 43).

Regarding Q 42.2, the total corresponds to first instance specialised courts of judicial courts and administrative and tax courts. Under our Constitution, we have two set of courts: judicial courts, which have general jurisdiction in civil/commercial and criminal matters and encompass specialized courts, and administrative and tax courts, whose role is to settle disputes arising out of administrative and tax relations. These latter are specialised in this domain only.

In order to be rigorous and coherent with Q 43, we have included first instance administrative and tax courts. The total corresponds to 418 judicial courts + 17 administrative/tax courts.

Q042 (2018): These data correspond to the values given for the last scoreboard.

The differences registered result from the changes to the judicial organization (Law n. 40-A/2016, 22 December) in force since January 1, 2017.

42.1 the number of 1st instance courts with general jurisdiction decreased due to the increase of specialized courts.

Accordingly, 20 courts that were closed in 2014 were re-enacted as proximity judgments, new family sections were created as well as new sections with generic jurisdiction.

Q042 (2017): The differences registered result from the changes to the judicial organization (Law n. 40-A/2016, 22 December) in force since January 1, 2017.

42.1 the number of 1st instance courts with general jurisdiction decreased due to the increase of specialized courts.

Accordingly, 20 courts that were closed in 2014 were re-enacted as proximity judgments, new family sections were created as well as new sections with generic jurisdiction.

Q042 (2014): As a result of the new Judicial Organization Reform, the number of specialized first instance courts increased in 2014, while the enlargement of the court districts has been promoted. The reform melted the former judicial districts into 23 judicial districts, each containing two or more units, according to the demographic and economic reality of the respective geographic area. The difference between Q42.2 and Q43 is due to the inclusion of the 20 administrative courts in Q43. In Portugal, the administrative jurisdiction is autonomous, independent from the civil jurisdiction.

Q043 (General Comment): Q.43 -total: The number given under Q43.1.1 includes 17 first instance courts and 3 higher instance courts of administrative jurisdiction that are not included under Q.42.2. Administrative courts are part of another jurisdiction and under our law cannot be considered specialized courts.

Q043 (2020): «Commercial courts» deal with, inter alia, winding up of the company, insolvency and suspension and revocation of company resolutions.

«Internet related disputes»: only for Internet domain system (DNS) issues, which are under the jurisdiction of the Intellectual Property Court; for all other Internet related issues, general jurisdiction courts are competent. Internet related disputes were not included in the number of specialised courts for previous cycles.

«Other specialised courts»: includes all other courts that are not listed in the categories above.

This category includes Civil Central Judicial Divisions, Criminal Central Judicial Divisions, Civil Local Proximity Judicial Divisions, Criminal Local Proximity Judicial Divisions, Petty Criminality Local; Proximity Judicial Divisions, Criminal Examination Judicial Divisions, Enforcement Judicial Divisions, Central Criminal Examination Court, Competition Court and Maritime Court.

Q043 (2019): This category includes Civil Central Judicial Divisions, Criminal Central Judicial Divisions, Civil Local Proximity Judicial Divisions, Criminal Local Proximity Judicial Divisions, Petty Criminality Local Proximity Judicial Divisions, Criminal Examination Judicial Divisions, Enforcement Judicial Divisions, Central Criminal Examination Court, Intellectual Property Court, Competition Court and Maritime Court.

Q043 (2018): Changes to the judicial organization (Law n. 40-A/2016, 22 December) are in force since January 1, 2017.

Q043 (2017): Changes to the judicial organization (Law n. 40-A/2016, 22 December) are in force since January 1, 2017.

Other specialised 1st instance courts include, among others: Criminal Instruction Courts, Maritime Courts; Intellectual Property and Competition Court; Enforcement Courts.

Law 31/2012, 14 August, put in force the Rent and tenancy section (Balcão Nacional do Arrendamento) that is functioning since 8 January 2013.

Q043 (2015): In 2013-2014, the Reform of the Portuguese Judicial system was implemented. One of the major goals of this reform was to set up specialised courts on a national level, which led to a significant increase of commercial courts compared to previous years.

The difference between Q42.2 and Q43 is due to the inclusion of the 20 administrative courts in Q43. In Portugal, the administrative jurisdiction is autonomous, independent from the civil jurisdiction and cannot be considered as specialised courts.

Other courts:

Other specialised 1st instance courts include: Criminal Instruction Courts, Maritime Courts; Intellectual Property and Competition Court; Enforcement Courts.

Law 31/2012, 14 August, put in force the Rent and tenancy section (Balcão Nacional do Arrendamento) that is functioning since 8 January 2013

Q043 (2014): In 2013-2014, the Reform of the Portuguese Judicial system was implemented. One of the major goals of this reform was to set up specialised courts on a national level, which led to a significant increase of commercial courts compared to previous years.

For 2014, the category "other" subsumes as in 2012 Criminal Instruction Courts, Maritime Courts, Intellectual Property and Competition Court and Enforcement Courts. Additionally, the Rent and tenancy section (Balcão Nacional do Arrendamento) has been established by law in August 2012 and is functioning since 8 January 2013.

Q043 (2012): For 2012, the category “other” encompasses Criminal Instruction Courts, Maritime Courts, Intellectual Property and Competition Court and Enforcement Courts.

Q044 (2020): The difference between 2019 and 2020 is justified by the increase in new buildings.

Q044 (2018): Law n.º 19/2019, 19th February.

The recent amendments to the Law of the Organization of the Judiciary System are intended to ensure the reciprocal proximity of justice and citizens in two key segments: criminal jurisdiction and family and minors jurisdiction.

These new amendments aim to facilitate people's access to courts and combat the desertification of the interior regions of the country.

Q044 (2016): Law n.40-A/2016, 22 December and Decree-Law n. 86/2016, 27 December.

On the 1st of January 2017, 20 extinct districts were reopened, as well as 23 of the so-called proximity sections, in which judicial acts may now be concluded.

Romania

Q042 (General Comment): In Romania there are 175 judecatorii, first instance courts of general jurisdiction.

Q042 (2020): Law no. 304/2004 on the judicial organisation.

The number of „judecatorii” has decreased by one between 2019-2020 because the activity of Judecătoria Insuratei was suspended so it no longer appears in the statistics. 175 represent the first instance courts with general jurisdiction in this matter, even if tribunals, courts of appeal and the High Court may also judge first instance cases. Starting from 2020 the methodology of presentation of data changed and only “judecatorii” are counted as first instance courts of general jurisdiction, even if tribunals, courts of appeal and the High Court may also judge first instance cases.

Q042 (2017): There are 176 first instance courts, 42 tribunals and 15 courts of appeals. All of the first instance courts deal with cases in first instance, but also the tribunals and the courts of appeal may have material or personal jurisdiction in first instance.

Q042 (2016): There are 176 first instance courts, 42 tribunals and 15 courts of appeals. All of the first instance courts deal with cases in first instance, but also the tribunals and the courts of appeal may have material or personal jurisdiction in first instance.

Q043 (2020): Law no. 304/2004 on the judicial organisation.

Q044 (2020): Law no. 304/2004 on the judicial organisation.

It should be mentioned that some of the first instance specialised courts share the location with „judecatorii”.

Q044 (2014): According to 2014 data, a bill on closing 30 courts and 30 attached prosecution offices with low volume of work was initiated by the Ministry of Justice with the support of the Superior Council of Magistracy of Romania. The bill was rejected by the Parliament. The Superior Council of Magistracy seeks for alternative solutions for the reallocation of the resources.

Slovakia

Q042 (2020): The Constitutional Court is not included, since it was not included in previous cycles. According to the explanatory note - "In some countries, other bodies can be referred to as courts. When they are not part of the regular judiciary system, they should not be considered here (e.g. courts of audits, constitutional courts when not dealing with individual cases but rather with questions of compliance with constitution and international law etc.)." In Slovak republic the Constitutional Court can deal with some rare individual cases.

Q042 (2019): The entire court system of the Slovak republic consists of 54 District Courts, 8 Regional Courts, The Specialized Criminal Court and the Supreme Court of the Slovak republic.

Q042 (2018): The entire court system of the Slovak republic consists of 54 District Courts, 8 Regional Courts, The Specialised Criminal Court and

The Supreme Court of the Slovak republic

Q042 (2017): The court system of the Slovak republic consists of 54 District Courts, 8 Regional Courts, Specialised Criminal Court and Supreme Court of the Slovak republic

Q042 (2016): The court system of the Slovak republic consists of 54 District Courts, 8 Regional Courts, The Specialised Criminal Court and The Supreme Court of the Slovak republic

Q043 (General Comment): In the Slovak court system there are 8 Regional courts which are the courts with dual competence. The Regional courts are the courts of appeal with the general jurisdiction in the civil, commercial and the criminal cases. In the appellate procedure they decide the appeals lodged against the decisions of all 54 District courts within their local jurisdiction. At the same time the Regional courts have the jurisdiction as the courts of first instance in administrative matters. They act as the administrative courts.

The Specialized Criminal court is competent to judge the grave criminal matters enumerated in the § 14 of the Criminal procedure Code (e. g. premeditated murder, corruption, terrorism, organised crime, severe economic crimes, damaging the financial interests of the EU etc.). Highest instance courts are the Supreme Court and the Constitutional Court.

Q043 (2020): The first instance administrative cases agenda is concentrated in eight regional courts, which also act as general courts of appeal. The question (43.) defines specialized courts as legal entities, so it cannot be understood that the administrative cases agenda is centralized on specialized courts as legal entities, but it is concentrated on 8 regional general courts. These 8 general regional courts are already legal entities included in Q42, line 1.2.

Q044 (2020): The Constitutional Court is not included in the 44 answer.

Q044 (2014): According to 2014 data, on 1st July 2016, the new Civil Litigious Procedure Code will enter into force. It introduces the so called "causal jurisdiction" of first instance courts. It means that certain types of civil claims will belong to the jurisdiction of only some of the first instance courts. This will apply e.g. for individual labour disputes, arbitration disputes, disputes arisen from bill of exchange etc.

Slovenia

Q042 (General Comment): First instance courts of general jurisdiction: 44 local courts + 11 district courts = 55

Second instance courts of general jurisdiction: 4 higher courts

Specialised courts: 3 labour courts (1st instance) + 1 labour and social court (1st instance) + 1 Administrative court (1st instance) + 1 Higher labour and social Court (2nd instance) = 6

Highest instance courts of general jurisdiction: The Supreme Court (also highest instance court for specialised courts)

Q042 (2018): First instance courts of general jurisdiction: 44 local courts + 11 district courts = 55

First instance specialised courts: 3 labour courts + 1 labour and social court + 1 Administrative court = 5

All courts: first instance courts of general jurisdiction (55, see Q42.1) + first instance specialised courts (4 labour courts + 1 social court + 7 branch offices of labour and social courts + 1 administrative court + 3 branch offices of administrative court) + second instance courts and courts of appeal (4 higher courts of general jurisdiction + 1 higher labour and social court) + the Supreme court = 77.

Q042 (2017): First instance courts of general jurisdiction: 44 local courts + 11 district courts = 55

First instance specialised courts: 3 labour courts + 1 labour and social court + 1 Administrative court = 5

All courts: first instance courts of general jurisdiction (55, see Q42.1) + first instance specialised courts (4 labour courts + 1 social court + 7 branch offices of labour and social courts + 1 administrative court + 3 branch offices of administrative court) + second instance courts and courts of appeal (4 higher courts of general jurisdiction + 1 higher labour and social court) + the Supreme court = 77.

Q042 (2016): First instance courts of general jurisdiction: 44 local courts + 11 district courts = 55

First instance specialised courts: 3 labour courts + 1 labour and social court + 1 Administrative court = 5

All courts: first instance courts of general jurisdiction (55, see Q42.1) + first instance specialised courts (4 labour courts + 1 social court + 7 branch offices of labour and social courts + 1 administrative court + 3 branch offices of administrative court) + second instance courts and courts of appeal (4 higher courts of general jurisdiction + 1 higher labour and social court) + the Supreme court = 77.

Q042 (2015): legal entities:

First instance courts of general jurisdiction: 44 local courts + 11 district courts = 55

First instance specialised courts: 3 labour courts + 1 labour and social court + 1 administrative court = 5

geographic locations:

All the courts = 77

- first instance courts of general jurisdiction = 55 (Q42.1); additionally

- first instance specialised courts = 4 labour courts + 1 social court + 7 branch offices of labour and social courts + 1 administrative court + 3 branch offices of administrative court = 16; additionally

- second instance courts and courts of appeal = 4 higher courts of general jurisdiction + 1 higher labour and social court = 5; and finally

- supreme court: the Supreme Court of the Republic of Slovenia = 1.

Q043 (General Comment): Although the given answer for 'labour courts' is 4 and 'insurance and/ or social welfare courts' at first instance is 1, the total number of these courts is 4, as one of the labour courts and the social court form a single legal entity – the Labour and social court in Ljubljana.
Concerning specialised courts – higher instances, although the given answer for 'labour courts' is 1 and 'insurance and/ or social welfare courts' is 1, the total number of these courts is 1, as they form a single legal entity – the Higher labour and social Court.

Q043 (2019): Please see general comment.

Q044 (General Comment): First instance courts: first instance courts of general jurisdiction (55, see Q42.1) + first instance specialised courts (4 labour courts and social court + 7 branch offices of labour and social courts + 1 administrative court + 3 branch offices of the Administrative court) =70

All courts: In addition to above also 4 higher courts of general jurisdiction + 1 higher labour and social court + the Supreme court = 76.

Q044 (2018): A change in the organisation of first instance courts (judicial map), as well as first instance judges' position is being prepared by the Ministry of Justice - see Q208.

Q044 (2016): Ministry of Justice is preparing court network reform. Existent first instance court network is considered as inefficient and insufficient. The main goal of this reform is to set up a system, which could assure better quality and efficiency of adjudication, specialization of judges and even allocation of cases. Furthermore, reform still should assure proper access to the courts and financial efficiency. Ministry of Justice is also taking in consideration different system of the nomination of judges, nomination of Supreme Court judges and president of the Supreme Court. Existent nomination procedure of judges is too rigid and does not enable taking prompt actions when the post is vacant.

Q044 (2014): According to 2014 data, discussions about the reorganization of the structure of courts have been initiated. Following the CEPEJ Guidelines on the creation of judicial maps to support access to justice within a quality judicial system (CEPEJ(2013)7) the change should be gradual. The reduction in the number of courts regarding geographical locations is not foreseen, but reorganization in the powers of local courts that are organizational units of district courts might be needed. There are local courts that have only a few (3-5) judges, which is not rational in the sense of court management. Such local courts might start dealing only with certain kinds of cases, with other local courts in the same district dealing with other kinds of cases, having de facto specialized local courts.
Nevertheless, these changes are still in the initial debate phase, so no formal proposal can be presented yet.

Spain

Q042 (General Comment): Courts counted as First Instance: Courts of first instance (civil), Courts of First Instance and Instruction (civil and criminal), Family Courts (Civil) and Courts of Mortgage Enforcement.
Courts counted as Second Instance General Jurisdiction: Sections of the Provincial Courts (except special sections) and Civil and Criminal Chambers of the Superior Courts of Justice of the Autonomous Regions.

Q043 (General Comment): The Arbitration Court was created by decision of the General Council of the Judiciary of 25 November 2010. The latter assigns exclusive jurisdiction over arbitration matters to the Court of First Instance No. 101 of Madrid. This measure seeks to foster the development of uniform criteria in court proceedings for the assistance and control of arbitration in Madrid.

Other specialised courts include: Penal courts; Penal courts specialized in violence against women (courts for criminal trial, that have been assigned only to cases of gender violence); violence against women courts (courts of criminal investigation and civil proceedings related to gender violence cases); juvenile courts; Prison courts; foreclosure proceedings courts; Civil Capacity courts and Civil registr

Q043 (2020): Commercial courts - new units have been established.

Q043 (2019): Courts of violence against women 106

Foreclosure proceedings Courts: 3

Court of arbitration: 1

Civil capacity courts: 13

Criminal courts: 348

Criminal courts specialized in Violence against women, 31

Juvenile Courts: 82

Prison courts: 51

Civil Registries: 28

Q043 (2018): Between 2016 and 2018, more first instance courts have become specialized in family matters. Courts of violence against women: 106
Foreclosure proceedings Courts: 3
Court of arbitration: 1
Civil capacity courts: 12
Criminal courts: 341
Criminal courts specialized in Violence against women, 32
Juvenile Courts: 82
Prison courts: 51
Civil Registries: 28
Additionally (and they are not accounted) there are 26 military courts that are not part of the Judiciary but they are inspected by it)

Q043 (2017): -338 Criminal courts
-32 Criminal courts specialized in violence against women
-106 violence against women courts
-82 juvenile courts
-51 Prison courts
-3 foreclosure proceedings courts
-1 Arbitration court
-18 Civil Capacity courts
- 28 Civil register offices

Q043 (2016): - 335 Criminal courts
-30 Criminal courts specialized in violence against women
-106 violence against women courts
-83 juvenile courts
-51 Prison courts
-3 foreclosure proceedings courts
-1 Arbitration court
-18 Civil Capacity courts
- 28 Civil register courts

Q043 (2015): Other specialised courts include: 343 Penal courts; 23 Penal courts specialized in violence against women; 106 violence against women courts; 83 juvenile courts; 50 Prison courts; 3 foreclosure proceedings courts; 1 Arbitration court; 12 Civil Capacity courts and 28 Civil registry.

The Commercial Courts deal with insolvency issues.

Military Courts have not been accounted because they do not belong to the Judiciary (except the Supreme Court 5th room). There are other 26 Military Courts.

Q043 (2014): In 2014, the category “other” encompasses: 357 Penal courts; 23 Penal courts specialized in violence against women; 106 violence against women courts; 83 Juvenile courts; 50 Prison courts; 16 Courts for disabled people (capacity courts), 26 Civil Register Courts, 3 Foreclosure proceedings courts (mortgage courts); 1 Arbitration court. The Decanatos exclusive are not included in this exercise because these organs are not courts and have rather administrative nature.

Q043 (2012): In 2012, the category “other” encompasses: 380 Penal courts; 17 Penal courts specialised in violence against women; 106 Violence against women courts; 82 Juvenile courts; 1 Juvenile Enforcement court; 50 Prison courts; 9 Capacity courts; 26 Civil Register courts; 8 Decanatos exclusive; 4 Labour enforcement courts; 4 Mortgage courts and one Arbitration Court.

Q044 (General Comment): One building usually houses different courts. For example, in Madrid one building (Castilla Square) houses 47 unipersonal Courts.

Q044 (2018): The traditional structure of a Court includes a Judge (or Magistrate), a Judicial Counsellor, and several civil servants (the exact number depends on many circumstances). The New Judicial Office (Nueva Oficina Judicial) has been implemented in many territories and its development continues. The New Judicial Office (NOJ) has, as base, the called 'Procedural Unit of Direct Support' (UPAD), a small office with personnel necessary for the strict aid of the work of the Judge. On the other hand, and for the uniform processing of repetitive tasks, the called Common Procedural Services have been created. The Judicial Counsellor is the Director of these services, and is responsible of processing the phase of the judicial file of a strictly procedural nature.

Q044 (2016): The traditional structure of a Court includes a Judge (or Magistrate), a Lawyer of the Administration of Justice, and several civil servants (the exact number depends on many circumstances). The New Judicial Office (Nueva Oficina Judicial) has been implemented in many territories and its development continues. The New Judicial Office (NOJ) has, as base, the called 'Procedural Unit of Direct Support' (UPAD), a small office with personnel necessary for the strict aid of the work of the Judge. On the other hand, and for the uniform processing of repetitive tasks, the called Common Procedural Services have been created. The Lawyer of the Administration of Justice is the Director of these services, and is responsible of processing the phase of the judicial file of a strictly procedural nature.

Q044 (2014): On the occasion of the 2014 evaluation, the attention was drawn on the deployment in the entire country of the Judicial Office, the new model for organising courts of law and the creation of the Instance Courts (Tribunales de Instancia), a new model of collegial courts aimed at replacing local courts belonging to the same judicial district.

Indicator 2: The judicial organisation

Comments provided by the national correspondents organised by question no.

Question 042. Number of courts - legal entities.

Question 043. Number of specialised courts – legal entities.

Question 044. Number of courts - geographic locations.

Question 042

Austria

(2020): In 2020 in Austria, the number of courts considered as legal entities is 152. Namely, there are 133 courts of general jurisdiction and 19 specialised courts. Among the 133 legal entities of general jurisdiction, 128 act at first instance, 4 at second instance and one at third instance. More precisely, the 115 District courts and the 13 Regional courts of general jurisdiction intervene as first instance courts. It is noteworthy that the 7 other regional courts that have specialised jurisdiction are not taken into consideration here, but are counted as specialised first instance courts (infra). It is to be mentioned that the peculiarity of the 20 Austrian Regional courts is that even though these are first instance courts, some of them are also competent in respect of appeals against District courts' decisions. The 4 Higher Regional Courts have appeal competence in respect of all civil and criminal cases.

The Supreme court is the highest instance court in civil and criminal matters.

(2014): From January 1st 2013 to July 1st, 2014 a number of district courts merged. In 2014, there are 129 first instance district courts which is less than 132 (number communicated for 2013) but still not complying with the aim of 115.

Belgium

(General Comment): The reform of the justices of the peace, with a decrease in geographical locations, was consolidated by the law of December 25, 2017. The implementation of the reform is carried out between 2016 and 2019.

(2020): "1.1 First instance Courts of general jurisdiction: 13 first instance courts, 162 justices of the peace, 11 assize courts (one per province and two in Brussels) and 15 police courts. "Second instance Courts of general jurisdiction": 13 courts of first instance that rule as appeal courts on the decisions of the justices of the peace and 5 appeal courts.

Vertical consistency in the table is not ensured, as the 13 courts of first instance with dual jurisdiction (1 and 2 instances) have been counted only once in the totals.

For the current evaluation round (2020 data), justices of the peace and police courts are counted as general courts. In previous cycles, they were categorized as specialized courts of first instance. As of 2020, the 11 assize courts are also included in the data. Insofar as the Conseil d'Etat intervenes both in first instance and on appeal, it has been taken into account in both columns of Q43, but only once in the total of Q42.2."

(2017): The law of 25 December 2017 amended the number of cantons of justices of the peace from 187 to 162. The implementation of this reform will take place until 2019.

(2016): A reform of the justices of the peace is under way, leading to a reduction in the number of hearing locations.

(2014): Following a reform of the judicial map, the number of legal entities decreased: from 27 to 13 first instance courts, from 27 to 9 labour courts, from 27 to 9 commercial courts, and from 34 to 15 police courts.

Bulgaria

(General Comment): There are the following courts in Bulgaria: District Courts- 113- The District Court is the main court of first instance. It has jurisdiction over all cases except those which are statutorily assigned to another court. It deals with civil, criminal and administrative-criminal cases. The decisions of the district courts are subject to appeal before the respective Regional court. Provincial/Regional Courts- 28- The Provincial Courts act as courts of first and second instance. As courts of first instance, they examine a precisely defined category of cases involving significant sums or substantial societal interest. When acting as a second (appellate) instance, they re-examine decisions taken by the district courts. Administrative Courts- 28 Specialized Criminal Court -1 Courts of Appeals - 5 Specialized Court of Appeal - 1 Military Courts - 3 - The Military courts consider criminal cases of crimes committed by servicemen or officials of the Interior Ministry at first instance. Military Court of Appeal - 1 Supreme Court of Cassation - 1 Supreme Administrative Court - 1

(2020): Judiciary System Act

Article 65

All courts are legal entities funded by the budget and shall be represented by the administrative head or another designated person. In the discharge of the functions of administrative head, orders, instructions and rules shall be issued in accordance with the statutory competence. The general assembly, the plenum of the Supreme Cassation Court and the Plenum of the Supreme Administrative Court shall be bodies of the respective court, which rule only in the cases specified in the law, give opinions, adopt rules and decisions by open ballot and a majority of more than half of the judges present.

(2019): There are the following courts in Bulgaria: District Courts- 113- The District Court is the main court of first instance. It has jurisdiction over all cases except those which are statutorily assigned to another court. It deals with civil, criminal and administrative-criminal cases. The decisions of the district courts are subject to appeal before the respective Regional court. Provincial/Regional Courts- 28- The Provincial Courts act as courts of first and second instance. As courts of first instance, they examine a precisely defined category of cases involving significant sums or substantial societal interest. When acting as a second (appellate) instance, they re-examine decisions taken by the district courts.

Administrative Courts- 28

Specialized Criminal Court -1

Courts of Appeals - 5

Specialized Court of Appeal - 1

Military Courts - 3 - The Military courts consider criminal cases of crimes committed by servicemen or officials of the Interior Ministry at first instance.

Military Court of Appeal - 1

Supreme Court of Cassation - 1

Supreme Administrative Court - 1

(2018): 42.1. District Court - 113

The District Court is the main court of first instance. It has jurisdiction over all cases except those which are statutorily assigned to another court. It deals with civil, criminal and administrative-criminal cases. The decisions of the district courts are subject to appeal before the respective Regional court.

Provincial/ regional courts- 28

The provincial courts act as courts of first and second instance. As courts of first instance, they examine a precisely defined category of cases involving significant sums or substantial societal interest. When acting as a second (appellate) instance, they re-examine decisions taken by the district courts.

Military first instance courts- 3

Military courts consider criminal cases of crimes committed by servicemen or officials of the Interior Ministry at first instance.

Croatia

(General Comment): The reform of judicial map implemented in 2015 decreased the number of Misdemeanour Courts from 63 to 22. Therefore, in accordance with the Act on Territorial Jurisdiction and Seats of Courts (Official Gazette, No. 128/14) in force, there are currently 22 Misdemeanour Courts in function. On the 1st of January 2019. new Courts Areas and Seats Act came into force. From the organizational aspect, the most important organizational measure was the merging of misdemeanor courts into municipal courts, and few municipal courts were reopened after 2015. That is why we have now less first instance specialized courts than in 2018. and more courts of general jurisdiction (22 courts which were in 2018. plus 8 courts which were reopened after the new law came into force).

(2020): On the 1st of January 2019. new Courts Areas and Seats Act came into force. From the organizational aspect, the most important organizational measure was the merging of misdemeanor courts into municipal courts, and few municipal courts were reopened after 2015. That is why we have now less first instance specialized courts than in 2018. and more courts of general jurisdiction (22 courts which were in 2018. plus 8 courts which were reopened after the new law came into force).

(2019): On the 1st of January 2019. new Courts Areas and Seats Act came into force. From the organizational aspect, the most important organizational measure was the merging of misdemeanor courts into municipal courts, and few municipal courts were reopened after 2015. That is why we have now less first instance specialized courts than in 2018. and more courts of general jurisdiction (22 courts which were in 2018. plus 8 courts which were reopened after the new law came into force).

(2016): There was a reform of judicial map implemented in 2015 in which the number of Misdemeanour Courts has decreased from 63 to 22. Therefore, in accordance with the Act on Territorial Jurisdiction and Seats of Courts (Official Gazette, No. 128/14) in force, there are currently 22 Misdemeanour Courts in function.

(2014): In 2014, according to the Act on Territorial Jurisdiction and Seats of Courts, there are 67 first instance courts but the Municipal Court in Novi Zagreb is not in function while the Municipal Criminal Court in Zagreb is a specialized court counted in Q42.2. Accordingly, there are 65 actually functioning first instance courts of a general jurisdiction.

(2013): For 2013, the Ministry of Justice added to the number of geographic locations all offices of a specific court that are located outside of the seat of the court, in which judicial activities are undertaken. The number of courts did not increase in 2013. Also, 66 municipal courts (65 municipal courts and 1 Municipal Criminal Court in Zagreb) were in function out of total 67 first instance courts prescribed by the Act on Territorial Jurisdiction and Seats of Courts. The Municipal Court in Novi Zagreb is still not in function.

Cyprus

(2020): Cyprus has a two-tier system, therefore the Supreme Court is the second, highest and final instance court. The data for Supreme Court in this question are included in the highest instance courts, but the case flow data of the Supreme Court are included in the second instance cases - questions 97 and 98.

(2017): x

(2014): The number of courts changed in 2014. Instead one labour court in the district of Nicosia, there are 3 separate courts in different districts. This applies as well as for rent and tenancies court. One more family court was also established. The Assize court deals with serious criminal offences only.

Czech Republic

(2020): 2. Supreme Administrative Court

(2017): There are no specialised first instance courts, but judges within individual courts are specialised (e.g. for family, labour and enforcement cases at district courts, and insolvency and administrative cases at regional courts as first instance courts).

(2016): There are no specialised first instance courts, but judges within individual courts are specialised (e.g. for family, labour and enforcement cases at district courts, and insolvency and administrative cases at regional courts as first instance courts).

Denmark

(General Comment): District courts are called 1st instance courts, the Land Registration court and the Maritime and Commercial Court are considered as first instance specialized courts. Second and third instance courts are the two High Courts and the Supreme Court.

(2019): Commercial and naval court
Land Registration court.

(2018): Data has not changed on this point.

(2017): District courts are called 1st instance courts, the Land Registration court and the Maritime and Commercial Court are considered as first instance specialized courts. Second and third instance courts are the two High Courts and the Supreme Court.

Estonia

(General Comment): Estonia has 17 courthouses of county courts (first instance courts), 4 courthouses of administrative courts (first instance courts), 2 courthouses of appellate courts (second instance courts) and 1 courthouse of the Supreme Court (highest instance court), all together 24 courthouses. However, as some of the courts are situated in the same house (e.g Tallinn Administrative Court and Tallinn Circuit Court) and taking into account the fact that Pärnu County Court has a courthouse that is divided between two locations, there are 20 actual geographical locations of Estonian courts.

(2019): A small courthouse was adjoined with another small courthouse. The distance between them was less than 50 km.

(2016): A small courthouse was adjoined with another small courthouse. The distance between them was less than 50 km.

Finland

(General Comment): In Finland, there are 20 district courts with 36 offices, five courts of appeal, the Supreme Court, six administrative courts, the Supreme Administrative Court, the Market Court, the Labour Court and the Insurance Court. One of the administrative courts, the Labour Court and the Market Court are located in the same location. In total there are 36 courts in 52 geographic locations.

(2020): The number of district courts was reduced at the re-structuring on 1.1.2019.

(2019): The Court Network has been modified.

(2016): Some geographic locations of the District Courts have been shut down.

(2014): In 2014, in Finland there are 81 courts as geographic locations, namely 27 District Courts, 13 Branch offices of District Courts, 25 Auxiliary courtrooms of District Courts (23 till 2014), 3 specialized courts, 6 Administrative Courts (8 till 2014), 5 Courts of Appeal (6 till 2014), the Supreme Court and the Supreme Administrative Court.

France

(2020):

There are 168 first instance courts of general jurisdiction, 37 second instance courts of general jurisdiction, and 1 highest instance court of general jurisdiction in the French judicial system.

(2019): See the comment on specialised first instance courts in the frame of Q43.

(2018): With regard to the ordinary courts, the number indicated in the 2016 questionnaire includes the local courts that have been abolished since 1 July 2017 (Act No. 2011-1862 of 13 December 2011), their powers having been taken over by the courts of first instance in civil matters and by the police courts attached to the courts of first instance in criminal matters. The number of 786 corresponded to: 164 TGI + 4 TPI + 307 TI + 311 jprox. Since then, TIs have been removed from the category of ordinary courts of first instance since they constitute specialised courts of first instance. The number of 479 ordinary courts of first instance therefore corresponded to 164 TGI + 4 TPI + 311 TPROX. The figure of 168 is thus explained by the abolition of the 311 local courts since 1 July 2017, as indicated in the comments in the questionnaire. Thus: $479 - 311 = 168$ ordinary courts of first instance (164 TGI + 4 TPI).

Germany

(General Comment): Even though the German legal system generally knows three instances (first instance, appeal on questions of fact and law, appeal on questions of law only), the different kinds of courts do not correspond directly to the stages of appeal. Local Courts (Amtsgerichte) are first instance courts with the Regional Courts (Landgerichte) as next stage of appeal (exceptions apply in family matters). However, Regional Courts do not only serve as second instance courts but also deal with first instance cases. Whether a case is initially dealt with at a Local or Regional Court depends (among other things) on the value at dispute (civil cases) or on the kind of the suspected offence (criminal cases). Similarly the Higher Regional Courts may serve as Second Instance courts (for cases that were initially dealt with at Regional Courts or for cases in family matters) and as Highest Instance Courts for cases that were initiated at the Local Courts (especially in criminal cases). The Constitutional Courts of the Länder and the Federal Constitutional Court (Bundesverfassungsgericht) are not part of the stages of appeal. Constitutional jurisdiction is also seen as separate from general and specialised jurisdiction. Constitutional Courts review legislation with regard to constitutional provisions. The Federal Constitutional Court mainly assesses alleged violations of basic rights by public authorities. However, in order to have access to the Constitutional Courts, the regular path of legal proceedings must generally be exhausted.

(2020): 1.1 First instance courts include: 638 Local Courts, 115 Regional Courts

1.2 Second instance courts include: 115 Regional Courts, 24 Higher Regional Courts

1.3 Highest instance courts include: 24 Higher Regional Courts, Federal Supreme Court

The vertical consistency is not fulfilled, since the 115 Regional Courts appear as "First instance courts" (1.1) as well as "Second instance courts" (1.2) and 24 Higher Regional Courts appear as "Second Instance Courts" (1.2) as well as "Highest Instance Courts" (1.3).

For further information please consult the General Comment.

The total number of specialised courts includes 16 Constitutional Courts of the Länder.

Greece

(2020): In highest instance courts include the Supreme Court (Areios Pagos). In First instance courts of general jurisdiction are included in the number 259, 196 local and District Criminal Courts and 63 courts of first degree.

Hungary

(General Comment): The Hungarian court system is as follows: Kúria (1) – the Hungarian Supreme Court - its jurisdiction in criminal, civil and administrative cases covers adjudication of extraordinary remedies and appeals, adopting uniformity decisions. It also decides if municipal decrees are in compliance with higher level legislation. Regional courts of appeal (5) – their jurisdiction in criminal and civil cases covers the adjudication of appeals received from the regional courts (third instance in criminal cases). Regional courts (20) – their jurisdiction in criminal, civil and administrative cases covers the adjudication of appeals received from district courts, administrative and labour courts, and procedure at first instance in certain criminal and civil cases. District courts (113) – their jurisdiction in criminal and civil cases covers the procedures at first instance. The number of judges in the largest district court is 357, whereas the smallest court operates with one judge. Out of the 113 district courts, the district courts in the seat of the regional courts have special competences in many cases.

(2020): The Hungarian court system is as follows: Kúria (1) – the Hungarian Supreme Court - its jurisdiction in criminal, civil and administrative cases covers adjudication of extraordinary remedies and appeals, adopting uniformity decisions. It also decides if municipal decrees are in compliance with higher level legislation. Regional courts of appeal (5) – their jurisdiction in criminal and civil cases covers the adjudication of appeals received from the regional courts (third instance in criminal cases). Regional courts (20) – their jurisdiction in criminal, civil and administrative cases covers the adjudication of appeals received from district courts, administrative and labour courts, and procedure at first instance in certain criminal and civil cases. District courts (113) – their jurisdiction in criminal and civil cases covers the procedures at first instance. Out of the 113 district courts, the district courts in the seat of the regional courts have special competences in many cases. Administrative and labour courts (20) were dismissed on the 31st of March 2020. From this date Regional Courts deal with labour cases on first instance while administrative cases are dealt with by eight Regional Court on a regional level.

(2019): 113 District Courts (first instance courts of general jurisdiction)

20 Administrative and Labour Courts (specialized first instance courts)

20 Regional Courts (second instance courts of general jurisdiction + first instance courts in cases of higher importance)

5 Regional Courts of Appeal (second instance courts in cases of higher importance)

1 Supreme Court ("Kúria" - special judicial review)

It has to be noted that Administrative and Labour Courts are merged into the regional courts on the 31st of March 2020. Since 1st of April 2020 every regional court deals with labour cases on first instance (second instance are the regional courts of appeal) and 8 regional courts have special administrative law department dealing with first instance cases (second instance is the Supreme Court).

(2018): Two new district courts were established (one in 2017 in the city of Szigetszentmiklós, another one in 2019 in the city of Érd).

113 District Courts (first instance courts of general jurisdiction)

20 Administrative and Labour Courts (specialized first instance courts)

20 Regional Courts (second instance courts of general jurisdiction + first instance courts in cases of higher importance)

5 Regional Courts of Appeal (second instance courts in cases of higher importance)

1 Supreme Court (special judicial review)

(2017): All courts include :

112 District Courts

20 Regional Courts

20 Administrative and Labour Courts

5 Regional Courts of Appeal

1 Supreme Court (Kúria)

The Hungarian court system is as follows: Kúria (1) – the Hungarian Supreme Court - its jurisdiction in criminal, civil and administrative cases covers adjudication of extraordinary remedies and appeals, adopting uniformity decisions. It also decides if municipal decrees are in compliance with higher level legislation. Regional courts of appeal (5) – their jurisdiction in criminal and civil cases covers the adjudication of appeals received from the regional courts (third instance in criminal cases). Regional courts (20) – their jurisdiction in criminal, civil and administrative cases covers the adjudication of appeals received from district courts, administrative and labour courts, and procedure at first instance in certain criminal and civil cases. District courts (112) – their jurisdiction in criminal and civil cases covers the procedures at first instance. The number of judges in the largest district court is 357, whereas the smallest court operates with one judge. Out of the 111 district courts, the district courts in the seat of the regional courts have special competences in many cases. Administrative and labour courts (20) – their jurisdiction covers procedures at first instance in individual and collective labour disputes and in administrative cases. First instance administrative and labour courts (20) started operating on 1 January 2013 as first instance specialized courts. Thus from this date the number of first instance courts of general jurisdiction is 112.

Ireland

(General Comment): In Ireland, there are only three first instance courts (as legal entities) exercising general jurisdiction for the entire State (the High Court, the Circuit Court and the District Court). Each of those three courts has a single court president only, who exercises a nationwide remit for his/her court. The number of geographic locations reflects the physical location serving as seats or venues for the three jurisdictions.

(2016): The specialised courts referred to are the two Special Criminal Courts the jurisdiction of which generally relates to trial of terrorism- and organised crime-related offences.

The increase of one location over the figure provided for 2014 refers to the temporary relocation of the Dublin District Court's Drug Treatment Court in 2016.

Italy

(2018): In 2012-2013 we went through a major reform of the judicial map. In particular, a great number of justice of peace offices (initially 846) were shut down. However, each Italian municipality had (and still has) the opportunity to preserve the office at their own expenses. For this reason, each year a series of Justice of Peace offices administered by the municipality might be re-opened or closed. 3 justice of peace offices closed between 2017 and 2018.

(2017): In 2012-2013 we went through a major reform of the judicial map. In particular, a great number of justice of peace offices (initially 846) were shut down. However, each Italian municipality had (and still has) the opportunity to preserve the office at their own expenses. For this reason, each year a series of Justice of Peace offices administered by the municipality might be re-opened or closed.

Latvia

(2020): In the total number of specialised courts - legal entities are included 1 Administrative court and 1 Administrative Regional (appeal) court. Starting from 31.03.2021. in Latvia is created and operates the Economic Court. The Economic Court is not included in the total number of specialized courts. In Latvia is also Constitutional court - which within the jurisdiction specified in the Constitution of the Republic of Latvia and in this Law, shall adjudicate matters regarding the conformity of laws and other regulatory enactments with the Constitution, as well as other matters regarding which jurisdiction is conferred upon it by this Law. The Constitutional court is not included in the total number of the courts.

(2019): Since the reform of March, 2018, the number of first instance courts has been reduced to 10 legal entities at first instance (9 general + 1 administrative). There are also 6 appellate courts and Supreme court. In 2019 was completed reform of Land Register Units, which are included in the composition of district (city) courts. The number of legal entities doesn't changes, but number of courts per geographic locations therefore differs. The data regarding the geographic locations are indicated on 31.12.2019.

(2018): Since the reform of March, 2018, the number of first instance courts has been reduced to 10 legal entities at first instance (9 general + 1 administrative). There are also 6 appellate courts and Supreme court.

(2017): The number of first instance courts (legal entities) is indicated on 31.12.2017., in Latvia starting from 2015 till March, 2018 was a reform where court map was revised. The number of first instance courts (legal entities) starting from March, 2018 is 9. As regards the specialised court - there is only one specialised court the Administrative court with 5 court houses.

(2016): There is only one specialised court the administrative court with 5 court houses

Lithuania

(General Comment): Regional courts are first instance courts for criminal and civil cases assigned to their jurisdiction by law, also, these regional courts are appeal instance for judgments, decisions, rulings and orders of district courts. Taking this into account, regional courts are counted as first instance courts of general jurisdiction (1.1) and as second instance courts of general jurisdiction (1.2), but in the totals (1) regional courts are counted only once as one legal entity.

(2020): 1.1. 12 district courts and 5 regional courts (the latter are adjudicating certain categories of cases as first instance courts);

1.2. 5 regional courts and the Court of Appeal of Lithuania;

2. 2 regional administrative courts and the Supreme Administrative Court of Lithuania.

(2018): Number of courts (as legal entities) in Lithuania decreased from 1st January 2018 according to the Law on Reorganization of Courts of the Republic of Lithuania (Law of 23rd June, 2016 No. XII-2474). Instead of 49 district courts (as legal entities) there are now 12 district courts (some of them have court houses), instead of 5 regional administrative courts there are now 2 of them (one has houses). The number of first instance courts of general jurisdiction (legal entities) in point 42.1 implies 5 regional courts (of general jurisdiction) which are first instance for criminal and civil cases assigned to its jurisdiction by law. These courts also are appeal instance for judgments, decisions, rulings and orders of district courts, so their number is also included in the number of all courts at point 42.3.

(2017): From January 1, 2018, there are 22 left (17 first instance courts, 2 first instance courts of special jurisdiction, 2 courts of appeal (1 of them is specialized court) and 1 court of cassation).

(2014): As regional courts of Lithuania function not only as courts of appeal, but also as courts of first instance, for 2014, the number of these courts is also included in the number of first instance courts of general jurisdiction. This was not the case in earlier years.

Luxembourg

(General Comment): "42.1.1: three justices of the peace and two district courts

42.1.2: one Court of Appeal 42.1.3: one Court of Cassation

42.2: Total specialized courts (all instances) Q43"

(2020): "In addition to the courts proper, the law of 27 July 1997 on the organization of the Constitutional Court established this court, which is seized, on a preliminary basis, when a question relating to the conformity of a law to the Constitution arises before a court of the judicial or administrative order. It rules, by means of a judgment, on the conformity of laws with the Constitution, with the exception of those concerning the approval of treaties.

When a party raises a question concerning the conformity of a law with the Constitution before a court of the judicial or administrative order, that court is obliged to refer the matter to the Constitutional Court, except when it considers that a decision on the question raised is not necessary to render its judgment, that the question is unfounded or that the Constitutional Court has already ruled on a question with the same object.

If a court considers that a question of conformity of a law with the Constitution arises and that a decision on this point is necessary to render its judgment, it must raise it of its own motion after first inviting the parties to present their observations. The parties are admitted to conclude and plead before the Constitutional Court through the ministry of a lawyer registered in list I of the tables drawn up annually by the Bar Associations.

The judgments of the Constitutional Court are published in the Official Journal of the Grand Duchy of Luxembourg within thirty days of their delivery. (Portal of Justice: <https://justice.public.lu/fr/organisation-justice/cour-constitutionnelle.html>) "

(2017): 42.1: 3 justices of the peace and 2 district courts

42.2: Please note that the total of 043 is not identical to the total in 042, as most of the specialized courts are in fact specialized sections of a general court. E.g. the commercial courts (which also deal with insolvency cases) are specialized sections of the district court (tribunal d'arrondissement). Only the administrative, military and 1st instance social security courts are selfstanding.

(2016): 42.1: 3 justices of the peace and 2 district courts

42.2: Please note that the total of 043 is not identical to the total in 042, as most of the specialized courts are in fact specialized sections of a general court. E.g. the commercial courts (which also deal with insolvency cases) are specialized sections of the district court (tribunal d'arrondissement). Only the administrative, military and 1st instance social security courts are selfstanding.

Malta

(2020): The 1st instance courts of general jurisdiction are:

- the Court of Magistrates, Civil Jurisdiction (competency up to Euros 15,000)
- the Civil Court, First Hall (civil cases above Euros 15,000)

The 2nd instance courts of general jurisdiction are:

- the Civil Court of Appeal, Inferior Jurisdiction - the Civil Court of Appeal, Superior Jurisdiction

In the Maltese judicial system, there are only 2 instances of courts, hence Q1.3 is marked as NAP.

The increase in the number of courts as legal entities reflects the addition of the criminal courts to the above data, namely:

- 1st Instance Courts: Court of Magistrates Criminal Jurisdiction and Criminal Court
- 2nd Instance Courts: Criminal Court of Appeal in its Inferior and Superior Jurisdiction

(2018): In 2018, the Commercial Division was set up in order to hear cases filed under the Companies Act that include Insolvency cases. This new specialised first instance court is the reason behind the increase in the number of courts quoted at 42.2 above.

Netherlands

(General Comment): Since 2013 and following the implementation of the reform related to the reorganization of the judicial map, the number of district courts was reduced from 19 in 2010 to 11 in 2013 and 2014. Moreover, this reform resulted in the closure of sub-district court locations due to which the number of geographic locations decreased from 64 in 2010 to 40 in 2013 and 2014.

(2020): There are 11 first instance courts (Rechtbanken).

There are 4 second instance courts of general jurisdiction: 4 courts of appeal (Second instance, Gerechtshoven) that handle civil cases, criminal cases and tax cases.

There is 1 highest instance court of general jurisdiction, the Supreme Court (Hoge Raad), the highest instance court in The Netherlands.

There are three specialized courts (see comment Q43).

(2017): same as last year

Poland

(General Comment): The Polish court structure is characterized by four levels of courts but only three instances. Basically, there are district courts which are first instance courts, regional courts which are first and second instance courts, and appellate courts which are second instance courts. The highest instance courts are the Supreme Court, the Supreme Administrative Court and the Constitutional Tribunal.

(2020): The table indicating the content of:

1.1 first instance courts (district + regional courts), 1.2 second (appellate courts) , 1.3 third instance courts (cassation of the judgment) (Supreme Court) of general jurisdiction.

(2018): .

(2017): 42.1 First instance courts of general jurisdiction - common courts (318 regional courts, 45 district courts).

42.2 First instance specialised courts - 16 administrative courts, 9 military courts.

42.3 All the courts - the Supreme Court, common courts (318 regional courts, 45 district courts, 11 appeal courts), administrative courts (voivodship administrative courts (16), the Supreme Administrative Court), military courts (regional military courts (7), district military courts (2)).

(2016): 42.1 First instance courts of general jurisdiction - common courts (318 regional courts, 45 district courts).

42.2 First instance specialised courts - 16 administrative courts, 9 military courts.

42.3 All the courts - the Supreme Court, common courts (318 regional courts, 45 district courts, 11 appeal courts), administrative courts (16 voivodship administrative courts. the Supreme Administrative Court), military courts (9 regional military courts, 2 district military courts). The differences between presented data and the data from 2014 edition is likely to be due to the restoration of District Courts, abolished and converted to divisions of larger units in 2013.

The difference in courts number between this (363) and previous evaluation cycle (287) is probably caused by a significant organizational reform of polish court system, which took place in 2013. Almost eighty small district courts were merged with larger entities. Since 2015 the reform has been reversing, which has resulted in an increase in the number of the courts.

(2012): In 2012, there was a structural change concerning District courts. Some of them were transformed into divisions of other courts.

Portugal

(2020): 1.1 Courts of general jurisdiction and proximity divisions;

1.2. 2nd Instance Courts (Tribunal Relação de Lisboa, Coimbra, Porto, Évora e Guimarães).

1.3. Supreme Justice Court

(2019): Regarding Q 42.1 the decrease of the total number of first instance courts of general jurisdiction is accompanied by an increase of certain types of first instance courts (please consult answers provided to Q 43).

Regarding Q 42.2, the total corresponds to first instance specialised courts of judicial courts and administrative and tax courts. Under our Constitution, we have two set of courts: judicial courts, which have general jurisdiction in civil/commercial and criminal matters and encompass specialized courts, and administrative and tax courts, whose role is to settle disputes arising out of administrative and tax relations. These latter are specialised in this domain only.

In order to be rigorous and coherent with Q 43, we have included first instance administrative and tax courts. The total corresponds to 418 judicial courts + 17 administrative/tax courts.

(2018): These data correspond to the values given for the last scoreboard.

The differences registered result from the changes to the judicial organization (Law n. 40-A/2016, 22 December) in force since January 1, 2017.

42.1 the number of 1st instance courts with general jurisdiction decreased due to the increase of specialized courts.

Accordingly, 20 courts that were closed in 2014 were re-enacted as proximity judgments, new family sections were created as well as new sections with generic jurisdiction.

(2017): The differences registered result from the changes to the judicial organization (Law n. 40-A/2016, 22 December) in force since January 1, 2017.

42.1 the number of 1st instance courts with general jurisdiction decreased due to the increase of specialized courts.

Accordingly, 20 courts that were closed in 2014 were re-enacted as proximity judgments, new family sections were created as well as new sections with generic jurisdiction.

(2014): As a result of the new Judicial Organization Reform, the number of specialized first instance courts increased in 2014, while the enlargement of the court districts has been promoted. The reform melted the former judicial districts into 23 judicial districts, each containing two or more units, according to the demographic and economic reality of the respective geographic area. The difference between Q42.2 and Q43 is due to the inclusion of the 20 administrative courts in Q43. In Portugal, the administrative jurisdiction is autonomous, independent from the civil jurisdiction.

Romania

(General Comment): In Romania there are 175 judecatorii, first instance courts of general jurisdiction.

(2020): Law no. 304/2004 on the judicial organisation.

The number of „judecatorii” has decreased by one between 2019-2020 because the activity of Judecătoria Insuratei was suspended so it no longer appears in the statistics. 175 represent the first instance courts with general jurisdiction in this matter, even if tribunals, courts of appeal and the High Court may also judge first instance cases. Starting from 2020 the methodology of presentation of data changed and only „judecatorii” are counted as first instance courts of general jurisdiction, even if tribunals, courts of appeal and the High Court may also judge first instance cases.

(2017): There are 176 first instance courts, 42 tribunals and 15 courts of appeals. All of the first instance courts deal with cases in first instance, but also the tribunals and the courts of appeal may have material or personal jurisdiction in first instance.

(2016): There are 176 first instance courts, 42 tribunals and 15 courts of appeals. All of the first instance courts deal with cases in first instance, but also the tribunals and the courts of appeal may have material or personal jurisdiction in first instance.

Slovakia

(2020): The Constitutional Court is not included, since it was not included in previous cycles. According to the explanatory note - "In some countries, other bodies can be referred to as courts. When they are not part of the regular judiciary system, they should not be considered here (e.g. courts of audits, constitutional courts when not dealing with individual cases but rather with questions of compliance with constitution and international law etc.)." In Slovak republic the Constitutional Court can deal with some rare individual cases.

(2019): The entire court system of the Slovak republic consists of 54 District Courts, 8 Regional Courts, The Specialized Criminal Court and the Supreme Court of the Slovak republic.

(2018): The entire court system of the Slovak republic consists of 54 District Courts, 8 Regional Courts, The Specialised Criminal Court and The Supreme Court of the Slovak republic

(2017): The court system of the Slovak republic consists of 54 District Courts, 8 Regional Courts, Specialised Criminal Court and Supreme Court of the Slovak republic

(2016): The court system of the Slovak republic consists of 54 District Courts, 8 Regional Courts, The Specialised Criminal Court and The Supreme Court of the Slovak republic

Slovenia

(General Comment): First instance courts of general jurisdiction: 44 local courts + 11 district courts = 55

Second instance courts of general jurisdiction: 4 higher courts

Specialised courts: 3 labour courts (1st instance) + 1 labour and social court (1st instance) + 1 Administrative court (1st instance) + 1 Higher labour and social Court (2nd instance) = 6

Highest instance courts of general jurisdiction: The Supreme Court (also highest instance court for specialised courts)

(2018): First instance courts of general jurisdiction: 44 local courts + 11 district courts = 55

First instance specialised courts: 3 labour courts + 1 labour and social court + 1 Administrative court = 5

All courts: first instance courts of general jurisdiction (55, see Q42.1) + first instance specialised courts (4 labour courts + 1 social court + 7 branch offices of labour and social courts + 1 administrative court + 3 branch offices of administrative court) + second instance courts and courts of appeal (4 higher courts of general jurisdiction + 1 higher labour and social court) + the Supreme court = 77.

(2017): First instance courts of general jurisdiction: 44 local courts + 11 district courts = 55

First instance specialised courts: 3 labour courts + 1 labour and social court + 1 Administrative court = 5

All courts: first instance courts of general jurisdiction (55, see Q42.1) + first instance specialised courts (4 labour courts + 1 social court + 7 branch offices of labour and social courts + 1 administrative court + 3 branch offices of administrative court) + second instance courts and courts of appeal (4 higher courts of general jurisdiction + 1 higher labour and social court) + the Supreme court = 77.

(2016): First instance courts of general jurisdiction: 44 local courts + 11 district courts = 55

First instance specialised courts: 3 labour courts + 1 labour and social court + 1 Administrative court = 5

All courts: first instance courts of general jurisdiction (55, see Q42.1) + first instance specialised courts (4 labour courts + 1 social court + 7 branch offices of labour and social courts + 1 administrative court + 3 branch offices of administrative court) + second instance courts and courts of appeal (4 higher courts of general jurisdiction + 1 higher labour and social court) + the Supreme court = 77.

(2015): legal entities:

First instance courts of general jurisdiction: 44 local courts + 11 district courts = 55

First instance specialised courts: 3 labour courts + 1 labour and social court + 1 administrative court = 5

geographic locations:

All the courts = 77

- first instance courts of general jurisdiction = 55 (Q42.1); additionally

- first instance specialised courts = 4 labour courts + 1 social court + 7 branch offices of labour and social courts + 1 administrative court + 3 branch offices of administrative court = 16; additionally

- second instance courts and courts of appeal = 4 higher courts of general jurisdiction + 1 higher labour and social court = 5; and finally

- supreme court: the Supreme Court of the Republic of Slovenia = 1.

Spain

(General Comment): Courts counted as First Instance: Courts of first instance (civil), Courts of First Instance and Instruction (civil and criminal), Family Courts (Civil) and Courts of Mortgage Enforcement.

Courts counted as Second Instance General Jurisdiction: Sections of the Provincial Courts (except special sections) and Civil and Criminal Chambers of the Superior Courts of Justice of the Autonomous Regions.

Question 043

Austria

(General Comment): The other specialized first instance courts are 2 criminal courts and 2 civil law courts (in Vienna and Graz). The sum of the numbers in the categories exceeds the total number of specialised courts because the labour and social court in Vienna is one court that is competent for labour and (some) social welfare cases. From January 1st, 2014 there are 11 newly found courts for administrative law in Austria, namely 9 regional administrative courts, 1 Federal administrative court and 1 Federal Tax Court.

(2020): As a rule every court has to deal with all judicial issues; in the biggest Austrian cities certain courts are specialised, i.e. five in Vienna (civil cases, criminal cases, commercial cases [2 x], labour and social welfare cases) and two in Graz (civil cases, criminal cases);

Because of the Court for labour and social welfare cases in Vienna (Arbeits- und Sozialgericht Wien) the sum of the individual courts does not correspond to the total number of specialised courts.

One commercial court in Vienna, both courts (in Vienna and Graz) specialised on civil cases and both courts (in Vienna and Graz) specialised on the enforcement of criminal sanctions also act as second instance courts.

(2019): On principal every court has to deal with all judicial issues; in the biggest Austrian cities certain courts are specialized, i.e. eight in Vienna (civil cases, criminal cases, commercial cases [2x], employment- and social welfare cases, administrative cases) and two in Graz (criminal cases, remaining cases). There is also a regional administrative court in every federal state (9 in total). Because of the Court for labour and social welfare cases in Vienna (Arbeits- und Sozialgericht Wien) the sum of the individual courts equals nineteen.

(2018): On principal every court has to deal with all judicial issues; in the biggest Austrian cities certain courts are specialised, i.e. five in Vienna (civil cases, criminal cases, commercial cases [2 x], employment- and social welfare cases) and two in Graz (criminal cases, remaining cases)

(2017): On principal every court has to deal with all judicial issues; in the biggest Austrian cities certain courts are specialised, i.e. five in Vienna (civil cases, criminal cases, commercial cases [2 x], employment- and social welfare cases) and two in Graz (criminal cases, remaining cases)

(2016): On principal every court has to deal with all judicial issues; in the biggest Austrian cities certain courts are specialised, i.e. five in Vienna (civil cases, criminal cases, commercial cases [2 x], employment- and social welfare cases) and two in Graz (criminal cases, remaining cases)

Belgium

(General Comment): Administrative courts: Council of State, Aliens Litigation Council, Raad voor Vergunningsbetwistingen, het Milieuhandhavingscollege and Raad voor Verkiezingsbetwistingen.

Six first instance courts have specialized enforcement chambers. The name 'enforcement court' is used, but in reality it is a specialized chamber.

All first instance courts (13) have a specialized family and youth section. The name 'family court' is used, but in reality it is a specialized section.

(2020):

For the current evaluation round (2020 data), justices of the peace and police courts are counted as general courts. In previous cycles, they were categorized as specialized courts of first instance.

(2019): Other: 162 justices of the peace and 15 police courts. Administrative courts: Council of State, Council for Aliens Litigation, de Raad voor Vergunningsbetwistingen, het Milieuhandhavingscollege en de Raad voor Verkiezingsbetwistingen (these courts are under the authority of the Minister for Home Affairs and the Flemish Regional Government, and not the Minister of Justice).

Six courts of first instance have specialized chambers for the application of sentences. The denomination 'court for the enforcement of sentences' is used, but in reality it is a specialized chamber.

All the courts of first instance (13) have a special family and youth section. The denomination 'family court' is used, but in reality it is a specialized section.

(2017): Others: justices of the peace and police courts. The law of 25 December 2017 amended the number of cantons of justices of the peace from 187 to 162 (162 justices of the peace and 15 police courts).

Administrative courts: Council of State, Aliens Litigation Council, Raad voor Vergunningsbetwistingen, het Milieuhandhavingscollege en de Raad voor Verkiezingsbetwistingen.

Five courts of first instance have specialized chambers for the enforcement of sentences. Despite the term used in their respect - "court for the enforcement of sentences", those are specialised chambers.

All courts of first instance (13) have a specialised family and youth section. The term "family court" is used, but these are also specialised sections.

(2016): Other: justices of the peace and police courts

Administrative courts: Council of State, Aliens Litigation Council, Raad voor Vergunningsbetwistingen, het Milieuhandhavingscollege en de Raad voor Verkiezingsbetwistingen.

Five courts of first instance have specialized chambers for the enforcement of sentences. The name "court for the enforcement of sentences" is used, but in reality it is a specialized chamber.

All courts of first instance (13) have a specialized family and youth section. The name "family court" is used, but in reality it is a specialized section.

(2015): Other: justices of the peace and police courts

Administrative courts: the Council of State, the Council of the Litigation of Foreigners, Milieuhandhavingscollege, de Raad voor Vergunningsbetwistingen en de Raad voor Verkiezingsbetwistingen.

(2014): The other specialised courts are 15 police courts and 187 justices of peace. Family courts are a section within the 13 first instance courts. The administrative courts (the Council of State, the Alien Litigation Council, "(Vlaamse)Raad voor Vergunningsbetwistingen", "het (Vlaamse) Milieuhandhavingscollege") are not part of the judicial system administered by the Ministry of Justice. Following a reform of the judicial map, the number of labour, commercial and police courts was reduced.

Bulgaria

(General Comment): Administrative Courts- 28

Supreme Administrative Court - 1

Military Courts - 3

Military Court of Appeal - 1 Specialized Criminal Court -1 Specialized Court of Appeal - 1

(2020): The category "other specialised courts" encompasses the Specialized Criminal Court of Republic of Bulgaria, established in 2011, situated in Sofia and treated as a Provincial/Regional Court. Its jurisdiction covers criminal cases of a general nature for crimes carried out throughout the Republic of Bulgaria. Its competence is determined on the basis of the subject of the case and not the quality of the perpetrator. The Criminal Procedure Code exhaustively enumerates cases within the competence of this Court, namely crimes committed by organized criminal groups, or on behalf of them and following their decision.

(2019): The cases under the jurisdiction of Specialized Criminal Court are specified in Art. 411a of the Penal Procedure Code

(2018): The category “other” encompasses the Specialized Criminal Court of Republic of Bulgaria (see the general comment).

(2017): Specialized Criminal Court

(2016): 'Other specialised 1st instance courts' - 1 Specialized Criminal Court.

Croatia

(General Comment): The term “other specialized first instance courts” in the Republic of Croatia refers to misdemeanour courts and the Municipal Criminal Court in Zagreb. There was a reform of judicial map implemented in 2015 in which the number of Misdemeanour Courts has decreased from 63 to 22. Therefore, in accordance with the Act on Territorial Jurisdiction and Seats of Courts (Official Gazette, No. 128/14) in force, there are currently 22 Misdemeanour Courts in function.

(2020): In Croatian Judicial system there is a higher instances of 3 specialized courts: commercial, administrative and other (misdemeanour).

(2019): One criminal and two misdemeanour courts. After the reorganization of courts in 2019 we do not have 22 misdemeanour courts. Only two courts specialized only for misdemeanor cases were left in two largest cities (Zagreb and Split). Third specialized court is court in Zagreb specialized only for criminal cases.

(2018): Other specialised 1st instance courts are Misdemeanour courts and Municipal Criminal Court in Zagreb.

(2017): 23 other specialised 1st instance courts are 22 Misdemeanour courts and 1 Municipal Criminal Court in Zagreb

(2016): According to the Act on the Jurisdiction and Seats of Courts (Official Gazette 128/14) as of 1 April 2015 the number of municipal courts has been reduced, as of 1 July 2015 reduced the number of misdemeanour courts has been reduced and as of 1 April 2015 a new commercial court has been established. Other specialised 1st instance courts are 22 Misdemeanour courts and a Municipal Criminal Court in Zagreb.

Cyprus

(2020): 5 Assize courts

1 Administrative court for international Protection

(2019): Other specialised 1st instance courts: 1 International Protection Administrative Court and 5 Assize Court. In 2019 the new administrative court for international protection was established to hear cases concerning asylum applications and international protection matters.

(2018): 5 Assize courts

(2017): Assize Courts

(2016): Assize Courts

(2015): In 2015, two new Assize courts and one administrative court were established and one Rent Control Tribunal was removed.

Czech Republic

(General Comment): There are no specialised first instance courts, but judges within individual courts are specialised (e.g. for family, labour and enforcement cases at district courts, and insolvency and administrative cases at regional courts as first instance courts).

Denmark

(General Comment): Re "Juvenile Courts" such courts do not exist. Juveniles are dealt with by district courts as any other case. There are taken special care though of juveniles in a Juvenile Board. The category "other" concerns the Land Registration Court that has been established in 2009. As for the Commercial Court, in Denmark, it is called Maritime and Commercial Court and it presents the peculiarity to also deal, to a great extent but not exclusively, with insolvency cases (bankruptcies etc.). Accordingly, there is an overlap with the category "Insolvency courts". Family courts are administered as part of District courts. There is one military court but military courts are not part of the Danish Courts Administration.

(2020): Land Registration Court (see also general comments). The other specialized court is Maritime and Commercial Court. The latter do some degree deals with insolvency cases similar to district courts.

(2019): Other specialised 1st instance court is the Land Registration Court. The Maritime and Commercial Court is a commercial court which ALSO deals with insolvency cases. Although it looks like there are two courts there is only one! As the district courts outside Greater Copenhagen deal with insolvency cases, and the Maritime and Commercial Court deals with insolvency cases inside Greater Copenhagen, but at the same time is a specialized commercial court, the Maritime and Commercial Court is marked as a specialized Commercial Court and insolvency court.

(2018): Military courts exist but they are not part of the Danish Courts Administration. The 24 district courts have always dealt with family cases. From 1 April 2019 family issues are a section of the court.

(2017): The category "other" concerns the Land Registration Court that has been established in 2009. As for the Commercial Court, in Denmark, it is called Maritime and Commercial Court and it presents the peculiarity to also deal, to a great extent but not exclusively, with insolvency cases (bankruptcies etc.). Accordingly, there is an overlap with the category "Insolvency courts". Of course Military courts exist but they are not part of the Danish Courts Administration.

(2016): Land Registration Court.

Estonia

(General Comment): In Estonia, there are no specialized first instance courts, other than administrative courts. All the cases are dealt with by ordinary courts of first instance. The two administrative courts of first instance are situated in Tallinn and Tartu. Nevertheless, for guaranteeing wider access to justice, these two courts have several court buildings in other cities, namely in Pärnu and Jõhvi, where judges and their supporting legal staff work.

Finland

(General Comment): In Finland, there are six regional administrative courts, the Market Court, the Labour Court and the Insurance Court.

Another specialised court is the High Court of Impeachment that hears charges against ministers (i.e. members of the Government), the Chancellor of Justice, the Parliamentary Ombudsman and members of the Supreme Court or the Supreme Administrative Court for unlawful conduct in office. In addition, the High Court of Impeachment deals with charges concerning the criminal liability of the President of the Republic. However, it is convened only when necessary.

(2016): In Finland there are 6 Administrative Courts, 1 Market Court, 1 Labour Court and 1 Insurance Court. Then there is the High Court of Impeachment that hears charges against Ministers (i.e. Members of the State Council), Chancellor of Justice, Parliamentary Ombudsman and Supreme Court Justices for unlawful conduct in office but it is convened only when necessary.

France

(General Comment): "With regard to the courts for the enforcement of criminal sanctions: In matters of enforcement of sentences, the enforcement judge (JAP) is a court of first instance for the enforcement of sentences, being at the same time a decision-making, monitoring and follow-up body. There is at least one JAP per department (article 712-2 of the CPP). The JAP is competent for adult convicts, and his field of intervention is the following: For measures to individualize custodial sentences, he or she has general jurisdiction (except for a few measures that fall under the special jurisdiction of the court for the enforcement of sentences), For custodial sentences, when a specific text so provides, For the follow-up of security measures. Established by the law of March 9, 2004, the Court for the Enforcement of Sentences (TAP) is a court of first instance, composed of three JAPs of the judicial courts, appointed by order of the First President of the second instance Court. In each second instance Court, a TAP is established whose territorial jurisdiction extends to the jurisdiction of this court (articles 712-3 and D 49-2 of the CPP, article indicating the list of TAPs by second instance Court and the territorial jurisdiction). The seat of the TAP is in principle "that of the judicial court of the seat of the second instance Court" (article D. 49-3 CPP).

The objective is to entrust the most complex and sensitive cases to a collegiality. Thus, the TAP has jurisdiction over - by the effect of the law for those sentenced to the heaviest penalties: applications for parole and suspension of "medical" sentences for persons sentenced to imprisonment or imprisonment of more than 10 years and whose remaining sentence to be served exceeds 3 years; applications for an increase in the security period; placement under judicial supervision of dangerous persons...) by decision of the JAP, in particular because of the complexity of the case or the personality of the convicted person (article 712-6 al. 3 of the CPP).

In matters of terrorism, a derogatory jurisdiction is provided for under ordinary law (articles 706-22-1 and D 49-75 to D49-81-5 of the CPP). The Paris enforcement courts specialized in terrorist matters (JAPAT, the TAPAT and the enforcement chamber) have -exclusive jurisdiction to monitor persons convicted by specialized terrorism trial courts pursuant to Article 706-17 of the CPP; -competing jurisdiction with ordinary law enforcement courts to monitor persons convicted of acts of terrorism and other offenses falling within the scope of Article 706-16 of the CPP by ordinary law courts.
source DACG. "

(2020): Despite the provisional NA answer for the category " Courts for the execution of criminal sanctions ", the total is available, as it is a small number that will not significantly affect the total. On labor courts: 210 CPHs + 6 labor courts = 216 courts Industrial tribunals have jurisdiction, according to Article L. 1411-1 of the Labor Code, to hear individual disputes that arise between employees or apprentices and their employers during the execution of an employment or apprenticeship contract. There are 210 industrial tribunals and 6 labor courts in the French overseas territories. Same figure as in 2020 On commercial courts: 134 TCs, 9 TMCs, 2 TPJs with commercial jurisdiction, 7 TJs with commercial jurisdiction = 152 courts Commercial courts are specialized courts with jurisdiction to hear disputes relating to commitments between traders, between credit institutions or between them, disputes relating to commercial companies and commercial acts by their form (Art. L. 721-1 et seq. of the Commercial Code) On social jurisdictions:

-Since November 1, 2019, litigation concerning military disability pensions has been transferred to the jurisdiction of the administrative courts, doing away with the military disability pension courts and the regional military disability pension courts that rule on appeal.

- Since January 1, 2019, as a result of Law No. 2016-1547 of November 18, 2016 on the modernization of justice in the 21st century, social litigation, formerly divided between the social security courts (TASS), the courts of disability litigation (TCI) and the departmental social assistance commissions (CDAS), was merged and transferred to the "tribunaux de grande instance", ordinary courts of first instance, which became, as of January 1, 2020, by effect of law n° 2019-222 of March 23, 2019 on programming 2018-2022 and reform for the justice system, Judicial Courts. Consequently, these specialized jurisdictions have been abolished. On appeal, the litigation was only under the jurisdiction of the CNITAAT (extended until December 31, 2022; but now it is under the jurisdiction of specially designated courts of appeal, which allows for better accessibility to justice. There are 134 commercial courts whose judges are exclusively consular. With regard to the judicial organization in overseas France, there are 2 courts of first instance with jurisdiction in commercial matters and 9 mixed commercial courts. In addition, 7 judicial courts have a commercial chamber in Alsace-Moselle. In 2020 it was written 143 commercial courts because I think that only the TC and TMC were counted and not the TJ with commercial jurisdiction nor the TPI with commercial jurisdiction. About the other specialized courts :

The tribunaux paritaires des baux ruraux (TPBR) are autonomous (L. 491-1 of the Code rural et de la pêche maritime). The 2018-2022 programming and reform law for justice sets the seats and jurisdictions of the TPBRs no longer with reference to the seats of the former magistrate's courts but according to the seats of the judicial courts and their proximity chamber. On social jurisdictions:

-Since November 1, 2019, the litigation of military disability pensions has been transferred to the jurisdiction of the administrative courts, making the military disability pension courts and the regional military disability pension courts, which rule on appeal, disappear.

- Since January 1, 2019, as a result of law no. 2016-1547 of November 18, 2016 on the modernization of justice in the 21st century, social litigation, which was previously divided between the social security courts (TASS), the disability litigation courts (TCI) and the departmental social assistance commissions (CDAS), was merged and transferred to the "tribunaux de grande instance", courts of first instance under ordinary law, which became, as of January 1, 2020, the "Tribunaux Judiciaires" (Judicial Courts) under law No. 2019-222 of March 23, 2019, on programming for 2018-2022 and reform of the justice system

(2019): Since 1 January 2019, social litigation, formerly divided between the social security courts (TASS), the incapacity courts (TCI) and the departmental social assistance commissions (CDAS), has been merged and transferred to the "tribunaux de grande instance" (first instance courts of general jurisdiction). As a result, these specialised courts have been abolished. As of 1 November 2019, litigation concerning military invalidity pensions will be transferred to the administrative courts, eliminating the military invalidity pension courts and the regional military invalidity pension courts which rule on appeal. These changes explain the variation in the number of courts compared to the previous year. The other specialised courts are: - joint courts for rural leases: 274; juvenile courts: 155; court for navigation on the Rhine: 1; maritime courts: 6; national asylum court: 1; court of first instance for navigation on the Moselle: 1.

(2018): The other specialized courts are: - joint courts for rural leases: 272 ;

- juvenile courts: 155; - military pension courts: 36;

- court for navigation on the Rhine: 1;

- Maritime courts: 6;

- national court of asylum: 1; - court of first instance for navigation on the Moselle: 1.

In the previous questionnaire, the Joint Rural Lease Courts (JRTs) were indicated, with the District Courts (TIs) within the "Rental Courts", the figure of 307 corresponding to the District Courts, since the seats and jurisdictions of the JRTs were linked to those of the TI. However, the TPBRs are, and have always been, autonomous courts. However, as decrees have been issued to remove some TPBRs, there is no longer a correlation between their number and that of IT. We have therefore indicated here in the "rental courts", only IT (289), and by including TPBRs in a separate item, which is legally more accurate. The total number of TPBRs is 274. On the insurance and social security courts: in the requested reference year, there are 26 disability courts, 115 social security courts (TASS) and 100 departmental social assistance commissions (CDAS). The differential of 100 corresponds to the addition of the 100 CDASs which are administrative courts.

The Paris Court, created on 14 May 2018, brought together all the services of the Regional Court, formerly dispersed over 5 sites, including Ile de la Cité, the Police Court and the 20 District Courts. The number of TIs had to be reduced by 19. In addition, the reform of the transfer of the police court under the 21st century Justice Act had the effect of removing 3 of them from the 307 TIs. The number of IT has therefore increased from 304 (307-3) to 285 district courts (304-19). We have added to these 285 TI the 4 TPIs because of their dual IT and TGI skills. Thus: 285 TI + 4 TPI = 289 TI in total.

(2017): The other specialized courts are:

- juvenile courts 155

- military pensions tribunals 36

- the court for navigation on the Rhine 1

- the court for navigation on the Moselle 1

- maritime trade courts 6

- national court of asylum 1

(2016): The other specialised courts are: 155 juvenile courts; 36 military pension courts; 1 court for navigation on the Rhine; 1 court for navigation on the Moselle; 6 maritime trade courts; 1 national asylum court.

As a matter of fact, the following reforms are on-going:

- The future Tribunal of Paris, whose establishment is scheduled for 14 May 2018, will unify all the services of the TGI (Tribunal de grande instance) currently dispersed over 5 sites, including "Ile de la Cité", the police court and the first instance courts (tribunaux d'instance);

- Since 1 July 2017, the hearings of the Police Court, previously under the jurisdiction of the "tribunaux d'instance", have been transferred to the TGI. The aim of this reform is to refocus the tribunaux d'instance on day-to-day civil justice and to centralise criminal litigation at the seat of the TGI.

- Since 1 July 2017, the 311 local courts have been abolished (Law No. 2011-1862 of 13 December 2011), their powers being taken over by the tribunaux d'instance in civil matters and by the police courts attached to the TGI in criminal matters.

- As of 1 January 2019, social litigation, currently divided between the Social Security Courts (TASS), the Disability Dispute Courts (TCI) and the Departmental Social Assistance Commissions (CDAS), will be unified and transferred to the TGI (first instance courts of general jurisdiction). These specialised courts will then be abolished.

(2015): Other specialised courts are:

Juvenile courts : 155

Military Pensions Courts: 36

Court for navigation on the Rhine: 1

Maritime Courts: 14

National Court of Asylum: 1

Court of First Instance for navigation on the Moselle: 1

(2014): The reduction of the number of specialised courts is primarily due to the suppression of 70 military pensions courts. The other specialised courts are: Children courts (155); Military pensions courts (36); the Rhine navigation court; commercial maritime courts (14); the National court for asylum right; the Court for the navigation on the Moselle. In contrast with 2010 and 2012 data, a part of the "other specialised courts" was distributed in the proposed categories, namely the agricultural land courts, the courts of rental cases, the Courts for enforcement of criminal sanctions and the courts of incapability litigation. The specialised interregional courts, competent to judge cases of organised crime were added.

(2013): The reduction of the number of specialised courts is primarily due to the suppression of 70 military pensions courts. The other specialised courts are: Children courts (155); Military pensions courts (36); the Rhine navigation court; commercial maritime courts (14); the National court for asylum right; the Court for the navigation on the Moselle. In contrast with 2010 and 2012 data, a part of the "other specialised courts" was distributed in the proposed categories, namely the agricultural land courts, the courts of rental cases, the Courts for enforcement of criminal sanctions and the courts of incapability litigation. The specialised interregional courts, competent to judge cases of organised crime were added.

(2012): There are 135 Commercial Courts and 8 mixed commercial courts (this of Mayotte is not included). The category "labour courts" subsumes 210 industrial courts and 6 labour courts. The category "insurance and/or social security courts" refers to the courts responsible for social security cases. The other specialised courts are: Police courts (3); local Police courts (3); Children courts (155); Incapacity Dispute courts (26); Agricultural land courts (281); Sentence enforcement courts (50); Military pensions courts (106); the Rhine navigation court; Commercial maritime courts (14); the Court for the navigation on Moselle. The military court of Paris was discontinued in January 2012. Its functions were transferred to a pole specialised in military matters in the High Court of Paris.

Germany

(General Comment): It is noteworthy that depending on the value at dispute, commercial cases are dealt with at Local or Regional Courts, on application in a chamber established at the Regional Court for commercial cases. There are no separate commercial courts. Likewise, there are no independent rent and tenancies courts, enforcement courts or courts for insurance cases. Depending on the caseload, special panels of judges are established for this purpose at the Local and Regional Courts. Family cases are dealt with at first instance in special departments of the Local Courts (second instance: Higher Regional Courts). The Federal Armed Forces do not have any military courts of their own; its members are subject to civil jurisdiction. Juvenile courts do not exist as independent courts either. They are established at the Local Courts or Regional Courts, depending on the severity of the expected sentence and the type of offence. The Juvenile Courts may be composed of a single criminal judge sitting as youth judge or one or more judges together with lay youth assessors.

(2020): The category "other" covers:

18 Finance Courts (first instance)

16 Constitutional Courts of the Länder, the Federal Constitutional Court, Federal Patent Court, Federal Labour Court, Federal Administrative Court, Federal Social Court and the Federal Finance Court (higher instances)

With regard to the Constitutional Courts please see General Comment Q 42.

(2019): finance courts

(2018): Finance Courts

(2017): Finance courts

(2016): Other specialised 1st instance courts: Finance Courts

(2015): The data refer to the year 2014. At present, no more recent data are available.

(2014): In 2014, in comparison with 2012, the number of specialized first instance courts decreased of three labour courts in two Landers.

Greece

(General Comment): In Greece, there are no special courts for the fields of law described in the question 43, besides those already mentioned. The Greek Constitution is reluctant to provide in the Greek legal system special courts. Instead, within the Courts of First Instance and Courts of Appeal of large cities, we have special Chambers, where the task of adjudicating in special categories of law (e.g. family law, commercial law, etc.) is assigned. Judges entrusted with such duties have usually the correspondent specific studies. As far as other special courts are concerned, special provisions regulate the operation of courts for juveniles, military, navy and air force courts. We clarify that the military, navy and air force courts are under the jurisdiction of the Ministry of National Defense, therefore we have no further information.

(2020): Administrative courts include: in the first instance 30, in the second instance 9 and 1 Supreme Court(the Council of State).

Juvenile courts are subject to the Courts of First Instance, according to your instructions the choice changed from non-available to non applicable.

The military courts are under a different ministry, specifically the National Defense.

The higher instance other specialized courts is the Court of Auditors that is considered one of three supreme courts in Greece.

(2017): In Greece, there are no special courts for the fields of law described in the question 43, besides those already mentioned. The Greek Constitution is reluctant to provide in the Greek legal system special courts. Instead, within the Courts of First Instance and Courts of Appeal of large cities, we have special Chambers, where the task of adjudicating in special categories of law (e.g. family law, commercial law, etc.) is assigned. Judges entrusted with such duties have usually the correspondent specific studies. As far as other special courts are concerned, special provisions regulate the operation of courts for juveniles, military, navy and air force courts.

Hungary

(General Comment): There are military departments at five Regional Courts and at one Regional Court of Appeal. Although they only deal with military related criminal cases, they are not considered as specialized courts as they are a part of the ordinary court system both in administrative and professional management.

(2020): "Administrative and labour courts (20) were dismissed on the 31st of March 2020. From this date Regional Courts deal with labour cases on first instance while administrative cases are dealt with by eight Regional Court on a regional level".

Ireland

(General Comment): The two specialised first instance courts listed above are Special Criminal Court No. 1 and Special Criminal Court No. 2. The latter was established in October 2015 and came into operation, sitting for the first time, in 2016. In previous cycles the category "other" (1) was referring to Special Criminal Court No. 1.

Other than distinctions between jurisdictional levels there is no specialisation - all judges within a court jurisdiction may be allocated to any category of case falling within the jurisdictional remit of the court concerned. Starting in 2013 a new cadre of specialist judges was created in the Circuit Court with specific jurisdiction in relation to certain types of personal insolvency remedy and certain pre-trial order making powers.

Ireland has a specialist regime for the trial of commercial proceedings in the form of the Commercial List of the High Court (known as the 'Commercial Court') but, as it is not a separate legal entity, being a list within and formally a part of the High Court, it is not included as a specialist court as such.

(2019): Legislation to provide for a Family Court has been proposed

Italy

(General Comment): Since 2014 in Italy there are 22 Brand Commercial courts (Tribunali delle imprese) that are legal entities of their own and not just internal court divisions for organizational purpose (such as labour, family etc.).

It is noteworthy that in Italy, some of the specialized first instance courts are not administered and financed by the Ministry of Justice. This is the case for the regional administrative courts, the regional audit commissions, the local tax commissions and military courts. These courts are not taken into consideration for the replies to questions 6, 46 and 52 for none of the exercises.

In respect of the 20 first instance administrative courts (legal entities) and their supreme court, it should be stressed that they have been encompassed within the total under question 43 for the last four exercises, but only since 2014 this approach is reflected in questions 91 and 99 (number of administrative law cases).

Moreover, in Italy specific matters (such as labour, family etc.) are dealt by specific divisions within the same Court. There are also 26 divisions called DDA (Direzioni Distrettuali Antimafia) which deal specifically with mafia and organized crime.

(2020): Tax courts fall into the “Other” category.

The appeal of some specialized courts (e.g. commercial courts, juvenile courts) are dealt by the general jurisdiction appeal courts.

Specific subject matters (e.g labour, insolvency, family, fight against terrorism and organised crime) are dealt by specific divisions within general jurisdiction courts. See general comment for details.

(2019): The category “other” subsumes 29 Minor (or Juvenile) Courts and 103 Tax Courts

(2018): The category “other” category subsumes 29 Minor (or Juvenile) Courts and 103 Tax Courts.

(2017): Other: 29 Minor (or Juvenile) Courts + 103 provincial tax commissions

(2016): OTHER: 29 Minor (or Juvenile) Courts + 103 Local Tax Commissions

(2013): In September 2013, the Italian judicial system implemented an extensive reorganization of the territorial distribution of offices with the closing (by merger) of 30 Tribunals, 30 Prosecution offices, 220 branches of Tribunals and 346 Peace Judges.

Latvia

(General Comment): In Latvia, only the Administrative court can be considered as a 1st instance specialized court (which is divided into 5 court houses). As to the category “military courts”, the reply NA is justified by the fact that according to the Law on Judicial Power, judicial power in the Republic of Latvia is vested in district (city) courts, regional courts, the Supreme Court and the Constitutional Court, but in state of emergencies or during war – also military courts. The rest of the courts in Latvia are not established, and therefore in this case should be NAP. Latvia has also one Court, which is specialized on Commercial cases, but that court working with other civil cases and is first instance court. This court is unchecked separately on Question 43 because it is not a separate commercial court, but just few judges are specialized on commercial cases.

(2020): Military courts is established in state of emergency or during a war. On 1 July 2020, amendments to the Law on Judicial Power came into force, providing for the establishment of the Economic Court, which is competent for both certain types of civil and criminal cases. Accordingly, the Court is competent for specific commercial disputes and criminal cases, which cause significant damage to the business environment and economic development. The Economic Court is not counted yet in the total number of specialized courts, because it will start its action on 31st March 2021. As for Administrative court - first instance court is Administrative District Court and for higher instance is indicated Administrative Regional (appeal) instance Court.

(2019): There is only Administrative court in Latvia. On July 1, 2020, amendments to the Law “On Judicial Power” entered into force. The Amendments provides for the establishment of the Court of Economic Affairs. The Economic Court will take office on 1 January 2021.

(2018): There is only Administrative court in Latvia.

(2016): There is only one specialised court the administrative court with 5 court houses

Luxembourg

(General Comment):

General courts are organized into specialized sections of a court. For example, the commercial courts (which also deal with insolvency cases) are specialized sections of the district court. Only the administrative, military and social security courts of first instance are autonomous.

(2020): Pour 2020, seules les entités juridiques ont été prises en considération dans le tableau.

(2017): Please note that the total of 043 is not identical to the total in 042, as most of the specialized courts are in fact specialized sections of a general court. E.g. the commercial courts (which also deal with insolvency cases) are specialized sections of the district court (tribunal d'arrondissement). Only the administrative, military and 1st instance social security courts are selfstanding.

(2016): Please note that the total of 043 is not identical to the total in 042, as most of the specialized courts are in fact specialized sections of a general court. E.g. the commercial courts (which also deal with insolvency cases) are specialized sections of the district court (tribunal d'arrondissement). Only the administrative, military and 1st instance social security courts are selfstanding.

(2014): Most of the areas mentioned in the question are within the competence of district courts (commercial cases, insolvency cases, family law cases and all criminal cases except for offenses that are under the jurisdiction of justices of peace) and justices of peace (labour law cases, rental cases). The indicated total is a purely statistical information which does not reflect the reality.

(2012): Matters concerning trade and family law are dealt with at the level of district courts, while matters pertaining to labour law and rental cases are within the competence of the justices of peace.

Malta

(General Comment): The number of specialised courts includes non-criminal, administrative and criminal courts established as legal entities in line with the CEPEJ methodology. The seven (7) specialised courts referred to in Q43 are the Rent Regulation Board, the Land Arbitration Board, the Rural Leases Control Board, the Small Claims Tribunal, the Court of Voluntary Jurisdiction, the Administrative Review Tribunal and the Juvenile Court. Other courts previously counted as specialised courts, such as the Family Court and the Commercial Court, are divisions of the Civil Court, First Hall, and as such are now being included with the 1st Instance Courts of General Jurisdiction.

(2020): A number of courts that used to be previously identified as specialised courts, are not being categorised this time, given that they all make part of the First Hall, General Jurisdiction Court. These are:

- The Commercial Court (including insolvency cases)
- The Family Court

The identified specialised courts listed under 'Other specialised courts' are:

- the Land Arbitration Board
- the Rural Leases Control Board
- the Small Claims Tribunal
- the Court of Voluntary Jurisdiction

The Juvenile Court is a specialised criminal court.

(2019): The courts referred to under 'Other specialised 1st Instance courts' include:

- The Civil Court, First Hall
- the Land Arbitration Board
- the Rural Leases Control Board
- the Small Claims Tribunal
- the Court of Voluntary Jurisdiction

(2018): The courts referred to under 'Other specialised 1st Instance courts' include:

- The Civil Court, First Hall
- the Land Arbitration Board
- the Rural Leases Control Board
- the Small Claims Tribunal
- the Court of Voluntary Jurisdiction

(2017): The other specialised 1st Instance courts include:

- the Civil Court, First Hall
- the Court of Voluntary Jurisdiction - the Land Arbitration Board
- the Rural Leases Control Board
- the Small Claims Tribunal

(2016): The other specialised 1st Instance courts include:

- the Civil Court, First Hall
- the Land Arbitration Board
- the Rural Leases Control Board
- the Small Claims Tribunal

Netherlands

(General Comment): There is only one specialized first instance court, namely the Trade and Industry Appeals Tribunal, also known as Administrative High Court for Trade and Industry. The other specialized jurisdictions are not legal entities (Natte kamer, Ondernemingskamer, Militaire kamer) but only chambers within the courts. There is no separate military court, but there is a military chamber in one of the district courts.

(2020): The specialized courts are:

Trade and Industry Appeals Tribunal: the administrative High Court for trade and industry. This tribunal is a specialized administrative court that rules on disputes in the area of social-economic administrative law. Categorized as administrative court.

The Central Appeals Tribunal is the highest judicial authority in areas of social security and civil service. Categorized as other.

(2017): same as last year

(2015): Currently the commercial court in the Netherlands is the specialized court CBb. Per January first 2017 starts the Netherlands Commercial Court (NCC).

Poland

(2020): There are 7 military courts of first instance and 2 military courts of higher instance in Poland.

(2019): It is noteworthy that the Land and Mortgage Courts which are within the structure of the common court system deal with specific topics, but they are departments.

Besides, the National Court Register and Pledge Registry Departments are business divisions.

The EU Trademark and Community Design Court (which existed in the XXII Division of the District Court in Warsaw)-functioned from 2004 until the creation of intellectual property courts, which took place on 1 July 2020. Cases in the field of intellectual property belong to the jurisdiction of selected District Courts (Article 47990 of the Code of Civil Procedure), while the District Court in Warsaw (XXII Division) has exclusive jurisdiction in matters of intellectual property concerning computer programs, inventions, utility models, topography of integrated circuits, plant varieties and company secrets of a technical nature.

The Court of Competition and Consumer Protection is a special department functioning within the District Court in Warsaw. In the current state of law, the scope of activity of the 17th Department of the Court of Competition and Consumer Protection includes the handling of the following cases in court proceedings of appeals and complaints against decisions and orders issued by the government: the President of the Office of Competition and Consumer Protection, the President of the Energy Regulatory Office, the President of the Railway Transport Office, the President of the Office of Electronic Communications. When it comes to matters from lease or tenancy agreements - as long as these matters are of an economic nature, they are recognized by business departments, as are matters related to new technologies and the Internet space.

Portugal

(General Comment): Q.43 -total:The number given under Q43.1.1 includes 17 first instance courts and 3 higher instance courts of administrative jurisdiction that are not included under Q.42.2. Administrative courts are part of another jurisdiction and under our law cannot be considered specialized courts.

(2020): «Commercial courts» deal with, inter alia, winding up of the company, insolvency and suspension and revocation of company resolutions.

«Internet related disputes»: only for Internet domain system (DNS) issues, which are under the jurisdiction of the Intellectual Property Court; for all other Internet related issues, general jurisdiction courts are competent. Internet related disputes were not included in the number of specialised courts for previous cycles.

«Other specialised courts”: includes all other courts that are not listed in the categories above.

This category includes Civil Central Judicial Divisions, Criminal Central Judicial Divisions, Civil Local Proximity Judicial Divisions, Criminal Local Proximity Judicial Divisions, Petty Criminality Local; Proximity Judicial Divisions, Criminal Examination Judicial Divisions, Enforcement Judicial Divisions, Central Criminal Examination Court, Competition Court and Maritime Court.

(2019): This category includes Civil Central Judicial Divisions, Criminal Central Judicial Divisions, Civil Local Proximity Judicial Divisions, Criminal Local Proximity Judicial Divisions, Petty Criminality Local Proximity Judicial Divisions, Criminal Examination Judicial Divisions, Enforcement Judicial Divisions, Central Criminal Examination Court, Intellectual Property Court, Competition Court and Maritime Court.

(2018): Changes to the judicial organization (Law n. 40-A/2016, 22 December) are in force since January 1, 2017.

(2017): Changes to the judicial organization (Law n. 40-A/2016, 22 December) are in force since January 1, 2017.

Other specialised 1st instance courts include, among others: Criminal Instruction Courts, Maritime Courts; Intellectual Property and Competition Court; Enforcement Courts.

Law 31/2012, 14 August, put in force the Rent and tenancy section (Balcão Nacional do Arrendamento) that is functioning since 8 January 2013.

(2015): In 2013-2014, the Reform of the Portuguese Judicial system was implemented. One of the major goals of this reform was to set up specialised courts on a national level, which led to a significant increase of commercial courts compared to previous years.

The difference between Q42.2 and Q43 is due to the inclusion of the 20 administrative courts in Q43. In Portugal, the administrative jurisdiction is autonomous, independent from the civil jurisdiction and cannot be considered as specialised courts.

Other courts:

Other specialised 1st instance courts include: Criminal Instruction Courts, Maritime Courts; Intellectual Property and Competition Court; Enforcement Courts.

Law 31/2012, 14 August, put in force the Rent and tenancy section (Balcão Nacional do Arrendamento) that is functioning since 8 January 2013

(2014): In 2013-2014, the Reform of the Portuguese Judicial system was implemented. One of the major goals of this reform was to set up specialised courts on a national level, which led to a significant increase of commercial courts compared to previous years.

For 2014, the category “other” subsumes as in 2012 Criminal Instruction Courts, Maritime Courts, Intellectual Property and Competition Court and Enforcement Courts. Additionally, the Rent and tenancy section (Balcão Nacional do Arrendamento) has been established by law in August 2012 and is functioning since 8 January 2013.

(2012): For 2012, the category “other” encompasses Criminal Instruction Courts, Maritime Courts, Intellectual Property and Competition Court and Enforcement Courts.

Romania

(2020): Law no. 304/2004 on the judicial organisation.

Slovakia

(General Comment): In the Slovak court system there are 8 Regional courts which are the courts with dual competence. The Regional courts are the courts of appeal with the general jurisdiction in the civil, commercial and the criminal cases. In the appellate procedure they decide the appeals lodged against the decisions of all 54 District courts within their local jurisdiction. At the same time the Regional courts have the jurisdiction as the courts of first instance in administrative matters. They act as the administrative courts.

The Specialized Criminal court is competent to judge the grave criminal matters enumerated in the § 14 of the Criminal procedure Code (e. g. premeditated murder, corruption, terrorism, organised crime, severe economic crimes, damaging the financial interests of the EU etc.). Highest instance courts are the Supreme Court and the Constitutional Court.

(2020): The first instance administrative cases agenda is concentrated in eight regional courts, which also act as general courts of appeal. The question (43.) defines specialized courts as legal entities, so it cannot be understood that the administrative cases agenda is centralized on specialized courts as legal entities, but it is concentrated on 8 regional general courts. These 8 general regional courts are already legal entities included in Q42, line 1.2.

Slovenia

(General Comment): Although the given answer for 'labour courts' is 4 and 'insurance and/ or social welfare courts' at first instance is 1, the total number of these courts is 4, as one of the labour courts and the social court form a single legal entity – the Labour and social court in Ljubljana.

Concerning specialised courts – higher instances, although the given answer for 'labour courts' is 1 and 'insurance and/ or social welfare courts' is 1, the total number of these courts is 1, as they form a single legal entity – the Higher labour and social Court.

(2019): Please see general comment.

Spain

(General Comment): The Arbitration Court was created by decision of the General Council of the Judiciary of 25 November 2010. The latter assigns exclusive jurisdiction over arbitration matters to the Court of First Instance No. 101 of Madrid. This measure seeks to foster the development of uniform criteria in court proceedings for the assistance and control of arbitration in Madrid.

Other specialised courts include: Penal courts; Penal courts specialized in violence against women (courts for criminal trial, that have been assigned only to cases of gender violence); violence against women courts (courts of criminal investigation and civil proceedings related to gender violence cases); juvenile courts; Prison courts; foreclosure proceedings courts; Civil Capacity courts and Civil register

(2020): Commercial courts - new units have been established.

(2019): Courts of violence against women 106

Foreclosure proceedings Courts: 3

Court of arbitration: 1

Civil capacity courts: 13

Criminal courts: 348

Criminal courts specialized in Violence against women, 31

Juvenile Courts: 82

Prison courts: 51

Civil Registries: 28

(2018): Between 2016 and 2018, more first instance courts have become specialized in family matters. Courts of violence against women: 106

Foreclosure proceedings Courts: 3

Court of arbitration: 1

Civil capacity courts: 12

Criminal courts: 341

Criminal courts specialized in Violence against women, 32

Juvenile Courts: 82

Prison courts: 51

Civil Registries: 28

Additionally (and they are not accounted) there are 26 military courts that are not part of the Judiciary but they are inspected by it)

(2017): -338 Criminal courts

-32 Criminal courts specialized in violence against women

-106 violence against women courts

-82 juvenile courts

-51 Prison courts

-3 foreclosure proceedings courts

-1 Arbitration court

-18 Civil Capacity courts

- 28 Civil register offices

(2016): - 335 Criminal courts

-30 Criminal courts specialized in violence against women

-106 violence against women courts

-83 juvenile courts

-51 Prison courts

-3 foreclosure proceedings courts

-1 Arbitration court

-18 Civil Capacity courts

- 28 Civil register courts

(2015): Other specialised courts include: 343 Penal courts; 23 Penal courts specialized in violence against women; 106 violence against women courts; 83 juvenile courts; 50 Prison courts; 3 foreclosure proceedings courts; 1 Arbitration court; 12 Civil Capacity courts and 28 Civil registry.

The Commercial Courts deal with insolvency issues.

Military Courts have not been accounted because they do not belong to the Judiciary (except the Supreme Court 5th room). There are other 26 Military Courts.

(2014): In 2014, the category “other” encompasses: 357 Penal courts; 23 Penal courts specialized in violence against women; 106 violence against women courts; 83 Juvenile courts; 50 Prison courts; 16 Courts for disabled people (capacity courts), 26 Civil Register Courts, 3 Foreclosure proceedings courts (mortgage courts); 1 Arbitration court. The Decanatos exclusive are not included in this exercise because these organs are not courts and have rather administrative nature.

(2012): In 2012, the category “other” encompasses: 380 Penal courts; 17 Penal courts specialised in violence against women; 106 Violence against women courts; 82 Juvenile courts; 1 Juvenile Enforcement court; 50 Prison courts; 9 Capacity courts; 26 Civil Register courts; 8 Decanatos exclusive; 4 Labour enforcement courts; 4 Mortgage courts and one Arbitration Court.

Question 044

Austria

(2020): For this cycle, data on geographic locations is presented in respect of different locations for different instances, in compliance with the methodology developed in the Explanatory Note. The variation observed with previous cycles is only of a methodological nature.

(2016): It is planned to reduce the number of courts by 3 in 2018 (-1) and 2019 (-2)

Belgium

(2020): Deduction made on the basis of the number of buildings in which the courts are housed: 225 buildings in which all our premises are housed. In Eupen, the first instance courts combines the court of first instance, the labour court and the company court, which gives 8 for the labour and company courts (Law of 14 February 2014)

(2016): A reform of the justices of the peace is under way: 1. a reduction in the number of geographical settlements 2. expansion of their jurisdiction by increasing the amount of claims.

The reform of the cantons (justices of the peace) was launched in 2016 and resulted in the law of 25 December 2017 which formally amended or abolished the cantons. The amendments come into force over 1.5 years.

(2014):

According to 2014 data, a change in the number of seats of the justices of the peace is ongoing. Similarly, from 1 April 2014, the statutory number of courts has been decreased for commercial, labour and police first instance courts while keeping the existing geographical seats.

Bulgaria

(2018): Proposals for amendments to the Code of Administrative Procedure and Code of Civil Procedure to change the jurisdiction of the district and administrative courts with a view to regulating their workload. A model for the optimization of the judicial map at the level of district courts will be developed in implementation of a project under the Operational Program "Good Governance" 2014-2020.

(2016): Proposals for amendments to the Administrative Procedure Code and the Code of Civil Procedure are intended to reform the jurisdiction of regional and administrative courts in order to regulate their workload. Within the implementation of a project under “Good governance” Operational Programme 2014-2020 a model for optimization of the judicial map on regional courts level will be developed.

Croatia

(2020): The reorganisation of judicial map that started in 2015 in which the number of municipal and misdemeanour courts as well as the number of municipal state attorneys' offices has been reduced continued in 2019 with the merger of municipal and misdemeanour courts into municipal courts.

The reasons for the merger were a significant decrease in the number of misdemeanour cases and overburdened municipal courts with civil cases. In the new judicial map, instead of 46 municipal and misdemeanour courts, there are now 34 municipal courts - all misdemeanour and municipal courts were merged in the same cities except in 2 largest cities, Zagreb and Split, in which specialised municipal courts for misdemeanour cases were retained, and due to geographical specificities and size of certain municipal courts they were separated and new municipal courts were established (10). Also, a new commercial court was established in Dubrovnik. The aim of this new judicial map with new courts in the network and increased jurisdiction of permanent services is to increase the efficiency of the courts, improve access to court services, ensure even distribution of the workload of judges, shorten the length of court proceedings, reduce the number of unresolved cases in municipal courts, and ensure optimisation and easier management of human resources in courts.

(2018): The reorganisation of judicial map that started in 2015 in which the number of municipal and misdemeanour courts as well as the number of municipal state attorneys' offices has been reduced continued in 2019 with the merger of municipal and misdemeanour courts into municipal courts.

The reasons for the merger were a significant decrease in the number of misdemeanour cases and overburdened municipal courts with civil cases. In the new judicial map, instead of 46 municipal and misdemeanour courts, there are now 34 municipal courts - all misdemeanour and municipal courts were merged in the same cities except in 2 largest cities, Zagreb and Split, in which specialised municipal courts for misdemeanour cases were retained, and due to geographical specificities and size of certain municipal courts they were separated and new municipal courts were established (10). Also, a new commercial court was established in Dubrovnik. The aim of this new judicial map with new courts in the network and increased jurisdiction of permanent services is to increase the efficiency of the courts, improve access to court services, ensure even distribution of the workload of judges, shorten the length of court proceedings, reduce the number of unresolved cases in municipal courts, and ensure optimisation and easier management of human resources in courts.

(2016): There is a new judicial reform in plan in which the misdemeanour courts will be merged with municipal courts (both 1st instance courts).

(2014): According to the new Act on Territories and Seats of Courts (Official Gazette 128/14), that entered into force on the 1st of April 2015, a further rationalization of the network of municipal (from 67 to 24) and misdemeanour courts (from 63 to 22) and the establishment of an additional commercial court (8 instead of 7) are to be carried out from 1st of April and 1st of July.

As well, the new Act introduces changes regarding the territorial jurisdiction with regard to dealing with appeals. In criminal cases, any county court can decide on appeals lodged against judgments, while only few county courts may decide on appeals in land, labor and family matters.

Cyprus

(2018): In 2019 a New administrative court of international protection has been established that will deal with asylum cases.

(2016): Bills are being drafted for the creation of a commercial court and a first instance asylum administrative court.

(2014): In the frame of the 2014 exercise, it has been pointed out that an Administrative court has been established in Cyprus and started functioning on the 7th of January 2016.

Czech Republic

(2020): 6 regional courts and 3 district courts have their branches in other cities.

Denmark

(2020): Included in first instance courts are district courts, Land Registration Court and the Maritime and Commercial Court.

Estonia

(General Comment): Estonia has 17 courthouses of county courts (first instance courts), 4 courthouses of administrative courts (first instance courts), 2 courthouses of appellate courts (second instance courts) and 1 courthouse of the Supreme Court (highest instance court), all together 24 courthouses. However, as some of the courts are situated in the same house (e.g Tallinn Administrative Court and Tallinn Circuit Court) and taking into account the fact that Pärnu County Court has a courthouse that is divided between two locations, there are 20 actual geographical locations of Estonian courts.

(2020): Tartu county court closed one courthouse, so now there's 20 geographic locations.

(2014): In the end of 2015 the Council for Administration of Courts devised the merger of two courthouses in Estonia that are situated very close to each other (20 km). Both houses will remain open but will have joint territorial jurisdiction and administration.

Finland

(2018): As of 1 January 2019, the district courts will be centralised by decreasing the number of the courts from 27 to 20. A court can have more than one office. The number of the district courts' offices will be reduced from 57 to 36 offices. As of 1 September 2019, undisputed civil cases (for example debt collection, unpaid rents, other small debts and eviction cases) which are handled and decided in summary proceedings will be centralised from all 20 district courts to nine district courts.

(2016): In Finland is ongoing structural reform of the District Courts in which the number of the courts will be decreased from 27 to 20. The main target is to merge smaller courts in to bigger units that would be more efficient and profitable and also maintain high quality. At the same time the geographical locations of the District Courts will be decreased from 57 to 36. This means that in addition to the 7 administrative offices that will be shut down, 5 side offices and 13 separate locations for hearing will be closed. Instead the use of video conference, electronic services and other IT-solutions would be increased. Deadline for the new project is 31.12.2018 so that the reform would be in force in the beginning of the year 2019. The government's proposal has been given at January 2017. The handling of the proposal in the parliament is unfinished.

(2014): According to 2014 data, for the foreseeable future the next reform is the developing of the structure of the District Court network. The foreseen change is a reduction of the number of District Courts.

France

(2020): "With regard to the judiciary, there are 576 courts of first instance - geographic locations. This figure takes into account, by number of sites, all the courts of first instance, excluding the second instance court. Sites hosting exclusively a second instance court have therefore been excluded from this count. Sites hosting both a CA and a trial court were counted only once. There were 619 Courts geographic locations counted. This figure takes into account, by number of sites, all the jurisdictions whether they are appeal or first instance. Moreover, when a first instance court and a second instance court are located on the same site, they have been counted twice (hence the difference of 43 with the previous question: 37 CA which occupy 43 sites).

As regards the administrative order, there are 42 first instance courts for the administrative order and 53 all courts for the administrative order. "

(2016): A reform could take place within the framework of the bill on Justice programming presented in 2018. If no court site should be closed, the organization could be modified, particularly at the level of the courts of appeal, whose map is very different from those of the current administrative regions. There could also be only one first instance court per department.

(2014): As of 1 September 2014, the high courts (TGI) were resettled in the towns of Saint-Gaudens, Saumur and Tulle. Moreover, seconded chambers (geographic locations) were created on the same date in Guingamp and Marmande and on 1 January 2015 in Millau. A draft law to modernise the justice provides that the litigation of social security affairs and disability will be brought together before the TGI. Small offences ruled before the District Court will be transferred to TGI; similarly, compensation for personal injury will be entirely the responsibility of the TGI.

Germany

(General Comment): The figures in this section are taken from the chart "Number of Federal and State Courts" (https://www.bmjb.de/SharedDocs/Downloads/DE/PDF/Anzahl_der_Gerichte_des_Bundes_und_der_Laender.html) that does not distinguish between legal entities and geographic location of the courts. Generally, one legal entity equals one geographic location. A small number of courts may have a additional points of presence in other geographic locations. Since the exact number of geographic locations in comparison to legal entities is unknown, the figures from the chart "Number of Federal and State Courts" were used to answer this question as well.

(2018): The possibility of combining courts is being considered by individual Länder in order to reduce costs. The regional structures have proven effective. On 5 November 2019, the Land Government of Schleswig-Holstein adopted a statutory instrument on the concentration of jurisdiction which combines existing concentrations of jurisdiction while adding further concentration provisions. The instrument will be promulgated at the end of the month.

(2016): The possibility of combining courts is being considered by individual Länder in order to reduce costs.

Greece

(2020): The total number of courts includes the Court of Auditors

(2014): According to 2014 data, the Law 1756/1988, article 2, as modified by the Law 4123/2013, provides for a reduction of the number of courts. Besides, the Law 1756/1988, article 4, as modified by the Law 4264/2014, provides for a change in the powers of courts.

Hungary

(2018): According to proposed legislation an independent administrative court system may be established in the future.

(2016): Two new district courts will be established (one in 2017 in the city of Szigetszentmiklós, another one in 2019 in the city of Érd).

(2014): According to 2014 data, a new first instance (district) court will be established in the city of Érd on 01/01/2018.

Ireland

(2018): The Assisted Decision-Making (Capacity) Act 2015 will, when commenced, replace the existing wardship regime for persons with capacity issues and introduce new decision support arrangements for such persons. New jurisdiction will, in particular, be conferred on the Circuit Court in respect of such arrangements. The current situation is that while some parts of the 2015 Act are commenced, others remain to be commenced.

(2016): The Assisted Decision-Making (Capacity) Act 2015 will, when commenced, replace the existing wardship regime for persons with capacity issues and introduce new decision support arrangements for such persons. New jurisdiction will, in particular, be conferred on the Circuit Court in respect of such arrangements.

(2014): According to 2014 data, legislation is in preparation for the creation of specialised family courts within the High, Circuit and District Courts.

Italy

(2016): Enhancing the specialization of judges / courts. In particular, the judiciary authorities are evaluating the introduction of specific courts for family and personal matters ("Berruti" reform). Increased competence of Business Courts. Establishment of specialized sections on matters such as immigration, international protection and free movement of citizens of the European Union.

Revision of the appeal system in order to reduce the appeal rate.

Latvia

(2018): Reform was finished in March 2018. In its course first instance court count was reduced to 10 (9 first instance + 1 first instance Administrative court).

In year 2020/2021 there is a plan of creating a court for economical cases that would be a specialised 1st instance court.

(2016): Starting from 1 of February 2016, the reform has been introduced in Latgale (administrative region of Latvia). A number of district (city) courts in territory of Latgale regional court was decreased from six to two district (city) courts (Balvi District Court and Ludza District Court had been incorporated into Rezekne District Court; Kraslava district court and Preiļi District Court had been incorporated into Daugavpils District Court).

in 2016, Ministry of Justice make preparatory work to make court house reform in two district (city) court in the Rīgas region. Accordingly, starting from 1 of February 2017, the City of Rīga Zemgale Urban District Court has been reorganized and conjoined with the City of Rīga Kurzeme District Court and changed the name of this court to City of Rīga Pārdaugavas Court.

(2014): In the frame of the 2014 evaluation, it has been stressed that the Judicial Council and the Cabinet of Ministers have initiated the gradual unification of the territory of operation of district (city) courts, through the implementation of the reform of the Riga court region. From March 2015, the Sigulda Court is attached to the Riga District Court, while the Riga City Central District Court was attached to the Riga City Vidzeme District Court.

The Judicial Council's decision of 8 June 2015 confirmed the restructuring plan concerning the Jurmala City Court. According to the plan, the latter must be attached to the Riga District Court from August 2015. The review of the judicial map is intended to increase the efficiency of the court system and the quality of the judicial activity, to reduce the processing times and to even out the judicial capacity. The reform is still going on.

Lithuania

(2020): There are 59 1st instance courts locations: 12 district courts (49 locations), 5 regional courts (5 locations) of general jurisdiction and 2 regional administrative courts (5 locations).

For all the courts 62 courts locations: The Supreme Court of Lithuania, the Court of Appeal of Lithuania, the Supreme Administrative Court of Lithuania and 59 1st instance courts locations.

(2018): Analysis and discussion on the need and possibility to decrease the number of court houses are initiated.

(2016): From January 1, 2018, there shall be 12 district courts (instead of 49) and 2 regional administrative courts (instead of 5).

Malta

(2016): Throughout 2017, work was carried out in order to introduce a commercial division within the Civil Court in order to facilitate cases filed under the Companies Act. The bill is currently undergoing the legislative process that would see it being enacted as law by the end of the year. The Commercial Division will become operative in 2018.

Netherlands

(2020): In one case (of 43), a first instance court of general jurisdiction, a specialized first instance court, and a court of appeal are housed at the same site (adding 2 sites according to the explanatory note).

In 3 cases, a first instance court of gen.jur. and a court of appeal are housed at the same site (adding 3 sites according to the explanatory note).

In 1 case, a f.i. court of gen.jur. and a specialized second instance court are housed at the same site (adding 1 site according to the explanatory note).

Finally, the Supreme Court, 1 specialized second instance court, and 2 appeal courts are housed at unique locations (adding 4 sites according to the explanatory note).

(2016): Possibility of closing subdistrict court facility?

(2014): According to 2014 data, the reforms regarding the merging of courts mentioned on the occasion of the 2012 evaluation have been implemented.

Poland

(2020): Regarding point 44, it should be noted that in the previous evaluation cycles (2016, 2017, 2018, 2019) the answer in terms of the number of all courts as geographical locations was 401, while in 2020 it is 494.

The figure of 494 indicated in 2020 is the sum of the common, administrative and military courts of first and second instance and the Supreme Court by geographic location (i.e. including the subdivisions). To the number of courts of first instance by geographical location (item 44 in line 1 - all common, administrative, military courts of first instance with localised divisions: number of courts 433) was added the number of 61 courts: - regional courts: 46; - courts of appeal: 11; - military courts: 2; - Supreme Administrative Court: 1; - Supreme Court: 1; Total: 494 (433 + 61).

The discrepancy is due to the adoption of a different method of data presentation in 2020 (by geographical location). In compliance with the Explanatory note, the 2020 data show first-instance courts (line 1), and further all courts (line 2) together with all seats in different locations, which in the realities of the Polish legal system should be understood as a necessity to show the number of courts together with local divisions.

(2016): It is considered to reduce the number of district courts which are responsible for land and mortgage registers or abolishing external branches in district courts.

Portugal

(2020): The difference between 2019 and 2020 is justified by the increase in new buildings.

(2018): Law n.º 19/2019, 19th February.

The recent amendments to the Law of the Organization of the Judiciary System are intended to ensure the reciprocal proximity of justice and citizens in two key segments: criminal jurisdiction and family and minors jurisdiction.

These new amendments aim to facilitate people's access to courts and combat the desertification of the interior regions of the country.

(2016): Law n.40-A/2016, 22 December and Decree-Law n. 86/2016, 27 December.

On the 1st of January 2017, 20 extinct districts were reopened, as well as 23 of the so-called proximity sections, in which judicial acts may now be concluded.

Romania

(2020): Law no. 304/2004 on the judicial organisation.

It should be mentioned that some of the first instance specialised courts share the location with „judecatorii”.

(2014): According to 2014 data, a bill on closing 30 courts and 30 attached prosecution offices with low volume of work was initiated by the Ministry of Justice with the support of the Superior Council of Magistracy of Romania. The bill was rejected by the Parliament. The Superior Council of Magistracy seeks for alternative solutions for the reallocation of the resources.

Slovakia

(2020): The Constitutional Court is not included in the 44 answer.

(2014): According to 2014 data, on 1st July 2016, the new Civil Litigious Procedure Code will enter into force. It introduces the so called "causal jurisdiction" of first instance courts. It means that certain types of civil claims will belong to the jurisdiction of only some of the first instance courts. This will apply e.g. for individual labour disputes, arbitration disputes, disputes arisen from bill of exchange etc.

Slovenia

(General Comment): First instance courts: first instance courts of general jurisdiction (55, see Q42.1) + first instance specialised courts (4 labour courts and social court + 7 branch offices of labour and social courts + 1 administrative court + 3 branch offices of the Administrative court) = 70

All courts: In addition to above also 4 higher courts of general jurisdiction + 1 higher labour and social court + the Supreme court = 76.

(2018): A change in the organisation of first instance courts (judicial map), as well as first instance judges' position is being prepared by the Ministry of Justice - see Q208.

(2016): Ministry of Justice is preparing court network reform. Existent first instance court network is considered as inefficient and insufficient. The main goal of this reform is to set up a system, which could assure better quality and efficiency of adjudication, specialization of judges and even allocation of cases. Furthermore, reform still should assure proper access to the courts and financial efficiency. Ministry of Justice is also taking in consideration different system of the nomination of judges, nomination of Supreme Court judges and president of the Supreme Court. Existent nomination procedure of judges is too rigid and does not enable taking prompt actions when the post is vacant.

(2014): According to 2014 data, discussions about the reorganization of the structure of courts have been initiated. Following the CEPEJ Guidelines on the creation of judicial maps to support access to justice within a quality judicial system (CEPEJ(2013)7) the change should be gradual. The reduction in the number of courts regarding geographical locations is not foreseen, but reorganization in the powers of local courts that are organizational units of district courts might be needed. There are local courts that have only a few (3-5) judges, which is not rational in the sense of court management. Such local courts might start dealing only with certain kinds of cases, with other local courts in the same district dealing with other kinds of cases, having de facto specialized local courts. Nevertheless, these changes are still in the initial debate phase, so no formal proposal can be presented yet.

Spain

(General Comment): One building usually houses different courts. For example, in Madrid one building (Castilla Square) houses 47 unipersonal Courts.

(2018): The traditional structure of a Court includes a Judge (or Magistrate), a Judicial Counsellor, and several civil servants (the exact number depends on many circumstances). The New Judicial Office (Nueva Oficina Judicial) has been implemented in many territories and its development continues. The New Judicial Office (NOJ) has, as base, the called 'Procedural Unit of Direct Support' (UPAD), a small office with personnel necessary for the strict aid of the work of the Judge. On the other hand, and for the uniform processing of repetitive tasks, the called Common Procedural Services have been created. The Judicial Counsellor is the Director of these services, and is responsible of processing the phase of the judicial file of a strictly procedural nature.

(2016): The traditional structure of a Court includes a Judge (or Magistrate), a Lawyer of the Administration of Justice, and several civil servants (the exact number depends on many circumstances). The New Judicial Office (Nueva Oficina Judicial) has been implemented in many territories and its development continues. The New Judicial Office (NOJ) has, as base, the called 'Procedural Unit of Direct Support' (UPAD), a small office with personnel necessary for the strict aid of the work of the Judge. On the other hand, and for the uniform processing of repetitive tasks, the called Common Procedural Services have been created. The Lawyer of the Administration of Justice is the Director of these services, and is responsible of processing the phase of the judicial file of a strictly procedural nature.

(2014): On the occasion of the 2014 evaluation, the attention was drawn on the deployment in the entire country of the Judicial Office, the new model for organising courts of law and the creation of the Instance Courts (Tribunales de Instancia), a new model of collegial courts aimed at replacing local courts belonging to the same judicial district.

Indicator 3: The performance of courts at all stages of the proceedings

First instance other than criminal cases by categories of case by case status (number of pending 1 Jan, incoming, resolved, pending 31 Dec, pending over 2 years)

Table 3.1.1.1(2020): First instance courts, number of other than criminal law cases in 2020 - Pending cases on 1st Jan. (Q91)

| States | Total number of other than criminal law cases | Civil (and commercial) litigious cases | Total non-litigious cases | General civil (and commercial) non-litigious cases * | Registry cases | Non-litigious land registry cases | Non-litigious business registry cases | Other registry cases | Other non-litigious cases | Administrative law cases | Other cases** |

Romania: Due to the peculiarity of the national Statis system, cases older than 3 years instead of 2 are communicated.

France: administrative matters: in contrast with previous cycle, 2019 data are expressed in net figures, excluding serial cases presenting the same legal issue for trial.

Romania: Due to the peculiarity of the national Statis system, cases older than 3 years instead of 2 years are communicated.

France: administrative matters: raw data are communicated including serial cases presenting the same legal issue for trial.

Greece: In 2017 new management systems were introduced for civil as well as administrative cases and some variations can be noticed.

Slovak Republic: Because of changes in the structure of the caseload data the number of cases is not comparable between different cycles.

Greece: Any deviations from the 2015 figures are due to a new way of collecting statistics.

Slovak Republic: Because of changes in the structure of the caseload data the number of cases is not comparable between different cycles.

Belgium: The pending cases of commercial courts, first instance (civil, youth, family) and justice of the peace are not included. Included in pending cases are: labor courts, police courts, courts of appeal.

Slovak Republic: In all evaluation cycles 2015 and before, it was not possible to distinguish number of pending cases solely on 1st instance since each case is considered pending until the moment a final decision is enacted and no further proceeding is possible.

Germany: for civil and commercial litigious and administrative cases, the updated data is solely based on the statistics on the administration of justice published by the Federal Statistical Office. As far as the category “other”, there are the most recent available data at the closing date of the CEPEJ data collection and involve information provided by the 16 Länder on the basis of the query lodged with the judicial administrations of the Länder. Some of the Länder were unable to provide complete data regarding question 91. Accordingly, the information for this category is incomplete and is not comparable with the 2013 data.

Belgium: The pending cases of commercial courts, first instance (civil, youth, family) and justice of the peace are not included. Included in pending cases are: labor courts, police courts, courts of appeal.

Slovak Republic: In all evaluation cycles 2015 and before, it was not possible to distinguish number of pending cases solely on 1st instance since each case is considered pending until the moment a final decision is enacted and no further proceeding is possible.

Germany: for civil and commercial litigious and administrative cases, the updated data is solely based on the statistics on the administration of justice published by the Federal Statistical Office. As far as the category “other”, there are the most recent available data at the closing date of the CEPEJ data collection and involve information provided by the 16 Länder on the basis of the query lodged with the judicial administrations of the Länder. Some of the Länder were unable to provide complete data regarding question 91. Accordingly, the information for this category is incomplete and is not comparable with the 2013 data.

* Starting from 2014, non-litigious enforcement cases have been included in general civil (and commercial) non-litigious cases. Hence the number of General civil (and commercial) non-litigious cases in 2014 is comparable with General civil (and commercial) non-litigious cases + Non-litigious enforcement cases in the 2010, 2012 and 2013 tables.

** Due to the creation in 2014 of a category "other" in non-litigious cases, "other cases" category is not fully comparable before and after 2014.

Germany: for civil and commercial litigious and administrative cases, the updated data is solely based on the statistics on the administration of justice published by the Federal Statistical Office. As far as the category "other", there are the most recent available data at the closing date of the CEPEJ data collection and involve information provided by the 16 Länder on the basis of the query lodged with the judicial administrations of the Länder. Some of the Länder were unable to provide complete data regarding question 91. Accordingly, the information for this category is incomplete and is not comparable with the 2013 data.

Italy: Only since 2014 the 29 regional administrative courts data are taken into account in the number of cases on first instance.

Slovak Republic: In all evaluation cycles 2015 and before, it was not possible to distinguish number of pending cases solely on 1st instance since each case is considered pending until the moment a final decision is enacted and no further proceeding is possible.

* Starting from 2014, non-litigious enforcement cases have been included in general civil (and commercial) non-litigious cases. Hence the number of General civil (and commercial) non-litigious cases in 2014 is comparable with General civil (and commercial) non-litigious cases + Non-litigious enforcement cases in the 2010, 2012 and 2013 tables.

** Due to the creation in 2014 of a category "other" in non-litigious cases, "other cases" category is not fully comparable before and after 2014.

Germany: for civil and commercial litigious and administrative cases, the updated data is solely based on the statistics on the administration of justice published by the Federal Statistical Office. As far as the category "other", there are the most recent available data at the closing date of the CEPEJ data collection and involve information provided by the 16 Länder on the basis of the query lodged with the judicial administrations of the Länder. Some of the Länder were unable to provide complete data regarding question 91. Accordingly, the information for this category is incomplete and is not comparable with the 2013 data.

Italy: Only since 2014 the 29 regional administrative courts data are taken into account in the number of cases on first instance.

Slovak Republic: In all evaluation cycles 2015 and before, it was not possible to distinguish number of pending cases solely on 1st instance since each case is considered pending until the moment a final decision is enacted and no further proceeding is possible.

Table 3.1.1.2b(2014): First instance courts, Caseload in the EU in 2014 (incoming cases per 100 inhabitants) (Q1, Q91)

* Starting from 2014, non-litigious enforcement cases have been included in general civil (and commercial) non-litigious cases. Hence the number of General civil (and commercial) non-litigious cases in 2014 is comparable with General civil (and commercial) non-litigious cases + Non-litigious enforcement cases in the 2010, 2012 and 2013 tables.

** Due to the creation in 2014 of a category "other" in non-litigious cases, "other cases" category is not fully comparable before and after 2014.

Germany: for civil and commercial litigious and administrative cases, the updated data is solely based on the statistics on the administration of justice published by the Federal Statistical Office. As far as the category "other", there are the most recent available data at the closing date of the CEPEJ data collection and involve information provided by the 16 Länder on the basis of the query lodged with the judicial administrations of the Länder. Some of the Länder were unable to provide complete data regarding question 91. Accordingly, the information for this category is incomplete and is not comparable with the 2013 data.

Italy: Only since 2014 the 29 regional administrative courts data are taken into account in the number of cases on first instance.

Slovak Republic: In all evaluation cycles 2015 and before, it was not possible to distinguish number of pending cases solely on 1st instance since each case is considered pending until the moment a final decision is enacted and no further proceeding is possible.

Table 3.1.1.4b(2014): First instance courts, Caseload in the EU in 2014 (pending cases per 100 inhabitants) (Q1, Q91)

* Due to the creation in 2014 of a category "other" in non-litigious cases, "other cases" category is not fully comparable before and after 2014.

Slovak Republic: In all evaluation cycles 2015 and before, it was not possible to distinguish number of pending cases solely on 1st instance since each case is considered pending until the moment a final decision is enacted and no further proceeding is possible.

Germany: With regard to the number of incoming non-litigious enforcement cases, the number of Lander taken into consideration within the reply is different for the 2012 and 2013 exercises. Consequently, data are not comparable.

* Due to the creation in 2014 of a category "other" in non-litigious cases, "other cases" category is not fully comparable before and after 2014.

Slovak Republic: In all evaluation cycles 2015 and before, it was not possible to distinguish number of pending cases solely on 1st instance since each case is considered pending until the moment a final decision is enacted and no further proceeding is possible.

Germany: With regard to the number of incoming non-litigious enforcement cases, the number of Lander taken into consideration within the reply is different for the 2012 and 2013 exercises. Consequently, data are not comparable.

* Due to the creation in 2014 of a category "other" in non-litigious cases, "other cases" category is not fully comparable before and after 2014.

Slovak Republic: In all evaluation cycles 2015 and before, it was not possible to distinguish number of pending cases solely on 1st instance since each case is considered pending until the moment a final decision is enacted and no further proceeding is possible.

Germany: With regard to the number of incoming non-litigious enforcement cases, the number of Lander taken into consideration within the reply is different for the 2012 and 2013 exercises. Consequently, data are not comparable.

Clearance Rate and Disposition Time for first instance other than criminal cases

Croatia: in 2019, new amendments to the Personal Bankruptcy Law caused a significant increase of incoming cases.

Ireland: The low CR is a result of a specifics of the system where the cases resolved out of court are not obliged to report back to courts.

Slovak Republic: Because of changes in the structure of the caseload data the number of cases is not comparable between different cycles.

Ireland: The low CR is a result of a specyfics of the system where the cases resolved out of court are not obliged to report back to courts

Slovak Republic: Because of changes in the structure of the caseload data the number of cases is not comparable between different cycles.

Ireland: The low CR is a result of a specifics of the system where the cases resolved out of court are not obliged to report back to courts

Slovak Republic: Because of changes in the structure of the caseload data the number of cases is not comparable between different cycles.

Belgium: The pending cases of commercial courts, first instance (civil, youth, family) and justice of the peace are not included. Included in pending cases are: labor courts, police courts, courts of appeal.

Germany: for civil and commercial litigious and administrative cases, the updated data is solely based on the statistics on the administration of justice published by the Federal Statistical Office. As far as the category “other”, there are the most recent available data at the closing date of the CEPEJ data collection and involve information provided by the 16 Länder on the basis of the query lodged with the judicial administrations of the Länder. Some of the Länder were unable to provide complete data regarding question 91. Accordingly, the information for this category is incomplete and is not comparable with the 2013 data.

Greece: Any deviations from the 2015 figures are due to a new way of collecting statistics.

* Starting from 2014, non-litigious enforcement cases have been included in general civil (and commercial) non-litigious cases. Hence the number of General civil (and commercial) non-litigious cases in 2014 is comparable with General civil (and commercial) non-litigious cases + Non-litigious enforcement cases in the 2010, 2012 and 2013 tables.

** Due to the creation in 2014 of a category "other" in non-litigious cases, "other cases" category is not fully comparable before and after 2014.

Germany: for civil and commercial litigious and administrative cases, the updated data is solely based on the statistics on the administration of justice published by the Federal Statistical Office. As far as the category "other", there are the most recent available data at the closing date of the CEPEJ data collection and involve information provided by the 16 Länder on the basis of the query lodged with the judicial administrations of the Länder. Some of the Länder were unable to provide complete data regarding question 91. Accordingly, the information for this category is incomplete and is not comparable with the 2013 data.

Italy: Only since 2014 the 29 regional administrative courts data are taken into account in the number of cases on first instance.

Ireland: The low CR is a result of a specifics of the system where the cases resolved out of court are not obliged to report back to courts

Slovak Republic: In all evaluation cycles 2015 and before, it was not possible to distinguish number of pending cases solely on 1st instance since each case is considered pending until the moment a final decision is enacted and no further proceeding is possible.

* Starting from 2014, non-litigious enforcement cases have been included in general civil (and commercial) non-litigious cases. Hence the number of General civil (and commercial) non-litigious cases in 2014 is comparable with General civil (and commercial) non-litigious cases + Non-litigious enforcement cases in the 2010, 2012 and 2013 tables.

** Due to the creation in 2014 of a category "other" in non-litigious cases, "other cases" category is not fully comparable before and after 2014.

Germany: for civil and commercial litigious and administrative cases, the updated data is solely based on the statistics on the administration of justice published by the Federal Statistical Office. As far as the category "other", there are the most recent available data at the closing date of the CEPEJ data collection and involve information provided by the 16 Länder on the basis of the query lodged with the judicial administrations of the Länder. Some of the Länder were unable to provide complete data regarding question 91. Accordingly, the information for this category is incomplete and is not comparable with the 2013 data.

Italy: Only since 2014 the 29 regional administrative courts data are taken into account in the number of cases on first instance.

Ireland: The low CR is a result of a specifics of the system where the cases resolved out of court are not obliged to report back to courts

Slovak Republic: In all evaluation cycles 2015 and before, it was not possible to distinguish number of pending cases solely on 1st instance since each case is considered pending until the moment a final decision is enacted and no further proceeding is possible.

Croatia: in 2019, new amendments to the Personal Bankruptcy Law caused a significant increase of incoming cases.

Ireland: The low CR is a result of a specifics of the system where the cases resolved out of court are not obliged to report back to courts

* Starting from 2014, non-litigious enforcement cases have been included in general civil (and commercial) non-litigious cases. Hence the 2014 column "General civil (and commercial) non litigious cases" is comparable with the addition of the columns "General civil (and commercial) non litigious cases" and "Non-litigious enforcement cases" in the 2010, 2012 and 2013 tables.

** Due to the creation in 2014 of a category "other" in non-litigious cases, "other cases" category is not fully comparable between 2012, 2013 and 2014, 2015.

Czech Republic, Slovak Republic: In all evaluation cycles, it was not possible to distinguish number of pending cases solely on 1st instance since each case is considered pending until the moment a final decision is enacted and no further proceeding is possible.

Italy: A different classification of civil cases was introduced in 2013. Therefore comparison between different years might lead to erroneous conclusion.

Specific categories of first instance cases

Belgium: The category "litigious divorce cases", the variations in the numbers of incoming and resolved cases are due to the fact that, unlike previous cycles (2014, 2015), the 2016 and 2017 data does not include divorces by mutual consent.

Hungary: Litigious divorce cases in 2017 and 2016 cannot be compared with the previous years as the statistical system has changed due to an amendment of the code of civil procedure these cases were included in a new statistical category.

Hungary: Litigious divorce cases in 2015 cannot be compared with the previous years as the statistical system has changed due to an amendment of the code of civil procedure these cases were included in a new statistical category.

Slovak Republic: In evaluation cycles 2015 and before, it was not possible to distinguish number of pending cases solely on 1st instance since each case is considered pending until the moment a final decision is enacted and no further proceeding is possible.

| % of NAP | 0% | 0% | 4% | 4% | 0% | 0% |

The bars for Disposition Time are not set to maximum value but they exclude the outlier to enhance visibility and comparability.

Belgium: Starting from 2018, incoming insolvency cases do not include cases dealt with by the new Regsol platform since mid 2017.

Ireland: The low CR is a result of a specifics of the system where the cases resolved out of court are not obliged to report back to courts.

Malta: The Disposition Time is very high due to the low absolute number of resolved cases in 2020.

Table 3.5.1(2019): First instance courts, clearance rate (in percentage) and disposition time (in days) for specific case categories (litigious divorce, employment dismissal and insolvency cases) in 2019 (Q101)

Belgium: Starting from 2018, incoming insolvency cases do not include cases dealt with by the new Regsol platform since mid 2017.

Ireland: The low CR is a result of a specifics of the system where the cases resolved out of court are not obliged to report back to courts.

Slovak Republic: Because of changes in the structure of the caseload data the number of cases is not comparable between different cycles.

Table 3.5.1(2018): First instance courts, clearance rate (in percentage) and disposition time (in days) for specific case categories (litigious divorce, employment dismissal and insolvency cases) in 2018 (Q101)

Croatia: The increase of incoming insolvency cases is due to the new Act for shortened insolvency proceedings and more than 20.000 legal persons for which the preconditions were met initiated these proceedings. Consequently there is an increase of pending cases at the end of the period as well as decreased Clearance Rate.

Slovak Republic: In evaluation cycles 2015 and before, it was not possible to distinguish number of pending cases solely on 1st instance since each case is considered pending until the moment a final decision is enacted and no further proceeding is possible.

Hungary: Litigious divorce cases since 2015 cannot be compared with the previous years as the statistical system has changed due to an amendment of the code of civil procedure these cases were included in a new statistical category.

| % of NAP | 0% | 0% | 4% | 4% | 0% | 0% |

The bars for Disposition Time are not set to maximum value but they exclude the outlier to enhance visibility and comparability.

Belgium: In 2018 and 2019 incoming insolvency cases do not include cases dealt by the new Regsol platform since mid 2017.

Malta: The variation of the Disposition Time is very high due to the low absolute number of resolved cases in 2020.

Slovak Republic: Because of changes in the structure of the caseload data the number of cases is not comparable between different cycles.

Table 3.6.2: First instance courts, change of clearance rate (in percentage points) and disposition time (in percentages) for specific case categories (litigious divorce, employment dismissal and insolvency cases) from 2012 to 2020 (Q101)

Belgium: In 2018 and 2019 incoming insolvency cases do not include cases dealt by the new Regsol platform since mid 2017.

Czech Republic, Slovak Republic: In all evaluation cycles, it was not possible to distinguish number of pending cases solely on 1st instance since each case is considered pending until the moment a final decision is enacted and no further proceeding is possible.

Hungary: Litigious divorce cases in 2015 cannot be compared with the previous years as the statistical system has changed due to an amendment of the code of civil procedure these cases were included in a new statistical category.

Cyprus, Malta have a two tier system therefore the Supreme Court is the second, highest and final instance court.

Malta: In the second instance courts, Administrative law cases are included in the number of Civil (and commercial) litigious cases.

Poland: The Supreme Administrative Court is also the court of second instance and it is impossible for the Statistics Division to divide its cases statistics and identify the number of second instance cases on the one hand, and the number of third instance cases, on the other hand. The total number of administrative law cases dealt with by the Supreme Administrative Court is provided within the frame of Q97.

Table 3.7.2a(2020): Second instance courts, number of other than criminal law cases in 2020 - Incoming cases (Q97)

Cyprus, Malta have a two tier system therefore the Supreme Court is the second, highest and final instance court.

Malta: In the second instance courts, Administrative law cases are included in the number of Civil (and commercial) litigious cases.

Poland: The Supreme Administrative Court is also the court of second instance and it is impossible for the Statistics Division to divide its cases statistics and identify the number of second instance cases on the one hand, and the number of third instance cases, on the other hand. The total number of administrative law cases dealt with by the Supreme Administrative Court is provided within the frame of Q97.

Table 3.7.2b(2020): Second instance courts, number of other than criminal law cases in 2020 - Incoming cases per 100 inhabitants (Q1, Q97)

| States | Total number of other than criminal law cases | Civil (and commercial) litigious cases | Total non-litigious cases | General civil (and commercial) non-litigious cases * | Registry cases | Non-litigious land registry cases | Non-litigious business registry cases | Other registry cases | Other non-litigious cases | Administrative law cases | Other cases |

Cyprus, Malta have a two tier system therefore the Supreme Court is the second, highest and final instance court.

Malta: In the second instance courts, Administrative law cases are included in the number of Civil (and commercial) litigious cases.

Poland: The Supreme Administrative Court is also the court of second instance and it is impossible for the Statistics Division to divide its cases statistics and identify the number of second instance cases on the one hand, and the number of third instance cases, on the other hand. The total number of administrative law cases dealt with by the Supreme Administrative Court is provided within the frame of Q97.

Table 3.7.4b(2020): Second instance courts, number of other than criminal law cases in 2020 - Pending cases on 31 Dec. per 100 inhabitants (Q1, Q97)

Cyprus, Malta have a two tier system therefore the Supreme Court is the second, highest and final instance court.

Malta: In the second instance courts, Administrative law cases are included in the number of Civil (and commercial) litigious cases.

Poland: The Supreme Administrative Court is also the court of second instance and it is impossible for the Statistics Division to divide its cases statistics and identify the number of second instance cases on the one hand, and the number of third instance cases, on the other hand. The total number of administrative law cases dealt with by the Supreme Administrative Court is provided within the frame of Q97.

Table 3.8.2(2020): Second instance courts, disposition time (in days) for different categories of other than criminal law cases in 2020 (Q97)

Cyprus, Malta have a two tier system therefore the Supreme Court is the second, highest and final instance court.

Poland: The Supreme Administrative Court is also the court of second instance and it is impossible for the Statistics Division to divide its cases statistics and identify the number of second instance cases on the one hand, and the number of third instance cases, on the other hand. The total number of administrative law cases dealt with by the Supreme Administrative Court is provided within the frame of Q97.

Slovak Republic: Because of changes in the structure of the caseload data the number of cases is not comparable between different cycles.

Cyprus, Malta have a two tier system therefore the Supreme Court is the second, highest and final instance court. It was agreed to present the data for the Supreme Court in the second instance cases.

Malta: In the second instance courts, Administrative law cases are included in the number of Civil (and commercial) litigious cases.

Croatia: in 2019, new amendments to Personal Bankruptcy law caused a significant increase of incoming cases.

Cyprus, Malta have a two tier system therefore the Supreme Court is the second, highest and final instance court.

Poland: The Supreme Administrative Court is also the court of second instance and it is impossible for the Statistics Division to divide its cases statistics and identify the number of second instance cases on the one hand, and the number of third instance cases, on the other hand. The total number of administrative law cases dealt with by the Supreme Administrative Court is provided within the frame of Q97.

Cyprus, Malta have a two tier system therefore the Supreme Court is the second, highest and final instance court.

Poland: The Supreme Administrative Court is also the court of second instance and it is impossible for the Statistics Division to divide its cases statistics and identify the number of second instance cases on the one hand, and the number of third instance cases, on the other hand. The total number of administrative law cases dealt with by the Supreme Administrative Court is provided within the frame of Q97.

Table 3.10.3b(2020): Supreme courts, number of other than criminal law cases in 2020 - Resolved cases per 100 inhabitants (Q1, Q99)

Cyprus, Malta have a two tier system therefore the Supreme Court is the second, highest and final instance court.

Poland: The Supreme Administrative Court is also the court of second instance and it is impossible for the Statistics Division to divide its cases statistics and identify the number of second instance cases on the one hand, and the number of third instance cases, on the other hand. The total number of administrative law cases dealt with by the Supreme Administrative Court is provided within the frame of Q97.

Slovak Republic: Because of changes in the structure of the caseload data the number of cases is not comparable between different cycles.

Cyprus, Malta have a two tier system therefore the Supreme Court is the second, highest and final instance court.

Poland: The Supreme Administrative Court is also the court of second instance and it is impossible for the Statistics Division to divide its cases statistics and identify the number of second instance cases on the one hand, and the number of third instance cases, on the other hand. The total number of administrative law cases dealt with by the Supreme Administrative Court is provided within the frame of Q97.

Slovak Republic: Because of changes in the structure of the caseload data the number of cases is not comparable between different cycles.

Cyprus, Malta have a two tier system therefore the Supreme Court is the second, highest and final instance court.

Poland: The Supreme Administrative Court is also the court of second instance and it is impossible for the Statistics Division to divide its cases statistics and identify the number of second instance cases on the one hand, and the number of third instance cases, on the other hand. The total number of administrative law cases dealt with by the Supreme Administrative Court is provided within the frame of Q97.

Greece: In 2017 new IT management systems were introduced for civil as well as administrative cases and some variations can be noticed.

Italy: Only since 2014 the 29 regional administrative courts data are taken into account in the number of cases on first instance.

Slovak Republic: Because of changes in the structure of the caseload data the number of cases is not comparable between different cycles.

| Nb of values | 27 | 27 | 27 | 27 |
| % of NA | 4% | 41% | 44% | 26% |
| % of NAP | 7% | 26% | 44% | 67% |

Cyprus, Malta have a two tier system therefore the Supreme Court is the second, highest and final instance court. It was agreed to present the data for the Supreme Court in the second instance cases.

Indicator 3: The performance of courts at all stages of the proceedings

Comments provided by the national correspondents organised by country

Question 091. First instance courts: number of other than criminal law cases.

Question 092. If courts deal with "civil (and commercial) non-litigious cases", please indicate the case categories included:

Question 093. Please indicate the case categories included in the category "other cases":

Question 094. First instance courts: number of criminal law cases.

Question 097. Second instance courts (appeal): Number of "other than criminal law" cases.

Question 098. Second instance courts (appeal): Number of criminal law cases.

Question 099. Highest instance courts (Supreme Court): Number of "other than criminal law" cases:

Question 100. Highest instance courts (Supreme Court): Number of criminal law cases.

Question 101. Number of specific litigious cases received and processed by first instance courts.

Austria

Q091 (General Comment): The statistical database of the Federal Ministry of Justice of Austria subdivides civil and commercial cases into several categories. One of these categories is "litigious cases". Data concerning the number of cases pending for more than 1, 2 and 3 years is only provided for main categories, which a single case qualifies for during the entire proceeding (for example payment procedure, family law procedure). A case can change its status from litigious to non-litigious (or vice-versa) during the procedure depending on the procedural steps of the parties. Therefore, the statistical database only counts the number of litigious cases pending at the end of a certain period as a whole and not those, pending for more than a certain period of time, since this number would not provide reliable information.

Q091 (2020): "Non litigious business registry cases": Sec. 3a para. 2 of the COVID-19 act concerning corporate law ("Gesellschaftsrechtliches COVID-19-Gesetz") allows corporations to file their annual accounts and other documents, that have to be published by law, not only within 9 but within 12 months from the account date (mostly: December 31st of a year). Usually, the duty to file these reports within 9 months leads to a high number of incoming files in September. 2020 the special rules lead to such high incoming file numbers in December and thereby to an increase in pending cases at the end of the year. "4. Other cases": The number of incoming and resolved cases surged due to an increase of "general civil proceedings, that are not allocated to other categories of cases" because the district administrative authorities (Bezirksverwaltungsbehörden) had to notify the district courts of every single person against which a quarantine measure (SARS-CoV-2) had been taken. In concerns of statistical data every such notification resulted in an incoming (and resolved) case.

Q091 (2019): There is a lack of horizontal consistency concerning the category "general civil and commercial non-litigious cases". Figures provided by the statistical system were double checked in this respect and are correct.

Q091 (2017): Due to the absolute low numbers of pending cases on 1 Jan./31 Dec. high deviations in percentage are normal. Note to 2.1.1.: Because of an inaccuracy by analysing pending non-litigious business registry cases the count had to be corrected on 1st December 2017. Therefore the pending cases on 31.12.2016 do not comply with those of 01.01.2017.

Q091 (2016): Due to the low absolute numbers of pending cases on 1 Jan./31 Dec. high deviations in percentage are normal.

Q091 (2015): In the category litigious are counted all proceedings (in civil matters, labour and social security cases at first instance courts) which are marked as being litigious in the court register (f.e. from the second court hearing on).

Civil and commercial non-litigious cases include commencement of bankruptcy proceedings, Bankruptcy proceedings, composition proceedings, non-litigious proceedings about rent, non profit cooperative association for housing, home ownership, proceedings about Lease of farm land, wardship cases in connection with administration of assets, custody and maintenance, uncontested payment orders, enforcement cases.

Category "other" includes Probate Proceedings, cases concerning the Administration of justice, Cancellation proceedings and proceedings in connection with [official] declaration of death authentication of signatures, proceedings to render legal assistance in civil matters for other courts (also international ones), General civil proceedings, that are not allocated to other categories of cases, Some Non litigious family matters.

Q091 (2012): In 2012, a legislative reform entailed more obligations for companies to register.

Q092 (2014): For the year 2014, this category has been extended to the enforcement cases.

Q094 (2020): The distinction between misdemeanour criminal cases and severe criminal cases is possible only for the criminal courts. However the total number includes administrative criminal law cases as well, where distinction is not possible.

Q094 (2018): The distinction between misdemeanour criminal cases and severe criminal cases is possible only for the criminal courts. However the total number includes administrative criminal law cases as well, where distinction is not possible.

Q094 (2016): Administrative criminal cases are included in misdemeanour and in total

Q097 (General Comment): From January 1st, 2014 there are 11 newly found courts for administrative law in Austria, namely 9 regional administrative courts, 1 Federal Administrative Court and 1 Federal Tax Court (all courts of first instances).

Furthermore, there is also the Supreme Administrative Court (final instance). With regard to administrative law cases there is no second instance. The statistical evidence of the Federal Ministry of Justice of Austria does not distinguish between the types of second instance cases mentioned under 2.1., 2.2. and 2.3. Data regarding the general categories "litigious cases" (1.) and "non-litigious cases" (2.) is available.

The number of "Other cases" (4.) is included in the category "litigious cases" (1.).

Q097 (2017): In the area of appeal cases concerning other than criminal law cases only the categories of general civil law, labour law and social law are gathered. The administrative cases are NAP in second instance since they are presented in first and final instance.

Q097 (2016): In the area of appeal cases concerning other than criminal law cases only the categories of general civil law, labour law and social law are gathered. The administrative cases are NAP in second instance since they are presented in first and final instance.

Q098 (2020): "Misdemeanour and / or minor criminal cases": compared to the previous 10 years the pending, incoming and resolved cases in this category in the year 2020 showed a slight decrease. There is no specific explanation for this circumstance.

Q098 (2016): There is significant discrepancy in the number of incoming and resolved misdemeanour cases because the administrative criminal cases of second instance are included in third instance.

Q099 (2020): Discrepancy between number of pending administrative cases on 31 December 2019 and number of pending administrative cases on 1 January 2020: the number of 3 064 pending administrative cases on 1 January 2020 corresponds to 2762 procedures adopted from previous years and 302 procedures completed in previous years and reopened in the reference year.

Pending administrative law cases older than 2 years: the observed increase is a consequence of the high number of cases in the field of asylum and aliens.

Q099 (2019): The reason for the increased number of incoming administrative cases and accordingly the increase in the number of pending administrative cases is related to the high number of cases in the field of asylum and aliens law characterizing the period 2016 - 2019.

Q099 (2018): The reasons for this increase of the incoming administrative cases is related to the high number of cases in the field of asylum and aliens law.

Q099 (2017): To 3.:

Because of the model of business cases installed at the Supreme Administrative Court pending cases at the begin of a reporting year have to be analysed by calculation. Incoming cases are subtracted from the sum of resolved cases and of pending cases at the end of the reporting year. New applications within the same case cause a reopening of the concerned cases. Thus the number of pending cases changes. Therefore a completely consistent image of figures of pending cases from the end of previous year and those from the begin of the current year is not feasible.

Q099 (2016): The big variation is due to the fact that this cycle the administrative cases were included. The administrative courts were established January 1st 2014. After their establishment the data of the administrative courts is introduced this cycle for the first time.

Q100 (2020): The total figure includes data on administrative criminal cases before the Supreme Administrative Court.

Q100 (2016): The big variation is due to the fact that this cycle the administrative cases were included. The administrative courts were established January 1st 2014. After their establishment the data of the administrative courts is introduced this cycle for the first time.

Q101 (General Comment): For intentional homicide cases include only the cases against known offenders. The intentional homicide cases includes facts of murder, manslaughter, killing on demand, involvement in suicide and killing a child at birth (sec 75 to 79 criminal code).

For robbery cases include only the cases against known offenders and facts of robbery theft and heavy robbery (sec 131, 142 and 143 Austrian Criminal Code).

Q101 (2020): Insolvency cases: the observed decreases between 2019 and 2020 are due to the pandemic. Data on intentional homicide and robbery cases were delivered for the year 2018 due to a special evaluation that had taken place. Because of this special evaluation data for 2018 was available. The standard statistical tools do not enable enquiries to pending cases of a certain category (regarding certain criminal offences) to a specific date in the past.

Q101 (2019): The decrease in the number of incoming cases related to the right of entry and stay of aliens stems from the decline in migration flows. Accordingly, the number of pending cases at the end of 2019 decreased.

Belgium

Q091 (2019): Regarding the category "4. other cases" which refers to "protection cases", the statistical service does not have figures for 2019, following discussions on the counting rules between the courts. However, we kept the total for "other than criminal" cases since protection cases represent more or less 10,000 cases, or 1% of the total. Their actual number will not change the total figure significantly.

"Administrative cases pending at the end of the year": the lack of horizontal consistency is due to the fact that the number of judgments does not necessarily correspond to the number of closed cases. For example, a judgement that closes two cases is recorded as one stop

Q091 (2018): Civil and commercial cases include cases of justices of the peace, courts of first instance, civil, family and youth sections, labour courts and company courts (known as "commercial courts")

Civil and family courts: no data for pending cases. New rules for counting and recording cases mean that the statistics are not comparable to previous years. In particular, cases where there is a permanent referral are now counted as a case.

Concerning juvenile courts: no data for completed or pending cases due to the lack of uniform practice and low registration of completed cases.

Concerning registry cases: these are immediate acts, which is why the number of incoming cases is equal to the number of resolved cases. Administrative affairs: Council of State, Aliens Litigation Council, Raad voor Vergunningsbetwistingen, het Milieuhandhavingscollege en de Raad voor Verkiezingsbetwistingen.

Q091 (2017): The difference with the 2016 data is due to the lack of data on justices of the peace cases. In respect of justices of the peace, from July 2017 to June 2018, a deployment of new codes was carried out at the national level. The support service of the College of Courts and Tribunals is currently in the process of defining accounting rules for justices of the peace. For this reason, no figures were issued in 2018 pertaining to 2017 data.

Civil data are not included or only partially included for 5 courts; Youth courts: no data from Brussels (Dutch-speaking); no data for resolved cases and pending cases; No data for civil cases from police courts; Commercial courts: no data for pending cases + new counting rules for resolved cases. For this reason, comparison with previous data is made difficult; not all activities carried out in commercial courts are reflected in the statistics provided. Indeed, the following services are not covered: commercial investigation service, business continuity law, bankruptcy and dissolutions/liquidations.

Q091 (2016): Administrative cases: Council of State, Aliens Litigation Council, Raad voor Vergunningsbetwistingen, het Milieuhandhavingcollege en de Raad voor Verkiezingsbetwistingen.

The sharp decrease in administrative cases is due to immigration cases. There are 5 administrative courts, two of which are at federal (national) level: the State Council and the Aliens Litigation Council. It is within the latter that there has been a decrease in the number of cases. Immigration and asylum cases are handled by the Conseil du Contentieux des Etrangers. The Aliens Litigation Council is an independent administrative court, which deals with cases "in the first instance", i.e. full substantive litigation or "in cassation", i.e. a decision "in annulment" or "suspension". The Council may be seized with appeals against decisions of the "Commissariat général aux Réfugiés et aux Apatrides", against decisions of the "Office des Etrangers" and against all other individual decisions taken pursuant to the Act of 15 December 1980 on access to the territory, residence, establishment and removal of aliens (Aliens Act).

Please also note that figures for juvenile courts as well as figures for civil cases treated by the police courts are not included in this cycle. These figures present very small number from the total number of cases.

Q091 (2015): The pending cases of commercial courts, first instance (civil, youth, family) and justice of the peace are not included.

Included in pending cases are: labor courts, police courts, courts of appeal.

Q091 (2014): With regard to non-litigious business registry cases, the central register of notices of seizure, delegation, transfer, collective debt settlement and loan is managed by the National Chamber of Bailiffs. Administrative cases are handled by the State Council (except for cassation rulings), the Alien Litigation Council and the Flemish regional administrative colleges, "Raad voor verkiezingsbetwistingen, Raad voor milieuhandhaving by Raad voor vergunningbetwistingen".

Q091 (2012): The category 1 "civil (and commercial) litigious cases" refers to cases tried by first instance courts, commercial courts and justices of peace, and civil cases dealt with by the police courts. Civil cases concerning youth are not included, as well as cases tried in second instance by courts of first instance. For 2010, there are no available data on the labour courts because the project to build a data warehouse 'Statistics labour courts' is not yet finalised. Cases from categories 1 and 2 cannot be distinguished and are all grouped in category 1.

Q094 (2016): Severe: all cases that are dealt with at first instance by the criminal courts of first instance; Minors: all cases that are dealt with by the police court

Three sites could not provide statistics for severe cases.

Q094 (2014): Offences handled by the police court (although this court can pronounce prison sentences) are considered as minor offences.

Q097 (2018): Number of cases before courts of appeal, labour courts and cases of appeal against decisions of justices of the peace and police courts, at the first instance level.

Court of Appeal (civil matters): pending cases at 1/01/2018 = 33,018; pending cases at 31/12/2018 = 32,321; pending cases for more than 2 years from the date in which the case is brought before the courts of second instance = 13,507. Labour Court: pending cases at 1/01/2018 = 6236; pending cases at 31/12/2018 = 6201; pending cases for more than 2 years from the date in which the case is brought before the courts of second instance = 1535. Bron: datawarehouse (extraction 1/09/2019) no data on pending appeals against decisions of the justices of the peace and police courts at the first instance level.

In administrative matters, there is no second instance. The Council of State is the only supreme court.

Q097 (2017): Number of cases before courts of appeal, labour courts and appeals against decisions of justices of the peace and police courts at the first instance level.

Courts of Appeal: Justice in numbers

Q097 (2016): Number of cases before courts of appeal, labour courts and cases of appeals against decisions of justices of the peace and police courts, at first instance.

Q098 (2016): The category "Severe criminal cases" concerns appeals to the courts of appeal against the judgements of the courts of first instance ruling in criminal matters. The category "Misdemeanour and / or minor criminal cases" refers to appeals to the courts of first instance against decisions of police courts in criminal matters.

Q099 (General Comment): Civil, social and tax cases at the Supreme court.

Administrative cases are the cases at the highest level of the Council of State.

Q099 (2019): Civil, social and fiscal affairs at the supreme Court. Administrative cases are the cases 'in cassation' at the Council of State.

Q099 (2018): Civil, social and tax cases at the Court of Cassation

Administrative affairs = cases "in cassation" at the Council of State

Q099 (2017): civil and commercial cases: cases in roles C, S and F at the Court of Cassation

administrative cases: cases before the Council of State "in cassation": Out= 221 judgments and 214 non-admission orders

Q099 (2016): Civil, social and fiscal cases at the Court of Cassation

Administrative cases = "cassation" cases in the State Council

The decrease in administrative cases is due to a reduction in referrals to the Council of State for this type of case.

Q099 (2014): 2014: The civil and commercial cases include cases of roles C (private and public law), F (tax law) and S (employment law) of the Court of cassation.

Administrative cases fall within the decisions of the Council of State in cassation.

Q100 (2016): Cases on the 'p' list of the Court of Cassation

the downward trend in the input of criminal cases is due to the tightening of access conditions: stricter time limits, obligation to serve notice of appeal, compulsory intervention by a lawyer trained in the cassation technique, abolition of immediate appeal against interlocutory judgments, abolition of the Court of Cassation's review of pre-trial detention, except for the first confirmation of the arrest warrant. To all this it must be added the introduction of a rapid and non-adversarial procedure allowing appeals that are not substantiated or manifestly inadmissible or unfounded to be refused.

Q101 (2019): In matters relating to asylum seekers, the line between an asylum case and a migration case is not always easy to draw. Thus, 'asylum' cases are very cyclical. The figures were communicated by the Foreigners Litigation Council.

Q101 (2018): As a result of the new rules for counting and recording cases, the number of contentious divorce cases is lower than the one in the previous years.

Bankruptcy cases do not include cases that have been managed by the Regsol system and procedure since mid-2017. The number of pending and resolved cases cannot be calculated due to the unreliability of the available data.

Cases concerning asylum seekers include asylum cases before the Aliens Litigation Council (e. g. applications for recognition of refugee status or granting of the subsidiary protection status). Cases relating to the right of entry and residence include migration cases before the Aliens Litigation Council (appeals for annulment of individual decisions taken pursuant to the Act on Access to the Territory, Residence, Establishment and Removal of Foreign Nationals).

Q101 (2017): Appeals lodged with the Aliens Litigation Council (Conseil du contentieux des Etrangers (CCE)) in the context of an asylum procedure
migration litigation.

Q101 (2016): "Justice of the peace: no data for pending cases (start + end)

civil courts of first instance and family courts: no data for pending cases (start + end)

Youth courts: no data for Eupen, Leuven, Brussels (Dutch-speaking), Tournai, Mons; no data for resolved cases, pending cases and length of criminal courts of first instance: no data for Turnhout, Tongeren, Hasselt, Leuven, Charleroi, Eupen; no data for durations and breakdown by type of offence; police courts : no data for civil cases: no data for new cases, pending cases and commercial court length: concerns (only) the following roles: general role (including contested claims), role of motions and role of summary proceedings. It should be noted that the number of resolved cases is only an estimation - this figure has been calculated on the basis of the last judgment and this judgment closes the case. Consequently, not all the following cases are taken into account in this calculation: cases that have been the subject of another judgement after the judgement ending the case, and cases in which no judgement has been pronounced; no data for pending cases. Insolvency (commercial courts) :

Due to unreliable data, figures for pending and resolved insolvency cases (commercial courts) cannot be provided. With regard to insolvency (commercial courts), it should be noted that: - incoming cases: cases registered with a insolvency nature, cases with a insolvency number or cases registered on a dedicated insolvency list. Cases relating to liquidations/dissolutions, business continuity law and commercial investigations (not leading to insolvency) are not recorded. Filter: nature group of the insolvency case or insolvency number or entry on the roll F, G, H, K, L, V.

Bankruptcies include business insolvency proceedings (Commercial Court) and personal insolvency proceedings (collective debt settlement with the labour court).

With regard to the "litigious divorce cases" category, the variations in the number of incoming cases and the number of resolved cases are due to the fact that, unlike the previous cycles (2014, 2015), the 2016 data do not include divorces with mutual consent. The category "insolvency cases" in 2016 encompasses insolvency proceedings of companies (Commercial Court) and personal insolvency proceedings (collective debt settlement before the Labour Court) that were not included in previous cycles."

Q101 (2015): The insolvency cases provided only include cases regarding individuals and not the ones concerning companies.

Bulgaria

Q091 (General Comment): The division by types of cases in the statistical forms published by the Supreme Judicial Council of Bulgaria is quite different from the CEPEJ categorisation and for that reason breakdown cannot be made. Only administrative cases are possible to differentiate due to existence of administrative courts. Furthermore, in Bulgaria registry cases are not resolved by courts. They are under the competence of the Registry agency where is the property register, the commercial register, the BULSTAD register and the Register of the Property Relations between spouses. Since there is no centralised Case Management System, the information on number of cases in different instances was summed up on the bases of the data collected from different courts and some mistakes are possible due to non-existence of control mechanism to check all the incoming courts data and spot eventual anomalies.

Q091 (2018): The observed increase in the number of incoming administrative law cases and accordingly in the number of pending administrative law cases at the end of 2018, is a consequence of an increase characterizing the period 2016-2017. As explained in the comment accompanying 2017 data, there is no specific reason for the increase in the number of incoming administrative law cases between 2016 and 2017. During this period there was an increase in the number of cases before the administrative courts (mainly claims under the Administrative Procedure Code, Management of Resources from the European Structural and Investment Funds Act, Tax and Social Insurance Procedure Code, Competition Protection Act, etc.).

Q091 (2017): 02/11/2018 7:17:04 AM There is no specific reason for the increase in the number of incoming administrative law cases between 2016 and 2017. During this period there was an increase in the number of cases before the administrative courts (mainly claims under the Administrative Procedure Code, Management of Resources from the European Structural and Investment Funds Act, Tax and Social Insurance Procedure Code, Competition Protection Act, etc.).

Q091 (2014): The number of all civil cases (litigious and non-litigious) considered as an overall category could be obtained by extracting from the total the number of administrative cases (67 513 pending cases on 1 January 2014; 294 657 incoming cases; 300 799 resolved cases; 61 371 pending cases on 31 December 2014).

Q091 (2012): The number of pending administrative law cases on 31 December 2012 has increased because of the increase of the number of incoming cases in 2010 and 2012. Administrative courts resolved about 72% on average of the cases during the year.

Q093 (General Comment): Till 2014, the sum of all civil and commercial cases (litigious and not litigious) heard by first instance courts was represented within item "other". However, in order to ensure better consistency of the comparative analyses of the CEPEJ, starting from 2014 exercise, even the category "other" is answered by "NA".

Q094 (General Comment): For most of the crimes, the Bulgarian Criminal Code provides for a deprivation of liberty, which makes the distinction hard to be made. The offences could be divided into two categories: common offences and offences subject to private prosecution. For the common offences, the search of responsibility is subordinated to the common regime (there is a public interest concerned or public interest and personal goods). Such are the crimes against individuals (homicide, grievous or intermediate bodily harm, rape, fornication and etc.), crimes against the property (the list is not exhaustive). As to the offences subject to private prosecution, the criminal proceedings are initiated upon a complaint by the affected person (personal interests of the affected person, and usually the affected person and the perpetrator are close relatives). Those offences have a lower degree of public danger and affect less the rights of the concerned person. Such offences are the minor bodily injury, the insult, the slander and etc.

Q094 (2020): Other criminal cases: All criminal cases (criminal cases of general nature, private criminal cases, administrative-criminal cases) at first instance!

Q097 (General Comment): The division by types of cases in the statistical forms published by Supreme Judicial Council of Bulgaria is quite different from the CEPEJ categorisation and for that reason breakdown cannot be made. Only administrative cases are possible to differentiate due to existence of administrative courts. Furthermore in Bulgaria registry cases are not resolved by the courts. They are under the competence of the Registry agency where is the property register, the commercial register, the BULSTAD register and the Register of the Property Relations between spouses. Since there is no centralised Case Management System, the information on number of cases in different instances was summed up on the bases of the data collected from different courts and some mistakes are possible due to non-existence of control mechanism to check all the incoming courts data and spot eventual anomalies.

Till 2014, the sum of all civil and commercial cases (litigious and not litigious) heard by first instance courts was represented within item "other". However, in order to ensure better consistency of the comparative analyses of the CEPEJ, starting from 2014, even the category "other" is answered by "NA". The total is correct and represents the sum of the "administrative law cases" which number is identifiable, on the one hand, and all the civil cases considered as an overall category, on the other hand.

Q097 (2020): "Total": the decreases in the number of pending cases is due to growth in civil and commercial cases in 2019 which continued in 2020, but at a slower pace. "4.Other cases": All appellate civil and commercial cases

Q097 (2019): See General comments

Q097 (2018): NA

Q097 (2016): There is no particular explanation for the downward trend observed between 2014 and 2016 in respect of the number of pending cases on 1 January for the categories "total" and "administrative law cases". All the data provided is correct.

Q097 (2012): In the frame of the 2012 exercise, it has been explained that the number of pending administrative law cases on 31 December 2012 has increased because of the increase of the number of incoming cases in 2010 and 2012.

Q098 (2020): All criminal cases

Q098 (2018): NA

Q099 (General Comment): The software of the Supreme Court of Cassation for extraction of statistical data is made according to a methodology developed in the Supreme Court of Cassation, as the codes for the respective type of cases are formed by a working group of judges in the Supreme Court of Cassation. This software, which allows the SCC to extract the statistics needed to answer Question 99, is different from the product used for other courts.

Q099 (2020): The number of pending administrative cases decreased meaningfully because of reorganization of work in the Supreme Administrative Court (SAC). By issuing an internal order The Chairman/President of the SAC increased the workload of each judge to achieve these results.

The difference of two cases in the horizontal calculation/consistency (indicated by the SCC 3863 cases instead of 3865- Pending cases on 31 Dec. ref. year) is due to two cases found in 2020, which were completed in the SCC in a previous period (before 2020), but were not correctly filled in then with all the details needed by the software to report the cases as completed. The adjustment was made in 2020, which actually reduces the number of cases for consideration by two, and the number of completed cases does not increase because the cases were completed in a previous period - before 2020.

Q099 (2019): There are some non-litigious cases that are not included in the data but their number is insignificant.

Q099 (2018): There are also some other non-litigious cases that are not included in the data. However their number is insignificant.

The number of pending administrative cases older than 2 years decreased meaningfully because of reorganization of work in the Supreme Administrative Court (SAC). By issuing an internal order The Chairman/President of the SAC increased the workload of each judge to achieve these results.

Q099 (2017): The answer for 2. Non litigious cases (2.1+2.2+2.3) is NAP for previous cycles as well.

Q099 (2016): The increase in the number of pending administrative law cases (in the beginning and at the end of the year) is explained by the fact that data has been provided by different sources for 2014 and 2016.

Q100 (General Comment): The software of the Supreme Court of Cassation for extracting statistics is different from the product used for other courts. The division of criminal cases according to the criteria set out in Question 100 was made on the basis of the definitions of the CEPEJ.

In the category "other criminal cases" are included: cases with charges on corpus delicti which doesn't have independently application; cases on Chapter XXXIII Criminal Procedure Code (re-opening of criminal cases); private cassation proceedings (change of local jurisdiction, jurisdiction disputes, proceedings on returning of cassation claim/protest etc.); procedures regarding execution of judicial acts that are entered into force; proceedings regarding administration and/or movement of cases etc.

Q100 (2018): The "Other cases" group are: cases where the punishment for a committed crime depends on the punishment for other crime, that is established in the main text of the Criminal Code – it could be an offence of more severe or lightly punishment; cases on procedures related to the main case; cases on claims for re-establishment of criminal case; cases on jurisdiction disputes; cases on interpretation of a judicial act; cases on rehabilitation; cases that were instituted on a private appeal, etc. Some cases which were previously counted in misdemeanour/minor are now indicated under "other" which explains the decrease in the number of misdemeanour/minor criminal cases in respect of all categories – pending, incoming and resolved cases.

Q100 (2016): Comment on question 100

Till 2015 only the Supreme Court of Cassation was hearing the requests for resumption of criminal cases. In 2015 the Criminal Procedure Code was amended with the Law For Amendment and Supplementation of Criminal Procedure Code /SG, 42/2015/. According to the amendment the request for resumption of the criminal case grounded on art. 422, par. 1, p. 5 of the Criminal Procedure Code shall be heard by the respective court of appeal, when the judgments under art. 419 of the Criminal Procedure Code were decreed by a regional or district court, except of the new verdicts.

As a result of the legislative amendment, a significant part of the requests under Chapter Thirty-three of Criminal Procedure Code are heard by the courts of appeal in the state.

The above led to reduction in the number of cases related to the resumption of criminal cases heard by the Supreme Court of Cassation. This is also the reason for the presence of more than 20% deviation from the total number of criminal cases heard by the Supreme Court of Cassation during 2016 than those from previous years.

Q100 (2014): In the annual report of the Supreme Court of Cassation in 2012 (criminal division) the cases pending at the end of the reporting period were 260. In the report for 2013 the pending cases at the beginning of the period were 602 and the pending cases at the end of the reporting period were 671. Under Table 1 of the report for 2012, there is a note that the pending cases which are not included in the number of adjourned and private proceedings were filed in December 2012 at the registry of the Supreme Court of Cassation and are scheduled for consideration in January and February 2013. As a result, the total number of pending cases in 2014 appears much higher than in 2012.

Q101 (General Comment): Since there is no centralised Case Management System, the information on number of cases was summed up on the bases of the data collected from different courts and some mistakes are possible due to non-existence of control mechanism to check all the incoming courts data and spot eventual anomalies. Accordingly, some discrepancies can appear between data communicated for different cycles.

Q101 (2020): The Supreme Judicial Council does not only collect separate statistics for "Employment dismissal cases", but also adds claims for revocation of the imposed penalty "remark" and "dismissal warnings". If this overall statistic will be useful for this row in the table of Q101, then the data for it are the following:

1. Pending cases on 1 January of the reference year - 749
2. Incoming cases - 1301
3. Resolved cases - 1121
4. Pending cases on 31 December of the reference year - 929

Q101 (2019): "Employment dismissal cases": the Supreme Judicial Council does not collect separate statistics only for the type of cases "employment dismissal cases", but also adds in the statistics the claims for revocation of the imposed penalty "remark" and "dismissal warnings". "Cases relating to asylum seekers": in connection with the observed significant decrease in the number of cases received in 2018 and 2019 (217 in 2018 and 98 in 2019, respectively), we note that this is probably due to the significantly reduced number of foreign nationals, who sought asylum in the Republic of Bulgaria in 2019(2536 in 2018 and 309 in 2019, respectively).

Q101 (2018): The number of dismissal cases includes: "Claims for protection against unlawful dismissal and claims for annulment of the penalty imposed" note "and" warning of dismissal".

There is no specific explanation as to why insolvency proceedings decreased during the reference 2018. There is also no specific explanation as to why the number of employment dismissal cases decreased.

Q101 (2017): Since there is no centralised Case Management System, the information on number of cases was summed up on the bases of the data collected from different courts and some mistakes are possible due to non-existence of control mechanism to check all the incoming courts data and spot eventual anomalies. Accordingly, some discrepancies can appear between data communicated for different cycles.

Q101 (2016): There is no particular explanation in respect of the observed variations. All the data provided is correct.

Q101 (2013): The increase in the number of pending insolvency cases on 1 January 2013 is due to the overall increase in the number of incoming cases justified by macroeconomic reasons, namely the global financial crisis.

Croatia

Q091 (General Comment): In Croatia, the enforcement cases are within only one type of procedure, and one category - Enforcement. Enforcement cases are non-litigious cases, and are therefore presented within row 2.1.- Civil and Commercial non-litigious cases. It should be noticed that bankruptcy cases are subsumed in the category "civil and commercial litigious cases". A bankruptcy registry has not been established in the Republic of Croatia. Since 2014, ICMS was improved as Croatia introduced an updated and very detailed code table, in order to extract more detailed case types from the system. Therefore, since then the distinction between all cases in litigious and non-litigious cases as well as other types of cases can be made very accurately. This change of methodology of categorisation affected the difference between pending cases on 31 December 2013 and pending cases on 1 January 2014 and disappears in the next cycle. For land registry cases there is a special explanation about the way of presenting unresolved cases 2.2.1. (Non-litigious land register cases) we emphasize that on 1 November 2014 the new monitoring methodology of the unsolved land register cases has been introduced, in a way that regular land register cases (e.g. registration) are monitored separately from other land register cases which include objections, appeals, individual correction procedures, proposals to connect the register of deposited contracts and general register and renewal cases, the establishment and amendment of land register. That is the reason of data horizontal inconsistency of data. The same reflects to the 2014, 2015 and 2016 period.

Q091 (2019): In 2019 new amendments to the Personal Bankruptcy Law came into force. That caused significant income of other than criminal cases to the municipal courts. There was an increase in the number of land registry incoming cases too. The increased number of incoming land registry cases is caused by intensified economic activities and activities on the real property market. With the same number of employees working on these cases, pending cases increased at the end of the year. Additionally, a large number of citizens started civil lawsuits against banks regarding loans in Swiss currency. These factors combined led to the increase of pending cases at the end of the year as well. The decrease in the number of civil and commercial non litigious cases is due to enforcement cases: courts solved a significant amount of these cases during 2018, while the number of incoming cases decreased as well. For that reason, at the end of 2018 /beginning of 2019 there are fewer cases than at the end of 2017/ beginning of 2018.

As regards "administrative cases", administrative courts resolved more cases during 2018. That decreased the pending stock of the cases at the end of 2018/beginning of 2019.

Q091 (2018): Decrease of the number of incoming cases (34%) in category 2.1. in comparison to previous cycle is due to the significant decrease of enforcement cases which are calculated in this category. Majority of enforcement cases are aimed at debtor's monetary assets based on trustworthy documents – i.e. documents that make the existence of debt highly plausible (such as regular utility bills, telecom operators' invoices, credit card invoices, unpaid installments of bank loans, etc.). Those cases were removed from jurisdiction of courts to public notaries already in 2012., and since then there is year after year decrease of enforcement cases in municipal courts - enforcement based on other types of enforcement titles (other than trustworthy document), as well as enforcement against real property.

Q091 (2017): The cases relative to the Personal Bankruptcy Act which came into force on 1st January 2016 are handled by the 1st instance Municipal Courts. The data about these cases was not available in the moment of completing the questionnaire for the Evaluation (CEPEJ study for EU Scoreboard) (data 2016) but the data is now available within the ICMS system for the year 2017 and they are incorporated in the category 1. Civil (and commercial) litigious cases (including litigious enforcement cases and if possible without administrative law cases, see category 3). There were 268 pending Personal Bankruptcy cases on January 1st 2017, 377 incoming cases in 2017, 281 cases resolved in 2017 and 365 pending cases on 31st December 2017.

"Registry cases": In this category there is more than 20% increase of pending cases at the beginning of reference year in comparison to the beginning 2016. The reason are land registry cases. As stated in the previous cycle, the reason for the increased number of pending land registry cases is the significant income of these cases during 2016 and the difficulty for courts to cope with this income in same amount as in 2015. This all reflects on data for 2017.

The reason for the decrease in the number of pending administrative cases at the end of the 2017 is laying in the fact that administrative courts received almost 18% less cases than in 2016. Although judges resolved less cases than in previous year, in relation to the income, it was enough to decrease the number of pending cases at the end of 2017 for more than 20%.

Q091 (2016): More land registry cases has been received in 2016 than in 2014 so the total number of registry cases has increased as well.

During the two-year period (through 2014 and 2015), administrative courts accumulated unresolved cases - they solved significantly less than they received, which led to 15024 pending cases at the beginning of 2016. By the end of 2015, a total of 5 judges were transferred to administrative courts from other legal branches, which resulted in better results in 2016 (more resolved cases).

Q091 (2015): In 2015 the reorganization of the judicial system in the Republic of Croatia, which is partly related to the reorganization of the second instance proceedings, has been carried out. Consequently, in the county courts there has been a harmonization of case registers and case codes (litigious, non-litigious and other) in a way that in 2015 courts carried out the alignment and correction of the indication of certain types of second-instance civil cases. For this reason, in 2015 the correction of the category of cases according to the new methodology of monitoring has been carried out.

The total of all categories is aligned with the continuity of previous cycle (horizontal consistency), whereas the individual categories in the column "Pending cases on Jan. 1 2015" are presented under the new revised indication of the types of cases. For example, some cases that have been categorized in previous cycles under category 'Other', the courts have categorized according to the certain types of dispute which was possible after new case registers were open (e.g. Enforcement – Security by lien on the basis of an agreement of the parties).

Q091 (2014): In 2014, a new methodology of monitoring unresolved land registry cases was introduced, in a way that regular land registry cases (i.e. registration, note, caution) are not being monitored anymore and are not presented in the total. Other land registry cases (i.e. objections, appeals, specific corrections, etc.) are still being monitored. The overall number of enforcement cases is subsumed in the category "general civil and commercial non-litigious cases". The Municipal Civil Court undertook the harmonization of data due to data migration. After the new standardization of the audit, the Supreme Court has started to be less up-to-date since the number of received cases is far beyond the number of cases which may be resolved (priority is given to urgent and old cases).

Q091 (2013): The implementation of the ICMS system resulted in unification of data into one reporting system. The category "general civil and commercial non-litigious cases" includes inheritance cases but excludes company registry cases. The increase of the incoming "civil and commercial litigious cases" was mostly due to the continuity of the negative economic situation, while the efforts of judges, as well as broadening the scope of powers of court advisors resulted in the increase of resolved cases. The implementation of the enforcement on pecuniary means carried out by the Financial Agency (FINA) led to decreases in respect of "non-litigious enforcement cases". Since 2013, court advisors deliver a decision in land registry cases, while the judge supervises its content. The competence of other persons for issuing land registry was also established, electronic delivery of submissions and e-notice board were introduced.

Q091 (2012): Till December 2011, "administrative law cases" were adjudicated at the Administrative Court. Provided that the latter was overburdened, a two-instance administrative adjudication was introduced in January 2012. 4 regional administrative courts were established as first instance courts, while the former Administrative Court became second-instance High Administrative Court. Since 2012, there is a mandatory oral court hearing of the parties before the first-instance courts.

Q092 (General Comment): The category "civil (and commercial) non-litigious cases" encompasses all non-litigious cases that are not stated in the different categories.

Q092 (2014): For 2013 and 2014, the provided examples concern only question 92: exercise of the parental care; meeting and spending time with parent; obtaining the capacity to exercise rights of minor that became parent; decision with whom the child will be living; issuing of the permit for entering into marriage before age of majority; deprivation/returning of capacity to exercise rights; deprivation/returning /prolongation of parental care; deprivation of parents' right to live with the child and raise the child; content of court will; security of evidence; setting-up/derogation of necessary passage; setting-up of court deposit, opening of a safe; verification of a contract on life-long support; amortization of documents; trust of a child with behavioural disorder; the recognition of foreign court decisions; declaring a missing person dead; co-ownership dissolution; meetings and spending time with grandmother, grandfather, sister, brother, half-sister, step-brother; land borders; regulation of relations between co-owners; restraining a child; providing legal aid; conclusion of court settlement; inheritance statement; proof of death; regulation of co-ownership relationships; boundaries and necessary passage; determination of extramarital union; other- family non-litigious proceedings; storage of the testament; providing international legal assistance; verification; other –the rest of non-litigious proceedings; international child abduction; other - proclamation of the deceased and proof of death; the appointment of members of the companies body; the appointment of auditors, temporary/interim administrator; the safeguard of evidence; the establishment of a court deposit; opening of the safe deposit box; registry cases; previous measures; forcible establishment of lien; temporary measure; temporary and previous measures, recognition of arbitration decisions; recognition of a foreign court decision; cases entering in the scope of Article 4 point 2 of the Companies Act; court insurance by the transfer of ownership and rights.

Q092 (2013): For 2013 and 2014, the provided examples concern only question 92: exercise of the parental care; meeting and spending time with parent; obtaining the capacity to exercise rights of minor that became parent; decision with whom the child will be living; issuing of the permit for entering into marriage before age of majority; deprivation/returning of capacity to exercise rights; deprivation/returning /prolongation of parental care; deprivation of parents' right to live with the child and raise the child; content of court will; security of evidence; setting-up/derogation of necessary passage; setting-up of court deposit, opening of a safe; verification of a contract on life-long support; amortization of documents; trust of a child with behavioural disorder; the recognition of foreign court decisions; declaring a missing person dead; co-ownership dissolution; meetings and spending time with grandmother, grandfather, sister, brother, half-sister, step-brother; land borders; regulation of relations between co-owners; restraining a child; providing legal aid; conclusion of court settlement; inheritance statement; proof of death; regulation of co-ownership relationships; boundaries and necessary passage; determination of extramarital union; other- family non-litigious proceedings; storage of the testament; providing international legal assistance; verification; other –the rest of non-litigious proceedings; international child abduction; other - proclamation of the deceased and proof of death; the appointment of members of the companies body; the appointment of auditors, temporary/interim administrator; the safeguard of evidence; the establishment of a court deposit; opening of the safe deposit box; registry cases; previous measures; forcible establishment of lien; temporary measure; temporary and previous measures, recognition of arbitration decisions; recognition of a foreign court decision; cases entering in the scope of Article 4 point 2 of the Companies Act; court insurance by the transfer of ownership and rights.

Q092 (2012): For the 2012 exercise, the provided indications constitute replies to both questions 92 and 93. _x000D_ The non-litigious cases were divided in the following categories: _x000D_

1. Non-litigious cases referred to issues on personal status (status law): restriction, deprivation and returning of capacity to exercise rights; prolongation of parental care; deprivation and restriction of parental care; permit for entering into marriage; confession of fatherhood; detention in the institutions for mental diseases; promulgation of vanished persons dead and proving of death;_x000D_
2. Non-litigious cases referred to property issues: inheritance proceedings; regulation of co-ownership relations; division of property and voluntary transmission of common property; boundary regime/regulation; amortization of decrees; conduction of different registers; _x000D_
3. In the scope of non-litigious cases there have been developed special, different units: bankruptcy proceedings; liquidations and forced settlements; land registry proceedings; enforcement proceedings.

Q093 (2014): In 2013 and 2014 the reply NAP in respect of the category “other” is due to the fact that a bankruptcy registry has not been established in the Republic of Croatia.

Q093 (2013): In 2013 and 2014 the reply NAP in respect of the category “other” is due to the fact that a bankruptcy registry has not been established in the Republic of Croatia.

Q093 (2012): For the 2012 exercise, the provided indications constitute replies to both questions 92 and 93. Non-litigious cases were divided in the following categories: _x000D_

1. Non-litigious cases referred to issues on personal status (status law): restriction, deprivation and returning of capacity to exercise rights; prolongation of parental care; deprivation and restriction of parental care; permit for entering into marriage; confession of fatherhood; detention in the institutions for mental diseases; promulgation of vanished persons dead and proving of death;_x000D_
2. Non-litigious cases referred to property issues: inheritance proceedings; regulation of co-ownership relations; division of property and voluntary transmission of common property; boundary regime/regulation; amortization of decrees; conduction of different registers; _x000D_
3. In the scope of non-litigious cases there have been developed special, different units: bankruptcy proceedings; liquidations and forced settlements; land registry proceedings; enforcement proceedings.

Q094 (General Comment): Croatian legislation distinguishes misdemeanours and criminal offences. The Criminal code stipulates criminal offences, while misdemeanours are not codified in one single Act. Since there are misdemeanours for which it is possible to impose a penalty of deprivation of liberty, and that neither the Criminal Code does not strictly classify the categories of severe and minor criminal offences, we are not able to classify as misdemeanour/minor all offences for which it is not possible to pronounce a sentence of deprivation of liberty, and classify as severe offences all offences punishable by a deprivation of liberty.

According to this, in the category “severe criminal cases” there are criminal cases under the jurisdiction of the 1st instance municipal and county courts, while in the category “misdemeanours and/or minor criminal cases” there are cases under the jurisdiction of the 1st instance misdemeanour courts. Misdemeanour Act prescribes that misdemeanours and misdemeanour legal sanctions can be prescribed solely for those behaviours that violate or threaten public order, social discipline and social values guaranteed and protected by the Constitution of the Republic of Croatia, international law and the laws whose protection is not possible without misdemeanour legal sanction, and their protection is not achieved with criminal coercion. The above shows that misdemeanours are certain behaviours that deserve sanction, but which by its severity and consequences do not deserve criminal liability.

Q094 (2020): In category "Other cases" are included (from last cycle) cases related to criminal matters in first instance: execution of sanctions (imprisonment), investigation actions of a judge, cases connected to procedural matters (e.g. panel of judges decision about detention, about prolongation of detention, about confirmation or dismissal of indictment, etc.)

Q094 (2018): In category "Other cases" are included (from this cycle) cases related to criminal matters in first instance: execution of sanctions (imprisonment), investigation actions of a judge, cases connected to procedural matters (e.g. panel of judges decision about detention, about prolongation of detention, about confirmation or dismissal of indictment, etc.)

Q094 (2016): Starting from 1 June 2013, when the Act on Amendments to the Misdemeanours Act (OG 39/2013) entered into force, the inflow of first-instance misdemeanour cases displayed in this table continuously and significantly had been reduced. The number of resolved cases reduced as well, but due to a significant decrease in inflows, the number of unresolved cases reduced by the end of the period. This reflected also on High Misdemeanours Court, whose data is shown in this table.

Q094 (2014): The new Criminal Procedure Act entered into force in September 2011, introducing the investigation conducted by the State Attorney Offices (instead of court investigation), as well as new and wider opportunities for negotiating settlements. Besides, the decrease of the total number of misdemeanour cases at all levels was the main goal of adopting the Act on the Amendments of the Misdemeanour Act in 2013. The definition of misdemeanour act was changed, the principle of opportunity as well as the simplification of the procedure were introduced, more active role was given to the plaintiff etc. The Register of Unpaid Fines was established. There is no more suspension of the proceedings because of the statute of limitations.

Q097 (2019): Due to legal changes, the High Administrative Court of RoC started to receive more cases from 2016. With the same amount of judges, they did not manage to cope well with this income of case, therefore pending cases increased.

Q097 (2018): In category 1. Civil (and commercial) litigious cases there has been a decrease in the number of pending cases at the beginning of the period, received cases, resolved cases and also pending cases at the end of the year. This seems to be the trend for several years now. Although these courts are resolving less cases than in previous period, due to the reduced income, pending cases are still significantly decreased. Reduced number of received civil litigious and commercial cases on second instance do not have reason in for example law changes. Simply because less cases are resolved at first instance, less appeals are lodged to the second instance.

The increased number of pending administrative law cases at the beginning and at the end of the year as well as received cases is due to the extended jurisdiction of the High administrative court following law changes. The latter led to an increased inflow of cases and difficulty for the High administrative court to cope successfully with the income of second instance cases, especially since the number of judges remain the same as before law changes. This comment was provided also for last cycle. The rest of the categories which have increase or decrease in pending cases is just an effect of the incoming or resolved cases.

Q097 (2017): The increased number of pending administrative law cases at the beginning and at the end of the year is due to the extended jurisdiction of the High administrative court following law changes. The latter led to an increased inflow of cases and difficulty for the High administrative court to cope successfully with the income of second instance cases. This comment in more details was provided also for last cycle.

In this category there is more than 20% increase of pending cases at the beginning of reference year in comparison to the beginning 2016. The reason are land registry cases. Reason for increased number of pending land registry cases is decreased number of resolved cases in relation to the number of incoming cases (87%) during previous year (2016.) which affected results for 2017. In 2017, second instance courts also resolved less than received land registry cases.

The reason for the decreased number of pending business registry cases at the beginning of 2017 in comparison to the beginning of 2016 is the number of resolved cases in relation to the number of incoming cases (104%) during 2016. The lower number of received cases and Clearance rate of 106% lead to the decrease of the number of pending business registry cases at the end of 2017. The reason for the decreased number of pending "other non-litigious cases" at the beginning of 2017 in comparison to the beginning of 2016 is the significant number of resolved cases in relation to the number of incoming cases (185%!!) during 2016. Regarding the increased number of incoming cases of this type, there are in absolute numbers very few cases (154) and although there is an increase of more than 20% in comparison to previous year, we think that there is no significant explanation for this, which would affect the trends in following cycles. As for the decrease in the number of resolved "other non-litigious cases", there is no significant explanation for this, but we think that it will not influence the trend in future cycles.

The reason for the decrease of pending civil and commercial litigious cases older than 2 years in second instance courts lays in the fact that in 2017 second instance county courts and the High Commercial Court resolved significant amount of cases in relation to received cases (122%) with special focus on older cases. This led to a decrease of more than 17% of all pending cases and more than 30% of pending cases older than 2 years.

The reason for the decrease of pending non-litigious cases older than 2 years in second instance courts lays in the fact that in 2017 second instance county courts and the High Commercial Court resolved more cases than received (103%) with special focus on older cases. This led to decrease of more than 7% of all pending cases and more than 30% of pending cases older than 2 years (of which they have few in the beginning). The reason for the decrease of pending "general civil and commercial non-litigious cases" older than 2 years in second instance courts lays in the fact that in 2017 second instance county courts and the High Commercial Court resolved more cases than received (103%) with special focus on older cases. This led to decrease of more than 7% of all pending cases and more than 30% of pending cases older than 2 years (of which they have few in the beginning). The reason of the increase of pending registry cases older than 2 years in this category is entirely due to the increase of the number of pending land registry cases older than two years. The reason is already explained - the increase of pending cases in total is due to the difficulty of second instance courts to cope with the income of these cases. Finally, in respect of administrative law cases, due to the decrease of number of pending cases of this type in total, there is also decrease for 8 cases of pending cases older than 2 years (as stated before, we do not think that this is significant change taking into consideration absolute numbers and type of cases).

Q097 (2016): Second instance land registry cases, due to introducing separate case registers for certain type of cases on second instance courts, are now traceable as such in case management system. They have been taken out from Other non-litigious cases, where they were presented in previous cycles. The number of administrative cases, both in incoming and pending cases at the end of period is increasing. This is due to the law changes, which have extend jurisdiction of this court and consequently increase income of cases and unresolved cases at the end of period.

Q097 (2014): It is noteworthy that in 2012 and 2013, the ICMS could not recognize and divide cases into litigious or non-litigious. In 2014, the ICMS was improved as Croatia introduced updated and a very detailed code table, in order to extract more detailed case types from the system. Therefore, now the distinction between all cases in litigious and non-litigious cases as well as other types of cases can be made very accurately. This change of methodology of categorisation affected the difference between pending cases on 31 December 2013 and pending cases on 1 January 2014 which will disappear in the next cycle.

Q097 (2013): In the frame of the 2013 exercise it has been explained that the discrepancies that can be observed in respect of the category "total of other than criminal cases" between the number of pending cases indicated for December 2012 and the number of pending cases communicated for January 2013, result from an administrative correction of a specific small number of cases by the second instance courts after the closure of the statistic period, which the reporting system then generates as a difference concerning previously rendered data. _x000D_

As to the category "civil and commercial litigious cases", owing to a different methodology of presentation of data, the number of pending cases in the end of 2012 does not coincide with the number of pending cases in the beginning of 2013. The number of pending cases on 31 December 2012 included second instance-civil and commercial courts' cases, bankruptcy cases, general non-litigious cases, enforcement cases, land registry cases and company registry cases. Since 2013, it is possible to provide data on the second-instance civil and commercial litigation cases and bankruptcy cases separately from the general non-litigious cases, enforcement cases, land registry cases and company registry cases. _x000D_

The variations observed with regard to the category "total of other than non-criminal law cases" for the period 2010-2013 can be explained by the negative economic situation in Croatia, which resulted in the increase of incoming commercial and civil cases before first instance courts and consequently led to the increase of the second instance cases.

Q097 (2012): As to the variations observed in respect of the “administrative law cases”, they are justified by the reform related to the administrative justice. Basically, till December 2011, they were adjudicated at the Administrative Court of the Republic of Croatia. Provided that the latter was overburdened, the two-instance administrative adjudication was introduced in January 2012. Four regional administrative courts were established as first instance courts (Zagreb, Osijek, Rijeka and Split), and former Administrative Court became second-instance High Administrative Court (appellate court).

Q098 (General Comment): Due to the peculiarity of the Croatian legal system explained within the frame of question 95, the category “severe criminal cases” subsumes criminal cases under the jurisdiction of the 2nd instance county courts, while the category “misdemeanours and/or minor criminal cases” encompasses cases under the jurisdiction of the 2nd instance misdemeanour courts and the High Misdemeanour Court. Croatian legislation distinguishes misdemeanours and criminal offences. Misdemeanour Act prescribes that misdemeanours and misdemeanour legal sanctions can be proscribed solely for those behaviours that violate or threaten public order, social discipline and social values guaranteed and protected by the Constitution of the Republic of Croatia, international law and the laws whose protection is not possible without misdemeanour legal sanction, and their protection is not achieved with criminal coercion. The above shows that misdemeanours are certain behaviours that deserve sanction, but which by its severity and consequences do not deserve criminal liability. Since the Criminal code does not strictly classify the categories of severe and minor criminal offences, we are not able to classify as misdemeanour/minor all offences for which it is not possible to pronounce a sentence of deprivation of liberty, and classify as severe offences all offences punishable by a deprivation of liberty. According to this, in the category “severe criminal cases” there are criminal cases under the jurisdiction of the 2nd instance county courts, while in the category “misdemeanours and/or minor criminal cases” there are cases under the jurisdiction of the 2nd instance misdemeanour courts and High Misdemeanour Court.

Q098 (2018): Starting from 1 June 2013, when the Act on Amendments to the Misdemeanors Act (OG 39/2013) entered into force, the inflow of first-instance misdemeanour cases had been reduced up to the point where there was no more justification for keeping specialized courts for these types of cases. This led also to continuous decrease of second instance misdemeanour cases, which is also the case in this reporting cycle.

Category “Other cases” - category introduced in this cycle: in case of Croatia, cases calculated here are cases of execution of imprisonment sanctions on county courts in second instance.

Q098 (2016): Starting from 1 June 2013, when the Act on Amendments to the Misdemeanours Act (OG 39/2013) entered into force, the inflow of first-instance misdemeanour cases displayed in this table continuously and significantly had been reduced. The number of resolved cases reduced as well, but due to a significant decrease in inflows, the number of unresolved cases reduced by the end of the period.

Q098 (2014): According to 2014 data and pursuant to the Act on the Amendments of Misdemeanour Act which entered into force in 2013 (OG 39/13), possession of drugs for personal usage is no longer a criminal act but a misdemeanour act. That provision enabled disburdening of the county courts. Furthermore, municipal courts became competent for criminal act of unauthorized production and trafficking of drugs (which was previously in the jurisdiction of county courts and made a share of 40-50% of all cases dealt with by the county courts).

Q098 (2013): Generally speaking, the decrease of the total number of misdemeanour cases at all levels was the main goal and purpose of adopting the Act on the Amendments of the Misdemeanour Act in 2013 (OG 39/13) in which the definition of misdemeanour act was changed, the principle of opportunity as well as the simplification of the procedure were introduced, the more active role was given to the plaintiff. Moreover, specific measures were introduced: if the fine is paid when caught in committing a misdemeanour offence, it is considered as paid if the half of the amount was paid immediately, and if the deadline was prescribed, it is considered as paid if the 2/3 of the amount was paid. Moreover, the enforcement procedure conducted on monetary assets is more efficient. The Register of Unpaid Fines was established. _x000D_ According to the new misdemeanour provisions, there is no suspension of the proceedings because of the statute of limitations. Every court decision is being enforced, fines are being paid, therefore strengthening the general prevention and withdraw of committing misdemeanour offences. All of the above said leads to the reduction of the number of misdemeanour cases at both courts’ instances: misdemeanour courts and High Misdemeanour Court of the Republic of Croatia

Q099 (2017): Regarding the answers in this question, cases dealt with by the Supreme Court of the Republic of Croatia, as the highest instance court in the RoC, have been presented. We are unable to show separately the required categories. The Supreme Court of the RoC is in the process of preparing the implementation of the ICMS, which will in future enable the expression of cases by types. Source for this data is published data by the Supreme Court of the RoC for year 2017 on their website.

Q099 (2016): Due to a large influx of revision proceedings and a slower solving of cases in 2014 and 2015, at the beginning of 2016 the number of pending cases continues to increase. However in 2016 the Supreme Court of the Republic of Croatia significantly resolved more cases than in previous cycle and the number of pending cases had decreased compared with 2015 although not when compared with 2014.

Q099 (2015): In the table 99. cases dealt by the Supreme Court of the Republic of Croatia, as the highest most instance court, have been presented. We are unable to show separately the required categories. The Supreme Court is in the process of preparing the implementation of the ICMS, which will in future enable the expression of cases by types.

Q099 (2014): After the new standardization of the audit, the Supreme Court has started to be less up-to-date since the number of received cases is far beyond the number of cases which the existing judges and advisors at the Supreme Court may solve. In resolving the cases at the Supreme Court, advantage is given to urgent cases (determined by laws) and to old cases.

Q100 (2018): The table shows cases under the jurisdiction of the Supreme Court of the Republic of Croatia, as the highest judicial authority in the Republic of Croatia.

Q100 (2016): The table shows cases under the jurisdiction of the Supreme Court of the Republic of Croatia, as the highest judicial authority in the Republic of Croatia. We are not able to present the data separately for "Severe criminal cases" and "Misdemeanour and/or minor criminal cases" due to the fact that the implementation of the Integrated Case Management System at the Supreme Court of the Republic of Croatia is underway. It will enable the track record of the cases by type. The significant decrease of the number of pending cases at the beginning of 2016 in the Supreme Court is due to the fact that since beginning of 2014 this court continuously solves more cases than it receives and also because in 2015 there was a further reduction in inflow of cases.

Q100 (2014): For 2014, the table shows cases under the jurisdiction of the Supreme Court, as the highest judicial authority in the Republic of Croatia. Data on "severe criminal cases" and "misdemeanour and/or minor criminal cases" could not be presented separately due to the fact that the implementation of the Integrated Case Management System at the Supreme Court of the Republic of Croatia is underway. It will enable the track record of the cases by type. x000D_ When comparing 2012, 2013 and 2014 data, it can be noticed a trend of decrease of the total number of incoming criminal cases, which is a result of legislative amendments, suspension of extraordinary legal remedy (request for extraordinary mitigation of penalty), as well as the decrease of the number of cases in which the decision about an appeal to investigative imprisonment needs to be decided on.

Q101 (2019): Courts competent for "employment dismissal cases" solved more cases during 2018., which led to the decrease of pending cases at the end of 2018./beginning of 2019. As regards insolvencies, in previous years, due to some legislative changes we had higher income of insolvency cases. The income of shortened bankruptcy procedures which was product of those changes stopped, so this income is rather "normal" for Croatia (more or less similar to the income in years before aforementioned changes).

Q101 (2018): The reason for decreasing the number of pending insolvency cases lies in the new Bankruptcy Act, which entered into force in September 2015. Since then, and throughout the first half of 2016, many shortened bankruptcy proceedings have been initiated ex officio and finished in relatively short period (that was "unnaturally" large income of simple insolvency cases). Cycles defined in aforementioned Law of initiating these procedures by FINA finished, so 2018. actually reflects regular state of insolvency proceedings regarding income of insolvency cases.

Q101 (2017): "Litigious divorce cases" - regarding the decrease in the number of pending cases at the beginning of reference year in comparison to the beginning 2016., the reason lays in the fact that first instance municipal courts resolved significant number of cases in relation to the number of incoming cases (148%!!) during 2016., while the income of these cases, as stated in previous cycle decreased in comparison to the 2015. In 2017, courts resolved less cases than in 2016., but nevertheless more than they received which led to the decrease of pending cases at the end of 2017.

"Employment dismissal cases": Regarding the decrease in the number of pending cases at the beginning of reference year in comparison to the beginning 2016., the reason lays in the fact that first instance municipal courts resolved significant number of cases in relation to the number of incoming cases (133%!!) during 2016. Municipal courts received less cases of this type. The reason lays in the fact that in general, income of labour cases decreased in 2017. with no specific reason in sense of law changes etc. Lower number of received cases and Clearance rate of 137% lead to the decrease of the number of pending cases at the end of 2017.

Insolvency cases: in 2015. new Insolvency act was introduced. Significant number of companies were subject of shortened insolvency proceeding conducted by commercial court. Cycles defined in aforementioned Law of initiating these procedures by FINA finished by the mid of 2016., so 2017. reflects regular „movement“ of insolvency cases.

Q101 (2016): Regarding insolvency cases, 2015 was the year when, by introducing new Insolvency act, significant number of companies were subject of shortened insolvency proceeding conducted by commercial courts. Cycles defined in aforementioned Law of initiating these procedures by FINA finished, so 2016 actually reflects regular state of insolvency proceedings regarding income of insolvency cases. Relating the reduced number of incoming divorce cases, the number of divorces with minor children dropped in 2016. Namely, according to the new Family Law which came into force on 1 November 2015, couples with children, before initiating the court proceeding, have to undergo mandatory family mediation at social welfare centres. This fact postpones court proceedings and therefore there are fewer cases in court in 2016.

Q101 (2015): Regarding the Litigious divorce cases, the Republic of Croatia point out that in 2015 there have been amendments to the Family Act, due to which a certain number of family cases were no more resolved in a litigious, but in non-litigious proceedings. For this reason, the number of cases in this category for 2015 is presented decreased (e.g. if these cases remained within the same category, the result would be as follows: Pending at the beginning of 2015 – 4 595, Incoming – 9 253, Resolved – 8 756 and Pending at 31.12.2015 – 5 092 cases).

There is an increase of incoming insolvency cases due to the fact that on 1 September 2015 the new Insolvency Act came into force. The Act stipulates that the court will conduct an shortened insolvency proceedings regarding the legal person if the following conditions are met:

- If it has no employees
- If the FINA Register has unexecuted orders for forced payment for a continuous period of 120 days
- If preconditions for a second proceeding for deletion from the court registry are not fulfilled.

The Financial agency (FINA) is obliged, for legal persons who, on the day of the entry of the Insolvency Act into force, have had unexecuted orders for forced payment in the FINA Register for a continuous period of 120 days submit request to the court to initiate the shortened insolvency proceeding.

In view of the above provisions and the fact that at the time of the entry into force of the Insolvency Act there was more than 20.000 legal persons for which the preconditions were met to initiate the shortened insolvency proceedings, the number of incoming insolvency cases in 2015 increased significantly compared to previous years.

Q101 (2014): The increase in the number of pending bankruptcy cases on 1st January 2014 is due to the fact that many companies have gone bankrupt in 2013, thus there were a large inflow in 2013 in relation to other periods. The same reason accounts for the decrease in the number of incoming bankruptcy cases in 2014, when compared with the outlier in 2013.

Q101 (2013): The category “employment dismissal cases” includes dismissal of employment contract cases, determination of employment relationship cases and termination of employment cases.

Cyprus

Q091 (2020): in the previous cycle a big number of cases were tried together

The delay in the disposition time is part of the reform process

The difference in the pending cases in administrative cases is that in this figure the cases filed before the Administrative court of international protection which was set up

Q091 (2019): In the previous campaigns the number of cases filled and resolved was increased as a result of a big number of cases filed together (in one bundle) and tried together.

Q091 (2018): The increase in the number of resolved cases is a consequence of the cases tried together. For number of administrative cases, it should be taken into account that cases were consolidated and that 2724 consolidated cases were withdrawn.

Q091 (2017): The variation concerning incoming (total) and resolved (total and administrative) cases (decrease) is due to the fact that, in 2016, cases were filed and tried in a bundle but each was considered separately for statistical purposes. Put differently, cases were joined together and therefore there was an increase in the number of resolved cases. Accordingly, we can observe a decrease in the number of resolved cases between 2016 and 2017.

Q091 (2015): Variations: The increase in the number of pending cases between 2010 and 2015 is a result of the bail in Cyprus a lot of administrative cases had been filed against that decision.

The reason for the decrease in the number of resolved cases is that the bail in cases had been consolidated and was tried jointly after 31st of December 2014.

Q091 (2014): The increase in the number of pending cases is a result of the bail in Cyprus; a lot of administrative cases had been filed against that decision. _x000D_ The reason for the decrease in the number of resolved cases is that the bail in cases had been consolidated and was tried jointly after 31st of December 2014.

Q094 (2018): There were fewer criminal cases in 2018.

Q094 (2014): As a result of the bail in, the total number of first instance criminal pending cases on 1 January 2014 increased with 27% between 2012 and 2014.

Q097 (2019): The Administrative law cases include the cases from the administrative court which was established in 2018.

Q097 (2017): appeals filed against decisions of the administrative courts which was established in 2016 should be included in the pending cases on 1.1.2017 as Other cases include family court appeals
Variation between 2016 and 2017 in administrative cases (incoming and resolved): this includes appeals filed against decisions of the administrative court

Q097 (2016): The Supreme Court is the appeal court.

Q098 (2016): There was an increase in the cases pending between 2014 and 2016. With regard to the increase of number of cases resolved this was due to the creation of the administrative court and therefore the Supreme court did no longer had to deal with first instance administrative cases.

Q099 (General Comment): Q99 is NAP because Cyprus has a two tier system therefore the supreme court is the second, highest and final instance court.

Q099 (2018): Cyprus only has a two tier system. The Court of Appeal is also the Supreme Court, therefore the relevant data could be found in the section on second instance cases.

Q099 (2016): The supreme court is the appeal court

Q100 (General Comment): The peculiarity of the judicial system of Cyprus is that the Supreme Court is the appeal and the final instance court.

Q100 (2020): The Supreme Court is also the appeal court

Q100 (2018): Cyprus only has a two tier system. The Court of Appeal is also the Supreme Court, therefore the relevant data could be found in the section on second instance cases.

Q100 (2016): The supreme court is the appeal court

Q101 (General Comment): The increase in the number of employment dismissal cases since 2010 is the result of the crisis.

Q101 (2019): The number of cases relating to asylum seekers reflects the period between June 2019 (date of establishment of the Administrative court for international protection) till December 2019.

The incoming and resolved employment dismissal cases include a bundle of 204 cases concerning overtime arrears against the Cyprus telecommunication authority.

Q101 (2017): in the litigious divorce cases 192 cases pending on 1.1.16 of the family court of Famagusta were not included Concerning the employment dismissal cases, the variation (decrease) between 2016 and 2017 is due to the fact that in 2016 many cases were filed after companies were closed many of which were later withdrawn.

Czech Republic

Q091 (General Comment): For years 2010, 2012 and 2013, business register cases, administrative cases and insolvency registry cases which are decided by the regional courts (second instance courts) acting as first instance courts, were included in the table concerning the case-load of second instance courts (question 97). On the contrary, since 2014, administrative cases, business registry cases and insolvency cases (and also some litigious cases) which are still decided by the second instance courts acting as first instance courts, are subsumed within the table of question 91 (which was already the case for the 2008 exercise). Methodology has been changed in year 2015 – more case types have been included, which led to the big increment in the number of cases. There are no further changes expected.

Q091 (2020): The registry cases are very quickly resolved and the numbers can vary between years significantly. In 2019, courts managed to resolve more cases than was the number of incoming cases, which led to decrease in pending cases. The same explanation applies to “other non-litigious cases”. The number of cases is quite small. It follows that there is big variance in the data between years. Furthermore, during 2019 courts managed to resolve significantly more cases than in 2018, no special reasons were reported other than a fact that number of cases is relatively small and the cases are not complex. This also resulted in further reduction of the number of cases at the end of 2019. In 2020, the courts again managed to resolve more cases than was the number of incoming cases for both registry cases and other non-litigious cases.

Business registry cases are very quickly resolved and there is quite a variance between years. The number of cases is probably affected by many factors – new laws, economic situation and much more.

Other cases: The number of incoming cases has grown, probably due to changes in insolvency legislation.

Q091 (2019): The registry cases are very quickly resolved and the numbers can vary between years significantly. Last year, courts managed to resolve more cases than was the number of incoming cases, which led to decrease in pending cases at 1 January of the reference year. For Other non-litigious cases the same reasons apply for the number of cases at the beginning of the year. Furthermore, during 2019 courts managed to resolve significantly more cases than last year, no special reasons were reported other than a fact that number of cases is relatively small and the cases are not hard. This also resulted in further reduction of the number of cases at the end of the reference year. For incoming Other cases, there was a legislative change in insolvency law that is probably a reason for the significant grow in the number of incoming cases.

Q091 (2018): Methodology has been changed in 2.1 and 2. (civil and commercial non-litigious cases) in year 2015 – more case types have been included, which led to the big increment in the number of cases.

Q091 (2017): Methodology has been changed in 2.1 and 2. (civil and commercial non-litigious cases) in year 2015 – more case types have been included, which led to the big increment in the number of cases. Generally the number of incoming cases is decreasing, more use of ADR.

In the previous year the number of resolved cases greatly exceeded the number of incoming cases for other non-litigious cases, which led to huge drop in pending cases and discrepancy appeared.

Non-litigious business registry cases are very easy to resolve and the variance between years in the number of cases (incoming, resolved and pending) is quite big in general. Thus the annual change could easily be (and is) greater than 25 %. Courts have problems with resolving administrative cases. It follows that number of incoming cases was last year much bigger than number of incoming cases. Thus number of pending cases increased greatly cases and discrepancy appeared.

As to Other cases, insolvency cases are reported. This is relatively new and very specific agenda, which usually takes 5 years to resolve. There was an increase in case filings five years ago, which resulted in growth in the number of resolved cases nowadays. On the other hand, for various reasons (including legislative changes) the number of incoming cases is decreasing.

Q091 (2016): Methodology has been changed in 2.1 and 2. (civil and commercial non-litigious cases) in year 2015 – more case types have been included, which led to the big increment in the number of cases. Generally the number of incoming cases is decreasing, more use of ADR.

Q091 (2015): Methodology has been changed in 2.1 in year 2015 – more case types have been included, which led to the big increment in the number of cases.

Civil and commercial non-litigious cases include: 2.1 - uncontested payment orders, cases of the upbringing and maintenance of a minor, declaration of admissibility of taking or keeping of a person in a medical (health care) institution, declaration of the death of a person, inheritance proceedings, judicial deposit cases

Category "other includes: insolvency cases and incidence disputes

Q091 (2014): For 2014, business register cases, administrative cases, insolvency registry cases and also some litigious cases which are decided by the regional courts (second instance courts) acting as first instance courts are subsumed within the table of question 91.

For 2014 the category "other" encompasses insolvency cases.

In 2014, the high increase of insolvency cases is due to numerous cases of personal bankruptcies as well as to an unfavourable economic situation.

Q091 (2013): For 2013, business register cases, administrative cases and insolvency registry cases which are decided by the regional courts (second instance courts) acting as first instance courts, were included in the table concerning the case-load of second instance courts. In 2014, these cases (and also some litigious cases) are subsumed within the table of question 91.

For 2012, the category of enforcement cases concerns exclusively enforcement carried out by the court itself, while for 2013, this category encompasses also enforcement ensured by private executors (in this procedure, the court authorizes the private executor to proceed to the enforcement and decides about remedial measures against executor's decision). For 2012, the category "other" includes electronic payment orders and probate proceedings, while for 2013 it encompasses only electronic payment proceedings. Moreover, in respect of the electronic payment orders, there was a switchover to another register and 174.067 cases were transferred to a new register. The describes evolutions affect the total. _x000D_

Q091 (2012): For 2012, business register cases, administrative cases and insolvency registry cases which are decided by the regional courts (second instance courts) acting as first instance courts, were included in the table concerning the case-load of second instance courts. In 2014, these cases (and also some litigious cases) are subsumed within the table of question 91.

Variations between 2010 and 2012 concerning the number of pending cases on 1st January, the number of incoming cases and the number of pending cases on 31 December stem from the high number of incoming electronic payment orders in 2011. Besides, more enforcement cases are handled by private executors.

Q092 (2014): For all of the four exercises (2010, 2012, 2013 and 2014) the category of civil and commercial non-litigious cases encompasses cases of upbringing and maintenance of a minor. In 2014, it subsumes also declarations of admissibility of taking or keeping a person in a medical (health care) institution and declarations of death of persons.

Q093 (General Comment): For 2010 and 2012 the category "other" subsumes electronic payment orders and probate proceedings, while for 2013, it encompasses only electronic payment orders. By contrast, for 2014, its content covers insolvency cases.

Q094 (General Comment): We are not able to distinguish between serious offences and minor offences. Thus only total number of cases is reported. There are no cases that could be reported in "Other cases".

Q094 (2018): We are not able to distinguish between serious offences and minor offences. Thus only total number of cases is reported. There are no cases that could be reported in "Other cases"

Q094 (2014): Severe criminal cases are crimes in respect of which the law provides for a minimum term of imprisonment of 5 years. They are decided by regional courts acting in first instance. Minor criminal cases are tried by district courts in first instance, regional courts being the appellate courts in such matters.

Q097 (General Comment): It is noteworthy that the methodology of presentation of data has been changed since the 2014 exercise. In fact, for 2010, 2012 and 2013, business register cases, administrative cases and insolvency registry cases which are decided by the regional courts (second instance courts) acting as first instance courts, were included in the table concerning the case-load of second instance courts (question 97). On the contrary, since 2014, administrative cases, business registry cases and insolvency cases (and also some litigious cases) which are still decided by the second instance courts acting as first instance courts, are subsumed within the table of question 91 (which was already the case for the 2008 exercise). However, this change is not reflected in question 46 concerning the number of second instance judges because it is very difficult to distinguish among them judges working on administrative cases, business registry cases and insolvency cases (and also some litigious cases).

Q097 (2020): In general, number of incoming cases is decreasing and it follows that the numbers of pending cases and resolved are decreasing as well (the situation is getting better). This may result in some big yearly changes and discrepancies. Civil (and commercial) litigious cases: In general, number of incoming cases is decreasing (mostly because number of first instance cases is decreasing too) and it follows that the number of pending cases is decreasing as well (the situation is getting better). This may result in some big yearly changes and discrepancies.

Other cases: The variations are the result of changes in first instance agenda. This category includes insolvency cases and there were numerous legislative changes in last years. Also, it must be noted that the number of pending cases is relatively small, thus the variance is bigger.

Q097 (2019): In "Other cases" category, insolvency cases are reported.

In general, number of incoming cases is decreasing and it follows that the numbers of pending cases and resolved are decreasing as well (the situation is getting better). This may result in some big yearly changes and discrepancies.

Q097 (2018): In "Other cases" category, insolvency cases are reported.

In general, number of incoming cases is decreasing and it follows that the numbers of pending cases and resolved are decreasing as well (the situation is getting better). This may result in some big yearly changes and discrepancies.

Q097 (2017): In "Other cases" category, insolvency cases are reported. In this year the number of resolved insolvency cases greatly exceeded the number of incoming insolvency cases, which led to huge drop in pending cases at the end of the year and discrepancy appeared. The changes are connected to changes in first instance insolvency agenda.

Q097 (2016): Increase in the number of "other cases" in 2015 and 2016 is due to the change of methodology applied to these data.

Q097 (2015): Increases in the number of "other cases" are due to the change of methodology applied to the 2015 data.

Q097 (2014): In 2014, the high increase of insolvency cases is due to numerous cases of personal bankruptcies as well as to an unfavourable economic situation.

Q097 (2013): For the 2013 exercise, the totals do not include the number of non-litigious business registry cases which is not available.

Q097 (2012): For the 2012 exercise, the totals do not include the number of non-litigious business registry cases which is not available.

Q098 (General Comment): Comment: The data provided involves appeals and complaints (corrective measure against a resolution). Instead of "Pending cases older than 2 years from the date the case came to the second instance court" "Pending cases older than 1 year from the date the case came to the second instance court" are provided.

Q098 (2012): In the frame of the 2012 evaluation cycle, it has been specified that the total number of criminal cases includes severe criminal cases decided by second instance courts acting in first instance and appeals against decisions of the first instance courts in criminal matters. On the contrary, in 2010, the total encompassed only the number of appeals, while the number of severe criminal cases was not subsumed. Accordingly, due to the different methodology of presentation of data, the comparison between the 2010 and 2012 figures should be qualified.

Q099 (2020): Civil (and commercial) litigious cases: After several years of steady growth in the incoming cases, the incoming cases started to decrease in 2018. This is mainly due to legislative changes and drop in first and second-instance agenda in previous years. Thanks to this decrease the Supreme court was able to resolve part of its backlog and thus pending cases significantly decreased.

Civil (and commercial) non litigious cases: The variations should be put into perspective due to small absolute values.

Administrative cases: The Supreme court is overburdened and encounter difficulties to resolve its cases thus the number of pending cases grow quite quickly. It is connected to grow in number of administrative first-instance cases and growing tendency to fill an appeal to Supreme Administrative Court.

Other cases: This category includes appeals in last (third) instance of insolvency cases and incidence disputes. The changes are the result of changes in second-instance agenda. Also, it must be noted that the number of pending cases is relatively small, thus the variance is bigger.

Q099 (2019): Court was overburdened last year (there was much higher number of incoming cases than it managed to resolve), so there is a big increase in the number of pending Administrative cases.

Q099 (2018): The category "other" includes appeals in last (third) instance of insolvency cases and incidence disputes.

Q099 (2017): The category "other" includes appeals in last (third) instance of insolvency cases and incidence disputes. This whole agenda is relatively new (since 2008) and it takes quite a long time to resolve a case (several years). Since the agenda is new, it took several years before the number of first-instance incoming cases stopped growing and reach somehow stable level. Of course, the number of appeals (second instance) and incoming case second instance cases started to grow as well, but later. For simplicity, it can be said that Supreme Court deals with appeals in final (third instance). It follows that the number of final instance cases in this agenda also started to grow and again, later than the number of incoming cases in second instance. Thus the number of incoming cases in this agenda (insolvency cases and incidence disputes) is currently growing. The court seems to be struggling to deal with this growth in number of incoming cases, yet it is difficult to understand the reasons behind it, as the growth does not seem to be very high in absolute numbers.

Q099 (2016): In 2016 the administrative cases were added and for that reason all numbers show variation. Previously the number of administrative cases on this instance was NA.

Q099 (2012): In the frame of the 2012 evaluation cycle, it was specified that the civil and other cases are within the competence of the Supreme Court, while the administrative cases are within the competence of the Supreme Administrative Court.

Q100 (General Comment): We are not able distinguish between serious offences and minor offences. Thus only total number of cases is reported. There are no cases that could be reported in "Other cases"

Q100 (2020): Total of criminal cases: The variations should be put into perspective due to small absolute values.

Q100 (2018): We are not able distinguish between serious offences and minor offences. Thus only total number of cases is reported. There are no cases that could be reported in "Other cases"

Q101 (General Comment): For all evaluation cycles for the Czech Republic it was not possible to identify the number of pending cases solely on 1st instance since, each case is considered pending until the moment a final decision is enacted and no further proceeding is possible.

Q101 (2020): In last years, there were many legislative changes in insolvency law. That results in relatively big changes in the number of cases.

Q101 (2019): There was a legislative change in insolvency law. We believe that this change resulted in significant grow in the number of incoming cases. The number of resolved cases also increased. The reason might be that number of incoming cases peaked in 2013 and the length of many insolvency cases is 5 years due to legislative reasons.

Q101 (2017): This is relatively new and very specific agenda, which usually takes 5 years to resolve. There was an increase in case filings five years ago, which resulted in growth in the number of resolved cases nowadays. On the other hand, for various reasons (including legislative changes) the number of incoming cases is decreasing. There was an amendment of insolvency law in 2017 which introduced e. g. obligatory processing of insolvency motion by specialised entities or broadening of reasons for discontinuance of proceedings due to the lack of, or little, estate.

Q101 (2013): The increasing trend concerning the category of insolvency cases is due to the economic situation. More particularly, the number of personal bankruptcies is increasing.

Denmark

Q091 (General Comment): As concerns "non-litigious business registry cases", it is important to note that pending cases always may vary a lot as it is a residual figure when pending prior to the period, received and resolved cases are counted. Furthermore, the reason for the discrepancy is that we do not have pending figures from the Maritime and Commercial High Court. The number of "administrative law cases" which are litigious is encompassed in the number of "civil and commercial litigious cases".

With regard to "non litigious land registry cases", it should be pointed out that due to the high amount of incoming and resolved cases, the residual figure of pending cases prior and after the period may vary.

Q091 (2020): As concerns "non-litigious business registry cases", it is important that because of new regulations/laws, it is possible to start a new company with no prior capital. This causes many more companies and many more closures in some categories and also affect number of pending cases, like for non-litigious business registry cases.

Q091 (2019): Variation in land registration (loans etc) as market and interest rates always vary from year to year. For non-litigious business registry cases: Received markedly fewer enforced cases re enforced closure in 2019 than in 2018; Solved many extra insolvency cases in the beginning of year 2019 received in late autumn / winter 2018; pending cases on 31 December - It is important to understand the figure, that we succeeded to include pending cases from the Maritime and Commercial court.

Q091 (2018): As concerns "non-litigious business registry cases", it is important that because of new regulations/laws, it is possible to start a new company with no prior capital. This causes many more companies and many more closures in some categories and also affect number of pending cases, like for non-litigious business registry cases. Besides from that it is important to note that pending cases always may vary a lot as it is a residual figure when pending prior to the period, received and resolved cases are counted. Furthermore, the reason for the discrepancy is that we do not have pending figures from the Maritime and Commercial High Court. The number of "administrative law cases" which are litigious is encompassed in the number of "civil and commercial litigious cases".

With regard to "non litigious land registry cases", it should be pointed out that due to the high amount of incoming and resolved cases, the residual figure of pending cases prior and after the period may vary.

Q091 (2017): The figures provided in respect of this question are not fully consistent. The Maritime and Commercial Court only measures incoming and resolved insolvency cases but not pending cases. Accordingly, when the data on processed/resolved cases from this court are included, there will always be a small inconsistency. Therefore, vertical and horizontal figures are not totally consistent.

Concerning the category "land registry cases", the number of pending cases on 1 January 2017 is a residual figure from received, finalized and pending cases ultimo the year; it may deviate from pending cases ultimo 2016, but it is a residual figure. The number of pending cases on 31 December 2017 is an actual figure. Concerning the category "registry cases", it is specified that the Maritime and Commercial Court does not publish pending cases which results in a discrepancy.

Q091 (2016): As concerns "non-litigious business registry cases", it is important that because of new regulations/laws, it is possible to start a new company with no prior capital. This causes many more companies and many more closures in some categories and also affect number of pending cases, like for non-litigious business registry cases. Besides from that it is important to note that pending cases always may vary a lot as it is a residual figure when pending prior to the period, received and resolved cases are counted. The number of "administrative law cases" which are litigious is encompassed in the number of "civil and commercial litigious cases".

With regard to "non litigious land registry cases", it should be pointed out that due to the high amount of incoming and resolved cases, the residual figure of pending cases prior and after the period may vary.

Q091 (2014): Due to an improved business situation, courts at all levels receive fewer cases, i.e. civil cases, enforcement cases, forced sales, insolvency cases; pending cases are also reduced thereby. Non-litigious business registry cases follow the overall tendency.

Q091 (2013): The successive decrease observed in the number of civil and commercial litigious cases stems from the possibility to reopen cases and the missing data on pending cases before the Maritime and Commercial Court. As for the land registry cases, following the digitalizing in 2009 of land registry, the number of pending cases decreased markedly.

Q092 (General Comment): Paternity, adoption, guardianship and others in the same category; cases under inquisitorial procedures.

Q093 (General Comment): Estate after a deceased person, notary, insolvency cases not included under 2.2.2. above.

Q094 (General Comment): Danish Court Administration has not worked out a statistics on pending cases older than 2 years. When we categorize cases as "severe", it does not mean that privation of liberty is the end result, but based on the category chosen by the court to deal with the case could include severe cases. Minor cases are typically fines that will never have as a result of privation of liberty. Probably there are too many cases under the category "severe" then, but that is the figures we have.

Q094 (2018): Our statistics on criminal cases does not have data on pending cases older than 2 years. We can not differentiate pending cases according to age. When we categorize cases as "severe", it does not mean that privation of liberty is the end result, but based on the category chosen by the court to deal with the case could include severe cases. Minor cases are typically fines that will never have as a result of privation of liberty. Probably there are too many cases under the category "severe" then, but that is the figures we have.

Q094 (2016): Our statistics on criminal cases does not have data on pending cases older than 2 years. We can not differentiate pending cases according to age.

The reason pending cases per 31 December 2016 has decreased is that the courts have resolved more cases than incoming cases.

Q094 (2014): For the period 2010-2014, district courts have been able to resolve more cases than the number of incoming cases, especially concerning minor criminal cases (traffic offences etc.) which have been given a higher priority. In 2012, district courts received more minor criminal cases due to a new procedure according to which the police sent cases where citizens haven't paid their fines to courts. This was changed again in the end of 2012 where warnings were sent out first and the number of minor cases dropped therefore markedly in 2013. In 2014 the number of received minor criminal cases has gone up again following a decision of the police to step up on issuing fines for traffic offences. Besides, city courts resolved more cases through the plea guilty procedure.

Q094 (2012): The Courts of Denmark received an extraordinary appropriation in 2009 specifically to bring down backlogs. This effect can be seen in 2012, among other things in the lower number of pending cases. The increase in the number of misdemeanor and/or minor criminal cases is due to the fact that a high number of cases concerning, especially, traffic fines were handled at court level.

Q097 (General Comment): It is noteworthy that all appellate cases are considered as "litigious cases" which explains the reply NAP for all the other categories, as well as the fact that the total coincides with the number of civil and commercial litigious cases. The number of "administrative law cases" which are litigious is encompassed in the number of "civil and commercial litigious cases".

Another important remark concerns cases that are not first instance cases before the two High Courts and which are included in question 97. Cases that begin as first instance at one of the two High Courts are not included in the figures in table 97.

Q097 (2016): Pending cases may vary a lot depending on the ratio of resolved cases compared to incoming cases. We can observe a decrease of about 30 % of pending cases ultimo the 2016. This is due to this "residual" nature of pending cases. The decrease in the pending cases between 2014 and 2016 is because in both calendar years 2015 and 2016 the number of resolved cases exceed the number of incoming cases.

Q097 (2014): In the ambit of the 2014 exercise, it has been emphasized that due to an improved business situation, courts on all levels receive fewer cases, i.e. civil cases, enforcement cases, forced sales, insolvency cases. Generally speaking, pending cases are also reduced thereby.

Q098 (General Comment): All criminal cases at 2nd instance are considered severe as they would otherwise not become 2nd instance criminal cases. We can not differentiate pending cases depending on their age. There might be cases though that would not fulfil the criteria of a severe case. About one third of the cases may be smaller or bigger issues from the cases in the district courts that are appealed to one of the two High Courts before proceeding at the district courts and then finally settled in the district court. It is not possible to see if it an issue is from a severe case in the district or a case that is not severe. Then the whole case may afterward be appealed to one of the two High Courts when the district courts have come to a final judgment.

Q098 (2016): All criminal cases at 2nd instance are considered severe as they would otherwise not become 2nd instance criminal cases. We can not differentiate pending cases after how old they are.

Q099 (General Comment): The number of incoming cases corresponds only to the number of admissible cases (excluding cases declared inadmissible which number is not available)

Q099 (2019): resolved and incoming cases have not markedly changed. So it is pending cases that varies. But pending cases are residual numbers and will typically vary from year to year.

Q099 (2018): In the Danish context, non-litigious cases do not make sense. Pending cases may vary as it is residual in nature and is depending on the number of incoming and resolved cases and the ratio between those two. It is also important, when we talk discrepancy, that there is a year between previous and present year (2016 - 2018). 2017 is missing, so data - in particular pending cases - may vary.

Q099 (2017): Pending cases primo and ultimo 2017 for the Supreme Court is found based on pending cases ultimo 2016, received cases in 2017 and resolved cases in 2017. Put differently, pending cases are now generated based on pending ultimo 2016 and cases in 2017.

Q099 (2016): In the Danish context, non-litigious cases do not make sense. Pending cases may vary as it is residual in nature and is depending on the number of incoming and resolved cases and the ratio between those two.

Q099 (2015): The number of incoming cases ("other than criminal cases") dropped between 2010 and 2015. Since the instance reform in 2007, the Supreme Court is now almost only a third instance court (instead of being partly a second instance court and partly a third instance court). Indeed, first instance pending cases at the two High Courts in 2007 have gradually already been appealed or finalised.

Q099 (2014): In the frame of the 2014 exercise, the attention was drawn on the fact that the number of incoming and resolved cases before the Supreme Court was still falling, since the reform of 1st January 2007. Before 2007, many cases started in one of the two High Courts and could be appealed directly to the Supreme Court as second instance. Since 2007, almost all cases start at the lowest level and consequently, much fewer cases are appealed to the Supreme Court. This effect of still fewer cases appealed to the Supreme Court following the reform could still be seen from 2012 to 2014.

Q100 (General Comment): All 3rd instance cases are considered severe. Misdemeanour/minor criminal cases would never reach a 3rd instance court. There is no data on pending cases. Data are from the yearly report 2018 from the Supreme Court, <http://www.hoejesteret.dk/hoejesteret/embedsregnskab/Documents/Årsberetning2018.pdf>

Q100 (2018): Data are from the yearly report 2018 from the Supreme Court, <http://www.hoejesteret.dk/hoejesteret/embedsregnskab/Documents/Årsberetning2018.pdf>

Q100 (2016): Based on the data the Danish Court Administration got, it is not possible to show pending criminal cases.

Q100 (2014): For 2014, the number of pending criminal cases was not available. _x000D_ The number of received criminal cases has fallen all the years since 2010, except from 2014 where it went up with 7 cases and the same number of criminal cases were received as in 2012. It is worth mentioning that the Danish Court Administration differentiates between cases that are fully appealed and cases in respect of which a specific point is appealed (i.e. should the person being charged stay in custody while the case is on-going). The number of cases fully appealed has varied between 27 and 14 over the period 2010-2012-2013-2014 (in 2013 and 2014 there were 14 received cases). Completed "full cases" have varied between 32 and 12 cases (in 2014 there were 12 completed criminal cases). The rest of the cases were related to specific questions. _x000D_ Therefore, and due to the instance reform as well, the Supreme Court has over the years dealt with fewer and fewer cases.

Q101 (General Comment): To be sure to have consistent information, pending cases prior to the period in question is calculated based on received, finalized and pending cases ultimo the period in question. In addition, We got pending bankruptcy cases from the Maritime and Commercial Court from the court's annual report enabling us to answer question 101. It should be noticed that all cases from the District Courts regarding marriage and paternity/maternity are considered litigious divorce cases.

Q101 (2020): To be sure to have consistent information, pending cases prior to the period in question is calculated based on received, finalized and pending cases ultimo the period in question. It should be noticed that all cases from the District Courts regarding marriage and paternity/maternity are considered litigious divorce cases.

Q101 (2019): It should be noticed that all cases from the District Courts regarding marriage and paternity/maternity are considered litigious divorce cases. From April 1, 2019 a new law addressing divorces and togetherness with children and legal housing for children was implemented. It may have had an effect in the number of cases as administrative decisions to some degree become court decisions.

There is a change of numbers of pending insolvency cases as we succeeded to include the Maritime and Commercial Court's pending insolvency cases in the overall figure. We can see over numbers of years, that there is an increasing number of bankruptcy cases. This can be seen too from 2018 to 2019 where there is an increase in the number of bankruptcy cases.

Q101 (2018): It should be noticed that all cases from the District Courts regarding marriage and paternity/maternity are considered litigious divorce cases.

There is a change of numbers of pending insolvency cases as we succeeded to include the Maritime and Commercial Court's pending insolvency cases in the overall figure.

Q101 (2016): Please note concerning insolvency: The number of cases concerning compulsory dissolution of companies has increased markedly due to new regulation where it is possible to start a company without starting capital. Accordingly, more companies are started, but more companies are also then closed. As concerns the number of pending insolvency cases, the data refers only to district courts given that data related to the Maritime and Commercial court is not available.

Q101 (2015): A decrease in the number of litigious divorce cases can be observed from 2010, it is most likely due to a change in the administrative proceedings, i.e. fewer cases end up in the courts.

Estonia

Q091 (2020): MoJ

Q091 (2019): Some horizontal inconsistencies and inconsistencies with previous year are due to the fact that data are always taken from the live database.

Q091 (2018): The variations in total and in the non litigious cases are due to the number of entrepreneurs that has grown every year, so the number of incoming case is also increasing. Furthermore, the number of real estate transactions has increased and the market is active. The number pending cases end of 2017 is different because the numbers are taken later and the data has been corrected.

Q091 (2017): There are not any particular reasons to explain variations in the number of non-litigious business registry cases, causing variations in respect of the category "registry cases" and "non-litigious cases". As regards item 2.1 "general civil and commercial non-litigious cases", there is an important discrepancy between the number of pending cases on 31 December 2016 and the number of pending cases on 1 January 2017. The reason is related to the time the numbers have been taken out of the system (see general comment). The fifth column "pending cases older than 2 years", includes cases that are suspended (part 9 of our Code of Civil Procedure, <https://www.riigiteataja.ee/en/eli/506022018001/consolide>). The proceedings may be suspended for example if the one of the parties dies or falls seriously ill; or if in order to solve the dispute the court needs a resolution of another case.

Q091 (2016): The decrease in the number of incoming administrative court cases is due to the decrease in the number of inmate complaints. The variations in total and in the non litigious cases are due to increase of incoming business and land registry cases.

Q091 (2014): The increase in the number of incoming administrative law cases is due to a rise of complaints of prisoners. As to the decrease in the total of pending other than criminal law cases on 1 January 2014, the performance indicators of courts have justified supplementary budget resources. Agreements between the Ministry of Justice and courts are expected concerning the efforts that need to be undertaken in court to clear the backlog and accelerate proceedings. For 2014, non-litigious enforcement cases are included in the category "general civil (and commercial) non-litigious cases".

Q091 (2013): As to non-litigious business registry cases and the observed decreases, in 2012 it was impossible to separate supervisory proceedings from general proceedings and therefore 2012 data included supervisory proceedings as well. The number of pending "civil and commercial litigious cases" decreased on account of the enhanced efficiency of the first instance courts, while the decrease in the number of incoming cases is due to the reestablishment of the normal case-flow after the economic crises.

Q091 (2012): The land register (together with the marital property register) and the commercial register (together with the non-profit associations and foundations register, commercial pledge register and ship register) are part of the county courts. "Land registry cases" and "business registry cases" refer to the registration procedure, including supervisory proceedings over undertakings. Disputes arising from the registration procedure are subsumed in "general civil (and commercial) non-litigious cases". The dynamics of the "civil and commercial non litigious cases" is considerably influenced by the payment order proceedings that form the largest part of this category and are dealt with by only one courthouse. The 2012 data includes enforcement, land and business registry cases.

Q094 (2018): Increase of incoming misdemeanor and minor criminal cases.

Q094 (2016): Misdemeanour cases can be joined and solved together in court. Cases that can lead to deprivation of liberty of less to five years are still included under severe criminal cases.

Because the distinction between severe and minor criminal cases is not the same with the CEPEJ, data for subcategories can be found below : Severe criminal cases : Pending cases on 1 Jan. ref. year : 803

Incoming cases : 7628

Resolved cases : 7463

Pending cases on 31 Dec. ref. year: 824

Pending cases older than 2 years from the date the case came to the first instance court : 23

Misdemeanour and / or minor criminal cases :

Pending cases on 1 Jan. ref. year : 1835

Incoming cases : 10032

Resolved cases : 10628

Pending cases on 31 Dec. ref. year: 891

Pending cases older than 2 years from the date the case came to the first instance court : 3

Q094 (2014): The variations observed over the years 2010, 2012 and 2014 are most likely due to the fact that the Ministry of Justice and the biggest court in Estonia (Harju County court) had an agreement setting the target for eliminating backlogs.

Q094 (2012): Horizontal inconsistency within the table stems mainly from the joinder and severance of criminal matters. Following a law amendment of March 2011, claims against enforcement of misdemeanour decisions are brought before bailiffs and not before courts.

Q097 (2019): Some horizontal inconsistencies and inconsistencies with previous year are due to the fact that data are always taken from the live database.

Q097 (2015): In respect of the civil and commercial non-litigious cases, the increase from 2013 in the number of pending cases resulted from the implementation of an efficiency-raising project in 2013 in Harju County Court. Accordingly, the efficiency of the latter increased significantly in civil cases. Owing to the fact that this court is the largest 1st instance court dealing with 1/3 of all of the cases in Estonia, it had an impact on the case-flow of the second instance courts (only 2 appeal courts competent in civil, criminal and administrative matters).

As to the administrative cases, it is noteworthy that as there are only 2 appeal courts in Estonia competent in civil, criminal and administrative matters, every change in the number of 2nd instance judges influences the statistics of the Courts of appeal. Between 2010 and 2012 there were a few vacant administrative judges' positions in one of the appeal courts which had an impact on the number of pending cases

Q097 (2014): On the occasion of the 2014 exercise, it has been emphasized that there has been an ongoing reform concerning the court budgets and judicial performance indicators. Agreements have to be adopted on the occasion of the budget negotiations between the Ministry of Justice and the courts concerning the efforts that need to be undertaken in court to clear the backlog and accelerate proceedings.

As to the increase of the total of pending other than criminal cases (beginning and end of the year), the reason is that 1st instance courts started the project of clearing backlogs and accelerating proceeding earlier. As a result, the number of incoming cases in 2nd instance courts increased in 2013 and resulted also in an increase of the number of pending cases by the end of the year 2013.

For 2014, non-litigious enforcement cases are included in the category "general civil (and commercial) non-litigious cases".

Q097 (2013): In the frame of the 2012 and 2013 exercises, several clarifications were provided.

Firstly, in respect of the civil and commercial litigious cases, the observed variations were deemed to be normal, as a part of the ordinary dynamics of the case-flow.

Secondly, in respect of the civil and commercial non-litigious cases, the increase in the number of pending cases resulted from the implementation of an efficiency-raising project in 2013 in Harju County Court. Accordingly, the efficiency of the latter increased significantly in civil cases. Owing to the fact that this court is the largest 1st instance court dealing with 1/3 of all of the cases in Estonia, it had an impact on the case-flow of the second instance courts (only 2 appeal courts competent in civil, criminal and administrative matters). Owing to that, in 2014 one civil judge's position was given to the Tallinn Appeal Court in order to raise their efficiency.

As to the enforcement procedures, they are in the competence of public bailiffs who are completely independent from the judicial system but act as public authorities. The reply NA is justified by the impossibility to distinguish in the bailiffs' information system the enforcement proceedings where the enforcement instrument is court decision from all the other enforcement proceedings where the enforcement instrument is for example a fine made by police, an administrative act made by the tax authority etc.

In respect of the land registry and business registry cases, it should be recalled that they are within the competence of the 1st instance courts. If the decision of the registry is appealed, it goes to the first instance court as a regular civil case.

As to the administrative cases, it is noteworthy that as there are only 2 appeal courts in Estonia competent in civil, criminal and administrative matters, every change in the number of 2nd instance judges influences the statistics of the Courts of appeal. Between 2010 and 2012 there were a few vacant administrative judges' positions in one of the appeal courts which had an impact on the number of pending cases.

Q097 (2012): In the frame of the 2012 and 2013 exercises, several clarifications were provided. _x000D_

Firstly, in respect of the civil and commercial litigious cases, the observed variations were deemed to be normal, as a part of the ordinary dynamics of the case-flow. _x000D_

Secondly, in respect of the civil and commercial non-litigious cases, the increase in the number of pending cases resulted from the implementation of an efficiency-raising project in 2013 in Harju County Court. Accordingly, the efficiency of the latter increased significantly in civil cases. Owing to the fact that this court is the largest 1st instance court dealing with 1/3 of all of the cases in Estonia, it had an impact on the case-flow of the second instance courts (only 2 appeal courts competent in civil, criminal and administrative matters). Owing to that, in 2014 one civil judge's position was given to the Tallinn Appeal Court in order to raise their efficiency. _x000D_

As to the enforcement procedures, they are in the competence of public bailiffs who are completely independent from the judicial system but act as public authorities. The reply NA is justified by the impossibility to distinguish in the bailiffs' information system the enforcement proceedings where the enforcement instrument is court decision from all the other enforcement proceedings where the enforcement instrument is for example a fine made by police, an administrative act made by the tax authority etc. _x000D_

In respect of the land registry and business registry cases, it should be recalled that they are within the competence of the 1st instance courts. If the decision of the registry is appealed, it goes to the first instance court as a regular civil case. _x000D_

As to the administrative cases, it is noteworthy that as there are only 2 appeal courts in Estonia competent in civil, criminal and administrative matters, every change in the number of 2nd instance judges influences the statistics of the Courts of appeal. Between 2010 and 2012 there were a few vacant administrative judges' positions in one of the appeal courts which had an impact on the number of pending cases.

Q098 (2016): Discrepancies are due to the numbers being quite small. Number of incoming cases depends on the crimes being committed and the number of resolved cases depends on.

Because the distinction between severe and minor criminal cases is not the same with the CEPEJ, data for subcategories can be found below :

Severe criminal cases : Pending cases on 1 Jan. ref. year : 71

Incoming cases : 745

Resolved cases : 762

Pending cases on 31 Dec. ref. year: 54

Pending cases older than 2 years from the date the case came to the first instance court : 0

Misdemeanour and / or minor criminal cases :

Pending cases on 1 Jan. ref. year : 9

Incoming cases : 208

Resolved cases : 214

Pending cases on 31 Dec. ref. year: 3

Pending cases older than 2 years from the date the case came to the first instance court : 0

Q098 (2014): The variations observed over the years 2010, 2012 and 2014 are most likely due to the fact that the Ministry of Justice and the biggest court in Estonia (Harju County court) had an agreement setting the target for eliminating backlogs.

Q099 (General Comment): It is noteworthy that the discrepancies that can be observed between the number of pending cases indicated for December of one year and the number of pending cases communicated for January of the next year, are due to the fact that the statistic system is alive and courts are entitled to modify and up-date data at any time. Moreover, differences in the horizontal consistency may be explained by the fact that during the proceedings some cases are joined and some are disjoined.

Q099 (2016): The number of pending cases has increased because the number of cases where the Supreme Court has decided to open proceedings in the Supreme Court has increased.

Q100 (General Comment): The Supreme Court is the court of cassation, therefore only those cases are heard which have been given leave to appeal (i.e. that have been declared admissible for proceedings in the Supreme Court). The data presented shows the number of cases which have been actually heard by the Supreme Court and not the number of appeals. The Supreme Court is not required to give reasons in its ruling on the admissibility of the appeals.

Q100 (2016): Numbers are quite small. No special reason for discrepancies. Because the distinction between severe and minor criminal cases is not the same with the CEPEJ, data for subcategories can be found below :

Severe criminal cases : Pending cases on 1 Jan. ref. year : 18

Incoming cases : 82

Resolved cases : 73

Pending cases on 31 Dec. ref. year: 27

Pending cases older than 2 years from the date the case came to the first instance court : NA

Misdemeanour and / or minor criminal cases :

Pending cases on 1 Jan. ref. year : 6

Incoming cases : 26

Resolved cases : 29

Pending cases on 31 Dec. ref. year: 3

Pending cases older than 2 years from the date the case came to the first instance court : NA

Q100 (2014): The variations observed in 2014 are not of importance, since the numbers are small.

Q100 (2012): In 2012, the higher number of criminal cases compared to 2010 was a result of the higher number of cases where the decision of the lower court was appealed. As regards the number of misdemeanour cases before the Supreme Court, the number of appeals was not much lower compared to 2010 but the number of cases accepted by the Supreme Court was lower (in 2010 the Supreme Court declared admissible 35% of the appeals, while in 2012 only 21% of the appeals were accepted).

Q101 (General Comment): It is noteworthy that the discrepancies that can be observed between the number of pending cases indicated for December of one year and the number of pending cases communicated for January of the next year, are due to the fact that the statistic system is alive and courts are entitled to modify and up-date data at any time. It is possible to observe differences in the horizontal consistency since during the proceedings some cases are joined and some are disjoined.

Q101 (2019): For all the discrepancies - the numbers are so small so that's why the percentage is so significant.

Q101 (2015): The numbers of pending, incoming and resolved employment dismissal cases decreased from 2012 (compared to 2010). This variation is supposedly related to the fact that more cases are effectively resolved by the labour dispute committees, less cases arrive to the courts.

In 2014, the number of resolved litigious divorce cases increased. This is justified by the fact that courts are working more efficiently and have accelerated the proceedings.

Q101 (2014): The increase in the number of resolved litigious divorce cases in 2014 is justified by the fact that courts are working more efficiently and have accelerated the proceedings.

Q101 (2012): The decrease in the numbers of pending, incoming and resolved employment dismissal cases in 2012 is supposedly related to the fact that more cases are effectively resolved by the labour dispute committees, less cases arrive to the courts.

Finland

Q091 (2020): The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on

12.1.2021 and reflects the situation on that day. The data available is: 1)Incoming cases 2)Resolved cases 3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously announced number of cases on 31 December and the now announced

number of cases in 1 Jan will differ. Currently the calculation is further complicated by the partial implementation of the new cases

managements systems, AIPA (for general courts) and HAIPA (for administrative and special courts). The number mentioned in category 3 includes cases dealt by the administrative courts, the Market Court and the Insurance Court.

Q091 (2019): The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on 22.1.2020 and reflects the situation on that day. The data available is:

1)Incoming cases 2)Resolved cases

3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously announced number of cases on 31 December and the now announced number of cases in 1 Jan will differ. Currently the calculation is further complicated by the partial implementation of the new cases managements systems, AIPA (for general courts) and HAIPA (for administrative and special courts). The number mentioned in category 3 includes cases dealt by the administrative courts, the Market Court and the Insurance

Court.

The number of administrative cases increased dramatically in 2016 due to the asylum crisis. Accordingly, more judges were hired to deal with cases and make the procedure more effective. The limits in which cases have to be handled have also been shortened in order to reduce the number of pending cases. To tackle this crisis, a legislative reform decentralized the asylum cases from one administrative court (Helsinki) to three other administrative courts as well.

As to "civil and commercial litigious cases", we can notice a very high Clearance Rate for 2016 due to the fact that in 2016 the number

of incoming civil cases decreased and courts were able to deal with pending cases. Accordingly, the number of pending cases decreased between 2016 and 2019.

"General civil and commercial non-litigious cases": the number of pending cases at the end of 2019 increased slightly between 2018 and 2019. In this respect, it should be noticed that the partial switch to the new case management system AIPA (as for example divorce cases are already processed in this system) can be the explanation as some initial challenges in the reporting tool has been noted recently.

Q091 (2018): The number mentioned in category 3 includes cases dealt by the administrative courts, the Market Court and the Insurance Court.

The number of administrative cases increased dramatically in 2016 due to the asylum crisis. Accordingly, more judges were hired to deal with cases and make the procedure more effective. The limits in which cases have to be handled have also been shortened in order to reduce the number of pending cases. To tackle this crisis, a legislative reform decentralized the asylum cases from one administrative court (Helsinki) to three other administrative courts as well.

As to "civil and commercial litigious cases", we can notice a very high Clearance Rate for 2016 due to the fact that in 2016 the number of incoming civil cases decreased and courts were able to deal with pending cases. Accordingly, the number of pending cases decreased between 2016 and 2018.

Q091 (2017): 1. Civil (and commercial) litigious cases: in 2016 the number of incoming civil cases decreased and courts were able to deal with pending cases; accordingly, the number of pending civil litigious cases at the beginning of 2017 has decreased. 2.2.1 From the beginning of the year 2010 Land register cases were transferred to National Land Survey of Finland.

3. Administrative law cases: On appeal, the administrative court reviews the legality of the decision of the authority. The number mentioned in category 3 includes cases dealt with by Administrative Courts, Market Court and Insurance Court. It is worth mentioning that in 2016 the number of administrative cases increased dramatically due to the asylum crisis. As a result, the number of pending administrative cases at the beginning of 2017 increased considerably. Against this background, Finland had adopted different measures to face the asylum crisis (e.g. decentralisation of the competence in respect of asylum cases from one administrative court (Helsinki) to three other administrative courts). Accordingly, the number of incoming administrative cases for 2017 decreased (28%).

Q091 (2016): In 2016 the number of incoming civil cases decreased and courts were able to deal with pending cases. The number of administrative cases increased dramatically due to the asylum crisis. Accordingly, more judges were hired to deal with cases and make the procedure more effective. The limits in which cases have to be handled have also been shortened in order to reduce the number of pending cases. To tackle this crisis, a legislative reform decentralized the asylum cases from one administrative court (Helsinki) to three other administrative courts as well. For that reason, statistics show variations as concerns the number of pending administrative law cases in 2016. The number of pending administrative law cases on 1.1.2016 was 20 4775, but due to the decentralization around 5000 cases were transferred from Helsinki to these other courts. In the statistics, these cases do not appear as pending anymore. It is not possible to say how many of them have been resolved, but they are included in the number of resolved administrative law cases.

Q091 (2014): Non-litigious enforcement cases are subsumed in the category “general civil (and commercial) non-litigious cases”. The enforcement is of the competence of the enforcement authorities, not of this of courts. Cases mentioned here are appeals in execution proceedings before district courts.

Q091 (2012): The increase in the number of pending civil and commercial litigious cases is the result of an exceptionally high number of incoming litigious civil cases in 2011.

Q094 (General Comment): The cases are not statistically categorised in severe criminal cases and misdemeanour and / or minor cases in Finland.

Q094 (2020): The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly

changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on

12.1.2021 and reflects the situation on that day. The data available is: 1)Incoming cases 2)Resolved cases 3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously announced number of cases on 31 December and the now announced

number of cases in 1 Jan will differ. Currently the calculation is further complicated by the partial implementation of the new cases

managements systems, AIPA (for general courts) and HAIPA (for administrative and special courts).

Q094 (2018): There is no particular explanation regarding the decreased clearance rate of criminal cases.

Q097 (2020): The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly

changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on

12.1.2021 and reflects the situation on that day. The data available is: 1)Incoming cases 2)Resolved cases 3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously announced number of cases on 31 December and the now announced

number of cases in 1 Jan will differ. Currently the calculation is further complicated by the partial implementation of the new cases

managements systems, AIPA (for general courts) and HAIPA (for administrative and special courts).

Q097 (2019): The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on 22.1.2020 and reflects the situation on that day. The data available is:

1)Incoming cases 2)Resolved cases

3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously announced number of cases on 31 December and the now announced number of cases in 1 Jan will differ. Currently the calculation is further complicated by the partial implementation of the new cases managements systems, AIPA (for general courts).

Q097 (2018): In 2017, the number of incoming cases has decreased for example due to some procedural changes and the courts have been able to resolve more pending cases. Accordingly, the number of pending cases at the beginning of 2018 has decreased.

Q097 (2017): In 2016, the number of incoming cases has decreased (for example due to some procedural changes) and the courts have been able to resolve more pending cases. Accordingly, the number of pending cases at the beginning of 2017 has decreased.

Q097 (2016): The number of incoming cases has decreased (for example due to some procedural changes) and the courts have been able to resolve more pending cases.

Q097 (2013): The category of civil and commercial non-litigious cases includes petitions for the 2012 exercise, divorce cases and petitions (without cases included in the other sub-categories) for the 2013 exercise. As for the category “other”, according to the provided comments, in 2012 it encompasses cases, which Appeal Courts resolve as 1st instance, military justice cases and cases concerning prisoners. In 2013 it subsumes temporary procedural remedy cases, adjustment of the debts of a private individual - cases, restructuring of enterprises cases and bankruptcy cases and complaints.

Q097 (2012): The category of civil and commercial non-litigious cases includes petitions for the 2012 exercise, divorce cases and petitions (without cases included in the other sub-categories) for the 2013 exercise. As for the category “other”, according to the provided comments, in 2012 it encompasses cases, which Appeal Courts resolve as 1st instance, military justice cases and cases concerning prisoners. In 2013 it subsumes temporary procedural remedy cases, adjustment of the debts of a private individual - cases, restructuring of enterprises cases and bankruptcy cases and complaints.

Q098 (General Comment): The cases are not statistically categorised in severe criminal cases and misdemeanour and / or minor cases in Finland.

Q098 (2020): The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on

12.1.2021 and reflects the situation on that day. The data available is: 1)Incoming cases 2)Resolved cases 3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously announced number of cases on 31 December and the now announced

number of cases in 1 Jan will differ. Currently the calculation is further complicated by the partial implementation of the new cases

managements systems, AIPA (for general courts) and HAIPA (for administrative and special courts).

Q099 (2020): The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on

12.1.2021 and reflects the situation on that day. The data available is: 1)Incoming cases 2)Resolved cases 3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously announced number of cases on 31 December and the now announced

number of cases in 1 Jan will differ.

Q099 (2019): The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on 22.1.2020 and reflects the situation on that day. The data available is:

1)Incoming cases 2)Resolved cases

3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously announced number of cases on 31 December and the now announced number of cases in 1 Jan will differ. Currently the calculation is further complicated by the partial implementation of the new cases managements systems, AIPA (for general courts) and HAIPA (for administrative and special courts).

Q099 (2018): The total of incoming other than criminal cases decreased slightly in 2018 compared to 2017. The number of administrative law cases decreased slightly in 2018 but is still high. The general increase is mostly a consequence of the asylum crisis and the fact that cases from the administrative courts have reached the highest instance in 2017 and 2018.

Q099 (2017): The total of incoming other than criminal cases increased for the period 2016-2017. This increase is mostly due to the increase in the number of administrative law cases as a consequence of the asylum crisis and the fact that cases from the administrative courts have reached the highest instance in 2017 (which was not the case in 2016).

Q099 (2016): Courts were able to resolve more cases because the number of incoming cases decreased. The Supreme Administrative court got more resources and personnel due to the asylum crisis, but cases from the administrative courts have still not reached the highest instance.

Q099 (2014): In respect of the variations observed between 2012 and 2014 data, it is noteworthy that the statistics system has changed. Data is not received any more from the Central Statistical Office of Finland. Instead, the Ministry of Justice receives information directly from processing systems. This method of compilation of statistics does not quite support answering the question, as the information is run periodically and not daily. As a result, some discrepancies occur. As the system does not provide the numbers for 1 January 2014, it is necessary to calculate them separately from the correct data obtained on a later date.

Q100 (2020): The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on 12.1.2021 and reflects the situation on that day. The data available is: 1)Incoming cases 2)Resolved cases 3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously announced number of cases on 31 December and the now announced number of cases in 1 Jan will differ.

Q101 (2020): The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on 12.1.2021 and reflects the situation on that day. The data available is: 1)Incoming cases 2)Resolved cases 3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously announced number of cases on 31 December and the now announced number of cases in 1 Jan will differ. Currently the calculation is further complicated by the partial implementation of the new cases managements systems, AIPA (for general courts) and HAIPA (for administrative and special courts).

Q101 (2019): The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on 22.1.2020 and reflects the situation on that day. The data available is:
1)Incoming cases 2)Resolved cases
3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously announced number of cases on 31 December and the now announced number of cases in 1 Jan will differ. Currently the calculation is further complicated by the partial implementation of the new cases managements systems, AIPA (for general courts) and HAIPA (for administrative and special courts). According to Finnish Immigration Service the number of asylum seekers arriving to Finland continued to be low (see, for example, <https://tilastot.migri.fi/#decisions/23330?l=en&start=588&end=599>)
"Cases relating to the right of entry and stay of aliens": the number of resolved cases increased considerably between 2018 and 2019 resulting in a decrease in the number of pending cases at the end of 2019. In this regard, it should be noticed that courts have reorganized their resources internally. They have allocated more resources to these types of cases, and this way keep reasonable the time the case is pending in the court. Also, in 2019 the administrative courts got 119 more staff as follows: 65 judges, 27 referendaries and 27 clerical staff.

Q101 (2018): In 2016, the number of incoming cases relating to asylum seekers increased dramatically due to the asylum crisis. In 2018, the number of incoming cases relating to asylum seekers was considerably lower than in 2016. For the decreased number of resolved cases relating to the right of entry and stay for aliens, the only explanation is the general bigger case load in the administrative courts.

Q101 (2017): Cases relating to the right of entry and stay for aliens: includes the cases concerning deportation, permits of residence and removing from the country.
Cases related to Asylum seekers: the number of pending cases at the beginning of 2017 increased drastically as a consequence of the important number of incoming cases in 2016; the number of incoming cases in 2017 decreased compared to 2016 which allowed courts to better deal with pending cases (the number of resolved cases increased considerably in 2017, while the number of pending cases at the end of 2017 decreased).

Q101 (2016): The number of resolved cases pertaining to intentional homicide has decreased for the period 2014 - 2016. The category "Cases relating to the right of entry and stay for aliens" includes cases concerning deportation, permits of residence and removing from the country.

Q101 (2013): The category "insolvency cases" includes only bankruptcy cases dealt with by District Courts and not restructuring of enterprises cases.

France

Q091 (General Comment): Non-litigious business registry cases are handled by the registry of the commercial court. The activity of the latter is not included in the Ministry of Justice's perimetre.

Q091 (2019): Administrative law cases pending for more than 2 years: in contrast with previous cycle, 2019 data are expressed in net figures, excluding serial cases presenting the same legal issue for trial.

Q091 (2018): With regard to the reduction of the number of non-contentious cases, this corresponds both to the impossibility of including data relating to adults under protection in 2018, due to a technical problem, and to the abolition of the approval of over-indebtedness plans by the judge of the Court of First Instance, the proceedings before which are processed by the Over-indebtedness Commission, as from 1 January 2018. Act No. 2016-1547 of 18 November 2016 on the modernization of 21st century justice, known as the "Justice 21 Act" and the Act of 9 December 2016, abolished judicial approval of the measures recommended by the over-indebtedness commission. As a reminder, divorces by mutual consent no longer fall within the competence of the family court.

Q091 (2016): The important increase in the number of pending non-litigious cases is due to the increased number of requests for ending unions - 60% (especially in 2016) and the increased number of pending cases before execution judges within the TGI in respect of a third party (without significant increase in the number of incoming cases, but a regular increase, namely for the last two years in the number of cases under consideration).

Q091 (2014): In civil litigation, cases relating to the activity of the liberty and custody judge amount to 98 300 cases in 2014 and have increased by 6.8% compared to 2013. These cases have significantly increased in 2012 (+ 65.5%), due to the law No. 2011-803 of July 2011 on the rights and protection of persons under psychiatric care. The reform systematised the control of psychiatric hospitalisations without the consent of the liberty and custody judge.

Q092 (General Comment): Other non-litigious civil cases include: divorce by mutual consent, legal separation, change of matrimonial regime, applications relating to parental authority, adoption, medically assisted procreation, incapacity of a minor, inheritance, compensation for invasion of privacy, change of name, civil status, nationality, operation of a grouping and discipline of notaries and ministerial officers.

Q092 (2014): In 2014, the category civil cases (and commercial) non-litigious are also included in non-litigious cases relating to enforcement.

Q097 (2017): As regards administrative law cases, the Council of State report indicates that it is a coincidence to have the same number for incoming and resolved cases.

Q097 (2013): 2012, 2013: The 'non-litigious matters relating to the implementation' (which answer is NA) exist but are included in the category 'non-litigious civil cases'.

Q097 (2012): 2012, 2013: The 'non-litigious matters relating to the implementation' (which answer is NA) exist but are included in the category 'non-litigious civil cases'.

Q099 (2014): 2014: The statistics of the Court of Cassation are not based on the same information system as the ones of courts of first instance and appeal courts. If discontinued cases of the category non-litigious cases may be subject to an appeal, it is not possible to identify them, they are included in the figure given for civil litigious cases. Thus, the total figure is the one retained.

Q101 (2019): Problems related to data feedback make it impossible to have information on robberies and intentional homicides.

Concerning cases relating to asylum seekers, the 2019 activity report of the National Asylum Court states that: "The year 2019 was marked by sustained activity: while the number of incoming cases stabilised in 2019 at 59,091 cases, an increase of less than 1% compared to 2018, the number of decisions handed down reached an all-time high of 66,464 cases, an increase of 40.5% compared to the previous year. This result was made possible thanks to the mobilisation of all the permanent judges, temporary judges and agents, as well as to the significant reinforcements that the Court benefited from this year. The court was thus able to create a sixth section and five new chambers in the space of a few weeks, open six new courtrooms and recruit, train and integrate more than 87 new judges on a temporary basis ("vacataires") and 175 new staff, including 91 rapporteurs".

Q101 (2018): The particular context of asylum applications in France and the sustained activity of the French Office for the Protection of Refugees and Stateless Persons (OFPRA) explain the high number of applications before the National Court of Asylum. Indeed, the CNDA's exclusive mission is to rule on appeals against decisions taken by OFPRA that do not satisfy asylum seekers. In addition, the number of appeals has tended to increase over the past ten years, increasing by a factor of 2.7 between 2008 and 2018.

Asylum seekers: National Court of Asylum

Data on the right of entry and residence of foreigners: data provided by the report of the Council of State on the number of proceedings processed by the administrative courts

For bankruptcies, business bankruptcies were used. The decrease in redundancies is explained by the increase in the number of contractual breaches of employment contracts.

Q101 (2017): With regard to cases concerning asylum seekers and cases concerning the right of entry and residence of foreigners, migratory phenomena explain this evolution.

Q101 (2016): The category "insolvency" refers to business bankruptcies (opening of receivership proceedings, opening of immediate judicial liquidation, recovery plans pronounced after protection, judicial liquidation pronounced after protection) have been taken into account. 2016 data on asylum seekers: National Court of Asylum at the State Council (Conseil d'Etat); 2016 data on the right of entry and residence of foreigners: Judge of freedoms and detention.

Germany

Q091 (General Comment): The horizontal consistency in the table is not ensured because the data are continuously checked.

Q091 (2020): There is no special reason explaining the slight decrease in the number of incoming administrative law cases.

Q091 (2019): The horizontal consistency in the table is not ensured because the data are continuously checked.

Q091 (2018): The high number of administrative pending cases on January 1st and December 31st is a result from the numerous unresolved cases in 2017 due to the rise of asylum seekers since 2015.

Cases of guardianship law in 2018 are not included in the "other cases" category, because changeover of data collections by the Länder.

Q091 (2017): Source: Federal Statistical Office (DESTATIS)

No. 4 - Other cases: Cases of guardianship law in 2017 are not included, because changeover of data collections by the Länder.

Q091 (2016): Source: Federal Statistical Office (DESTATIS)

Q091 (2015): For civil and commercial litigious and administrative cases, the updated data is solely based on the statistics on the administration of justice published by the Federal Statistical Office for 2015. As for the category "other", it refers to the most recent available data at the closing date of the CEPEJ data collection and encompasses information provided by the 16 Länder on the basis of the query lodged with the judicial administrations of the Länder. However, some of the Länder were unable to provide complete data regarding this category. Accordingly, the information for this category remains incomplete. The category "other" refers to: local court family cases; guardianship and curator cases at the family court; custodianship cases; curator cases at the custodianship court; proceedings regarding judgments and orders at the labour court.

Q091 (2014): For civil and commercial litigious and administrative cases, the updated data is solely based on the statistics on the administration of justice published by the Federal Statistical Office for 2014. As for the category "other", it refers to the most recent available data at the closing date of the CEPEJ data collection and encompasses information provided by the 16 Länder on the basis of the query lodged with the judicial administrations of the Länder. However, some of the Länder were unable to provide complete data regarding this category. Accordingly, the information for this category is incomplete and is not comparable. The category "other" includes: local court family cases; guardianship and curator cases at the family court; custodianship cases; curator cases at the custodianship court; proceedings regarding judgments and orders at the labour court.

Q091 (2013): Two Länder did not provide data with regard to the number of other than criminal law cases, while one Land did not provide information about the number of non-litigious land registry cases. The information is incomplete and the following legal cases were not taken into account: Incoming cases - payment order procedure (civil courts: 4 751 355 cases; labour courts: 56 053 cases), insolvency cases (143 662), cases concerning the civil registry office, wills, estates, accommodations, agriculture, escrow, and public notice proceedings (1 469 273); Pending legal cases on 31 December 2013 - guardianship and curator cases (12 795); insolvency cases (303 654).

Q091 (2012): The data was not available for 1 Land and remained incomplete for 4 Länder.

Q092 (2012): In 2012, the value entered was calculated by deducting the contentious judgments from all sets of proceedings that were resolved before the Local and the Regional Court in civil cases (not including those passed on within the court). Those sets of proceedings that are resolved other than by contentious judgment were particularly resolved by default, acknowledgement or waiver judgments, settlements, withdrawal of the charge or of the motion, staying of the proceedings or non-pursuance and orders in accordance with section 91a of the Code of Civil Procedure.

Q093 (2014): For the 2013 and 2014 exercises, the category "other" includes: Local Court family cases; guardianship and curator cases at the family court; custodianship cases; curator cases at the custodianship court; proceedings regarding judgments and orders at the labour court.

Q093 (2013): For the 2013 and 2014 exercises, the category "other" includes: Local Court family cases; guardianship and curator cases at the family court; custodianship cases; curator cases at the custodianship court; proceedings regarding judgments and orders at the labour court.

Q093 (2012): In the ambit of the 2012 exercise the category "other" includes: family-court jurisdiction, labour courts (proceedings leading to a judgment or a decision) as well as guardianship and custodianship courts. The figures do not include 1 426 805 new legal matters related to payment proceedings before labour courts, registry office cases, inheritance cases, custody, agriculture, legal aid, deposit cases and public notice proceedings with regard to which resolution or the number of cases pending at the beginning and at the end of the year are not recorded. The figures also do not include 202 106 new legal cases related to insolvency proceedings with regard to which only resolution is recorded (292 821).

Q094 (General Comment): The category “severe criminal cases” includes criminal proceedings in accordance with the Criminal Code and ancillary criminal laws. The category “misdemeanour and/or minor criminal cases” subsumes regulatory fine proceedings before criminal courts.

“Other cases” include:

- proceedings concerning suspension of execution of the remainder of a sentence of life imprisonment or concerning suspension of execution of placement in a psychiatric hospital or in preventive detention - determinate custodial sentences - proceedings under sections 109, 110, 138 of the Prison Act (Strafvollzugsgesetz, StVollzG) - proceedings under Part IV of the Act on International Legal Assistance in Criminal Matters (Gesetz über die internationale Rechtshilfe in Strafsachen, IRG) and section 71 (4) of Part II - supervision of conduct
- complaints about costs/fees - complaints against search/seizure orders - complaints in economic cases and tax cases
- complaints in matters concerning detention - cases in matters falling within the Regulatory Offences Act (Ordnungswidrigkeitengesetz, OWiG) registered in the complaints register - other complaints - subsequent or reserved preventive detention
- proceedings regarding the order of subsequent or reserved preventive detention - proceedings regarding the suspension of execution of a sentence where the court has reserved the order of preventive detention, in the cases covered by section 462a (2), third sentence, of the Code of Criminal Procedure (Strafprozessordnung, StPO)
- proceedings before the judicial service court
- proceedings regarding health professionals, tax consultants, agents in tax matters, patent lawyers or architects
- other disciplinary proceedings - proceedings regarding legal remedies in matters of enforcement of youth custody, youth detention and remand detention

Q094 (2018): As only the number of resolved “other cases” is available, these will not be included in the total.

Q094 (2014): The information provided in the frame of the 2014 evaluation refers to 2013 data (the 2014 data is not available).

Q097 (General Comment): The horizontal consistency in the table is not ensured because the data are continuously checked.

Q097 (2020): The horizontal consistency in the table is not ensured because the data are continuously checked.

Q097 (2019): The horizontal consistency in the table is not ensured because the data are continuously checked.

Q097 (2015): A substantial number of the Länder was unable to provide information, meaning that any amount cited would not be meaningful in substantive terms.

Q097 (2014): The 2014 data are the same as those that have been provided in 2013. No update was available.

Q097 (2013): For 2013, two Landers did not provide any information. _x000D_

The category “other “ includes proceedings on complaints on appeal in family cases at the Higher Regional Courts and appellate proceedings on fact and law and proceedings on complaints on appeal at the Regional Labour Courts. In addition, given a lack of complete data, a total of 164 272 new legal cases or proceedings on complaints on appeal (in custodianship, accommodation, insolvency, estate, and costs cases, along with other complaints on appeal) were not considered in the category “other”. _x000D_

Regarding the slight horizontal inconsistency for the category “administrative law cases”, it can partly be explained by the federal State structure of Germany. Moreover, data regarding incoming administrative law cases also reflected the number of appeals against decisions to grant provisional legal protection in the higher administrative regional courts and in the higher social courts; and appeals in matters of legal aid and other proceedings. In comparison with the previous years, the 2013 data are more accurate. The same applies regarding resolved cases even though no data was available for the appeals in matters of legal aid and other proceedings. _x000D_

With regard to the sub-category “civil and commercial litigious cases” and the meaningful increase of the number of resolved cases, it should be noticed that in the frame of the 2013 exercise, the indicated figure encompassed the number of resolved civil and commercial litigious and not-litigious cases. For this cycle, it was impossible to distinguish between these two sub-categories.

Q097 (2012): In the frame of the 2012 evaluation it was stressed that the values regarding questions 91, 94, 97, 98, 99, 100, 101, 102, 107, 108 corresponded to data of the year 2011.

Q098 (2016): The category “severe criminal cases” (line 2) includes criminal proceedings in accordance with the Criminal Code (Strafgesetzbuch, StGB) and ancillary criminal laws. The category “minor criminal cases” (line 3) includes regulatory fine proceedings before the criminal courts.

Q098 (2014): According to 2014 data, the category “severe criminal cases” included criminal proceedings in accordance with the Criminal Code and ancillary criminal laws. The category “misdemeanour and/or minor criminal cases” subsumed regulatory fine proceedings before criminal courts. _x000D_

The information provided in the frame of the 2014 evaluation refers to 2013 data (the 2014 data is not available).

Q098 (2012): According to 2012 data, the category “severe criminal cases” included criminal proceedings in accordance with the Criminal Code and ancillary criminal laws. The category “misdemeanour and/or minor criminal cases” subsumed regulatory fine proceedings before criminal courts.

Q099 (2015): The data provided date from 2014. At present, no data are available for 2015.

It is not possible to distinguish between litigious civil cases, respectively commercial cases, and those that are non-litigious. Accordingly, number 1 of the answer to question 99 includes all appeals on points of law brought in the civil matters before the Federal Court of Justice (Senates for civil matters including family law matters). However, the number of proceedings dealt with and concluded by litigious rulings in 2014 amounts to 600.

Q099 (2014): The 2014 data are the same as those that have been provided in 2013. No update was available.

Q099 (2013): For 2013, two Landers did not provide any information. Data provided for the civil (and commercial) litigious cases include all appeals lodged encompassing litigious and non-litigious cases as well as family law cases.

Q099 (2012): In the frame of the 2012 evaluation it was stressed that the values regarding questions 91, 94, 97, 98, 99, 100, 101, 102, 107, 108 corresponded to data of the year 2011.

Q100 (General Comment): The category “severe criminal cases” includes criminal proceedings in accordance with the Criminal Code and ancillary criminal laws. The category “misdemeanour and/or minor criminal cases” subsumed regulatory fine proceedings before criminal courts.

Q100 (2020): It is not possible to differentiate between "severe criminal cases" and "minor criminal cases" (NA). The total number of cases means the number of appeals on points of law, including referrals and regulatory offences pursuant to the Act on Regulatory Offences (OWiG) as well as regulatory offences pursuant to the Act Against Restraints of Competition (GWB) and the Energy Act (EnBW) before the criminal panels (including antitrust panel).

Q100 (2018): It is not possible to differentiate between "severe criminal cases" and "minor criminal cases" (NA). The total number of cases means the number of appeals on points of law, including referrals and regulatory offences pursuant to the Act on Regulatory Offences (OWiG) as well as regulatory offences pursuant to the Act Against Restraints of Competition (GWB) and the Energy Act (EnBW) before the criminal panels (including antitrust panel).

Q100 (2016): It is not possible to differentiate between "severe criminal cases" and "minor criminal cases" (NA). The total number of cases means the number of appeals on points of law, including referrals and regulatory offences pursuant to the Act on Regulatory Offences (OWiG) as well as regulatory offences pursuant to the Act Against Restraints of Competition (GWB) and the Energy Act (EnBW) before the criminal panels (including antitrust panel).

Q100 (2014): The 2014 data reflects an overview of the case workflow processed by the Senates for Criminal Matters of the Federal Court of Justice (statistics for the year 2014). For 2014, it was not possible to distinguish between categories of “severe criminal cases” and “minor criminal cases”. The total number of criminal proceedings concerns appeals on points of law, including matters submitted to the Federal Court of Justice for its review of the principle of the matter and misdemeanour cases pursuant to the Act on Regulatory Offences. It also includes misdemeanours pursuant to the Act on Restraints of Competition that are pending before the Senates for Criminal Matters of the Federal Court of Justice (including the Senate for Anti-Trust Matters)._x000D_

It is noteworthy that as there were only very few “minor criminal cases” in the previous cycles, the figures remain comparable for the last three evaluations.

Q101 (2019): 2017 was the peak of cases at the administration courts regards asylum-seeker. The cases decrease constantly since then:

(2015: 50 422 / 2016: 141 046 / 2017: 260 160 / 2018: 108 917 / 2019: 82 598)

Q101 (2018): Regarding the number of cases relating to asylum seekers, there were many unresolved cases in 2017 (see Scoreboard data 2017 (rise of asylum seekers since 2015)). Schleswig-Holstein: With regard to this question, no data are available for 2018 for Employment dismissal cases for pending cases on 31 Dec ref. year. The data from 2017 have therefore been included.

With regard for all Länder, no data are available for 2018 for the cases of Robbery and Intentional homicide (resolved cases) yet. The data from 2017 have therefore been included.

Q101 (2017): Cases relating to asylum seekers: there is an important increase due to the rise of asylum seekers since 2015. Pending cases on 31 Dec ref - Insolvency:

With regard to this question, no data are available for 2017 from Bavaria, Bremen and Mecklenburg-Vorpommern. The data from 2016 have therefore been included.

Hamburg

The figures show the number of insolvency proceedings at the end of the reporting period in terms of natural and legal persons (IN) and according to foreign law (IE) but excluding consumer insolvency proceedings (IK), Source: judicial statistics

Hesse

Total number of insolvency proceedings as of 31 December 2017, not broken down into proceedings that have already been opened or into IN/IK/IE proceedings. The data were taken from table Z1.4 "Civil matters before the local courts" provided by the Hesse Statistics Office (serial numbers 161.00, 161.50, 162.00 und 163.00).

Q101 (2016): Employment dismissal cases: The variation between this cycle and the previous cycle for resolved cases is not explained.

Q101 (2015): A substantial number of the Länder was unable to provide information, meaning that any amount cited would not be meaningful in substantive terms.

Q101 (2014): The 2014 data are the same as those that have been provided in 2013. No update was available.

Q101 (2013): For 2013, two Länder did not communicate any reply. As to dispute divorce cases only the number of conclusions by way of an order of divorce was provided. As to divorce proceedings (2013) overall, the following data were available: pending on 1 January 2013: 85 780; _x000D_incoming: 119 123; _x000D_resolved: 156 951; pending on 31 December 2013: 85 124. _x000D_As to insolvency cases, only data on incoming cases was provided as well as on legal cases still pending at year end. Nevertheless, not all Länder were able to give information on both of these points. To this extent the information is incomplete.

Q101 (2012): The number of resolved litigious divorce cases refers to resolution by divorce decree only. However, the data in respect of the total number of divorce cases (2011) are complete: pending on 1 January 2011: 63 363; incoming: 66 194; resolved: 215 769 (of which 190 258 by divorce decree); _x000D_pending on 31 December 2011: 58 773.

Greece

Q091 (2020): The courts from March 2020 due to Covid 2019 operated under special conditions and dealt with priority mainly criminal cases, this is the reason for the differentiation of pending cases of civil and administrative nature.

Q091 (2019): The Council of State did not provide the Ministry of Justice with data regarding the Administrative law cases

Q091 (2018): -

Q091 (2017): The divergence between 31.12.2016 and 1.1.2017 regarding the Civil and Commercial cases (First column of this year's data) is mainly due to the recent operation of the NEW system (integrated Civil and Criminal Court case management system -OSDDY PP) in the Court of First Instance of Piraeus (1587 more cases on 1.1.2017 than those on 31.12.2016). In 2017, the number of "incoming" and "resolved" civil and commercial litigious cases at first instance courts increased due to the fact that in 2017 the function of the courts was not affected by the strike of lawyers, which took place in 2016. The horizontal consistency of the table is not ensured with regard to civil and commercial litigious cases because in 2017 some of the courts which do not yet have an automated system had to make minor adjustments in the statistical data provided to the MoJ. Concerning administrative law cases, any deviations from the 2016 figures, regarding the number of cases on 31.12.2016 and of 1.1.2017 (240650) are due to a number of factors that the General Commission of the State is trying to track down and gradually eliminate. A slight deviation has been noticed for the 2017 data of the administrative first instance courts of Athens and Piraeus, which is due to the data migration to a new information technology (IT) system called "Integrated Court Management System for the Administrative Justice (OSDDY-DD)". This deviation that has already been taken into account by the Central Organizational Committee for the due implementation of OSDDY-DD, is expected to lapse gradually within the next years. Furthermore, deviations have also emerged from the new way of collecting statistical data that the central Organizational Committee is trying to establish in order to ensure the uniform input of data by each court and from recent verifications of relevant numerical data that were subsequently sent by the courts. Finally, discrepancies are also due to errors of the information system itself, for which an effort is being made to identify and inform about, the contractor of the system. The deviation regarding the Number of resolved cases of 2017 from 2016 is due to the fact that in 2017 the function of the courts was not affected by the strike of the lawyers, which took place in 2016. Regarding the new integrated court management system, for administrative cases it has been implemented at all court levels since autumn 2016 and for civil and commercial cases and more especially in the Court of First Instance of Piraeus, the integrated court management system was gradually implemented from March 2016 resulting to an accurate calculation of pending cases of 1/1/2017.

Q091 (2016): Any deviations from the 2015 figures are due to a new way of collecting statistics. In fact, in 2016, a working group was set up to update and simplify the content of the statistical data requested by the judicial services of the country. The working group created tables followed by detailed instructions and training in relation to the requested information. According to the instructions given to the courts, some procedures they handle, in those which there is no participation of a judge, are not included in the data collected. In addition, in 2016 a long-term abstention by the lawyers of the country took place, resulting in reduction in the number of cases (especially civil and commercial litigious cases).

The number 79.872 of resolved administrative law cases does not include joint cases, i.e. decisions that refer to more than one case. Furthermore, for the 2016 data of the administrative First Instance Courts of Athens and Piraeus a slight deviation has been noted which is due to the data migration to a new information technology (IT) system called "Integrated Court Management System for Administrative Justice (OSDDY-DD)". This deviation that has already been taken into account by the Central Organizational Committee for the due implementation of OSDDY – DD is expected to lapse gradually within the next years.

As concerns the category "civil and commercial litigious cases" - incoming and resolved - in 2016 a long-term abstention by the lawyers of the country took place, resulting in reduction of numbers regarding the cases.

Q091 (2014): The significant increase in the number of pending cases on 1 January for the total of "other than criminal law cases" is due to lawyers' abstention in the years 2013 and 2014.

Q091 (2012): The system of collecting data does not comply with the CEPEJ methodology. Besides, recent law changes have altered the jurisdiction of courts, so the figures communicated for 2012 could not be compared with these provided for the previous evaluation cycles.

Q094 (General Comment): the answers provided include data from 205 courts out of 214 (the prosecution office of Athens has not provided any data)

Q094 (2020): To give a brief overview of the national criminal procedure, criminal cases are filed for admission in the Public Prosecutor's Office, where they are further investigated. If a prosecution is initiated, the cases are discussed in court. The Court of First Instance or the Court of Appeal discusses and issues a judgment on each case brought before the court. The decision can then either postpone the case (whereby the case is forwarded to the competent Prosecutor's Office for further processing), or convict/ acquit the defendants. When the case is forwarded to the competent Prosecutor's Office (after a postponement), it is uncertain if and when it will go back to the court for discussion. Criminal cases cannot be tracked down throughout the different stages of the criminal procedure at present. With the Integrated Civil and Criminal Court Case Management System (OSDDY-PP)- Phase A', which was completed in March 2019 for 41 courts of the State, an integrated information system is implemented, which includes individual applications (subsystems) to support the operational functioning of the units of all levels of the courts involved in the flow of every case (criminal and civil), allowing the extraction of the relevant data.

Q094 (2018): To give a brief overview of the national criminal procedure, criminal cases are filed for admission in the Public Prosecutor's Office, where they are further investigated. If a prosecution is initiated, the cases are discussed in court. The Court of First Instance or the Court of Appeal discusses and issues a judgment on each case brought before the court. The decision can then either postpone the case (whereby the case is forwarded to the competent Prosecutor's Office for further processing), or convict/ acquit the defendants. When the case is forwarded to the competent Prosecutor's Office (after a postponement), it is uncertain if and when it will go back to the court for discussion. Criminal cases cannot be tracked down throughout the different stages of the criminal procedure at present. With the Integrated Civil and Criminal Court Case Management System (OSDDY-PP)- Phase A', which was completed in March 2019 for 41 courts of the State, an integrated information system is implemented, which includes individual applications (subsystems) to support the operational functioning of the units of all levels of the courts involved in the flow of every case (criminal and civil), allowing the extraction of the relevant data.

Q094 (2016): Filling in the requested information regarding the criminal procedure is not possible at the moment. To give a brief overview of the national criminal procedure, criminal cases are filed for admission in the Public Prosecutor's Office, where they are further investigated. If a prosecution is initiated, the cases are discussed in court. The Court of First Instance or the Court of Appeal discusses and issues a judgment on each case brought before the court. The decision can then either postpone the case (whereby the case is forwarded to the competent Prosecutor's Office for further processing), or convict/ acquit the defendants. When the case is forwarded to the competent Prosecutor's Office (after a postponement), it is uncertain if and when it will go back to the court for discussion. Criminal cases cannot be tracked down throughout the different stages of the criminal procedure at present. With the Integrated Civil and Criminal Court Case Management System (OSDDY-PP)- Phase A', which is expected to be completed by November 2018, an integrated information system will be implemented, which will include individual applications (subsystems) to support the operational functioning of the units of all levels of the courts involved in the flow of every case (criminal and civil), allowing the extraction of the relevant data. For 2016 the available data regarding the criminal procedure are as follows: Courts of First Instance: Criminal Cases Discussed: 473.457, Convictions/Acquittals: 206.311, Postponements: 262.433, Courts of Appeal: Criminal Cases Discussed: 59.643, Convictions/Acquittals: 24.995, Postponements: 33.601

Q097 (2020): Due to the pandemic, pending cases have accumulated in the courts of first instance, with the result that the courts of second instance have fewer cases to handle.

Q097 (2019): The Council of State did not provide the Ministry of Justice with data regarding the Administrative law cases

Q097 (2017): Concerning Civil and Commercial litigious cases but also administrative law cases, the numbers are different from those provided in the 2016 questionnaire due to the recent operation of the OSDDY-PP and OSDDY-DD Integrated Management Systems (please see the comments provided for Q91).

Variations in the number of resolved cases are explained by the fact that in 2017 the function of the courts was not affected by the strike of the lawyers, which took place in 2016.

Q097 (2016): Any deviations from the 2015 figures are due to a new way of collecting statistics. In fact, in 2016, a working group was set up to update and simplify the content of the statistical data requested by the judicial services of the country. The working group created tables followed by detailed instructions and training in relation to the requested information. According to the instructions given to the courts, some procedures they handle, in those which there is no participation of a judge, are not included in the data collected. In addition, in 2016 a long-term abstention by the lawyers of the country took place, resulting in reduction of numbers regarding the cases.

Q097 (2012): In the ambit of the 2012 exercise, it has been stressed that, as far as the statistical information provided by the courts is concerned (e.g. replies to questions 91 and 97), the system of collecting data could not comply with the CEPEJ methodology because it was planned having altogether different national needs in mind. Thus, schematically, a case brought into the Greek judicial system gets an initial reference number. However, in the process of being tried, it gets more than one reference number according to the laws. As a result the numbers of incoming and resolved cases do not match. _x000D_ Moreover, the Ministry of Justice, Transparency and Human Rights was not able to verify the accuracy of the replies, due to the lack of IT system. _x000D_

Besides, recent law changes have altered the jurisdiction of courts, so the figures communicated for 2012 could not be compared with these provided for the previous evaluation cycles.

Q098 (2020): Due to the pandemic, pending cases have accumulated in the courts of first instance, with the result that the courts of second instance have fewer cases to handle.

Q098 (2018): To give a brief overview of the national criminal procedure, criminal cases are filed for admission in the Public Prosecutor's Office, where they are further investigated. If a prosecution is initiated, the cases are discussed in court. The Court of First Instance or the Court of Appeal discusses and issues a judgment on each case brought before the court. The decision can then either postpone the case (whereby the case is forwarded to the competent Prosecutor's Office for further processing), or convict/ acquit the defendants. When the case is forwarded to the competent Prosecutor's Office (after a postponement), it is uncertain if and when it will go back to the court for discussion. Criminal cases cannot be tracked down throughout the different stages of the criminal procedure at present. With the Integrated Civil and Criminal Court Case Management System (OSDDY-PP)- Phase A', which was completed in March 2019 for 41 courts of the State, an integrated information system is implemented, which includes individual applications (subsystems) to support the operational functioning of the units of all levels of the courts involved in the flow of every case (criminal and civil), allowing the extraction of the relevant data.

Q098 (2016): Filling in the requested information regarding the criminal procedure is not possible at the moment. To give a brief overview of the national criminal procedure, criminal cases are filed for admission in the Public Prosecutor's Office, where they are further investigated. If a prosecution is initiated, the cases are discussed in court. The Court of First Instance or the Court of Appeal discusses and issues a judgment on each case brought before the court. The decision can then either postpone the case (whereby the case is forwarded to the competent Prosecutor's Office for further processing), or convict/ acquit the defendants. When the case is forwarded to the competent Prosecutor's Office (after a postponement), it is uncertain if and when it will go back to the court for discussion. Criminal cases cannot be tracked down throughout the different stages of the criminal procedure at present. With the Integrated Civil and Criminal Court Case Management System (OSDDY-PP)- Phase A', which is expected to be completed by November 2018, an integrated information system will be implemented, which will include individual applications (subsystems) to support the operational functioning of the units of all levels of the courts involved in the flow of every case (criminal and civil), allowing the extraction of the relevant data. For 2016 the available data regarding the criminal procedure are as follows: Courts of First Instance: Criminal Cases Discussed: 473.457, Convictions/Acquittals: 206.311, Postponements: 262.433, Courts of Appeal: Criminal Cases Discussed: 59.643, Convictions/Acquittals: 24.995, Postponements: 33.601

Q099 (2018): "the discrepancy between the number of the resolved cases of 2017 and of 2018 for administrative law cases is due to the combination of the following factors:

- in 2018 a number of difficult cases, that had to do with the system of social insurance, was about to be completed
- lawyers become familiar with the filters regarding the cassation and its strict prerequisites, which lead to less rejections of cases as inadmissible and subsequently to a higher number of cases being discussed as far as their real facts are concerned.
- for the abovementioned reason the fast procedure provided for by the relevant code of procedure is not so often implemented
- there are still vacant places of councillors of state, i.e. of the highest rank."

Q099 (2017): "Administrative law cases": the number of incoming cases decreased in mainly two sections of the Council of State (i.e. section b for tax issues (-239 cases) and section d for general issues (-692)).

Q099 (2016): Previous data concerning the total did not include administrative law cases.

Q100 (2020): Due to the pandemic, pending cases have accumulated in the courts of first instance, with the result that the courts of the second instance and the Supreme Court have fewer cases to handle. The above information is referred to the Supreme Court only.

Q100 (2016): With regard to the category "pending cases on 1 January 2016", the abnormality of the figures is due to the fact that the postponed cases because of the abstention of the lawyers in 2015 were not considered as pending to the backlog of the court.

In 2016 a long-term abstention by the lawyers of the country took place, resulting in reduction of the number of resolved criminal law cases. Accordingly, the number of pending criminal law cases increased.

Q101 (2019): Competent Authorities and Courts did not provide us with the relevant data

Q101 (2017): "cases relating to asylum seekers": the number of incoming cases and the number of resolved cases increased compared to 2016 due to an increased inflow of cases. As regards the number of pending cases at the end of the year: the deviation between the respective data of 2016 is due to the transition of the data from hard copy to a new information (IT) system called "Integrated Court Management System for the Administrative Justice (OSDDY-DD)". This deviation that has already been taken into account by the Central Organizational Committee for the due implementation of OSDDY-DD, is expected to lapse gradually within the next years. Furthermore, deviations have also emerged from the new way of collecting statistical data that the central Organizational Committee is trying to establish in order to ensure the uniform input of data by each court and from recent verifications of relevant numerical data that were subsequently sent by the courts. Finally, discrepancies are also due to errors of the information system itself, for which an effort is being made to identify and inform about, the contractor of the system. Cases relating to the right of entry and stay for aliens: the number of acts of removal/expulsion of foreigners has been reduced, since most of them who are now entering the county, seek asylum, something that explains the respective increase in asylum cases within 2017.

Q101 (2016): Except for the categories "cases relating to asylum seekers (refugee status under the 1951 Geneva Convention)" and "cases relating to the right of entry and stay for aliens", the relevant data are not available electronically for the moment, therefore their extraction is not possible.

Hungary

Q091 (2018): One of the reasons of the decreasing number of incoming cases is the new civil procedural code coming into force on the 1st of January 2018. This resulted that many of those parties (especially those who were represented by lawyer) who had the chance to do so, filed their petition before the end of 2017 under the scope of the old and well-known procedural code. Regarding the discrepancy between 2017 and 2018 in the number of registry cases, it is due to the fact that for the first time in 2018, the number of non-litigious business registry cases is available.

Q091 (2017): Regarding the categories "2.1 general civil (and commercial) non-litigious cases", and "4. other cases" the number of pending cases on 1st of January differ from the closing number of the previous year because of data collection problems at certain regional courts.

In the category "registry cases" the higher number of incoming and resolved cases in 2016 was the result of a large number of involuntary dissolution cases. As the courts finished these cases and backlog cases from previous years the number of resolved cases in 2016 was higher than incoming cases in contrast with 2017.

Q091 (2016): In category "4. other cases" there is a difference between the number of pending cases on 31 December 2015 and the number of pending cases on 1 January 2016. The cause of this difference is the change of the IT system and the cleansing of the database.

2.1 General civil and commercial non-litigious cases: there was a change in the statistical methodology at the largest regional court that caused a difference in the figures pertaining to pending cases on 1 January 2016.

2.2.3. "other registry cases" include registration of civil societies.

The increase in the number of general civil (commercial) non litigious cases pending on 1 January 2016 is due to the change in the statistical methodology at the largest regional court that caused a difference in the figures.

The number of incoming "other registry cases" increased between 2014 and 2016 because of the increasing number of registry cases of civil societies. Accordingly, the number of resolved "other registry cases" increased also for the same period. With regard to the category "other non-litigious cases", the increased numbers characterizing the period 2014-2016 are the consequence of the increasing number of court mediation cases and non-litigious labour cases.

Q091 (2015): There is a difference between the number of pending cases on 31 December 2014 and the number of pending cases on 1 January 2015. The cause of this difference is the change of the calculation method at some regional courts.

The category "civil and commercial non-litigious cases" includes all cases that are not concluded through the rules of the civil procedure, but through a more or less simplified procedure. Thus, there is a very wide range of related categories set forth by the Civil Procedure Code or other acts. For example, a reference was made to: exclusion of a judge; preliminary verification; issuance of a restraining order and review of that; declaration of dead; declaration of missing; revision of the medical care of mentally disordered patients, deposit at the court; company registration procedures; registration of associations, foundations etc.

The category "other registry cases" include registration of civil societies.

The category "other non-litigious cases" include court mediation and non-litigious labour cases.

The category "other" include Insolvency cases and labour cases.

Q091 (2014): In 2014, in contrast with the 2013 evaluation, some registration cases as well as non-litigious enforcement cases were also included within the category "civil and commercial non-litigious cases". The item "other registry cases" includes registration of civil societies. The item "other non-litigious cases" includes court mediation and non-litigious labour cases. Before 2013, non-litigious administrative law cases were counted as "non-litigious civil and commercial cases". Since 2013, non-litigious and litigious administrative law cases are provided together. The increased number of investigations conducted by administrative authorities (e.g. tax authorities) resulted in an increased number of reviews against these decisions.

Q091 (2013): Till 2013, the data-provider for non-litigious enforcement cases was the Ministry of Justice. Since 2013, the data-collecting system of courts covers also this group of cases (general non-litigious cases). Before 2013, non-litigious administrative law cases were counted as "non-litigious civil and commercial cases". Since 2013, non-litigious and litigious administrative law cases are provided together. As for the subcategory "civil (and commercial) litigious cases", it encompasses different categories of cases for 2012 and 2013.

Q093 (2013): In 2010, 2012 and 2014 the category "other" encompasses insolvency registry cases and labour litigious cases. In 2012, additionally it includes misdemeanour cases. In 2013, the category subsumes insolvency cases and non-litigious labour cases.

Q094 (General Comment): Criminal offences are severe or minor crimes. Severe crimes (büntett) are committed intentionally and are punishable with at least two years of imprisonment. All other criminal offences are minor crimes (vétség). Crimes that are not committed intentionally are always considered as minor crimes, despite the possible punishment. Misdemeanours (szabálysértés) are not considered as criminal offences, but are unlawful acts that are endangering the society. The authorities intervening in their respect are the police, the district office, or the National Tax and Customs Office. Their decisions can be reviewed by the relevant section of the respective district court upon request of the accused person. Generally, the court rules without oral hearings, based upon the available documents. However, it can set a hearing if it finds it necessary or if the person charged by a misdemeanor requests it. The judgment is a final and enforceable decision. It is noteworthy that the Hungarian law identifies also the category of civil offences encompassing offences mainly against public administration. However some criminal offenses, such as property crimes involving objects of small value (under 50000 HUF/ approximately 156€), are classified in this category as well. Civil offences fall under the jurisdiction of various administrative agencies, local governments or traffic police, but not the courts. Concerning the methodology of presentation of data, as according to the Hungarian Criminal Code not only severe crimes (büntett), but also almost every minor crime (vétség) are punishable with imprisonment, both categories were included into the category "severe criminal cases". Thus misdemeanors (szabálysértés) were included into the category "minor criminal cases".

Q094 (2020): Criminal offences are severe or minor crimes. Severe crimes (büntett) are committed intentionally and are punishable with at least two years of imprisonment. All other criminal offences are minor crimes (vétség). Crimes that are not committed intentionally are always considered as minor crimes, despite the possible punishment. Misdemeanours (szabálysértés) are not considered as criminal offences, but are unlawful acts that are endangering the society. The authorities intervening in their respect are the police, the district office, or the National Tax and Customs Office. Their decisions can be reviewed by the relevant section of the respective district court upon request of the accused person. Generally, the court rules without oral hearings, based upon the available documents. However, it can set a hearing if it finds it necessary or if the person charged by a misdemeanor requests it. The judgment is a final and enforceable decision. It is noteworthy that the Hungarian law identifies also the category of civil offences encompassing offences mainly against public administration. However some criminal offenses, such as property crimes involving objects of small value (under 50000 HUF/ approximately 139€), are classified in this category as well. Civil offences fall under the jurisdiction of various administrative agencies, local governments or traffic police, but not the courts. Concerning the methodology of presentation of data, as according to the Hungarian Criminal Code not only severe crimes (büntett), but also almost every minor crime (vétség) are punishable with imprisonment, both categories were included into the category "severe criminal cases". Thus misdemeanors (szabálysértés) were included into the category "minor criminal cases".

Q094 (2018): Criminal offences are severe or minor crimes. Severe crimes are committed intentionally and are punishable with at least two years of imprisonment. All other criminal offences are minor crimes. Misdemeanours are not considered as criminal offences, but are unlawful acts that are endangering the society.

Q094 (2014): The increase in the number of incoming misdemeanour cases in 2012 and 2014 is the consequence of an amendment of the relevant legislation. This increase resulted also in higher numbers of resolved and pending cases.

Q094 (2012): For 2012, not all types of misdemeanour cases were included in the respective category. The increase in the number of incoming misdemeanour cases stems from legislative amendments. This increase resulted also in higher numbers of resolved and pending cases.

Q097 (2019): No specific reason was pointed out in respect of decreases observed for the period 2018 - 2019 with regard to "4. other cases".

Q097 (2017): With regard to variations observed in the numbers of "registry cases" and "other registry cases", it is noteworthy that the content of these categories is the same for the last four cycles. As the legislation on civil societies was amended in 2014 this resulted in an increased number of registry cases, but since then the number of incoming cases is decreasing.

Q097 (2016): With regard to the pending cases, it is noteworthy specifying that the decrease of the "backlog" of the courts is an overall trend in the Hungarian judiciary.

As for the other variations observed within the frame of question 97, the "raw" figures in most of the categories can be considered as relatively low figures (e.g. some hundreds in the whole country), so even a not so huge increase or decrease result in a large percentage change.

Q097 (2014): In 2014, in contrast with the 2013 evaluation, some registration cases were also included within the category "civil and commercial non-litigious cases". The item "other registry cases" includes registration of civil societies. The item "other non-litigious cases" includes court mediation and non-litigious labour cases. _x000D_
The category "other" encompasses insolvency cases and labour cases.

Q098 (2014): The increases over the period 2010-2014 regarding misdemeanour and/or minor criminal cases, is due to the constant increase of incoming and resolved first instance cases starting from 2010, which led to the increase in the number of second instance incoming cases.

Q099 (2017): The number of incoming cases decreased in most of the observed categories at the Supreme Court. This also resulted in a decrease in the number of resolved cases thus the number of pending cases increased.

Q099 (2016): Generally, the increase in the number of incoming cases at the Kúria (Hungarian Supreme Court) for 2016 is the result of the increasing use of extraordinary remedies by the parties. As the number of incoming cases increased, it resulted in an increase in the other categories as well.

Q099 (2014): In 2014, in contrast with the 2013 evaluation, some registration cases were also included within the category "civil and commercial non-litigious cases". The item "other registry cases" includes registration of civil societies. The item "other non-litigious cases" includes court mediation and non-litigious labour cases. _x000D_
The category "other" encompasses insolvency cases and labour cases. _x000D_

On the occasion of the 2014 exercise, it has been stressed that one of the main aims of the judicial reform of January 1, 2012 was that the President of the Supreme Court (Kúria) and the Supreme Court itself should focus more on the quality of judicial work. As the President of the Supreme Court was released from the burden of the central administration of the court system, the Kúria was able to reduce its backlog as well as to focus more on the consistency of the national jurisdiction.

Q101 (2017): Regarding the categories "insolvency", "robbery" and "intentional homicide" the number of pending cases on 1st of January differ from the closing number of the previous year because of data collection problems at certain regional courts.

Q101 (2016): With regard to the category "employment dismissal cases", as the number of incoming cases decreased it resulted in a decrease in the other categories as well. The reason of the decrease in the number of incoming cases might be outside of the court system. With regard to the category "insolvency cases", the methodology of data collection changed from the year 2015 to 2016. Accordingly, there is a discrepancy between the number of insolvency cases pending on 31 December 2015 and the number of insolvency cases pending on 1 January 2016.

With regard to "robbery cases" and "intentional homicide", currently the database contains some invalid data for these categories, so before solving this problem no valid data may be given.

Q101 (2015): Regarding the category "litigious divorce cases", the data provided for 2015 cannot be compared with the previous years as the statistical system has changed. As a result of an amendment of the code of civil procedure, litigious divorce cases were included in a new statistical category. This resulted in a starting number of "0" litigious divorce case at the beginning of the year 2015.

Q101 (2014): The decrease in the number of pending employment dismissal cases on 31 December over the period 2012-2014 is a consequence of the decrease in the number of incoming cases. Another reason was the establishment of 20 Administrative and Labour courts and 6 Regional Administrative and Labour Divisions in January 2013. The former are specialized first instance courts dealing with cases concerning the review of administrative decisions and employment relationships. The latter are special departments that coordinate the professional work of Administrative and Labour Courts, providing a professional platform for judges to discuss actual issues in administrative and labour matters.

Ireland

Q091 (General Comment): Historically, the number of pending civil cases has not been recorded in caseload data, as many cases initiated before the Irish courts either settle out of court or are not proceeded with by the plaintiff/applicant without there being any procedural requirement that the parties inform the court of either a settlement or an intention not to proceed with the case. Civil (and commercial) non-litigious cases include proceedings not resolved inter partes, such as undefended pecuniary claims, deed poll applications, probate (grants of representation), wardship proceedings, registrations of enduring powers of attorney, appointment of care representatives, unopposed personal and corporate insolvency proceedings, liquor licencing applications and marriage notice exemption applications.

Category "other" includes: Taxation of bills of costs, Appointment by Chief Justice of Commissioner for Oaths and Notaries Public, Persons called to the Bar; Declarations by newly appointed Judges; Extensions of service granted to District Court Judges/County Registrars; Certificates of Authentication issued.

Q091 (2017): We are not in a position to offer further comment on the figure for resolved Civil (and commercial) litigious cases. We are not in a position to offer further comment on variations in the number of incoming and resolved "other" cases.

Q091 (2016): The decrease in the number of incoming and resolved "other cases" observed for the period 2014 - 2016 is due to a sharp reduction on taxations of legal costs since 2014.

Q091 (2015): Category "other" includes: Taxation of bills of costs.

Q091 (2014): A substantial number of cases which have been completed (through settlement or non-pursuit of the case by the plaintiff without notice to the court) are not recorded and counted as completed. Consequently, the clearance rate appearing from the case flow data provided is considered to understate significantly the actual case clearance rate.

Q091 (2013): The number of enforcement cases has been reported for the first time. The Courts Service has sought to create a category of cases under the Irish system that would be equivalent to non-litigious enforcement cases under other justice systems. The figure consists of the following steps leading to enforcement measures by court judgments and orders: Execution orders, Registered Judgments, Judgment Mortgage Certificates.

Q092 (2014): Starting 2014 the category: "Appointment of care representatives" was added to the "Civil (and commercial) non-litigious cases"

Q093 (2014): From 2014, the range of 'Other cases' has been revised to incorporate the category 'certificates of taxation of legal costs issued'. This can explain the fact that different elements have been included in the category 'other' in 2013 and 2014.

Q094 (General Comment): Akin to question 91, the number of pending criminal law cases cannot be provided within the frame of question 94, provided that it is not recorded in caseload data.

Misdemeanour and/or minor criminal cases include all cases triable summarily (e.g. common assault, public order offences, burglary or theft in other than aggravated circumstances).

Q094 (2018): From 2016 extra judicial resources were applied by Senior Judiciary to the Courts dealing with some of the most serious criminal matters, which explains the increase of the number of resolved severe cases.

Q094 (2016): With regard to the number of resolved severe criminal cases, there is no particular reason explaining the observed discrepancy between 2014 and 2016, except for the fact that in 2014 figures were exceptionally high.

Q094 (2014): The previous data in respect of severe criminal cases were presented by reference to the defendant rather than to the offence(s) charged, whereas the data for 2014 reflects offence(s) charged, to align with the unit of measurement for minor criminal cases.

Q094 (2012): There were substantial reductions in the number of recorded traffic and public order offences between 2010 and 2012, and these categories of offences make up a significant proportion of the minor criminal cases that come before the courts.

Q097 (2017): The number of resolved civil and commercial litigious cases reflects a significant reduction in disposal of second instance appeals by comparison with that returned in the previous reporting cycle.

Q097 (2016): As concerns the number of resolved "Civil and commercial litigious cases", 2016 data reflects a significant increase in disposal of second instance appeals over that in the previous reporting cycle. Accordingly, the total of resolved cases is affected.

Q098 (2020): Offences are counted here rather than number of cases

Q098 (2018): With regard to the category "resolved cases", the figures reflect a continuing increase in disposal of second instance appeals disposed of over that in the previous reporting cycle (2016 data) due to the establishment of the Court of Appeal.

Q098 (2016): Data on resolved cases reflect a significant increase in disposal of second instance appeals due to the establishment of the Court of Appeal. Concerning the number of incoming severe criminal cases, 2016 data reflects the receipt by the Court of Appeal of a substantial number of pending appeals following its establishment.

Q098 (2014): The increase of 161% between 2012 and 2014 in the number of incoming cases and the increase of 101% in the number of resolved cases are due to a change in the unit of measurement for criminal cases from a defendant related unit to an offence related unit.

Q099 (2019): There has been an overall increase in the appeals in civil matters to the Supreme Court from 2016 and it is expected at this stage that this trend will continue into next year.

Q099 (2018): There has been an overall increase in the appeals in civil matters to the Supreme Court from 2016 and it is expected at this stage that this trend will continue into 2019.

Q099 (2017): Since the establishment of the Court of Appeal in 2014, the number of pending cases at third instance has fallen. However, the number of incoming cases at third instance has slightly increased between 2016 (164) and 2017 (190).

Q099 (2016): The reduced number of incoming and resolved cases reflects the consequences of the establishment of the new Court of Appeal which came into operation in October 2014.

Q099 (2015): The reduction in the number of incoming cases to the Supreme Court substantially reflects the change in the jurisdiction of the Supreme Court from that of a second instance appeal court to an appeal court which is primarily third instance in nature

Q099 (2014): 2014: Variation: The significant increase in the number of resolved civil (and commercial) litigious cases between 2012 and 2014 reflects a significant exercise undertaken by the Supreme Court in reviewing its caseload in preparation for the establishment in 2014 of the new Court of Appeal (which has assumed the previous second instance jurisdiction of the Supreme Court), which resulted in the striking out or withdrawal of a significant number of appeals then pending before the Supreme Court.

Q100 (2018): The increase in incoming and resolved caseload reflects arrangements on foot of the establishment of the Court of Appeal and the new appellate jurisdiction of the Supreme Court.

Q100 (2016): The increase in incoming and resolved caseload reflects arrangements on foot of the establishment of the Court of Appeal and the new appellate jurisdiction of the Supreme Court.

Q101 (General Comment): Under the Insolvency category above the figures reflect both corporate and personal insolvency cases. Insolvency figures include both litigious and non-litigious cases.

Q101 (2019): There was a decrease in bankruptcy and alternative personal insolvency application by debtors and to bankruptcy as a remedy by creditors in 2019. The overall amount of personal insolvency cases fell from 2,909 in 2016 to 1,496 in 2019

Q101 (2018): There was a decrease in bankruptcy and alternative personal insolvency application by debtors and to bankruptcy as a remedy by creditors in 2018. The overall amount of personal insolvency cases fell from 2,909 in 2016 to 1,526 in 2018"

Q101 (2017): The entered under "Cases relating to asylum seekers (refugee status under the 1951 Geneva Convention)" represent judicial review applications relating to asylum cases generally. We are not in a position to provide definitive data on the specific case category indicated on "Cases relating to the right of entry and stay for aliens ".

"Employment dismissal cases": we regret that we cannot definitively explain the reason for the decrease: there is no necessary connection between improvement in the economy and the number of disputes arising from employment dismissal.

Q101 (2016): With regard to the category "insolvency cases", 2016 data on incoming and resolved cases reflect a significant increase in recourse to personal insolvency procedures by debtors (there were 2730 personal insolvency and bankruptcy proceedings in 2016 compared to 941 in 2014).

Q101 (2015): 2015 figure should be 2368. The large increase is substantially due to a large increase in the number of applications for Debt Relief notices, Debt Settlement Arrangements and Personal Insolvency Arrangements

Q101 (2014): The significant increase in the number of incoming and resolved insolvency cases between 2013 and 2014 reflects the introduction of a new range of statutory personal insolvency remedies.

Italy

Q091 (General Comment): A different methodology of classification of civil cases is used since 2012. The result is an improved classification and a better split between litigious and non-litigious cases. For 2010, 2012 and 2013, the category of civil and commercial non-litigious cases has an identical content, namely: separation and divorce by mutual consent, interdiction and incapacitation, protective measures for underage, guardianship and trusteeship etc. Since 2014, it subsumes uncontested payment orders, uncontested divorces, technical appraisals, judicial interdiction and incapacitation, hereditament, etc.

Q091 (2020): In 2020 the case flow was highly affected by the COVID-19 pandemic and the consequent temporary shutdown of courts. This had an impact on both incoming and resolved cases, which fell quite considerably compared to 2019. However, the fall in the number of resolved cases was less drastic than that of incoming cases, resulting in a clearance rate (CR) higher than 100% and, hence, in a reduction in the number of the unresolved cases (i.e. the pending cases at the end of the period). The COVID-19 pandemic also had a strong impact on the disposition time (DT). As well known, the DT compares the number of unresolved cases at the end of a reporting period with the number of resolved cases during that period. Under the assumption that the number of resolved cases remain constant, the indicator provides an indirect estimate of the length of proceedings. Yet, it is evident that the number of resolved cases in 2020 is not a good proxy of the capacity of the system to resolve cases in general, making the indicator rather skewed. More generally, the DT does not appear to be a good indicator when there are strong time series discontinuities in the number of resolved cases. Such methodological considerations suggest that the DT should not be considered in the current exercise or, at least, that not much attention should be given to it in the final report. Rather, the focus should be more on other indicators such as the clearance rate and the variation of pending cases.

Q091 (2019): Number of "pending cases older than 2 years" is not available because it refers to first instance causes which also include the activity of Justice of peace offices, for which this information is no available.

Q091 (2018): Administrative cases. – It should be noted that fast-track simplified proceedings are available for dispute resolution in important areas of administrative law, such as public procurement (“rito appalti”). In 2018, the disposition time for such disputes was 237 days in the first instance and 274 days before the Consiglio di Stato (CDS). Furthermore, requests of interim measures are frequent in administrative law cases (about one third of the cases in first instance and half of the cases before the CDS). They provide fast legal protection of the claimant’s rights, often anticipating the final judgment on the merits.

Q091 (2015): Figures at Q.91 (points 1 and 2) have been extracted from a new IT system called “Civil Data warehouse”. This new system allows us to get in-depth information on single proceedings. Before the implementation of such data warehouse, statistics were based on aggregated variables that only partially could distinguish between litigious and non-litigious cases.

As far as figures at Q.91 (point 3), please consider that Administrative Justice doesn’t fall under the umbrella of the Ministry of Justice as it is administered by the Council of State (Consiglio di Stato). However, figures at Q.91 (point 3) were not provided by the Council of State, they were rather taken from a public document available online at https://www.giustizia-amministrativa.it/cdsintra/cdsintra/Notiziasingola/index.html?p=NSIGA_3826149

Since the administrative cases (Q.91 point 3) refers to a different administration, it wouldn’t be reasonable to compare these numbers against the number of judges provided at Q.46.

Civil and commercial non-litigious cases include: Uncontested payment orders, uncontested divorces, technical appraisals, judicial interdiction and incapacitation, hereditament, etc.

Q091 (2014): In 2014, figures for the category “administrative law cases” have been submitted for the first time. The administrative justice doesn’t fall under the umbrella of the Ministry of Justice as it is a completely different administration.

Q091 (2013): In 2013 and 2014, the Italian judicial system has gone through a historical geographic reorganization with the closing of almost 1000 courts. Thus, the statistics regarding flows of cases at the end of 2013 may show some anomalies that will be adjusted with the following data gathering. A constant reduction in the incoming civil and commercial litigious and non-litigious cases is observed from the end of 2009. The number of ADR cases is constantly increasing with a filter effect on the litigious incoming files.

Q093 (2014): In the ambit of the 2014 exercise, the category “other” encompasses the number of enforcement cases.

Q094 (General Comment): In Italy there is no formal definition of minor criminal cases. For the purposes of this exercise, are considered as minor criminal cases those proceedings dealt with by the Justice of Peace Offices.

Q094 (2018): The reduction in the number of resolved first instance criminal cases, and consequently the increase in the Disposition Time, between 2018 and 2016 comes from the decriminalization measures introduced in 2016 that led to a sharp increase in the number of case dismissals in that year. Indeed, the data for 2017 are:

Incoming: 1.311.900

Resolved: 1.293.054

Pending: 1.282.406

Disposition time: 362 days

These figures show a positive trend of the DT between 2014 and 2017, maintained in 2018.

Q097 (General Comment): · Non-litigious enforcement cases are not in the competence of the Courts of Appeal.

· With regard to the administrative cases (which number is provided only since 2014), the appeals are dealt with by the Council of State (Consiglio di Stato) which is a legal-administrative consultative body ensuring the legality of public administration in Italy. The Council has jurisdiction on acts of all administrative authorities, except when these authorities lack discretionary power, in which case the dispute is considered to be one of civil law. Figures referring to the activity of the Council of State are inserted in the frame of question 99 and not question 97.

Q097 (2020): In 2020 the case flow was highly affected by the COVID-19 pandemic and the consequent temporary shutdown of courts. This had an impact on both incoming and resolved cases, which fell quite considerably compared to 2019. However, the fall in the number of resolved cases was less drastic than that of incoming cases, resulting in a clearance rate (CR) higher than 100% and, hence, in a reduction in the number of the unresolved cases (i.e. the pending cases at the end of the period). The COVID-19 pandemic also had a strong impact on the disposition time (DT). As well known, the DT compares the number of unresolved cases at the end of a reporting period with the number of resolved cases during that period. Under the assumption that the number of resolved cases remain constant, the indicator provides an indirect estimate of the length of proceedings. Yet, it is evident that the number of resolved cases in 2020 is not a good proxy of the capacity of the system to resolve cases in general, making the indicator rather skewed. More generally, the DT does not appear to be a good indicator when there are strong time series discontinuities in the number of resolved cases. Such methodological considerations suggest that the DT should not be considered in the current exercise or, at least, that not much attention should be given to it in the final report. Rather, the focus should be more on other indicators such as the clearance rate and the variation of pending cases.

Q097 (2018): -

Q097 (2017): The number of pending "civil and commercial non-litigious cases", older than 2 years, decreased between 2016 and 2017. Generally speaking, pending cases older than 2 year have priority. However, in this specific case, the important reduction (in %) is mainly due to the fact that the numbers are small.

Q097 (2016): As regards the variations concerning the category "general civil (and commercial) non litigious cases", it should be noted that the Ministry of Justice has recently implemented a data warehouse system that can collect a huge number of data and events pertaining to millions of civil cases. The new DWGC (Data Warehouse for Civil Justice) is now fully operational and it represents a major improvement in terms of statistics and quality. Since 2015, data pertaining to Q.97 is extracted from the above Datawarehouse and it is to be considered more accurate than the figures provided in the past. It should be noted that in 2014 for many cases it was not possible to distinguish between litigious and non-litigious cases because they were coming together in a bundle. With the data warehouse it is possible to tell whether any given procedure has either litigious or non-litigious nature. Besides, when comparing pending cases on 31 Dec 2014 with pending cases on 1 Jan 2016, the variations are less important.

Q097 (2015): The appeal of administrative case is dealt by the Council of State (Consiglio di Stato) which is a legal-administrative consultative body that ensures the legality of public administration in Italy. The council has jurisdiction on acts of all administrative authorities, except when these authorities lack discretionary power, in which case the dispute is considered to be one of civil law.

Figures referring to the activity of the Council of State (second instance of administrative justice) have been submitted to Q.99 rather than Q.97.

Figures on Q.97 (points 1 and 2) have been extracted from a new IT system called "Civil Data warehouse". This new system allows us to get in-depth information on single proceedings. Before the implementation of such data warehouse, statistics were based on aggregated variables that only partially could distinguish between litigious and non-litigious cases. All cases dealt by the Supreme Court of Cassation has always a litigious nature.

Q098 (General Comment): In Italy there is no formal definition of "minor criminal cases". For the purposes of this exercise are considered as minor criminal cases those proceedings dealt with by the Justice of Peace Offices which have been appealed (to Tribunal).

Q098 (2018): -

Q098 (2016): With regard to second instance criminal cases, in 2014-2015 a new case management system was introduced. This has negatively affected the statistics for those two years. Statistics for 2016 are definitely more robust and consistent. Besides, when comparing pending cases on 31 Dec 2014 with pending cases on 1 Jan 2016, the variations are less important.

Q099 (General Comment): - With regard to the administrative cases (which number is provided only since 2014), the appeals are dealt with by the Council of State (Consiglio di Stato) which is a legal-administrative consultative body ensuring the legality of public administration in Italy. The Council has jurisdiction on acts of all administrative authorities, except when these authorities lack discretionary power, in which case the dispute is considered to be one of civil law. Figures referring to the activity of the Council of State are inserted in the frame of question 99 and not question 97. - In Italy, non-litigious enforcement cases are not heard by the highest instance court. The latter only hears litigious enforcement cases.

Q099 (2019): Other cases represent residual cases, such as cases regarding the competence or jurisdiction of the courts, correction of material errors.

Q099 (2018): The increase of the incoming civil litigious cases is ascribed to proceedings related to immigration matters. There is no specific explanation for the increase of resolved administrative cases. Other cases represent residual cases, such as cases regarding the competence or jurisdiction of the courts, correction of material errors.

Q099 (2017): The category "other cases" at Q.99 (Supreme Court) represents residual cases such as cases regarding the competence/jurisdiction of the court, corrections of material errors, etc. The 25% variation (in terms of number of resolved cases) has no particular explanation. Please also note that this category do not exist at first and second instance.

Q099 (2016): "Other cases" represent residual cases such as cases regarding the competence/jurisdiction of the court, corrections of material errors, etc. In respect of this category, the numbers are small and the observed variations should be put into perspective.

Q099 (2014): · In the frame of the 2014 exercise, it has been indicated that figures subsumed within the category "other" represent really residual cases (such as cases regarding the competence/jurisdiction of the court, corrections of material errors, etc.)._x000D_

· As to the increases observed in respect of the "total of other than criminal law cases" with regard to all the items (pending, incoming, resolved cases), it is noteworthy that in 2014 for the first time "administrative law cases" dealt with by the Council of State were considered. If looking only to "civil (and commercial) litigious cases", the differences are not that big. In general terms the Supreme Court of Cassation resolves fewer cases than incoming cases.

Q099 (2012): In the frame of the 2012 exercise, it has been specified that non-litigious enforcement cases are not heard by the highest instance court which hears only litigious enforcement cases. Before 2012, only litigious enforcement cases have been provided. For 2012, data related to litigious enforcement cases are the following: initially pending: 1090; incoming: 221; resolved: 413; finally pending: 898.

Q100 (General Comment): Under "misdemeanour and/or minor criminal cases" are included all those cases coming from the Justice of Peace Courts.

Q100 (2020): 2. "minor criminal cases" represent cases against justice of peace's decisions and cases against first and second instance judges' decisions, regarding minor offences that are punished with fines. 3. "Other cases" Can be related to procedures pending in first or second instances (jurisdiction or competence conflicts between other courts), or pending in other countries (rogatory or capture instances); "Other cases" can be also related to decisions regarding the execution of imposed punishments (for example regarding the end or a change (home detention) of the imprisonment), or can be related to the correction of material errors on Highest Court's sentences.

Q100 (2018): Following the introduction of the new item "other" at Q100, the Supreme Court has revised and ameliorated their classification of cases. The misdemeanour category now includes not only the proceedings coming from the justice of peace offices but also all those minor offences which are punished with fines. "Other cases" (point 3) can be related to procedures pending in first or second instances (jurisdiction or competence conflicts between other courts), or pending in other countries (rogatory or capture instances); "Other cases" can be also related to decisions regarding the execution of imposed punishments (for example regarding the end or a change (home detection) of the imprisonment), or related to the correction of material errors on Highest Court's sentences.

Q100 (2016): In respect of minor criminal cases, the numbers are small and the observed variations should be put into perspective.

Q101 (General Comment): With regard to the insolvency cases, the peculiarity of the Italian system consists in distinguishing between "insolvency applications" and "insolvency cases". The former category concerns the litigious part of the proceeding where creditors and debtors have different goals (dispute). The latter category concerns the part of the proceeding where the judge has already established the insolvency / bankruptcy of the debtor and the case is all about the management of the assets and proceeds of the debtor. Figures at questions 101 and 102 refer to "insolvency applications" rather than "insolvency cases".

Q101 (2018): Employment dismissal cases are strongly correlated with the economic trend. The number of employment dismissal cases used to be very high when the economic crisis was at its peak. Now the economy is getting better and therefore the number of these cases is going down.

The strong increase of cases related to asylum seekers was even addressed by the president of the Supreme Court during his speech on the occasion of the inauguration of the judicial year. The reason of such increase depends on the immigration flow. Cases related to the right of entry and stay for aliens are dealt by the administrative justice and for this reason they were not considered in 2016.

Q101 (2017): Asylum seekers cases represent a growing phenomenon. For this reason, a new piece of legislation (L.46/2017) which came into force in 2017, introduced a series of procedures with the aim of speeding up this kind of proceedings. In particular, the main innovations of the above regulatory intervention include the establishment of specialized sections within the courts. Such specialized sections deal exclusively with immigration and international protection cases. The Italian courts are not involved in the activities concerning the right of entry and stay of aliens. The competent body is the Ministry of internal affairs. For further information about this topic please visit http://poliziadistato.it/articolo/10618-Entering_Italy

Q101 (2016): With the introduction of the data warehouse system we can now identify specific types of proceedings (e.g. employment dismissal cases) more precisely.

The figures provided for both litigious divorce and insolvency cases (year 2016) are correct but there is no particular reason explaining the observed variations. With regard to the insolvency cases, the peculiarity of the Italian system consists in distinguishing between “insolvency applications” and “insolvency cases”. The former category concerns the litigious part of the proceeding where creditors and debtors have different goals (dispute). The latter category concerns the part of the proceeding where the judge has already established the insolvency / bankruptcy of the debtor and the case is all about the management of the assets and proceeds of the debtor. The figures at questions 101 and 102 refer to “insolvency applications” (the litigious part of this kind of proceedings) rather than “insolvency cases”.

Q101 (2015): Litigious divorce case in 2015 have been extracted from the “Civil Data warehouse”. While in 2014 they were taken from the previous system. To harmonise the data between the cycles the 2014 was updated with the values derived from the data warehouse too

Q101 (2014): The project called “Civil Datawarehouse” supposed to enable to look at each single procedure individually, has been implemented. However, the output is still under “test phase”.

Q101 (2012): The number of litigious divorce cases, has been affected by the implementation of a different classification of civil cases.

Latvia

Q091 (General Comment): Within the Court Information System, submissions received in the previous year but registered the next year are considered as incoming cases for the new year. “Non-litigious enforcement cases” and “non-litigious business registry cases” are not defined in the Civil Code and both are not within the competence of courts in the first instance (similar to “non-litigious land registry cases”).

The category “civil and commercial non-litigious cases” encompasses: applications for securing claim prior to initiation of the matter in a court; applications for securing of evidence prior to initiation of the matter in a court; applications for execution of obligations through the court; undisputed compulsory execution of obligations; execution of obligations in accordance with warning procedures; voluntary sale of immovable property at auction through the court; submitting the subject-matter of an obligation for safekeeping in the court; applications for Commercial Court adjudication execution procedures; applications for arbitrary court decision compulsory execution; applications for property protection if there is no inheritance case; applications concerning execution of court adjudications.

Q091 (2020): The precise data regarding the 2019 will be sent in separate e-mail, we have found some inaccuracies in 2019 data why the discrepancies are shown in 2020 data.

Q091 (2019): In 2018 there were several stages of court system reform. Several District courts were merged, and The Land Register offices appended to the District courts. Partially due to court system reform, Court Information System database has undergone several error checks and data clean-ups, that has affected amount of cases, especially – unresolved. The reform of the judiciary could also have affected the backlog of cases pending for more than 2 years, as it is undoubtedly that when transferring a backlog from one court to another, another judge needs extra time to go into the case file. However, the methodology for processing statistical data must also be taken into account, i.e. the functionality of the database, that the period of suspension of proceedings is taken into account during the proceedings and other external economic factors could have affected the number of long-standing civil cases. Taking into account also the peculiarities of litigation in our country, for example, that commercial cases are not separated from civil cases and that one civil case may contain several claims which are considered in one procedure, this generally means that the case takes longer to process.

Q091 (2018): In 2018 there were several stages of court system reform. Several District courts were merged, and The Land Register offices appended to the District courts. Partially due to court system reform, Court Information System database has undergone several error checks and data clean-ups, that has affected amount of cases, especially – unresolved.

Q091 (2017): Data updated after court reorganisation in 2018.

Q091 (2016): Data updated after court reorganisation in 2018.

Q091 (2014): Variations concerning administrative law cases over the period 2012-2014 are due to a change in the legislation. Namely, from July 2012, appealed administrative decisions of institutions are handed to District courts._x000D_

Q091 (2013): Amendments to the Civil Procedure Law introduce new long-pending forms for insolvency cases such as judicial protection proceedings, insolvency proceedings for individuals, etc., whose proportion increased. The insolvency process begins with a court ruling but the case cannot be closed until the end of the insolvency process. Besides, quick pending cases have been transferred from courts to the Land Registry offices from January 2012. The micro-enterprise development opportunities have increased the number of long-pending insolvency cases in the court. From July 2012, appealed administrative decisions of institutions are handed to District courts.

Q091 (2012): Decreases in the values are due to external (socio-economic) and internal (court system) factors: the gradual exit from the economic crisis; transfer of the majority of the non-litigious civil cases (land registry, business registry and non-litigious enforcement cases) from first instance courts to the competent Land Registry Department; transfer of the appealed decisions against administrative authorities from the Administrative court to the Regional courts of general jurisdiction (thus, only cases of the special jurisdiction of the administrative courts are counted).

Q094 (General Comment): According to 2014 data and pursuant to the Criminal Law, criminal offences are divided into criminal violations and crimes distinguished by their nature, degree of the harm and the threat to the interests of a person or the society. A criminal violation is an offence for which the law provides for a deprivation of liberty for a term exceeding fifteen days, but not exceeding three months (temporary deprivation of liberty), or a type of lesser punishment. Crimes are classified in the following way: less serious crimes (intentional offences for which the law provides for a deprivation of liberty for a term exceeding three months but not exceeding three years, as well as offences committed by negligence and for which the law provides for a deprivation of liberty for a term up to eight years); serious crimes (intentional offences for which the law provides for a deprivation of liberty for a term exceeding three years but not exceeding eight years, as well as offences committed by negligence and for which the law provides for a deprivation of liberty for a term exceeding eight years); especially serious crimes (intentional offences for which the law provides for a deprivation of liberty for a term exceeding eight years or a life imprisonment).

Q094 (2020): In 2020 there was changes in Administrative Procedure Law, that might affect the amount of resolved cases.

Q094 (2018): There may be some change in data due to court system reform.

Q094 (2016): Severe criminal cases - All sections of The Criminal Law

Misdemeanor and / or minor criminal cases - All sections of Latvian Administrative Violations Code

Q094 (2014): According to 2014 data and pursuant to the Criminal Law, criminal offences are divided into criminal violations and crimes distinguished by their nature, degree of the harm and the threat to the interests of a person or the society. A criminal violation is an offence for which the law provides for a deprivation of liberty for a term exceeding fifteen days, but not exceeding three months (temporary deprivation of liberty), or a type of lesser punishment. Crimes are classified in the following way: less serious crimes (intentional offences for which the law provides for a deprivation of liberty for a term exceeding three months but not exceeding three years, as well as offences committed by negligence and for which the law provides for a deprivation of liberty for a term up to eight years); serious crimes (intentional offences for which the law provides for a deprivation of liberty for a term exceeding three years but not exceeding eight years, as well as offences committed by negligence and for which the law provides for a deprivation of liberty for a term exceeding eight years); especially serious crimes (intentional offences for which the law provides for a deprivation of liberty for a term exceeding eight years or a life imprisonment).

Q094 (2012): According to 2012 data and pursuant to the Criminal Law, criminal offences are divided into criminal violations and crimes distinguished by their nature, degree of the harm and the threat to the interests of a person or the society. A criminal violation is an offence for which the law provides for a deprivation of liberty for a term exceeding fifteen days, but not exceeding three months (temporary deprivation of liberty), or a type of lesser punishment. Crimes are classified in the following way: less serious crimes (intentional offences for which the law provides for a deprivation of liberty for a term exceeding three months but not exceeding three years, as well as offences committed by negligence and for which the law provides for a deprivation of liberty for a term up to eight years); serious crimes (intentional offences for which the law provides for a deprivation of liberty for a term exceeding three years but not exceeding eight years, as well as offences committed by negligence and for which the law provides for a deprivation of liberty for a term exceeding eight years); especially serious crimes (intentional offences for which the law provides for a deprivation of liberty for a term exceeding eight years or a life imprisonment).

Q097 (General Comment): In accordance with the provisions related to data gathering, all information must be recorded in the Court Information System within 3 days. However, the Court Information System functionality for the statistical reports provides in the System recorded figures at the end of the year. Consequently, submissions received in the previous year but registered the next year are considered as incoming cases for the new year.

Justice statistics do not distinguish between “non-litigious enforcement cases” and “non-litigious business registry cases” because such types of cases are not defined in the Civil Code. Accordingly, the reply in their respect is NAP. At any rate, both of these sub-categories of cases are not within the competence of courts neither in first instance (similar to the “non-litigious land registry cases”), nor in second instance. By contrast, the “non-litigious land registry cases” are dealt with by the regional courts in second instance and they are within the competence of the Land Registry Office only in first instance.

Q097 (2020): The precise data regarding the 2019 will be sent in separate e-mail, we have found some inaccuracies in 2019 data why the discrepancies are shown in 2020 data.

Q097 (2019): Decrease of pending administrative cases is due to many resolved cases in previous period

The number of Non-litigious civil cases is very low, that's why percentage isn't good qualifier

Q097 (2018): Partially due to court system reform, Court Information System database has undergone several error checks and data clean-ups, that has affected amount of cases, especially – pending. Data on court statistics are being calculated by automated systems and records on changes that affect data in database are not available. Any changes to the Court Information System can affect the data.

Q097 (2017): As regards the decrease from 2016 in administrative law cases pending on 1 Jan, it can be explained as there were much more resolved cases than incoming in previous cycle. As regards the decrease in the total of other than criminal pending cases, it can be explained as there was a change of pending civil law cases in second instance. This might be an issue due to reclassifying the starting moment of a court case. Also, much more resolved cases than incoming cases has decreased the amount of unresolved cases on 31 Dec.

Q097 (2016): The increase in pending civil cases is due to fewer resolved cases in 2015. Decrease in pending Administrative cases is due to more resolved cases in 2015.

Q097 (2014): In the frame of the 2013 and 2014 exercises it has been indicated that the category “other” includes the following types of cases from the Supreme Court : cases related to moral and physical damages; copyright related cases; family relationship; deprivation of citizenship; labour law cases; cases in respect of inheritance rights.

Q097 (2013): In the frame of the 2013 and 2014 exercises it has been indicated that the category “other” includes the following types of cases from the Supreme Court : cases related to moral and physical damages; copyright related cases; family relationship; deprivation of citizenship; labour law cases; cases in respect of inheritance rights.

Q097 (2012): The decreases observed in 2012 with regard to the totals in respect of the different items (pending, incoming and resolved cases) are the consequence of the evolutions noticed for each of the sub-categories in respect of the number of incoming cases. The decrease of the latter and the improvement of the judicial efficiency resulted in a decrease of the number of pending cases. The end of the economic crisis and the strengthening of the courts' capacity are general factors which have to be taken into account when analysing this positive trend.

As to the sub-category "civil and commercial litigious cases", the increase of the number of pending cases on 1 January 2012 is due to the increase of the number of incoming cases in different categories of cases such as different types of bankruptcy cases which know a long processing time. The duration of these special types of bankruptcy cases cannot be shortened by improving the efficiency of the judiciary. The increase of the number of resolved cases can be explained by the improvement of the work capacity of courts.

As to the sub-category "civil and commercial non-litigious cases", the decrease of the number of resolved cases and pending cases on 1 January 2012 and 31 December 2012 can be explained by the transfer of a part of the cases from the first instance courts to the Land Registry Department, following the legislative reform of 1 January 2012. The number of incoming cases has decreased essentially due to external (socio-economic) factors, namely the gradual exit from the economic crisis during 2010-2013.

As to the sub-category "non-litigious land registry cases", the increase of the number of resolved cases between 2010 and 2012 can be explained by the courts work reviewing a large number of cases in the law limited time because of external factors causing an increase of the number of incoming cases before the entry into force of the new provisions of the Civil Procedure Law on 1 January 2012.

As to the sub-category "administrative law cases", the decrease of the number of pending cases on 1 January 2012 can be explained by the courts work, namely the improvement of the judicial capacity and the decrease of the number of incoming cases due to external factors as public activity resubmission to the Administrative Court and internal factors. The decrease of the number of resolved cases can be explained by the limited capacity of courts work, the complexity of the cases, the parties' failure to appear for court hearings, etc. The decrease of the number of pending cases on 31 December can be explained by the improvement of the judicial capacity of courts and decrease of incoming cases due to external factors.

There are no cases in the sub-category "other". All cases are distributed among the mentioned categories No.1, No.2 and No.6.

The decreases observed with regard to the totals in respect of the different items (pending, incoming, resolved cases) are the consequence of the evolutions noticed for each of the sub-categories in respect of the number of incoming cases. The decrease of the latter and the improvement of the judicial efficiency resulted in a decrease of the number of pending cases on 1 January and 31 December. The end of the economic crisis and the strengthening of the courts' capacity are general factors which have to be taken into account when analysing this positive trend.

As to the sub-category "civil and commercial non-litigious cases", the increase of the number of resolved cases between 2012 and 2013 can be explained by the long pending backlog of complex cases before the courts of the second instance.

Q098 (General Comment): The figures reflect data of second instance courts and the Supreme Court Criminal chamber. The latter is the appellate body in respect of cases decided by regional courts acting as courts of first instance. Statistics related to the Supreme Court are mentioned only within the total, because till 2009 the statistics were compiled by a specially hired expert.

Q098 (2020): In 2020 there was changes in Administrative Procedure Law, that might affect the amount of resolved cases.

Q098 (2018): Partially due to court system reform, Court Information System database has undergone several error checks and data clean-ups, that has affected amount of cases, especially – pending. Data on court statistics are being calculated by automated systems and records on changes that affect data in database are not available. Any changes to the Court Information System can affect the data.

Q098 (2014): In 2014, the statistics of the Supreme Court Criminal Chamber were the following: pending cases on 01.01.2014: 139; incoming cases: 19; resolved cases: 73; pending cases on 31.12.2014: 0. _x000D_

Due to a court reform, the Chamber of Criminal Cases of the Supreme Court has been liquidated as from 1 January 2015. All cases, which were not resolved on 31 December 2014, were transferred to regional courts.

Q099 (2020): There has been gradual decrease of incoming cases: civil cases 1336 (2018), 1164 (2019), 1127 (2020) and administrative cases 850 (2018), 844 (2019), 826 (2020).

There has been increase of examined cases per judge of the Administrative chamber (+4) and there was additional judge from the Civil chamber allocated to deal with administrative cases (February-September 2019) and substitute judge working at the Supreme Court (September-December 2020). As result the clearance rate for administrative cases in 2019 was 113% and in 2020 was 114%.

The clearance rate for civil cases (Civil chamber) was 120% which is explained by decrease of incoming cases and high number of examined cases per judge (97 cases).

Decrease of non-litigious land registry cases is explained, first, by decrease of total numbers of transaction, for example according to the statistics published by the State Cadastre, total number of transaction of land with buildings was 21619 in 2019 and 18616 in 2020. And, second, because majority of land registry cases of previous years concerned aspects of transformation of property rights (privatization and restitution) and economic activity before economic crises of 2008/2009 which are solved by now.

Q099 (2019): Starting from 2019 the Supreme Court has changed system of classification of cases under different categories for civil cases. During this change we encountered problem of reclassification of cases registered during previous years. This reclassification had as objective to introduce the detailed classification used for first and second instance courts. Statistics for the reference year 2019 encompasses results from both categories. Since 2015 number of unresolved administrative cases increased. During year 2018 additional recourses were allocated to the Administrative department (chamber) of the Supreme Court, including additional judges. As the result, number of resolved cases in 2019 increased. For next coming two years there are two additional judges envisaged for the Administrative department.

Other non-litigious cases (2.3) are specific enforcement procedures which are regarded as uncontested for our civil procedure. These have been received via the specific procedure of a protest submitted by the Prosecutors General Office. The number became available as the result of introduction of the detailed classification regime.

Q099 (2018): Supreme Court does not rely only on data in the Court Information System, they keep separate sheet for statistics

Q099 (2017): Supreme court has provided data for questions 1 & 2. As regards the decrease of Civil (and commercial) litigious cases, there was a major performance raise in 2016. Also, the Supreme court has only recently begun to collect statistics on their work performance and thus there was and still are some NA answers for CEPEJ questionnaire

Q099 (2016): Supreme court had accumulated too many unresolved cases and 1/3 of those are older than 2 years so they have made some changes and achieved progress.

Q099 (2015): An explanation for the rather large difference in case count for general civil and commercial non-litigious cases are changes in civil proceedings - while in 2014 undisputed compulsory execution cases were also heard by Supreme Court, in 2015 it was tasked with hearing decisions from Land registry, sworn bailiffs and notaries only.

Q099 (2012): In 2012, the decrease of the total of cases before the higher instance courts correlates with the general decrease of the number of civil cases.

Q100 (2020): During last two years 3 out of 8 judges (after increase of number of judges – 9 judges) have retired. Some additional time was needed to replace them (competition and appointment). There was significant decrease of examined cases in 2020 (clearance rate was 102% in 2019 and 95% in 2020) and increase of received cases in 2019: 734 (2018), 764 (2019) and 686 (2020).

Q100 (2018): Supreme Court does not rely only on data in the Court Information System, they keep separate sheet for statistics

Q101 (2020): There are minor changes in statistical data due to Covid-19 pandemic. The pandemic affected the hearings of the cases and procedure, because there were several case groups that were solved in written way affecting average length of the hearings.

Q101 (2019): Data on court statistics are being calculated by automated systems, we do not keep track on any changes that affect data in database.

Q101 (2018): Partially due to court system reform, Court Information System database has undergone several error checks and data clean-ups, that has affected amount of cases, especially – unresolved. Data on court statistics are being calculated by automated systems, we do not keep track on any changes that affect data in database. Any changes to the Court Information System can affect the data.

Q101 (2017): Data updated after court reorganisation in 2018.

Q101 (2016): Data updated after court reorganisation in 2018.

Q101 (2013): The number of pending insolvency cases in the beginning and in the end of the year increased because of the special handling procedures for insolvency cases set forth by the Civil Procedure Law. The duration of insolvency proceedings is mostly affected by external economic factors. The increase in the number of incoming insolvency cases is justified by external factors such as public activity submitting applications on legal protection of individuals in cases of insolvency. The increase of the resolved insolvency cases is due to the gradual improvement of the capacity of the courts work following the adoption of the new provisions of the Civil Procedure Law in 2012.

Q101 (2012): The decrease in the number of “litigious divorce cases” (pending, incoming, resolved) is due to the decrease in the number of incoming cases owing to the impact of external factors such as depopulation, decline in the number of marriages etc. As to the category “employment dismissal cases”, the decreases noticed in respect of all the items can be explained by external socio-economic factors such as the decrease of the unemployment after the end of the economic crisis.

Lithuania

Q091 (2020): "Pending non-litigious cases": general decrease of number of cases and application of administrative means.

Q091 (2019): In 2019 there is a downward trend in the backlog of incoming and resolved cases. At the end of the year, the backlog of pending cases at the district, county (I instance) and county administrative courts amounted to 29 898 cases, at the end of 2018 – 33 233 cases; at the end 2017 - 36 419 cases (10 percent less than in 2018 and 18 percent less than in 2017). In 2019 the number of court order cases has decreased. This decrease may have been caused by the general decrease of debtors' natural persons in 2017–2019. According to the information provided by the credit bureau Creditinfo data, on 1st January 2020 there were 163 929 debtors (natural persons), on 1st January 2019 -177 055, on 1st January 2018 - 207 000 debtors (natural persons).

In 2018, the number of administrative cases received increased by 27.35% compared to 2017 (e.g. the number of cases concerning conditions and detention of prisoners, cases concerning the legal status of aliens have significantly increased) and this led to the growth in the number of pending cases at the end of 2018 (and to the beginning of the reference year 2019).

In 2019, compared to 2018, the number of administrative cases heard in regional administrative courts increased by 14 percent. The change in the increase was due to a 34 percent increase compared to 2018 in the number of applications for a local fee for the collection and treatment of municipal waste. In 2019 a further upward trend in tax cases, enforcement cases and arrest cases, but there has been a significant reduction in civil liability for damage caused by illegal actions by public authorities.

In 2019, as compared to 2018, the number of administrative misconduct cases investigated in district courts increased by 16 percent. The change was due to a 64 percent increase in the number of cases of administrative offenses related to transport and road transport (370-463 Articles of the Code of Administrative Offenses). In 2019 significantly increased the number of cases of driving under the influence of drugs, psychotropic or other psychoactive substances without driving license. The number of cases related to trade, the financial system and statistics has also increased.

Q091 (2018): The decrease in general civil (and commercial) non-litigious cases (2.1.) may have been due to the overall decrease in debtors' natural persons in 2017 and 2018. The latter suggestion is based in data from the credit bureau Creditinfo (1 January, 2019 number of debtors natural persons was 177,055; 1 January - 207,000; 1 January, 2017 - 252 479). Credit Bureau "Creditinfo" stores information about credit risk for businesses and private entities, forms the credit history and establishes credit ratings.

The decrease in "other non-litigious cases" (2.3.): civil cases in process of enforcement (execution) in all district courts was due to changes in the law that came into effect in 2017 July 1, on the basis of which the bailiff, rather than the court of first instance, is responsible for dealing with the succession in enforcement proceedings.

The decrease in "other cases" (4): administrative offence cases (including cases in process of enforcement (execution) in 2017-2018 period was due to the entry into force of the Code of Administrative Offenses on 1 January, 2017 which left the handling of a large proportion of administrative misconduct and the imposition of penalties to various public administration entities (out of court). This could also be due to the expanded list of circumstances in which the person is not prosecuted under the Code of Administrative Offenses. The decrease in these cases was also influenced by the Amendments to the Criminal Code (on 1 January, 2017) that criminalized persons who drove a road vehicle or taught practical driving while under the influence of alcohol with more than 1.5 ounces of alcohol. In 2018, compared to 2017, the number of cases of administrative offences investigated in district courts decreased by 15.66%, compared to 2016, a decrease of 75.83%. Concerning administrative cases (3): in 2018, the number of cases received increased by 27.35% compared to 2017 (e.g. the number of cases concerning conditions and detention of prisoners, cases concerning the legal status of aliens have significantly increased) and this led to the growth in the number of pending cases at the end of the reference year.

Q091 (2017): Other non-litigious cases: civil cases in process of enforcement (execution).

Concerning the category "non-litigious cases" the number of pending cases on 1 January 2017 increased considerably compared to their number on 1 January 2016. The same increase characterises the categories "general civil and commercial non litigious cases" and "other non- litigious cases" (pending cases at the beginning of 2017). However, we can observe that at the end of 2017 the number of pending cases decreased concerning the category "non-litigious cases" and the sub-category "other non-litigious cases". Only with regard to "civil and commercial non-litigious cases" the number of pending cases at the end of 2017 increased. We can see that these variations are the result of variations in the number of incoming cases for the period 2015-2017. Besides, as the numbers are small, variations appear important. The main reason for increased pending cases is the increased number of incoming other non-litigious civil cases, i.e. enforcement cases, in 2017. More precisely, in 2017, the number of civil cases in enforcement procedure – requests to change the recoverer, increased. There is no particular reason, besides the fact that some companies were buying the recoverers' rights from other natural persons or legal entities.

As regards the category "other cases", it refers to cases of administrative offences and cases of administrative offences in process of enforcement (execution). Following the entry into force of a new Code of Administrative Offence (1 January 2017), the number of incoming cases of administrative offences decreased. The decrease in the number of incoming administrative law cases in 2017 is explained by the increased number of incoming administrative cases in previous years (due to the decisions of the Constitutional Court).

Registry cases cannot be identified among the overall number of general civil cases.

Administrative law cases: courts received less administrative cases; they are fighting backlogs from previous years.

Q091 (2016): Administrative law cases - courts are fighting backlogs. This led to the growth in the number of resolved cases and consequently to the decrease in the number of pending cases 31 December 2016.

Other non-litigious cases: civil cases in process of enforcement (execution). The increased number of these incoming cases also results in the increase of number of incoming non-litigious cases. The number of increased incoming other non-litigious cases (enforcement) may be due to the number of the resolved civil cases in 2015 (the number of pending cases on 1 January 2016 decreased). As regards registry cases: the answer should be NA, the NAP was chosen for the calculation purposes: it is not possible to identify those cases among all other general civil cases.

Q091 (2015): Civil and commercial non-litigious cases include court orders

Category "other" includes: Cases of administrative offences and cases of administrative offences in process of enforcement (execution).

Q091 (2014): The number of incoming administrative cases increased which affected the total. They were mostly cases on remuneration of public servants due to the decision of the Constitutional Court declaring the laws on the reduction of the remuneration of State servants and judges unconstitutional. For the same reason, the number of cases of administrative offence (in execution process) increased, which affected the category "other". As to the significant decrease in the number of general civil (and commercial) non-litigious cases (pending 31 Dec) in 2014, civil cases on deliver of judicial orders are resolved quickly and such residues are normal.

Q092 (2014): For 2013 and 2014, the category "civil and commercial non-litigious cases" includes court orders.

Q092 (2013): For 2013 and 2014, the category "civil and commercial non-litigious cases" includes court orders.

Q093 (2013): For 2010, this category encompasses only cases of administrative offence, while since 2012 it subsumes also the administrative offence cases in the process of execution.

Q094 (2018): On 1 January 2017 Amendments to the Criminal Code of the Republic of Lithuania were adopted that provide for criminal liability for persons who drove a road vehicle or taught practical driving while under the influence of alcohol more than 1,5 promilles. This change of regulation had impact on the increase of the number of criminal cases starting from 2017 (in comparison with 2016).

Q094 (2016): The crime situation changed in Lithuania - the number of registered crimes by prosecution also decreased through these years, as a result less cases were received in courts. As regards 94.1 and 94.2: the answer should be NA, the NAP was chosen for the calculation purposes.

Q094 (2012): For 2012, in contrast with the 2010 data, criminal cases in the execution process were also taken into account. The increase in the number of incoming and resolved criminal cases is due to the entry into force of the Law on Domestic Violence in December 2011. It has made compulsory the criminal investigation in respect of every single incident of domestic violence. The Lithuanian economic situation as well as the national economic priorities also account for the increase.

Q097 (General Comment): In Lithuania, statistical data on case flow and their classification are made according to the specific regulations and are mainly based on the institutes of Civil, Criminal Codes and the codes of Civil and Criminal procedures, as well as the Code of Administrative Offences and the law on Administrative procedure. Therefore figures for some of the types of cases are unavailable because there is no such classification while making statistical reports. In respect of the variations that can be observed between figures provided for the different evaluation cycles and in the light of the above described peculiarity of the statistic system of Lithuania, it is noteworthy that cases the number of which is not available are included in other categories, i.e. "civil litigious", "civil non-litigious". Accordingly, the indicated totals are relevant.

Q097 (2019): "Other": administrative offence cases (including cases in process of enforcement (execution)).
"Administrative cases" - the data provided encompasses cases dealt with by the Supreme Administrative Court of Lithuania; it is to notice that these figures include apellation cases (on decisions of the court of first Instance) well as cases that are heard in the Supreme Administrative Court of Lithuania as sole instance.
"Pending cases older than two years": the decrease is due to the fact that cases pending for more than 2 years have been resolved.

Q097 (2018): The decrease in "other cases" (4), i.e. administrative offence cases (including cases in process of enforcement (execution), at second instance courts (appeal) in 2017-2018 period was related to the decreased number of resolved administrative offence cases in the first instance courts (see Q091).

Q097 (2017): As regards the category "other cases" which refers to cases of administrative offences and cases of administrative offences in process of enforcement (execution), the observed decreases in their numbers (pending at the beginning of 2017, incoming, resolved, pending at the end of 2017) are the consequence of the entry into force of the new Code of Administrative Offences.

Q097 (2016): The changes in number of cases are mainly related to the increased number of resolved administrative cases in the first instance administrative courts in 2015 and 2016 (the courts were fighting backlogs from previous years) and the renewed processes that were suspended in the second instance court due to the application to the Constitutional Court of the Republic of Lithuania (related to salaries of civil servants, decreased pensions, etc.).

Q097 (2014): The increase between 2013 and 2014 in number of cases can be explained by the increase in the number of incoming administrative cases and cases of administrative offence. They were mostly cases on remuneration of public servants in 2013 due to the decision of the Constitutional Court of the Republic of Lithuania, which recognized the laws on the reduction of the remuneration of state servants and judges unconstitutional. This also had an effect on the significant increase of the category "other cases" since this situation resulted in the increase of the number of cases of administrative offence (in execution process).

Q099 (General Comment): Other cases - jurisdictional cases and administrative offences cases.

Q099 (2020): In 2019, the Supreme Court of Lithuania examined fewer cases than were received, therefore the number of pending cases increased at the end of the year. However, it should be noted that in 2019 the Supreme Court of Lithuania has provided a number of important and particularly socially sensitive interpretations in both civil, criminal and administrative offences cases.

The decrease in the number of resolved civil and commercial litigious cases and accordingly the increase in the number for pending cases at the end of 2020 are due to the reduction in the number of judicial posts and the lengthy appointment by Parliament procedures for vacancies.

Q099 (2019): Other cases - jurisdictional cases and administrative offences cases.

Over the last five years, there has been an almost consistent decline in cases, including cassation appeals. In 2019, as compared to 2015, 20 percent less civil cassation appeals were filed and 17 percent fewer civil cassation cases were accepted, 43 percent fewer civil cassation cases were examined. In 2019, the Supreme Court of Lithuania examined fewer cases than were received, therefore the number of pending cases increased at the end of the year.

However, it should be noted that in 2019 the Supreme Court of Lithuania has provided a number of important and particularly socially sensitive interpretations in both civil, criminal and administrative offences cases.

Q099 (2018): The number of civil (and commercial) litigious cases (1.) of the cassation instance court (Supreme Court) pending at the end of the year decreased due to the general decrease of resolved cases at first instance. In 2018 the number of civil cases resolved at first instance courts decreased by 10.89% compared to 2017 and was 15.03 % lower than in 2016. This led to the slightly lower inflow and larger number of resolved cases, therefore, to the decreased number of pending cases at the end of the year.

Q099 (2016): NA was changed to NAP only for calculation purpose -situation hasn't changed.

Q099 (2014): In the frame of the 2014 exercise, it has been indicated that the Supreme Court of Lithuania received 1369 appeals (cassation) in criminal cases and 2794 appeals (cassation) in civil cases. 677 appeals in criminal cases and 2038 in civil cases were returned to the complainants.

2014: Different category of cases as in Q91, 97 and 99 exist in Lithuania, but they are all under the category 1. Civil (and commercial) litigious cases and it is not possible at this point to distinguish them from other cases.

The increase between 2013 and 2014 in number of cases can be explained by the increase in the number of incoming administrative cases and cases of administrative offence. They were mostly cases on remuneration of public servants in 2013 due to the decision of the Constitutional Court of the Republic of Lithuania, which recognized the laws on the reduction of the remuneration of state servants and judges unconstitutional. This also had an effect on the significant increase of the category "other cases" since this situation resulted in the increase of the number of cases of administrative offence (in execution process).

Q100 (2020): general decrease of number of cases

Q100 (2016): The number of admitted cassation claims decreased in 2015 and in 2016 was almost the same as in 2015. Besides, the number of resolved cases increased in 2015 due to the aim to comply with the timeliness.

Q101 (2020): Pending on 31 December 2020 litigious divorce cases: the result of the decrease in the number of incoming cases and the compulsory mediation in pretrial stage.

Insolvency cases: general decrease in number of cases

Robbery cases: general decrease in number of cases

Q101 (2019): In common the number of pending cases decreases, this shows the efficient work of the courts.

Employment dismissal cases - the decrease of incoming and resolved cases might be due to the effective functioning of the Labor Disputes Commission (a mandatory pre-litigation labor dispute resolution body for individual and collective labor disputes).

Insolvency cases - in 2019 the number of bankruptcy proceedings compared to 2018 remained stably consistent, depending on the economic situation. The general number of received criminal cases has decreased. This may have been caused by the reduced level of crime in the Republic of Lithuania. In 2019, compared to 2018, fewer crimes were registered and fewer criminal proceedings were received. According to the publications of the Department of Informatics and Communications under the Ministry of the Interior of the Republic of Lithuania data, in 2019 51 449 criminal offenses were recorded (57 830 in 2018 and 63 846 in 2017). Cases relating to the right of entry and stay for aliens - general political situation in Lithuania and situation in EU on this issue led to the decrease of incoming cases in 2019.

Q101 (2018): Employment dismissal cases - the decrease of incoming and resolved cases might be due to the effective functioning of the Labor Disputes Commission (a mandatory pre-litigation labor dispute resolution body for individual and collective labor disputes).

Insolvency cases - the decrease of incoming cases might be due to the decrease of debtors (legal entities). Robbery cases - the decrease of incoming and resolved cases might be due to a general decrease in crimes to property. Cases relating to the right of entry and stay for aliens - general situation in EU on this issue led to the increase of incoming cases in 2017 and consequently to the increase of pending cases at the beginning of 2018. The number of resolved cases is higher due to higher number of incoming and correspondently pending cases. Cases relating to asylum seekers fall within the cases relating to the right of entry and stay for aliens or other administrative cases.

Q101 (2017): Cases relating to asylum seekers fall within the cases relating to the right of entry and stay for aliens or other administrative cases.

The number of incoming cases related to the right of entry and stay for aliens is related to the number of requests from residents of countries where there were no requests before (countries where there are no military actions carried) and such requests are often declined by the Migration department.

The decrease in the number of pending employment dismissal cases at the end of the year is explained by the fact that courts are successfully fighting the backlog.

Variations observed in respect of the number of pending litigious divorce cases appear important mainly due to the small numbers.

Q101 (2016): For the reference year 2016 cases relating to asylum seekers fall within the cases relating to the right of entry and stay for aliens or other administrative cases.

Q101 (2013): Variations observed in respect of the categories "employment dismissal cases" and "litigious divorce cases" are justified mainly by fluctuations in the number of incoming cases (due to the crisis, developments of the constitutional doctrine or amendments in law). In 2013, the number of district courts has been reduced to 49, resulting in a transfer of cases from one year to another from several/two courts to one court.

Luxembourg

Q091 (2018): The pending cases at the date of 31/12/2017 had to be adapted, since there were 27 cases of vacation court, which were no longer pending at the end of the year. These 27 cases were withdrawn from the 1,341 pending cases indicated in the Scoreboard 2017 to reach 1,314 other pending non-litigious cases on 01/01/2018.

Q091 (2016): For question 91.1 the new data collection system revealed a higher number of pending cases, previously not considered by those in charge of counting.

For question 91.2.2, the new data collection system provides now information on other non-litigious cases, previously unavailable.

Q091 (2015): The figures given (with the exception of those for the administrative court) are those of the two district courts (Luxembourg and Diekirch).

The three justices of the peace totaled 78.273 national as well as 285 European payment orders.

Q091 (2014): The data (except for the Administrative Court) are those of the district courts. Uniform statistical data for both types of courts are not yet available. The three justices of peace ruled 75 411 national payment orders, 260 european payment orders and resolved a total of 6386 cases for a total of 65840 new cases. The implementation of statistics counters for civil and commercial cases resulted in variations. The applied criteria have been refined and give a more accurate image.

Q091 (2013): Data concerns (except for the Administrative Court) district courts. Uniform statistical data for both types of courts (district courts and justice of peace) are not yet available. The District Court of Diekirch rendered 580 decisions and registered 664 new cases. The three justices of peace ruled 69 859 payment orders and resolved a total of 5 682 cases for a total of 6 508 new cases. The increase in the number of civil (and commercial) non-litigious cases between 2010 and 2013 is partly explained by the establishment in 2011 of the judiciary statistics office. The increase in the number of administrative law cases mainly stems from the increase in the asylum-related disputes.

x000D

Q091 (2012): The data provided (except for the Administrative Court) are those of the district courts. Uniform statistical data for both types of courts (district courts and justice of peace) are not yet available. The District Court of Diekirch rendered 591 decisions and registered 688 new cases. The three justices of peace ruled 63 651 payment orders and resolved a total of 8041 cases for a total of 9310 new cases. The 2012 data encompasses civil and commercial cases of both district tribunals (Luxembourg and Diekirch).

Q092 (2014): 2014: Category 2 (civil (and commercial) non-litigious cases) refers to european payment orders issued by two district courts. They are handled almost immediately, so that there is no stock at the end of the period. That is why the pending cases as well as incoming cases are classified as NAP.

Q092 (2013): 2012: Category 2 (civil (and commercial) non-litigious cases) refers to payment orders issued by district courts. They are handled almost immediately, so that there is no stock at the end of the period.

Q092 (2012): 2012: Category 2 (civil (and commercial) non-litigious cases) refers to payment orders issued by district courts. They are handled almost immediately, so that there is no stock at the end of the period.

Q094 (2018): Nous avons compté parmi les infractions mineures, toutes les affaires terminées par ordonnance pénale au tribunal de police ou au tribunal d'arrondissement. Les infractions graves représentent toutes les affaires terminées par jugement en première instance au tribunal de police, correctionnel ou criminel.

L'augmentation du nombre d'affaires résolues est due au fait que, pour les cycles précédents, les ordonnances pénales des tribunaux d'arrondissement n'étaient pas prises en compte au niveau des infractions mineures, qui comptabilisaient seulement les ordonnances pénales de justices de paix. Ainsi, pour 2016, les infractions pénales mineures reportées s'élevaient à 6460 en comptant les ordonnances pénales des tribunaux d'arrondissement, au lieu de 5454. Le total des affaires terminées a considérablement augmenté puisqu'il nous est depuis la période d'évaluation 2018-2020 possible, par l'ajout de la catégorie « Autres affaires » dans le questionnaire, de renseigner les affaires dont le cabinet d'instruction a été saisi. Les chiffres inscrits dans « autres affaires » correspondent donc aux affaires dont a été saisi le cabinet d'instruction.

Regarding the unavailability of the number of pending cases and incoming cases, Due to the specific organization of the work flow between the courts and the public prosecutor's office, files are transferred to the courts only a short time before the hearing, and, if the case is not heard at the given date, are then returned to the public prosecutor's office until the new date of the hearing. Thus, there are – with very few exceptions - no cases pending before the penal courts over a longer period of time, and the number of incoming cases equals more or less the resolved cases. With regard to civil cases, we should be able to provide information on cases pending for more than two years for the next evaluation, once the new application has been used for a longer period of time.

Q094 (2012): Courts do not have a "stock" given that cases are handled at the public prosecutor's office and are only referred to the court shortly before the hearing. The only moment when cases are pending is between the hearing and the adoption of the decision. Usually, the judgment is made within 3 or 4 weeks after the hearing. Thus, data concerning incoming cases is identical to data concerning resolved cases.

Q097 (2019): Civil and commercial litigious cases pending at the beginning of the year have been restated in relation to those available at the time of the 2018-2020 evaluation cycle. The introduction of a new case management application at the Court of Appeal (JUCIV) has made it possible to identify a number of cases, still listed as pending, which were in fact completed.

Q097 (2016): It is a fact that the number of appeals before the Court decreased between 2014 and 2016. A key reason is that the number of appellate judgments rendered by the court has decreased significantly. The first reason is that the court had to evacuate a large number of cases as a matter of priority under the so-called accelerated procedure provided for by the law of 18 December 2015 on international protection. For the judicial year 2015/2016, 355 judgments out of a total of 938 judgments (excluding striking off) were rendered in accelerated proceedings and therefore not subject to appeal.

Q097 (2013): 2013: because of the international events that have increased the number of asylum seekers, the administrative courts that have jurisdiction in case of appeal against a refusal of refugee status, have, in particular in 2013 but already during the 3-4 previous years, known a significant increase in this very specific litigation both at first instance level and appeal level.

Q098 (2018): Concernant le nombre d'affaire résolues en matière d'affaire pénales grave, une baisse des recours introduits à la Cour d'appel est observée depuis ces dernières années, en conséquence les affaires terminées ont diminué en 2018. Concernant le nombre d'affaire résolues en matière d'affaire pénales mineures, le chiffre plus élevé des affaires d'infractions mineures s'explique par le fait qu'en 2017, 59 recours avaient été introduits sur des jugements du tribunal de police et que ces recours ont été traités pour partie en 2018 seulement.

Q099 (General Comment): The pending files are now detailed between criminal and civil/commercial cases, thus this additional information is now available. There is no cassation possibility against the decisions of the administrative court of appeal.

Q099 (2019): Pending cases at the beginning of the year have been restated in relation to those available at the time of the 2018-2020 evaluation cycle. The introduction of a new case management application at the Court of cassation (JUCIV) has made it possible to identify a number of cases, still listed as pending, which were in fact completed.

Q099 (2018): Comparing 2016 to 2018, the increase in pending cases at the end of the period is 40.73%. However, there was already a clear increase in cases pending at the end of the period between 2016 and 2017, which is largely explained by a larger number of new cases in 2017. Between 2017 and 2018, the variation in cases pending at the end of the period is + 5%, which does not seem excessive, especially taking into account the low numbers.

Q099 (2017): Q99: total and civil and commercial litigation cases: the slight increase in the number of incoming cases in 2017 and the relatively stable number of resolved cases explain the increase in the number of pending cases at the end of 2017 to 109 .

Q099 (2014): 2014: several categories are in NAP because the Court of Cassation has no jurisdiction over these categories.

Q101 (2019): Compared to 2018 data, the number of incoming divorce cases has increased significantly. It seems that at the end of 2018, there was a number of pending divorce petitions, awaiting the entry into force of the law of 27 June 2018 establishing the family court judge (JAF law) on 1 November 2018. During the first two semesters of 2019, divorces were pronounced under a dual regime: on the one hand, cases filed under the old law were dismissed, and on the other hand, the JAF law, which provides for very short deadlines, made it possible to close a greater number of cases in less time than was the case under the old procedure.

"Cases relating to asylum seekers": as we previously indicated in our 2018 comment, variations in the number of incoming and the number of resolved cases depend on factors external to the administrative courts. The variations are probably related to applications for international protection and especially the decisions taken in relation to these applications by the Ministry of Foreign and European Affairs (see https://maee.gouvernement.lu/content/dam/gouv_maee/directions/d8/publications/statistiques-en-mati%C3%A8re-d-asyle/Bilan-2019-Asile-Immigration-et-Accueil.pdf).

Q101 (2018): With regard to the number of incoming divorce cases, compared to the numbers provided for the 2017 scoreboard, they increased by only 8%. Since 2017, we have seen an acceleration in the number of divorce applications in 2018 since, before the entry into force of the law of the 27th of June 2018 establishing the Family Court (JAF law) and reforming the divorce procedure, many proceedings initiated under the former law were dismissed as a priority. In addition, the numbers for asylum seeker cases have decreased by 5% compared to the numbers available for 2017. The variation in incoming cases and resolved cases is linked to factors which are external to administrative courts and it is probably linked to the decrease in 2018 in applications for international protection and especially in decisions taken in relation to these issues. Finally, the number of cases resolved in 2016 concerning the entry and residence of foreigners was particularly high, this can be explained, among other things, with the creation of a new chamber in 2016 at the Administrative Court, the complexity of the cases, which can vary, as well as the delays in the investigation which can affect the date of delivery. The number of resolved cases related to the right of entry and residence of foreigners remains unchanged from the cases resolved in 2017.

Q101 (2017): Litigious divorce cases: The increase in the number of incoming cases in 2017 may have its origin in the fact that parliamentary proceedings had been initiated to reform the existing divorce procedure, which was intended to repeal the contentious divorce procedure. The Act of 27 June 2018 establishing the Family Court (juge aux affaires familiales) and reforming divorce and parental authority was initially supposed to come into force in the beginning of 2018 but it will only come into force on 1 November 2018. This law is also amending: 1. the New Code of Civil Procedure; 2. the Civil Code; 3. the Criminal Code; 4. the Social Security Code; 5. the Labour Code; 6. the amended Act of 11 November 1970 on the transfer and seizure of work pay and pensions; 7. the amended Act of 7 March 1980 on the organisation of the judiciary; 8. the amended law of 10 August 1992 on the protection of young people; 9. the amended law of 27 July 1997 on insurance contracts; 10. the amended law of 9 July 2004 on the legal effects of certain partnerships; 11. the law of 27 June 2017 adopting a multiannual programme for recruitment to the judiciary and amending the amended law of 7 March 1980 on judicial organisation. In addition, an increasing number of divorces between asylum seekers can be noticed.

Cases relating to asylum-seekers (refugee status under the 1951 Geneva Convention)[incoming cases and resolved cases]: the increase in the number of incoming and resolved cases is due to factors external to administrative courts and is probably linked to the general increase in 2017 in the number of applications and decisions taken in relation to asylum claims (see <https://statistiques.public.lu/fr/actualites/population/population/2018/01/20180117/20180117.pdf>).

Cases relating to the right of entry and residence of aliens [resolved cases]: the number of resolved cases in 2016 was particularly high, which can be explained by, inter alia, the creation of a new chamber in 2016 at the Administrative Court, the complexity of cases which may vary as well as the length of investigation proceedings, which may affect the date of delivery of the decision.

Q101 (2016): For insolvency cases the number of incoming and resolved cases is identical because these cases are treated immediately.

Q101 (2013): The number of employment dismissal cases corresponds to the incoming cases brought before the three competent courts. All these cases, with some exceptions, are generally heard and resolved within a few months. Regarding insolvency cases, they are all considered as urgent and are heard, at the latest one month after they are brought before the court.

Malta

Q091 (General Comment): The Administrative Review Tribunal was set up in late 2009 and replaced a number of ad hoc tribunals, each with their own varying caseload. From the moment it has been set-up, till practically 2014, the Administrative Review Tribunal was incorporating all these different caseloads within its own, and this resulted in a disproportional increase in the number of administrative incoming cases, as well as an increase in the pending caseload. Only now is the Tribunal starting to settle down to its normal annual caseload. The figures of "administrative cases" reflect the changes resulting from the integration of the caseloads of the ad hoc tribunals, into the Administrative Review Tribunal.

The observed variations for these cases between 2013 and the following years are due to the fact that in 2014 another magistrate started presiding over the Administrative Review Tribunal thereby increasing the judicial complement to 2 members. This change resulted in an increase in the number of administrative resolved cases leading to the increase in the clearance rate. The low number of incoming cases is reflecting the current intake once all cases from the ad hoc tribunals have been transferred.

As regards the decrease between 2014 and 2015 in the number of pending cases, this is the result of the improvement in the performance and efficiency of the Administrative Review Tribunal during these last 2 years.

Non-litigious data is not available for 2015.

The vast majority of cases heard before the courts of Malta are litigious cases. Nevertheless, there is the Court of Voluntary Jurisdiction which deals with adoptions, appointment of tutor, curators and other administrators, interdiction and incapacitation and opening of secret wills.

Q091 (2019): Non litigious cases - incoming cases: The data was provided by the case management system of the Court Services Agency and shows an increase in the incoming caseload of these cases over that of the previous year.

Non litigious cases - pending cases at the end of the reference year: The relative high number of pending cases at the end of the year compared by the previous year is the result of the increase of incoming cases but a retention in the number of resolved cases. As a result, efficiency, as expressed as a higher number of pending cases, has suffered.

Q091 (2018): This evaluation cycle contains for the first time the efficiency data of the First Hall, Commercial Section which is a new court established in April 2018. Furthermore there was a registered increase in the incoming caseload particularly of the Court of Voluntary Jurisdiction and in cases of dissolution of marriage.

The lack of horizontal consistency results from recounts that happen throughout the year, and that ensure that the data is always as up to date as possible. However when taken as a global figure, horizontal consistency might then be lost.

Q091 (2017): Apart from the provision of the new non-litigious data captured by sub-section 2.1 above, this year we also introduced the data for another civil, litigious court, namely, the Court of Voluntary Jurisdiction, established by the Civil Courts (Establishment of Sections) Order 2003, in terms of Art 2 of the Code of Organisation and Civil Procedure (Chp 12 of the Laws of Malta). The Court has jurisdiction to deal with, amongst other matters, applications related to adoptions, interdictions and incapacitations, matters related to wills and to trusts, and to specific cases falling under the Foster Care Act (Chp 491 of the laws of Malta).

As concerns pending cases at the beginning of the year, information is not available for the newly provided data, namely data from the Court of Voluntary Jurisdiction and the non-litigious data. These data will be available for the next cycle. Increases observed between 2016 and 2017 in the total of incoming and resolved cases result from the fact that new data has been added (data on non-litigious cases and data from the Court of Voluntary Jurisdiction).

Q091 (2016): Horizontal consistency: This is a problem encountered also in previous evaluations. Unfortunately this inconsistency results from the way that the data is logged, and it is practically impossible to resolve it at present. Concerning the variations between cycles: In reality, in 2015 the Administrative Review Tribunal worked real hard to reduce the pending caseload and also resolved one set of interrelated cases that translated in the conclusion of about 150 separate cases. So 2015 was a very good year in which the efficiency parameters of the Tribunal spiked. In 2016, the rhythm by which cases were being resolved went back to 2014 figures, hence the apparent decrease in the number of resolved cases between 2015 and 2016. The reduction in the pending caseload is also the result of the additional 150 odd cases that were resolved in 2015 and that dramatically reduced the pending caseload for good, even if the resolved caseload of 2016 was less than that of 2015. Concerning Administrative cases: These figures reflect the pending balance at the beginning of 2016. Throughout 2015, the Tribunal resolved one batch of related cases that resulted in a drop in the number of pending cases and a spike in the number of resolved cases.

Q091 (2014): The category "civil litigious cases" covers family mediation cases and cases before the Court of revision of notarial acts and the Small Claims Tribunal. In 2014, another magistrate started presiding over the Administrative Review Tribunal thereby increasing the judicial complement by 2 members. This change resulted in an increase in the number of resolved cases. Following an internal exercise carried out by the Court Administration, cases that have been prescribed, have been cleaned from the system.

Q091 (2013): In 2013, the number of administrative law cases continued increasing. The Administrative Court was created in 2010. Over the time, the number of areas of competence of the Administrative Court has increased, which resulted in an increased caseload.

Q091 (2012): The Administrative Court was set up in late 2010, as a result of which, figure given in the previous report reflected the operation of the Court over a couple of months only. For 2012, the communicated figures reflect the operation of the Court over a twelve month period.

Q092 (General Comment): The non-litigious case category is codified under Art 166A of the Code of Organisation and Civil Procedure (COCP), Chp 12 of the Laws of Malta.

Q094 (General Comment): In the Maltese legal system, all proceedings which appear before the Court of Magistrates may be punishable with a fine or imprisonment, bar a few contraventions which still appear before the Court of Magistrates and it is not possible to obtain data relating to these few cases. Nevertheless, all cases which lead to an imprisonment of ten years or more can only be heard by the Criminal Court whilst cases between 2 and 12 years may be heard by the Court of Magistrates only once the procedure before it as a Court of Criminal Inquiry is completed. Since in Malta the vast majority of the cases contemplate the possibility of imprisonment, barring a few contraventions, the cases indicated as misdemeanors/minor offences, are those cases which are heard by the Court of Magistrates (excluding those being heard as a Court of Criminal Inquiry) having a maximum punishment of 2 years imprisonment while the cases indicated as 'severe criminal offences' are those having a punishment of over 2 years (Criminal Court & Court of Criminal Inquiry).

Q094 (2020): Given that the categorisation of criminal offences in Malta does not exactly match with the CEPEJ definitions provided, only the total of such cases is being reported. An actual breakdown of the figures quoted above is as follows:

- Pending 1st January 2020 = 11899 (79 cases Criminal Court and 11820 cases Court of Magistrates)
- Incoming cases 2020 = 11086 (17 cases Criminal Court and 11069 cases Court of Magistrates)
- Resolved cases 2020 = 7321 (5 cases Criminal Court and 7316 cases Court of Magistrates)
- Pending cases 31st December 2020 = 15883 (89 cases Criminal Court and 15794 cases Court of Magistrates)

The lack of horizontal consistency results from recounts that happen throughout the year, and that ensure that the data is always as up to date as possible. However when taken as a global figure, horizontal consistency might then be lost.

The decrease in the number of incoming and resolved cases, and the ensuing high number of pending cases, results from the restrictions imposed by the pandemic on the functioning of the Courts of Law.

Q094 (2018): Given that the categorisation of criminal offences in Malta does not exactly match with the CEPEJ definitions provided, only the total of such cases is being reported. An actual breakdown of the figures quoted above is as follows:

- Pending 1st January 2018 = 11887 (61 cases Criminal Court and 11826 cases Court of Magistrates)
- Incoming cases 2018 = 13817 (19 cases Criminal Court and 13,798 cases Court of Magistrates)
- Resolved cases 2018 = 14168 (8 cases Criminal Court and 14140 cases Court of Magistrates)
- Pending cases 31st December 2018 = 11589 (72 cases Criminal Court and 11517 cases Court of Magistrates)

The lack of horizontal consistency results from recounts that happen throughout the year, and that ensure that the data is always as up to date as possible. However when taken as a global figure, horizontal consistency might then be lost.

The decrease in the number of incoming and resolved cases is a phenomenon we are observing over the past years. The discrepancy between the data of 2016 and 2018 makes sense when one looks at the 2017 data that also shows a decrease in the caseloads from 2016. It is to be noted that the incoming caseload in 2018 is actually a bit higher than that of 2017.

Q094 (2016): In the Maltese legal system, all proceedings which appear before the Court of Magistrates may be punishable with a fine or imprisonment, bar a few contraventions which still appear before the Court of Magistrates and it is not possible to obtain data relating to these few cases. Nevertheless, all cases which lead to an imprisonment of ten years or more can only be heard by the Criminal Court whilst cases between 2 and 12 years may be heard by the Court of Magistrates only once the procedure before it as a Court of Criminal Inquiry is completed. Since in Malta the vast majority of the cases contemplate the possibility of imprisonment, barring a few contraventions, the cases indicated as misdemeanors/minor offences, are those cases which are heard by the Court of Magistrates (excluding those being heard as a Court of Criminal Inquiry) having a maximum punishment of 2 years imprisonment while the cases indicated as 'severe criminal offences' are those having a punishment of over 2 years (Criminal Court & Court of Criminal Inquiry).

This definition of severe/minor-misdemeanor cases is not fully consistent with the definition built by CEPEJ and therefore a comparison is not possible with the previous cycles. According to the Maltese categorization of cases, the number for severe criminal cases in 2016 is as follows: pending on the 1st Jan of Ref Year = 3054; Incoming cases = 827; Resolved cases = 1143; Pending cases on the 31st Dec of Ref Year = 2736. The number for minor/misdemeanor criminal cases is as follows: pending on the 1st Jan of Ref Year = 10571; Incoming cases = 15887; Resolved cases = 15682; Pending cases on the 31st Dec of Ref Year = 10805.

Q094 (2013): The 2014 data is derived from the official court statistics that are also available online at www.justiceservices.com. The horizontal discrepancy in the data at point 6 cannot be verified since the data collection in the criminal courts is not as yet automated.

Q097 (2020): The pandemic restrictions effected the caseload of the Court.

Q097 (2019): Total other than criminal cases - resolved cases: The data shows an increase in the resolved caseload of the 2nd instance courts and in fact, the pending caseload at the end of the year is less than that registered in 2018. These courts were more efficient in 2019.

Q097 (2017): In Malta, the civil second instance courts comprise the Civil Court of Appeal in its Inferior and Superior Jurisdiction. To date, whilst we can collect the data relating to the incoming, resolved and pending caseloads of these courts, we cannot easily distinguish between the sub-divisions of case typology outlined above. What we can tell for sure is that all cases filed before the Courts of Appeal are civil and commercial litigious cases (including a minority of administrative law cases) so the figures provided at Category 1 reflect the global total of cases heard at the second instance courts. Non-litigious cases are not filed before these courts (hence NAP answers).

Concerning the variation between 2016 and 2017 in the pending cases older than 2 years, the reason is due to a different methodology used in 2016 and in 2017.

Q097 (2016): Regarding Civil (and commercial) litigious cases: 2015 was the best year in terms of number of resolved cases, mainly because the judiciary were trying hard to conclude cases that were ready for sentencing. In fact, our efficiency indicators reflected this effort. As regards to the other data, we do not, as yet, have those statistics at hand and hence, the last 3 evaluations were marked as NAP.

Q097 (2014): The discrepancy in the data provided for 2014 as “pending cases on 31st December 2014” results from an internal exercise being carried out by the Court Administration in which cases that have been prescribed, are being cleaned from the system. This exercise is going to be carried out more frequently so that it does not reflect in discrepancies in the data that is published.

Q097 (2013): The significant increase of the number of civil and commercial litigious cases between 2010 and 2013 was due to the fact that the number of appeals has increased substantially in the past few years and the jurisdiction of the Court of Appeal has been extended to include also appeals from large public contract awards. Accordingly, the Court of Appeal was not in a position to manage the considerable influx of cases.

Q097 (2012): In 2012, a number of judges in the Appeal Court retired and their replacement took some time to materialise, as a result of which, the number of decided cases decreased.

Q098 (2020): The above data reflects the aggregate scores of the Criminal Court of Appeal in its Superior and Inferior Jurisdiction.

The pandemic restrictions effected the caseload of the Court.

Q098 (2018): Given that in the Maltese legal system, the definition of severe/ minor-dismeneanor cases is not fully consistent with the definition built by CEPEJ, the data for these types of cases for Malta, is going to be presented within this section: For severe cases: Pending caseload at 1st January 2018 = 32; Incoming cases = 6; Resolved cases = 14; Pending cases on the 31st December = 21. Minor/ misdemeanour criminal cases: 1st January 2018 = 1266; Incoming cases = 445; Resolved cases = 644; Pending cases on the 31st December = 1018.

Q098 (2016): There was an increase in the pending caseload of the Court of Criminal Appeal, Inferior Jurisdiction.

In the Maltese legal system, the definition of severe/minor-misdemeanor cases is not fully consistent with the definition built by CEPEJ and therefore a comparison is not possible with the previous cycles. According to the Maltese categorization of cases, the number for severe criminal cases in 2016 is as follows: pending on the 1st Jan of Ref Year = 26; Incoming cases = 15; Resolved cases = 10; Pending cases on the 31st Dec of Ref Year = 32. The number for minor/misdemeanor criminal cases is as follows: pending on the 1st Jan of Ref Year = 1214; Incoming cases = 629; Resolved cases = 485; Pending cases on the 31st Dec of Ref Year = 1358.

Q098 (2012): In 2012, the increase of the number of criminal cases resulted from the fact that for some time the number of judges hearing the appeals, particularly in the Criminal Court of Appeal (Inferior Jurisdiction), was reduced due to retirement and re-allocation of duties. Accordingly, the number of appeals in the inferior jurisdiction increase considerably.

Q099 (2017): In Malta the 2nd instance courts are the highest instance. Hence the NAP answer to this section.

Q099 (2016): In Malta the 2nd instance courts are the highest instance. Hence the NAP answer to this section.

Q100 (2018): NA

Q101 (2020): Less incoming and resolved cases due to court closure.

Q101 (2019): Following the establishment of the Civil Court, Commercial Division, a number of insolvency cases previously filed before other courts were still being transferred to the new Court and hence the relatively high number of incoming cases in previous years. The Commercial Court is now fully operational and receiving new cases filed before it. Hence this figure is presumed to reflect more faithfully the cases of insolvency filed within a year.

Q101 (2017): The employment dismissal cases are not heard by the courts but rather by the Industrial Tribunal which is separate from courts and has no connection whatsoever to courts or the Ministry of Justice. Cases related to asylum seekers are processed by the Refugee Commission and heard by the Refugee Appeals Board, which is an entity separate from the courts. Therefore such data is NAP. The Office of the Refugee Commissioner (RefComm) is regulated by The Refugees Act, Chp 420 of the Laws of Malta, and its main responsibility is to receive, process and determine applications for international protection in Malta, as stipulated by the Refugees Act, amended by Act VI and VII in 2015 and its Subsidiary Legislation 420.07 on Procedural Standards in Examining Applications for Refugee Status Regulations. This Office is also bound by the obligations assumed by Malta under the 1951 Geneva Convention relating to the status of Refugees and its 1967 Protocol, as well as its obligations under European Directive 2011/95/EU, European Directive 2013/32/EU and the Dublin Regulation. RefComm implements a single asylum procedure. It first examines whether the applicant fulfils the criteria to be recognised as a refugee according to law, and in the case of those applicants who do NOT meet the criteria to be recognised as refugees, the Office proceeds to examine whether the applicant fulfils the criteria for subsidiary protection according to law. The applicant is informed in writing about the decision issued by the Office of the Refugee Commissioner. The reasons in fact and in law are stated in the decision. In the case of a negative decision, applicants are informed of their right to enter an appeal against this decision to the Refugee Appeals Board. Information on how to challenge a negative decision is given in writing to those applicants whose application was rejected with regards to refugee status and/or subsidiary protection status. This is an administrative review and involves the assessment of facts and points of law. An asylum seeker has 2 weeks to appeal since the day in which the written negative decision by the Refugee Commission has been received. Whilst the Refugee Appeals Board does not accept late appeals, it does have suspensive effect.

An onward appeal is not provided in the law in case of a negative decision from the Refugee Appeals Board. However, judicial review of the decisions taken by the Board is possible before the First Hall of the Civil Court, limited only to an enquiry into the validity of the administrative act. However, such information is not available. Judicial review does not deal with the merits of the asylum claim, but only with the manner in which the concerned administrative authority reached its decision. At this stage, applicants could be granted legal aid if eligible under the general rules for legal aid in court proceedings.

Q101 (2016): Litigious cases: the number of incoming and resolved cases has been on the increased every year.

Netherlands

Q091 (2020): Administrative law cases include tax cases and immigration / asylum cases.

First instance cases at Council of State, Court of Appeal, including trade tribunal, are excluded.

In the Netherlands, there are some registers that are kept by the judiciary. Those do not include a land- or business registry, see www.rechtspraak.nl/registers. Most registers are related to debt, bankruptcy and help or surveillance of people who are unable to handle their financial situation. There is also a register with so-called 'nevenfuncties' (a list of jobs and positions held by judges next to their judgeship). Mutations in these registers are not counted as court cases. For the category 'other registry cases' the answer is NAP, as the Dutch system does not count mutations in the registers as court cases.

Q091 (2019): In The Netherlands, there are some registers which are kept by the judiciary. These do not include a land- or business registry (see www.rechtspraak.nl/registers). Most registers are related to debt, bankruptcy and help or surveillance of people who are unable to handle their financial situation. There is also a register with so-called 'nevenfuncties' (a list of jobs and positions held by judges next to their judgeship). Mutations in these registers are not counted as court cases. For the category 'other registry cases', the answer is NAP, as the Dutch system does not count mutations in the registers as court cases.

Q091 (2018): In the Netherlands, there are some registers that are kept by the judiciary. Those do not include a land- or business registry. See: <https://www.rechtspraak.nl/Registers>

Most registers are related to debt, bankruptcy and help or surveillance of people that are unable to handle their financial situation. There is also a register of 'nevenfuncties', which lists all the jobs/positions that judges fulfill next to being a judge. Mutations in these registers are not counted as court cases. For the category "other registry cases", since the Dutch system does not count mutations in the registers as court cases, the answer is NAP.

Q091 (2017): None

Q091 (2016): Number of administrative law cases litigious plus non-litigious.

In 2016, there has been a strong decrease in numbers of cases compared to 2014. This decrease pertains to the group of misdemeanours, in particular the group of traffic offences ("Mulder Law"). The cases of "vorderingen dwangsom" (coercive detention) are no longer treated by the Public Prosecution. This following complaints at the Ombudsman. These coercive detention cases increased at first strongly in 2013 and 2014. But after that decision of the Public Prosecution The "Mulder Law" cases decreased from 200.000 in 2014, via 100.000 in 2015 to 40.000 in 2016.

Q094 (2020): Classification of severe and minor cases:

Minor offences: mainly traffic offences (speeding tickets, running red lights) and petty theft, vagrancy, littering, etc.

Severe offences: driving while drunk, grand theft, violent crimes, vice, drugs/narcotics, etc.

Q094 (2016): In 2016, there has been a strong decrease in numbers of cases compared to 2014. This decrease pertains to the group of misdemeanours, in particular the group of traffic offences ("Mulder Law"). The cases of "vorderingen dwangsom" (coercive detention) are no longer treated by the Public Prosecution. This following complaints at the Ombudsman. These coercive detention cases increased at first strongly in 2013 and 2014. But after that decision of the Public Prosecution The "Mulder Law" cases decreased from 200.000 in 2014, via 100.000 in 2015 to 40.000 in 2016.

Q097 (General Comment): As to the lack of horizontal consistency that can be observed, the reason is that the official number of cases pending on January 1st is determined at different time then the other 3 categories (official incoming, official resolved, official pending on December 31st). Due to time lags in registration and dynamics in the data systems, if the cases pending on January 1st are measured at the same time as the others, the result would be different.

Q097 (2019): .

Q097 (2018): If there is an appeal, cases are litigious in my view. I would tend to enter the value "0", but since the question is being asked, you probably see things differently. So I chose the answer "NA"

Q097 (2017): Administrative law cases, litigious plus non-litigious.

Q097 (2016): Administrative law cases, litigious plus non-litigious.

Q098 (2014): The reason for the horizontal inconsistency in 2014 is that the figures from the 4 columns of the table are not retrieved at the same time. The number of pending cases on Jan 1st is determined one year before the other 3 columns can be filled. One year later it is possible to determine the number of incoming cases, the number of resolved cases and the number of pending cases on Dec 31st. The definition of 'pending' together with dynamic changes in the registration system mean that the number of pending cases on Jan 1st will have changed. To ensure horizontal consistency, all the 4 columns should be determined after the years' end which would imply to overrule a previously determined and official (i.e. published) number of pending cases on Jan 1st.

Q099 (General Comment): Information in this section is taken from the annual report of the High Court.

Q099 (2020): With regard to 2. Non litigious cases: In theory, it is possible these cases get to the Supreme Court, but these cases are not specified in available numbers for the courts.

With regard to 3. Administrative law cases: Please note that the Dutch Supreme Court only handles tax cases and some social security cases. There is no third instance court for other administrative cases in the Netherlands, so these are not represented in this number.

With regard to 4. Other cases: There might be other cases in separate courts (Kamers), but these numbers are not available nationally.

With regard to the discrepancies: there are always some factors that might be of influence on the number of cases the Supreme Court handles in a year. It might be due to delays or catch ups in lower courts (so incoming cases are lower/higher), new laws or changes in law that the SC must answer (like covid-regulations), cases may become more complex because laws and differences are more complex (as a result cases may take longer), or cases that are connected that are grouped to deal with in clusters (meaning more cases for a longer time). While we cannot clearly pinpoint a 'cause' of the discrepancies, all these factors mentioned might influence the numbers.

Q099 (2019): Reason for discrepancies: discrepancies seem higher, as absolute values are lower. When asked, the High Court explains that there is always an eb and flow of cases due to several factors.

Q099 (2018): Cases handled by the High Court are 'litigious' by nature (= cases are settled at first instance if one party remains inactive)

Q099 (2017): the answer to this question is still not available.

Q099 (2016): At the moment the Supreme Court has not the data available to answer this question. The National Correspondent is consulting the Supreme Court to improve this situation.

Q100 (2020): In the numbers and accounts that are kept by the Dutch Supreme Court, no distinction is made between severe criminal cases and misdemeanours and/or minor criminal cases.

With regard to the discrepancies: there are always some factors that might be of influence on the number of cases the Supreme Court handles in a year. It might be due to delays or catch ups in lower courts (so incoming cases are lower/higher), new laws or changes in law that the SC must answer (like covid-regulations), cases may become more complex because laws and differences are more complex (as a result cases may take longer), or cases that are connected that are grouped to deal with in clusters (meaning more cases for a longer time). While we cannot clearly pinpoint a 'cause' of the discrepancies, all these factors mentioned might influence the numbers.

Q101 (2020): There are some numbers available on this, but we don't register whether cases are litigious or not in this manner.

Q101 (2018): As for the number of resolved employment dismissal cases, it dropped significantly in recent years, most probably because of the shortage in labour or low unemployment

Q101 (2017): The distinction of litigious cases is only available for resolved cases.

Q101 (2016): At the moment the Supreme Court has not the data available to answer this question. The National Correspondent is consulting the Supreme Court to improve this situation.

Poland

Q091 (General Comment): The attention should be drawn on the fact that it is not excluded to notice horizontal inconsistencies due to omissions or mistakes in statistical information generated by courts as well as to structural changes within the court system. As for the category "civil (and commercial) litigious cases", it includes as well litigious family and labour (employment) cases. Besides, it encompasses also some types of cases decided under chapter II of the Civil Proceedings Code that concern non-litigious cases (such as distribution of inherited assets, separation of common property, demarcation of the real estate) which nature in fact is litigious because of the opposite interests of the parties and contradictory ways of presenting their arguments.

Q091 (2020): Comments: The discrepancies in Table 91. First instance courts: number of other than criminal law cases - compared to the previous periods (2018 and 2019) are mainly due to combinations of two reasons. First - the COVID19 pandemic, which significantly reduced case inflow to the courts (in some type of cases even by several dozen of percent), reduced the number of resolved cases and pending cases as well. The second factor, which in contrary - caused increase in the volume of cases registered in court system was the inflow of cases related with conversion of the right of perpetual use of built-up land for residential purposes into land ownership (2.2.1 - Non litigious land registry cases). In 2020, there were more than a million incoming cases of this type (in 2019 – more than 2,5 million), which also resulted in an increase in the number of resolved cases in this area, as well as pending cases for the next reporting period.

Q091 (2019): The discrepancies in section 4.2.2. Case flow management - first instance - compared to the previous period mainly concern the data shown in point 2.2.1 Non-litigious land registry cases.

In explaining the above, it should be emphasized that the general state of cases in courts of first instance in 2019 was related to cases brought to the land registry departments with regard to the conversion of the right of perpetual use of built-up land for residential purposes into land ownership. In 2019, more than 2 million incoming cases of this type, which also resulted in an increase in the number of resolved cases in this area, as well as pending cases for the next reporting period.

It should be noted that after excluding from the analysis all cases considered in Land Registry Departments, the impact of cases and settlements in 2019 were almost at the same level as in the previous year.

Q091 (2018): The discrepancy between 2016 and 2018 was realised in 2017 due to the increasing number of mostly non-litigious cases. More details in 2017 data.

Number of pending cases in the category 2.1. General civil (and commercial) non-litigious cases has dropped slightly. That situation is caused by high effectiveness of courts. Number of resolved cases is higher than number of incoming cases. That situation has maintained since 2017.

Higher number of pending cases in Non-litigious business registry cases is temporary and it is a result of higher number of initiated compulsory proceedings. If it is ascertained that the application for entry in the Register or compulsory documents have not been submitted despite expiry of the deadline, the registry court shall call on the obliged parties to submit them. We observed that the effectiveness of courts has increased and therefore number of pending cases in mentioned category has dropped at the end of the year.

In regard to non litigious land registry cases we observe in Divisions of Land and Mortgage higher staff turnover. It contributes to problems with solving cases, therefore number of pending cases has increased.

In regard to "other" cases we have observed significant increasing of incoming cases without specified category. In this category we include following cases: exemption from costs, reconstruction of files, affidavit of assets, excluding judge etc. Higher number of pending cases on 31 Dec. is a consequence of high number of incoming cases during the year. It was probably temporary situation.

Q091 (2017): As to a general explanation for discrepancies in 2016 to 2017 data, it has to be stated that in 2016, there was a substantial number of incoming non-litigious cases, mostly general civil cases, but also registry cases (around 700k cases total).

This important number of cases was not resolved and the backlog remained important at the end of the year. This could explain the large difference of pending cases between 1 Jan 2016 and 1 Jan 2017.

2.1. In 2016 there were serious problems with the information system which is in use in electronic proceedings therefore the number of pending cases on 1 Jan. ref. year has increased. In 2017 we did not notice any problems with mentioned system, so the number of resolved cases has increased significantly. At the same reason the number of pending cases on 31 Dec. 2017 has dropped.

We indicate that fluctuation of the number of cases can be also caused by implemented organizational changes in courts (changes in staff, changes in the organization of work). 2.2. Registry cases (2.2.1+2.2.2+2.2.3) discrepancies are justified in points 2.2.1 and 2.2.2.

2.2.1. Non litigious land registry cases. Higher number of pending cases (on 1 Jan. ref. year and on 31 Dec. ref. year) is caused by Higher number of incoming cases than resolved cases. This situation is related to large-scale investments in infrastructure in Poland Building new roads is closely connected with changes in land registry. We need to indicate that courts have to cope with large number of difficult cases. (Mentioned reason is related to resolved / incoming cases)

2.2.2. Within the changes in business registry cases we can observe significant increase in all types of Application for registration

(first registration) cases, but there is also considerable increase in general business cases (changes in the registry, including cases of

removing from registry). We indicate that it could be caused by fluctuation in compulsory proceedings. Mentioned proceedings are carried on in the cases where it is found that an application for an entry in the National Court Register or the documents whose submission is obligatory were not submitted despite the lapse of the time limit. The registry court shall summon the obliged persons to submit them, and shall set an additional 7-day time limit. We emphasize, that the registry court shall discontinue the compulsory proceedings, if it can be concluded from the circumstances of the case that the proceedings will not lead to the fulfilment of the mentioned obligation. (Mentioned reason is related to resolved / incoming and pending cases)

2.2.3. and 2.3. - Categories do not exist in our judicial system.

Q091 (2016): Within the changes in business registry cases we can observe significant increase in all types of Application for registration (first registration) cases, but there is also considerable increase in general business cases (changes in the registry, including cases of removing from registry).

In 2016 there were serious problems with the information system which is in use in electronic proceedings therefore the number of pending cases had increased.

Q092 (General Comment): The category of civil (and commercial) non-litigious cases (including non-litigious family cases) covers all the rest of cases decided under chapter II of the Civil Proceedings Code which are non-litigious cases (such as ascertainment of the acquisition of an inheritance, cases connected with birth, marriage and death records, declaration of dead, adoption as well as summary and injunction proceedings in money payment cases).

Q093 (General Comment): The category "other" includes first of all social security cases and cases related to the application of correctional and educational measures as required in juvenile cases and execution of guardianship or tutoring.

Q094 (General Comment): Misdemeanour cases (minor offences) refer to offences in which regard the law set forth a maximum penalty up to 1 month of detention, or fine or both of them. All other criminal cases are encompassed within the category "severe cases". The latter subsumes: cases for which the indictment (or other motion substituting the indictment) has been filed at a court; cases implying to issue conjunctive rulings; prosecutor's motions for discontinuation of the case because of insanity, and prosecutor's motions for conditional discontinuation of the proceeding. Statistics contain also the so called "organisation cases" which do not deal directly with crimes.

Q094 (2020): Severe criminal cases includes all offences under the Penal Code, Penal Fiscal Code and offences specified in other Acts. Misdemeanours are cases conducted under the Petty Offence Code.

The category "Other cases" covers the rest of cases conducted in criminal courts which are not connected directly with the severe criminal cases or misdemeanours (mainly cases conducted under the Code of Criminal Procedure and Petty Offences Procedure Code).

Discrepancy comment:

Comments: The discrepancies in Table 94. First instance courts: number of criminal law cases - compared to the previous period (2018) are mainly due to two reasons. First – the COVID19 pandemic which reduced the inflow of Misdemeanour and / or minor criminal cases (p. 2). Second – in 2020 release the number of Other cases (p. 3) was added to the table. It significantly increased the number of total cases shown in the line Total of criminal cases (1+2+3).

Q094 (2014): For the 2014 evaluation, changes in the statistical forms made possible the identification of some types of misdemeanor cases (mainly the organizational ones, which were not considered in 2012). Above this, there is a constant growth in the number of incoming cases.

Q094 (2012): The increase of the total of criminal cases and the number of severe criminal cases in respect of the item "pending cases on 1st January 2012" is due to the fact that since 2010, there was a significant increase of the inflow of cases.

Q097 (General Comment): The number of second instance administrative law cases coincides with the number of administrative law cases in third instance because the Supreme Administrative Court is also the court of second instance and it is impossible for the Statistics Division to divide its cases statistics.

Q097 (2020): The category „Other cases“ includes appeals and complaints concerning social insurance, minors and others. Discrepancy comment: The discrepancies in Table 97. Second instance courts (appeal): Number of "other than criminal law" cases

- compared to the previous period (2018) in categories Incoming cases and Resolved cases result from the COVID19 pandemic which reduced the number of new case in courts and number of cases resolved. As regards increases in categories: Pending cases on 1 Jan. ref. year and Pending cases on 31 Dec. ref. year it is due to increased amount of unresolved specific categories of cases in civil litigious procedure (e.g. claims under the loan agreement) and civil non-litigious procedure (e.g. division of the property). Administrative law cases: In 2020, the Supreme Administrative Court received 14,281 cassation complaints and 100 complaints for the resumption of proceedings. From the previous period, 28,086 cassation complaints and 43 complaints for the resumption of proceedings remained to be examined. In total, there were 42,367 cassation complaints pending.

In 2020, a total of 12 581 cassation appeals were examined, of which 4129 cases (32.82% of the total number of satisfied cassation appeals), and 8452 cases (67.18%). In 2677 cases the Supreme Administrative Court allowed the cassation complaint (21.28%), 9189 cassation appeals dismissed (73.04%), and 715 were settled in another way (5.68%).

In 2020, the number of cassation appeals filed compared to the previous year decreased by 2563 complaints.

The largest number of cassation complaints was filed by a party to the proceedings other than public administration body - 10 348, administration bodies lodged 3775 complaints, while

The number of cassation appeals filed by an administrative body and a party to proceedings other than an administrative body was 158.

In the proceedings before the Supreme Administrative Court there were 1948 attorneys for public administration bodies, 572 attorneys at law public administration bodies, 572 advocates, 865 legal advisers, 399 tax advisers, 29 patent attorneys, 43 prosecutors and in 11 cases the Ombudsman. As in previous years, the largest number of cassation appeals concerned taxes and other pecuniary benefits to which the provisions of the Tax Ordinance are applicable, as well as enforcement of these pecuniary benefits (5167 complaints were filed). 4434 cassation appeals were resolved on this subject, which constitutes 35.24% of the total number of cassation appeals examined.

Apart from cassation complaints, in 2020 The Supreme Administrative Court settled 4367 complaints against decisions (orders) of courts of first instance, of which in 690 cases it allowed the complaint (15.8% of the total number of complaints settled), in 3376 cases the Supreme Administrative Court dismissed the complaint (77.31%), and 301 cases were settled otherwise (6.89%).

Moreover, the Supreme Administrative Court examined 169 complaints on infringement of a party's right to have a case heard in court proceedings without undue delay, of which 2 complaints were upheld (1.18% to the total number of settlements of such cases), 74 were dismissed (43.79%), while 93 cases were settled in a different manner (55.03%).

In 2020, the court disposed of 57.70% of all cases within 12 months, and within up to 24 months 78.66%. With regard to cassation complaints, 44.06% of cases were dealt with within 12 months. As far as complaints are concerned, 75.99% are settled within 2 months, while within 12 months the rate is 99.57%.

(The data comes from the annual report on the activity of administrative courts.)

Q097 (2019): The decrease of Clearance Rate for 1. Civil and commercial litigious cases and 4. Other cases in 2019 compared with 2018 is caused by increased value of incoming cases. For 1. Civil and commercial litigious cases: from 141 045 cases in 2018 to 155 341 cases in 2019 (increase of 10%) and for 4. Other cases: from 41 242 cases in 2018 to 44 233 cases in 2019 (increase of 7%). The number of judges hearing in these type of cases in 2019 was at comparable level like in 2018 so the number of cases per one judge had increased automatically. In 2019, 16,844 cassation appeals (3,385 appeals less than in 2018) and 80 appeals for reopening the proceedings were submitted to the Supreme Administrative Court. From the previous period, 27,649 complaints and 28 applications for reopening of proceedings remain to be considered. In total, the Supreme Administrative Court had to consider 44,493 cassation appeals. In 2019, a total of 16,375 cassation complaints were examined. In 3,465 cases, the Supreme Administrative Court allowed the cassation appeal (21.16%), dismissed 11,721 cassation appeals (71.58%), and settled 1,189 in a different way (7.26%). Apart from cassation appeals, in 2019 the Supreme Administrative Court handled 4,665 complaints against decisions (orders) of courts of first instance, of which 715 allowed the appeal (15.36% of all appeals), and in 3,773 cases, the Supreme Administrative Court dismissed the appeal (80.88%), and it handled 177 matters in a different way (3.79%).

Moreover, the Supreme Administrative Court examined 162 complaints about violation of a party's right to hear a case in court proceedings without undue delay, of which 4 were admitted (2.47% of all settlements of this type), 60 were dismissed (37.04%), and 98 were settled in other way (60.49%).

In 2019, the Supreme Administrative Court handled 42.33% of all cases within 12 months, and 80.43% within 24 months. With regard to cassation complaints, 23.54% of the cases were settled within 12 months. In the case of complaints, 91.13% are examined by 2 months, and within 12 months, this ratio is 99.72%.

Q097 (2017): 2.2.2. There is not any specific explanation for observed increase. We can indicate only that mentioned increase is related especially to Register of Pledges.

As regards General civil (and commercial) non-litigious cases, we have validated previous data and we have made some corrections. We also indicate that a number of pending cases on 1 Jan. ref. year have been increased due to higher number of incoming cases in 2016.

Q097 (2016): Within the changes in business registry cases we can observe significant increase in all types of Application for registration (first registration) cases, but there is also considerable increase in general business cases (changes in the registry, including cases of removing from registry).

In 2016 there were serious problems with the information system which is in use in electronic proceedings therefore the number of pending cases had increased.

Q098 (2020): Severe criminal cases includes all offences under the Penal Code, Penal Fiscal Code and offences specified in other Acts. Misdemeanours are cases conducted under the Petty Offence Code.

The category "Other cases" covers the rest of cases conducted in criminal courts which are not connected directly with the severe criminal cases or misdemeanours (mainly cases conducted under the Code of Criminal Procedure and Petty Offences Procedure Code).

Discrepancy comment: The discrepancies in Table 98. Second instance courts (appeal): Number of criminal law cases - compared to the previous period (2018) are mainly due to two reasons. First – the COVID19 pandemic which reduced the inflow of Severe criminal cases (p. 1) and Misdemeanour and / or minor criminal cases (p. 2). Second – in 2020 release the number of Other cases (p. 3) was added to the table. It significantly increased the number of total cases shown in the line Total of criminal cases (1+2+3).

Q098 (2012): The increase of the total of criminal cases and the number of severe criminal cases in respect of the item "pending cases on 1st January 2012" is due to the fact that since 2010, there was a significant increase of the inflow of cases".
x000D

As to the number of minor cases, there was a change in the statistical system which resulted in aggregating some categories of cases considered as minor with other criminal second instance cases. Accordingly, it was impossible to include them in the provided figures.

Q099 (2020): Other cases are cases pertaining to public law, decided by the Chamber for Extraordinary Control and Public Issues.

Discrepancies - Administrative law cases - see data in Q97 and general comment to that question.

Q099 (2019): 1. Civil cases = civil cases + labour and social security cases;

4. Other cases = public law cases + disciplinary cases;

3. Data from Supreme Administrative Court; "1. Civil and commercial litigious cases": Pending cases on 1 Jan. ref. year : 2586 (civil cases) + 2010 (labour and social security cases); Incoming cases :5105 (civil cases) + 2480 (labour and social security cases); Resolved cases: 5095 (civil cases) + 2329 (labour law and social security cases); Pending cases on 31 Dec. ref. year: 2596 (civil cases) + 2161 (labour and social security cases);

"4. Other cases": Pending cases on 1 Jan. ref year: 117 (disciplinary cases) + 215 (public law cases); Incoming cases: 269 (disciplinary cases) + 894 (public law cases); Resolved cases: 281 (disciplinary cases) + 955 (public law cases); Pending cases on 31 Dec. ref. year: 105 (disciplinary cases) + 154 (public law cases).

Public law cases and disciplinary cases were not entered in the table in 2018. Public law cases in 2018: Pending cases on 1 Jan. ref. Year – no data; Incoming cases – 293; Resolved cases – 81; Pending cases 31st December – 212; Disciplinary cases in 2018 : In 2018 the Disciplinary Chamber of the Supreme Court received a total of 161 cases, of which 52 to the First Department and 109 to the Second Department. In the First Department, in 2018, 11 cases were resolved. In the Department of the Second Disciplinary Chamber, 17 cases were considered and completed in terms of content, and 16 cases formally (data from the Supreme Court activity report for 2018).

Q099 (2016): In 2014 the Administrative Supreme court cases were not included and they are reintroduced in this cycle. In regard to administrative law cases we kindly indicate that administrative cases are excluded from the jurisdiction of the common courts. Administrative cases are proceeded by the Voivodship Administrative Courts and Supreme Administrative Court, which are only competent to proceed such cases.

Q099 (2012): In the frame of the 2012 exercise, it has been indicated that the Supreme Court provided the Ministry of Justice with data set that allowed summing up non-criminal cases with administrative cases of the Supreme Administrative Court. Therefore it was possible to include both data-sets.

Q100 (General Comment): The Supreme Court does not divide its statistics into categories corresponding to those defined and used by the CEPEJ.

Q100 (2020): Others cases are disciplinary cases resolved in the Disciplinary Chamber of the Supreme Court
Discrepancy comment: The dynamics of the movement of cases of 2020 in the work of the Criminal Chamber was due to changes of a personnel nature. In addition, some of the disciplinary cases of advocates were submitted for consideration to the Criminal Chamber on the basis of decisions of the First President of the Supreme Court made in the period until May 2020 or decisions of the President of the Supreme Court directing the work of the Criminal Chamber at a later date, as the Disciplinary Court of the Polish Bar Association refers files of disciplinary cases with cassation appeals to the Criminal Chamber, recognizing that the Disciplinary Chamber should refrain from examining them. At the same time, the above-standard involvement in the work of judges, assistants and all other employees of the Criminal Chamber allowed for an increase in the number of cases dealt with.

Q100 (2018): Number of incoming cases has increased due to implemented law changes in Code of Criminal Procedure. On 15 April 2016 entered into force regulations about complaints against appellate court judgments. Parties may complain to the Supreme Court of the Republic of Poland against an appellate court judgment revoking a judgment of the court of the first instance and referring the case for reconsideration. In the first period of functioning of mentioned regulations there were not many incoming cases. The situation changed in 2018. We have observed that many cases incoming on the base of regulations implemented in 2016. Moreover, in 2018 were carried on some organisational changes e.g. Military Chamber of Supreme Court has been closed and all cases were moved to Criminal Chamber.

Q101 (2020): The discrepancies in Table 101. Number of specific litigious cases received and processed by first instance courts - compared to the previous period (2018) are mainly due to the significant increase in number of cases of personal bankruptcy (in the „incolveny” category). The amendment to the bankruptcy law made it much easier to obtain the right to bankruptcy for a natural person, therefore the number of such cases brought to court has been increasing for several last years.

Q101 (2019): *) In divorces cases the number of Pending cases on 31 Dec ref. year is not equal to pending cases on January + Incoming cases - resolved cases because some cases brought to the court as a divorce cases may be judged after a trial as a separation.

*)The number of incoming insolvency cases has been increasing in recent years, inter alia, due to the significant increase in number of cases of personal bankruptcy. The amendment to the bankruptcy law made it much easier to obtain the right to bankruptcy for a natural person, therefore the number of such cases brought to court has increased many times.
