Q091 (2014): In 2014, figures for the category “administrative law cases” have been submitted for the first time. The administrative justice doesn’t fall under the umbrella of the Ministry of Justice as it is a completely different administration.

Q091 (2013): In 2013 and 2014, the Italian judicial system has gone through a historical geographic reorganization with the closing of almost 1000 courts. Thus, the statistics regarding flows of cases at the end of 2013 may show some anomalies that will be adjusted with the following data gathering. A constant reduction in the incoming civil and commercial litigious and non-litigious cases is observed from the end of 2009. The number of ADR cases is constantly increasing with a filter effect on the litigious incoming files.

Q093 (2014): In the ambit of the 2014 exercise, the category “other” encompasses the number of enforcement cases.

Q094 (2021): In Italy there is no formal definition of minor criminal cases. For the purposes of this exercise, are considered as minor criminal cases those proceedings dealt with by the Justice of Peace Offices.
Q094 (2018): The reduction in the number of resolved first instance criminal cases, and consequently the increase in the Disposition Time, between 2018 and 2016 comes from the decriminalization measures introduced in 2016 that led to a sharp increase in the number of case dismissals in that year. Indeed, the data for 2017 are:
Incoming: 1.311.900
Resolved: 1.293.054
Pending: 1.282.406
Disposition time: 362 days
These figures show a positive trend of the DT between 2014 and 2017, maintained in 2018.

Q097 (General Comment): · Non-litigious enforcement cases are not in the competence of the Courts of Appeal.
· With regard to the administrative cases (which number is provided only since 2014), the appeals are dealt with by the Council of State (Consiglio di Stato) which is a legal-administrative consultative body ensuring the legality of public administration in Italy. The Council has jurisdiction on acts of all administrative authorities, except when these authorities lack discretionary power, in which case the dispute is considered to be one of civil law. Figures referring to the activity of the Council of State are inserted in the frame of question 99 and not question 97.

Q097 (2021): There are no "other cases"
Figures in 2020 were hugely affected by the pandemic
Q097 (2020): In 2020 the case flow was highly affected by the COVID-19 pandemic and the consequent temporary shutdown of courts. This had an impact on both incoming and resolved cases, which fell quite considerably compared to 2019. However, the fall in the number of resolved cases was less drastic than that of incoming cases, resulting in a clearance rate (CR) higher than 100% and, hence, in a reduction in the number of the unresolved cases (i.e. the pending cases at the end of the period). The COVID-19 pandemic also had a strong impact on the disposition time (DT).

Q097 (2018): -

Q097 (2017): The number of pending “civil and commercial non-litigious cases”, older than 2 years, decreased between 2016 and 2017. Generally speaking, pending cases older than 2 year have priority. However, in this specific case, the important reduction (in %) is mainly due to the fact that the numbers are small.

Q097 (2016): As regards the variations concerning the category "general civil (and commercial) non litigious cases", it should be noted that the Ministry of Justice has recently implemented a data warehouse system that can collect a huge number of data and events pertaining to millions of civil cases. The new DWGC (Data Warehouse for Civil Justice) is now fully operational and it represents a major improvement in terms of statistics and quality. Since 2015, data pertaining to Q.97 is extracted from the above Datawarehouse and it is to be considered more accurate than the figures provided in the past.
It should be noted that in 2014 for many cases it was not possible to distinguish between litigious and non-litigious cases because they were coming together in a bundle. With the data warehouse it is possible to tell whether any given procedure has either litigious or non-litigious nature. Besides, when comparing pending cases on 31 Dec 2014 with pending cases on 1 Jan 2016, the variations are less important.

Q097 (2015): The appeal of administrative case is dealt by the Council of State (Consiglio di Stato) which is a legal-administrative consultative body that ensures the legality of public administration in Italy. The council has jurisdiction on acts of all administrative authorities, except when these authorities lack discretionary power, in which case the dispute is considered to be one of civil law.

Figures referring to the activity of the Council of State (second instance of administrative justice) have been submited to Q.99 rather than Q.97.

Figures on Q.97 (points 1 and 2) have been extracted from a new IT system called “Civil Data warehouse”. This new system allows us to get in-depth information on single proceedings. Before the implementation of such data warehouse, statistics were based on aggregated variables that only partially could distinguish between litigious and non-litigious cases.
All cases dealt by the Supreme Court of Cassation has always a litigious nature.

Q098 (General Comment): In Italy there is no formal definition of “minor criminal cases”. For the purposes of this exercise are considered as minor criminal cases those proceedings dealt with by the Justice of Peace Offices which have been appealed (to Tribunal).
Q098 (2021): Figures in 2020 were hugely affected by the pandemic

Q098 (2018): -

Q098 (2016): With regard to second instance criminal cases, in 2014-2015 a new case management system was introduced. This has negatively affected the statistics for those two years. Statistics for 2016 are definitely more robust and consistent. Besides, when comparing pending cases on 31 Dec 2014 with pending cases on 1 Jan 2016, the variations are less important.

Q099 (General Comment): · With regard to the administrative cases (which number is provided only since 2014), the appeals are dealt with by the Council of State (Consiglio di Stato) which is a legal-administrative consultative body ensuring the legality of public administration in Italy. The Council has jurisdiction on acts of all administrative authorities, except when these authorities lack discretionary power, in which case the dispute is considered to be one of civil law. Figures referring to the activity of the Council of State are inserted in the frame of question 99 and not question 97. · In Italy, non-litigious enforcement cases are not heard by the highest instance court. The latter only hears litigious enforcement cases.

Q099 (2021): "Other cases" represent residual cases, such as those concerning the competence or jurisdiction of the courts, or those concerning the correction of the so-called material errors committed by the Supreme Court.

Q099 (2019): Other cases represent residual cases, such as cases regarding the competence or jurisdiction of the courts, correction of material errors.
Q099 (2018): The increase of the incoming civil litigious cases is ascribed to proceedings related to immigration matters. There is no specific explanation for the increase of resolved administrative cases. Other cases represent residual cases, such as cases regarding the competence or jurisdiction of the courts, correction of material errors.

Q099 (2017): The category "other cases” at Q.99 (Supreme Court) represents residual cases such as cases regarding the competence/jurisdiction of the court, corrections of material errors, etc. The 25% variation (in terms of number of resolved cases) has no particular explanation. Please also note that this category do not exist at first and second instance.

Q099 (2016): "Other cases” represent residual cases such as cases regarding the competence/jurisdiction of the court, corrections of material errors, etc. In respect of this category, the numbers are small and the observed variations should be put into perspective.

Q099 (2014): · In the frame of the 2014 exercise, it has been indicated that figures subsumed within the category “other” represent really residual cases (such as cases regarding the competence/jurisdiction of the court, corrections of material errors, etc.).
· As to the increases observed in respect of the “total of other than criminal law cases” with regard to all the items (pending, incoming, resolved cases), it is noteworthy that in 2014 for the first time “administrative law cases” dealt with by the Council of State were considered. If looking only to “civil (and commercial) litigious cases”, the differences are not that big. In general terms the Supreme Court of Cassation resolves fewer cases than incoming cases.

Q099 (2012): In the frame of the 2012 exercise, it has been specified that non-litigious enforcement cases are not heard by the highest instance court which hears only litigious enforcement cases. Before 2012, only litigious enforcement cases have been provided. For 2012, data related to litigious enforcement cases are the following: initially pending: 1090; incoming: 221; resolved: 413; finally pending: 898.
Q100 (General Comment): Under "minor criminal cases" fall cases against justice of peace's decisions and cases against first and second instance decisions regarding minor offences which are punished with fines.
“Other cases” represent proceedings regarding jurisdiction or competence conflicts, proceedings pending in other countries (rogatory) or procedures regarding the correction of the so-called material errors committed by the Supreme Court.

Q100 (2021): * Most discrepancies between 2021 and 2021 data are due to the fact that in 2020 the activity of the courts was hugely affected by the pandemic.
**Moreover, small number often lead to large percentage variations.
Q100 (2020): 2."minor criminal cases" represent cases against justice of peace's decisions and cases against first and second instance judges’ decisions, regarding minor offences that are punished with fines. 3. “Other cases” Can be related to procedures pending in first or second instances (jurisdiction or competence conflicts between other courts), or pending in other countries (rogatory or capture instances); “Other cases” can be also related to decisions regarding the execution of imposed punishments (for example regarding the end or a change (home detention) of the imprisonment), or can be related to the correction of material errors on Highest Court’s sentences.

Q100 (2018): Following the introduction of the new item “other” at Q100, the Supreme Court has revised and ameliorated their classification of cases. The misdemeanour category now includes not only the proceedings coming from the justice of peace offices but also all those minor offences which are punished with fines. “Other cases” (point 3) can be related to procedures pending in first or second instances (jurisdiction or competence conflicts between other courts), or pending in other countries (rogatory or capture instances); “Other cases” can be also related to decisions regarding the execution of imposed punishments (for example regarding the end or a change (home detection) of the imprisonment), or related to the correction of material errors on Highest Court’s sentences.

Q100 (2016): In respect of minor criminal cases, the numbers are small and the observed variations should be put into perspective.
Q101 (General Comment): With regard to the insolvency cases, the peculiarity of the Italian system consists in distinguishing between “insolvency applications” and “insolvency cases”. The former category concerns the litigious part of the proceeding where creditors and debtors have different goals (dispute). The latter category concerns the part of the proceeding where the judge has already established the insolvency / bankruptcy of the debtor and the case is all about the management of the assets and proceeds of the debtor. Figures at questions 101 and 102 refer to “insolvency applications” rather than “insolvency cases”.
Q101 (2021): The decrease in the number of incoming employment dismissal cases might partially be explained by the extension of the ban on dismissal which was initially intended to address the covid emergency. Therefore, the decrease in the number of pending cases is the result of the decrease of incoming cases.
Q101 (2018): Employment dismissal cases are strongly correlated with the economic trend. The number of employment dismissal cases used to be very high when the economic crisis was at its peak. Now the economy is getting better and therefore the number of these cases is going down.
The strong increase of cases related to asylum seekers was even addressed by the president of the Supreme Court during his speech on the occasion of the inauguration of the judicial year. The reason of such increase depends on the immigration flow. Cases related to the right of entry and stay for aliens are dealt by the administrative justice and for this reason they were not considered in 2016.
Q101 (2017): Asylum seekers cases represent a growing phenomenon. For this reason, a new piece of legislation (L.46/2017) which came into force in 2017, introduced a series of procedures with the aim of speeding up this kind of proceedings. In particular, the main innovations of the above regulatory intervention include the establishment of specialized sections within the courts. Such specialized sections deal exclusively with immigration and international protection cases. The Italian courts are not involved in the activities concerning the right of entry and stay of aliens. The competent body is the Ministry of internal affairs. For further information about this topic please visit http://poliziadistato.it/articolo/10618-Entering_Italy

Q101 (2016): With the introduction of the data warehouse system we can now identify specific types of proceedings (e.g. employment dismissal cases) more precisely.
The figures provided for both litigious divorce and insolvency cases (year 2016) are correct but there is no particular reason explaining the observed variations. With regard to the insolvency cases, the peculiarity of the Italian system consists in distinguishing between “insolvency applications” and “insolvency cases”. The former category concerns the litigious part of the proceeding where creditors and debtors have different goals (dispute). The latter category concerns the part of the proceeding where the judge has already established the insolvency / bankruptcy of the debtor and the case is all about the management of the assets and proceeds of the debtor. The figures at questions 101 and 102 refer to “insolvency applications” (the litigious part of this kind of proceedings) rather than “insolvency cases”.

Q101 (2015): Litigious divorce case in 2015 have been extracted from the “Civil Data warehouse”. While in 2014 they were taken from the previous system. To harmonise the data between the cycles the 2014 was updated with the values derived from the data warehouse too

Q101 (2014): The project called “Civil Datawharehouse” supposed to enable to look at each single procedure individually, has been implemented. However, the output is still under “test phase”.
Q101 (2012): The number of litigious divorce cases, has been affected by the implementation of a different classification of civil cases.

Latvia

Q091 (General Comment): Data from the first and appeal instance courts are compiled by the Court Administration, and the Court Information System is a living database that allows data to be corrected, so changes between previous periods are possible.
Within the Court Information System, submissions received in the previous year but registered the next year are considered as incoming cases for the new year. “Non-litigious enforcement cases” and “non-litigious business registry cases” are not defined in the Civil Code and both are not within the competence of courts in the first instance (similar to “non-litigious land registry cases”).
The category “civil and commercial non-litigious cases” encompasses: applications for securing claim prior to initiation of the matter in a court; applications for securing of evidence prior to initiation of the matter in a court; applications for execution of obligations through the court; undisputed compulsory execution of obligations; execution of obligations in accordance with warning procedures; voluntary sale of immovable property at auction through the court; submitting the subject-matter of an obligation for safekeeping in the court; applications for Commercial Court adjudication execution procedures; applications for arbitrary court decision compulsory execution; applications for property protection if there is no inheritance case; applications concerning execution of court adjudications.

Q091 (2021): The number of pending cases on January differs from pending cases on December, 2020 registered data due the living Court information system database. The number of pending cases on Jan. is higher than previous year due high number of pending non-litigious cases. See comments from previous campaigns. Every year from 2019, a significant increase in the number of non-litigious civil cases has been observed. Compared to the previous period, the number of cases increases by 25%. According to the Civil Procedure Law, judge should examine application within seven days. The consideration time determined by the law also affects the amount of resolved cases, and accordingly indicates a direct connection with the amount of incoming cases.
Administrative cases: At the end of 2021, the number of cases received, (which were directed against the Covid-19 restrictive measure - mandatory vaccination), increased significantly, and it was not possible to resolve these cases until the end of the year
The number of pending cases (pending for more then 2 years) has decreased. The reduction of pending cases is related to the increased interest and pressure of the public, the Council of Justice and the Ministry of Justice to reduce the number of long pending civil and administrative cases.

Q091 (2020): The number of resolved and incoming cases of general civil (commercial) non litigious cases are higher because there was significant increase on applications for the undisputed enforcements. Usually, cases on the undisputed enforcement are submitted electronically and solved in written procedure. The increment of such cases are probably closely connected with activities of creditors` intensity.
We cannot find the main reason why pending cases older than 2 years are resolved more than in previous years.
Representatives of courts point out the effect of Covid19 restrictions because many old cases were re-classified from oral to written procedure if it was possible and if parties of case agreed to that.

Q091 (2019): In 2018 there were several stages of court system reform. Several District courts were merged, and The Land Register offices appended to the District courts. Partially due to court system reform, Court Information System database has undergone several error checks and data clean-ups, that has affected amount of cases, especially – unresolved. The reform of the judiciary could also have affected the backlog of cases pending for more than 2 years, as it is undoubtedly that when transferring a backlog from one court to another, another judge needs extra time to go into the case file. However, the methodology for processing statistical data must also be taken into account, i.e. the functionality of the database, that the period of suspension of proceedings is taken into account during the proceedings and other external economic factors could have affected the number of long-standing civil cases. Taking into account also the peculiarities of litigation in our country, for example, that commercial cases are not separated from civil cases and that one civil case may contain several claims which are considered in one procedure, this generally means that the case takes longer to process.

Q091 (2018): In 2018 there were several stages of court system reform. Several District courts were merged, and The Land Register offices appended to the District courts. Partially due to court system reform, Court Information System database has undergone several error checks and data clean-ups, that has affected amount of cases, especially – unresolved.

Q091 (2017): Data updated after court reorganisation in 2018.

Q091 (2016): Data updated after court reorganisation in 2018.

Q091 (2014): Variations concerning administrative law cases over the period 2012-2014 are due to a change in the legislation. Namely, from July2012, appealed administrative decisions of institutions are handed to District courts.

Q091 (2013): Amendments to the Civil Procedure Law introduce new long-pending forms for insolvency cases such as judicial protection proceedings, insolvency proceedings for individuals, etc., whose proportion increased. The insolvency process begins with a court ruling but the case cannot be closed until the end of the insolvency process. Besides, quick pending cases have been transferred from courts to the Land Registry offices from January 2012. The micro-enterprise development opportunities have increased the number of long-pending insolvency cases in the court. From July 2012, appealed administrative decisions of institutions are handed to District courts.

Q091 (2012): Decreases in the values are due to external (socio-economic) and internal (court system) factors: the gradual exit from the economic crisis; transfer of the majority of the non-litigious civil cases (land registry, business registry and non-litigious enforcement cases) from first instance courts to the competent Land Registry Department; transfer of the appealed decisions against administrative authorities from the Administrative court to the Regional courts of general jurisdiction (thus, only cases of the special jurisdiction of the administrative courts are counted).

Q094 (General Comment): Data from the first and appeal instance courts are compiled by the Court Administration, and the Court Information System is a living database that allows data to be corrected, so changes between previous periods are possible.
According to 2014 data and pursuant to the Criminal Law, criminal offences are divided into criminal violations and crimes distinguished by their nature, degree of the harm and the threat to the interests of a person or the society. A criminal violation is an offence for which the law provides for a deprivation of liberty for a term exceeding fifteen days, but not exceeding three months (temporary deprivation of liberty), or a type of lesser punishment. Crimes are classified in the following way: less serious crimes (intentional offences for which the law provides for a deprivation of liberty for a term exceeding three months but not exceeding three years, as well as offences committed by negligence and for which the law provides for a deprivation of liberty for a term up to eight years); serious crimes (intentional offences for which the law provides for a deprivation of liberty for a term exceeding three years but not exceeding eight years, as well as offences committed by negligence and for which the law provides for a deprivation of liberty for a term exceeding eight years); especially serious crimes (intentional offences for which the law provides for a deprivation of liberty for a term exceeding eight years or a life imprisonment.

Q094 (2021): Pending cases: The number of pending cases in January differs from pending cases in December 2020 registered data due the living Court information system database
Severe criminal cases include all criminal cases according to the Criminal law - it includes all cases where a harmful offense (act or failure to act) committed deliberately (intentionally) or through negligence, provided for the Criminal Law, and for the commission of which criminal punishment is set out shall be considered a criminal offense. Misdemeanor and / or minor criminal cases includes all administrative infringement cases according to the Law on Administrative liability about administrative offence of a person for which administrative liability is provided for in a law or binding regulations of local governments.
Criminal cases, which are assessed according to the Latvian Criminal Law and Criminal Procedure Law, are decreasing. The reduction from 2020 was influenced by changes in legislation. However, the tendency of the decrease in the number of criminal cases has been observed for a longer period of time, and it cannot be explained by the activities of the courts, but by assumptions about the general development trends of society.
In the summer of 2020, amendments to the Criminal Procedure Law entered into force, which stipulated that the case for minor violations of the criminal law is not referred for initiation of criminal proceedings (Section 373 An investigator with a consent of a prosecutor or a prosecutor may refuse to initiate criminal proceedings, if a misdemeanor has been committed), which affected the the total number of criminal law cases received in court. A decrease in the number of criminal cases received has been observed since 2020.
In the middle of 2020, Saeima adopted Law on Administrative Liability that affected amount of incoming cases significantly. According to the law, if the person intends to use his right to appeal a decision, he/she needs to address the complain to the higher official from institution which has made this decision, but if there is no higher official, a decision may be appealed to a district (city) court. This is the main reason for decrease of incoming cases. The number of pending cases (pending for more then 2 years) has significantly decreased. The reduction of pending cases is related to the increased interest and pressure of the public, the Council of Justice and the Ministry of Justice to reduce the number of long pending criminal cases. In 2021, courts of first instance resolved more criminal cases than in previous periods, which is related to the court's ability to adapt to resolve cases in the restrictive conditions of the Covid-19.
Data of 2020 for minor criminal cases are revised for incoming and resolved cases: 5 755 incoming cases and 6 631 resolved cases.

Q094 (2020): Data on resolved severe criminal cases is decreased because of Covid-19 restrictions. We have already pointed out the limitations of court work: written procedure, prohibition of face-to-face meetings, cancellation of court hearings etc.

Q094 (2018): There may be some change in data due to court system reform.

Q094 (2016): Severe criminal cases - All sections of The Criminal Law
Misdemeanor and / or minor criminal cases - All sections of Latvian Administrative Violations Code
Q094 (2014): According to 2014 data and pursuant to the Criminal Law, criminal offences are divided into criminal violations and crimes distinguished by their nature, degree of the harm and the threat to the interests of a person or the society. A criminal violation is an offence for which the law provides for a deprivation of liberty for a term exceeding fifteen days, but not exceeding three months (temporary deprivation of liberty), or a type of lesser punishment. Crimes are classified in the following way: less serious crimes (intentional offences for which the law provides for a deprivation of liberty for a term exceeding three months but not exceeding three years, as well as offences committed by negligence and for which the law provides for a deprivation of liberty for a term up to eight years); serious crimes (intentional offences for which the law provides for a deprivation of liberty for a term exceeding three years but not exceeding eight years, as well as offences committed by negligence and for which the law provides for a deprivation of liberty for a term exceeding eight years); especially serious crimes (intentional offences for which the law provides for a deprivation of liberty for a term exceeding eight years or a life imprisonment.

Q094 (2012): According to 2012 data and pursuant to the Criminal Law, criminal offences are divided into criminal violations and crimes distinguished by their nature, degree of the harm and the threat to the interests of a person or the society. A criminal violation is an offence for which the law provides for a deprivation of liberty for a term exceeding fifteen days, but not exceeding three months (temporary deprivation of liberty), or a type of lesser punishment. Crimes are classified in the following way: less serious crimes (intentional offences for which the law provides for a deprivation of liberty for a term exceeding three months but not exceeding three years, as well as offences committed by negligence and for which the law provides for a deprivation of liberty for a term up to eight years); serious crimes (intentional offences for which the law provides for a deprivation of liberty for a term exceeding three years but not exceeding eight years, as well as offences committed by negligence and for which the law provides for a deprivation of liberty for a term exceeding eight years); especially serious crimes (intentional offences for which the law provides for a deprivation of liberty for a term exceeding eight years or a life imprisonment.

Q097 (General Comment): Data from the first and appeal instance courts are compiled by the Court Administration, and the Court Information System is a living database that allows data to be corrected, so changes between previous periods are possible.
In accordance with the provisions related to data gathering, all information must be recorded in the Court Information System within 3 days. However, the Court Information System functionality for the statistical reports provides in the System recorded figures at the end of the year. Consequently, submissions received in the previous year but registered the next year are considered as incoming cases for the new year.
Justice statistics do not distinguish between “non-litigious enforcement cases” and “non-litigious business registry cases” because such types of cases are not defined in the Civil Code. Accordingly, the reply in their respect is NAP. At any rate, both of these sub-categories of cases are not within the competence of courts neither in first instance (similar to the “non-litigious land registry cases”), nor in second instance. By contrast, the “non-litigious land registry cases” are dealt with by the regional courts in second instance and they are within the competence of the Land Registry Office only in first instance.

Q097 (2021): Comparing to the previous period, the number of pending civil cases on 1 Jan is lower due the restriction measures of the Covid-19 spreading in 2019 and 2020. However indicator of pending administrative law cases on the beginning of year is lower than previous period due the high CR in 2020.
The reduction of pending cases is related to the increased interest and pressure of the public, the Council of Justice and the Ministry of Justice to reduce the number of long pending cases.
Q097 (2020): Data on civil (commercial) litigious cases (number of resolved and incoming cases) is lower due to the Covid19 pandemic. On March 14 2020 there was the state of emergency that affected the work of courts. In order to mitigate potential risks of virus, oral proceedings that did not involve serious violations of rights were cancelled. This restriction directly affected the number of resolved cases. Also, there were restrictions on appearance of persons in the court, that affected the number of new claims or request - incoming cases. The first state of emergency lasted till June 2020. The second state of emergency started in November 2020.
Number on civil (commercial) non - litigious cases include the data like in the first instance. Mainly there are cases on undisputed enforcement. Usually, non-litigious cases are resolved in written (not oral) process, and during State of emergency oral processes were not allowed, but there were no restriction on written process. According to this the number of non-litigious cases are higher.
Number on incoming administrative cases are lower. It is connected with restrictions of state emergency situation when representatives from institutions could not check, revise, visit companies (individuals) in the face-to-face meetings.

Q097 (2019): Decrease of pending administrative cases us due to many result cases in previous period
The number of Non-litigious civil cases is very low, that's why percentage isn't good qualifier
Q097 (2018): Partially due to court system reform, Court Information System database has undergone several error checks and data clean-ups, that has affected amount of cases, especially – pending. Data on court statistics are being calculated by automated systems and records on changes that affect data in database are not available. Any changes to the Court Information System can affect the data.
Q097 (2017): As regards the decrease from 2016 in administrative law cases pending on 1 Jan, it can be explained as there were much more resolved cases than incoming in previous cycle. As regards the decrease in the total of other than criminal pending cases, it can be explained as there was a change of pending civil law cases in second instance. This might be an issue due to reclassifying the starting moment of a court case. Also, much more resolved cases than incoming cases has decreased the amount of unresolved cases on 31 Dec.

Q097 (2016): The increase in pending civil cases is due to fewer resolved cases in 2015. Decrease in pending Administrative cases is due to more resolved cases in 2015.
Q097 (2014): In the frame of the 2013 and 2014 exercises it has been indicated that the category “other” includes the following types of cases from the Supreme Court : cases related to moral and physical damages; copyright related cases; family relationship; deprivation of citizenship; labour law cases; cases in respect of inheritance rights.

Q097 (2013): In the frame of the 2013 and 2014 exercises it has been indicated that the category “other” includes the following types of cases from the Supreme Court : cases related to moral and physical damages; copyright related cases; family relationship; deprivation of citizenship; labour law cases; cases in respect of inheritance rights.

Q097 (2012): The decreases observed in 2012 with regard to the totals in respect of the different items (pending, incoming and resolved cases) are the consequence of the evolutions noticed for each of the sub-categories in respect of the number of incoming cases. The decrease of the latter and the improvement of the judicial efficiency resulted in a decrease of the number of pending cases. The end of the economic crisis and the strengthening of the courts' capacity are general factors which have to be taken into account when analysing this positive trend.
As to the sub-category "civil and commercial litigious cases", the increase of the number of pending cases on 1 January 2012 is due to the increase of the number of incoming cases in different categories of cases such as different types of bankruptcy cases which know a long processing time. The duration of these special types of bankruptcy cases cannot be shortened by improving the efficiency of the judiciary. The increase of the number of resolved cases can be explained by the improvement of the work capacity of courts.
As to the sub-category "civil and commercial non-litigious cases", the decrease of the number of resolved cases and pending cases on 1 January 2012 and 31 December 2012 can be explained by the transfer of a part of the cases from the first instance courts to the Land Registry Department, following the legislative reform of 1 January 2012. The number of incoming cases has decreased essentially due to external (socio-economic) factors, namely the gradual exit from the economic crisis during 2010-2013.
As to the sub-category "non-litigious land registry cases", the increase of the number of resolved cases between 2010 and 2012 can be explained by the courts work reviewing a large number of cases in the law limited time because of external factors causing an increase of the number of incoming cases before the entry into force of the new provisions of the Civil Procedure Law on 1 January 2012.
As to the sub-category "administrative law cases", the decrease of the number of pending cases on 1 January 2012 can be explained by the courts work, namely the improvement of the judicial capacity and the decrease of the number of incoming cases due to external factors as public activity resubmission to the Administrative Court and internal factors. The decrease of the number of resolved cases can be explained by the limited capacity of courts work, the complexity of the cases, the parties' failure to appear for court hearings, etc. The decrease of the number of pending cases on 31 December can be explained by the improvement of the judicial capacity of courts and decrease of incoming cases due to external factors.
There are no cases in the sub-category "other". All cases are distributed among the mentioned categories No.1, No.2 and No.6.
The decreases observed with regard to the totals in respect of the different items (pending, incoming, resolved cases) are the consequence of the evolutions noticed for each of the sub-categories in respect of the number of incoming cases. The decrease of the latter and the improvement of the judicial efficiency resulted in a decrease of the number of pending cases on 1 January and 31 December. The end of the economic crisis and the strengthening of the courts' capacity are general factors which have to be taken into account when analysing this positive trend.
As to the sub-category "civil and commercial non-litigious cases", the increase of the number of resolved cases between 2012 and 2013 can be explained by the long pending backlog of complex cases before the courts of the second instance.

Q098 (General Comment): Data from the first and appeal instance courts are compiled by the Court Administration, and the Court Information System is a living database that allows data to be corrected, so changes between previous periods are possible. The figures reflect data of second instance courts and the Supreme Court Criminal chamber. The latter is the appellate body in respect of cases decided by regional courts acting as courts of first instance. Statistics related to the Supreme Court are mentioned only within the total, because till 2009 the statistics were compiled by a specially hired expert.

Q098 (2021): In the middle of 2020, Saeima adopted Law on Administrative Liability that affected amount of incoming cases significantly in the first instance courts. According to the law, if the person intends to use his right to appeal a decision, he/she needs to address the complain to the higher official from institution which has made this decision, but if there is no higher official, a decision may be appealed to a district (city) court. This is the main reason for decrease of incoming cases in the first instance courts and in appeal courts as well.
The reduction of pending cases is related to the increased interest and pressure of the public, the Council of Justice and the Ministry of Justice to reduce the number of long pending criminal cases.

Q098 (2020): In 2020 there was changes in Administrative Procedure Law, that might affect the amount of resolved cases. Furthermore, number of misdemeanour and / or minor cases are higher in the appeal courts because in last years the Constitutional court has declared several norms on administrative infringements are not incompatible with the Constitution of Latvia. This led to an increase of incoming administrative cases.

Q098 (2018): Partially due to court system reform, Court Information System database has undergone several error checks and data clean-ups, that has affected amount of cases, especially – pending. Data on court statistics are being calculated by automated systems and records on changes that affect data in database are not available. Any changes to the Court Information System can affect the data.

Q098 (2014): In 2014, the statistics of the Supreme Court Criminal Chamber were the following: pending cases on 01.01.2014: 139; incoming cases: 19; resolved cases: 73; pending cases on 31.12.2014: 0.
Due to a court reform, the Chamber of Criminal Cases of the Supreme Court has been liquidated as from 1 January 2015. All cases, which were not resolved on 31 December 2014, were transferred to regional courts.

Q099 (2021): Total number of incoming administrative cases and civil cases has decreased significantly; taken measures to handle backlog of administrative cases has resulted in increased turnover, this has resulted in falling numbers of pending cases. To handle backlog of administrative cases, two additional posts of judges were created for the years 2021 and 2022. For some type of listed cases the total numbers are so small, that even 2-3 cases give discrepancy ratio of 100 % or even more.

Q099 (2020): There has been gradual decrease of incoming cases: civil cases 1336 (2018), 1164 (2019), 1127 (2020) and administrative cases 850 (2018), 844 (2019), 826 (2020). There has been increase of examined cases per judge of the Administrative chamber (+4) and there was additional judge from the Civil chamber allocated to deal with administrative cases (February-September 2019) and substitute judge working at the Supreme Court (September-December 2020). As result the clearance rate for administrative cases in 2019 was 113% and in 2020 was 114%.
The clearance rate for civil cases (Civil chamber) was 120% which is explained by decrease of incoming cases and high number of examined cases per judge (97 cases). Decrease of non-litigious land registry cases is explained, first, by decrease of total numbers of transaction, for example according to the statistics published by the State Cadastre, total number of transaction of land with buildings was 21619 in 2019 and 18616 in 2020. And, second, because majority of land registry cases of previous years concerned aspects of transformation of property rights (privatization and restitution) and economic activity before economic crises of 2008/2009 which are solved by now. Starting from 2019 the Supreme Court uses the same categories of cases as it is used in the first and second instance courts. Therefore previously used category „other cases" disappears.

Q099 (2019): Starting from 2019 the Supreme Court has changed system of classification of cases under different categories for civil cases. During this change we encountered problem of reclassification of cases registered during previous years. This reclassification had as objective to introduce the detailed classification used for first and second instance courts. Statistics for the reference year 2019 encompasses results from both categories. Since 2015 number of unresolved administrative cases increased. During year 2018 additional recourses were allocated to the Administrative department (chamber) of the Supreme Court, including additional judges. As the result, number of resolved cases in 2019 increased. For next coming two years there are two additional judges envisaged for the Administrative department.
Other non-litigious cases (2.3) are specific enforcement procedures which are regarded as uncontested for our civil procedure. These have been received via the specific procedure of a protest submitted by the Prosecutors General Office. The number became available as the result of introduction of the detailed classification regime.

Q099 (2018): Supreme Court does not rely only on data in the Court Information System, they keep separate sheet for statistics
Q099 (2017): Supreme court has provided data for questions 1 & 2. As regards the decrease of Civil (and commercial) litigious cases, there was a major performance raise in 2016. Also, the Supreme court has only recently begun to collect statistics on their work performance and thus there was and still are some NA answers for CEPEJ questionnaire

Q099 (2016): Supreme court had accumulated too many unresolved cases and 1/3 of those ar older than 2 years so they have have made some changes and acheaved progess.
Q099 (2015): An explanation for the rather large difference in case count for general civil and commercial non-litigious cases are changes in civil proceedings - while in 2014 undisputed compulsory execution cases were also heared by Supreme Court, in 2015 it was tasked with hearing decisions from Land registry, sworn baillifs and notaries only.

Q099 (2012): In 2012, the decrease of the total of cases before the higher instance courts correlates with the general decrease of the number of civil cases.
Q100 (2021): Total number of pending cases has significantly increased. Measures to handle this problem have been adopted and are under implementation. There are amendments to the Criminal Procedure Law adopted (https://likumi.lv/ta/id/336542-grozijumi-kriminalprocesa-likuma , in force since 3.11.2022.) to transfer competence to review specific agreement process cases to the regional courts. Some internal case management arrangements have been put into action.

Q100 (2020): During last two years 3 out of 8 judges (after increase of number of judges – 9 judges) have retired. Some additional time was needed to replace them (competition and appointment). There was significant decrease of examined cases in 2020 (clearance rate was 102% in 2019 and 95% in 2020) and increase of received cases in 2019: 734 (2018), 764 (2019) and 686 (2020).
Q100 (2018): Supreme Court does not rely only on data in the Court Information System, they keep separate sheet for statistics

Q101 (2021): Limiting the spread of COVID-19 and mitigating the economic difficulties that may arise with restrictions, in March 2021 the Saeima adopted the Law on the Suppression of Consequences of the Spread of COVID-19 Infection, Section 22 of which stipulated that Until 1 September 2021, the creditor are prohibited from submitting an application for insolvency proceedings of a legal person if any of the features of insolvency proceedings of a legal person referred to in Section 57, Paragraph one, Clause 1, 2, 3, or 4 of the Insolvency Law exists, which affected the number of cases received in court. In 2021, there was a decrease in resolved insolvency cases, which was related to the restrictive measures in the field of insolvency process due to the COVID-19 pandemic.
In 2021, the number of received and resolved cases of the intentional homicide has returned to the level of previous years, and the decrease in the number of cases found in 2020 is no longer observable.
The number of pending cases (pending for more then 2 years) has significantly increased for litigious divorce cases, robbery cases and intentional homicide cases. The changes are related to the decisions taken in previous years to limit the spread of the COVID-19: resolving cases in the written procedure if it was possible. However, the types of cases mentioned above (specific Litigous cases) often require face-to-face meetings.

Q101 (2020): There are minor changes in statistical data due to Covid-19 pandemic. The pandemic affected the hearings of the cases and procedure, because there were several case groups that were solved in written way affecting average length of the hearings.

Q101 (2019): Data on court statistics are being calculated by automated systems, we do not keep track on any changes that affect data in database.
Q101 (2018): Partially due to court system reform, Court Information System database has undergone several error checks and data clean-ups, that has affected amount of cases, especially – unresolved. Data on court statistics are being calculated by automated systems, we do not keep track on any changes that affect data in database. Any changes to the Court Information System can affect the data.

Q101 (2017): Data updated after court reorganisation in 2018.

Q101 (2016): Data updated after court reorganisation in 2018.

Q101 (2013): The number of pending insolvency cases in the beginning and in the end of the year increased because of the special handling procedures for insolvency cases set forth by the Civil Procedure Law. The duration of insolvency proceedings is mostly affected by external economic factors. The increase in the number of incoming insolvency cases is justified by external factors such as public activity submitting applications on legal protection of individuals in cases of insolvency. The increase of the resolved insolvency cases is due to the gradual improvement of the capacity of the courts work following the adoption of the new provisions of the Civil Procedure Law in 2012.

Q101 (2012): The decrease in the number of “litigious divorce cases” (pending, incoming, resolved) is due to the decrease in the number of incoming cases owing to the impact of external factors such as depopulation, decline in the number of marriages etc. As to the category “employment dismissal cases”, the decreases noticed in respect of all the items can be explained by external socio-economic factors such as the decrease of the unemployment after the end of the economic crisis.

Lithuania

Q091 (2021): in 2021 July 1 the amendments to the Code of Administrative Misdemeanors entered into force, by which the cases of administrative offenses were transferred to be examined (except for the cases referred to in Article 614, paragraph 1, point 3) from district courts out of court to pre-trial institutions.
in 2021 in the district courts, there was a noticeable decrease in the number of civil cases examined by the first instance due to the bankruptcy of legal entities - 1,212 cases (1,624 in 2020, 2,787 in 2019). Compared to 2019, such cases decreased by more than half. It can be assumed that such a decrease in cases in this category could have been caused by the 2020 initiative adopted by the Council of Judges. The impact of the consequences of the novel coronavirus (COVID-19) on Lithuania entered into force Law no. XIII-2861, which was temporarily (until December 2020 31) the initiation of the insolvency process was suspended. It is noteworthy that out of 1212 civil cases on bankruptcy of legal entities, which examined in 2021, the majority - 860 cases - were received by 2020.

Q091 (2020): "Pending non-litigious cases": general decrease of number of cases and application of administrative means. The number of resolved civil and commercial litigious cases might have been affected by the pandemic as not all the categories of cases could have been adjudicated remotely. The number of administrative cases, sa well as for civil and commercial litigious cases could have decreased because of the need for some period to adapt IT and video conference equipment in the situation emerged. The increase of number of pending administrative cases older than 2 years is related to decisions of courts in environmental law cases to stay proceedings pending a decision in a related case, which will be a preliminary ruling in another case:legal entities are challenging a decision requiring them to pay a tax on the pollution of packaging waste from which they were exempted because they had concluded a contract for the organization of waste management. As the documents proving the waste management issued by the licensed recycler were canceled, the documents certifying the waste management of other entities were canceled, which obliged the entities (which had a contract with the waste manager to organize packaging waste management) to pay this fee. The cases are suspended and pending a decision in a case challenging a decision declaring waste management documents issued to applicants invalid because it will have a preliminary ruling in these cases.

Q091 (2019): In 2019 there is a downward trend in the backlog of incoming and resolved cases. At the end of the year, the backlog of pending cases at the district, county (I instance) and county administrative courts amounted to 29 898 cases, at the end of 2018 – 33 233 cases; at the end 2017 - 36 419 cases (10 percent less than in 2018 and 18 percent less than in 2017).
In 2019 the number of court order cases has decreased. This decrease may have been caused by the general decrease of debtors' natural persons in 2017–2019. According to the information provided by the credit bureau Creditinfo data, on 1st January 2020 there were 163 929 debtors (natural persons), on 1st January 2019 -177 055, on 1st January 2018 - 207 000 debtors (natural persons).
In 2018, the number of administrative cases received increased by 27.35% compared to 2017 (e.g. the number of cases concerning conditions and detention of prisoners, cases concerning the legal status of aliens have significantly increased) and this led to the growth in the number of pending cases at the end of 2018 (and to the beginning of the reference year 2019).
In 2019, compared to 2018, the number of administrative cases heard in regional administrative courts increased by 14 percent. The change in the increase was due to a 34 percent increase compared to 2018 in the number of applications for a local fee for the collection and treatment of municipal waste. In 2019 a further upward trend in tax cases, enforcement cases and arrest cases, but there has been a significant reduction in civil liability for damage caused by illegal actions by public authorities.
In 2019, as compared to 2018, the number of administrative misconduct cases investigated in district courts increased by 16 percent. The change was due to a 64 percent increase in the number of cases of administrative offenses related to transport and road transport (370-463 Articles of the Code of Administrative Offenses). In 2019 significantly increased the number of cases of driving under the influence of drugs, psychotropic or other psychoactive substances without driving license. The number of cases related to trade, the financial system and statistics has also increased.

Q091 (2018): The decrease in general civil (and commercial) non-litigious cases (2.1.) may have been due to the overall decrease in debtors' natural persons in 2017 and 2018. The latter suggestion is based in data from the credit bureau Creditinfo (1 January, 2019 number of debtors natural persons was 177,055; 1 January - 207,000; 1 January, 2017 - 252 479). Credit Bureau “Creditinfo“ stores information about credit risk for businesses and private entities, forms the credit history and establishes credit ratings.
The decrease in "other non-litigious cases" (2.3.): civil cases in process of enforcement (execution) in all district courts was due to changes in the law that came into effect in 2017 July 1, on the basis of which the bailiff, rather than the court of first instance, is responsible for dealing with the succession in enforcement proceedings.
The decrease in "other cases" (4): administrative offence cases (including cases in process of enforcement (execution) in 2017-2018 period was due to to the entry into force of the Code of Administrative Offenses on 1 January, 2017 which left the handling of a large proportion of administrative misconduct and the imposition of penalties to various public administration entities (out of court). This could also be due to the expanded list of circumstances in which the person is not prosecuted under the Code of Administrative Offenses. The decrease in these cases was also influenced by the Amendments to the Criminal Code (on 1 January, 2017) that criminalized persons who drove a road vehicle or taught practical driving while under the influence of alcohol with more than 1.5 ounces of alcohol. In 2018, compared to 2017, the number of cases of administrative offences investigated in district courts decreased by 15.66%, compared to 2016, a decrease of 75.83%. Concerning administrative cases (3): in 2018, the number of cases received increased by 27.35% compared to 2017 (e.g. the number of cases concerning conditions and detention of prisoners, cases concerning the legal status of aliens have significantly increased) and this led to the growth in the number of pending cases at the end of the reference year.

Q091 (2017): Other non-litigious cases: civil cases in process of enforcement (execution).
Concerning the category “non-litigious cases” the number of pending cases on 1 January 2017 increased considerably compared to their number on 1 January 2016. The same increase characterises the categories “general civil and commercial non litigious cases” and “other non- litigious cases” (pending cases at the beginning of 2017). However, we can observe that at the end of 2017 the number of pending cases decreased concerning the category “non-litigious cases” and the sub-category “other non-litigious cases”. Only with regard to “civil and commercial non-litigious cases” the number of pending cases at the end of 2017 increased. We can see that these variations are the result of variations in the number of incoming cases for the period 2015-2017. Besides, as the numbers are small, variations appear important. The main reason for increased pending cases is the increased number of incoming other non-litigious civil cases, i.e. enforcement cases, in 2017. More precisely, in 2017, the number of civil cases in enforcement procedure – requests to change the recoverer, increased. There is no particular reason, besides the fact that some companies were buying the recoverers‘ rights from other natural persons or legal entities.
As regards the category "other cases", it refers to cases of administrative offences and cases of administrative offences in process of enforcement (execution). Following the entry into force of a new Code of Administrative Offence (1 January 2017), the number of incoming cases of administrative offences decreased. The decrease in the number of incoming administrative law cases in 2017 is explained by the increased number of incoming administrative cases in previous years (due to the decisions of the Constitutional Court).
Registry cases cannot be identified among the overall number of general civil cases.
Administrative law cases: courts received less administrative cases; they are fighting backlogs from previous years.

Q091 (2016): Administrative law cases - courts are fighting backlogs. This led to the growth in the number of resolved cases and consequently to the decrease in the number of pending cases 31 December 2016.
Other non-litigious cases: civil cases in process of enforcement (execution). The increased number of these incoming cases also results in the increase of number of incoming non-litigious cases. The number of increased incoming other non-litigious cases (enforcement) may be due to the number of the resolved civil cases in 2015 (the number of pending cases on 1 January 2016 decreased). As regards registry cases: the answer should be NA, the NAP was chosen for the calculation purposes: it is not possible to identify those cases among all other general civil cases.

Q091 (2015): Civil and commercial non-litigious cases include court orders

Category "other" includes: Cases of administrative offences and cases of administrative offences in process of enforcement (execution).
Q091 (2014): The number of incoming administrative cases increased which affected the total. They were mostly cases on remuneration of public servants due to the decision of the Constitutional Court declaring the laws on the reduction of the remuneration of State servants and judges unconstitutional. For the same reason, the number of cases of administrative offence (in execution process) increased, which affected the category "other". As to the significant decrease in the number of general civil (and commercial) non-litigious cases (pending 31 Dec) in 2014, civil cases on deliver of judicial orders are resolved quickly and such residues are normal.

Q092 (2014): For 2013 and 2014, the category “civil and commercial non-litigious cases” includes court orders.

Q092 (2013): For 2013 and 2014, the category “civil and commercial non-litigious cases” includes court orders.

Q093 (2013): For 2010, this category encompasses only cases of administrative offence, while since 2012 it subsumes also the administrative offence cases in the process of execution.
Q094 (General Comment): There is no separate statistical data allowing to distinguish between severe/minor/and other criminal cases. Neither the court information system is applied to this, nor the courts have obligation to provide the information on the seriousness of the crime. In the court information system offenses are described through the indication of an article (it does not show the severeness of a crime by itself).
Q094 (2018): On 1 January 2017 Amendments to the Criminal Code of the Republic of Lithuania were adopted that provide for criminal liability for persons who drove a road vehicle or taught practical driving while under the influence of alcohol more than 1,5 promilles. This change of regulation had impact on the increase of the number of criminal cases starting from 2017 (in comparison with 2016).
Q094 (2016): The crime situation changed in Lithuania - the number of registered crimes by prosecution also decreased through these years, as a result less cases were received in courts. As regards 94.1 and 94.2: the answer should be NA, the NAP was chosen for the calculation purposes.
Q094 (2012): For 2012, in contrast with the 2010 data, criminal cases in the execution process were also taken into account. The increase in the number of incoming and resolved criminal cases is due to the entry into force of the Law on Domestic Violence in December 2011. It has made compulsory the criminal investigation in respect of every single incident of domestic violence. The Lithuanian economic situation as well as the national economic priorities also account for the increase.

Q097 (General Comment): In Lithuania, statistical data on case flow and their classification are made according to the specific regulations and are mainly based on the institutes of Civil, Criminal Codes and the codes of Civil and Criminal procedures, as well as the Code of Administrative Offences and the law on Administrative procedure. Therefore figures for some of the types of cases are unavailable because there is no such classification while making statistical reports. In respect of the variations that can be observed between figures provided for the different evaluation cycles and in the light of the above described peculiarity of the statistic system of Lithuania, it is noteworthy that cases the number of which is not available are included in other categories, i.e. “civil litigious”, “civil non-litigious”. Accordingly, the indicated totals are relevant. Second instance courts deal with some non-litigious cases, but their number is insignificant.

Q097 (2021): Other cases include appeal cases regarding decisions announced by the district courts in cases of administrative offenses.
The number of incoming administrative cases were increased in 2021 due to 1214 cases received in Vilnius Regional Administrative Court and the Regional Administrative Court regarding asylum (due to decisions taken by the Migration Department under the Ministry of Internal Affairs not to consider the request for granting asylum or decisions not to grant asylum). Only 335 such cases were examined.

Q097 (2020): Second instance courts deal with some non-litigious cases, but their number is insignificant.

Q097 (2019): "Other": administrative offence cases (including cases in process of enforcement (execution)).
"Administrative cases" - the data provided encompasses cases dealt with by the Supreme Administrative Court of Lithuania; it is to notice that these figures include apellation cases (on decisions of the court of first Instance) well as cases that are heard in the Supreme Administrative Court of Lithuania as sole instance.
"Pending cases older than two years": the decrease is due to the fact that cases pending for more than 2 years have been resolved.

Q097 (2018): The decrease in "other cases" (4), i.e. administrative offence cases (including cases in process of enforcement (execution), at second instance courts (appeal) in 2017-2018 period was related to the decreased number of resolved administrative offence cases in the first instance courts (see Q091).

Q097 (2017): As regards the category "other cases" which refers to cases of administrative offences and cases of administrative offences in process of enforcement (execution), the observed decreases in their numbers (pending at the beginning of 2017, incoming, resolved, pending at the end of 2017) are the consequence of the entry into force of the new Code of Administrative Offences.

Q097 (2016): The changes in number of cases are mainly related to the increased number of resolved administrative cases in the first instance administrative courts in 2015 and 2016 (the courts were fighting backlogs from previous years) and the renewed processes that were suspended in the second instance court due to the application to the Constitutional Court of the Republic of Lithuania (related to salaries of civil servants, decreased pensions, etc.).

Q097 (2014): The increase between 2013 and 2014 in number of cases can be explained by the increase in the number of incoming administrative cases and cases of administrative offence. They were mostly cases on remuneration of public servants in 2013 due to the decision of the Constitutional Court of the Republic of Lithuania, which recognized the laws on the reduction of the remuneration of state servants and judges unconstitutional. This also had an effect on the significant increase of the category “other cases” since this situation resulted in the increase of the number of cases of administrative offence (in execution process).

Q098 (General Comment): There is no separate statistical data allowing to distinguish between severe/minor/and other criminal cases. Neither the court information system is applied to this, nor the courts have obligation to provide the information on the seriousness of the crime. In the court information system offenses are described through the indication of an article (it does not show the severeness of a crime by itself).

Q099 (General Comment): Other cases - jurisdictional cases and cases based on requests to resume proceedings in cases of administrative offenses.

Q099 (2020): In 2019, the Supreme Court of Lithuania examined fewer cases than were received, therefore the number of pending cases increased at the end of the year. However, it should be noted that in 2019 the Supreme Court of Lithuania has provided a number of important and particularly socially sensitive interpretations in both civil, criminal and administrative offences cases.
The decrease in the number of resolved civil and commercial litigious cases and accordingly the increase in the number for pending cases at the end of 2020 are due to the reduction in the number of judicial posts and the lengthy appointment by Parliament procedures for vacancies.

Q099 (2019): Other cases - jurisdictional cases and administrative offences cases.
Over the last five years, there has been an almost consistent decline in cases, including cassation appeals. In 2019, as compared to 2015, 20 percent less civil cassation appeals were filed and 17 percent fewer civil cassation cases were accepted, 43 percent fewer civil cassation cases were examined. In 2019, the Supreme Court of Lithuania examined fewer cases than were received, therefore the number of pending cases increased at the end of the year.
However, it should be noted that in 2019 the Supreme Court of Lithuania has provided a number of important and particularly socially sensitive interpretations in both civil, criminal and administrative offences cases.

Q099 (2018): The number of civil (and commercial) litigious cases (1.) of the cassation instance court (Supreme Court) pending at the end of the year decreased due to the general decrease of resolved cases at first instance. In 2018 the number of civil cases resolved at first instance courts decreased by 10.89% compared to 2017 and was 15.03 % lower than in 2016. This led to the slightly lower inflow and larger number of resolved cases, therefore, to the decreased number of pending cases at the end of the year.

Q099 (2016): NA was changed to NAP only for calculation purpose -situation hasn't changed.

Q099 (2014): In the frame of the 2014 exercise, it has been indicated that the Supreme Court of Lithuania received 1369 appeals (cassation) in criminal cases and 2794 appeals (cassation) in civil cases. 677 appeals in criminal cases and 2038 in civil cases were returned to the complainants.
2014: Different category of cases as in Q91, 97 and 99 exist in Lithuania, but they are all under the category 1. Civil (and commercial) litigious cases and it is not possible at this point to distinguish them from other cases.
The increase between 2013 and 2014 in number of cases can be explained by the increase in the number of incoming administrative cases and cases of administrative offence. They were mostly cases on remuneration of public servants in 2013 due to the decision of the Constitutional Court of the Republic of Lithuania, which recognized the laws on the reduction of the remuneration of state servants and judges unconstitutional. This also had an effect on the significant increase of the category “other cases” since this situation resulted in the increase of the number of cases of administrative offence (in execution process).

Q100 (2020): general decrease of number of cases

Q100 (2016): The number of admitted cassation claims decreased in 2015 and in 2016 was almost the same as in 2015. Besides, the number of resolved cases increased in 2015 due to the aim to comply with the timeliness.

Q101 (2021): The decrease in insolvency cases category could be due to the initiative of the Council of Judges adopted in 21 April 2020
entered into force in 25 April 2020 The impact of the consequences of the novel coronavirus (COVID-19) on Lithuania
Law no. XIII-2861, which was temporarily (until 31 December 2020) the initiation of the insolvency process was suspended. It is noteworthy that out of 1212 civil cases on bankruptcy of legal entities, which had been examined in 2021, the majority - 860 cases - were received by 25 April 2020.

Q101 (2020): Pending on 31 December 2020 litigious divorce cases: the result of the decrease in the number of incoming cases and the compulsory mediation in pretrial stage.
Insolvency cases: general decrease in number of cases
Roberry cases: general decrease in number of cases

Q101 (2019): In common the number of pending cases decreeses, this shows the efficient work of the courts.
Employment dismissal cases - the decrease of incoming and resolved cases might be due to the effective functioning of the Labor Disputes Commission (a mandatory pre-litigation labor dispute resolution body for individual and collective labor disputes).
Insolvency cases - in 2019 the number of bankruptcy proceedings compared to 2018 remained stably consistent, depending on the economic situation. The general number of received criminal cases has decreased. This may have been caused by the reduced level of crime in the Republic of Lithuania. In 2019, compared to 2018, fewer crimes were registered and fewer criminal proceedings were received. According to the publications of the Department of Informatics and Communications under the Ministry of the Interior of the Republic of Lithuaniadata, in 2019 51 449 criminal offenses were recorded (57 830 in 2018 and 63 846 in 2017). Cases relating to the right of entry and stay for aliens - general political situation in Lithuania and situation in EU on this issue led to the decrease of incoming cases in 2019.

Q101 (2018): Employment dismissal cases - the decrease of incoming and resolved cases might be due to the effective functioning of the Labor Disputes Commission (a mandatory pre-litigation labor dispute resolution body for individual and collective labor disputes).
Insolvency cases - the decrease of incoming cases might be due to the decrease of debtors (legal entities). Robbery cases - the decrease of incoming and resolved cases might be due to a general decrease in crimes to property. Cases relating to the right of entry and stay for aliens - general situation in EU on this issue led to the increase of incoming cases in 2017 and consequently to the increase of pending cases at the beginning of 2018. The number of ressolved cases is higher due to higher number of incoming and correspondently pending cases. Cases relating to asylum seekers fall within the cases relating to the right of entry and stay for aliens or other administrative cases.

Q101 (2017): Cases relating to asylum seekers fall within the cases relating to the right of entry and stay for aliens or other administrative cases.
The number of incoming cases related to the right of entry and stay for aliens is related to the number of requests from residents of countries where were no requests before (countries where are no military actions carried) and such requests are often declined by the Migration department.
The decrease in the number of pending employment dismissal cases at the end of the year is explained by the fact that courts are successfully fighting the backlog.
Variations observed in respect of the number of pending litigious divorce cases appear important mainly due to the small numbers.

Q101 (2016): For the reference year 2016 cases relating to asylum seekers fall within the cases relating to the right of entry and stay for aliens or other administrative cases.
Q101 (2013): Variations observed in respect of the categories “employment dismissal cases” and “litigious divorce cases” are justified mainly by fluctuations in the number of incoming cases (due to the crisis, developments of the constitutional doctrine or amendments in law). In 2013, the number of district courts has been reduced to 49, resulting in a transfer of cases from one year to another from several/two courts to one court.

Luxembourg

Q091 (2021): The comment provided for 2020 data remains relevant in respect of cases pending at the end of 2020. It should be recalled that since the law of 27 July 2018 establishing the Judge for family law litigation (JAF), which came into force on 1.11. 2018, cases under the jurisdiction of the JAF are included in the category "civil litigious cases". These are cases previously dealt with by the civil chambers, but also cases dealt with by the youth and guardianship court (e.g., cases relating to parental responsibility with regard to a natural child or a child whose parents are divorced) or at the level of the justice of the peace (maintenance cases). Moreover, it can be observed that the number of incoming cases in these matters has increased since they are within the JAF competence. This is explained by the simplification of the access to justice for the litigant, who, in procedures other than divorce, can refer to the JAF by a simple letter; by the emergence of cases on the basis of new legal provisions (e.g., application by the minor); and by all the litigation generated by the new legal provision establishing the institution of generalized joint parental authority. Moreover, since proceedings before the JAF take much less time than before the reform introducing the JAF, motions to modify decisions taken are filed more quickly and thus increase the volume of cases.

Q091 (2020): "The law of July 27, 2018 establishing the family court judge (JAF) went into effect on 1.11. 2018. The cases currently under the jurisdiction of the JAF were included for the first time in the category "contentious civil cases" for the year 2020 which explains the observed increases in the number of new, completed and pending cases compared to the previous data. These are cases previously handled by the civil chambers, but also cases handled by the juvenile and guardianship court (e.g., parental responsibility cases involving a natural child or a child whose parents are divorced) or at the justice of the peace level (alimony cases). In addition, there has been an increase in the number of new cases in these areas since they were handled by the Family Court. This fact can be explained by the simplification of access to justice for the litigant, who, in procedures other than divorce, can refer to the JAF by a simple letter, by the emergence of cases based on new legal provisions (e.g. request emanating from the minor) and by all the litigation generated by the new legal provision of the institution of a generalized joint parental authority? Moreover, since proceedings before the JAF take much less time than proceedings before the introduction of the JAF law, motions to modify decisions are filed more quickly and thus increase the volume of cases.
Including JAF cases, for 2019, new cases would be 7,626 (up from 5,038) while completed cases were 6,714 (up from 5,098).
Including JAF cases, for 2018, 91.1 new cases would be 5,248 (up from 4,807) while completed cases were 4,905(up from 4,857).
Regarding pending cases in 2018, at the end of the years JAF cases constituted a plus of 453, which corresponds to 1,649 pending cases at the end of the 2018 period in item 91.1. instead of the 1,256 cases informed. Taking into account horizontal consistency, the changes in new and completed cases discussed above, imply that at the end of the 2019 period, pending cases (91.1) totaled 2,561 (instead of 1,196).
The figures for previous years remain unchanged.
""Other non-contentious cases"" pending at year-end: Due to containment during the COVID-19 pandemic the number of public hearings was reduced to a minimum, allowing courts to prioritize work on cases not requiring such hearings. In addition, special crisis legislation allowed cases to be taken under advisement without a public hearing, with the agreement of the parties.
"

Q091 (2018): The pending cases at the date of 31/12/2017 had to be adapted, since there were 27 cases of vacation court, which were no longer pending at the end of the year. These 27 cases were withdrawn from the 1,341 pending cases indicated in the Scoreboard 2017 to reach 1,314 other pending non-litigious cases on 01/01/2018.

Q091 (2016): For question 91.1 the new data collection system revealed a higher number of pending cases, previously not considered by those in charge of counting.
For question 91.2.2, the new data collection system provides now information on other non-litigious cases, previously unavailable.
Q091 (2015): The figures given (with the exception of those for the administrative court) are those of the two district courts (Luxembourg and Diekirch).

The three justices of the peace totalized 78.273 national as well as 285 European payment orders.
Q091 (2014): The data (except for the Administrative Court) are those of the district courts. Uniform statistical data for both types of courts are not yet available. The three justices of peace ruled 75 411 national payment orders, 260 european payment orders and resolved a total of 6386 cases for a total of 65840 new cases. The implementation of statistics counters for civil and commercial cases resulted in variations. The applied criteria have been refined and give a more accurate image.

Q091 (2013): Data concerns (except for the Administrative Court) district courts. Uniform statistical data for both types of courts (district courts and justice of peace) are not yet available. The District Court of Diekirch rendered 580 decisions and registered 664 new cases. The three justices of peace ruled 69 859 payment orders and resolved a total of 5 682 cases for a total of 6 508 new cases. The increase in the number of civil (and commercial) non-litigious cases between 2010 and 2013 is partly explained by the establishment in 2011 of the judiciary statistics office. The increase in the number of administrative law cases mainly stems from the increase in the asylum-related disputes.

Q091 (2012): The data provided (except for the Administrative Court) are those of the district courts. Uniform statistical data for both types of courts (district courts and justice of peace) are not yet available. The District Court of Diekirch rendered 591 decisions and registered 688 new cases. The three justices of peace ruled 63 651 payment orders and resolved a total of 8041 cases for a total of 9310 new cases. The 2012 data encompasses civil and commercial cases of both district tribunals (Luxembourg and Diekirch).
Q092 (2014): 2014: Category 2 (civil (and commercial) non-litigious cases) refers to european payment orders issued by two district courts. They are handled almost immediately, so that there is no stock at the end of the period. That is why the pending cases as well as incoming cases are classified as NAP.
Q092 (2013): 2012: Category 2 (civil (and commercial) non-litigious cases) refers to payment orders issued by district courts. They are handled almost immediately, so that there is no stock at the end of the period.

Q092 (2012): 2012: Category 2 (civil (and commercial) non-litigious cases) refers to payment orders issued by district courts. They are handled almost immediately, so that there is no stock at the end of the period.
Q094 (General Comment): The unavailability of the number of pending and incoming criminal cases is explained by the specific organisation of the workflow between courts and prosecution offices. Cases are only transferred to the courts shortly before the hearing and, if a case is not heard on the given date, it is physically returned to the prosecution until the new hearing date. Thus, there are - with a few exceptions - no cases pending before the criminal courts over a long period of time, and the number of incoming cases is more or less equal to the number of resolved cases.
Minor criminal cases represent all cases resolved by criminal order in the Police court and the district court. Severe criminal cases represent all cases resolved by a judgment at first instance in the Police, Correctional or Criminal court. “Other criminal cases” are cases that are dealt with by the investigating office.

Q094 (2018): Nous avons compté parmi les infractions mineures, toutes les affaires terminées par ordonnance pénale au tribunal de police ou au tribunal d'arrondissement. Les infractions graves représentent toutes les affaires terminées par jugement en première instance au tribunal de police, correctionnel ou criminel.
L’augmentation du nombre d’affaires résolues est due au fait que, pour les cycles précédents, les ordonnances pénales des tribunaux d’arrondissement n’étaient pas prises en compte au niveau des infractions mineures, qui comptabilisaient seulement les ordonnances pénales de justices de paix. Ainsi, pour 2016, les infractions pénales mineures reportées s’élevaient à 6460 en comptant les ordonnances pénales des tribunaux d’arrondissement, au lieu de 5454. Le total des affaires terminées a considérablement augmenté puisqu’il nous est depuis la période d’évaluation 2018-2020 possible, par l’ajout de la catégorie « Autres affaires » dans le questionnaire, de renseigner les affaires dont le cabinet d’instruction a été saisi. Les chiffres inscrits dans « autres affaires » correspondent donc aux affaires dont a été saisi le cabinet d’instruction.
Regarding the unavailability of the number of pending cases and incoming cases, Due to the specific organization of the work flow between the courts and the public prosecutor’s office, files are transferred to the courts only a short time before the hearing, and, if the case is not heard at the given date, are then returned to the public prosecutor’s office until the new date of the hearing. Thus, there are – with very few exceptions - no cases pending before the penal courts over a longer period of time, and the number of incoming cases equals more or less the resolved cases. With regard to civil cases, we should be able to provide information on cases pending for more than two years for the next evaluation, once the new application has been used for a longer period of time.

Q094 (2012): Courts do not have a "stock" given that cases are handled at the public prosecutor's office and are only reffered to the court shortly before the hearing. The only moment when cases are pending is between the hearing and the adoption of the decision. Usually, the jugdgment is made within 3 or 4 weeks after the hearing. Thus, data concerning incoming cases is identical to data concerning resolved cases.
Q097 (2021): The increased number of pending administrative law cases at the beginning of 2021 is a consequence of the increase in the number of pending administrative law cases at the end of 2020. In this respect, it should be recalled that the decrease of the Clearance rate for 2020 was mainly due to the increase in the number of appeals, in particular those relating to the general development plan of the City of Luxembourg. These cases had entered the first instance from January to March 2018, while the related judgments, consolidated by the administrative court, were delivered between May and September 2020. The related appeals, 51 in number, were filed between July and November 2020 and were still under investigation on 31 December 2020 due to the fixed time limit regime of investigation, but also due to the pandemic and the introduction of crisis legislation involving a suspension of appeal timeframes.

Q097 (2020):

Administrative cases - the decrease in the RC for 2020 is primarily due to the increase in the number of appeal motions, particularly those related to the City of Luxembourg's general development plan. These cases were entered in the first instance from January to March 2018, while the related judgments, consolidated by the Administrative Court, were issued between May and September 2020. The related appeals, numbering 51, were filed between July and November 2020 and were still being processed on December 31, 2020, due to the fixed timeframe regime (suspension from July 16 to September 15 - one month for the answer - one month for the reply - one month for the rejoinder), but also due to the pandemic and the implementation of crisis legislation involving a suspension of the appeal deadlines (until June 24, 2020). Thus, in addition to the increase in the number of requests for appeal, their investigation has been postponed, leading to an increase in the number of cases pending as of December 31, 2020. Throughout 2020, the Administrative Court was essentially up to date and disposed of cases as soon as they had been heard. The same is true in 2021.

Q097 (2019): Civil and commercial litigious cases pending at the beginning of the year have been restated in relation to those available at the time of the 2018-2020 evaluation cycle. The introduction of a new case management application at the Court of Appeal (JUCIV) has made it possible to identify a number of cases, still listed as pending, which were in fact completed.

Q097 (2016): It is a fact that the number of appeals before the Court decreased between 2014 and 2016. A key reason is that the number of appellate judgments rendered by the court has decreased significantly. The first reason is that the court had to evacuate a large number of cases as a matter of priority under the so-called accelerated procedure provided for by the law of 18 December 2015 on international protection. For the judicial year 2015/2016, 355 judgments out of a total of 938 judgments (excluding striking off) were rendered in accelerated proceedings and therefore not subject to appeal.

Q097 (2013): 2013: because of the international events that have increased the number of asylum seekers, the administrative courts that have jurisdiction in case of appeal against a refusal of refugee status, have, in particular in 2013 but already during the 3-4 previous years, known a significant increase in this very specific litigation both at first instance level and appeal level.

Q098 (General Comment): 0

Q098 (2018): Concernant le nombre d'affaire résolues en matière d'affaire pénales grave, une baisse des recours introduits à la Cour d'appel est observée depuis ces dernières années, en conséquence les affaires terminées ont diminué en 2018. Concernant le nombre d'affaire résolues en matière d'affaire pénales mineures, le chiffre plus élevé des affaires d'infractions mineures s'explique par le fait qu'en 2017, 59 recours avaient été introduits sur des jugements du tribunal de police et que ces recours ont été traités pour partie en 2018 seulement.

Q099 (General Comment): The pending files are now detailed between criminal and civil/commercial cases, thus this additional information is now available. There is no cassation possibility against the decisions of the administrative court of appeal.

Q099 (2021): The number of incoming cases depends on the appeals lodged which the Court has no influence on and which is, among other things, a function of the number of decisions taken at the level of the other instances. In 2020, the number of decisions taken by the different instances has decreased compared to the previous years, which can explain the decreased number of incoming cases before the Court of Cassation. The legislation has not changed since the previous reference period.

Q099 (2019): Pending cases at the beginning of the year have been restated in relation to those available at the time of the 2018-2020 evaluation cycle. The introduction of a new case management application at the Court of cassation (JUCIV) has made it possible to identify a number of cases, still listed as pending, which were in fact completed.

Q099 (2018): Comparing 2016 to 2018, the increase in pending cases at the end of the period is 40.73%. However, there was already a clear increase in cases pending at the end of the period between 2016 and 2017, which is largely explained by a larger number of new cases in 2017. Between 2017 and 2018, the variation in cases pending at the end of the period is + 5%, which does not seem excessive, especially taking into account the low numbers.

Q099 (2017): Q99: total and civil and commercial litigation cases: the slight increase in the number of incoming cases in 2017 and the relatively stable number of resolved cases explain the increase in the number of pending cases at the end of 2017 to 109 .

Q099 (2014): 2014: several categories are in NAP because the Court of Cassation has no jurisdiction over these categories.

Q100 (General Comment): The Court of cassation makes a legality control, independant from the severity of the infraction. The pending files are now detailed between criminal and civil/commercial cases, thus this additional information is now available.

Q100 (2020): "The number of new cases depends on the appeals filed, on which the Court has no influence, and which is, among other things, a function of the number of decisions taken by the other courts. In 2020, the number of decisions taken by the different instances has decreased compared to the previous years, which can explain the decrease of new cases at the Court of Cassation. The legislation has not changed since the previous reference period.
The decrease in pending cases can be explained by the decrease in new cases in 2020, since the number of decisions taken remained stable between 2018 and 2020.
"

Q101 (General Comment): The unavailability of the number of pending and incoming criminal cases is explained by the specific organisation of the workflow between courts and prosecution offices. Cases are only transferred to the courts shortly before the hearing and, if a case is not heard on the given date, it is physically returned to the prosecution until the new hearing date. Thus, there are - with a few exceptions - no cases pending before the criminal courts over a long period of time, and the number of incoming cases is more or less equal to the number of resolved cases.

Q101 (2021): "Robbery cases": After the strict health measures in 2020, robbery cases dealt with by criminal and correctional chambers of the courts returned in 2021 to a level 17% above the level observed in 2018.
"Intentional homicide": After the strict health measures in 2020, the number of resolved intentional homicide cases returned in 2021 to a level 5% higher than in 2018.

Q101 (2020):
"""Contentious divorce"": compared to the figures provided for the court systems assessment for 2018, new divorce cases had already increased significantly in 2019. It appears that at the end of 2018, there were a number of pending divorce petitions, awaiting the entry into force of the June 27, 2018 law establishing the family court judge (JAF law) on November 1, 2018. During the first two semesters of 2019, divorces were pronounced in a dual regime: on the one hand, cases filed under the old law were evacuated, and the JAF law, providing for very short deadlines, made it possible to close a greater number of cases in less time than was the case under the old procedure. Compared to the 1,070 new cases recorded in 2019, there is actually a 14% decrease in new cases in 2020.
""Robbery with violence"" The decrease observed between 2018 and 2020 of 23% of completed cases in violent robbery can be explained on the one hand by the decrease in new cases in this area and on the other hand by the general decrease in judgments issued during 2020 and related to the health situation.
Voluntary manslaughter cases include attempted homicides. The observed decrease between 2018 and 2020 of 27% of completed cases in intentional homicide can be explained on the one hand by the decrease in new cases in this area and on the other hand by the general decrease in judgments handed down during the year 2020 and related to the health situation. "

Q101 (2019): Compared to 2018 data, the number of incoming divorce cases has increased significantly. It seems that at the end of 2018, there was a number of pending divorce petitions, awaiting the entry into force of the law of 27 June 2018 establishing the family court judge (JAF law) on 1 November 2018. During the first two semesters of 2019, divorces were pronounced under a dual regime: on the one hand, cases filed under the old law were dismissed, and on the other hand, the JAF law, which provides for very short deadlines, made it possible to close a greater number of cases in less time than was the case under the old procedure.
“Cases relating to asylum seekers”: as we previously indicated in our 2018 comment, variations in the number of incoming and the number of resolved cases depend on factors external to the administrative courts. The variations are probably related to applications for international protection and especially the decisions taken in relation to these applications by the Ministry of Foreign and European Affairs (see https://maee.gouvernement.lu/content/dam/gouv_maee/directions/d8/publications/statistiques-en-mati%C3%A8re-d-asyle/Bilan-2019-Asile-Immigration-et-Accueil.pdf).

Q101 (2018): With regard to the number of incoming divorce cases, compared to the numbres provided for the 2017 scoreboard, they increased by only 8%. Since 2017, we have seen an acceleration in the number of divorce applications in 2018 since, before the entry into force of the law of the 27th of June 2018 establishing the Family Court (JAF law) and reforming the divorce procedure, many proceedings initiated under the former law were dismissed as a priority. In addition, the numbers for asylum seeker cases have decreased by 5% compared to the numbers available for 2017. The variation in incoming cases and resolved cases is linked to factors which are external to administrative courts and it is probably linked to the decrease in 2018 in applications for international protection and especially in decisions taken in relation to these issues. Finally, the number of cases resolved in 2016 concerning the entry and residence of foreigners was particularly high, this can be explained, among other things, with the creation of a new chamber in 2016 at the Administrative Court, the complexity of the cases, which can vary, as well as the delays in the investigation which can affect the date of delivery. The number of resolved cases related to the right of entry and residence of foreigners remains unchanged from the cases resolved in 2017.

Q101 (2017): Litigious divorce cases: The increase in the number of incoming cases in 2017 may have its origin in the fact that parliamentary proceedings had been initiated to reform the existing divorce procedure, which was intended to repeal the contentious divorce procedure. The Act of 27 June 2018 establishing the Family Court (juge aux affaires familiales) and reforming divorce and parental authority was initially supposed to come into force in the beginning of 2018 but it will only come into force on 1 November 2018. This law is also amending: 1. the New Code of Civil Procedure; 2. the Civil Code; 3. the Criminal Code; 4. the Social Security Code; 5. the Labour Code; 6. the amended Act of 11 November 1970 on the transfer and seizure of work pay and pensions; 7. the amended Act of 7 March 1980 on the organisation of the judiciary; 8. the amended law of 10 August 1992 on the protection of young people; 9. the amended law of 27 July 1997 on insurance contracts; 10. the amended law of 9 July 2004 on the legal effects of certain partnerships; 11. the law of 27 June 2017 adopting a multiannual programme for recruitment to the judiciary and amending the amended law of 7 March 1980 on judicial organisation. In addition, an increasing number of divorces between asylum seekers can be noticed.

Cases relating to asylum-seekers (refugee status under the 1951 Geneva Convention)[incoming cases and resolved cases]: the increase in the number of incoming and resolved cases is due to factors external to administrative courts and is probably linked to the general increase in 2017 in the number of applications and decisions taken in relation to asylum claims (see https://statistiques.public.lu/fr/actualites/population/population/2018/01/20180117/20180117.pdf).

Cases relating to the right of entry and residence of aliens [resolved cases]: the number of resolved cases in 2016 was particularly high, which can be explained by, inter alia, the creation of a new chamber in 2016 at the Administrative Court, the complexity of cases which may vary as well as the length of investigation proceedings, which may affect the date of delivery of the decision.

Q101 (2016): For insolvency cases the number of incoming and resolved cases is identical because these cases are treated immediately.
Q101 (2013): The number of employment dismissal cases corresponds to the incoming cases brought before the three competent courts. All these cases, with some exceptions, are generally heard and resolved within a few months. Regarding insolvency cases, they are all considered as urgent and are heard, at the latest one month after they are brought before the court.

Malta

Q091 (General Comment): The vast majority of cases heard before the courts of Malta are litigious cases. Nevertheless, there is the Court of Voluntary Jurisdiction which deals with adoptions, appointment of tutor, curators and other administrators, interdiction and incapacitation and opening of secret wills.
Horizontal inconsistencies in the efficiency data are mainly derived from discrepancies in data inputting methodology. Data is also collected at a particular point in time and this means that eventual changes are not captured at the time of the submission of this information.
Q091 (2021): As from 2021, the civil litigious category includes the data of the Civil Court (Asset Recovery Section) that was established in 2021. A spike in the incoming caseload of civil litigious cases has resulted in the courts not managing to resolve enough cases in order to retain the previous levels of efficiency, despite a marginal increase in the number of resolved cases.

Q091 (2020): The lack of horizontal consistency results from recounts that happen throughout the year, and that ensure that the data is always as up to date as possible. However when taken as a global figure, horizontal consistency might then be lost.

Q091 (2019): Non litigious cases - incoming cases: The data was provided by the case managment system of the Court Services Agency and shows an increase in the incoming caseload of these cases over that of the previous year.
Non litigious cases - pending cases at the end of the reference year: The relative high number of pending cases at the end of the year compared by the previous year is the result of the increase of incoming cases but a retention in the number of resolved cases. As a result, efficiency, as expressed as a higher number of pending cases, has suffered.

Q091 (2018): This evaluation cycle contains for the first time the efficiency data of the First Hall, Commercial Section which is a new court established in April 2018. Furthermore there was a registered increase in the incoming caseload particularly of the Court of Voluntary Jurisdiction and in cases of dissolution of marriage.
The lack of horizontal consistency results from recounts that happen throughout the year, and that ensure that the data is always as up to date as possible. However when taken as a global figure, horizontal consistency might then be lost.

Q091 (2017): Apart from the provision of the new non-litigious data captured by sub-section 2.1 above, this year we also introduced the data for another civil, litigious court, namely, the Court of Voluntary Jurisdiction, established by the Civil Courts (Establishment of Sections) Order 2003, in terms of Art 2 of the Code of Organisation and Civil Procedure (Chp 12 of the Laws of Malta). The Court has jurisdiction to deal with, amongst other matters, applications related to adoptions, interdictions and incapacitations, matters related to wills and to trusts, and to specific cases falling under the Foster Care Act (Chp 491 of the laws of Malta).
As concerns pending cases at the beginning of the year, information is not available for the newly provided data, namely data from the Court of Voluntary Jurisdiction and the non-litigious data. These data will be available for the next cycle. Increases observed between 2016 and 2017 in the total of incoming and resolved cases result from the fact that new data has been added (data on non-litigious cases and data from the Court of Voluntary Jurisdiction).

Q091 (2016): Horizontal consistency: This is a problem encountered also in previous evaluations. Unfortunately this inconsistency results from the way that the data is logged, and it is practically impossible to resolve it at present. Concerning the variations between cycles: In reality, in 2015 the Administrative Review Tribunal worked real hard to reduce the pending caseload and also resolved one set of interrelated cases that translated in the conclusion of about 150 separate cases. So 2015 was a very good year in which the efficiency parameters of the Tribunal spiked. In 2016, the rhythm by which cases were being resolved went back to 2014 figures, hence the apparent decrease in the number of resolved cases between 2015 and 2016. The reduction in the pending caseload is also the result of the additional 150 odd cases that were resolved in 2015 and that dramatically reduced the pending caseload for good, even if the resolved caseload of 2016 was less than that of 2015. Concerning Administrative cases: These figures reflect the pending balance at the beginning of 2016. Throughout 2015, the Tribunal resolved one batch of related cases that resulted in a drop in the number of pending cases and a spike in the number of resolved cases.

Q091 (2014): The category “civil litigious cases” covers family mediation cases and cases before the Court of revision of notarial acts and the Small Claims Tribunal. In 2014, another magistrate started presiding over the Administrative Review Tribunal thereby increasing the judicial complement by 2 members. This change resulted in an increase in the number of resolved cases. Following an internal exercise carried out by the Court Administration, cases that have been prescribed, have been cleaned from the system.

Q091 (2013): In 2013, the number of administrative law cases continued increasing. The Administrative Court was created in 2010. Over the time, the number of areas of competence of the Administrative Court has increased, which resulted in an increased caseload.

Q091 (2012): The Administrative Court was set up in late 2010, as a result of which, figure given in the previous report reflected the operation of the Court over a couple of months only. For 2012, the communicated figures reflect the operation of the Court over a twelve month period.

Q092 (General Comment): The non-litigious case category is codified under Art 166A of the Code of Organisation and Civil Procedure (COCP), Chp 12 of the Laws of Malta.

Q094 (General Comment): In the Maltese legal system, all proceedings which appear before the Court of Magistrates may be punishable with a fine or imprisonment, bar a few contraventions which still appear before the Court of Magistrates and it is not possible to obtain data relating to these few cases. Nevertheless, all cases which lead to an imprisonment of ten years or more can only be heard by the Criminal Court whilst cases between 2 and 12 years may be heard by the Court of Magistrates only once the procedure before it as a Court of Criminal Inquiry is completed. Since in Malta the vast majority of the cases contemplate the possibility of imprisonment, barring a few contraventions, the cases indicated as misdemeanors/minor offences, are those cases which are heard by the Court of Magistrates (excluding those being heard as a Court of Criminal Inquiry) having a maximum punishment of 2 years imprisonment while the cases indicated as 'severe criminal offences' are those having a punishment of over 2 years (Criminal Court & Court of Criminal Inquiry).

Q094 (2020): Given that the categorisation of criminal offences in Malta does not exactly match with the CEPEJ definitions provided, only the total of such cases is being reported. An actual breakdown of the figures quoted above is as follows:
- Pending 1st January 2020 = 11899 (79 cases Criminal Court and 11820 cases Court of Magistrates)
- Incoming cases 2020 = 11086 (17 cases Criminal Court and 11069 cases Court of Magistrates)
- Resolved cases 2020 = 7321 (5 cases Criminal Court and 7316 cases Court of Magistrates)
- Pending cases 31st December 2020 = 15883 (89 cases Criminal Court and 15794 cases Court of Magistrates)

The lack of horizontal consistency results from recounts that happen throughout the year, and that ensure that the data is always as up to date as possible. However when taken as a global figure, horizontal consistency might then be lost.
The decrease in the number of incoming and resolved cases, and the ensuing high number of pending cases, results from the restrictions imposed by the pandemic on the functioning of the Courts of Law.

Q094 (2018): Given that the categorisation of criminal offences in Malta does not exactly match with the CEPEJ definitions provided, only the total of such cases is being reported. An actual breakdown of the figures quoted above is as follows:
- Pending 1st January 2018 = 11887 (61 cases Criminal Court and 11826 cases Court fo Magistrates)
- Incoming cases 2018 = 13817 (19 cases Criminal Court and 13,798 cases Court of Magistrates)
- Resolved cases 2018 = 14168 (8 cases Criminal Court and 14140 cases Court of Magistrates)
- Pending cases 31st December 2018 = 11589 (72 cases Criminal Court and 11517 cases Court of Magistrates)

The lack of horizontal consistency results from recounts that happen throughout the year, and that ensure that the data is always as up to date as possible. However when taken as a global figure, horizontal consistency might then be lost.
The decrease int he number of incoming and resolved cases is a phenomenon we are observing over the past years. The discrepancy between the data of 2016 and 2018 makes sense when one looks at the 2017 data that also shows a decrease in the caseloads from 2016. It is to be noted that the incoming caseload in 2018 is actually a bit higher than that of 2017.

Q094 (2016): In the Maltese legal system, all proceedings which appear before the Court of Magistrates may be punishable with a fine or imprisonment, bar a few contraventions which still appear before the Court of Magistrates and it is not possible to obtain data relating to these few cases. Nevertheless, all cases which lead to an imprisonment of ten years or more can only be heard by the Criminal Court whilst cases between 2 and 12 years may be heard by the Court of Magistrates only once the procedure before it as a Court of Criminal Inquiry is completed. Since in Malta the vast majority of the cases contemplate the possibility of imprisonment, barring a few contraventions, the cases indicated as misdemeanors/minor offences, are those cases which are heard by the Court of Magistrates (excluding those being heard as a Court of Criminal Inquiry) having a maximum punishment of 2 years imprisonment while the cases indicated as 'severe criminal offences' are those having a punishment of over 2 years (Criminal Court & Court of Criminal Inquiry).
This definition of severe/minor-misdemeanor cases is not fully consistent with the definition built by CEPEJ and therefore a comparison is not possible with the previous cycles. According to the Maltese categorization of cases, the number for severe criminal cases in 2016 is as follows: pending on the 1st Jan of Ref Year = 3054; Incoming cases = 827; Resolved cases = 1143; Pending cases on the 31st Dec of Ref Year = 2736. The number for minor/misdemeanor criminal cases is as follows: pending on the 1st Jan of Ref Year = 10571; Incoming cases = 15887; Resolved cases = 15682; Pending cases on the 31st Dec of Ref Year = 10805.

Q094 (2013): The 2014 data is derived from the official court statistics that are also available online at www.justiceservices.com. The horizontal discrepancy in the data at point 6 cannot be verified since the data collection in the criminal courts is not as yet automated.
Q097 (2020): The decrease in the Incoming caseload results from the disruption of the pandemic on the court operations.
In the second instance courts, we are still unable to distinguish precisely between the cases that are appealed. Thus, Administrative law cases are included in the number of Civil (and commercial) litigious cases.

Q097 (2019): Total other than criminal cases - resolved cases: The data shows an increase in the resolved cseload of the 2nd instance courts and in fact, the pending caseload at the end of the year is less than that registered in 2018. These courts were more efficient in 2019.
Q097 (2017): In Malta, the civil second instance courts comprise the Civil Court of Appeal in its Inferior and Superior Jurisdiction. To date, whilst we can collect the data relating to the incoming, resolved and pending caseloads of these courts, we cannot easily distinguish between the sub-divisions of case typology outlined above. What we can tell for sure is that all cases filed before the Courts of Appeal are civil and commercial litigious cases (including a minority of administrative law cases) so the figures provided at Category 1 reflect the global total of cases heard at the second instance courts. Non-litigious cases are not filed before these courts (hence NAP answers).
Concerning the variation between 2016 and 2017 in the pending cases older than 2 years, the reason is due to a different methodology used in 2016 and in 2017.

Q097 (2016): Regarding Civil (and commercial) litigious cases: 2015 was the best year in terms of number of resolved cases, mainly because the judiciary were trying hard to conclude cases that were ready for sentencing. In fact, our efficiency indicators reflected this effort. As regards to the other data, we do not, as yet, have those statistics at hand and hence, the last 3 evaluations were marked as NAP.
Q097 (2014): The discrepancy in the data provided for 2014 as “pending cases on 31st December 2014” results from an internal exercise being carried out by the Court Administration in which cases that have been prescribed, are being cleaned from the system. This exercise is going to be carried out more frequently so that it does not reflect in discrepancies in the data that is published.
Q097 (2013): The significant increase of the number of civil and commercial litigious cases between 2010 and 2013 was due to the fact that the number of appeals has increased substantially in the past few years and the jurisdiction of the Court of Appeal has been extended to include also appeals from large public contract awards. Accordingly, the Court of Appeal was not in a position to manage the considerable influx of cases.

Q097 (2012): In 2012, a number of judges in the Appeal Court retired and their replacement took some time to materialise, as a result of which, the number of decided cases decreased.

Q098 (2021): During 2021, the criminal courts were still largely effected by Covid restrictions. Given that these particular courts did not introduce video-conferencing, it was not possible to counteract the increasing incoming caseload with an equally increasing resolved caseload. As a result of this imbalance, the efficiency parameters of the criminal courts suffered. Having said this, following the removal of the pandemic restrictions, sincere efforts have been made in order to restore the efficiency of the criminal courts to the former levels.

Q098 (2020): The above data reflects the aggregate scores of the Criminal Court of Appeal in its Superior and Inferior Jurisdiction.
The pandemic restrictions effected the caseload of the Court.

Q098 (2018): Given that in the Maltese legal system, the definition of severe/ minor-dismeneanor cases is not fully consistent with the definition built by CEPEJ, the data for these types of cases for Malta, is going to be presented within this section: For severe cases: Pending caseload at 1st January 2018 = 32; Incoming cases = 6; Resolved cases = 14; Pending cases on the 31st December = 21. Minor/ misdemeanour criminal cases: 1st January 2018 = 1266; Incoming cases = 445; Resolved cases = 644; Pending cases on the 31st December = 1018.

Q098 (2016): There was an increase in the pending caseload of the Court of Criminal Appeal, Inferior Jurisdiction.
In the Maltese legal system, the definition of severe/minor-misdemeanor cases is not fully consistent with the definition built by CEPEJ and therefore a comparison is not possible with the previous cycles. According to the Maltese categorization of cases, the number for severe criminal cases in 2016 is as follows: pending on the 1st Jan of Ref Year = 26; Incoming cases = 15; Resolved cases = 10; Pending cases on the 31st Dec of Ref Year = 32. The number for minor/misdemeanor criminal cases is as follows: pending on the 1st Jan of Ref Year = 1214; Incoming cases = 629; Resolved cases = 485; Pending cases on the 31st Dec of Ref Year = 1358.

Q098 (2012): In 2012, the increase of the number of criminal cases resulted from the fact that for some time the number of judges hearing the appeals, particularly in the Criminal Court of Appeal (Inferior Jurisdiction), was reduced due to retirement and re-allocation of duties. Accordingly, the number of appeals in the inferior jurisdiction increase considerably.

Q099 (2017): In Malta the 2nd instance courts are the highest instance. Hence the NAP answer to this section.

Q099 (2016): In Malta the 2nd instance courts are the highest instance. Hence the NAP answer to this section.

Q100 (2018): NA

Q101 (2021): There was a registered increase in insolvency cases throughout 2021 that has been confirmed by the Court Services Agency.

Q101 (2020): Less incoming and resolved cases due to court closure.

Q101 (2019): Following the establishment of the Civil Court, Commercial Division, a number of insolvency cases previously filed before other courts were still being transferred to the new Court and hence the relatively high number of incoming cases in previous years. The Commercial Court is now fully operational and receiving new cases filed before it. Hence this figure is presumed to reflect more faithfully the cases of insolvency filed within a year.

Q101 (2017): The employment dismissal cases are not heard by the courts but rather by the Industrial Tribunal which is separate from courts and has no connection whatsoever to courts or the Ministry of Justice. Cases related to asylum seekers are processed by the Refugee Commission and heard by the Refugee Appeals Board, which is an entity separate from the courts. Therefore such data is NAP. The Office of the Refugee Commissioner (RefComm) is regulated by The Refugees Act, Chp 420 of the Laws of Malta, and its main responsibly is to receive, process and determine applications for international protection in Malta, as stipulated by the Refugees Act, amended by Act VI and VII in 2015 and its Subsidiary Legislation 420.07 on Procedural Standards in Examining Applications for Refugee Status Regulations. This Office is also bound by the obligations assumed by Malta under the 1951 Geneva Convention relating to the status of Refugees and its 1967 Protocol, as well as its obligations under European Directive 2011/95/EU, European Directive 2013/32/EU and the Dublin Regulation. RefComm implements a single asylum procedure. It first examines whether the applicant fulfils the criteria to be recognised as a refugee according to law, and in the case of those applicants who do NOT meet the criteria to be recognised as refugees, the Office proceeds to examine whether the applicant fulfils the criteria for subsidiary protection according to law. The applicant is informed in writing about the decision issued by the Office of the Refugee Commissioner. The reasons in fact and in law are stated in the decision. In the case of a negative decision, applicants are informed of their right to enter an appeal against this decision to the Refugee Appeals Board. Information on how to challenge a negative decision is given in writing to those applicants whose application was rejected with regards to refugee status and/or subsidiary protection status. This is an administrative review and involves the assessment of facts and points of law. An asylum seeker has 2 weeks to appeal since the day in which the written negative decision by the Refugee Commission has been received. Whilst the Refugee Appeals Board does not accept late appeals, it does have suspensive effect.
An onward appeal is not provided in the law in case of a negative decision from the Refugee Appeals Board. However, judicial review of the decisions taken by the Board is possible before the First Hall of the Civil Court, limited only to an enquiry into the validity of the administrative act. However, such information is not available. Judicial review does not deal with the merits of the asylum claim, but only with the manner in which the concerned administrative authority reached its decision. At this stage, applicants could be granted legal aid if eligible under the general rules for legal aid in court proceedings.

Q101 (2016): Litigious cases: the number of incoming and resolved cases has been on the increased every year.

Netherlands

Q091 (General Comment): In the Netherlands, some registers are kept by the judiciary. Those do not include a land- or business registry, see www.rechtspraak.nl/registers. Most registers are related to debt, bankruptcy and help or surveillance of people who are unable to handle their financial situations. Also, there is a register with ‘nevenfuncties’ (jobs and positions held by judges next to their judgeship). Mutations in these registers are not counted as court cases. The Dutch system does not count mutations in the registers as court cases, so ‘other registry cases’ is NAP.

Q091 (2021): In previous years, we were able to produce the number of incoming and pending cases for categories 1, 2 and 2.1, but not this year. The Judiciary has decided on a different norm for one of the components needed for this number, so these numbers are no longer available.
Q091 (2020): Administrative law cases include tax cases and immigration / asylum cases.
First instance cases at Council of State, Court of Appeal, including trade tribunal, are excluded.
In the Netherlands, there are some registers that are kept by the judiciary. Those do not include a land- or business registry, see www.rechtspraak.nl/registers. Most registers are related to debt, bankruptcy and help or surveillance of people who are unable to handle their financial situation. There is also a register with so-called ‘nevenfuncties’ (a list of jobs and positions held by judges next to their judgeship). Mutations in these registers are not counted as court cases. For the category ‘other registry cases’ the answer is NAP, as the Dutch system does not count mutations in the registers as court cases.

Q091 (2019): In The Netherlands, there are some registers which are kept by the judiciary. These do not include a land- or business registry (see www.rechtspraak.nl/registers). Most registers are related to debt, bankruptcy and help or surveillance of people who are unable to handle their financial situation. There is also a register with so-called 'nevenfuncties' (a list of jobs and positions held by judges next to their judgeship). Mutations in these registers are not counted as court cases. For the category 'other registry cases', the answer is NAP, as the Dutch system does not count mutations in the registers as court cases.

Q091 (2018): In the Netherlands, there are some registers that are kept by the judiciary. Those do not include a land- of business registry. See: https://www.rechtspraak.nl/Registers
Most registers are related to debt, bankruptcy and help or surveillance of people that are unable to handle their financial situation. There is also a register of 'nevenfuncties', which lists all the jobs/positions that judges fulfill next to being a judge. Mutations in these registers are not counted as court cases. For the category "other registry cases", since the Dutch system does not count mutations in the registers as court cases, the answer is NAP.

Q091 (2017): None

Q091 (2016): Number of administrative law cases litigious plus non-litigious.
In 2016, there has been a strong decrease in numbers of cases compared to 2014. This decrease pertains to the group of misdemeanours, in particular the group of traffic offences ("Mulder Law"). The cases of "vorderingen dwangsom" (coercive detainment) are no longer treated by the Public Prosecution. This following complaints at the Ombudsman. These coercive detainment cases increased at first strongly in 2013 and 2014. But after that decision of the Public Prosecution The "Mulder Law" cases decreased from 200.000 in 2014, via 100.000 in 2015 to 40.000 in 2016.

Q094 (General Comment): Classification of minor and severe cases:
Minor offences – mainly traffic offences (speeding tickets, running red lights), petty theft, vagrancy, littering, etc.
Severe offences – driving while drunk, grand theft, violent crimes, vice, drugs/narcotics etc.
Q094 (2020): Classification of severe and minor cases:
Minor offences: mainly traffic offences (speeding tickets, running red lights) and petty theft, vagrancy, littering, etc.
Severe offences: driving while drunk, grand theft, violent crimes, vice, drugs/narcotics, etc.
Effects of the pandemic:
No in person hearings happened in the period between 17 March and April 6 2020. At the start of the pandemic, not everyone was able to work remotely due to insufficient available laptops and that many files were still coming in on paper. There were some exceptions for working remotely as well, such as security, some administrative staff (people that compiled paper files, for example), etc.
Some measures were taken: hearing in other buildings, online or hybrid, and hearings in the evenings. The age restriction for judges was upped from 70 years old to 73 years old, more criminal orders were handled by the public prosecution and more cases were handled by one judge instead of more (enkelvoudig versus meervoudig)

Q094 (2016): In 2016, there has been a strong decrease in numbers of cases compared to 2014. This decrease pertains to the group of misdemeanours, in particular the group of traffic offences ("Mulder Law"). The cases of "vorderingen dwangsom" (coercive detainment) are no longer treated by the Public Prosecution. This following complaints at the Ombudsman. These coercive detainment cases increased at first strongly in 2013 and 2014. But after that decision of the Public Prosecution The "Mulder Law" cases decreased from 200.000 in 2014, via 100.000 in 2015 to 40.000 in 2016.

Q097 (General Comment): It is not possible to differentiate between litigious and non-litigious cases at second instance. The financial registrations at first instance make a clear distinction between types of cases (that the answer for first instance can be based upon), but for second instances this differentiation does not exist (and thus, the registration is all the same).
As to the lack of horizontal consistency that can be observed, the reason is that the official number of cases pending on January 1st is determined at different time then the other 3 categories (official incoming, official resolved, official pending on December 31st). Due to time lags in registration and dynamics in the data systems, if the cases pending on January 1st are measured at the same time as the others, the result would be different.

Q097 (2021): The number of incoming administrative law cases increased between 2020 and 2021, most probably due to the pandemic. Especially, the number of appeals for tax cases is higher in 2021.
Q097 (2020): It is not possible for us to differentiate between litigious and non-litigious cases at second instance. In short, we can provide this for first instance because the financial registrations makes clear distinction between types of cases (finances differ) that we can base that answer on, but for second instances, this differentiation in finances does not exist and thus, the registration is all the same.
Q097 (2019): .

Q097 (2018): If there is an appeal, cases are litigious in my view. I would tend to enter the value "0", but since the question is being asked, you probably see things differently. So I chose the answer "NA"
Q097 (2017): Administrative law cases, litigeous plus non-litigeous.

Q097 (2016): Administrative law cases, litigeous plus non-litigeous.

Q098 (2014): The reason for the horizontal inconsistency in 2014 is that the figures from the 4 columns of the table are not retrieved at the same time. The number of pending cases on Jan 1st is determined one year before the other 3 columns can be filled. One year later it is possible to determine the number of incoming cases, the number of resolved cases and the number of pending cases on Dec 31st. The definition of 'pending' together with dynamic changes in the registration system mean that the number of pending cases on Jan 1st will have changed. To ensure horizontal consistency, all the 4 columns should be determined after the years' end which would imply to overrule a previously determined and official (i.e. published) number of pending cases on Jan 1st.

Q099 (General Comment): Information in this section is taken from the annual report of the High Court. The formula for pending cases on 31 December might not work satisfactory – there will be a gap between pending cases at the ent of the year and the number of pending cases at the beginning of the year + incoming cases -/- resolved cases. The gap is caused by cases that are labelled 'outflow other'. These are cases that do not get resolved because of administrative reasons (for instance, the appeals is filed to late, or mandatory court fees have not been paid and there is no dispensation).

Q099 (2021): The formula for pending cases on 31 December might not work satisfactory – there will be a gap between pending cases at the ent of the year and the number of pending cases at the beginning of the year + incoming cases -/- resolved cases. The gap is caused by cases that are labelled 'outflow other'. These are cases that do not get resolved because of administrative reasons (for instance, the appeals is filed to late, or mandatory court fees have not been paid and there is no dispensation).
2 – Non-litigious cases: in theory, it might possible these cases get to the Supreme Court, but the numbers are not specified for the courts.
3 – Administrative law cases: please note that the Dutch Supreme Court only handles tax cases and some social security cases. There is not third instance court for other administrative cases in the Netherlands, so these are not included in the numbers given. 4 – Other cases: There might be other cases in separate courts, but these numbers are not nationally available. Regarding discrepancy: There are always factors that might influence the number of cases the SC handles in a year. There are no published numbers identifying the various types of cases the tax chamber handles. As mentioned before, we can provide a more general explanation for an increase in SC cases and/or disposition time. For example, delays or catch up in lower courts (increasing/lowering the number of incoming cases), new laws or changes in law that the SC must answer, cases may become more complex due to increasing complexity of laws and differences (and thus, cases may take longer), or cases that are connected are grouped to deal with in clusters (meaning more cases for a longer time). While a specific cause cannot be clearly pinpointed, all these factors might influence the numbers.

Q099 (2020): With regard to 2. Non litigious cases: In theory, it is possible these cases get to the Supreme Court, but these cases are not specified in available numbers for the courts.
With regard to 3. Administrative law cases: Please note that the Dutch Supreme Court only handles tax cases and some social security cases. There is no third instance court for other administrative cases in the Netherlands, so these are not represented in this number.
With regard to 4. Other cases: There might be other cases in separate courts (Kamers), but these numbers are not available nationally.
With regard to the discrepancies: there are always some factors that might be of influence on the number of cases the Supreme Court handles in a year. It might be due to delays or catch ups in lower courts (so incoming cases are lower/higher), new laws or changes in law that the SC must answer (like covid-regulations), cases may become more complex because laws and differences are more complex (as a result cases may take longer), or cases that are connected that are grouped to deal with in clusters (meaning more cases for a longer time). While we cannot clearly pinpoint a 'cause' of the discrepancies, all these factors mentioned might influence the numbers.

Q099 (2019): Reason for discrepancies: discrepancies seem higher, as absolute values are lower. When asked, the High Court explains that there is always an eb and flow of cases due to several factors.
Q099 (2018): Cases handled by the High Court are 'litigious' by nature (= cases are settled at first instance if one party remains inactive)
Q099 (2017): the answer to this question is still not available.
Q099 (2016): A the moment the Supreme Court has not the data available to answer this question. The National Correspondent is consulting the Supreme Court to improve this situation.

Q100 (General Comment): No distinction is made between severe criminal cases, misdemeanors and/or minor criminal cases in the numbers and accounts kept by the Dutch SC.
The gap in horizontal consistency is caused by cases that are labeled as 'outflow other' (in Dutch: uitstroom overig). These are cases that do not get resolved because of administrative reasons (for instance: the appeal is filed too late, or mandatory court fees have not been paid and there is no dispensation).

Q100 (2021): No distinction is made between severe criminal cases, misdemeanors and/or minor criminal cases in the numbers and accounts kept by the Dutch SC.
Pending cases at the end of the year are not equal to the number of pending cases at the beginning of the year + incoming cases - solved cases

Q100 (2020): In the numbers and accounts that are kept by the Dutch Supreme Court, no distinction is made between severe criminal cases and misdemeanours and/or minor criminal cases.
With regard to the discrepancies: there are always some factors that might be of influence on the number of cases the Supreme Court handles in a year. It might be due to delays or catch ups in lower courts (so incoming cases are lower/higher), new laws or changes in law that the SC must answer (like covid-regulations), cases may become more complex because laws and differences are more complex (as a result cases may take longer), or cases that are connected that are grouped to deal with in clusters (meaning more cases for a longer time). While we cannot clearly pinpoint a 'cause' of the discrepancies, all these factors mentioned might influence the numbers. The gap of 213 is caused by cases that are labeled as ‘outflow other’ (in Dutch: uitstroom overig). These are cases that do not get resolved because of administrative reasons (for instance: the appeal is filed too late, or mandatory court fees have not been paid and there is no dispensation).

Q101 (General Comment): There are a few numbers available, but NL does not register whether cases are litigious or not in the manner asked here.
Q101 (2020): There are some numbers available on this, but we don’t register whether cases are litigious or not in this manner.
Q101 (2018): As for the number of resolved employment dismissal cases, it dropped significantly in recent years, most probably because of the shortage in labour or low unemployment
Q101 (2017): The distinction of litgious cases is only available for resolved cases.

Q101 (2016): A the moment the Supreme Court has not the data available to answer this question. The National Correspondent is consulting the Supreme Court to improve this situation.

Poland

Q091 (2021): * administrative law cases - It is difficult to identify, apart from the COVID-19 pandemic, any particular reason for the increase in the number of cases brought before provincial administrative courts. A particularly large increase in the number of cases submitted to administrative courts concerned complaints about the inaction of public administration bodies and the protracted conduct of proceedings by these bodies. The increase in the receipt of such complaints in 2021 was 73.2 % compared to 2020. This may also be indicative of some backlog in public administration due to the numerous pandemic restrictions in 2020.

Q091 (2020): Comments: The discrepancies in Table 91. First instance courts: number of other than criminal law cases - compared to the previous periods (2018 and 2019) are mainly due to combinations of two reasons. First - the COVID19 pandemic, which significantly reduced case inflow to the courts (in some type of cases even by several dozen of percent), reduced the number of resolved cases and pendig cases as well. The second factor, which in contrary - caused increase in the volume of cases registered in court system was the inflow of cases related with conversion of the right of perpetual use of built-up land for residential purposes into land ownership (2.2.1 - Non litigious land registry cases). In 2020, there were more than a million incoming cases of this type (in 2019 – more than 2,5 million), which also resulted in an increase in the number of resolved cases in this area, as well as pending cases for the next reporting period.
Administrative law cases: the main reason for the slight slowdown in casework was the pandemic.

Q091 (2019): The discrepancies in section 4.2.2. Case flow management - first instance - compared to the previous period mainly concern the data shown in point 2.2.1 Non-litigious land registry cases.
In explaining the above, it should be emphasized that the general state of cases in courts of first instance in 2019 was related to cases brought to the land registry departments with regard to the conversion of the right of perpetual use of built-up land for residential purposes into land ownership. In 2019, more than 2 million incoming cases of this type, which also resulted in an increase in the number of resolved cases in this area, as well as pending cases for the next reporting period.
It should be noted that after excluding from the analysis all cases considered in Land Registry Departments, the impact of cases and settlements in 2019 were almost at the same level as in the previous year.

Q091 (2018): The discrepancy between 2016 and 2018 was realised in 2017 due to the increasing number of mostly non-litigious cases. More details in 2017 data.
Number of pending cases in the category 2.1. General civil (and commercial) non-litigious cases has dropped slightly. That situation is caused by high effectiveness of courts. Number of resolved cases is higher than number of incoming cases. That situation has maintained since 2017.
Higher number of pending cases in Non-litigious business registry cases is temporary and it is a result of higher number of initiated compulsory proceedings. If it is ascertained that the application for entry in the Register or compulsory documents have not been submitted despite expiry of the deadline, the registry court shall call on the obliged parties to submit them.
We observed that the effectiveness of courts has increased and therefore number of pending cases in mentioned category has dropped at the end of the year.
In regard to non litigious land registry cases we observe in Divisions of Land and Mortgage higher staff turnover. It contributes to problems with solving cases, therefore number of pending cases has increased.
In regard to “other” cases we have observed significant increasing of incoming cases without specified category. In this category we include following cases: exemption from costs, reconstruction of files, affidavit of assets, excluding judge etc.
Higher number of pending cases on 31 Dec. is a consequence of high number of in incoming cases during the year. It was probably temporary situation.

Q091 (2017): As to a general explanation for discrepancies in 2016 to 2017 data, it has to be stated that in 2016, there was a substantial number of incoming non-litigious cases, mostly general civil cases, but also registry cases (around 700k cases total).
This important number of cases was not resolved and the backlog remained important at the end of the year. This could explain the large difference of pending cases between 1 Jan 2016 and 1 Jan 2017.

2.1. In 2016 there were serious problems with the information system which is in use in electronic proceedings therefore the number of pending cases on 1 Jan. ref. year has increased. In 2017 we did not notice any problems with mentioned system, so the number of resolved cases has increased significantly. At the same reason the number of pending cases on 31 Dec. 2017 has dropped.
We indicate that fluctuation of the number of cases can be also caused by implemented organizational changes in courts (changes in staff, changes in the organization of work). 2.2. Registry cases (2.2.1+2.2.2+2.2.3) discrepancies are justified in points 2.2.1 and 2.2.2.
2.2.1. Non litigious land registry cases. Higher number of pending cases (on 1 Jan. ref. year and on 31 Dec. ref. year) is caused by Higher number of incoming cases than resolved cases. This situation is related to large-scale investments in infrastructure in Poland Building new roads is closely connected with changes in land registry. We need to indicate that courts have to cope with large number of difficult cases. (Mentioned reason is related to resolved / incoming cases)
2.2.2. Within the changes in business registry cases we can observe significant increase in all types of Application for registration
(first registration) cases, but there is also considerable increase in general business cases (changes in the registry, including cases of
removing from registry). We indicate that it could be caused by fluctuation in compulsory proceedings. Mentioned proceedings are carried on in the cases where it is found that an application for an entry in the National Court Register or the documents whose submission is obligatory were not submitted despite the lapse of the time limit. The registry court shall summon the obliged persons to submit them, and shall set an additional 7-day time limit. We emphasize, that the registry court shall discontinue the compulsory proceedings, if it can be concluded from the circumstances of the case that the proceedings will not lead to the fulfilment of the mentioned obligation. (Mentioned reason is related to resolved / incoming and pending cases)
2.2.3. and 2.3. - Categories do not exist in our judicial system.

Q091 (2016): Within the changes in business registry cases we can observe significant increse in all types of Application for registration (first registration) cases, but there is also considerable increse in general business cases (changes in the registry, including cases of removing from registry).
In 2016 there were serious problems with the information system which is in use in electronic proceedings therefore the number of pending cases had incresed.
Q094 (General Comment): Severe criminal cases include all offences under the Penal Code, Penal Fiscal Code and offences specified in other Acts. Misdemeanours are cases conducted under the Petty Offence Code.
The category “Other cases” covers the rest of cases conducted in criminal courts which are not connected directly with the severe criminal cases or misdemeanours (mainly cases conducted under the Code of Criminal Procedure and Petty Offences Procedure Code).

Q094 (2020): The discrepancies in Table 94. First instance courts: number of criminal law cases - compared to the previous period (2018) are mainly due to two reasons. First – the COVID19 pandemic which reduced the inflow of Misdemeanour and / or minor criminal cases (p. 2). Second – in 2020 release the number of Other cases (p. 3) was added to the table. It significantly increased the number of total cases shown in the line Total of criminal cases (1+2+3).

Q094 (2014): For the 2014 evaluation, changes in the statistical forms made possible the identification of some types of misdemeanor cases (mainly the organizational ones, which were not considered in 2012). Above this, there is a constant growth in the number of incoming cases.
Q094 (2012): The increase of the total of criminal cases and the number of severe criminal cases in respect of the item "pending cases on 1st January 2012" is due to the fact that since 2010, there was a significant increase of the inflow of cases.

Q097 (General Comment): The Supreme Administrative Court is also the court of second instance and it is impossible for the Statistics Division to divide its cases statistics and identify the number of second instance cases on the one hand, and the number of third instance cases, on the other hand. The total number of administrative law cases dealt with by the Supreme Administrative Court is provided within the frame of Q97, while Q99 is replied by NA.
The category „Other cases" includes appeals and complaints concerning social insurance, minors and others.

Q097 (2021): The category „Other cases" includes appeals and complaints concerning social insurance, minors and others.
* administrative law cases - The figures given to you on the receipt of cases at the Supreme Administrative Court and their settlement were affected primarily by two circumstances, i.e. changes in the organizational structure of the Supreme Administrative Court (NSA) and the related transfer of cases between departments, and, as indicated above, restrictions on court operations due to the declared epidemic state in Poland.
As of January 1, 2021, new additional adjudicatory divisions were established in the Finance Chamber and the General Administrative Chamber. Some cases from Divisions I and II of both chambers were transferred to the newly created Division III. These actions had a significant impact on the way the statistics were read.
According to the data provided to you, in 2020 the NSA completed 15786 cases registered in the "SK" repertory (cassation complaints, complaints for the resumption of proceedings). However, this number includes not only cases completed by issuing a substantive decision, but also cases closed due to their transfer to a new department. There were 3115 such cases in 2020. Given the above, the real efficiency in 2020 was 88%, not 110% as reported. Cases closed in the Finance Chamber of the Supreme Administrative Court in 2020 were, in turn, in large part added to the impact in 2021, for they were re-registered in another judicial department.
The re-registration of the aforementioned cases in the Financial Chamber, as well as the re-registration of cases in the General Administration Chamber for similar reasons (4079 cases) were recorded in the total number of cases received by the NSA in 2021. Hence, 7194 cases (re-registered) would have to be deducted from the total number of 26873, which was given to you in earlier correspondence. Thus, the real flow of new cases to the NSA was 19679.
The data on the completion of cases for 2021 shows that 17111 cases were completed at the NSA. It should be noted that this figure also includes cases closed in the General Administration Chamber due to their transfer to Division III. Such cases, as mentioned, were 4079. Thus, it can be assumed that in 2021 the NSA completed 13032 cases through their substantive settlement. These data, in turn, allow us to assume that the NSA's adjudication efficiency in 2021 was 67%.
Despite the decrease in efficiency in 2021 compared to the previous year, it should be noted that in 2021 the NSA settled more cases than in 2020. On the other hand, undoubtedly, the higher inflow of cases to the NSA was due to the increased number of complaints filed with provincial administrative courts, as discussed in more detail in point 1. The increased inflow of cases to the NSA was also due to a partial blockage in the circulation of documentation between administrative courts of both instances, which occurred especially during the first phase of the pandemic (March-May 2020). During this period, far fewer cases were submitted to the NSA, which consequently translated into an increase in impact in the following months of 2020 and 2021. In turn, referring to issues related to the number of cases handled at the NSA in 2021, one can additionally point to staff shortages resulting from the retirement of some judges and the fact that more than a quarter of full-time positions were unfilled (more than 20% of judicial positions remained unfilled). In addition, the COVID-19 pandemic necessitated the reorganization of the Court's work by providing parties with the opportunity to attend hearings remotely. For technical reasons, fewer cases may be handled at remote hearings than at land-based hearings.

Q097 (2020): “Other than criminal law” cases: compared to the previous period (2018), decreases in the numbers of "incoming cases" before courts and "resolved cases" result from the COVID19 pandemic. As regards increases in the number of pending cases, they are due to increased amount of unresolved specific categories of cases in civil litigious procedures (e.g.claims under the loan agreement) and civil non-litigious procedures (e.g. division of the property). Administrative law cases : In 2020, the court disposed of 57.70% of all cases within 12 months, and within up to 24 months 78.66%. With regard to cassation complaints, 44.06% of cases were dealt with within 12 months. As far as complaints are concerned, 75.99% are settled within 2 months, while within 12 months the rate is 99.57%. 4. "4.Other cases": From the analysis of annual information for 2020 at the level of district courts and appellate courts in the labour and social security division, the following factors had an impact on the decrease in the degree of control of the impact (and thus the number of cases handled) and the increase in the average duration of proceedings in Ua, Uz and AUa and AUz cases in relation to 2019: - restrictions on court activity in 2020 related to the Covid-19 pandemic, due to the declaration of an epidemic state in the territory of the Republic of Poland from 20 March 2020 and the associated need for quarantine, sick leave, isolation, the need to provide care for children under 8 years of age, remote working, resulting in a reduction in the work of adjudicators, clerks and experts; - Insufficient number of experts on the list of expert witnesses compared to the number of cases requiring an opinion and the need to carry out joint or multiple expert opinions from different specialities, refusal of experts to carry out examinations necessary for their opinion (as a result of the epidemic situation in relation to SARS-CoV-2 infections), - a large number of suspended cases resulting from the regulation of the Act of 19 June 2020 on amending the Act on pensions from the Social Insurance Fund (Journal of Laws of 2020, item 1222), concerning a group of women born in 1953 (in these cases the proceedings were suspended by law as of 10 July 2020 until the pension authority issues a new decision recalculating the benefit of entitled persons, but not earlier than after 6 months from the suspension).

Q097 (2019): The decrease of Clearance Rate for 1. Civil and commercial litigious cases and 4. Other cases in 2019 compared with 2018 is caused by increased value of incoming cases. For 1. Civil and commercial litigious cases: from 141 045 cases in 2018 to 155 341 cases in 2019 (increase of 10%) and for 4. Other cases: from 41 242 cases in 2018 to 44 233 cases in 2019 (increase of 7%). The number of judges hearing in these type of cases in 2019 was at comparable level like in 2018 so the number of cases per one judge had increased automatically. In 2019, 16,844 cassation appeals (3,385 appeals less than in 2018) and 80 appeals for reopening the proceedings were submitted to the Supreme Administrative Court. From the previous period, 27,649 complaints and 28 applications for reopening of proceedings remain to be considered. In total, the Supreme Administrative Court had to consider 44,493 cassation appeals. In 2019, a total of 16,375 cassation complaints were examined. In 3,465 cases, the Supreme Administrative Court allowed the cassation appeal (21.16%), dismissed 11,721 cassation appeals (71.58%), and settled 1,189 in a different way (7.26%). Apart from cassation appeals, in 2019 the Supreme Administrative Court handled 4,665 complaints against decisions (orders) of courts of first instance, of which 715 allowed the appeal (15.36% of all appeals), and in 3,773 cases, the Supreme Administrative Court dismissed the appeal (80.88%), and it handled 177 matters in a different way (3.79%).
Moreover, the Supreme Administrative Court examined 162 complaints about violation of a party's right to hear a case in court proceedings without undue delay, of which 4 were admitted (2.47% of all settlements of this type), 60 were dismissed (37.04%), and 98 were settled in other way (60.49%).
In 2019, the Supreme Administrative Court handled 42.33% of all cases within 12 months, and 80.43% within 24 months. With regard to cassation complaints, 23.54% of the cases were settled within 12 months. In the case of complaints, 91.13% are examined by 2 months, and within 12 months, this ratio is 99.72%.

Q097 (2017): 2.2.2. There is not any specific explanation for observed increase. We can indicate only that mentioned increase is related especially to Register of Pledges.
As regards General civil (and commercial) non-litigious cases, we have validated previous data and we have made some corrections. We also indicate that a number of pending cases on 1 Jan. ref. year have been increased due to higher number of incoming cases in 2016.

Q097 (2016): Within the changes in business registry cases we can observe significant increase in all types of Application for registration (first registration) cases, but there is also considerable increase in general business cases (changes in the registry, including cases of removing from registry).
In 2016 there were serious problems with the information system which is in use in electronic proceedings therefore the number of pending cases had increased.

Q098 (General Comment): Severe criminal cases includes all offences under the Penal Code, Penal Fiscal Code and offences specified in other Acts. Misdemeanours are cases conducted under the Petty Offence Code. The category “Other cases” covers the rest of cases conducted in criminal courts which are not connected directly with the severe criminal cases or misdemeanours. Mainly these are cases conducted under the Code of Criminal Procedure and Petty Offences Procedure Code, e.g: complaints against the discontinuation of the proceedings, complaints against the application or extension of pre-trial detention, complaints against the ordering the execution of a substitute prison sentence, complaints against a failure to grant parole.

Q098 (2021): Severe criminal cases includes all offences under the Penal Code, Penal Fiscal Code and offences specified in other Acts. Misdemeanours are cases conducted under the Petty Offence Code.
The category “Other cases” covers the rest of cases conducted in criminal courts which are not connected directly with the cevere criminal cases or misdemeanours (mainly cases conducted under the Code of Criminal Procedure and Petty Offences Procedure Code).

Q098 (2020): Variations in the number of criminal law cases in 2020 compared to the previous period (2018) are mainly due to two reasons. First – the COVID19 pandemic which reduced the inflow of severe criminal cases (p. 1) and misdemeanour and / or minor criminal cases (p. 2). Second – in 2020 release, the number of Other cases (p. 3) was added to the table. It significantly increased the number of total cases shown in the line Total of criminal cases (1+2+3).

Q098 (2012): The increase of the total of criminal cases and the number of severe criminal cases in respect of the item “pending cases on 1st January 2012” is due to the fact that since 2010, there was a significant increase of the inflow of cases”.

As to the number of minor cases, there was a change in the statistical system which resulted in aggregating some categories of cases considered as minor with other criminal second instance cases. Accordingly, it was impossible to include them in the provided figures.

Q099 (General Comment): The Supreme Administrative Court is also the court of second instance and it is impossible for the Statistics Division to divide its cases statistics and identify the number of second instance cases on the one hand, and the number of third instance cases, on the other hand. The total number of administrative law cases dealt with by the Supreme Administrative Court is provided within the frame of Q97, while Q99 is replied by NA.
While the Supreme Court considers non-contentious cases, there is no inclusion of this category of cases in the internal statistics. Accordingly, the reply is NA.

Q099 (2021): *1. They include cases conducted in the Civil Chamber, the Labor and Social Insurance Chamber Chamber and the Chamber for Extraordinary Control and Public Affairs, including those with the reference NSNc
*4)The data includes cases conducted in the Chamber for Extraordinary Control and Public Affairs with the references NSK, NSKP, NZP, NZ, NSW, NSP NKRS, NWW, and NO signatures. These are cases that fall under the jurisdiction of the Extraordinary Control and Public Affairs Chamber mainly in the field of public law public, i.e., other than extraordinary complaints in both civil and criminal cases (which have been assigned to civil and criminal cases shown in boxes 99 and 100, respectively),
For example, cases in the field of telecommunications regulation, energy, competition protection, but also appeals against resolutions of the National Judicial Council.
*4)Other cases are also disciplinary cases resolved in the Disciplinary Chamber of the Supreme Court.
In the case statistics of the Chamber Civil, Labor and Social Security Chamber, as well as in the statistics of civil cases (extraordinary complaints) of the Extraordinary Control and Public Affairs Chamber, there was an increased receipt in 2021 compared to 2020.This was an increase so significant that the statistics of cases handled declined compared to 2020.It should be assumed that - similar to previous years previous years, the general reason for the less favorable statistics are further organizational changes within the Supreme Court and the impact of the dispute over judicial reform on the efficiency of the work of Supreme Court judges. In addition, following the assumption of the post of President of the Civil Chamber of the Supreme Court by prof. Joanna Misztal-Konecka, there has been a review of the observance of the order in which cases are received in their allocation to individual judges. The Office Instruction was then modified in the part concerning the system of case numbers. Some cases were then assigned new case numbers, which could lead to an artificial overestimation of the number of cases with an unchanged rate of their handling.

Q099 (2020): *Civil cases :- litigious cases heard by the civil chamber and the labour and social insurance chamber: Civil Chamber - pending cases on 1 Jan - 2596, incoming cases - 4360, resolved cases - 5518, pending cases on 31th Dec - 1438; Labour and social insurance chamber - pending cases on 1 Jan - 2161, incoming cases - 1535, resolved cases - 1938, pending cases on 31th Dec - 1758; *Other cases: - cases pertaining to public law, decided by the Chamber for Extraordinary Control and Public Issues and disciplinary cases resolved in the Disciplinary Chamber of the Supreme Court: the Chamber for Extraordinary Control and Public Issues - pending cases on 1 Jan - 149, incoming cases - 6696, resolved cases - 6710, pending cases on 31th Dec - 135; the Disciplinary Chamber of the Supreme Court: pending cases on 1 Jan - 105, incoming cases - 312, resolved cases - 395, pending cases on 31th Dec - 22; Other cases: *These increases must be explained by the election year, in which the Chamber of Extraordinary Control and Public Affairs dealt with numerous protests. This has resulted in a substantial increase in the dynamics of cases in this Chamber.
Discrepancies - Administrative law cases - see data in Q97 and general comment to that question.

Q099 (2019): 1. Civil cases = civil cases + labour and social security cases;
4. Other cases = public law cases + disciplinary cases;
3. Data from Supreme Administrative Court; “1. Civil and commercial litigious cases”: Pending cases on 1 Jan. ref. year : 2586 (civil cases) + 2010 (labour and social security cases); Incoming cases :5105 (civil cases) + 2480 (labour and social security cases); Resolved cases: 5095 (civil cases) + 2329 (labour law and social security cases); Pending cases on 31 Dec. ref. year: 2596 (civil cases) + 2161 (labour and social security cases);
“4.Other cases”: Pending cases on 1 Jan. ref year: 117 (disciplinary cases) + 215 (public law cases); Incoming cases: 269 (disciplinary cases) + 894 (public law cases); Resolved cases: 281 (disciplinary cases) + 955 (public law cases); Pending cases on 31 Dec. ref. year: 105 (disciplinary cases) + 154 (public law cases).
Public law cases and disciplinary cases were not entered in the table in 2018. Public law cases in 2018: Pending cases on 1 Jan. ref. Year – no data; Incoming cases – 293; Resolved cases – 81; Pending cases 31th December – 212; Disciplinary cases in 2018 : In 2018 the Disciplinary Chamber of the Supreme Court received a total of 161 cases, of which 52 to the First Department and 109 to the Second Department. In the First Department, in 2018, 11 cases were resolved. In the Department of the Second Disciplinary Chamber, 17 cases were considered and completed in terms of content, and 16 cases formally (data from the Supreme Court activity report for 2018).

Q099 (2016): In 2014 the Administrative Supreme court cases were not included and they are reintroduced in this cycle. In regard to administrative law cases we kindly indicate that administrative cases are excluded from the jurisdiction of the common courts. Administrative cases are proceeded by the Voivodship Administrative Courts and Supreme Administrative Court, which are only competent to proceeded such cases.

Q099 (2012): In the frame of the 2012 exercise, it has been indicated that the Supreme Court provided the Ministry of Justice with data set that allowed summing up non-criminal cases with administrative cases of the Supreme Administrative Court. Therefore it was possible to include both data-sets.

Q100 (General Comment): The Supreme Court does not divide its statistics into categories corresponding to those defined and used by the CEPEJ.

Q100 (2020): The dynamics of the movement of cases of 2020 in the work of the Criminal Chamber of the Supreme Court was due to changes of a personnel nature. In addition, some of the disciplinary cases of advocates were submitted for consideration to the Criminal Chamber on the basis of decisions of the First President of the Supreme Court made in the period until May 2020 or decisions of the President of the Supreme Court directing the work of the Criminal Chamber at a later date, as the Disciplinary Court of the Polish Bar Association refers files of disciplinary cases with cassation appeals to the Criminal Chamber, recognizing that the Disciplinary Chamber should refrain from examining them. At the same time, the above-standard involvement in the work of judges, assistants and all other employees of the Criminal Chamber allowed for an increase in the number of cases dealt with.

Q100 (2018): Number of incoming cases has increased due to implemented law changes in Code of Criminal Procedure. On 15 April 2016 entered into force regulations about complaints against appellate court judgments. Parties may complain to the Supreme Court of the Republic of Poland against an appellate court judgment revoking a judgment of the court of the first instance and referring the case for reconsideration. In the first period of functioning of mentioned regulations there were not many incoming cases. The situation changed in 2018. We have observed that many cases incoming on the base of regulations implemented in 2016. Moreover, in 2018 were carried on some organisational changes e.g. Military Chamber of Supreme Court has been closed and all cases were moved to Criminal Chamber.

Q101 (General Comment): As regards criminal cases heard in cours - only total numer of such cases is collected (without the breakdown by the type of crime commited). The breakdown by the articles of Criminal Code is used while collecting statistics on convicted persons (both in first and second instance).
Lack of horizontal consistency in the table in respect of divorce cases: in respect of this case type, he horizontal consistency is not always ensured. Sometimes the case incoming to the court as „divorce” may be adjudicated as „separation” or the case incoming to the court as „separation” may be adjudicated as „divorce”.

Q101 (2020): The discrepancies in Table 101. Number of specific litigious cases received and processed by first instance courts - compared to the previous period (2018) are mainly due to the significant increase in number of cases of personal bankruptcy (in the „incolvency” category). The amendment to the bankruptcy law made it much easier to obtain the right to bankruptcy for a natural person, therefore the number of such cases brought to court has been increasing for several last years.

Q101 (2019): *) In divorces cases the number of Pending cases on 31 Dec ref. year is not equal to pending cases on January + Incoming cases - resolved cases because some cases brought to the court as a divorce cases may be judged after a trial as a separation.
*)The number of incoming insolvency cases has been increasing in recent years, inter alia, due to the significant increase in number of cases of personal bankruptcy. The amendment to the bankruptcy law made it much easier to obtain the right to bankruptcy for a natural person, therefore the number of such cases brought to court has increased many times.

Q101 (2018): In regard to litigious divorce cases, please note that pending cases on 1 Jan. ref. year plus incoming cases minus resolved cases are not equal pending cases on 31 Dec. ref. year. In some judicial proceedings parties decided to change their decision and do not get divorce but they get separation. In that situations incoming cases are classified as divorce cases but in resolved cases they are classified as separation cases which are included in different statistical position.

Q101 (2017): Changes in insolvency cases pending on 31 Dec are probably caused by implemented organizational changes in courts.
Q101 (2016): The growth of the number of insolvency cases is a result of the amendment of The Bankruptcy and Reorganisation Act which entered into force on the 31 December 2016.
It should be noted, that this is a very important change, which simplifies the submission of requests for consumer bankruptcy. It also implemented solutions for insolvent consumers which facilitate reaching deal with their creditors. The amended regulations do not establish automatisation in declaring consumer bankruptcy - it is still a legal proceeding. Every time the consumer must fulfil a number of conditions, which are subject to an individual assessment conducted by the judge.
Since the implementation of this act, the number of incoming insolvency cases has increased singnificantly (300 in 2014, 8694 in 2016).

Portugal

Q091 (General Comment): The question 91_1 “Civil (and commercial) litigious cases”, includes the case-flow of civil justice, labour justice and juvenile justice. It does not include civil and labour enforcement cases.
Q091 (2021): The increase in the number of cases resolved on 1 January 2021 should be contextualised, in our view, within the framework of the effects of the Covid 19 pandemic and the consequent confinement, with a reflection on the functioning of the courts in 2020, considering that in certain periods face-to-face services were interrupted or conditioned.

Q091 (2020): The decrease in the number of Civil (and commercial) litigious cases reflects the effects of the Covid 19 pandemic and the consequent lockdown, that had an impact on the functioning of the courts, considering that in certain periods face-to-face services have been interrupted or conditioned.
On 1 September 2013, the new Code of civil Procedure entered into force, establishing a new regime for the enforcement action in Portugal, based on a new paradigma, which states that the processes that run in court must stand out clearly – those who are dependent on the commission of an act of the judge or the secretary – from those who run out of court. This new model, which enables a new way of organizing tasks, of work monitoring ando f differentiating responsabilities is provided for in Article 551, paragraph 5 of the new Code of Civil Procedure. This new system follows more closely the current model in other countries and, without prejudice to the specificities of each planning and method of statistical production, will facilitate the future approach to a comparision of the Portuguese system with that of other countries. From a statistical point of view, this new model has not yet however been reflected in numbers, as work is still ongoingaimed at demarcating the procedures that are in court, waiting for an act, from those that are being handled by other entities. Since is not yet possible to provide figures that reflect the amount of work taken on by the courts as referred above, the data does not include civil and labour enforcement cases. The number of enforcement cases fot the year 2020 are: Pending cases on 1 Jan. 2020: 521224; Incoming cases: 96047; Resolved cases: 159616; Pending cases on 31 Dec. 2020: 457655. This numbers correspond to the total number of existing procedures in Portugal in 2020, following the existing model prior to the entry into force of the said legal diploma.
For this reason, the alerts and notes transmitted in previous years with regard to comparisons between countries still remain. A comparative Reading of these values must, as we have repeatedly drawn attention, be very cautious, refraining from any comparison in terms of volume or duration of cases and should be limited to the evaluation of the development indicators.
In the scope of Working Group within the Ministry of Justice that monitors the development of the procedural processing system of the 1st instance judicial courts (Citius System), work is underway to implement the mechanism in question, in order to allow for autonomous accounting of cases that are awaiting the performance of an act that falls within the competence of the registry or the judge. At the moment, it is not yet possible to estimate a date for the conclusion of the work. The question 91_3 “Administrative law cases”, includes administrative and tax cases. The number of Pending cases on 1 Jan. that correspond only to tax cases is 44542. The number Incoming cases that correspond only to taxcases is 44329. The number of Resolved cases that correspond only to tax cases is 48704. The number of Pending cases on 31 Dec. That correspond only to tax cases is 40167. In what concerns this typ of cases, in 2020 there were 68,467 new cases and 73,880 completed cases. However, of these totals, only 20,731 new cases and 26,144 completed cases corresponded to real movements of the beginning and end of cases. The remaining 47,736 cases refer to cases that were internally transferred between units, namely due to the establishment of specialised courts in September 2020 (which are not independent legal entities), or that were subject to changes in the subject matter. Considering that in 2020 the number of cases transferred between organizational units was very high in the 1st instance administrative and tax courts, for this cycle we indicated in the table only the numbers of cases opened and closed, without including transferred cases. In previous editions, the figures included transferred cases, which could impair the comparative reading.

Q091 (2019): 91.1 The decrease of the number of pending cases older than 2 years follows the general trend of decrease of pending cases for this category. There were no legislative changes that can explain this decrease.

Q091 (2018): The question 91_1 “Civil (and commercial) litigious cases”, includes the case-flow of civil justice, labour justice and juvenile justice. It does not include civil and labour enforcement cases.
On 1 September 2013, the new Code of Civil Procedure entered into force, establishing a new regime for the enforcement action in Portugal, based on a new paradigm, which states that the processes that run in court must stand out clearly - those who are dependent on the commission of an act of the judge or the secretary – from those who run out of court. This new model, which enables a new way of organizing tasks, of work monitoring and of differentiating responsibilities is provided for in Article 551, paragraph 5 of the new Code of Civil Procedure. This new system follows more closely the current model in other countries and, without prejudice to the specificities of each planning and method of statistical production, will facilitate the future approach to a comparison of the Portuguese system with that of other countries. From a statistical point of view, this new model has not yet however been reflected in numbers, as work is still ongoing aimed at demarcating the procedures that are in court, waiting for an act, from those that are being handled by other entities. Since is not yet possible to provide figures that reflect the amount of work taken on by the courts as referred above, the data does not include civil and labour. The number of enforcement cases for the year 2018 are: Pending cases on 1 Jan. 2018 700.638; Incoming cases:127.646; Resolved cases:222.480; Pending cases on 31 Dec. 2018: 605.804 This numbers correspond to the total number of existing procedures in Portugal in 2018, following the existing model prior to the entry into force of the said legal diploma.
For this reason, the alerts and notes transmitted in previous years with regard to comparisons between countries still remain. A comparative reading of these values must, as we have repeatedly drawn attention, be very cautious, refraining from any comparison in terms of volume or duration of cases and should be limited to the evaluation of the development indicators.
The question 91_3 ”Administrative law cases”, includes administrative and tax cases.
The number of Pending cases on 1Jan. that correspond only to tax cases is 47931
The number Incoming cases that correspond only to tax cases is 14895
The number of Resolved cases that correspond only to tax cases is 16828
The number of pending cases on 31 Dec. that correspond only to tax cases is 45998
91.1 Due to increased efficiency of first instance courts, we can notice for the last several cycles a down-word trend in respect of the number of pending cases, namely civil and commercial litigious cases

Q091 (2017): Q 91.1 - the decrease of pending cases older than 2 years can be explained by the global decrease of theses cases. There were no legislative changes that could explain this decrease.
The question 91_1 “Civil (and commercial) litigious cases”, includes the case-flow of civil justice, labour justice and juvenile justice. It does not include civil and labour enforcement cases.
On 1 September 2013, the new Code of Civil Procedure entered into force, establishing a new regime for the enforcement action in Portugal, based on a new paradigm, which states that the processes that run in court must stand out clearly - those who are dependent on the commission of an act of the judge or the secretary – from those who run out of court. This new model, which enables a new way of organizing tasks, of work monitoring and of differentiating responsibilities is provided for in Article 551, paragraph 5 of the new Code of Civil Procedure. This new system follows more closely the current model in other countries and, without prejudice to the specificities of each planning and method of statistical production, will facilitate the future approach to a comparison of the Portuguese system with that of other countries. From a statistical point of view, this new model has not yet however been reflected in numbers, as work is still ongoing aimed at demarcating the procedures that are in court, waiting for an act, from those that are being handled by other entities. Since is not yet possible to provide figures that reflect the amount of work taken on by the courts as referred above (the technical work is still on going), the data does not include civil and labour enforcement cases. The number of enforcement cases for the year 2017 are: Pending cases on 1 Jan. 2017: 804.423; Incoming cases: 148.713; Resolved cases: 249.837; Pending cases on 31 Dec. 2017: 703.299. This numbers correspond to the total number of existing procedures in Portugal in 2017, following the existing model prior to the entry into force of the said legal diploma.
For this reason, the alerts and notes transmitted in previous years with regard to comparisons between countries still remain. A comparative reading of these values must, as we have repeatedly drawn attention, be very cautious, refraining from any comparison in terms of volume or duration of cases and should be limited to the evaluation of the development indicators.
The question 91_3 ”Administrative law cases”, includes administrative and tax cases.
The number of Pending cases on 1Jan. that correspond only to tax cases is 49.943
The number Incoming cases that correspond only to tax cases is 14.707
The number of Resolved cases that correspond only to tax cases is 16.811
The number of pending cases on 31 Dec. that correspond only to tax cases is 47.839

Q091 (2016): " Item 91-1 “Civil (and commercial) litigious cases”, includes the case-flow of civil justice, labour justice and juvenile justice. It does not include civil and labour enforcement cases. On 1 September 2013, the new Code of Civil Procedure entered into force, establishing a new regime for the enforcement action in Portugal, based on a new paradigm, which states that the processes that run in court must stand out clearly - those who are dependent on the commission of an act of the judge or the secretary – from those who run out of court. This new model, which enables a new way of organizing tasks, of work monitoring and of differentiating responsibilities is provided for in Article 551, paragraph 5 of the new Code of Civil Procedure. This new system follows more closely the current model in other countries and, without prejudice to the specificities of each planning and method of statistical production, will facilitate the future approach to a comparison of the Portuguese system with that of other countries. From a statistical point of view, this new model has not yet however been reflected in numbers, as work is still on-going aimed at demarcating the procedures that are in court, waiting for an act, from those that are being handled by other entities. Since is not yet possible to provide figures that reflect the amount of work taken on by the courts as referred above, the data does not include civil and labour enforcement cases. The data on enforcement cases for the year 2016 is: pending cases on 1 Jan. 2016: 934.860; incoming cases: 158.164; resolved cases: 289.402; pending cases on 31 Dec. 2016: 803.622. These numbers correspond to the total number of existing procedures in Portugal in 2016, following the existing model prior to the entry into force of the said legal diploma. For this reason, the alerts and notes transmitted in previous years with regard to comparisons between countries still remain. A comparative reading of these values must, as we have repeatedly drawn attention, be very cautious, refraining from any comparison in terms of volume or duration of cases and should be limited to the evaluation of the development indicators. Item 91_3 ”Administrative law cases”, includes administrative and tax cases. The separate data on tax cases is as follows: pending cases on 1Jan. - 53.597; incoming cases - 16.445; resolved cases - 20.222; pending cases on 31 Dec. - 49.820. Regarding the decrease in the number of incoming administrative law cases, it results from the decrease in the number of incoming tax law cases, in particular in what concerns misdemeanour appeals".

Q091 (2015): The category “civil (and commercial) litigious cases” includes the case-flow of civil justice, labour justice and juvenile justice. It does not include civil and labour enforcement cases. On 1 September 2013, the new Code of Civil Procedure entered into force, establishing a new regime for the enforcement action in Portugal, based on a new paradigm, which states that the processes that run in court must stand out clearly - those who are dependent on the commission of an act of the judge or the secretary – from those who run out of court. From a statistical point of view, this new model has not yet however been reflected in numbers, as work is still ongoing aimed at demarcating the procedures that are in court, waiting for an act, from those that are being handled by other entities. It is not yet possible to provide figures that reflect the amount of work taken on by the courts as referred in that table. Just for information, the data on the total number of existing enforcement procedures in Portugal in 2015, following the existing model prior to the entry into force of the said legal diploma is the following: pending cases on 1 Jan. 2015: 1.000.446; incoming cases: 199.359; resolved cases: 272.191; pending cases on 31 Dec. 2015: 927.614.
The category “administrative law cases” includes administrative and tax cases. The separate data on tax cases is the following: pending cases on 1Jan - 47.866; incoming cases - 24.808; resolved cases - 19.164; pending cases on 31 Dec. - 53.510.

Q091 (2014): For 2014, data are not available due to technical constraints.

Q091 (2013): Portugal took important measures in order to improve the courts clearance rate and backlogs which resulted in an increased number of resolved non-criminal and enforcement cases. Some measures were focused primarily on enforcement cases, since they represent 70% of the total of pending cases. For example, the government adopted measures with the purpose to eliminate cases where there are no assets to execute or no procedural momentum, as well as measures with the aim to limit the number of incoming cases, establishing initial court fees. Courts with excessive number of pending cases were subject to particular assistance of specialized teams.

Q091 (2012): As for the number of incoming non-criminal and enforcement cases, the 2012 data reflect the effects of the entry into force of Decree 113-A/2011, which proceeded to a major judiciary reorganization. The figures reflect the corresponding movement of cases between organizational units. As a result, in 2012, a higher number of cases that have not entered ex novo in the Portuguese courts were taken into account. These cases have ended in the unit/court where they left and entered into the new courts where they were transferred.

Q092 (2013): On the occasion of the 2010, 2012 and 2013 exercises, it has been specified that the category of civil (and commercial cases) litigious cases includes the case flow of civil justice, labour justice and juvenile justice.

Q092 (2012): On the occasion of the 2010, 2012 and 2013 exercises, it has been specified that the category of civil (and commercial cases) litigious cases includes the case flow of civil justice, labour justice and juvenile justice.

Q094 (2021): The discrepancy should be contextualised, in our view, within the framework of the effects of the Covid 19 pandemic and the consequent confinement, with a reflection on the functioning of the courts in 2020, considering that in certain periods face-to-face services were interrupted or conditioned.

Q094 (2020): 94.1 - The decrease in the number of cases completed in the category "Total of criminal law cases" between 2018 and 2020 is justified by the decrease in court activity in the year 2020 due to the Covid-19 pandemic situation.
94.2 -The decrease in the number of incoming and outgoing cases in the category "Misdemeanour and / or minor criminal cases" between 2018 and 2020 is justified by the decrease in court activity in the year 2020 due to the Covid-19 pandemic situation. Still, the number of cases pending on January 1, 2020 reduced compared to the number of cases pending on January 1, 2018, since the number of cases completed from 2018 to 2019 was relatively higher than the number of cases entered in those years. 94.3 - The increase in the number of pending cases older than 2 years in the "Other criminal cases" category in 2020 compared to 2018 may be related to reduced court activity in the year 2020 due to the Covid-19 pandemic situation.

Q094 (2018): Regarding the decrease of the numbers comparing to 2016, there were no legislative changes or others that could explain this decrease. Due to increased efficiency of first instance courts, we can notice for the last several cycles a down-word trend in respect of the number of pending cases, namely criminal law cases.

Q094 (2016): There is no specific reason explaining the decrease in the number of incoming and pending criminal cases in comparison with the values of previous cycles. There were no legislative changes or other that could explain this value. However, we can note that cases at first instance in criminal and other areas have been decreasing in the last years. In addition, this decrease may also result from the fact that the number of criminal cases registered by police forces has been decreasing.

Q094 (2012): The number of pending minor criminal cases on 1 January and 31 December 2012 decreased due to the fact that the number of misdemeanor and minor criminal resolved cases in 2010 and 2011 was significantly superior to the number of cases filed on both those years. Generally, there is a decreasing trend concerning minor offences.

Q097 (General Comment): Since 2007, statistical data concerning pending cases in 2nd instance judicial courts are collected through the courts information systems. Being a dynamic system, allowing regular corrections and up-dating, this data collection may lead to oscillation data from previous years resulting in variations in pending cases.
In Portugal, there are not non-litigious cases in superior courts.
The category "other" does not exist in the higher instances.
It is noteworthy that before 2015, data concerning the total of “other than criminal law cases” did not include administrative law cases. Since 2015, administrative law cases are included in the total which explains the significant increase of cases.

Q097 (2021): The decrease in the number of pending cases is related to the fact that in 2020 the number of cases that were completed in the second instance courts was higher than the number of new cases. This downward trend in pending cases has been constant since 2016.
Q097 (2020): The decrease in the number of cases under the category "Civil (and commercial) litigious cases" between 2018 and 2020 is justified by the decrease in court activity in 2020 due to the Covid-19 pandemic situation. The number of cases pending on December 31, 2020 has reduced compared to the number of cases pending on December 31, 2018, since the number of cases completed from 2018 to 2020 was relatively higher than the number of cases entered in those years. The increase in the number of cases completed in Administrative Courts between 2018 and 2019 may be justified by the increase in the number of judicial magistrates working in these courts. Even so, despite this increase in cases completed, there was an increase in the number of cases pending on January 1, 2020 compared to the number of cases pending on January 1, 2018, considering that the number of cases completed from 2018 to 2019 was still relatively lower than the number of cases entered in those years.

Q097 (2019): This increase of resolved cases can be explained by the increase on the number of judges in Administrative Courts.
Q097 (2018): Regarding the increase in the number of pending administrative law cases comparing to 2016, there were no legislative changes or others that could explain this variation”.
Q097 (2016): There is no specific explanation as regards the increase in the number of civil and commercial litigious cases pending on 1 January 2016 between 2015 and 2016. The question 97_3 ”Administrative law cases”, includes administrative and tax cases.
The number of Pending cases on 1Jan. that correspond only to tax cases is 3.909
The number Incoming cases that correspond only to tax cases is 1.809
The number of Resolved cases that correspond only to tax cases is 1.663
The number of Pending cases on 31 Dec. that correspond only to tax cases is 4.055

Q097 (2015): The question 97_3 ”Administrative law cases”, includes administrative and tax cases.

Q098 (General Comment): When courts handle appeal cases it is not possible to separate appeals that had in their origin a criminal case or a misdemeanor case.

Q098 (2016): There is no specific reason explaining the increase in the number of pending criminal cases on 31 December 2016 in comparison with the values of the previous cycle. There were no legislative changes or other that could explain this change.

Q099 (General Comment): In Portugal, there are not non-litigious cases in superior courts.
The category "other" does not exist in the higher instances.
It is noteworthy that before 2015, data concerning the total of “other than criminal law cases” did not include administrative law cases. Since 2015, administrative law cases are included in the total which explains the significant increase of cases.

Q099 (2021): The increase in the number of cases pending on 1 January 2021 is related to the fact that in 2020 the number of cases brought was slightly higher than the number of cases completed. There is no specific explanation for these values.

Q099 (2020): There was an increase in the number of cases pending from 2018 to 2020 at the Supreme Court of Justice, considering that the number of cases that ended from 2018 to 2020 was relatively lower than the number of cases brought in those years. The rise in the number of pending cases in the year 2020 is also partly explained by the decrease in court activity in the year 2020 due to the Covid-19 pandemic situation.

Q099 (2019): 99 (total) - the increase on the number of pending cases vis a vis 2018 is explained by the fact that the closed cases from 2018 to 2019 were relatively inferior to the number of incoming cases in those years. There were no legislative changes that could explain these numbers.
99.1 - the increase on the number of pending cases vis a vis 2018 is explained by the fact that the closed cases from 2018 to 2019 were relatively inferior to the number of incoming cases in those years. There were no legislative changes that could explain these numbers.

Q099 (2018): Regarding the slight decrease in the number of pending civil and commercial litigious cases at the beginning of the year 2018, comparing to 2016, there were no legislative changes or others that could explain this decrease

Q099 (2017): Q99.1 - The decrease in the number of pending civil and commercial litigious cases on 31 december 2017 is explained by the fact that the number of resolved cases in 2017 was superior to the number of incoming cases in the same year. There were no legislative changes or other that can explain this decrease.

Q099 (2016): In Portugal, there are not non-litigious cases in superior courts.
The category "other" does not exist in the higher instances.
It is noteworthy that before 2015, data concerning the total of “other than criminal law cases” did not include administrative law cases. Since 2015, administrative law cases are included in the total which explains the significant increase of cases.
The question 99.3 “Administrative law cases”, includes administrative and tax cases.
The number of Pending cases on 1Jan. that correspond only to tax cases is 783
The number Incoming cases that correspond only to tax cases is 1.039
The number of Resolved cases that correspond only to tax cases is 946
The number of Pending cases on 31 Dec. that correspond only to tax cases is 876

Q099 (2015): The question 99.3 “Administrative law cases”, includes administrative and tax cases.

Q100 (General Comment): The communicated data reflects the case-flow of criminal cases before the highest instance courts.
“Misdemeanor cases” are never taken to high instance courts.

Q100 (2020): The increase in the number of criminal cases pending on January 1, 2020 compared to the number of cases pending on January 1, 2018, at the Supreme Court is justified by the fact that the number of cases completed from 2018 to 2019 was relatively lower than the number of cases entered in those years.

Q100 (2016): In Portugal, misdemeanour/minor criminal cases may not be dealt in the Supreme Court of Justice.

Q100 (2012): The number of pending cases has decreased between 1 January 2010 and 1 January 2012 due to the fact that the number of resolved cases in that period was superior to the number of incoming cases. Conversely, in the period between 31 December 2010 and 31 December 2012, the number of incoming cases was superior to the number of resolved cases, which resulted in the increase of the number of pending cases. In addition, the number of pending cases at 1 January 2010, as well as the number of incoming cases in 2010 benefited from the effect of the change of the Criminal Procedure Code (Law n.48/2007) that narrowed the access to the High Judicial Superior Council. In the years 2011 and 2012, this effect was diluted, leading to a slight increase of the pending cases on 31 December 2012.

Q101 (General Comment): Since 2007, statistical data concerning pending cases in 1st instance judicial courts are collected through the courts information systems. Being dynamic systems, allowing regular corrections and up-dating, the data collection may lead to oscillation data from previous years resulting in variations in pending cases.

Q101 (2021): The increase in the number of pending cases on 1 January 2021 is related to the fact that in 2020 the number of incoming cases was higher than the number of completed cases. This situation should be contextualised, in our view, within the framework of the effects of the Covid 19 pandemic and the consequent confinement, with a reflection on the functioning of the courts in 2020, considering that in certain periods face-to-face services were interrupted or conditioned.

Q101 (2020): The increase in the number of employment dismissal cases pending from 2018 to 2020 is largely justified by the fact that in 2020 the number of the cases filed was much higher than the number of cases completed. This is be partly justified by the decrease in court activity in 2020 due to the Covid-19 pandemic situation.
The number of pendinginsolvency cases as of January 1, 2020 has decreased compared to the number of cases pending as of January 1, 2018, as the number of cases completed in 2018 and 2019 was relatively higher than the number of cases entered in those years. The decrease in the number of insolvency cases completed between 2018 and 2020 is justified by the decrease in court activity in 2020 due to the Covid-19 pandemic situation.
Robbery and intentional homicide: At the trial stage, the classification of the type of crime in criminal cases is done only at the time the case ends, so it is not possible to provide data on the movement of cases before the case is finished.

Q101 (2019): The number of insolvency pending cases has decreased in relation to 2018, because the number of resolved cases has increased. In addition, the number of insolvency cases in 2018 decreased due to a more favourable economic situation. Finally, this decrease follows the decrease in pending cases in the civil procedural area in global terms.

Q101 (2018): The decrease of the number of pending cases follows the global general tendency of decrease of the number of civil and labor cases filed and pending. We have not identified any legislative or other changes that could directly justify the decrease of such cases.
Q101 (2017): The number of pending employment dismissal cases decreased in 2017 in relation to2016. This was due to the fact that the numer of resolved cases in 2016 was superior to the number of new cases that year. The number of cases in 2016 decreased as a result of a better economic environment.
In addition, labour cases have been decreasing in global terms.
The number of pending insolvency cases decreased in 2017 in relation to2016. This was due to the fact that the numer of resolved cases in 2016 was superior to the number of new cases that year. The number of cases in 2016 decreased as a result of a better economic environment.
In addition, civil procedural cases have been decreasing in global terms.

Q101 (2016): - The decrease in the number of pending cases in the beginning of 2016 in relation to 2015 in respect of litigious divorce cases, employment dismissal cases and insolvency is explained by the fact that the number of resolved cases in 2015 was superior to the number of incoming cases that year. There is no specific explanation as regards the decrease in the number of these cases (for example legislative changes). However the decrease of these cases follow the general trend of the decrease of incoming and pending cases in civil and labour matters.
- The decrease in the number of pending cases in the end of 2016 in relation to 2015 in respect of litigious divorce cases, employment dismissal cases and insolvency is explained by the fact that the number of resolved cases in 2016 was superior to the number of incoming cases that year. There is no specific explanation as regards the decrease in the number of these cases (for example legislative changes). However the decrease of these cases follow the general trend of the decrease of incoming and pending cases in civil and labour matters.

Q101 (2015): The decrease in the number of employment dismissal cases follow the general trend of the decrease of incoming and pending cases in labour matters.
Q101 (2013): The number of incoming litigious divorce cases is decreasing since 2010, entailing a decrease in the number of pending cases. Between 2010 and 2013, the clearance rate has remained stable, with values above 100%. Besides, the number of marriages has decreased in these last years. In 2012, legislative and other measures were adopted with the objective to accelerate procedural times of insolvency cases. These measures have allowed courts to respond more promptly to the increasing number of insolvency cases.

Romania

Q091 (General Comment): In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.
Q091 (2021): As presented in the comments to the data communicated in the previous CEPEJ cycle, the measures taken in the pandemic period led to an increase in the stock of cases, that explain the number of pending cases on Jan 1st and also some of the values of the pending cases in courts for 2 years. At the same time, as shown in some of the data on resolved cases, although the stock at the beginning of 2021 was considerable by the enhanced activity the number of resolved cases increased

Q091 (2020): The decrease in the number of resolved cases in 2020 was caused by the context of the Covid-19 pandemic. The activity of al the courts was partially suspended between the 15-th of March until the end of May 2020 because a state of emergency was declared. During that period only few urgent cases were adjudicated. Some courts instituted preventive mesures even before the 15-th of March 2020 which included postponing non-urgent cases. After the state of emergency ended there were still in place measures that affected the normal activity of the courts like: the introduction of specific timeframes for each case, hearings through video conference, a strict limitation of human interaction at the auxiliary compartments of the courts that dealt directly with public like the Archive and the Registry office, so that requests and documents had to be submitted by post, fax or e-mail. These measures affected not only the court staff but all court users that had to adapt to the new circumstances and led to the postponement of many cases. There were also gaps in activity caused by cases of Covid-19 among the personnel of the courts. The same explanation is valid for the increased Disposition time which led to an increased numer of pending cases older than 3 years.

Q091 (2019): In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.
Referring to the non-litigious business registry cases,the differences in the statistical data are given by the dynamics in the business environment and the interactions at economic level and do not relate to any manifestation at the level of public authority. By referring to total requests that are the object of registration in the trade register, the influence is insignificant.
Referring to the administartive cases, the decrease in the number of pending cases in administrative matters can be determined by aspects such as: certain types of cases that have been exhausted before courts (e.g cases on salary rights of public servants initiated in 2010) or cases such as those on pollution taxes that were mostly exhausted before courts and for which administrative procedures have been expressly regulated as to discharge the huge workload in courts that they have generated. In terms of incoming administrative cases, when referring to a decrease in their number, similar reasons that justify the decrease in the number of pending administrative cases should be taken into consideration, namely, for example, those referring to the administrative procedures that have been expressly regulated as to discharge the huge workload in courts (e.g. regarding to the cases on pollution taxes). There is no particular explanation on the increased number of general civil and commercial non-litigious cases in 2019, resulting in a slight decrease of the CR for this category. However, it should be noticed that the operatitivity and volume of solved cases has increased.

Q091 (2018): In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.
Referring to the non-litigious business registry cases,the differences in the statistical data are given by the dynamics in the business environment and the interactions at economic level and do not relate to any manifestation at the level of public authority. By referring to total requests that are the object of registration in the trade register, the influence is insignificant.
Referring to the administartive cases, the decrease in the number of pending cases in administrative matters can be determined by aspects such as: certain types of cases that have been exhausted before courts (e.g cases on salary rights of public servants initiated in 2010) or cases such as those on pollution taxes that were mostly exhausted before courts and for which administrative procedures have been expressly regulated as to discharge the huge workload in courts that they have generated. In terms of incoming administrative cases, when referring to a decrease in their number, similar reasons that justify the decrease in the number of pending administrative cases should be taken into consideration, namely, for example, those referring to the administrative procedures that have been expressly regulated as to discharge the huge workload in courts (e.g. regarding to the cases on pollution taxes).

Q091 (2017): In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.
“Administrative law cases”: indeed, the data are correct, namely there is a significant increase in the number of incoming cases in 2017 that could be explained by the changes brought in 2013 to the Law no. 554/2004 of administrative litigations; the amendments resulted in a high number of second appeals in this matter (by number of second appeals we understand all second appeals under the competence of both the Supreme Court (High Court of Cassation and Justice) and of the courts of appeal, because in this matter some of the cases shall be judged in first instance by tribunals and others by the courts of appeals).

Q091 (2016): In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.
The high clearance rate of administrative cases in previous cycles has led to lower significantly the number pending cases. The increase of the number of incoming cases is a consequence of a higher number of requests filed in administrative domain that also triggers an increase in the number of resolved cases. The decrease in the number of non-litigious pending cases as well as "other" pending cases is mostly due to lower number of incomming ases.

Q091 (2014): By the decision n° 46/2012, the Superior Council of Magistracy has decided that all the courts will implement by 1 January 2014 the IT system of collecting data. The new method is based on new definitions of the indicators. Accordingly, a case is transferred from the field “stocks” to the field “closed” only when the final decision, including its reasoning is drafted signed and communicated to the parties. For that reason, the number of pending cases on 31 December 2013 cannot be identical with the number of pending cases on 1st January 2014.
The initial total number of pending cases has increased as a result of reporting the data into Ecris database. The number of incoming cases and this of resolved cases are comparable from one year to another for the period 2010-2013. The stocks at the end of the period is in relation to the adjustment of the stocks at the beginning of the period, but comparable with 2012.
Concerning the number of administrative law cases the workload has constantly decreased starting with 2012. The increase of stocks initially communicated for 2013 comes from the high number of incoming cases in 2012. The final stock of 2014 is lower also because of the lower number of the new cases in 2013. It may also be noticed that the new cases closed in 2013 was higher than in 2012. The high decrease in the number of incoming, resolved and pending administrative law cases on 31 December between 2013 and 2014 is progressive and is caused by the social climate.

Q091 (2013): With regard to the category “civil and commercial litigious cases”, because of the delays between hearings that are often very long (usually the first hearing is determined by an electronic system after a long period of time, in relation with the actual workload of judges), the new entered files are not usually finalised within a year.
With regard to the category “civil and commercial non-litigious cases”, all the indicators kept a growing trend in 2012 and 2013. As for the stock of files (pending on 31.12), the increase between 2012 and 2013 is due to the fact that during the same period the number of resolved files has also decreased.
As to the trends observed in 2013 in respect of the “non-litigious enforcement cases” and “non-litigious land registry cases”, data are correct.
As to the category “administrative law cases”, the big differences have always been a reason for concern and continuous analysis. In the report on the status of Judiciary on 2012, it was noted that “in the administrative contentious and fiscal matters, the most of the cases were related to the restitution of the tax for pollution, but also to the obligation of the authorities to register the vehicles, without the payment of the tax for pollution (obligation to perform)”. It should be mentioned that the actions of the legislative have led to the growth of the number of administrative cases in the past 5 years, at tribunals with more than 400% and at the courts of appeal with around 200%.

Q091 (2012): With regard to the category “civil and commercial non-litigious cases”, all the indicators kept a growing trend in 2012.
As to the category “administrative law cases”, the big differences have always been a reason for concern and continuous analysis. In the report on the status of Judiciary on 2012, it was noted that “in the administrative contentious and fiscal matters, the most of the cases were related to the restitution of the tax for pollution, but also to the obligation of the authorities to register vehicles, without the payment of the tax for pollution (obligation to perform)”. It should be mentioned that the actions of the legislative have led to the growth of the number of administrative cases to be solved in the past 5 years, at tribunals with more than 400% and at the courts of appeal with around 200%.

Q094 (General Comment): There is no classification of severe and less severe offences in the Romanian statistics.
In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.

Q094 (2020): As stated at Q91 the context of the Covid-19 pandemic affected the activity of the courts which led to the decrease in the number of resolved cases in 2020 an increased Disposition time and an increased numer of pending cases older than 3 years. In criminal law cases postponements were reccurent in cases involving persons serving a prison senstence, because generaly they have to be brought to every court hearing which was not always possibile due to the curantine measures taken by the prison administrations.

Q094 (2018): The changes brought to the code of criminal procedure may be among the reasons for the augmentation of the total number of criminal law cases pending on January 1st between 2016 and 2018, namely for e.g. the procedure regarding the prosecutor's decision to discontinue the criminal investigation has to be confirmed by a judges/in court, according to the new provisions.

Q094 (2016): In the national Statis system, the cases are recorded on categories of pending cases as follows: - 0-1/2 years;
- 1/2-1 year;
- 1 - 1 and 1/2 years;
- 1 and 1/2 - 3 years;
- 3 - 5 years;
In the table above, last column, there are mentioned the numbers for cases pending for more than 3 years.
The total number of incoming criminal cases in first instance courts has substantially increased when compared to 2014 data (+41%). These figures have been confirmed by the CEPEJ National Correspondent.

Q094 (2014): The significant increase in the number of total pending cases on 1st of January within the period 2012 – 2014 is due to the new way of counting the statistical data by the application Statis. The time of reaching a decision is not equivalent to the time of drafting the decision. For the present evaluation, files where a decision is reached but is not drafted yet are not counted.

Q097 (General Comment): It is worth specifying that, since 2010, the first table (question no. 91) centralizes all the first instance cases (irrespective of the level of the courts), the second table (question no. 97) centralizes all the second instance cases – appeal (irrespective of the level of the court) and table no. 3 (question no. 99) shows the statistical data on all second appeal cases (last instance cases) from all courts (irrespective of their level).
In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.

Q097 (2021): As stated at Q91 the context of the Covid-19 pandemic affected the activity of the courts which led to the decrease in the number of resolved cases, therefore the the stock with old cases increased in some cases.

Q097 (2020): As stated at Q91 the context of the Covid-19 pandemic affected the activity of the courts which led to the decrease in the number of resolved cases in 2020 an increased Disposition time and an increased numer of pending cases older than 3 years.

Q097 (2019): In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.

Q097 (2018): In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.
The increase in the number of cases in appeal reflects the changes in the procedural provisions in the new codes; the jurisdiction of the courts in judging appeals and second appeals has changed. Accordingly, the number of appeals in the New Civil Procedural Code includes the number of appeals and second appeals from the Old Code and shows continous increase since the entry into force of the provisions.

Q097 (2017): In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.
The increase in the number of cases in appeal reflects the changes in the procedural provisions in the new codes; the jurisdiction of the courts in judging appeals and second appeals has changed. Accordingly, the number of appeals in the New Civil Procedural Code includes the number of appeals and second appeals from the Old Code and shows continous increase since the entry into force of the provisions.

Q097 (2016): In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.
The general increase in the number of cases in appeal reflects the changes in the procedural provisions in the new codes; the jurisdiction of the courts on judging appeals and second appeals has changed. Accordingly, the number of appeals in the new Civil Procedure Code includes the number of appeals and second appeals from the old Code and shows continuous increase after 2014.

Q097 (2014): By the decision n° 46/2012, the Superior Council of Magistracy has decided that all the courts will implement by 1 January 2014 the IT system of collecting data. The new method is based on new definitions of the indicators. Accordingly, a case is transferred from the field “stocks” to the field “closed” only when the final decision, including its reasoning is drafted signed and communicated to the parties. For that reason, the number of pending cases on 31 December 2013 cannot be identical with the number of pending cases on 1st January 2014.
The meaningful increases in figures observed between 2012 and 2014 are due to the fact that, in relation to the appeal, beyond the differences recorded in Statis, there was a change of jurisdiction in civil matters. Accordingly, the appeal (apel) became the main instrument to challenge a decision.

Q097 (2013): With regard to the category “civil and commercial litigious cases”, the observed evolutions between 2010 and 2013 are due to the fact that following the changes in the procedural provisions in the new codes, the jurisdiction of the courts on judging appeals and second appeals has changed. Accordingly, the number of appeals in the new Civil Procedure Code includes the number of appeals and second appeals from the old Code. Thus, even if the number of solved files in second instance is higher in 2013 than in the previous year, the number of new appeals (incoming cases in second instance) is higher. This explains the growth of the workload in the last period of time on these courts, although previously the trend was descending.
With regard to the category “civil and commercial non-litigious cases”, the analysis of data and the noticed evolutions and variations between 2010 and 2013 should be qualified. In fact, the figures are not so high and the growth and regress of a few cases during one year lead to relatively important variations. For example, a growth of only 8 cases at the end of the year will reflect a growth of 35%. The same reasoning should be applied with regard to the category “non-litigious land registry cases” where a growth of only 122 cases at the beginning of the year will reflect a growth of over 40%.
In respect of the category “non-litigious enforcement cases”, the considerable increases between 2010 and 2013 with regard to all the items (pending cases, incoming and resolved) were the consequence of the new distribution of competences between courts. Since 2013, all the enforcement cases are in the jurisdiction of the courts of appeal. The number of cases in third instance decreased correlatively.
Following the changes in the procedural provisions made in 2013, the second appeal, as means of review in the field of non-litigious business registry, became appeal, in accordance with the new principles of the Civil Procedure Code as regards the means of review.

Q098 (General Comment): There is no classification of severe and less severe offences in the Romanian statistics.

Q098 (2016): In the national Statis system, the cases are recorded on categories of pending cases as follows: - 0-1/2 years;
- 1/2-1 year;
- 1 - 1 and 1/2 years;
- 1 and 1/2 - 3 years;
- 3 - 5 years;
In the table above, last column, there are mentioned the numbers for cases pending for more than 3 years.

Q098 (2014): The significant increase of the total of criminal cases in respect of all the enumerated categories (pending, incoming and resolved cases) in 2014 is due to the entry into force of the new Codes and the changes of jurisdiction.

Q098 (2012): The decrease of the total of criminal cases in 2012 in respect of all the enumerated categories (pending, incoming, resolved cases) is due to the entry into force of Law n° 202/2010, the so called “small reform law”. Consequently, the legal remedy of appeal (appeal on the merit) has been abolished in several criminal matters, remaining only the “recurs” (“appeal on law”).
Q099 (2021): The increase in Pending cases older than 2 years for administrative cases could be explained both by the significant increase in 2017 of the number of incoming cases of this type and by the limited capacity for resolving cases during the pandemic crises (from 30038 in 2019 to 26800 in 2020); therefore, the effect shall be seen in terms of statistics after 3 years in the number of pending cases (according to our statistical application the pending cases are registered in the category cases pending for more than 3 years).
Q099 (2019): In 2017 there was a significant increase in the number of incoming administrative cases explained by the modifications in terms of procedure, namely amendments regarding the jurisdiction for administrative cases brought in 2013 that might have generated later effects in terms of number of "second appeals" (peculiarity of our system). Since 2017 and the described peak, the number of incoming administrative cases is decreasing.

Q099 (2018): The differences compared to the previous cycle are due to changes brought by the Constitutional Court's decisions to the interpretation given by the High Court of Cassastion and Justice to the legislation regarding the increasing number of incoming civil litigious cases and the decreasing number of civil litigious cases pending for more than 2 years.

Q099 (2017): In the national Statis system, the cases are recorded on different categories of pending cases. So, for the last column, there are mentioned the numbers for cases pending for more than 3 years. The increase in the number of incoming administrative cases may be explained by the modifications in terms of procedure, namely modifications regarding the jurisdiction for administrative cases brought in 2013 that might have generated later effects in terms of number of "second appeals" (peculiarity of our system); moreover, there should be mentioned that the number of second appeals in this question, refers to both the second appeals judged by the supreme court (High Court of Cassation and Justice) and by the courts of appeals, aspect that is valid even for the previous cycles.

Q099 (2016): In the national Statis system, the cases are recorded on different categories of pending cases. So, for the last column, there are mentioned the numbers for cases pending for more than 3 years. As result of the changes in the procedural provisions in the new codes; the jurisdiction of the courts on judging appeals and second appeals has changed and some of the cases that were under the jurisdiction of the High Court are now under the jurisdiction of the courts of appeal Consequently the number of cases in Supreme court shows significant decrease in all categories.

Q099 (2014): By the decision n° 46/2012, the Superior Council of Magistracy has decided that all the courts will implement by 1 January 2014 the IT system of collecting data. The new method is based on new definitions of the indicators and offers data with greater value for 2014. This partly explains the considerable increase of the number of pending administrative cases on 1st January between 2012 and 2014. Besides, the number of incoming cases in 2013 was higher than in 2014.

Q099 (2013): In respect of the administrative law cases, until 2013, there was only a second appeal that is encompassed in the answers to question 99.
Q100 (2021): according to the application for statistics

Q100 (2018): The increase in the total of criminal law cases incoming between 2016 and 2018 can be explained by the retrail / re-examination of a high important number of cases (to be noted that none of these cases were new) according to the Constitutional Court's decision that brought changes to the interpretation given by the High Court of Cassation and Justice in the matter of judicial organisation.
Q100 (2016): The jurisdiction of the courts on judging appeals and second appeals has changed and some of the cases that were under the jurisdiction of the High Court are now under the jurisdiction of the courts of appeal Consequently the number of cases in Supreme court shows significant decrease in all categories.
In the national Statis system, the cases are recorded on categories of pending cases as follows: - 0-1/2 years;
- 1/2-1 year;
- 1 - 1 and 1/2 years;
- 1 and 1/2 - 3 years;
- 3 - 5 years;
In the table above, last column, there are mentioned the numbers for cases pending for more than 3 years.

Q100 (2014): The significant decrease between 2012 and 2014 of the total of criminal cases in respect of the following categories – incoming, resolved and pending on 31st December, is due to the entry into force of the new Codes and the changes of jurisdiction.
Q100 (2012): The important increase of the total of criminal cases pending on 1 January 2012 is the consequence of the entry into force of Law n° 202/2010. Consequently, the legal remedy of appeal (appeal on the merit) has been abolished in several criminal matters, remaining only the “recurs” (“appeal on law”). It resulted in an increase of the number of “recurs”.

Q101 (General Comment): In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.
Q101 (2021): The decrease in the number of incoming employment dismissal cases is linked to the decrease in the number of this type of pending cases. A similar explanation can be given for the robbery cases. The decrease in the number of resolved cases of intentional homicide is linked to the decrease in the number of incoming intentional homicide cases. However, at least some of the increase, such as for the divorce cases, may be caused by the context of Covid 19 pandemic period since the number of pending cases on January 2021 increased since the previous cycle.

Q101 (2020): The increase in the number of employment dismissal cases may be attributed to a complex set of socio-economical factors and we do not have the data analisis in this matter. However, at least some of the increase may be caused by the context of Covid 19 pandemic that affected a lot of economic sectors that may have caused a suge in employment dismissal cases.
Q101 (2019): As to the increased number of cases relating to asylum seekers at the beginning of 2019, the reason is the increased number of incoming cases in 2018 due to the increase of the migration as a phenomenon

Q101 (2018): The augmentation of cases related to asylum seekers is due to the increase of the migration as a phenomenon

Q101 (2017): With regard to "cases related to asylum seekers" the increase in the number of incoming cases in 2017 may be determined by the extended phenomenon of immigration lately registered in Europe. Referring to the decrease in the number of resolved cases related to the right of entry and stay for aliens (resulting in an increased number of pending cases on 31 December 2017) there is not an objective reason that may explain this statistical data.

Q101 (2016): The decrease of pending Employment dismissal cases is due to high Clearance Rate in 2015. Regarding insolvency cases, the decrease observed for the period 2014-2016 was determined, on the one hand, by the change in economic conditions and the re-launching of the companies' potential. On the other hand, the reform of insolvency legislation (Law 85/2014) encouraged early recovery prior to insolvency and, balancing the protection of creditors with that enjoyed by debtors, has reduced the tendency of borrowers to use this judicial procedure.

Q101 (2015): One may notice an important decrees of first instance new cases in administrative law and insolvency as a cause of legislative amendments dating from 2012. The same reason is for increases of numbers in appeal and decreases in second appeal, except for special laws like administrative law.
Q101 (2014): By the decision n° 46/2012, the Superior Council of Magistracy has decided that all the courts will implement by 1 January 2014 the IT system of collecting data. The new method is based on new definitions of the indicators. Accordingly, a case is transferred from the field “stocks” to the field “closed” only when the final decision, including its reasoning is drafted signed and communicated to the parties. For that reason, the number of pending cases on 31 December 2013 cannot be identical with the number of pending cases on 1st January 2014.
The decrease of the number of resolved litigious divorce cases between 2013 and 2014 was due to the socio-economic conditions.

Q101 (2013): In respect of the category “litigious divorce cases”, the decrease of the number of cases in 2013 may have social causes and may also reflect the alternative instruments to litigious divorce (.g. divorce in front of notaries).
In respect of the category “employment dismissal cases”, because of the delays on the first hearings allocated by the new automatic system implemented with the new Civil Procedure Code, even if the number of the new entered cases has decreased, the total volume of activity was focused on stocks. The problem enters on a normal path in 2013.

Q101 (2012): In respect of the category "litigious divorce cases", the decrease of the number of cases in 2012 may have social causes and may also reflect the alternative instruments to litigious divorce (.g. divorce in front of notaries).

Slovak Republic

Q091 (General Comment): For 2016 data, new methodology was implemented based on the working group’s conclusions and CEPEJ mission’s recommendation (06/2016). Former reporting structure was not consistent with the methodology of CEPEJ, which could lead to inappropriate comparison of Slovak Republic (SR) with other countries. Also, the Ministry of Justice (MoJ) realized that evaluation of courts’ performance by disposed and unresolved (decided and undecided) cases is discriminating SR in comparison with other countries in European Union (EU) as this methodology is not counting a decision of first instance court as disposed until the case becomes valid. This results into reporting such case as unresolved despite respective court has already made a decision and it is no longer in its disposition how - and more importantly when - the case will be resolved (disposed) by the second instance court. This is the nature of reporting of many “unresolved” cases on courts despite court already decided, in fact. Newly proposed way of reporting extracts the numbers of decided cases in respective court instances from “unresolved” and allocates these numbers to those court instances that made an actual decision in respective time. This means that decision validity state is not being awaited for as it could potentially contain an appeal and thus also a time that a case spends on second instance court. Upon decision’s validity the case would become „disposed/resolved“ at the first instance court but most probably it would not be disposed in the same period when it was decided by the (first instance) court. This past methodology (applied by 2016) resulted (visually) in accumulation of unresolved cases while some of them were already decided by first instance court.

Q091 (2021): An erroneous reporting of decided cases at the courts in 2020 had to be corrected in Pending cases at 1st January 2021 by 1128 cases (line 2. and Total of other than criminal law cases).
2.2.2 Non-litigious business registry cases - the increase in cases comming to the courts in 2019 due to the new legislation gradually stabilized over the course of the year 2020, 2021.
The category “other” encompasses bankruptcy and debt restructuring cases, including the debt elimination procedure (bankruptcy of the natural persons),inheritance proceedings and other. In covid years especialy the number of cases inheritance proceedings rose.
3. Administrative law cases - new reform of Administrative courts was expected and the clearance rate of the regional courts dropted to 80 %.

Q091 (2020): Exolanation of the discrepancies:
In the category 2.2.3. Other registry cases was added register "RPVS" - Register of public sector partners. The Register of public sector partners has the character of a register of legal and natural persons, which receives from the state, local-government and other public sector entities public financing or property above the limit specified by law. The persons who conclude a contract, framework agreement or concession contract pursuant to public procurement regulations, healthcare providers and so on. The classification of the registry in category 2.2.3. was consulted with CEPEJ organization.
In the category 2.2.2 and consequently in the category 2.2. - at the end of year 2019, the incoming cases into the business register was enormously increased due to new applied legislation, which caused high level of the pending cases at the beginning of the year 2020.
Administrative law cases - keeps the high level of pending cases.
Non-litigious business registry cases - the cause of the increase is explained below:
The Commercial Code (Act No. 513/1991 Coll) was amended by the Act No. 390/2019 Coll, which became effective from the 1st of October 2020. This amendment brought following changes (also changes to the Commercial register):
1.From October 1, 2020, it is possible to submit an application for registration of data in the Commercial Register only in electronic form (including objections to the refusal of registration)
2.Obligation of the company´s founders to submit the consent of the real-estate owner to setting up a registered seat of the company with verified signature of the owner.
3.The list of the information is being expanded in order to identify these persons more precisely. In the case of natural persons, a date of birth and a birth number must be given, if it was assigned. In the case of legal persons, their registration number must be given. The existing companies are required to complete this information by September 30, 2021.
4.The amendment also covers one of the reasons why the court is entitled to dissolve a company without liquidation. It is a breach of the obligation filing the financial statement into the collection of deeds within the specified period of 9 months from its preparation. This means, that if a company doesn't deposit this financial statement in the collection of documents within 15 months from its preparation, the registry court will decide on its dissolution without a proposal.
The other discrepancies are mainly caused by the situation in 2020 due to Covid-19 pamdemic situation.
The emergency situation due to COVID 19 has been ongoing since March 2020. Since then, hearings have been held to the necessary extent, which is determined by a decree of the Ministry of Justice. The decree was amended 4 times according to the development of the epidemic situation.
Thus, the courts were not closed in 2020, but operated in a restricted regime, and that restricted regime depended on the development of the epidemic situation. There were situations where hearings were organised to the absolute minimum, for example in April 2020, almost no hearings were held. Since May 2020, it has been up to the courts to ensure hearings to the extent necessary and in accordance with other regulations related to the pandemic situation.
In several measures in 2020, the Ministry of Justice recommended that courts organize work so that court staff and judges work from home.As for an access to the file for lawyers, it was provided.

Q091 (2019): The changes in the total number of Pending cases on 1 Jan. ref. year - the courts, which did not comply with the established methodology for reporting bankruptcy and restructuring, corrected the data in 2019 and thus the initial state of 2019, which causes differences compared to 2018 pending cases. Similar situation is in the other non-litigious cases, where the methodology for the cases (acceptance of things into custody of court) was changed due the legislation changes in the court register during the year 2019.
Line 2; 2.1;2.2;2.2.2: According to the act. no. 390/2019 Coll. on the end user of benefits for entrepreneurs, the entrepreneurs became obliged to make the corresponding entry in the Business Register by 31 December 2019. The increase in new-coming cases was mainly in the last three months of 2019 by 117 thousand cases in business register courts.
The deadline for processing proposals for the registration of end-user benefit data by the court has been postponed to 30 June 2020, due to the large expected new-coming cases of business records at the end of the year.

Q091 (2018): 1. Differences in the initial states of things as of 1 January 2018 different from the final states as of 31 December 2017 are due to the introduction of electronic data collection through the Data Collection Application (hereinafter referred to as AZU). When introducing electronic data collection in 2018, the courts were allowed to record the actual state of pending cases as of 1 January 2018 with the aim of not transmitting any inaccuracies from paper collection of previous periods. These differences should not occur in the next year due to the introduction of automatic transfer of the number of undecided cases from the end of the previous period in the electronic data collection.
2. Another reason for the differences in the opening cases as of 1 January 2018 from the closing stocks as of 31 December 2017 is the change in the classification of some court registers between rows in the table in question 91. The change of classification was carried out on the basis of the recommendation of the national correspondent for the SR and after its thorough consultation with the members of the working group GT CEPEJ - EVAL

Q091 (2017): The data in the table are not horizontally consistent. This is caused by the fact, that the data on pending cases on 1. January 2017 (the same as data on 31. December 2016 given for the previous cycle) were collected in a one-shot collection for the Justice Scoreboard 2017 and were not bound by control patterns of horizontal consistency as it is in the new electronic data collection active since January 2018. The improper initial number of unresolved cases taken from a “paper” collection of data in 2016 caused such differences. Likewise, the transition from 2015 final numbers to 2016 initial numbers were counted up manually from paper collections. We cannot therefore consider the initial numbers as of 1 January as reliable. The transition between the old system of collecting the statistical data to new one is more complicated than was expected, with the setting up of Analytical centre of the MoJ, application of CEPEJ methodology and its tools is one of the targets in the ongoing project between CEPEj and Ministry of justice of the Slovak republic.
There are still two different IT tools used to collect the statistical data from the courts to Analytical centre. Some inconsistencies in data between the old and new system persist.
The Analytical centre makes every effort to complete the transition between two systems as soon as possible to get reliable data as soon as possible.
As to administrative cases, until the 30. June 2016 the case-jurisdiction in administrative matters in the first instance stipulated by law was divided between Regional courts and the district courts. The general rule was, that the general jurisdiction in first instance lies at the Regional courts. However, there was a small number of proceedings (enumerated in law) where the District courts had the jurisdiction to act as a court of first instance. In reality, more than 90% of all administrative cases were tried by the Regional court as the courts of first instance.
Since 1. July 2016 the new Code of the administrative procedure came into force. According to this new law the Regional courts have the exclusive jurisdiction to try administrative cases as the courts of first instance.
As for the appeal procedure, there is the general rule that the appellate court is the court one level above in the structure of the court system. It means that the appeals against the decisions of the District courts are processed at the Regional courts and the appeals against the decisions of Regional court are processed at the Supreme court as the court of appeal.
In our data for administrative cases in the year 2017 there were some appeal procedures pending at Regional courts as the courts of appeal as the result of application of the previous procedural rules described in point 1. Those appeal proceedings were indicated in table to Q 97
All appeals against the decisions of Regional court (as the courts of first instance) were always tried by the Supreme court and we are presenting this data for all evaluation cycles in the table to Q 99

Q091 (2016): The new structure of data presented by the Ministry of Justice is the reason for the discrepancies and incompatibility of the data with the previous cycles. As regards the category "general civil non-litigious cases" we notice a decrease of incoming cases as of the year 2013.
In this cycle the succession cases were classified as "Other non litigious cases" while in previous years they were classified as "general civil (and commercial) non litigious cases.

Q091 (2014): The increase in the number of incoming and pending other than criminal law cases at all levels of the judiciary is due to the increase in the number of litigious cases. The Slovak judicial system for a several years faces significant increases of claims filed with the courts by debt-collecting companies and non-bank loan companies against consumers, as well as class actions of one private company against the State for alleged damages etc. The higher number of resolved administrative cases was achieved by the intensive effort to reduce the existing backlogs in administrative matters.

Q091 (2013): The Slovak judicial system was facing different types of claims which massively loaded courts of all instances. For example, there was a huge number of legal actions arisen from the loans provided by the so called “non-bank loan companies” where courts had to consider constant violations of the consumer protection law. Besides, there was a huge number of class actions against the State, carried out by one of the non-bank companies for alleged damages etc. In spite of the positive trend concerning the increase of the number of total resolved cases, the number of incoming cases was increasing even more, causing backlogs.

Q091 (2012): The number of pending enforcement and business registry cases was gradually and considerably decreasing over the period 2011-2012. As concerns the variation noticed in respect of the number of incoming and resolved administrative law cases, it was due to the fact that in 2010 a meaningful number of specific collective claims were filed and resolved.

Q092 (General Comment): The category "civil (and commercial) non-litigious cases" includes all cases arisen from legal relationships regulated by family law (maintenance cases, custody of the child, visiting rights, guardianship, divorce cases with the ruling on rights and obligations towards the minor child etc.), cases related to assessment of the legal capacity of natural persons, reminder procedure (electronic payment orders).

Q093 (General Comment): The category “other” encompasses bankruptcy and debt restructuring cases, including the debt elimination procedure (bankruptcy of the natural persons), issuing of the enforcement permission for the enforcement agents, enforcement of court rulings on the visiting rights to minor child and enforcement of court fees receivables.

Q094 (General Comment): The statistical data collected by the Ministry of Justice of the Slovak republic does not allow the categorization of the criminal matters according to the types of criminal offences as defined in explanatory note.

Q094 (2020): Sources: Analytical center, Ministry of Justice of the Slovak republic

Q094 (2018): There is a big discrepancy between pending cases on 31st of December 2016 and “Pending cases on 1st of January 2018”. This is caused of two factors: The first one and major is in delivered data in 2016. In the 2017 was the data collection still in paper form and in the old methodology, as we explained already. In the same time the project Audit with the experts from CEPEJ was already influencing the newly growing Analytical center and motivated as to try collect pending cases for 2016 backward. Since there were no electronic tools for collecting data available neither for courts nor for Ministry of Justice; the result were obviously full of mistakes. Analytical center had no chance to make data check, since pending cases were never collected before, so we had to rely on the courts data without possible checkup. After 2017, when was already available electronic tool (AZU) for collecting data from courts with implemented controlling formulas, then the mistakes from previous manual collection have occurred significantly especially in the first instance criminal agenda. The second factor is, that the Clearance rate dropped from 106, 52% in 2016 to the level 101, 81% in 2018.

Q094 (2016): For 2016 data, new methodology was implemented to make the reporting structure consistent with the CEPEJ methodology and leads to better comparison of Slovak Republic (SR) with other countries. The previous methodology was not counting a decision of first instance court as resolved until the case becomes finalised at last instance. This resulted in reporting such case as unresolved despite respective court has already made a decision. This is the nature of reporting of many “unresolved” cases on courts despite court already decided, in fact. New way of reporting extracts the numbers of decided cases in respective court instances from “unresolved” and allocates these numbers to those court instances that made an actual decision in the reference period that is in correspondence with CEPEJ methodology and better comparable with other countries.

Q097 (2021): Explained in the table.

Q097 (2020): More significant decline of incoming cases and resolved cases as well in the Second instance courts as a result of a pandemic situation. In the category 3. Administrative law cases was only one pending case on 1 January 2020, which was resolved during the year and no case came into the Second instance courts in the year 2020.
The number of non-litigious business registry cases is included in "general civil and commercial non-litigious cases".

Q097 (2019): The decrease in the number of cases (especially incoming and pending on 31 December) was not analysed yet but we can confirm that there were no significant changes in the system or legislation.
Q097 (2018): The discrepancies in the number of pending cases as of 1 January 2018 in comparison with the final numbers as of 31 December 2017 were caused due to the introduction of electronic data collection through the Data Collection Application (hereinafter referred to as AZU). When introducing the electronic data collection in 2018, the courts were allowed to record the actual state of pending cases as of 1 January 2018 with the aim of not transmitting any inaccuracies from paper data collection of previous periods. These differences should not occur in the next year, given the introduction of automatic transfer of the number of undecided cases from the end of the previous period in the electronic data collection

Q097 (2017): As regards the trends of the decrease in all monitored indicators, the decrease in caseload at first instance courts has a secondary impact on the drop in caseload at the courts of appeal. We did not analyse in details the cause of decrease and the detail structure of caseload. The decrease of caseload has the positive effect of raising the CR to 121% and decreasing of total number of pending (unresolved) cases.
The data in the table are not horizontally consistent. This is caused by the fact, that the data on pending cases on 1. January 2017 (the same as data on 31. December 2016 given for the previous cycle) were collected in a one-shot collection for the Justice Scoreboard 2017 and were not bound by control patterns of horizontal consistency as it is in the new electronic data collection active since January 2018. The improper initial number of unresolved cases taken from a “paper” collection of data in 2016 caused such differences. Likewise, the transition from 2015 final numbers to 2016 initial numbers were counted up manually from paper collections. We cannot therefore consider the initial numbers as of 1 January as reliable. The transition between the old system of collecting the statistical data to new one is more complicated than was expected, with the setting up of Analytical centre of the MoJ, application of CEPEJ methodology and its tools is one of the targets in the on-going project between CEPEJ and Ministry of justice of the Slovak republic.
There are still two different IT tools used to collect the statistical data from the courts to Analytical centre. Some inconsistencies in data between the old and new system persist.
The Analytical centre makes every effort to complete the transition between two systems as soon as possible to get reliable data as soon as possible.
As to administrative cases, since 1 July 2016 the appeals against the decisions of the District courts are processed at the Regional courts and the appeals against the decisions of Regional court are processed at the Supreme court as the court of appeal.
In our data for administrative cases in the year 2017 there were some appeal procedures pending at Regional courts as the courts of appeal as the result of application of the previous procedural rules described in point 1. Those appeal proceedings appear in this table. All appeals against the decisions of Regional court (as the courts of first instance) were always tried by the Supreme court and we are presenting this data for all evaluation cycles in the table to Q 99

Q097 (2016): The new structure of data presented by the Ministry of Justice influenced also the second instance. Registry cases are all included in 2.1 and can not be separated by categories.
Q097 (2014): In respect of the variations observed in 2014 with regard to the category “administrative law cases”, it is worth mentioning that the low number of cases makes small absolute variation large in relative terms.

Q097 (2013): For 2013, a general remark was provided in respect of questions 91, 97 and 101, explaining that there were no specific reasons justifying the variations in the numbers of cases of the particular categories. It was stressed that the Slovak judicial system was facing different types of claims which massively loaded courts of all instances. For example, there was a huge number of legal actions arisen from the loans provided by the so called “non-bank loan companies” where courts had to consider constant violations of the consumer protection law. Besides, there was a huge number of class actions against the State, carried out by one of the non-bank companies for alleged damages etc. The capacity of the court staff to resolve all of the filed cases in the appropriate time period was limited despite the measures which have been taken. In spite of the positive trend concerning the increase of the number of total resolved cases, the number of incoming cases was increasing even more, causing backlogs.

Q098 (2020): Sources: Analytical center, Ministry of Justice of the Slovak republic

Q098 (2016): The 2016 data are based on the new methodology which may cause inconsistency comparing to previous cycles. The 2014 data are based on the methodology that covered only two main criminal court registers, while the 2016 data are based on the methodology that covers more than two criminal court registers. This makes the basic and key difference.

Q099 (General Comment): The collected statistical data for the Supreme Court do not distinguish the litigious and non-litigious cases. In the civil and commercial matters the Supreme court decides primarily on the applications for appellate review on legal questions. In the commercial cases it decides also in the appellate procedure against the decisions of the Regional courts as the courts of first instance. The administrative cases at the Supreme Court level includes the remedy procedures against the decisions of the Regional courts as the courts of first instance. Depending on the type of the administrative procedure it might be appeal procedure or the cassation review procedure.

Q099 (2021): As to the number of administrative law cases, in August 2021, the Supreme Administrative Court of the Slovak Republic was established as a separate institution and it took over all the administrative law cases of the Supreme Court of the Slovak Republic. Therefore, the above-mentioned figures of the administrative law cases cover only the period from January to July 2021.
Q099 (2020): Decline of incoming cases and resolved cases as well in the Supreme court as a result of a pandemic situation.

Q099 (2019): No cases in the category other cases
Line 1: A significant drop in the number of cases for 2019 compared to 2018 has been caused by a massive decrease of incoming cases of a certain plaintiff - Pohotovosť s. r. o., a legal person which back then overwhelmed the Supreme Court´s Civil and Commercial law divisions with thousands of appeals and caused an abnormal caseload. Therefore, the indicators for 2019 should be considered as regular average numbers. Compared to e.g. 2018 and previous years which were rather exceptional.

Q099 (2018): The decrease in numbers of both incoming and resolved other than criminal cases may be explained by two important issues. First of all this is the complex change of the Civil and Administrative court procedure by introducing the new procedural rules which came into force since 1 July 2016. The other reason is the decrease of the caseload at the lower courts which naturally influence the number of cases at the Supreme court level.

Q099 (2017): The decrease in numbers of both incoming and resolved cases must be understood in connection with the data for previous years. As we explained in previous cycles (data 2014, 2015, 2016), at the level of the Supreme Court of the Slovak Republic there was the enormous increase of incoming (and resolved) cases related to consumer protection in civil and enforcement procedure. We recorded in previous years thousands of recurring submissions of several private loans' companies. These submissions started to be processed quicker and subsequently, its number dropped. The similar explanation is relevant also for the administrative cases.
As regards the variations, some inconsistencies in data between the old and new system persist, and they can be explained as the transition between the old system of collecting the statistical data to new one is more complicated than was expected, with the setting up of Analytical centre of the MoJ, application of CEPEJ methodology and its tools is one of the targets in the on-going project between CEPEJ and Ministry of justice of the Slovak republic.
There are still two different IT tools used to collect the statistical data from the courts to Analytical centre. The Analytical centre makes every effort to complete the transition between two systems as soon as possible to get reliable data as soon as possible.
As to administrative cases, in the year 2017 there were some appeal procedures pending at Regional courts as the courts of appeal as the result of application of the previous procedural rules described in point 1. All appeals against the decisions of Regional court (as the courts of first instance) were always tried by the Supreme court and we are presenting this data for all evaluation cycles in this table.

Q099 (2016): The enormous increase of the incoming cases is related to consumer protection in civil and enforcement procedure.
Q099 (2013): For 2013, a general remark was provided in respect of questions 91, 97 and 101, explaining that there were no specific reasons justifying the variations in the numbers of cases of the particular categories. It was stressed that the Slovak judicial system was facing different types of claims which massively loaded courts of all instances. For example, there was a huge number of legal actions arisen from the loans provided by the so called "non-bank loan companies" where courts had to consider constant violations of the consumer protection law. Besides, there was a huge number of class actions against the State, carried out by one of the non-bank companies for alleged damages etc. The capacity of the court staff to resolve all of the filed cases in the appropriate time period was limited despite the measures which have been taken. In spite of the positive trend concerning the increase of the number of total resolved cases, the number of incoming cases was increasing even more, causing backlogs.

Q100 (General Comment): The collected statistical data does not distinguish between the two types of criminal offences.

Q100 (2018): The decrease in incoming and resolved cases is influenced by the decrease of the caseload at the lower courts

Q100 (2016): During 2015 there were more pending cases created

Q101 (2021): The data listed in the category "Roberry case" and "Intentional homicide" represent the number of convicted persons in legally closed cases. These are data obtained from the database of legally closed cases, which are marked as completed in statistical reporting, and therefore the data is only available for the category " Resolved cases". Since 2018, the number of convicted persons is not reported according to the most severe criminal offense, but convictions for all criminal offenses are taken into account (i.e. in the event that a person was convicted of committing several criminal offenses, the person in question is reported as convicted for each criminal offense separately).

Q101 (2020): More significant decline of incoming cases and resolved cases as well in the courts as a result of a pandemic situation. In the employment dismissal cases the rate of the discrepancy is not so high in comparison with 2019.

Q101 (2019): Note 1: The data in the "Roberry case" and "Intentional homicide" categories represent the number of convicted persons in legally finished cases (resolved cases). These are the data obtained from the database of legally completed/finished cases, which are reported as resolved cases in the statistical reporting, and therefore the data are only available in the category "Resolved cases". Since 2018, the number of convicted persons has not been reported according to the most severe criminal offense, but convictions for all criminal offenses are taken into account. This means that if a person has been convicted of more than one crime (for example 2), the person is reported as convicted of each crime separately (it means twice).
Note 2: The difference between pending cases on 1 Jan. 2019 and the final state pending cases on 31st of December 2018, is due to the findings of a non-uniform method of reporting cases in the insolvency agenda among the our courts. Based on these findings, the courts were instructed/directed on how to report the number of decided insolvency cases. Subsequently, the courts were allowed to record the actual state of pending cases on 1 Jan. 2019, that the methodology is the same for all courts and in the whole year (2019) period. For the next year, these differences should not occur, due to the automatic transfer of the data from the end of period (2019) into the beginning of the monitored period 2020 in the electronic data collection.

Q101 (2018): Note 1:Differences in the initial states of things as of 1 January 2018 different from the final states as of 31 December 2017 are due to the introduction of electronic data collection through the Data Collection Application (hereinafter referred to as AZU). When introducing electronic data collection in 2018, the courts were allowed to record the actual state of pending cases as of 1 January 2018 with the aim of not transmitting any inaccuracies from paper collection of previous periods. These differences should not occur in the next year, given the introduction of automatic transfer of the number of undecided cases from the end of the previous period in the electronic data collection.
Note 2: The increasing number of insolvency cases is caused by an important amendment of the Act on bankruptcy. The personal bankruptcy of the natural persons has been introduced in march 2017 and in 2018 we registered significant increase of new cases. Note 3: Data in the "Robbery case" and "Intentional homicide" categories represent the number of convicted persons in lawfully completed cases. These are data obtained from the lawfully completed database, which are classified as equipped in the statistical reporting and therefore data are only available for " Since 2018, the number of convicted persons has not been reported according to the strictest crime, but convictions for all crimes are taken into account (i.e. if the person has been convicted of several offenses, the person is reported as convicted for each crime separately).

Q101 (2017): Q101 : The data in the table are not horizontally consistent. This is caused by the fact, that the data on pending cases on 1. January 2017 (the same as data on 31. December 2016 given for the previous cycle) were collected in a one-shot collection for the Justice Scoreboard 2017 and were not bound by control patterns of horizontal consistency as it is in the new electronic data collection active since January 2018.
As regards the variations, some inconsistencies in data between the old and new system persist, and they can be explained as the transition between the old system of collecting the statistical data to new one is more complicated than was expected, with the setting up of Analytical centre of the MoJ, application of CEPEJ methodology and its tools is one of the targets in the on-going project between CEPEJ and Ministry of justice of the Slovak republic.
There are still two different IT tools used to collect the statistical data from the courts to Analytical centre. The Analytical centre makes every effort to complete the transition between two systems as soon as possible to get reliable data as soon as possible.
The increase in litigious divorce cases is influenced by significant decrease in the clearance rate (CR) to 79% in previous year 2016. The reason for the reduced CR can be found in the change of records of divorce without children from register C to the register of Pc, which was carried out in the middle of 2016, and with this change the organizational shift of the relevant number of judges into another department was not parallel.
The increase in the numbers of insolvency cases was significantly influenced by the legislative changes related to the personal bankruptcy of natural persons. Since 1.3.2017 the simplified access to personal bankruptcy and the possibility of debt elimination of natural persons is in effect. The impact of this changes was immediate in both incoming and resolved cases.

Q101 (2016): Comparison with previous cycles is not possible due to the change of methodology of calculation of cases introduced by the Analytical centre. The methodology now can identify cases finalised at each instance. The inconsistency between pending cases at the beginning of 2016 and pending at the end of 2015 is disturbed because of introduction of new methodology of calculation by the Analytical centre .

Slovenia

Q091 (General Comment): Category 1. 'Civil (and commercial) litigious cases' at first instance includes: civil litigious cases at local and district courts, various civil cases at local and district courts, legal aid at local and district courts, international legal aid at district courts, commercial litigious cases at district courts, labour law cases at labour courts, social law cases at social court, various labour and social law at labour and social courts, legal aid at labour and social courts. insolvency cases including compulsory composition, bankruptcy of legal person, bankruptcy of physical person, bankruptcy of inheritance, compulsory dissolution, simplified compulsory composition and preventive restructuring at district courts. The number includes the labour law and social law cases (before specialised labour and social law courts) due to their similarity to litigious cases in material and procedural aspects.
Q91 - Category 2.1. 'General civil (and commercial) non-litigious cases': see Q92.
Q91 - Category 2.2.1. 'Non litigious land registry cases' at first instance includes (at local courts): land registry cases, decisions on appeals at first instance and various land registry cases.
Q91 - Category 2.2.2 'Non-litigious business registry cases ' at first instance includes (at district courts): business registry cases and various business registry cases.
Q91 - Category 2.2.3. 'Other registry cases': No cases were included in this category.
Q91 - Category 2.3. 'Other non-litigious cases': No cases were included in this category.
Q91 -Category 3. 'Administrative law cases' at first instance include (at the Administrative court): - administrative cases and various administrative cases.
Q91 - Category 4. 'Other cases': see Q93.
The above listed cases are classified into CEPEJ categories slightly differently over the years.
Q 91, 97, 99, 101 - Inconsistencies:
Inconsistencies within the tables are possible due to the peculiarity of the Supreme Court`s Data Warehouse (used in the Slovenian judiciary as the official source of data since January 1st 2012, at every court, and for providing data to the Ministry of Justice and at the Judicial Council).
It is a "live" system (dynamic reporting), meaning that the reported figures for a specific date or period of time inevitably vary for different reasons (e.g. the data was not promptly entered into the CMS; in some instances, the decision, in which category some specific new cases should be included, may be subsequently changed and when data are unified some figures change; there is also the possibility that a mistake was done when entering the data and was later detected in the quality check and corrected.)
In Data warehouse reports, every category (column in the table) is calculated (counted) separately, therefore the „Pending on 31 Dec“ may not equal to the formula (Pending 1 Jan + Incoming – Resolved) due to fore mentioned influences."

Q091 (2021): 2.2 Registry cases and 2.2.1 Non litigious land registry cases - Pending cases on 1 Jan.: decrease by approx. 50%
In 2020, the number of incoming cases decreased due to Covid-19 pandemics and its effect on the sales of real estate. Consequently, the number of pending cases at the beginning of 2021 decreased. 2.2 Registry cases and 2.2.1 Non litigious land registry cases - Incoming cases/Resolved cases: increase by approx. 25%
In 2021, the number of incoming (and consequently resolved) cases increased, most likely due to the loosening of Covid-19 restrictions and its effect on the real estate market.
2.2 Registry cases and 2.2.1 Non litigious land registry cases - Pending cases on 31 Dec.:
In 2021, the number of incoming and resolved cases increased (see above). However, the increase in resolved cases was slightly lower, hence the increase in pending cases at the end of the year (Disposition time in register cases is low – approx. 0,2 months; ratio of Resolved vs. Pending cases is approx. 65:1).
2.2.2. Non litigious business registry cases – Pending cases older than 2 years from the date the case came to the first instance court: decrease by 200%:
Please note the small (absolute) number of cases (less than 5 cases).
4. Other cases - Pending cases on 31 Dec.: decrease 38%
The majority of cases in this category are enforcement cases on the basis of authentic document in civil matters before the writ for the execution became final (all cases processed at the Central Department for Authentic Document at the Local Court in Ljubljana – exclusive jurisdiction), where the trend of decrease of pending cases is observable in 2021 and 2022. More factors could have contributed to the decrease, but no specific major reason can be identified.
4. Other cases - Pending cases older than 2 years: increase by 58%
The majority of cases in this category are enforcement cases on the basis of authentic document in civil matters before the writ for the execution became final (all cases processed at the Central Department for Authentic Document at the Local Court of Ljubljana – exclusive jurisdiction). Some of those cases are waiting for inheritance cases regarding parties to finish. Please note the small number of cases (less than 100 cases), compared to incoming cases (more than 100.000 per year).

Q091 (2020): The decrease in the number of resolved cases at 1. Civil (and commercial) litigious cases and 4. Other cases is due to the limitation of operation of courts due to Covid-19 pandemics.
The decrease in the number of pending cases at the end of the year at 2.2.1 Non litigious land registry cases (and consequently at 2.2 Registry cases) is not unusual due to the high number of incoming and resolved cases in a year compared to pending cases at the end of the year (around 1-2%).
Regarding the increase in Administrative law cases - Pending cases older than 2 years: In previous years, the Administrative court was faced with the influx of new cases, due to the implementation of the ECHR judgement 60642/08 (e.g. 24,5 % of incoming cases in 2017), as well as some new competences. This caused an increase in the number of pending and resolved cases. In the aforementioned cases, the court was also faced with new legal and factual issues, as well as administrative difficulties. In recent years, the Administrative court is also dealing with a considerable number of priority or urgent cases (e.g. asylum seekers), which means a longer waiting line for “regular” cases. Though administrative and managerial actions have been taken, the number of (older) pending cases has increased due to the aforementioned difficulties and the overburdening of the court.

Q091 (2019): In general, the trend of decrease in the number of incoming cases can be observed in all types of civil cases, causing also a decrease in the number of resolved and pending cases. In recent years, the number of incoming cases is generally decreasing due to several reasons, partly due to a better economic situation in Slovenia and partly to a successful introduction of new business models in the
Slovenian judiciary (informatisation, change of perception when litigants and debtors do not see any profit in prolonging court procedures, gradual settlement of case-law). Accordingly, in the last years, the clearance rate is at or slightly above 100%.
In 2019, a new Family Code and new Non-Contentious Civil Procedure Act stepped into force. The main change for district courts was establishing family law cases as non-litigious cases (before 2019 classified as litigious cases). Additionally, local courts became competent to decide in tutelage cases (before 2019 in competence of the executive branch).
This reflected in a decreased number of reported 1. Civil litigious cases, while the number of 2.1 General civil non-litigious cases did not change (an increase in new cases is similar to the decrease in the number of incoming cases that is generally observed).
Administrative cases: In previous years, the Administrative court was faced with the influx of new cases, due to the implementation of the ECHR judgement 60642/08 (e.g. 24,5 % of incoming cases in 2017), as well as some new competences. This caused an increase in the pending and resolved cases. In the aforementioned cases, the court is faced with new legal and factual issues, as well as administrative difficulties. Though administrative and managerial actions have been taken, an increase in the number of pending cases is expected due to the aforementioned difficulties and the overburdening of the court.

Q091 (2018): In general, the trend of decreasing number of incoming cases can be observed in all types of civil cases, causing also a decrease in number of resolved and pending cases. In recent years, the number of incoming cases is generally decreasing due to several reasons, partly due to a better economic situation in Slovenia and partly to a successful introduction of new business models in the Slovenian judiciary (informatisation, change of perception when litigants and debtors do not see any profit in prolonging court procedures, gradual settlement of case-law). Accordingly, in last years, clearance rate is at or slightly above 100%.
Administrative cases: The Administrative court is faced with the influx of new cases, due to the implementation of the ECHR judgement 60642/08 (24,5 % of incoming cases in 2017). This caused an increase in the pending and resolved cases. In these cases, the court is faced with new legal and factual issues, as well as administrative difficulties - the actions are often incomplete or the information is insufficient, filled in foreign languages, the foreign parties have yet to nominate a proxy etc. The court has established a special office to perform a preliminary examination of the actions and assist in the exchange of documents between parties, however longer times for resolving cases are expected due to the aforementioned difficulties and the overburdening of the court.

Q091 (2017): In recent years, the number of incoming cases is generally decreasing due to several reasons, partly due to a better economic situation in Slovenia and mainly to a successful introduction of new business models in the Slovenian judiciary (informatisation, change of perception when litigants and debtors do not see any profit in prolonging court procedures, gradual settlement of case-law). Considering the higher number of incoming cases (number of pending cases is approx. 20%-30% of all incoming cases), a slight variation in incoming cases might have a considerable effect on the number of pending cases. For discrepancies, see general comments.
The Administrative court is faced with the influx of new cases, due to the implementation of the ECHR judgement 60642/08 (24,5 % of incoming cases in 2017). In these cases, the court is faced with new legal and factual issues, as well as administrative difficulties - the actions are often incomplete or the information is insufficient, filled in foreign languages, the foreign parties have yet to nominate a proxy etc. The court has established a special office to perform a preliminary examination of the actions and assist in the exchange of documents between parties, however longer times for resolving cases are expected due to the aforementioned difficulties and the overburdening of the court. At the end of 2017, the first case was ready to be processed on the merits of the case.

Q091 (2016): In recent years, the number of incoming cases is generally decreasing due to several reasons, partly due to a better economic situation in Slovenia and mainly to a successful introduction of new business models in the Slovenian judiciary (informatisation, change of perception when litigants and debtors do not see any profit in prolonging court procedures, gradual settlement of case-law). Considering the higher number of incoming cases (number of pending cases is approx. 20%-30% of all incoming cases), a slight variation in incoming cases might have a considerable effect on the number of pending cases. For discrepancies, see general comments.

Q091 (2015): In recent years, the number of incoming non-litigious cases is generally decreasing partly due to a better economic situation in Slovenia and mainly to a successful introduction of new business models in the Slovenian judiciary. Considering the higher number of incoming cases (number of pending cases is approx. 15%-20% of all incoming cases), a slight variation in incoming cases have a considerable effect on the number of pending cases.

Q091 (2014): In previous cycles, insolvency cases have been accounted in former category 1. 'Civil (and commercial) litigious cases'. For 2014, they are encompassed within the item ''other''. The 2014 data includes labour law and social law cases decided before specialised labour and social law courts, due to their similarity to litigious cases in material (employment contract derives from civil law contract) and procedural (the court procedure in labour and social cases is based on general civil law procedure) aspects.
Q091 (2013): "Civil and commercial litigious cases" include labour law and social law cases that are proceeded by specialised labour and social law courts. Cases that do not fit exactly to the determined types of civil, commercial, non-litigious, land and business registry, enforcement and administrative law cases, were previously included in other cases. For 2014, 'Other cases' include only cases outside of the above mentioned legal fields, while the various cases are distributed among the other items. With regard to the category 'non-litigious business registry cases', the increase of the number of pending cases on 31 December 2013 can be explained with the fact that there were 8.000 more incoming cases in 2013 than in 2012, but courts were not able to handle the case-load.

Q091 (2012): “Civil and commercial litigious cases“ encompasse bankruptcy proceedings, which were in the previous round counted as 'other cases'. The number of incoming non-litigious business registry cases rose, probably due to the postponed effect of the financial and economic crisis. Nevertheless, courts managed to solve almost all incoming cases. The total subsumes for the first time cases processed by the Central Department for Authentic Document (part of the Local Court of Ljubljana) which has jurisdiction over all enforcement cases. The area of land registry cases is in constant improvement since a successful computerisation project in 2003. The decrease in the number of pending cases stems from a better organisation of work and of the totally electronic procedure.

Q092 (General Comment): Categories used in “Civil and commercial non-litigious cases”: all non-litigious civil cases at local and district courts, non-litigious commercial cases at district courts (different kinds of personal and family status, property and other disputes, provided by the Non Contentious Procedure Act or other law, procedures for issuing a payment order at local and district courts in civil matters, procedures for issuing a payment order in commercial matters at district courts, cases pursuant to the Inheritance Act at local courts, cases pursuant to the Mental Health Act at local courts; and civil enforcement cases on the basis of an enforcement title, commercial enforcement cases on the basis of an enforcement title, cases for enforcement on real-estate property, enforcement cases on the basis of authentic document in civil matters after the writ for the execution became final, temporary injunctions in civil matters, temporary injunctions in commercial matters, various enforcement cases.
The above listed cases are classified into CEPEJ categories slightly differently over the years.

Q092 (2014): 2014 Category 2.1 „General civil (and commercial) non-litigious cases“at the first instance includes 1. (former category 2. „General civil (and commercial) non-litigious cases“): N, Ng, Pl, Plg, D, Pr; and 2. (former category 3. ' Non litigious enforcement cases'): I, Ig, In, VL, Z, Zg and R-i.

Q092 (2013): 2013 Civil and commercial non-litigious cases at first instance include: N, Ng, Pl, Plg, D, Pr.

Q092 (2012): 2012 "Civil and commercial non-litigious cases at first instance include: N, Ng, Pl, Plg, D and P."

Q093 (General Comment): Category 4. „Other cases“ at first instance includes: free legal aid at district courts, labour courts and at the Administrative court, enforcement cases on the basis of authentic document in civil matters before the writ for the execution became final (all cases processed at the Central Department for Authentic Document at the Local Court of Ljubljana – exclusive jurisdiction), international attestations at district courts, attestations according to the Hague convention at district courts.

Q093 (2014): 2014 4. „Other cases“ at first instance includes: Bpp ,COVL, Ov-i, Ov-H and St [(St-01), (St-02), (St-03), (St-04) (St-05)].
In previous cycles, all the mentioned St cases have been accounted in former category 1. 'Civil (and commercial) litigious cases'."

Q093 (2013): 2013 "Other" civil law cases at first instance include: Bpp, COVL, Ov-i, Ov-H."

Q093 (2012): 2012 "Other” civil law cases at first instance include: Pom , Pom-i, R, Rg, Ov-i, Ov-H, Bpp, COVL, II Upr, I Upr.

Q094 (General Comment): The figures in the table include the following cases: Severe criminal cases: criminal cases at local and district courts,, criminal cases against juveniles at district courts. Misdemenour cases: minor offences in regular court procedure – request for judicial protection, minor offences in regular court procedure – accusation proposals, cancellation of validity of the driver’s licence according to the legal limit of punitive points
Other cases: criminal investigations at district courts, criminal cases against juveniles in preparatory proceedings, execution of the sanction of prison, execution of criminal sanctions of foreign courts, criminal investigation actions at local and district courts, various criminal matters at local and district courts, cases of the out-of-hearing senate, clemency procedures at local and district courts, legal aid in criminal matters, international legal aid in criminal matters, cases of decisions to permit interventions within human rights and freedoms, legal aid in minor offences, international legal aid in minor offences, search of premises, setting a task for the good of the community or the local community, various cases in minor offences, compliance detention.
Regarding criminal investigations at district courts: Slovenia has a system where the state public prosecutor can request a (first instance) court to perform a criminal investigation (or individual investigatory acts). When this procedure at court is finished, the case is returned to the state prosecutor, who can decide whether to dismiss a case or file an accusatory act at the (same) court. When the accusatroy act is filed, a criminal trial (i.e. deliberating on the responsibility and sanctioning of the offender) begins.

Q094 (2021): 1. Severe criminal cases - Pending cases on 1 Jan.: increase by 22%
In 2020, the functioning of first instance courts was limited due to Covid-19 restrictions, hence the increase in pending cases at the beginning of 2021.
1. Severe criminal cases - Resolved: increase by 17%
In 2020 first instance courts resolved less cases than usual due to Covid-19 restrictions, hence the increase in resolved cases in 2021.
2. Misdemeanour and / or minor criminal cases - Pending cases older than 2 years from the date the case came to the first instance court: decrease by 34%.
The decrease is due to the more efficient work of courts in resolving older cases.
3. Other criminal cases - Pending cases on 1 Jan. ref. year: increase by 16%
In 2020, the functioning of first instance courts was limited due to Covid-19 restrictions, hence the increase in pending cases at the beginning of 2021.
In 2021, approx. 30% of pending cases and 7% of incoming/resolved cases were criminal investigation cases (see general comment).

Q094 (2020): Until now, at "1. Severe criminal cases" we have reported both criminal investigation and criminal trial cases (see general comment) for the same criminal offence. For 2020, we have excluded data on investigations to report data on criminal trials only, and criminal investigation is reported at 3. Other criminal cases. The main reason is the comparability of data between countries as criminal investigation is not within the juridiction of courts in most countries. Investigation cases, that were previously reported at 1. Severe criminal cases and are now reported under 3. Other cases represent 5-10% of all reported cases.
The number of incoming Severe criminal cases decreased by 1% in 2019 and the number of resolved cases decreased by 2% in 2019. However, in 2020 the number of incoming cases decreased by 1%, and the number of resolved cases decreased by 23%, mostly due to limitations of operations of courts due to the Covid-19 pandemics. Consequently, the number of pending cases has also increased by 22%.
The number of pending Severe criminal cases, older than 2 years increased in 2019 (by 15%) and stayed roughly the same in 2020, while the number of Misdemeanour cases stayed roughly the same in 2019 and increased significantly (by 128%) in 2020. No specific explanation can be given for any of the mentioned changes. This two factors resulted in increase in total number of pending cases older than 2 years.

Q094 (2018): Severe criminal law cases include all offences, listed in the Criminal Code. Such offences are punishable by either imprisonment, fine (monetary penalty) or in some cases with restricting the driving of motorized vehicles. Minor offences are set in other laws (not the Criminal Code) and the procedure is regulated by the Minor Offences Act. Minor offences cannot be punished by deprivation of liberty, but rather by a fine and/or other sanctions, provided by laws.
Discrepancies: This year, some of the cases, previously reported at Severe or Misdemeanor cases, are reported under new category - Other cases (for details, please see general comment). The metodology for the total number of cases reported did not change, and the changes for total are below 20%.

Q094 (2016): The observed decreases can be attributed to the decrease in the number of cases, processed by the police and the state prosecution (see Q107).
Q094 (2014): According to 2014 data, the category “severe criminal law cases” includes all offences, listed in the Criminal Code. Such offences are punishable by either imprisonment, fine (monetary penalty) or in some cases with restricting the driving of motorized vehicles. At first instance, this category encompasses: criminal cases at local and district courts (K); criminal investigations at district courts (Kpr); criminal cases against juveniles at district courts (Km); criminal investigation actions at local and district courts (Kpd); various criminal matters at local and district courts (Kr); clemency procedures at local and district courts (Po); criminal cases against juveniles in preparatory proceedings (Kmp); cases of the out-of-hearing senate (Ks); execution of the sanction of prison (IKZ); execution of criminal sanctions of foreign courts (IKZt); cases of decisions to permit interventions within human rights and freedoms (Pp). The attention should be drawn on the fact that the 2014 data is not comparable to pre-2014 results, because until 2014, only first 3 categories above were reported. In 2015, the reporting method was further improved, and other types of cases were also included in the reporting.
The minor offences are set in other laws (not the Criminal Code) and the procedure is regulated by the Minor Offences Act. The minor offences cannot be punished by deprivation of liberty, but rather by a fine and/or other sanctions, provided by laws. At first instance, this category subsumes: minor offences in regular court procedure – request for judicial protection (PR-zsv); minor offences in regular court procedure – accusation proposals (PR-obp); cancellation of validity of the driver’s licence according to the legal limit of punitive points (EPVD); compliance detention (PRuz). This category does not include: legal aid in minor offences (PomPR); international legal aid in minor offences (PomPRi); search of premises (PRhp); setting a task for the good of the community or the local community (PRnk) and various cases in minor offences (PRr).

Q094 (2012): The decrease in the number of “misdemeanour and/or minor criminal cases” in 2012 is the result of the reform in law on minor offenses which transferred the jurisdiction of some cases previously tried by courts to other authorities. According to 2012 data, the category “severe criminal law cases” at first instance included: criminal cases at local and district courts (K); criminal investigations at district courts (Kpr); and criminal cases against juveniles at district courts (Km). The category did not encompass: criminal investigation actions at local and district courts (Kpd); various criminal matters at local and district courts (Kr); clemency procedures at local and district courts (Po); criminal cases against juveniles in preparatory proceedings (Kmp); cases of the out-of-hearing senate (Ks); execution of the sanction of prison (IKZ); execution of criminal sanctions of foreign courts (IKZt); cases of decisions to permit interventions within human rights and freedoms (Pp).

The category “misdemeanour cases and minor offences cases” at first instance included: minor offences in regular court procedure – request for judicial protection (PR-zsv); minor offences in regular court procedure – accusation proposals (PR-obp); minor offences at the transition from 2004 to 2005 (PRs); minor offences, introduced in the judicial jurisdiction after the 31.12.2004 (PRv); cancellation of validity of the driver’s licence according to the legal limit of punitive points (EPVD); compliance detention (PRuz). This category did not subsume: legal aid in minor offences (PomPR); international legal aid in minor offences (PomPRi); search of premises (PRhp); setting a task for the good of the community or the local community (PRnk); and various cases in minor offences (PRr).

Q097 (General Comment): The distribution of cases for Q97 is the same as for Q91.
Inconsistences noticed are due the Data Warehouse system explained in Q91.
Q097 (2021): All categories - Pending cases on 1 Jan.: decrease by approx. 50%
In 2020, the functioning of first instance courts was limited due to Covid-19 restrictions (and the number of resolved cases at first instance courts decreased). As second instance courts deal with the majority of cases without hearing of parties, their functioning was not affected that much. The number of appeals coming from first instance decreased, which resulted in the decrease of pending cases at second instance courts at the beginning of 2021.
Resolved cases: The decrease in the number of resolved cases is due to two factors: 1. impact of Covid-19 pandemics, namely the higher number of judges and court staff on sick leave or quarantined (compared to 2020), and 2. more general human resources issues (retirement of judges, prolonged sick leaves etc.).
Categories 1, 2 and 2.1 - Pending cases on 21 Dec.: increase by approx. 10-30%
Higher courts resolved approx. 10% less cases in 2021, which resulted in a greater increase of pending cases on 31. Dec (Disposition time in higher courts is low – 1-2 months; ratio of Resolved vs. Pending cases is approx. 10:1)
Categories 2.2/2.2.1 - Pending cases on 21 Dec.: increase by approx. 60/90%
Please note the increase in resolved land registry cases in 2021 (Q91) which may result in an increase of appeals, and small (absolute) number of cases at second instance (20-30 pending cases).
Category 2.2.2 - Pending cases on 21 Dec.: decrease by approx. 25%
Please note the small (absolute) number of cases at second instance (less than 5 pending cases).

Q097 (2020): The decrease in pending cases at the beginning and the end of the year is due to the fact that higher courts are sucesfully reducing the number of pending cases. The decrease in incoming and resolved cases is partially due to the national trend observed in general, and paritally due to the limitation of operation of courts due to Covid-19 pandemics.
The discrepancies in categories 2.2.1. Non litigious land registry cases and 2.2.2 Non-litigious business registry cases (and subsequently in 2.2. Registry cases), as well as at Pending cases older than 2 years from the date the case came to the second instance court are due to a small absolute number of cases.

Q097 (2019): No particular explanation can be given for the general decrease of incoming cases (national trend) which resulted in the decrease in the number of incoming and pending cases.
The increase in incoming Non-litigious business registry cases in 2018 resulted in an increased number of pending cases in the beginning of 2019. Please note small (absolute) number of cases.
Q097 (2018): No particular explanation can be given for the general decrease of incoming cases (national trend), as well as for the increase in number of incoming registry cases.
Q097 (2017): In recent years, the number of incoming cases is generally decreasing due to several reasons, partly due to a better economic situation in Slovenia and mainly to a successful introduction of new business models in the Slovenian judiciary (informatisation, change of perception when litigants and debtors do not see any profit in prolonging court procedures, gradual settlement of case-law). Considering the higher number of incoming cases (number of pending cases is approx. 20%-30% of all incoming cases), a slight variation in incoming cases might have a considerable effect on the number of pending cases.

Q097 (2016): In recent years, the number of incoming cases is generally decreasing due to several reasons, partly due to a better economic situation in Slovenia and mainly to a successful introduction of new business models in the Slovenian judiciary (informatisation, change of perception when litigants and debtors do not see any profit in prolonging court procedures, gradual settlement of case-law). Considering the higher number of incoming cases (number of pending cases is approx. 20%-30% of all incoming cases), a slight variation in incoming cases might have a considerable effect on the number of pending cases.

Q097 (2015): In recent years, the number of incoming non-litigious cases is generally decreasing partly due to a better economic situation in Slovenia and mainly to a successful introduction of new business models in the Slovenian judiciary. Considering the higher number of incoming cases (number of pending cases is approx. 15%-20% of all incoming cases), a slight variation in incoming cases have a considerable effect on the number of pending cases.

Q097 (2013): 2013 The area of land registry cases has been in constant improvement since a successful computerisation project in 2003 – the average disposition times have fallen from 18 months to 2 weeks. The lowering of the number of pending cases is the consequence of a better organisation of work and of the totally electronic procedure.

Q097 (2012): 2012 The figures of pending cases on 1 January 2012 for civil litigious cases (as well as for incoming, resolved and pending cases on 31 December 2012) are higher than in the previous exercise, because we included in this category the cases of bankruptcy proceedings (including: compulsory composition, bankruptcy of legal person, bankruptcy of physical person, bankruptcy of inheritance and compulsory dissolution), which were counted as 'other cases' in the previous evaluation cycle. The example in the questionnaire for this 7th category was ‘insolvency registry cases’, so we mistakenly included here all the cases pursuant to the Financial Operations, Insolvency Proceedings and Compulsory Dissolution Act handled by district courts. These are not insolvency registry proceedings, but are to be understood as litigious proceedings according to the CEPEJ Explanatory note.
With regard to the category "administrative law cases, in the previous round we included appeals in administrative disputes, which are lodged with and dealt with by the highest instance court, namely the Supreme Court of the Republic of Slovenia in this category (Q 97.6). To ensure internally consistent answers we decided to provide the data in this chapter regarding the instance of the court that decides on the case not the instance of the procedure in which the cases is decided. This means that all the cases that are addressed by the Supreme Court of the Republic of Slovenia are taken into account at question 97.

Q098 (General Comment): For explanation on severe criminal cases and minor offences please see comment to Q94.
The figures for severe criminal law cases at second instance include criminal cases (Kp).
The figures for minor offences cases at second instance include:
- PRp-zsv – minor offences in regular court procedure – request for judicial protection,
- PRp-obp – minor offences in regular court procedure – accusation proposals,
- EPVDp – cancellation of validity of the drivers license according to the legal limit of punitive points,

The figures for other cases include:
- Kr – various criminal cases,
- PRnkp – setting a task for the good of the community or the local community,
- PRr – various cases in minor offences,
- PRuzp – compliance detention.

Q098 (2021): All categories - Pending cases on 1 Jan.: decrease by approx. 10-70%
In 2020, the functioning of first instance courts was limited due to Covid-19 restrictions (and the number of resolved cases at first instance courts decreased). As second instance courts deal with the majority of cases without hearing of parties, their functioning was not as affected that much. The number of appeals coming from first instance decreased, which resulted in the decrease of pending cases at second instance courts at the beginning of 2021.
2. Misdemeanour and / or minor criminal cases – Incoming/Resolved cases: increase by approx. 150/90%, Pending cases on 21 Dec.: increase by approx. 1400% (this also reflected in Total)
The increase in incoming cases at second instance in 2021 is mostly due to two factors: 1) according to the Minor Offences Act, the appeal in minor offences in regular court procedures – request for judicial protection was limited (depending on the criteria - sanction). At the end of 2020 the Constitutional court established that the aforementioned limitation for appeal was unconstitutional, which lead to the increase in the number of appeals in 2021; 2) In 2021, the higher court, competent for the coastal region received multiple cases of fishermen regarding border-crossing issues (in relation to the Arbitration under the arbitration agreement between the government of the Republic of Croatia and the Government of the Republic of Slovenia; PCA CASE NO. 2012-04). Despite the efforts (see the number of resolved cases), the number of pending cases at the end of the year increased (Disposition time in higher courts is low – less than 1 month; ratio of Resolved vs. Pending cases is approx. 33:1).

Q098 (2020): The decrease in pending cases at the beginning and the end of the year is due to the fact that higher courts are sucesfully reducing the number of pending cases. the decrease in incoming and resolved cases is due to the limitation of operation of courts due to Covid-19 pandemics
The discrepancies at Pending cases older than 2 years from the date the case came to the second instance court are due to a small absolute number of cases.

Q098 (2018): Discrepancies: This year, some of the cases, previously reported at Severe or Misdemeanor cases, are reported under new category - Other cases (for details, please see general comment). The metodology for the total number of cases reported did not change, and the changes for total are below 20%.

Q098 (2016): The observed decreases can be attributed to the decrease in the number of cases, processed by the police and the state prosecution (see Q107).

Q098 (2014): According to 2014 data, the figures for “severe criminal law cases” at second instance includes: criminal cases (Kp) and various criminal cases (Kr). In this respect, it should be highlighted that the 2014 data is not comparable to pre-2014 results, because until 2014, only first category was reported. In 2015, the reporting method was further improved, and other types of cases were also included in the reporting.
The figures for “minor offences cases” at second instance included: minor offences in regular court procedure – request for judicial protection (PRp-zsv); minor offences in regular court procedure – accusation proposals (PRp-obp); cancellation of validity of the drivers license according to the legal limit of punitive points (EPVDp); compliance detention (PRuzp); setting a task for the good of the community or the local community (PRnkp); various cases in minor offences (PRr).

Q098 (2012): According to 2012 data, the figures for “severe criminal law cases” at second instance included criminal cases (Kp) and excluded various criminal cases (Kr).
The figures for “minor offences cases” at second instance included: minor offences in regular court procedure – request for judicial protection (PRp-zsv); minor offences in regular court procedure – accusation proposals (PRp-obp); minor offences at the transition from 2004 to 2005 (PRps); minor offences, introduced in the judicial jurisdiction after the 31.12.2004 (PRpv); cancellation of validity of the driver’s licence according to the legal limit of punitive points (EPVDp); and compliance detention (PRuzp). The category did not include: setting a task for the good of the community or the local community (PRnkp) and various cases in minor offences (PRr).
The decrease of the number of “misdemeanour and/or minor criminal cases” before courts in 2012 is the result of the reform in law on minor offenses which transferred some of the jurisdiction in cases previously tried by courts to other authorities.

Q099 (General Comment): The Supreme court has Criminal, Civil, Commercial, Labour and Social and Administrative department, The categories 1., 2.1 and 2.2.1 include corresponding cases from Civil, Commercial and Labour and Social departments registers. Category 3. includes registers of the Administrative department. The distribution of cases for Q99 is the same as for Q91.
Inconsistences noticed are due the Data Warehouse system explained in Q91.
Q099 (2021): 1. Civil (and commercial) litigious cases - Pending cases on 1 Jan.: decrease by approx. 40%
In 2020, the functioning of first instance courts was limited due to Covid-19 restrictions (and the number of resolved cases at first instance courts decreased). As the Supreme Court deals with the majority of cases without hearing of parties, its functioning was not affected as much and it managed to resolve more cases than it had received.
2. Non litigious cases (2.1+2.2+2.3); 2.1 General civil (and commercial) non-litigious cases; 2.2 Registry cases; 2.2.1 Non litigious land registry casesPlease note the small (absolute) number of cases at the Supreme Court instance.

Q099 (2020): Please note, the procedure of manifested inadmissibility cases are included in figures above.
The decrease in the number of (all) pending cases is due to the efficient work of the court in 2019 and 2020. Discrepancies in sub categories (form 1. through 3) are due to a small absolute number of cases).
Q099 (2019): The differences are due to a small (absolute) number of cases in some legal areas. The decrease in pending cases at the end of 2019 is due to more efficient work of the Supreme court (changes in criteria for manifested inadmissibility in 2017).
Q099 (2018): Administrative cases - in 2017, the procedure of manifested inadmissibility was introduced in aministrative cases, reducing the number of incoming (as well as resolved and pending) cases. As for other categories and Total, the difference is due to more efficient work of the Supreme court and due to aforementioned reason.
Please note, the procedure of manifested inadmissibility cases are included in figures above.

Q099 (2017): Administrative cases: the higher number of pending administrative law cases older than two years is partially a result of higher workload of the court. Partially this is the consequence of the fact that some older cases are waiting on the decision of the Constitutional court regarding laws in question (mainly taxes and public access to information issues).

Q099 (2015): Differences in pending, incoming and resolved cases Non litigious and administrative cases are mainly due to the small absolute number of cases and the nature of the cases (most complicated cases).

Q099 (2014): 2014: Variations: The numbers in that almost all categories for 2014 deviates more than +/- 20% from the 2012 data. This is due to a small (absolute) number of cases but also because the number of judges is smaller when compared to first and second instance and a single absence due to prolonged illness has a significant impact on the solving of some types of cases. We also believe that changes in economy (financial crisis), as well as in legislation, had impact on the overall statistics, but since cases at the Supreme Court level are "filtered" through courts of first and second instance, a direct connection cannot be established.

Q099 (2012): 2012: The decrease of the number of pending cases at the Supreme Court of the Republic of Slovenia can be attributed to different factors. On one hand procedural legislation has changed. Following the changes to the Administrative Dispute Act (2007) and the Civil Procedure Act (2008) the Supreme Court has now the right to decide in these types of cases whether to review a case or not. With the reform the admissibility criteria have changed and revision is now a remedy that depends mainly on the discretion of the Supreme Court. Now revision is admissible only, if the case raises a question of law of fundamental significance or if the development of law or the preservation of uniformity of case law requires a decision by the Supreme Court. The number of all incoming cases for the whole Supreme Court has dropped considerably from more than 5 000 in 2008 to less than 4000 in 2012). On the other hand this is the consequence of changes in human resources management. Firstly, the number of judicial advisers has risen and secondly, several judicial advisers were transferred from less burdened departments to those with more pending cases and consequently the productivity has risen and the number of pending cases decreased.

Q100 (General Comment): For explanation on severe criminal cases and minor offences please see comment to Q94.
Figures for severe criminal law cases at the highest instance include:
- Kp – appeals in criminal cases,
- Ips – requests for protection of legality in criminal cases, against a decision ordering or prolonging a detention, extraordinary mitigation of punishment,
- I Kr – other criminal cases – delegations, jurisdiction disputes, prolongation of detention, other.

Figures for minor offences cases at the highest instance include:
- IV Ips – requests for protection of legality in minor offences cases.

Q100 (2021): Discrepancies: Please note the small (absolute) number of cases at the Supreme Court instance.

Q100 (2020): The discrepancies are due to a small absolute number of cases.

Q100 (2018): Discrepancies are due to small (absolute) of cases which fluctuate between years.
For distinction see general comment.

Q100 (2016): The observed decreases can be attributed to the decrease in the number of cases, processed by the police and the state prosecution (see Q107).

Q100 (2014): According to 2012 and 2014 data, figures for “severe criminal law cases” at the highest instance include: appeals in criminal cases (Kp); requests for protection of legality in criminal cases (I Ips); requests for protection of legality against a decision ordering or prolonging a detention (XI Ips); extraordinary mitigation of punishment (IX Ips); other criminal cases – delegations, jurisdiction disputes (I Kr); other criminal cases – prolongation of detention (II Kr); other criminal cases (III Kr). Figures for “minor offences cases” at the highest instance include requests for protection of legality in minor offences cases (IV Ips).

Q100 (2012): The decrease of the number of “misdemeanour and/or minor criminal cases” before courts in 2012 is the result of the reform in law on minor offenses which transferred some of the jurisdiction in cases previously tried by courts to other authorities.
According to 2012 and 2014 data, figures for “severe criminal law cases” at the highest instance include: appeals in criminal cases (Kp); requests for protection of legality in criminal cases (I Ips); requests for protection of legality against a decision ordering or prolonging a detention (XI Ips); extraordinary mitigation of punishment (IX Ips); other criminal cases – delegations, jurisdiction disputes (I Kr); other criminal cases – prolongation of detention (II Kr); other criminal cases (III Kr). Figures for “minor offences cases” at the highest instance include requests for protection of legality in minor offences cases (IV Ips).

Q101 (General Comment): The number of litigious cases does not include litigious cases regarding the custody of children without divorce (as partners were not married to begin with).

Q101 (2021): Litigious divorce cases- Pending cases on 1 Jan.: increase by 26%
In 2020, the functioning of first instance courts was limited due to Covid-19 restrictions, hence the increase in pending cases at the beginning of 2021.
Litigious divorce cases - Resolved cases: increase by 24%
In 2020, the functioning of first instance courts was limited due to Covid-19 restrictions. Cconsequently, the number of resolved cases decreased. In 2021 with the loosening of Covid-19 restrictions, the number of resolved cases increased.
Employment dismissal cases - Pending cases on 1 Jan.: increase by 61%
In 2020, the functioning of first instance courts was limited due to Covid-19 restrictions, hence the increase in pending cases at the beginning of 2021.
Employment dismissal cases - Incoming cases: decrease by 29%
The number of incoming cases most probably decreased due to numerous state measures aiming to aid the economy. Cconsequently, the employers delayed their preventive measures (in 2022, the number of incoming cases increased).
Employment dismissal cases - Resolved cases: increase by 27%
Employment dismissal cases are considered urgent, therefore the courts were working on cases despite Covid-19 restrictions.
Employment dismissal cases - Pending cases on 31 Dec.: decrease by 27%
The number of incoming cases decreased and the number of resolved cases increased (see above). Cconsequently, the number of pending cases decreased. Employment dismissal cases - Pending cases older than 2 years from the date the case came to the first instance court - decrease by 25%:
Please note the small (absolute) number of cases.
Insolvency - Pending cases older than 2 years from the date the case came to the first instance court - decrease by 19%:
The biggest decrease is in the number of personal bankrupcies, which reppresent 71% of all pending cases, older than 2 years. Intentional homicide cases and Robbery cases: Please note the small (absolute) number of cases.
GC
Insolvency - Pending cases older than 2 years
Please note that the personal insolvency cases are considered resolved only when the assets have been liquidated and the trial period for the discharge of debts (that can be set to last from 6 months to 5 years) has ended.

Q101 (2020): Litigious divorce cases - the decrease in number of incoming and resolved cases is due to limitations of operation of courts due to the Covid-19 pandemics.
Employment dismissal cases – the number of incoming cases increased by 29% in 2020 (increase by 1% in 2019), which is likely connected to Covid-19 (downsizing of businesses as a consequence of the impact of Covid-19 pandemics to some economy sectors e.g. tourism, restaurants and bars, catering, etc.), while the number of resolved cases decreased by 7%, due to limitations of operation of courts due to the Covid-19 pandemics. Consequently, the number of pending cases has increased by 61%. Insolvency cases - The number of incoming cases is decreasing (personal bankruptcy from 2014 on and bankruptcy of legal persons from 2018 on), therefore the number of resolved and pending cases is also decreasing.
The discrepancies regarding other categories are due to a small (absolute) number of cases.

Q101 (2019): The change in case-flow of cases related to asylum seekers and cases relating to the right of entry and stay for aliens cannot be contribuited to legislature or organisational changes, but rather to the enforcement of policies of the state regarding the general immigration situation in the region.
The absolute number of these cases are low. In 2018, the clearance rate for cases related to asylum seekers had been 94% (for cases related to aliens above 100%) and in 2019 the clearance ratio had been very close to 100% for both types of cases.

Q101 (2018): Employment dismissal cases- No special reason for decreased number of incoming cases can be given. The decreased number of incoming cases affecte the number of resolved and pending cases.
Insolvency- Personal insolvency accounts for more than half of the insolvency cases. The decrease in incoming insolvency cases reflects the smaller number of new personal insolvency cases (we can speculate that the higher number of personal insolvency cases in previous years was the effect of the past economic crisis). The increase in resolved cases can be explained by the elapse of probation periods (typically 2-5 years) in personal insolvency cases and more efficient liquidation of assets in cases of business subject insolvency. The number of insolvency cases for business subjects did not vary significantly in recent years.
Cases related to asylum seekers - A decreased number of incoming cases can be attributed to the immigration crisis. The increased number of incoming cases affecte the number of resolved and pending cases.
Cases relating to the right of entry and stay for aliens - No special reason for decreased number of incoming cases can be given. The decreased number of incoming cases affecte the number of resolved cases.
Robbery - The difference in number of resolved cases can be attributed to small (absolute) number of cases.
Intentional homicide - The difference in number of resolved cases can be attributed to small (absolute) number of cases.

Q101 (2017): Personal insolvency accounts for more than half of the insolvency cases (61% new cases in 2017 and 75% in 2015). The decrease in incoming insolvency cases reflects the smaller number of new personal insolvency cases (we can speculate that the higher number of personal insolvency cases in previous years was the effect of the past economic crisis). The increase in resolved cases can be explained by the elapse of probation periods (typically 2-5 years) in personal insolvency cases and more efficient liquidation of assets in cases of business subject insolvency. The number of insolvency cases for business subjects (approx 34% of all new cases in 2017) did not vary significantly in recent years.

Q101 (2016): Differences (insolvency cases):
The effects of the past economic situation are still producing a high number of incoming insolvency cases, with a high percentage of personal bankruptcies. Following the legislation changes, introducing new, simplified types of (preventive) compulsory settlement, there has been an increase in pending cases due to the overburdening of courts with new cases, as well as lengthy procedures (the case cannot be resolved until the debtor's assets are liquidated – corporate; the case cannot be resolved until the end of probation period for the discharge of debt – personal insolvency; in this period the court cannot influence the duration and the case is still classified as not finished).

Q101 (2015): The effect of the economic situation are still effecting a high number of incoming insolvency cases, with a high percentage of personal bankruptcies (approx. 70%). The recent legislation changes introduced new, simplified types of (preventive) compulsory settlement which also led to new incoming cases.
The increase in pending cases is due to the overburdening of courts with new cases, as well as lengthy procedures (the case cannot be resolved until the debtor's assets are liquidated – corporate; the case cannot be resolved until the end of probation period for the discharge of debt – 2-5 years; in this period the court cannot influence the duration and the case is still classified as not finished).
Differences for robbery and intentional homicide is due to the small absolute number of cases.

Q101 (2014): The number of incoming insolvency cases is still high due to the effect of financial crisis. Besides, legislative amendments (2013) abolished the right for legal persons to apply for legal aid for financing the advances of the costs of the bankruptcy proceedings (legal persons are now exempt from paying such advance in all cases). The insolvency case is deemed resolved when the assets are liquidated and the creditors are paid (or in case of personal bankruptcy, if the dismissal of debts was requested, until such decision takes place). In cases of big companies as debtors, the sale of all assets can take years; and in cases of physical persons the "probation" period (between 2 and 5 years) must elapse, before the court can decide on dismissal of the debts.

Q101 (2013): The number of incoming insolvency cases constantly rises due to the effect of general economic crisis which resulted in a higher number of insolvent companies. The increase in the number of unresolved cases can also be attributed to a high number of proceedings of bankruptcies of physical persons. In these cases most debtors apply for conditional release of debt, where the trial period can last from 2-5 years.
Q101 (2012): The number of pending employment dismissal cases on 1 January 2012 decreased because employment dismissal cases are priority cases within labour courts. As robbery cases, are included criminal offences defined in the Criminal Code as Robbery and Larceny in the Form of Robbery. As intentional homicide, are included criminal offences defined in the Criminal Code as Murder, Voluntary Manslaughter and Infanticide. The data includes criminal cases against adult and juvenile offenders and excludes attempts.

Spain

Q091 (General Comment): Regarding registry cases, Spain Land Registry and Commercial Registry do not depend on Courts. But, if one disagrees with a decission of the Register (Land or Commercial) or of the Directorate General of Legal Security and Public Faith, he/she can appeal the decision before Courts.
When an error is detected in the statistics of a Court, the latter is allowed doing regularization, what means that the Court communicates the correct figure and rectifies the wrong one even if this does not concord with figures offered for previous exercises. This situation can happen for example in the specific control of cases that the Court makes when a judge leaves the Court (called "alarde"), but in general, in any case in which the Judicial Counsellor detects an error that comes from previous exercises but cannot be localized. The system prefers to correct the data than continue and amplify the error.
These regularizations and the cumulated cases and the re-opened cases are the causes for the horizontal inconsistencies.

Q091 (2021): The recovery of activity, after the most severe restrictions of the pandemic, may have contributed to the improvement in efficiency and increased number of resolved cases.
Q091 (2020): Regarding registry cases, Spain Land Registry and Commercial Registry do not depend on Courts. But, if one disagrees with a decission
of the Register (Land or Commercial) or of the Directorate General for Registers and Notaries, he/she can appeal the decision against
Courts.

Q091 (2018): The Court of Justice of the European Union (CJEU) of December 21, 2016 and other previous Judgments have meant a massive interposition of lawsuits based on that doctrine, for the civil challenge of general conditions included in financing contracts with real estate guarantees in which the borrower is a natural person. Measures, referred to in previous CEPEJ questionnaires, of specialization of certain judicial bodies have been adopted.
Regarding registry cases, Spain Land Registry and Commercial Registry do not depend on Courts. But, if one disagrees with a decission of the Register (Land or Commercial) or of the Directorate General for Registers and Notaries, he/she can appeal the decision against Courts.

Q091 (2016): Concerning the Administrative Law cases, between 2014 and 2016, the decrease of 'Pending cases' is probably because the number of resolved cases, both in 2015 and 2016 has been higher than the number of incoming cases (reinforcement measures have been applied).

Q091 (2015): The horizontal consistency can not be respected because of reopened, cumulated and regularised cases.
Law 10/2012 governing certain fees in the area of the Administration of Justice could explain (especially in Administrative Law cases) the decrease in the number of incoming administrative cases, and logically the decrease in the number of resolved and pending cases.

Q091 (2014): The number of “civil and commercial litigious cases” decreased for 2 reasons. Since the payment order procedures do not need a decision made by a judge but are of the competence of the judicial counsellor, they have been subsumed in the category of non-litigious civil and commercial cases. Since paying court fees for natural persons has been compulsory until March this year, there has been a decrease in the incoming cases. In respect of the category "administrative law cases", it should be recalled that in 2012, there was a decrease in the number of files related to the Public Administration owing to two parameters: plaintiffs have been sentenced to pay the court fees; since 2012, they have to be assisted by a lawyer to file an administrative case, on the other hand.

Q091 (2012): Inspection services are entitled to correct the number each time they find it inaccurate. The data encompasses restarted procedures. Owing to the economic crisis, the number of civil cases increased significantly, particularly this of small claims. The number of “incoming administrative law cases” increased in 2010, due to the reduction of the salaries of civil servants. In 2012, this number decreased with the decrease in the number of files related to the Public Administration for 2 main reasons: plaintiffs are sentenced to pay the court fees; since 2012, they have to be assisted by a lawyer to file an administrative case, on the other hand.
Q092 (2014): For the 2014 exercise, the category “civil and commercial non-litigious cases” encompasses payment order procedures and requests for undisputed matters such as settlement proceedings and divorce with mutual consent.

Q092 (2012): For the 2010 and 2012 exercises, the category “civil and commercial non-litigious cases” includes non-litigious divorces and cases of voluntary jurisdiction and internments as well.
Q094 (General Comment): When an error is detected in the statistics of a Court, the latter is allowed doing regularization, what means that the Court communicates the correct figure and rectifies the wrong one even if this does not concord with figures offered for previous exercises. This situation can happen for example in the specific control of cases that the Court makes when a judge leaves the Court (called “alarde”), but in general, in any case in which the Judicial Counsellor detects an error that comes from previous exercises but cannot be localized. The system prefers to correct the data than continue and amplify the error.
These regularizations and the cumulated cases and the re-opened cases are the causes for the horizontal inconsistencies.

Q094 (2021): The number of incoming severe criminal cases increased in comparison with 2020, because that was the year in which the pandemic forced mobility restrictions. The recovery of activity, after the most severe restrictions of the pandemic, may have contributed to the improvement in efficiency and increased number of resolved cases.

Q094 (2020): Possibly the pandemic, and the restrictions it entailed, have had an impact on the decrease of the number of resolved cases.
Q094 (2016): The Organic Law 1/2015 eliminated 'faltas' (misdemeanour) of the Criminal Code, qualifying some of them as minor offenses, and others as administrative infractions. Accordingly, we can observe decreases in the numbers of misdemeanour cases which also affects the total of criminal law cases.
Q094 (2014): The Law 41/2015 has amended the Criminal Procedural Law in the sense that those files opened by the police concerning crimes committed by an unknown person will not be submitted to courts but will remain at the police offices at the disposal of the judge and prosecutor, with the exception of those crimes affecting life, sexual integrity, freedom or corruption, in which case the police report will necessarily be referred to the criminal court. As a result, it is expected that the number of incoming cases before the criminal courts will decrease. In addition, the law 1/2015 amended the Penal Code by suppressing the misdemeanors which now will be judged as administrative or civil matters according to their nature or as minor crimes.

Q094 (2012): Restarted procedures were not counted because they are not really incoming cases. Besides, there was a readjustment of the statistical data in the period between 2010 and 2012. The final data on pending cases is the real data at December 2012.

Q097 (General Comment): When an error is detected in the statistics of a Court, the latter is allowed doing regularization, what means that the Court communicates the correct figure and rectifies the wrong one even if this does not concord with figures offered for previous exercises. This situation can happen for example in the specific control of cases that the Court makes when a judge leaves the Court (called “alarde”), but in general, in any case in which the Lawyer of the Administration of Justice detects an error that comes from previous exercises but cannot be localized. The system prefers to correct the data than continue and amplify the error.
These regularizations and the cumulated cases and the re-opened cases are the causes for the horizontal inconsistencies. It is noteworthy that the small (probably insignificant) number of Registry cases that arrive to the Second Instance is not distinguished of the Litigious cases. This is why, the total number of cases can be provided.
Regarding "other non-litigious cases", the most correct answer is NA (because we can appeal against certain decisions of 'voluntary jurisdiction' not included in the CEPEJ categories).

Q097 (2021): For civil and commercial litigious cases the number of incoming cases increased in comparison with 2020, because that was the year in which the pandemic forced mobility restrictions. This also affected the increases of the number of pending cases at the end of the year.
Q097 (2020): There is an increase in the number of incoming administrative appeal cases in the Autonomous Regions High Courts. It is possible that certain modifications in the Contentious Administrative Jurisdiction, as well as the Judgement of the Constitutional Court in 2015 that eliminated the fees to appeal, have had an impact on the number of incoming cases.

Q097 (2019): "Civil and commercial litigious cases": the increased number of pending cases at the beginning of the year is partly due to the low clearance rate in 2018. In general there is an increase in incoming issues. In civil law many appeals are related to cases of general conditions included in financing contracts with real estate guarantees in which the borrower is a natural person (object of massive cases in Spain since the doctrine of the CJEU).
"Administrative cases": The increase of administrative appeals may probably be due to Aliens (inmigration) cases, which had a strong increase in resolution in 2018.

Q097 (2018): The Court of Justice of the European Union (CJEU) of December 21, 2016 and other previous Judgments have meant a massive interposition of lawsuits based on that doctrine, for the civil challenge of general conditions included in financing contracts with real estate guarantees whose Borrower is a natural person. Measures, referred to in previous assessments, of spatialization of certain judicial bodies have been adopted. In 2018, the appeales to the judgments in matters of individual suitcases against general conditions included in financing contracts with real estate guarantees whose borrower is a natural person have reached the Provincial Courts (second Instance). The small (probably insignificant) number of Registry cases that arrive to the Second Instance is not distinguished of the Litigious cases. This is why the total number of cases can be provided

Q097 (2016): In respect of the increase in the number of incoming civil and commercial litigious cases as well as the increase of the total of incoming cases between 2014 and 2016, it should be mentioned that since March 2015 the fees to bring a case to the court were abolished in case of natural persons. Besides, in July 2016, the Constitutional Court declared the nullity of the fees to appeal.
Q097 (2015): Law 10/2012 governing certain fees in the area of the Administration of Justice could explain (especially in Administrative Law cases) the decrease in the number of incoming administrative cases, and logically the decrease in the number of resolved and pending cases.
Q097 (2014): For the 2014 exercise, the decrease of the number of pending administrative law cases in the beginning and in the end of the year is the result of the decreases observed and explained in fist instance.
Q097 (2012): In the frame of the 2012 exercise, the lack of horizontal consistency with regard to the total number of pending cases on 31 December has been explained by the fact that inspection services are entitled to correct the number each time they find it inaccurate. Moreover, the horizontal inconsistency is also a result of the inclusion within the table of data related to restarted procedures, while there is not a specific item dedicated to this category of cases.

Q098 (General Comment): When an error is detected in the statistics of a Court, the latter is allowed doing regularization, what means that the Court communicates the correct figure and rectifies the wrong one even if this does not concord with figures offered for previous exercises. This situation can happen for example in the specific control of cases that the Court makes when a judge leaves the Court (called “alarde”), but in general, in any case in which the Lawyer of the Administration of Justice detects an error that comes from previous exercises but cannot be localized. The system prefers to correct the data than continue and amplify the error.
These regularizations and the cumulated cases and the re-opened cases are the causes for the horizontal inconsistencies.

Q098 (2021): The number of incoming and pending cases for both severe and minor criminal case categories increased in comparison with 2020, because that was the year in which the pandemic forced mobility restrictions. The recovery of activity, after the most severe restrictions of the pandemic, may have contributed to the improvement in efficiency and increased number of resolved minor criminal cases.

Q098 (2020): The reduction in criminal appeals during 2020 may be an effect of the pandemic.

Q098 (2016): The number of pending severe criminal cases decreased due to the decrease in the number of incoming cases. The decreases observed in respect of the numbers of Misdemeanour cases can be due to the elimination of "Faltas" (Misdemeanour cases) by the Organic Law 1/2015. Some of theme were transformed in minor offences, but other disappeared or were transformed in administrative infractions.

Q098 (2012): The lack of horizontal consistency in 2012 was due to the number of restarted procedures that were not counted in the boxes of the questions because they are not really incoming cases. Besides, there was a readjustment of the statistical data in the period between 2010 and 2012. The final data provided in the questionnaire, and shown in the box of pending cases is the real data at December 2012.

Q099 (General Comment): When an error is detected in the statistics of a Court, the latter is allowed doing regularization, what means that the Court communicates the correct figure and rectifies the wrong one even if this does not concord with figures offered for previous exercises. This situation can happen for example in the specific control of cases that the Court makes when a judge leaves the Court (called “alarde”), but in general, in any case in which the Lawyer of the Administration of Justice detects an error that comes from previous exercises but cannot be localized. The system prefers to correct the data than continue and amplify the error. These regularizations and the cumulated cases and the re-opened cases are the causes for the horizontal inconsistencies.

Q099 (2021): The recovery of activity, after the most severe restrictions of the pandemic, may have contributed to the entry of more cases, as well as to greater efficiency and increased number of resolved cases. The comparison is with 2020, the year in which the pandemic forced mobility restrictions.

Q099 (2020): In administrative law cases, judgements based on the unified doctrine related Tax on the Retail Sales of Certain Hydrocarbons facilitated the resolution of cases in previous years and partly caused the good clearance rate of the Supreme Court Administrative Room in 2019. However, there were fewer of these cases in 2020, so the number of resolved cases decreased.

Q099 (2019): In respect of administrative law cases, the very positive clearance rate in 2018, added to the trend that continues being positive in 2019, explains the decrease in pending cases.

Q099 (2018): The Administrative Procedural Law allows the inadmissibility of the cassation appeal by resolution of a lower level than Civil Procedural Law. This explains partially the different clearance rate between this two rooms.
In relation to the good resolution rate in Administrative is due in part to this cause: In previous years, a Judgement of the Court of Justice of the European Union declared Spanish law contrary to Community law authorizing the tax on retail sales of certain hydrocarbons. This fact meant the massive presentation of claims for the patrimonial responsibility of the State for the undue payment of the so-called "sanitary cent". Once the Supreme Court established jurisprudence, many of these cases were resolved more quickly.

Q099 (2017): The cause of the raise of administrative cases (pending at the beginning of 2017 and resolved) in the Supreme Court is the reform of the cassation appeal by the Final Disposition Third of the Organic Law 7/2015, and, on the other hand, a new organisation of the Third Courtroom.

Q099 (2016): As concerns the variations observed between 2014 and 2016 regarding the categories "total of other than criminal law cases"; "civil and commercial litigious cases"; "administrative law cases", it should be noted that:
- the increase in the number of cases in civil matters is due to the increase in conflicts of competence entered and resolved as well as the increase in the number of resolutions of appeals for unification of doctrine.
- the high increase in administrative matters is due to the massive presentation of claims for the State's patrimonial responsibility for the undue payment of the called "sanitary cent", because of the Judgement of the Court of Justice of the European Union that declared contrary to the Community law the Spanish law that authorized the Tax on Retail Sales of Certain Hydrocarbons.

Q099 (2015): Regarding administrative cases in 2015, there was a significant flow of incoming cases related with tax on retail sales of certain hydrocarbons. But before that, since 2011, the incoming administrative cases dropped due to the Law of courts' fees.

Q099 (2014): For the 2014 exercise, the decreases observed in respect of the number of pending administrative law cases in the beginning of the year and the number of resolved administrative law cases, are the result of the decreases observed and explained in fist instance.
The increase in the number of pending civil and commercial litigious cases on 31 December between 2012 and 2014 is due to the economic crisis which resulted in the increase of the number of cases in the civil jurisdiction.

Q099 (2012): For the 2012 evaluation cycle, the category of civil and commercial litigious cases includes data on labour matters, special matters and military matters.

Q100 (General Comment): The Criminal Procedure Law was amended by Law 41/2015, and thus the scope of the cassation appeal that reach the Supreme Court in Criminal Matters was broadened. The objective of the Law was to try to homogenize the doctrine in criminal matters, since previously, in cases that had not criteria of Supreme Court, the criteria of the Provincial Courts could be different.
When an error is detected in the statistics of a Court, the latter is allowed doing regularization, what means that the Court communicates the correct figure and rectifies the wrong one even if this does not concord with figures offered for previous exercises. This situation can happen for example in the specific control of cases that the Court makes when a judge leaves the Court (called “alarde”), but in general, in any case in which the Lawyer of the Administration of Justice detects an error that comes from previous exercises but cannot be localized. The system prefers to correct the data than continue and amplify the error.
These regularizations and the cumulated cases and the re-opened cases are the causes for the horizontal inconsistencies.

Q100 (2021): In 2021, the recovery of greater activity (after the restrictions of the pandemic) has been able to contribute to greater efficiency and increased number of resolved cases.
Q100 (2020): Considering the broadening the scope of the cassation appeal that reach the Supreme Court, the number of cases has been increasing. Already in 2018, the final pending cases were higher than the initial. In 2019, those incoming also increased. All this resulted in significant increase in the number of pending cases at the end of 2020.

Q100 (2014): The number of total criminal pending cases on 31 December has decreased of 30% between 2012 and 2014. It has to be noted that both in 2013 and 2014, the Supreme Court has resolved more cases than the number of incoming cases.

Q101 (General Comment): When an error is detected in the statistics of a Court, the latter is allowed doing regularization, what means that the Court communicates the correct figure and rectifies the wrong one even if this does not concord with figures offered for previous exercises. This situation can happen for example in the specific control of cases that the Court makes when a judge leaves the Court (called “alarde”), but in general, in any case in which the Judicial Counsellor detects an error that comes from previous exercises but cannot be localized. The system prefers to correct the data than continue and amplify the error.
These regularizations and the cumulated cases and the re-opened cases are the causes for the horizontal inconsistencies.

Q101 (2021): Explanation of the increased number of resolved employment dismissal cases: The recovery of greater activity (after the restrictions of the pandemic) has been able to contribute to greater efficiency.
Explanation of the increased number of incoming insolvency cases: The complex economic context, derived in part from the pandemic.
Explanation of the increased number of resolved insolvency cases: The recovery of greater activity (after the restrictions of the pandemic) has been able to contribute to greater efficiency.

Q101 (2020): The decreasing number of resolved divorces cases has been parallel to that of incoming cases, which has also decreased, with a special decrease in 2020 in part as effect of pandemic on work of courts.
Increase in dismissal cases is observed since 2019.
The increase in incoming and resolved insolvency cases is mainly focused on the cases of insolvency of natural persons.

Q101 (2019): Concerning cases relating to asylum seekers and cases relating to the right of entry and stay for aliens, the increased number of pending cases at the beginning of 2019 is coherent with the increase in incoming cases in previous cycle.

Q101 (2018): Variations in respect of cases relating to asylum seekers and cases relating to the right of entry and stay for aliens are due to the migration crisis
Q101 (2017): Migratory crisis can explain the raise of asylum seekers judicial cases.
Q101 (2016): As concerns employment dismissal cases: in 2014, 2015 and 2016 an important decrease in the number of incoming cases has been observed. While the resolved cases have kept similar numbers, so, every year the number of resolved cases has been higher than the number of incoming cases. As concerns insolvency cases: the decrease in the number of incoming cases may be due to a certain decrease in some effects of the economic crisis.

Q101 (2015): The horizontal consistency can not be respected because of reopened, cumulated and regularised cases. Because of the economic restrictions and the increasing number of companies with financing problems, the number of employment dismissal cases and the number of insolvency cases brought to courts have remarkably increased in 2014.

Q101 (2014): Because of the economic restrictions and the increasing number of companies with financing problems, the number of employment dismissal cases and the number of insolvency cases brought to courts have remarkably increased in 2014.

Indicator 3: The performance of courts at all stages of the proceedings

Question 092. If courts deal with "civil (and commercial) non-litigious cases", please indicate the case categories included:

Question 093. Please indicate the case categories included in the category "other cases":
Question 094. First instance courts: number of criminal law cases.
Question 097. Second instance courts (appeal): Number of "other than criminal law" cases.
Question 098. Second instance courts (appeal): Number of criminal law cases.
Question 099. Highest instance courts (Supreme Court): Number of "other than criminal law" cases:
Question 100. Highest instance courts (Supreme Court): Number of criminal law cases.
Question 101. Number of specific litigious cases received and processed by first instance courts.

Question 091

Austria

(General Comment): Due to a change in calculation in the underlying statistics, the "pending cases on 1st Jan ref year" may differ compared to the "pending cases on 31st Dec" of the previous year.

(2021): "Non litigious business registry cases": Sec. 3a para. 2 of the COVID-19 act concerning corporate law ("Gesellschaftsrechtliches COVID-19-Gesetz") allows corporations to file their annual accounts and other documents, that have to be published by law, not only within 9 but within 12 months from the account date (mostly: December 31st of a year). Usually, the duty to file these reports within 9 months leads to a high number of incoming files in September. 2020 and 2021 the special rules lead to such high incoming file numbers in December and thereby to an increase in pending cases at the end of the year.

(2020): "Non litigious business registry cases": Sec. 3a para. 2 of the COVID-19 act concerning corporate law ("Gesellschaftsrechtliches COVID-19-Gesetz") allows corporations to file their annual accounts and other documents, that have to be published by law, not only within 9 but within 12 months from the account date (mostly: December 31st of a year). Usually, the duty to file these reports within 9 months leads to a high number of incoming files in September. 2020 the special rules lead to such high incoming file numbers in December and thereby to an increase in pending cases at the end of the year. "4. Other cases": The number of incoming and resolved cases surged due to an increase of "general civil proceedings, that are not allocated to other categories of cases" because the district administrative authorities (Bezirksverwaltungsbehörden) had to notify the district courts of every single person against which a quarantine measure (SARS-CoV-2) had been taken. In concerns of statistical data every such notification resulted in an incoming (and resolved) case.
Generally, no courts were closed during the lockdowns. During the first lockdown (middle of March until the end of April 2020) the number of incoming cases dropped significantly. Nearly all court hearings had to be postponed during the first lockdown. In total (all case types) in April 2020 there were 89.25 % less court hearings than in April 2019. In general litigious civil matters of first instance there were even 94.59 % less hearings. A comparison of the total number of court hearings held in the period of March 2019 to February 2020 on the one hand and of March 2020 to February 2021 on the other hand shows that there were 22.22 % less hearings since the first lockdown. The significant drop in incoming cases and held court hearings in April 2020 resulted in the opportunity to concentrate on finishing pending cases in which all hearings had already been held. The statistical data shows that the number of judgments pending more than 2 months since the final hearing declined considerably (1st of July 2020: -75 % compared to 1st of April 2020). Judges did always (even before the Covid-19 pandemic) have the opportunity to work from home. Many have made use of this option during the lockdowns. The Federal Ministry of Justice does not keep statistics on this matter (number of judges working from home) since judges are not obliged to record their working times or places.

(2019): There is a lack of horizontal consistency concerning the catgeory "general civil and commercial non-litigious cases". Figures provided by the statistical system were double checked in this respect and are correct.

(2017): Due to the absolut low numbers of pending cases on 1 Jan./31 Dec. high deviations in percentage are normal.
Note to 2.1.1.: Because of an inaccuracy by analysing pending non-litigious business registry cases the count had to be corrected on 1st December 2017. Therefore the pending cases on 31.12.2016 do not comply with those of 01.01.2017.

(2016): Due to the low absolute numbers of pending cases on 1 Jan./31 Dec. high deviations in percentage are normal.

(2015): In the category litigious are counted all proceedings (in civil matters, labour and social security cases at first instance courts) which are marked as being litigious in the court register (f.e. from the second court hearing on).

Civil and commercial non-litigious cases include commence of bankruptcy proceedings, Bankruptcy proceedings, composition proceedings, non-litigious proceedings about rent, non profit cooperative association for housing, home ownership, proceedings about Lease of farm land, wardship cases in connection with administration of assets, custody and maintenance, uncontested payment orders, enforcement cases.

Category "other" includes Probate Proceedings, cases concerning the Administration of justice, Cancellation proceedings and proceedings in connection with [official] declaration of death
authentication of signatures, proceedings to render legal assistance in civil matters for other courts (also international ones), General civil proceedings, that are not allocated to other categories of cases, Some Non litigious family matters.

(2012): In 2012, a legislative reform entailed more obligations for companies to register.

Belgium

(General Comment): Civil and commercial cases include cases from the Justices of the peace, first instance courts, civil, family and youth sections, labour courts and company courts (commercial courts). It should be noted that courts are not able to provide data on pending cases in civil, family and youth matters. Similarly, in the company courts, pending and resolved cases cannot be counted for insolvency cases because of a too low degree of reliability.
Administrative law cases are those of the Council of State acting as first instance court, the Aliens Litigation Council and the Flemish administrative courts Raad voor Vergunningsbetwistingen, het Milieuhandhavingscollege and Raad voor Verkiezingsbetwistingen. Concerning the number of administrative cases pending at the end of the year: the lack of horizontal consistency is due to the fact that the number of judgments does not necessarily correspond to the number of closed cases. For example, a judgment that closes two cases is recorded as one judgment.
Registry cases are immediate acts, which is why the number of incoming cases is equal to the number of resolved cases. Uncontested payment orders are counted as litigious cases because courts are not able to distinguish between uncontested and contested payment orders.
Insolvency cases (company courts): incoming cases - these are all cases registered based on a code “nature of the case” and that concern insolvency cases, cases that have been assigned an insolvency number, or cases entered in a specific insolvency roll. Only cases registered in the computer application of the company courts, called TCKH, are counted in these figures. There are also cases dealt with by company courts and which are solely registered in the computer application RegSol (since mid-2017) in insolvency proceedings, for example, between the curator and the juge-commissaire. Cases only registered in RegSol are not counted in these figures, which leads to an underestimation. It would therefore appear that the number of insolvency cases has decreased in recent years, whereas this is not the case. For your information, below is the number of new insolvency filings (attention: does not correspond to the number of bankruptcies pronounced) which shows a constant increase until 2019 (an impact of the coronavirus crisis is to be noted in 2020): 2016: 12,560; 2017: 13,301; 2018: 13,917; 2019: 14,567; 2020: 9516). Liquidation/dissolution, ECL, and commercial investigation cases (not resulting in bankruptcy) are not counted.

(2021): Administrative law cases are those of the Council of State, the Aliens Litigation Council and the Flemish administrative courts Raad voor Vergunningsbetwistingen, het Milieuhandhavingscollege and Raad voor Verkiezingsbetwistingen. However, the figure 1 428 (in the last column “Pending cases older than 2 years from the date the case came to the first instance court”) concerns the sole Council of State. Thus, with regard to the Councul of State, the figures are the following: 4 936; 2 191; 2 208; 4 420 and 1 428; with regard to the Aliens Litigation Council: 14 415; 14 124 (one judgment can close several cases which may result in a lack of horizontal consistency); 19 256; 9 273 and NA.
Juvenile cases are not counted in the category “other cases”. In fact, this case type includes both civil and criminal litigation.

(2020):
"The health crisis has impacted the numbers.
*Justice of the Peace: no pending cases (start + end). The way justice of the peace cases are counted has been adapted and unlike previous cycles, all dockets have also been taken into account for 2020. *Civil courts of first instance: no pending cases (start + end). The same counting method was applied as last year. Omissions as well as so-called "dormant cases" are counted in the closed cases. *Corporate courts: same counting method as last year. Only cases registered in the corporate court computer application, called TCKH, are counted in these figures. There are also corporate court cases that are only recorded in the RegSol computer application (since mid-2017) in bankruptcy proceedings, for example, between the receiver and the bankruptcy judge. Cases only registered in RegSol are not counted in these figures, which induces an underestimation. Commercial investigations (chambers of distressed companies) are not taken into account as the figures are unreliable due to the very disparate registration methods in the different company courts. No pending cases.
*As far as administrative cases are concerned, the total number of cases includes the figures for the Council of State, the Aliens Litigation Council and the Flemish administrative courts Raad voor Vergunningsbetwistingen, het Milieuhandhavingscollege and Raad voor Verkiezingsbetwistingen. However, the figure of 1489 (in the last column ""Cases pending for more than 2 years from the date on which the case is brought before the courts of first instance") concerns only the Council of State. Thus, - for the Council of State, the figures are: 4,564; 2,119; 2,019; 4,936 and 1,489; for the Conseil du Contentieux des Etrangers: 16,009; 14,238 (a judgment can close different cases hence the absence of complete horizontal logic); 15,769; 14,451 and NA.
"

(2019): Regarding the category "4. other cases" which refers to "protection cases", the statistical service does not have figures for 2019, following discussions on the counting rules between the courts. However, we kept the total for “other than criminal” cases since protection cases represent more or less 10,000 cases, or 1% of the total. Their actual number will not change the total figure significantly.
"Administrative cases pending at the end of the year": the lack of horizontal consistency is due to the fact that the number of judgments does not necessarily correspond to the number of closed cases. For example, a judgement that closes two cases is recorded as one stop

(2018): Civil and commercial cases include cases of justices of the peace, courts of first instance, civil, family and youth sections, labour courts and company courts (known as "commercial courts")
Civil and family courts: no data for pending cases. New rules for counting and recording cases mean that the statistics are not comparable to previous years. In particular, cases where there is a permanent referral are now counted as a case.
Concerning juvenile courts: no data for completed or pending cases due to the lack of uniform practice and low registration of completed cases.
Concerning registry cases: these are immediate acts, which is why the number of incoming cases is equal to the number of resolved cases. Administrative affairs: Council of State, Aliens Litigation Council, Raad voor Vergunningsbetwistingen, het Milieuhandhavingscollege en de Raad voor Verkiezingsbetwistingen.

(2017): The difference with the 2016 data is due to the lack of data on justices of the peace cases. In respect of justices of the peace, from July 2017 to June 2018, a deployment of new codes was carried out at the national level. The support service of the College of Courts and Tribunals is currently in the process of defining accounting rules for justices of the peace. For this reason, no figures were issued in 2018 pertaining to 2017 data.
Civil data are not included or only partially included for 5 courts; Youth courts: no data from Brussels (Dutch-speaking); no data for resolved cases and pending cases; No data for civil cases from police courts; Commercial courts: no data for pending cases + new counting rules for resolved cases. For this reason, comparison with previous data is made difficult; not all activities carried out in commercial courts are reflected in the statistics provided. Indeed, the following services are not covered: commercial investigation service, business continuity law, bankruptcy and dissolutions/liquidations.

(2016): Administrative cases: Council of State, Aliens Litigation Council, Raad voor Vergunningsbetwistingen, het Milieuhandhavingscollege en de Raad voor Verkiezingsbetwistingen.
The sharp decrease in administrative cases is due to immigration cases. There are 5 administrative courts, two of which are at federal (national) level: the State Council and the Aliens Litigation Council. It is within the latter that there has been a decrease in the number of cases. Immigration and asylum cases are handled by the Conseil du Contentieux des Etrangers. The Aliens Litigation Council is an independent administrative court, which deals with cases "in the first instance", i.e. full substantive litigation or "in cassation", i.e. a decision "in annulment" or "suspension". The Council may be seized with appeals against decisions of the "Commissariat général aux Réfugiés et aux Apatrides", against decisions of the "Office des Etrangers" and against all other individual decisions taken pursuant to the Act of 15 December 1980 on access to the territory, residence, establishment and removal of aliens (Aliens Act).
Please also note that figures for juvenile courts as well as figures for civil cases treated by the police courts are not included in this cycle. These figure present very small number from the total number of cases.

(2015): The pending cases of commercial courts, first instance (civil, youth, family) and justice of the peace are not included. Included in pending cases are: labor courts, police courts, courts of appeal.

(2014): With regard to non-litigious business registry cases, the central register of notices of seizure, delegation, transfer, collective debt settlement and loan is managed by the National Chamber of Bailiffs. Administrative cases are handled by the State Council (except for cassationrulings), the Alien Litigation Council and the Flemish regional administrative colleges, "Raad voor verkiezingsbetwistingen, Raad voor milieuhandhaving by Raad voor vergunningenbetwistingen".

(2012): The category 1 "civil (and commercial) litigious cases" refers to cases tried by first instance courts, commercial courts and justices of peace, and civil cases dealt with by the police courts. Civil cases concerning youth are not included, as well as cases tried in second instance by courts of first instance. For 2010, there are no available data on the labour courts because the project to build a data warehouse 'Statistics labour courts' is not yet finalised. Cases from categories 1 and 2 cannot be distinguished and are all grouped in category 1.

Bulgaria

(General Comment): The division by types of cases in the statistical forms published by the Supreme Judicial Council of Bulgaria is quite different from the CEPEJ categorisation and for that reason breakdown cannot be made. Only administrative cases are possible to differentiate due to existence of administrative courts. Furthermore, in Bulgaria registry cases are not resolved by courts. They are under the competence of the Registry agency where is the property register, the commercial register, the BULSTAD register and the Register of the Property Relations between spouses.
We should mention though that under current legislation Sofia City Court keeps a public register of political parties (https://sgs.justice.bg/bg/14755) and a public register of religious denominations having the status of legal entities. Sofia City Court is a Provincial/ Regional Court and as other regional courts acts as court of first and second instance. As far as registry cases are concerned Sofia City Court acts as first instance. So, there are some “other registry cases”, however, their number is insignificant. The special place and status of the Sofia City Court among the regional courts is determined by its competences, the most important of which are: claims for the recognition and enforcement of decisions of foreign courts, as well as requests for the recognition of a decision of a foreign court by an interested party that does not have a permanent address or seat on the territory of the Republic of Bulgaria.

(2020): As it is impossible to distinguish between litigious and non-litigious cases for the present, for 2020 the following data is available as to the sum of all civil and commercial litigious and non-litigious cases: pending at the beginning 85 460; incoming 282 768, resolved 285 461 and pending at the end of the year 82 767. It is noteworthy that since 2020, the Unified Court Information System (UIS) has been gradually introduced in all courts, developed within the project “Creating a Model for Optimizing the Court Card of Bulgarian Courts and Prosecutor's Offices and Developing a Unified Court Information System” with the financial support of Operational Program "Good Governance" 2014-2020. Depending on the functionalities of the system, it is possible to collect information on the next cycle according to the indicators in question 91.

(2018): The observed increase in the number of incoming administrative law cases and accordingly in the number of pending administrative law cases at the end of 2018, is a consequence of an increase characterizing the period 2016-2017. As explained in the comment accompanying 2017 data, there is no specific reason for the increase in the number of incoming administrative law cases between 2016 and 2017. During this period there was an increase in the number of cases before the administrative courts (mainly claims under the Administrative Procedure Code, Management of Resources from the European Structural and Investment Funds Act, Tax and Social Insurance Procedure Code, Competition Protection Act, etc.).

(2017): 02/11/2018 7:17:04 AM There is no specific reason for the increase in the number of incoming administrative law cases between 2016 and 2017. During this period there was an increase in the number of cases before the administrative courts (mainly claims under the Administrative Procedure Code, Management of Resources from the European Structural and Investment Funds Act, Tax and Social Insurance Procedure Code, Competition Protection Act, etc.).

(2014): The number of all civil cases (litigious and non-litigious) considered as an overall category could be obtained by extracting from the total the number of administrative cases (67 513 pending cases on 1 January 2014; 294 657 incoming cases; 300 799 resolved cases; 61 371 pending cases on 31 December 2014.

(2012): The number of pending administrative law cases on 31 December 2012 has increased because of the increase of the number of incoming cases in 2010 and 2012. Administrative courts resolved about 72% on average of the cases during the year.

Croatia

(2021): Between 2020 and 2021, there was an increase of incoming civil and commercial cases caused by the receipt of a large number of civil cases, namely lawsuits in labor disputes due to payment based on rights arising from the collective agreement, which occurred in the first quarter of 2021 and continued, to a somewhat lesser extent, throughout the rest of the year. Also there was an increase of the number of incoming enforcement cases that courts received during the last quarter of 2021, which was caused by a change of legislative framework in September 2021.

(2020): Regarding your comment about decreased number of incoming cases (except business registry cases) shown in this table: Due to the pandemic caused by COVID-19, in 2020., court proceedings for limited period in 2020 were submitted under specific conditions and measures, which contributed to decreased number of incoming cases, as well as court hearings especially in litigious cases.
Regarding the number of incoming non-litigious business registry cases - New article added by the Act on Amendments to the Court Register Act (Official Gazette No. 40/19) which came into force at the end of 2019., stipulated the obligation of companies to submit a request for entry of at least one e-mail address to the courts managing business registry. This was the reason for temporarily increased number of requests (cases), which were all resolved by the end of January 31, 2021.

(2019): In 2019 new amendments to the Personal Bankruptcy Law came into force. That caused significant income of other than criminal cases to the municipal courts. There was an increase in the number of land registry incoming cases too. The increased number of incoming land registry cases is caused by intensified economic activities and activities on the real property market. With the same number of employees working on these cases, pending cases increased at the end of the year. Additionally, a large number of citizens started civil lawsuits against banks regarding loans in Swiss currency. These factors combined led to the increase of pending cases at the end of the year as well. The decrease in the number of civil and commercial non litigious cases is due to enforcement cases: courts solved a significant amount of these cases during 2018, while the number of incoming cases decreased as well. For that reason, at the end of 2018 /beginning of 2019 there are fewer cases than at the end of 2017/ beginning of 2018.
As regards "administrative cases", administrative courts resolved more cases during 2018. That decreased the pending stock of the cases at the end of 2018/beginning of 2019.

(2018): Decrease of the number of incoming cases (34%) in category 2.1. in comparison to previous cycle is due to the significant decrease of enforcement cases which are calculated in this category. Majority of enforcement cases are aimed at debtor’s monetary assets based on trustworthy documents – i.e. documents that make the existence of debt highly plausible (such as regular utility bills, telecom operators’ invoices, credit card invoices, unpaid installments of bank loans, etc.). Those cases were removed from jurisdiction of courts to public notaries already in 2012., and since then there is year after year decrease of enforcement cases in municipal courts - enforcement based on other types of enforcement titles (other than trustworthy document), as well as enforcement against real property.

(2017): The cases relative to the Personal Bankruptcy Act which came into force on 1st January 2016 are handled by the 1st instance Municipal Courts. The data about these cases was not available in the moment of completing the questionnaire for the Evaluation (CEPEJ study for EU Scoreboard) (data 2016) but the data is now available within the ICMS system for the year 2017 and they are incorporated in the category 1. Civil (and commercial) litigious cases (including litigious enforcement cases and if possible without administrative law cases, see category 3). There were 268 pending Personal Bankruptcy cases on January 1st 2017, 377 incoming cases in 2017, 281 cases resolved in 2017 and 365 pending cases on 31st December 2017.
"Registry cases": In this category there is more than 20% increase of pending cases at the beginning of reference year in comparison to the beginning 2016. The reason are land registry cases. As stated in the previous cycle, the reason for the increased number of pending land registry cases is the significant income of these cases during 2016 and the difficulty for courts to cope with this income in same amount as in 2015. This all reflects on data for 2017.
The reason for the decrease in the number of pending administrative cases at the end of the 2017 is laying in the fact that administrative courts received almost 18% less cases than in 2016. Although judges resolved less cases than in previous year, in relation to the income, it was enough to decrease the number of pending cases at the end of 2017 for more than 20%.

(2016): More land registry cases has been received in 2016 than in 2014 so the total number of registry cases has increased as well.
During the two-year period (through 2014 and 2015), administrative courts accumulated unresolved cases - they solved significantly less than they received, which led to 15024 pending cases at the beginning of 2016. By the end of 2015, a total of 5 judges were transferred to administrative courts from other legal branches, which resulted in better results in 2016 (more resolved cases).

(2015): In 2015 the reorganization of the judicial system in the Republic of Croatia, which is partly related to the reorganization of the second instance proceedings, has been carried out. Consequently, in the county courts there has been a harmonization of case registers and case codes (litigious, non-litigious and other) in a way that in 2015 courts carried out the alignment and correction of the indication of certain types of second-instance civil cases. For this reason, in 2015 the correction of the category of cases according to the new methodology of monitoring has been carried out.

The total of all categories is aligned with the continuity of previous cycle (horizontal consistency), whereas the individual categories in the column “Pending cases on Jan. 1 2015” are presented under the new revised indication of the types of cases. For example, some cases that have been categorized in previous cycles under category 'Other', the courts have categorized according to the certain types of dispute which was possible after new case registers were open (e.g. Enforcement – Security by lien on the basis of an agreement of the parties).

(2014): In 2014, a new methodology of monitoring unresolved land registry cases was introduced, in a way that regular land registry cases (i.e. registration, note, caution) are not being monitored anymore and are not presented in the total. Other land registry cases (i.e. objections, appeals, specific corrections,etc.) are still being monitored. The overall number of enforcement cases is subsumed in the category “general civil and commercial non-litigious cases”. The Municipal Civil Court undertook the harmonization of data due to data migration. After the new standardization of the audit, the Supreme Court has started to be less up-to-date since the number of received cases is far beyond the number of cases which may be resolved (priority is given to urgent and old cases).

(2013): The implementation of the ICMS system resulted in unification of data into one reporting system. The category “general civil and commercial non-litigious cases” includes inheritance cases but excludes company registry cases. The increase of the incoming “civil and commercial litigious cases” was mostly due to the continuity of the negative economic situation, while the efforts of judges, as well as broadening the scope of powers of court advisors resulted in the increase of resolved cases. The implementation of the enforcement on pecuniary means carried out by the Financial Agency (FINA) led to decreases in respect of “non-litigious enforcement cases”. Since 2013, court advisors deliver a decision in land registry cases, while the judge supervises its content. The competence of other persons for issuing land registry was also established, electronic delivery of submissions and e-notice board were introduced.

(2012): Till December 2011, “administrative law cases” were adjudicated at the Administrative Court. Provided that the latter was overburdened, a two-instance administrative adjudication was introduced in January 2012. 4 regional administrative courts were established as first instance courts, while the former Administrative Court became second-instance High Administrative Court. Since 2012, there is a mandatory oral court hearing of the parties before the first-instance courts.

Cyprus

(General Comment): The reason for not having data for the subcategories of cases is that there was no electronic filing system that would enable us to have statistical data on different types of cases.

(2021): In the administrative cases, the applications for international protection are included and there was an increase in these applications in 2021, as a result of more asylum seekers coming into Cyprus. From 1 January 2021, the Review authority for refugees was abolished.

(2020): In the previous cycle a big number of cases were tried together. This is the reason why number of resolved cases in 2020 might appear lower than in 2019.
Reducing delays in the disposition time is part of the reform process. The difference in the pending cases in administrative cases compared with previous year is that in this figure we included the cases filed before the Administrative court of international protection which was set up.

(2019): In the previous campaigns the number of cases filled and resolved was increased as a result of a big number of cases filed together (in one bundle) and tried together.

(2018): The increase in the number of resolved cases is a consequence of the cases tried together. For number of administrative cases, it should be taken into account that cases were consolidated and that 2724 consolidated cases were withdrawn.

(2017): The variation concerning incoming (total) and resolved (total and administrative) cases (decrease) is due to the fact that, in 2016, cases were filed and tried in a bundle but each was considered separately for statistical purposes. Put differently, cases were joined together and therefore there was an increase in the number of resolved cases. Accordingly, we can observe a decrease in the number of resolved cases between 2016 and 2017.

(2015): Variations: The increase in the number of pending cases between 2010 and 2015 is a result of the bail in Cyprus a lot of administrative cases had been filed against that decision.
The reason for the decrease in the number of resolved cases is that the bail in cases had been consolidated and was tried jointly after 31st of December 2014.

(2014): The increase in the number of pending cases is a result of the bail in Cyprus; a lot of administrative cases had been filed against that decision. The reason for the decrease in the number of resolved cases is that the bail in cases had been consolidated and was tried jointly after 31st of December 2014.

Czech Republic

(General Comment): For years 2010, 2012 and 2013, business register cases, administrative cases and insolvency registry cases which are decided by the regional courts (second instance courts) acting as first instance courts, were included in the table concerning the case-load of second instance courts (question 97). On the contrary, since 2014, administrative cases, business registry cases and insolvency cases (and also some litigious cases) which are still decided by the second instance courts acting as first instance courts, are subsumed within the table of question 91 (which was already the case for the 2008 exercise). Methodology has been changed in year 2015 – more case types have been included, which led to the big increment in the number of cases. There are no further changes expected.

(2021): Business registry cases are very quickly resolved and there is quite a variance between years. The number of cases is probably affected by many factors – new laws, economic situation and much more. This is also reflected in the number of pending cases.
2.3 Other non-litigious cases - It is relatively minor and “not very important” case type. The number of cases is quite small. It follows that there is big variance in the data between years.

(2020): The registry cases are very quickly resolved and the numbers can vary between years significantly. In 2019, courts managed to resolve more cases than was the number of incoming cases, which led to decrease in pending cases. The same explanation applies to “other non-litigious cases”. The number of cases is quite small. It follows that there is big variance in the data between years. Furthermore, during 2019 courts managed to resolve significantly more cases than in 2018, no special reasons were reported other than a fact that number of cases is relatively small and the cases are not complex. This also resulted in further redaction of the number of cases at the end of 2019. In 2020, the courts again managed to resolve more cases than was the numer of incoming cases for both registry cases and other non-litigious cases.
Bussiness registry cases are very quickly resolved and there is quite a variance between years. The number of cases is probably affected by many factors – new laws, economic situation and much more.
Other cases: The number of incoming cases has grown, probably due to changes in insolvency legislation.

(2019): The registry cases are very quickly resolved and the numbers can vary between years significantly. Last year, courts managed to resolve more cases than was the number of incoming cases, which led to decrease in pending cases at 1 January of the reference year. For Other non-litigious cases the same reasons apply for the number of cases at the beginning of the year. Furthermore, during 2019 courts managed to resolve significantly more cases than last year, no special reasons were reported other than a fact that number of cases is relatively small and the cases are not hard. This also resulted in further redaction of the number of cases at the end of the reference year. For incoming Other cases, there was a legislative change in insolvency law that is probably a reason for the significant grow in the number of incoming cases.

(2018): Methodology has been changed in 2.1 and 2. (civil and commercial non-litigious cases) in year 2015 – more case types have been included, which led to the big increment in the number of cases.

(2017): Methodology has been changed in 2.1 and 2. (civil and commercial non-litigious cases) in year 2015 – more case types have been included, which led to the big increment in the number of cases. Generally the number of incoming cases is decreasing, more use of ADR.
In the previous year the number of resolved cases greatly exceeded the number of incoming cases for other non-litigious cases, which led to huge drop in pending cases and discrepancy appeared.
Non-litigious business registry cases are very easy to resolve and the variance between years in the number of cases (incoming, resolved and pending) is quite big in general. Thus the annual change could easily be (and is) greater than 25 %.
Courts have problems with resolving administrative cases. It follows that number of incoming cases was last year much bigger than number of incoming cases. Thus number of pending cases increased greatly cases and discrepancy appeared.
As to Other cases, insolvency cases are reported. This is relatively new and very specific agenda, which usually takes 5 years to resolve. There was an increase in case fillings five years ago, which resulted in growth in the number of resolved cases nowadays. On the other hand, for various reasons (including legislative changes) the number of incoming cases is decreasing.

(2016): Methodology has been changed in 2.1 and 2. (civil and commercial non-litigious cases) in year 2015 – more case types have been included, which led to the big increment in the number of cases. Generally the number of incoming cases is decreasing, more use of ADR.

(2015): Methodology has been changed in 2.1 in year 2015 – more case types have been included, which led to the big increment in the number of cases.

Civil and commercial non-litigious cases include: 2.1 - uncontested payment orders, cases of the upbringing and maintenance of a minor, declaration of admissibility of taking or keeping of a person in a medical (health care) institution, declaration of the death of a person, inheritance proceedings, judicial deposit cases

Category "other includes: insolvency cases and incidence disputes

(2014): For 2014, business register cases, administrative cases, insolvency registry cases and also some litigious cases which are decided by the regional courts (second instance courts) acting as first instance courts are subsumed within the table of question 91.

For 2014 the category “other” encompasses insolvency cases.

In 2014, the high increase of insolvency cases is due to numerous cases of personal bankruptcies as well as to an unfavourable economic situation.

(2013): For 2013, business register cases, administrative cases and insolvency registry cases which are decided by the regional courts (second instance courts) acting as first instance courts, were included in the table concerning the case-load of second instance courts. In 2014, these cases (and also some litigious cases) are subsumed within the table of question 91.

For 2012, the category of enforcement cases concerns exclusively enforcement carried out by the court itself, while for 2013, this category encompasses also enforcement ensured by private executors (in this procedure, the court authorizes the private executor to proceed to the enforcement and decides about remedial measures against executor’s decision). For 2012, the category “other” includes electronic payment orders and probate proceedings, while for 2013 it encompasses only electronic payment proceedings. Moreover, in respect of the electronic payment orders, there was a switchover to another register and 174.067 cases were transferred to a new register. The discribes evolutions affect the total.

(2012): For 2012, business register cases, administrative cases and insolvency registry cases which are decided by the regional courts (second instance courts) acting as first instance courts, were included in the table concerning the case-load of second instance courts. In 2014, these cases (and also some litigious cases) are subsumed within the table of question 91.

Variations between 2010 and 2012 concerning the number of pending cases on 1st January, the number of incoming cases and the number of pending cases on 31 December stem from the high number of incoming electronic payment orders in 2011. Besides, more enforcement cases are handled by private executors.

Denmark

(General Comment): As concerns "non-litigious business registry cases", it is important to note that pending cases always may vary a lot as it is a residual figure when pending prior to the period, received and resolved cases are counted. Furthermore, the reason for the discrepancy is that we do not have pending figures from the Maritime and Commercial High Court. The number of “administrative law cases” which are litigious is encompassed in the number of “civil and commercial litigious cases”..
With regard to "non litigious land registry cases", it should be pointed out that due to the high amount of incoming and resolved cases, the residual figure of pending cases prior and after the period may vary..

(2020): 2020 was an unusual year because of the Covid-19 related close down of society, including close down of courts. It created more pending cases as the prosecution continued to forward new cases to the courts that could not deal with it. Land registration is the major source of incoming cases. It fluctuates a lot depending on interest rates, loan rescheduling etc.
2.1. General civil (and commercial) non-litigious cases: The courts have successfully reduced the number of pending cases.
As concerns "2.2.2. Non-litigious business registry cases", it is important that because of new regulations/laws, it is possible to start a new company with no prior capital. This causes many more companies and many more closures in some categories and also affect number of pending cases, like for non-litigious business registry cases. The courts received many extra backlogged cased from the Danish Commerce and Companies Agency reenforced closure of companies that were still backlogged in the early 2020. The courts were closed for 3 weeks except for vital cases and government assistant to companies helped them and reduced bankruptcies and closures of companies that would normally have happened.

(2019): Variation in land registration (loans etc) as market and interest rates always vary from year to year.
For non-litigious business registry cases: Received markedly fewer enforced cases re enforced closure in 2019 than in 2018; Solved many extra insolvency cases in the beginning of year 2019 received in late autumn / winter 2018; pending cases on 31 December - It is important to understand the figure, that we succeeded to include pending cases from the Maritime and Commercial court.

(2018): As concerns "non-litigious business registry cases", it is important that because of new regulations/laws, it is possible to start a new company with no prior capital. This causes many more companies and many more closures in some categories and also affect number of pending cases, like for non-litigious business registry cases. Besides from that it is important to note that pending cases always may vary a lot as it is a residual figure when pending prior to the period, received and resolved cases are counted. Furthermore, the reason for the discrepancy is that we do not have pending figures from the Maritime and Commercial High Court. The number of “administrative law cases” which are litigious is encompassed in the number of “civil and commercial litigious cases”.
With regard to "non litigious land registry cases", it should be pointed out that due to the high amount of incoming and resolved cases, the residual figure of pending cases prior and after the period may vary.

(2017): The figures provided in respect of this question are not fully consistent. The Maritime and Commercial Court only measures incoming and resolved insolvency cases but not pending cases. Accordingly, when the data on processed/resolved cases from this court are included, there will always be a small inconsistency. Therefore, vertical and horizontal figures are not totally consistent.
Concerning the category "land registry cases", the number of pending cases on 1 January 2017 is a residual figure from received, finalized and pending cases ultimo the year; it may deviate from pending cases ultimo 2016, but it is a residual figure. The number of pending cases on 31 December 2017 is an actual figure. Concerning the category "registry cases", it is specified that the Maritime and Commercial Court does not publish pending cases which results in a discrepancy.

(2016): As concerns "non-litigious business registry cases", it is important that because of new regulations/laws, it is possible to start a new company with no prior capital. This causes many more companies and many more closures in some categories and also affect number of pending cases, like for non-litigious business registry cases. Besides from that it is important to note that pending cases always may vary a lot as it is a residual figure when pending prior to the period, received and resolved cases are counted. The number of “administrative law cases” which are litigious is encompassed in the number of “civil and commercial litigious cases”.
With regard to "non litigious land registry cases", it should be pointed out that due to the high amount of incoming and resolved cases, the residual figure of pending cases prior and after the period may vary.

(2014): Due to an improved business situation, courts at all levels receive fewer cases, i.e. civil cases, enforcement cases, forced sales, insolvency cases; pending cases are also reduced thereby. Non-litigious business registry cases follow the overall tendency.

(2013): The successive decrease observed in the number of civil and commercial litigious cases stems from the possibility to reopen cases and the missing data on pending cases before the Maritime and Commercial Court. As for the land registry cases, following the digitalizing in 2009 of land registry, the number of pending cases decreased markedly.

Estonia

(General Comment): Some horizontal inconsistencies and inconsistencies with previous year are due to the fact that data are always taken from the live database.

(2021): The increased number of administrative law cases pending at the end of 2021 is due to COVID-19 related cases that have taken more time to be solved.
Concerning general civil and commercial non litigious cases, it should be mentioned that during the second Covid-19 year, courts processed cases that they were not able to process during the first Covid-19 year.

(2020): MoJ
In 2020, there have been difficulties with filling the vacancies of judge positions in the biggest county court (judges going on maternity leave or retirement), which may have resulted in an increase in pending cases older than 2 years in general.

(2019): Some horizontal inconsistencies and inconsistencies with previous year are due to the fact that data are always taken from the live database.

(2018): The variations in total and in the non litigious cases are due to the number of entrepreneurs that has grown every year, so the number of incoming case is also increasing. Furthermore, the number of real estate transactions has increased and the market is active.The number pending cases end of 2017 is different because the numbers are taken later and the data has been corrected.

(2017): There are not any particular reasons to explain variations in the number of non-litigious business registry cases, causing variations in respect of the category "registry cases" and "non-litigious cases". As regards item 2.1 “general civil and commercial non-litigious cases”, there is an important discrepancy between the number of pending cases on 31 December 2016 and the number of pending cases on 1 January 2017. The reason is related to the time the numbers have been taken out of the system (see general comment). The fifth column “pending cases older than 2 years”, includes cases that are suspended (part 9 of our Code of Civil Procedure, https://www.riigiteataja.ee/en/eli/506022018001/consolide). The proceedings may be suspended for example if the one of the parties dies or fells seriously ill; or if in order to solve the dispute the court needs a resolution of an another case.

(2016): The decrease in the number of incoming administrative court cases is due to the decrease in the number of inmate complaints. The variations in total and in the non litigious cases are due to increase of incoming business and land registry cases.

(2014): The increase in the number of incoming administrative law cases is due to a rise of complaints of prisoners. As to the decrease in the total of pending other than criminal law cases on 1 January 2014, the performance indicators of courts have justified supplementary budget resources. Agreements between the Ministry of Justice and courts are expected concerning the efforts that need to be undertaken in court to clear the backlog and accelerate proceedings. For 2014, non-litigious enforcement cases are included in the category “general civil (and commercial) non-litigious cases”.

(2013): As to non-litigious business registry cases and the observed decreases, in 2012 it was impossible to separate supervisory proceedings from general proceedings and therefore 2012 data included supervisory proceedings as well. The number of pending “civil and commercial litigious cases” decreased on account of the enhanced efficiency of the first instance courts, while the decrease in the number of incoming cases is due to the reestablishment of the normal case-flow after the economic crises.

(2012): The land register (together with the marital property register) and the commercial register (together with the non-profit associations and foundations register, commercial pledge register and ship register) are part of the county courts. “Land registry cases” and “business registry cases” refer to the registration procedure, including supervisory proceedings over undertakings. Disputes arising from the registration procedure are subsumed in “general civil (and commercial) non-litigious cases“. The dynamics of the “civil and commercial non litigious cases” is considerably influenced by the payment order proceedings that form the largest part of this category and are dealt with by only one courthouse. The 2012 data includes enforcement, land and business registry cases.

Finland

(General Comment): The pending cases older than two years are not collected in Finland.

(2021): Comments The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on 12.1.2022 and reflects the situation on that day. The data available is: 1)Incoming cases 2)Resolved cases 3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously announced number of cases on 31 December and the now announced number of cases in 1 Jan will differ. The number mentioned in category 3 includes cases dealt by the administrative courts, the Market Court and the Insurance Court.

(2020): The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly
changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on
12.1.2021 and reflects the situation on that day. The data available is: 1)Incoming cases 2)Resolved cases 3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available
data. Because of the dynamic nature of the system, the previously annouced number of cases on 31 December and the now announced
number of cases in 1 Jan will differ. Currently the calculation is further complicated by the partial implementation of the new cases
managements systems, AIPA (for general courts) and HAIPA (for administrative and special courts). The number mentioned in category 3 includes cases dealt by the administrative courts, the Market Court and the Insurance Court.

(2019): The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on 22.1.2020 and reflects the situation on that day. The data available is:
1)Incoming cases 2)Resolved cases
3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously annouced number of cases on 31 December and the now announced number of cases in 1 Jan will differ. Currently the calculation is further complicated by the partial implementation of the new cases managements systems, AIPA (for general courts) and HAIPA (for administrative and special courts). The number mentioned in category 3 includes cases dealt by the administrative courts, the Market Court and the Insurance
Court.
The number of administrative cases increased dramatically in 2016 due to the asylum crisis. Accordingly, more judges were hired to deal with cases and make the procedure more effective. The limits in which cases have to be handled have also been shortened in order to reduce the number of pending cases. To tackle this crisis, a legislative reform decentralized the asylum cases from one administrative court (Helsinki) to three other administrative courts as well.
As to “civil and commercial litigious cases”, we can notice a very high Clearance Rate for 2016 due to the fact that in 2016 the number
of incoming civil cases decreased and courts were able to deal with pending cases. Accordingly, the number of pending cases decreased between 2016 and 2019.
“General civil and commercial non-litigious cases”: the number of pending cases at the end of 2019 increased slightly between 2018 and 2019. In this respect, it should be noticed that the partial switch to the new case management system AIPA (as for example divorce cases are already processed in this system) can be the explanation as some initial challenges in the reporting tool has been noted recently.

(2018): The number mentioned in category 3 includes cases dealt by the administrative courts, the Market Court and the Insurance Court.
The number of administrative cases increased dramatically in 2016 due to the asylum crisis. Accordingly, more judges were hired to deal with cases and make the procedure more effective. The limits in which cases have to be handled have also been shortened in order to reduce the number of pending cases. To tackle this crisis, a legislative reform decentralized the asylum cases from one administrative court (Helsinki) to three other administrative courts as well.
As to “civil and commercial litigious cases”, we can notice a very high Clearance Rate for 2016 due to the fact that in 2016 the number of incoming civil cases decreased and courts were able to deal with pending cases. Accordingly, the number of pending cases decreased between 2016 and 2018.

(2017): 1. Civil (and commercial) litigious cases: in 2016 the number of incoming civil cases decreased and courts were able to deal with pending cases; accordingly, the number of pending civil litigious cases at the beginning of 2017 has decreased.
2.2.1 From the beginning of the year 2010 Land register cases were transferred to National Land Survey of Finland.
3. Administrative law cases: On appeal, the administrative court reviews the legality of the decision of the authority. The number mentioned in category 3 includes cases dealt with by Administrative Courts, Market Court and Insurance Court.
It is worth mentioning that in 2016 the number of administrative cases increased dramatically due to the asylum crisis. As a result, the number of pending administrative cases at the beginning of 2017 increased considerably. Against this background, Finland had adopted different measures to face the asylum crisis (e.g. decentralisation of the competence in respect of asylum cases from one administrative court (Helsinki) to three other administrative courts). Accordingly, the number of incoming administrative cases for 2017 decreased (28%).

(2016): In 2016 the number of incoming civil cases decreased and courts were able to deal with pending cases. The number of administrative cases increased dramatically due to the asylum crisis. Accordingly, more judges were hired to deal with cases and make the procedure more effective. The limits in which cases have to be handled have also been shortened in order to reduce the number of pending cases. To tackle this crisis, a legislative reform decentralized the asylum cases from one administrative court (Helsinki) to three other administrative courts as well. For that reason, statistics show variations as concerns the number of pending administrative law cases in 2016. The number of pending administrative law cases on 1.1.2016 was 20 4775, but due to the decentralization around 5000 cases were transferred from Helsinki to these other courts. In the statistics, these cases do not appear as pending anymore. It is not possible to say how many of them have been resolved, but they are included in the number of resolved administrative law cases.

(2014): Non-litigious enforcement cases are subsumed in the category “general civil (and commercial) non-litigious cases”. The enforcement is of the competence of the enforcement authorities, not of this of courts. Cases mentioned here are appeals in execution proceedings before district courts.

(2012): The increase in the number of pending civil and commercial litigious cases is the result of an exceptionally high number of incoming litigious civil cases in 2011.

France

(2021): Source SDSE
Source Council of State

(2020): Comments on volumes.
Completed cases are down more than new cases, both civil/2019 and felonies/2018 (contravention are surprisingly up / 2018). The health crisis and containment may have played on TAs (completed cases) (reducing the ability of courts to process cases) but also on NAs (new cases) (fewer misdemeanors committed, fewer cases brought to court). Prior to this, a major lawyers' strike and a transport strike had mainly affected the TAs.
Commentary provided by the highest adminsitrative Court concerning the administrative order: the measures derogating from the ordinary law of contentious administrative procedure adopted to respond to the situation arising from the health crisis caused by the Covid-19 epidemic were provided for by order no. 2020-305 of March 25, 2020, then by order no. 2020-1402 of November 18, 2020, and decree no. 2020-1406 of the same day. I - Concerning the rules relating to the organization or holding of hearings 1°) Use of audiovisual or any other means of electronic communication
The two orders of March 25 and November 18, 2020 provided for the possibility of using an audiovisual means of telecommunication for the holding of hearings or any other means of electronic communication.
When this device was used, it was used, in almost all the jurisdictions that had recourse to it, for less than 10% of the cases judged in collegiality during the same period.
The most common configuration used was that in which one or more members of the panel were at a distance and the president, the other members of the panel, and the parties and their counsel were in the courtroom (approximately 75% of the courts that used videoconferencing chose this configuration and 53% of them used it for less than 10% of the cases tried by the panel). Very few courts have used video-conferencing with remote parties. The reasons for which the courts have used video-conferencing are linked to the constraints linked to the health crisis, in particular the difficulties encountered by lawyers to travel, especially in overseas territories, and the isolation imposed on certain people (judges or lawyers) declared to be in contact or recognized as fragile.
As regards single judges, the courts have made a very measured application of the provisions allowing the use of an audiovisual means of telecommunication, since only 6 administrative courts out of 35 have indicated that they have used it. The administrative courts indicated that they had used videoconferencing, as a single judge, for the processing of emergency proceedings in matters concerning foreigners, particularly in cases where the foreigner was in administrative detention. Finally, 15 administrative courts indicated that they held summary proceedings by videoconference. For almost all of these courts, the summary proceedings judge was in the courtroom and the parties were at a distance, and less than 10% of summary proceedings cases were judged in this configuration. Travel difficulties were the main reasons why the courts of first instance held summary proceedings by videoconference. The texts applicable during the state of health emergency allowed the use of any means of electronic communication, other than videoconferencing, in case of impossibility to use it. Only a few TAs used this procedure and for less than 10% of the cases in the courts that used it.
Generally speaking, the courts have made a very measured application of the provisions of the orders allowing hearings to be held by videoconference and this use was justified by the constraints and difficulties linked to the health crisis. 2°) The provisions allowing to limit the number of persons attending the hearing were applied by a large number of courts and in a frequent manner. On the other hand, the provisions allowing the president of the court to decide that the hearing will be held without the presence of the public have been used very little. 3°) The dispensation of the public rapporteur's conclusions has

(2019): Administrative law cases pending for more than 2 years: in contrast with previous cycle, 2019 data are expressed in net figures, excluding serial cases presenting the same legal issue for trial.

(2018): With regard to the reduction of the number of non-contentious cases, this corresponds both to the impossibility of including data relating to adults under protection in 2018, due to a technical problem, and to the abolition of the approval of over-indebtedness plans by the judge of the Court of First Instance, the proceedings before which are processed by the Over-indebtedness Commission, as from 1 January 2018. Act No. 2016-1547 of 18 November 2016 on the modernization of 21st century justice, known as the "Justice 21 Act" and the Act of 9 December 2016, abolished judicial approval of the measures recommended by the over-indebtedness commission. As a reminder, divorces by mutual consent no longer fall within the competence of the family court.

(2016): The important increase in the number of pending non-litigious cases is due to the increased number of requests for ending unions - 60% (especially in 2016) and the increased number of pending cases before execution judges within the TGI in respect of a third party (without significant increase in the number of incoming cases, but a regular increase, namely for the last two years in the number of cases under consideration).

(2014): In civil litigation, cases relating to the activity of the liberty and custody judge amount to 98 300 cases in 2014 and have increased by 6.8% compared to 2013. These cases have significantly increased in 2012 (+ 65.5%), due to the law No. 2011-803 of July 2011 on the rights and protection of persons under psychiatric care. The reform systematised the control of psychiatric hospitalisations without the consent of the liberty and custody judge.

Germany

(General Comment): General information on the statistics used as sources for answering the questions in this section:
Once per year, the Federal Statistical Office compiles and publishes the statistics of the civil, criminal, administrative, finance, social, family and labour courts. Nationwide uniform ordinances define the scope and rules of data collection for these statistics. The courts collect the data and submit it to the statistical offices of the Länder, who check and edit the data and send it to the Federal Statistical Office. In simplified terms, the ordinances provide two different kinds of data collection sheets: The "procedural surverys" that collect data on the specifics of the proceedings happening at a court and the "monthly surveys" that track the caseload of a court. With regard to the caseload count, the monthly surveys distinguish between "caseload of proceedings covered by the procedural surveys" and "other caseload". For the cases from the first category (proceedings covered by the procedural surveys), the monthly surveys collect the number of cases pending at the beginning and at the end of a month as well as the number of received and resolved cases. For the "other caseload", the monthly surveys only count the number of received cases.
2.1 General civil (and commercial) non-litigious cases: The figure represents the number of non-litigious enforcement cases. In the monthly survey for the statistics of the civil courts, these cases fall into the category of "other caseload". This is the reason why only the number of incoming cases is available.
2.2.1. Non litigious land registry cases: The figure represents the number of incoming requests with regard to entries, change of entries or deletion of entries in the land registry. This data is not part of the statistics of the civil courts but was taken from the statistics on the workload of the Local Courts in matters of non-contentious jurisdiction (according to the Act on Proceedings in Family Matters and in Matters of Non-contentious Jurisdiction - FamFG). The number of pending and resolved land registry cases is not collected within the framework of this statistic.
Pending cases older than 2 years from the date the case came to the first instance court:
With regard to the statistics of the civil, criminal, administrative, finance, social, family and labour courts, a statistical record of the day a case came to the court only exists for the cases covered by the procedural surveys. Courts submit the data from the procedural surveys to the statistical offices after the case has been concluded for the respective court and at the respective instance. This means that the duration of a proceeding is unknown for pending cases. The monthly surveys count the number of pending cases at the beginning and at the end of a month, but do not collect any information on the date the pending cases came to the court. The statistics compiled by the Federal Statistical Office include information on the percentage of cases that were resolved within certain time frames but no numbers on how many proceedings took longer than two years. The statistic on the workload of the Local Courts in matters of non-contentious jurisdiction does not collect any data regarding the date a case first came to court.
Horizontal inconsistencies in the table:
The inconsistencies with regard to the pending cases at the end of the year also occur in the statistics published by the Federal Statistical Office. The reason for this is, that courts submit count corrections for the monthly surveys at the end of the year.

(2021): 2.2.2: data represents - the number of registrations in the business registry (Handelsregister) at the end of the previous year
- the number of new registrations during the reference year
- the number of deleted registrations during the reference year
- the number of registrations at the end of the reference year
"other cases" include: family and labour law cases

(2020): There is no special reason explaining the slight decrease in the number of incoming administrative law cases.

(2019): The horizontal consistency in the table is not ensured because the data are continuously checked.

(2018): The high number of administrative pending cases on January 1st and December 31st is a result from the numerous unresolved cases in 2017 due to the rise of asylum seekers since 2015.
Cases of guardianship law in 2018 are not included in the "other cases " category, because changeover of data collections by the Lander.

(2017): Source: Federal Statistical Office (DESTATIS)
No. 4 - Other cases: Cases of guardianship law in 2017 are not included, because changeover of data collections by the Länder.

(2016): Source: Federal Statistical Office (DESTATIS)

(2015): For civil and commercial litigious and administrative cases, the updated data is solely based on the statistics on the administration of justice published by the Federal Statistical Office for 2015. As for the category “other”, it refers to the most recent available data at the closing date of the CEPEJ data collection and encompasses information provided by the 16 Länder on the basis of the query lodged with the judicial administrations of the Länder. However, some of the Länder were unable to provide complete data regarding this category. Accordingly, the information for this category remains incomplete. The category "other" refers to: local court family cases; guardianship and curator cases at the family court; custodianship cases; curator cases at the custodianship court; proceedings regarding judgments and orders at the labour court.

(2014): For civil and commercial litigious and administrative cases, the updated data is solely based on the statistics on the administration of justice published by the Federal Statistical Office for 2014. As for the category “other”, it refers to the most recent available data at the closing date of the CEPEJ data collection and encompasses information provided by the 16 Länder on the basis of the query lodged with the judicial administrations of the Länder. However, some of the Länder were unable to provide complete data regarding this category. Accordingly, the information for this category is incomplete and is not comparable. The category "other" includes: local court family cases; guardianship and curator cases at the family court; custodianship cases; curator cases at the custodianship court; proceedings regarding judgments and orders at the labour court.

(2013): Two Lander did not provide data with regard to the number of other than criminal law cases, while one Land did not provide information about the number of non-litigious land registry cases.The information is incomplete and the following legal cases were not taken into account: Incoming cases - payment order procedure (civil courts: 4 751 355 cases; labour courts: 56 053 cases), insolvency cases (143 662), cases concerning the civil registry office, wills, estates, accommodations, agriculture, escrow, and public notice proceedings (1 469 273); Pending legal cases on 31 December 2013 - guardianship and curator cases (12 795); insolvency cases (303 654).

(2012): The data was not available for 1 Land and remained incomplete for 4 Lander.

Greece

(2021): The data has been collected from the 63/63 First Instance courts of Greece.

(2020): The courts from March 2020 due to Covid 2019 operated under special conditions and dealt with priority mainly criminal cases, this is the reason for the differentiation of pending cases of civil and administrative nature.
Civil cases are answered NA, because not all courts could provide the data.

(2019): The Council of State did not provide the Ministry of Justice with data regarding the Administrative law cases

(2018): -

(2017): The divergence between 31.12.2016 and 1.1.2017 regarding the Civil and Commercial cases (First column of this year's data) is mainly due to the recent operation of the NEW system (integrated Civil and Criminal Court case management system -OSDDY PP) in the Court of First Instance of Pireaus (1587 more cases on 1.1.2017 than those on 31.12.2016). In 2017, the number of “incoming” and “resolved” civil and commercial litigious cases at first instance courts increased due to the fact that in 2017 the function of the courts was not affected by the strike of lawyers, which took place in 2016. The horizontal consistency of the table is not ensured with regard to civil and commercial litigious cases because in 2017 some of the courts which do not yet have an automated system had to make minor adjustments in the statistical data provided to the MoJ. Concerning administrative law cases, any deviations from the 2016 figures, regarding the number of cases on 31.12.2016 and of 1.1.2017 (240650) are due to a number of factors that the General Commission of the State is trying to track down and gradually eliminate. A slight deviation has been noticed for the 2017 data of the administrative first instance courts of Athens and Piraeus, which is due to the data migration to a new information technology (IT) system called "Integrated Court Management System for the Administrative Justice (OSDDY-DD)". This deviation that has already been taken into account by the Central Organizational Committee for the due implementation of OSDDY-DD, is expected to lapse gradually within the next years. Furthermore, deviations have also emerged from the new way of collecting statistical data that the central Organizational Committee is trying to establish in order to ensure the uniform input of data by each court and from recent verifications of relevant numerical data that were subsequently sent by the courts. Finally, discrepancies are also due to errors of the information system itself, for which an effort is being made to identify and inform about, the contractor of the system. The deviation regarding the Number of resolved cases of 2017 from 2016 is due to the fact that in 2017 the function of the courts was not affected by the strike of the lawyers, which took place in 2016. Regarding the new integrated court management system, for administrative cases it has been implemented at all court levels since autumn 2016 and for civil and commercial cases and more especially in the Court of First Instance of Piraeus, the integrated court management system was gradually implemented from March 2016 resulting to an accurate calculation of pending cases of 1/1/2017.

(2016): Any deviations from the 2015 figures are due to a new way of collecting statistics. In fact, in 2016, a working group was set up to update and simplify the content of the statistical data requested by the judicial services of the country. The working group created tables followed by detailed instructions and training in relation to the requested information. According to the instructions given to the courts, some procedures they handle, in those which there is no participation of a judge, are not included in the data collected. In addition, in 2016 a long-term abstention by the lawyers of the country took place, resulting in reduction in the number of cases (especially civil and commercial litigious cases).
The number 79.872 of resolved administrative law cases does not include joint cases, i.e. decisions that refer to more than one case. Furthermore, for the 2016 data of the administrative First Instance Courts of Athens and Piraeus a slight deviation has been noted which is due to the data migration to a new information technology (IT) system called “Integrated Court Management System for Administrative Justice (OSDDY-DD)”. This deviation that has already been taken into account by the Central Organizational Committee for the due implementation of OSDDY – DD is expected to lapse gradually within the next years.
As concerns the category "civil and commercial litigious cases" - incoming and resolved - in 2016 a long-term abstention by the lawyers of the country took place, resulting in reduction of numbers regarding the cases.

(2014): The significant increase in the number of pending cases on 1 January for the total of “other than criminal law cases” is due to lawyers’ abstention in the years 2013 and 2014.

(2012): The system of collecting data does not comply with the CEPEJ methodology. Besides, recent law changes have altered the jurisdiction of courts, so the figures communicated for 2012 could not be compared with these provided for the previous evaluation cycles.

Hungary

(2021): The number of incoming cases decreased in general and the situation was the same for administrative cases. As the number of incoming cases decreased and the courts were able to finish more cases than the number of the "new" cases, the backlog was reduced.

(2020): The pandemic situation had a huge effect on the case flow of the courts on every level of the court system. Special regulations were adopted by the legislator to promote videoconferencing and the courts were "closed between the 16th of March and the 31th of March (during this period no procedural events could be performed at the courts). Although the courts carried out their main activities, many cases were prolonged e.g. because the parties were not able to attend the hearings. Regarding administrative cases the re-organization of administrative jurisdiction also could have an effect on the case-flow.

(2018): One of the reasons of the decreasing number of incoming cases is the new civil procedural code coming into force on the 1st of January 2018. This resulted that many of those parties (especially those who were represented by lawyer) who had the chance to do so, filed their petition before the end of 2017 under the scope of the old and well-known procedural code. Regarding the discrepancy between 2017 and 2018 in the number of registry cases, it is due to the fact that for the first time in 2018, the number of non-litigious business registry cases is available.

(2017): Regarding the categories “2.1 general civil (and commercial) non-litigious cases”, and "4. other cases" the number of pending cases on 1st of January differ from the closing number of the previous year because of data collection problems at certain regional courts.
In the category "registry cases" the higher number of incoming and resolved cases in 2016 was the result of a large number of involuntary dissolution cases. As the courts finished these cases and backlog cases from previous years the number of resolved cases in 2016 was higher than incoming cases in contrast with 2017.

(2016): In category "4. other cases" there is a difference between the number of pending cases on 31 December 2015 and the number of pending cases on 1 January 2016. The cause of this difference is the change of the IT system and the cleansing of the database.
2.1 General civil and commercial non-litigious cases: there was a change in the statistical methodology at the largest regional court that caused a difference in the figures pertaining to pending cases on 1 January 2016.
2.2.3. “other registry cases” include registration of civil societies.
The increase in the number of general civil (commercial) non litigious cases pending on 1 January 2016 is due to the change in the statistical methodology at the largest regional court that caused a difference in the figures.
The number of incoming “other registry cases” increased between 2014 and 2016 because of the increasing number of registry cases of civil societies. Accordingly, the number of resolved “other registry cases” increased also for the same period. With regard to the category “other non-litigious cases”, the increased numbers characterizing the period 2014-2016 are the consequence of the increasing number of court mediation cases and non-litigious labour cases.

(2015): There is a difference between the number of pending cases on 31 December 2014 and the number of pending cases on 1 January 2015. The cause of this difference is the change of the calculation method at some regional courts.

The category “civil and commercial non-litigious cases” includes all cases that are not concluded through the rules of the civil procedure, but through a more or less simplified procedure. Thus, there is a very wide range of related categories set forth by the Civil Procedure Code or other acts. For example, a reference was made to: exclusion of a judge; preliminary verification; issuance of a restraining order and review of that; declaration of dead; declaration of missing; revision of the medical care of mentally disordered patients, deposit at the court; company registration procedures; registration of associations, foundations etc.

The category “other registry cases” include registration of civil societies.

The category “other non-litigious cases” include court mediation and non-litigious labour cases.

The category "other" include Insolvency cases and labour cases.

(2014): In 2014, in contrast with the 2013 evaluation, some registration cases as well as non-litigious enforcement cases were also included within the category “civil and commercial non-litigious cases”. The item “other registry cases” includes registration of civil societies. The item “other non-litigious cases” includes court mediation and non-litigious labour cases. Before 2013, non-litigious administrative law cases were counted as “non-litigious civil and commercial cases”. Since 2013, non-litigious and litigious administrative law cases are provided together. The increased number of investigations conducted by administrative authorities (e.g. tax authorities) resulted in an increased number of reviews against these decisions.

(2013): Till 2013, the data-provider for non-litigious enforcement cases was the Ministry of Justice. Since 2013, the data-collecting system of courts covers also this group of cases (general non-litigious cases). Before 2013, non-litigious administrative law cases were counted as “non-litigious civil and commercial cases”. Since 2013, non-litigious and litigious administrative law cases are provided together. As for the subcategory “civil (and commercial) litigious cases”, it encompasses different categories of cases for 2012 and 2013.

Ireland

(General Comment): Historically, the number of pending civil cases has not been recorded in caseload data, as many cases initiated before the Irish courts either settle out of court or are not proceeded with by the plaintiff/applicant without there being any procedural requirement that the parties inform the court of either a settlement or an intention not to proceed with the case.
Civil (and commercial) non-litigious cases include proceedings not resolved inter partes, such as undefended pecuniary claims, deed poll applications, probate (grants of representation), wardship proceedings, registrations of enduring powers of attorney, appointment of care representatives, unopposed personal and corporate insolvency proceedings, liquor licencing applications and marriage notice exemption applications.
Administrative law cases are included in the number of Civil (and commercial) litigious cases.

(2021): As the Courts Service is not in a position to confirm to increase or decrease, we can note the following: There was a decrease in over 2,500 in personal injuries cases, recovery of debt cases overall decreased by about 1,500 cases and small claims decreased by 40 percent to 2,134, licensing was down 18 percent to 10,764. We can say it is very likely that ongoing covid restrictions contributed to this in licensing.

(2020): Reduction in non-litigious cases due to COVID-19 pandemic. During the most restrictive lockdowns, only essential proceedings could be dealt with, but as guidance allowed, case volume increased. Urgent and essential cases continued to be heard throughout. This included domestic violence and criminal proceedings. All written judgments were delivered electronically and published on the Courts Service website, courts.ie.
Attendance at Court offices was by appointment only to ensure that footfall could be safely managed.

(2017): We are not in a position to offer further comment on the figure for resolved Civil (and commercial) litigious cases.
We are not in a position to offer further comment on variations in the number of incoming and resolved "other" cases.

(2016): The decrease in the number of incoming and resolved "other cases" observed for the period 2014 - 2016 is due to a sharp reduction on taxations of legal costs since 2014.

(2015): Category "other" includes: Taxation of bills of costs.

(2014): A substantial number of cases which have been completed (through settlement or non-pursuit of the case by the plaintiff without notice to the court) are not recorded and counted as completed. Consequently, the clearance rate appearing from the case flow data provided is considered to understate significantly the actual case clearance rate.

(2013): The number of enforcement cases has been reported for the first time. The Courts Service has sought to create a category of cases under the Irish system that would be equivalent to non-litigious enforcement cases under other justice systems. The figure consists of the following steps leading to enforcement measures by court judgments and orders: Execution orders, Registered Judgments, Judgment Mortgage Certificates.

Italy

(General Comment): A different methodology of classification of civil cases is used since 2012. The result is an improved classification and a better split between litigious and non-litigious cases. For 2010, 2012 and 2013, the category of civil and commercial non-litigious cases has an identical content, namely: separation and divorce by mutual consent, interdiction and incapacitation, protective measures for underage, guardianship and trusteeship etc. Since 2014, it subsumes uncontested payment orders, uncontested divorces, technical appraisals, judicial interdiction and incapacitation, hereditament, etc.

(2020): In 2020 the case flow was highly affected by the COVID-19 pandemic and the consequent temporary shutdown of courts. This had an impact on both incoming and resolved cases, which fell quite considerably compared to 2019. However, the fall in the number of resolved cases was less drastic than that of incoming cases, resulting in a clearance rate (CR) higher than 100% and, hence, in a reduction in the number of the unresolved cases (i.e. the pending cases at the end of the period). The COVID-19 pandemic also had a strong impact on the disposition time (DT). The number of pending older than 2 years is not available because figures include the activity of both tribunals and justice of peace offices and for the latter this information is not available.

(2019): Number of "pending cases older than 2 years" is not available because it refers to first instance causes which also include the activity of Justice of peace offices, for which this information is no available.

(2018): Administrative cases. – It should be noted that fast-track simplified proceedings are available for dispute resolution in important areas of administrative law, such as public procurement ("rito appalti"). In 2018, the disposition time for such disputes was 237 days in the first instance and 274 days before the Consiglio di Stato (CDS). Furthermore, requests of interim measures are frequent in administrative law cases (about one third of the cases in first instance and half of the cases before the CDS). They provide fast legal protection of the claimant's rights, often anticipating the final judgment on the merits.

(2015): Figures at Q.91 (points 1 and 2) have been extracted from a new IT system called "Civil Data warehouse". This new system allows us to get in-depth information on single proceedings. Before the implementation of such data warehouse, statistics were based on aggregated variables that only partially could distinguish between litigious and non-litigious cases.

As far as figures at Q.91 (point 3), please consider that Administrative Justice doesn't fall under the umbrella of the Ministry of Justice as it is administered by the Council of State (Consiglio di Stato). However, figures at Q.91 (point 3) were not provided by the Council of State, they were rather taken from a public document available online at https://www.giustizia-amministrativa.it/cdsintra/cdsintra/Notiziasingola/index.html?p=NSIGA_3826149
Since the administrative cases (Q.91 point 3) refers to a different administration, it wouldn't be reasonable to compare these numbers against the number of judges provided at Q.46.

Civil and commercial non-litigious cases include: Uncontested payment orders, uncontested divorces, technical appraisals, judicial interdiction and incapacitation, hereditament, etc.

(2014): In 2014, figures for the category "administrative law cases" have been submitted for the first time. The administrative justice doesn't fall under the umbrella of the Ministry of Justice as it is a completely different administration.

(2013): In 2013 and 2014, the Italian judicial system has gone through a historical geographic reorganization with the closing of almost 1000 courts. Thus, the statistics regarding flows of cases at the end of 2013 may show some anomalies that will be adjusted with the following data gathering. A constant reduction in the incoming civil and commercial litigious and non-litigious cases is observed from the end of 2009. The number of ADR cases is constantly increasing with a filter effect on the litigious incoming files.

Latvia

(General Comment): Data from the first and appeal instance courts are compiled by the Court Administration, and the Court Information System is a living database that allows data to be corrected, so changes between previous periods are possible. Within the Court Information System, submissions received in the previous year but registered the next year are considered as incoming cases for the new year. "Non-litigious enforcement cases" and "non-litigious business registry cases" are not defined in the Civil Code and both are not within the competence of courts in the first instance (similar to "non-litigious land registry cases").
The category "civil and commercial non-litigious cases" encompasses: applications for securing claim prior to initiation of the matter in a court; applications for securing of evidence prior to initiation of the matter in a court; applications for execution of obligations through the court; undisputed compulsory execution of obligations; execution of obligations in accordance with warning procedures; voluntary sale of immovable property at auction through the court; submitting the subject-matter of an obligation for safekeeping in the court; applications for Commercial Court adjudication execution procedures; applications for arbitrary court decision compulsory execution; applications for property protection if there is no inheritance case; applications concerning execution of court adjudications.

(2021): The number of pending cases on January differs from pending cases on December, 2020 registered data due the living Court information system database. The number of pending cases on Jan. is higher than previous year due high number of pending non-litigious cases. See comments from previous campaigns. Every year from 2019, a significant increase in the number of non-litigious civil cases has been observed. Compared to the previous period, the number of cases increases by 25%. According to the Civil Procedure Law, judge should examine application within seven days. The consideration time determined by the law also affects the amount of resolved cases, and accordingly indicates a direct connection with the amount of incoming cases.
Administrative cases: At the end of 2021, the number of cases received, (which were directed against the Covid-19 restrictive measure - mandatory vaccination), increased significantly, and it was not possible to resolve these cases until the end of the year
The number of pending cases (pending for more then 2 years) has decreased. The reduction of pending cases is related to the increased interest and pressure of the public, the Council of Justice and the Ministry of Justice to reduce the number of long pending civil and administrative cases.

(2020): The number of resolved and incoming cases of general civil (commercial) non litigious cases are higher because there was significant increase on applications for the undisputed enforcements. Usually, cases on the undisputed enforcement are submitted electronically and solved in written procedure. The increment of such cases are probably closely connected with activities of creditors` intensity.
We cannot find the main reason why pending cases older than 2 years are resolved more than in previous years. Representatives of courts point out the effect of Covid19 restrictions because many old cases were re-classified from oral to written procedure if it was possible and if parties of case agreed to that.

(2019): In 2018 there were several stages of court system reform. Several District courts were merged, and The Land Register offices appended to the District courts. Partially due to court system reform, Court Information System database has undergone several error checks and data clean-ups, that has affected amount of cases, especially – unresolved. The reform of the judiciary could also have affected the backlog of cases pending for more than 2 years, as it is undoubtedly that when transferring a backlog from one court to another, another judge needs extra time to go into the case file. However, the methodology for processing statistical data must also be taken into account, i.e. the functionality of the database, that the period of suspension of proceedings is taken into account during the proceedings and other external economic factors could have affected the number of long-standing civil cases. Taking into account also the peculiarities of litigation in our country, for example, that commercial cases are not separated from civil cases and that one civil case may contain several claims which are considered in one procedure, this generally means that the case takes longer to process.

(2018): In 2018 there were several stages of court system reform. Several District courts were merged, and The Land Register offices appended to the District courts. Partially due to court system reform, Court Information System database has undergone several error checks and data clean-ups, that has affected amount of cases, especially – unresolved.

(2017): Data updated after court reorganisation in 2018.

(2016): Data updated after court reorganisation in 2018.

(2014): Variations concerning administrative law cases over the period 2012-2014 are due to a change in the legislation. Namely, from July2012, appealed administrative decisions of institutions are handed to District courts.

(2013): Amendments to the Civil Procedure Law introduce new long-pending forms for insolvency cases such as judicial protection proceedings, insolvency proceedings for individuals, etc., whose proportion increased. The insolvency process begins with a court ruling but the case cannot be closed until the end of the insolvency process. Besides, quick pending cases have been transferred from courts to the Land Registry offices from January 2012. The micro-enterprise development opportunities have increased the number of long-pending insolvency cases in the court. From July 2012, appealed administrative decisions of institutions are handed to District courts.

(2012): Decreases in the values are due to external (socio-economic) and internal (court system) factors: the gradual exit from the economic crisis; transfer of the majority of the non-litigious civil cases (land registry, business registry and non-litigious enforcement cases) from first instance courts to the competent Land Registry Department; transfer of the appealed decisions against administrative authorities from the Administrative court to the Regional courts of general jurisdiction (thus, only cases of the special jurisdiction of the administrative courts are counted).

Lithuania

(2021): in 2021 July 1 the amendments to the Code of Administrative Misdemeanors entered into force, by which the cases of administrative offenses were transferred to be examined (except for the cases referred to in Article 614, paragraph 1, point 3) from district courts out of court to pre-trial institutions.
in 2021 in the district courts, there was a noticeable decrease in the number of civil cases examined by the first instance due to the bankruptcy of legal entities - 1,212 cases (1,624 in 2020, 2,787 in 2019). Compared to 2019, such cases decreased by more than half. It can be assumed that such a decrease in cases in this category could have been caused by the 2020 initiative adopted by the Council of Judges. The impact of the consequences of the novel coronavirus (COVID-19) on Lithuania entered into force Law no. XIII-2861, which was temporarily (until December 2020 31) the initiation of the insolvency process was suspended. It is noteworthy that out of 1212 civil cases on bankruptcy of legal entities, which examined in 2021, the majority - 860 cases - were received by 2020.

(2020): "Pending non-litigious cases": general decrease of number of cases and application of administrative means.
The number of resolved civil and commercial litigious cases might have been affected by the pandemic as not all the categories of cases could have been adjudicated remotely. The number of administrative cases, sa well as for civil and commercial litigious cases could have decreased because of the need for some period to adapt IT and video conference equipment in the situation emerged. The increase of number of pending administrative cases older than 2 years is related to decisions of courts in environmental law cases to stay proceedings pending a decision in a related case, which will be a preliminary ruling in another case:legal entities are challenging a decision requiring them to pay a tax on the pollution of packaging waste from which they were exempted because they had concluded a contract for the organization of waste management. As the documents proving the waste management issued by the licensed recycler were canceled, the documents certifying the waste management of other entities were canceled, which obliged the entities (which had a contract with the waste manager to organize packaging waste management) to pay this fee. The cases are suspended and pending a decision in a case challenging a decision declaring waste management documents issued to applicants invalid because it will have a preliminary ruling in these cases.

(2019): In 2019 there is a downward trend in the backlog of incoming and resolved cases. At the end of the year, the backlog of pending cases at the district, county (I instance) and county administrative courts amounted to 29 898 cases, at the end of 2018 – 33 233 cases; at the end 2017 - 36 419 cases (10 percent less than in 2018 and 18 percent less than in 2017).
In 2019 the number of court order cases has decreased. This decrease may have been caused by the general decrease of debtors' natural persons in 2017–2019. According to the information provided by the credit bureau Creditinfo data, on 1st January 2020 there were 163 929 debtors (natural persons), on 1st January 2019 -177 055, on 1st January 2018 - 207 000 debtors (natural persons).
In 2018, the number of administrative cases received increased by 27.35% compared to 2017 (e.g. the number of cases concerning conditions and detention of prisoners, cases concerning the legal status of aliens have significantly increased) and this led to the growth in the number of pending cases at the end of 2018 (and to the beginning of the reference year 2019).
In 2019, compared to 2018, the number of administrative cases heard in regional administrative courts increased by 14 percent. The change in the increase was due to a 34 percent increase compared to 2018 in the number of applications for a local fee for the collection and treatment of municipal waste. In 2019 a further upward trend in tax cases, enforcement cases and arrest cases, but there has been a significant reduction in civil liability for damage caused by illegal actions by public authorities.
In 2019, as compared to 2018, the number of administrative misconduct cases investigated in district courts increased by 16 percent. The change was due to a 64 percent increase in the number of cases of administrative offenses related to transport and road transport (370-463 Articles of the Code of Administrative Offenses). In 2019 significantly increased the number of cases of driving under the influence of drugs, psychotropic or other psychoactive substances without driving license. The number of cases related to trade, the financial system and statistics has also increased.

(2018): The decrease in general civil (and commercial) non-litigious cases (2.1.) may have been due to the overall decrease in debtors' natural persons in 2017 and 2018. The latter suggestion is based in data from the credit bureau Creditinfo (1 January, 2019 number of debtors natural persons was 177,055; 1 January - 207,000; 1 January, 2017 - 252 479). Credit Bureau “Creditinfo“ stores information about credit risk for businesses and private entities, forms the credit history and establishes credit ratings.
The decrease in "other non-litigious cases" (2.3.): civil cases in process of enforcement (execution) in all district courts was due to changes in the law that came into effect in 2017 July 1, on the basis of which the bailiff, rather than the court of first instance, is responsible for dealing with the succession in enforcement proceedings.
The decrease in "other cases" (4): administrative offence cases (including cases in process of enforcement (execution) in 2017-2018 period was due to to the entry into force of the Code of Administrative Offenses on 1 January, 2017 which left the handling of a large proportion of administrative misconduct and the imposition of penalties to various public administration entities (out of court). This could also be due to the expanded list of circumstances in which the person is not prosecuted under the Code of Administrative Offenses. The decrease in these cases was also influenced by the Amendments to the Criminal Code (on 1 January, 2017) that criminalized persons who drove a road vehicle or taught practical driving while under the influence of alcohol with more than 1.5 ounces of alcohol. In 2018, compared to 2017, the number of cases of administrative offences investigated in district courts decreased by 15.66%, compared to 2016, a decrease of 75.83%. Concerning administrative cases (3): in 2018, the number of cases received increased by 27.35% compared to 2017 (e.g. the number of cases concerning conditions and detention of prisoners, cases concerning the legal status of aliens have significantly increased) and this led to the growth in the number of pending cases at the end of the reference year.

(2017): Other non-litigious cases: civil cases in process of enforcement (execution).
Concerning the category “non-litigious cases” the number of pending cases on 1 January 2017 increased considerably compared to their number on 1 January 2016. The same increase characterises the categories “general civil and commercial non litigious cases” and “other non- litigious cases” (pending cases at the beginning of 2017). However, we can observe that at the end of 2017 the number of pending cases decreased concerning the category “non-litigious cases” and the sub-category “other non-litigious cases”. Only with regard to “civil and commercial non-litigious cases” the number of pending cases at the end of 2017 increased. We can see that these variations are the result of variations in the number of incoming cases for the period 2015-2017. Besides, as the numbers are small, variations appear important. The main reason for increased pending cases is the increased number of incoming other non-litigious civil cases, i.e. enforcement cases, in 2017. More precisely, in 2017, the number of civil cases in enforcement procedure – requests to change the recoverer, increased. There is no particular reason, besides the fact that some companies were buying the recoverers‘ rights from other natural persons or legal entities.
As regards the category "other cases", it refers to cases of administrative offences and cases of administrative offences in process of enforcement (execution). Following the entry into force of a new Code of Administrative Offence (1 January 2017), the number of incoming cases of administrative offences decreased. The decrease in the number of incoming administrative law cases in 2017 is explained by the increased number of incoming administrative cases in previous years (due to the decisions of the Constitutional Court).
Registry cases cannot be identified among the overall number of general civil cases.
Administrative law cases: courts received less administrative cases; they are fighting backlogs from previous years.

(2016): Administrative law cases - courts are fighting backlogs. This led to the growth in the number of resolved cases and consequently to the decrease in the number of pending cases 31 December 2016.
Other non-litigious cases: civil cases in process of enforcement (execution). The increased number of these incoming cases also results in the increase of number of incoming non-litigious cases. The number of increased incoming other non-litigious cases (enforcement) may be due to the number of the resolved civil cases in 2015 (the number of pending cases on 1 January 2016 decreased). As regards registry cases: the answer should be NA, the NAP was chosen for the calculation purposes: it is not possible to identify those cases among all other general civil cases.

(2015): Civil and commercial non-litigious cases include court orders

Category "other" includes: Cases of administrative offences and cases of administrative offences in process of enforcement (execution).

(2014): The number of incoming administrative cases increased which affected the total. They were mostly cases on remuneration of public servants due to the decision of the Constitutional Court declaring the laws on the reduction of the remuneration of State servants and judges unconstitutional. For the same reason, the number of cases of administrative offence (in execution process) increased, which affected the category "other". As to the significant decrease in the number of general civil (and commercial) non-litigious cases (pending 31 Dec) in 2014, civil cases on deliver of judicial orders are resolved quickly and such residues are normal.

Luxembourg

(2021): The comment provided for 2020 data remains relevant in respect of cases pending at the end of 2020. It should be recalled that since the law of 27 July 2018 establishing the Judge for family law litigation (JAF), which came into force on 1.11. 2018, cases under the jurisdiction of the JAF are included in the category "civil litigious cases". These are cases previously dealt with by the civil chambers, but also cases dealt with by the youth and guardianship court (e.g., cases relating to parental responsibility with regard to a natural child or a child whose parents are divorced) or at the level of the justice of the peace (maintenance cases). Moreover, it can be observed that the number of incoming cases in these matters has increased since they are within the JAF competence. This is explained by the simplification of the access to justice for the litigant, who, in procedures other than divorce, can refer to the JAF by a simple letter; by the emergence of cases on the basis of new legal provisions (e.g., application by the minor); and by all the litigation generated by the new legal provision establishing the institution of generalized joint parental authority. Moreover, since proceedings before the JAF take much less time than before the reform introducing the JAF, motions to modify decisions taken are filed more quickly and thus increase the volume of cases.

(2020): "The law of July 27, 2018 establishing the family court judge (JAF) went into effect on 1.11. 2018. The cases currently under the jurisdiction of the JAF were included for the first time in the category "contentious civil cases" for the year 2020 which explains the observed increases in the number of new, completed and pending cases compared to the previous data. These are cases previously handled by the civil chambers, but also cases handled by the juvenile and guardianship court (e.g., parental responsibility cases involving a natural child or a child whose parents are divorced) or at the justice of the peace level (alimony cases). In addition, there has been an increase in the number of new cases in these areas since they were handled by the Family Court. This fact can be explained by the simplification of access to justice for the litigant, who, in procedures other than divorce, can refer to the JAF by a simple letter, by the emergence of cases based on new legal provisions (e.g. request emanating from the minor) and by all the litigation generated by the new legal provision of the institution of a generalized joint parental authority? Moreover, since proceedings before the JAF take much less time than proceedings before the introduction of the JAF law, motions to modify decisions are filed more quickly and thus increase the volume of cases.
Including JAF cases, for 2019, new cases would be 7,626 (up from 5,038) while completed cases were 6,714 (up from 5,098).
Including JAF cases, for 2018, 91.1 new cases would be 5,248 (up from 4,807) while completed cases were 4,905(up from 4,857).
Regarding pending cases in 2018, at the end of the years JAF cases constituted a plus of 453, which corresponds to 1,649 pending cases at the end of the 2018 period in item 91.1. instead of the 1,256 cases informed. Taking into account horizontal consistency, the changes in new and completed cases discussed above, imply that at the end of the 2019 period, pending cases (91.1) totaled 2,561 (instead of 1,196).
The figures for previous years remain unchanged.
""Other non-contentious cases"" pending at year-end: Due to containment during the COVID-19 pandemic the number of public hearings was reduced to a minimum, allowing courts to prioritize work on cases not requiring such hearings. In addition, special crisis legislation allowed cases to be taken under advisement without a public hearing, with the agreement of the parties.
"

(2018): The pending cases at the date of 31/12/2017 had to be adapted, since there were 27 cases of vacation court, which were no longer pending at the end of the year. These 27 cases were withdrawn from the 1,341 pending cases indicated in the Scoreboard 2017 to reach 1,314 other pending non-litigious cases on 01/01/2018.

(2016): For question 91.1 the new data collection system revealed a higher number of pending cases, previously not considered by those in charge of counting.
For question 91.2.2, the new data collection system provides now information on other non-litigious cases, previously unavailable.

(2015): The figures given (with the exception of those for the administrative court) are those of the two district courts (Luxembourg and Diekirch).

The three justices of the peace totalized 78.273 national as well as 285 European payment orders.

(2014): The data (except for the Administrative Court) are those of the district courts. Uniform statistical data for both types of courts are not yet available. The three justices of peace ruled 75 411 national payment orders, 260 european payment orders and resolved a total of 6386 cases for a total of 65840 new cases. The implementation of statistics counters for civil and commercial cases resulted in variations. The applied criteria have been refined and give a more accurate image.

(2013): Data concerns (except for the Administrative Court) district courts. Uniform statistical data for both types of courts (district courts and justice of peace) are not yet available. The District Court of Diekirch rendered 580 decisions and registered 664 new cases. The three justices of peace ruled 69 859 payment orders and resolved a total of 5 682 cases for a total of 6 508 new cases. The increase in the number of civil (and commercial) non-litigious cases between 2010 and 2013 is partly explained by the establishment in 2011 of the judiciary statistics office. The increase in the number of administrative law cases mainly stems from the increase in the asylum-related disputes.

(2012): The data provided (except for the Administrative Court) are those of the district courts. Uniform statistical data for both types of courts (district courts and justice of peace) are not yet available. The District Court of Diekirch rendered 591 decisions and registered 688 new cases. The three justices of peace ruled 63 651 payment orders and resolved a total of 8041 cases for a total of 9310 new cases. The 2012 data encompasses civil and commercial cases of both district tribunals (Luxembourg and Diekirch).

Malta

(General Comment): The vast majority of cases heard before the courts of Malta are litigious cases. Nevertheless, there is the Court of Voluntary Jurisdiction which deals with adoptions, appointment of tutor, curators and other administrators, interdiction and incapacitation and opening of secret wills.
Horizontal inconsistencies in the efficiency data are mainly derived from discrepancies in data inputting methodology. Data is also collected at a particular point in time and this means that eventual changes are not captured at the time of the submission of this information.

(2021): As from 2021, the civil litigious category includes the data of the Civil Court (Asset Recovery Section) that was established in 2021. A spike in the incoming caseload of civil litigious cases has resulted in the courts not managing to resolve enough cases in order to retain the previous levels of efficiency, despite a marginal increase in the number of resolved cases.

(2020): The lack of horizontal consistency results from recounts that happen throughout the year, and that ensure that the data is always as up to date as possible. However when taken as a global figure, horizontal consistency might then be lost.

(2019): Non litigious cases - incoming cases: The data was provided by the case managment system of the Court Services Agency and shows an increase in the incoming caseload of these cases over that of the previous year.
Non litigious cases - pending cases at the end of the reference year: The relative high number of pending cases at the end of the year compared by the previous year is the result of the increase of incoming cases but a retention in the number of resolved cases. As a result, efficiency, as expressed as a higher number of pending cases, has suffered.

(2018): This evaluation cycle contains for the first time the efficiency data of the First Hall, Commercial Section which is a new court established in April 2018. Furthermore there was a registered increase in the incoming caseload particularly of the Court of Voluntary Jurisdiction and in cases of dissolution of marriage.
The lack of horizontal consistency results from recounts that happen throughout the year, and that ensure that the data is always as up to date as possible. However when taken as a global figure, horizontal consistency might then be lost.

(2017): Apart from the provision of the new non-litigious data captured by sub-section 2.1 above, this year we also introduced the data for another civil, litigious court, namely, the Court of Voluntary Jurisdiction, established by the Civil Courts (Establishment of Sections) Order 2003, in terms of Art 2 of the Code of Organisation and Civil Procedure (Chp 12 of the Laws of Malta). The Court has jurisdiction to deal with, amongst other matters, applications related to adoptions, interdictions and incapacitations, matters related to wills and to trusts, and to specific cases falling under the Foster Care Act (Chp 491 of the laws of Malta).
As concerns pending cases at the beginning of the year, information is not available for the newly provided data, namely data from the Court of Voluntary Jurisdiction and the non-litigious data. These data will be available for the next cycle. Increases observed between 2016 and 2017 in the total of incoming and resolved cases result from the fact that new data has been added (data on non-litigious cases and data from the Court of Voluntary Jurisdiction).

(2016): Horizontal consistency: This is a problem encountered also in previous evaluations. Unfortunately this inconsistency results from the way that the data is logged, and it is practically impossible to resolve it at present. Concerning the variations between cycles: In reality, in 2015 the Administrative Review Tribunal worked real hard to reduce the pending caseload and also resolved one set of interrelated cases that translated in the conclusion of about 150 separate cases. So 2015 was a very good year in which the efficiency parameters of the Tribunal spiked. In 2016, the rhythm by which cases were being resolved went back to 2014 figures, hence the apparent decrease in the number of resolved cases between 2015 and 2016. The reduction in the pending caseload is also the result of the additional 150 odd cases that were resolved in 2015 and that dramatically reduced the pending caseload for good, even if the resolved caseload of 2016 was less than that of 2015. Concerning Administrative cases: These figures reflect the pending balance at the beginning of 2016. Throughout 2015, the Tribunal resolved one batch of related cases that resulted in a drop in the number of pending cases and a spike in the number of resolved cases.

(2014): The category “civil litigious cases” covers family mediation cases and cases before the Court of revision of notarial acts and the Small Claims Tribunal. In 2014, another magistrate started presiding over the Administrative Review Tribunal thereby increasing the judicial complement by 2 members. This change resulted in an increase in the number of resolved cases. Following an internal exercise carried out by the Court Administration, cases that have been prescribed, have been cleaned from the system.

(2013): In 2013, the number of administrative law cases continued increasing. The Administrative Court was created in 2010. Over the time, the number of areas of competence of the Administrative Court has increased, which resulted in an increased caseload.

(2012): The Administrative Court was set up in late 2010, as a result of which, figure given in the previous report reflected the operation of the Court over a couple of months only. For 2012, the communicated figures reflect the operation of the Court over a twelve month period.

Netherlands

(General Comment): In the Netherlands, some registers are kept by the judiciary. Those do not include a land- or business registry, see www.rechtspraak.nl/registers. Most registers are related to debt, bankruptcy and help or surveillance of people who are unable to handle their financial situations. Also, there is a register with ‘nevenfuncties’ (jobs and positions held by judges next to their judgeship). Mutations in these registers are not counted as court cases. The Dutch system does not count mutations in the registers as court cases, so ‘other registry cases’ is NAP.

(2021): In previous years, we were able to produce the number of incoming and pending cases for categories 1, 2 and 2.1, but not this year. The Judiciary has decided on a different norm for one of the components needed for this number, so these numbers are no longer available.

(2020): Administrative law cases include tax cases and immigration / asylum cases.
First instance cases at Council of State, Court of Appeal, including trade tribunal, are excluded.
In the Netherlands, there are some registers that are kept by the judiciary. Those do not include a land- or business registry, see www.rechtspraak.nl/registers. Most registers are related to debt, bankruptcy and help or surveillance of people who are unable to handle their financial situation. There is also a register with so-called ‘nevenfuncties’ (a list of jobs and positions held by judges next to their judgeship). Mutations in these registers are not counted as court cases. For the category ‘other registry cases’ the answer is NAP, as the Dutch system does not count mutations in the registers as court cases.

(2019): In The Netherlands, there are some registers which are kept by the judiciary. These do not include a land- or business registry (see www.rechtspraak.nl/registers). Most registers are related to debt, bankruptcy and help or surveillance of people who are unable to handle their financial situation. There is also a register with so-called 'nevenfuncties' (a list of jobs and positions held by judges next to their judgeship). Mutations in these registers are not counted as court cases. For the category 'other registry cases', the answer is NAP, as the Dutch system does not count mutations in the registers as court cases.

(2018): In the Netherlands, there are some registers that are kept by the judiciary. Those do not include a land- of business registry. See: https://www.rechtspraak.nl/Registers
Most registers are related to debt, bankruptcy and help or surveillance of people that are unable to handle their financial situation. There is also a register of ‘nevenfuncties’, which lists all the jobs/positions that judges fulfill next to being a judge. Mutations in these registers are not counted as court cases. For the category "other registry cases", since the Dutch system does not count mutations in the registers as court cases, the answer is NAP.

(2017): None

(2016): Number of administrative law cases litigious plus non-litigious.
In 2016, there has been a strong decrease in numbers of cases compared to 2014. This decrease pertains to the group of misdemeanours, in particular the group of traffic offences ("Mulder Law"). The cases of "vorderingen dwangsom" (coercive detainment) are no longer treated by the Public Prosecution. This following complaints at the Ombudsman. These coercive detainment cases increased at first strongly in 2013 and 2014. But after that decision of the Public Prosecution The "Mulder Law" cases decreased from 200.000 in 2014, via 100.000 in 2015 to 40.000 in 2016.

Poland

(2021): * administrative law cases - It is difficult to identify, apart from the COVID-19 pandemic, any particular reason for the increase in the number of cases brought before provincial administrative courts. A particularly large increase in the number of cases submitted to administrative courts concerned complaints about the inaction of public administration bodies and the protracted conduct of proceedings by these bodies. The increase in the receipt of such complaints in 2021 was 73.2 % compared to 2020. This may also be indicative of some backlog in public administration due to the numerous pandemic restrictions in 2020.

(2020): Comments: The discrepancies in Table 91. First instance courts: number of other than criminal law cases - compared to the previous periods (2018 and 2019) are mainly due to combinations of two reasons. First - the COVID19 pandemic, which significantly reduced case inflow to the courts (in some type of cases even by several dozen of percent), reduced the number of resolved cases and pendig cases as well. The second factor, which in contrary - caused increase in the volume of cases registered in court system was the inflow of cases related with conversion of the right of perpetual use of built-up land for residential purposes into land ownership (2.2.1 - Non litigious land registry cases). In 2020, there were more than a million incoming cases of this type (in 2019 – more than 2,5 million), which also resulted in an increase in the number of resolved cases in this area, as well as pending cases for the next reporting period.
Administrative law cases: the main reason for the slight slowdown in casework was the pandemic.

(2019): The discrepancies in section 4.2.2. Case flow management - first instance - compared to the previous period mainly concern the data shown in point 2.2.1 Non-litigious land registry cases.
In explaining the above, it should be emphasized that the general state of cases in courts of first instance in 2019 was related to cases brought to the land registry departments with regard to the conversion of the right of perpetual use of built-up land for residential purposes into land ownership. In 2019, more than 2 million incoming cases of this type, which also resulted in an increase in the number of resolved cases in this area, as well as pending cases for the next reporting period.
It should be noted that after excluding from the analysis all cases considered in Land Registry Departments, the impact of cases and settlements in 2019 were almost at the same level as in the previous year.

(2018): The discrepancy between 2016 and 2018 was realised in 2017 due to the increasing number of mostly non-litigious cases. More details in 2017 data.
Number of pending cases in the category 2.1. General civil (and commercial) non-litigious cases has dropped slightly. That situation is caused by high effectiveness of courts. Number of resolved cases is higher than number of incoming cases. That situation has maintained since 2017.
Higher number of pending cases in Non-litigious business registry cases is temporary and it is a result of higher number of initiated compulsory proceedings. If it is ascertained that the application for entry in the Register or compulsory documents have not been submitted despite expiry of the deadline, the registry court shall call on the obliged parties to submit them.
We observed that the effectiveness of courts has increased and therefore number of pending cases in mentioned category has dropped at the end of the year.
In regard to non litigious land registry cases we observe in Divisions of Land and Mortgage higher staff turnover. It contributes to problems with solving cases, therefore number of pending cases has increased.
In regard to "other" cases we have observed significant increasing of incoming cases without specified category. In this category we include following cases: exemption from costs, reconstruction of files, affidavit of assets, excluding judge etc.
Higher number of pending cases on 31 Dec. is a consequence of high number of in incoming cases during the year. It was probably temporary situation.

(2017): As to a general explanation for discrepancies in 2016 to 2017 data, it has to be stated that in 2016, there was a substantial number of incoming non-litigious cases, mostly general civil cases, but also registry cases (around 700k cases total).
This important number of cases was not resolved and the backlog remained important at the end of the year. This could explain the large difference of pending cases between 1 Jan 2016 and 1 Jan 2017.

2.1. In 2016 there were serious problems with the information system which is in use in electronic proceedings therefore the number of pending cases on 1 Jan. ref. year has increased. In 2017 we did not notice any problems with mentioned system, so the number of resolved cases has increased significantly. At the same reason the number of pending cases on 31 Dec. 2017 has dropped.
We indicate that fluctuation of the number of cases can be also caused by implemented organizational changes in courts (changes in staff, changes in the organization of work). 2.2. Registry cases (2.2.1+2.2.2+2.2.3) discrepancies are justified in points 2.2.1 and 2.2.2.
2.2.1. Non litigious land registry cases. Higher number of pending cases (on 1 Jan. ref. year and on 31 Dec. ref. year) is caused by Higher number of incoming cases than resolved cases. This situation is related to large-scale investments in infrastructure in Poland Building new roads is closely connected with changes in land registry. We need to indicate that courts have to cope with large number of difficult cases. (Mentioned reason is related to resolved / incoming cases)
2.2.2. Within the changes in business registry cases we can observe significant increase in all types of Application for registration
(first registration) cases, but there is also considerable increase in general business cases (changes in the registry, including cases of
removing from registry). We indicate that it could be caused by fluctuation in compulsory proceedings. Mentioned proceedings are carried on in the cases where it is found that an application for an entry in the National Court Register or the documents whose submission is obligatory were not submitted despite the lapse of the time limit. The registry court shall summon the obliged persons to submit them, and shall set an additional 7-day time limit. We emphasize, that the registry court shall discontinue the compulsory proceedings, if it can be concluded from the circumstances of the case that the proceedings will not lead to the fulfilment of the mentioned obligation. (Mentioned reason is related to resolved / incoming and pending cases)
2.2.3. and 2.3. - Categories do not exist in our judicial system.

(2016): Within the changes in business registry cases we can observe significant increse in all types of Application for registration (first registration) cases, but there is also considerable increse in general business cases (changes in the registry, including cases of removing from registry).
In 2016 there were serious problems with the information system which is in use in electronic proceedings therefore the number of pending cases had incresed.

Portugal

(General Comment): The question 91_1 "Civil (and commercial) litigious cases", includes the case-flow of civil justice, labour justice and juvenile justice. It does not include civil and labour enforcement cases.

(2021): The increase in the number of cases resolved on 1 January 2021 should be contextualised, in our view, within the framework of the effects of the Covid 19 pandemic and the consequent confinement, with a reflection on the functioning of the courts in 2020, considering that in certain periods face-to-face services were interrupted or conditioned.

(2020): The decrease in the number of Civil (and commercial) litigious cases reflects the effects of the Covid 19 pandemic and the consequent lockdown, that had an impact on the functioning of the courts, considering that in certain periods face-to-face services have been interrupted or conditioned.
On 1 September 2013, the new Code of civil Procedure entered into force, establishing a new regime for the enforcement action in Portugal, based on a new paradigma, which states that the processes that run in court must stand out clearly – those who are dependent on the commission of an act of the judge or the secretary – from those who run out of court. This new model, which enables a new way of organizing tasks, of work monitoring ando f differentiating responsabilities is provided for in Article 551, paragraph 5 of the new Code of Civil Procedure. This new system follows more closely the current model in other countries and, without prejudice to the specificities of each planning and method of statistical production, will facilitate the future approach to a comparision of the Portuguese system with that of other countries. From a statistical point of view, this new model has not yet however been reflected in numbers, as work is still ongoingaimed at demarcating the procedures that are in court, waiting for an act, from those that are being handled by other entities. Since is not yet possible to provide figures that reflect the amount of work taken on by the courts as referred above, the data does not include civil and labour enforcement cases. The number of enforcement cases fot the year 2020 are: Pending cases on 1 Jan. 2020: 521224; Incoming cases: 96047; Resolved cases: 159616; Pending cases on 31 Dec. 2020: 457655. This numbers correspond to the total number of existing procedures in Portugal in 2020, following the existing model prior to the entry into force of the said legal diploma.
For this reason, the alerts and notes transmitted in previous years with regard to comparisons between countries still remain. A comparative Reading of these values must, as we have repeatedly drawn attention, be very cautious, refraining from any comparison in terms of volume or duration of cases and should be limited to the evaluation of the development indicators.
In the scope of Working Group within the Ministry of Justice that monitors the development of the procedural processing system of the 1st instance judicial courts (Citius System), work is underway to implement the mechanism in question, in order to allow for autonomous accounting of cases that are awaiting the performance of an act that falls within the competence of the registry or the judge. At the moment, it is not yet possible to estimate a date for the conclusion of the work. The question 91_3 “Administrative law cases”, includes administrative and tax cases. The number of Pending cases on 1 Jan. that correspond only to tax cases is 44542. The number Incoming cases that correspond only to taxcases is 44329. The number of Resolved cases that correspond only to tax cases is 48704. The number of Pending cases on 31 Dec. That correspond only to tax cases is 40167. In what concerns this typ of cases, in 2020 there were 68,467 new cases and 73,880 completed cases. However, of these totals, only 20,731 new cases and 26,144 completed cases corresponded to real movements of the beginning and end of cases. The remaining 47,736 cases refer to cases that were internally transferred between units, namely due to the establishment of specialised courts in September 2020 (which are not independent legal entities), or that were subject to changes in the subject matter. Considering that in 2020 the number of cases transferred between organizational units was very high in the 1st instance administrative and tax courts, for this cycle we indicated in the table only the numbers of cases opened and closed, without including transferred cases. In previous editions, the figures included transferred cases, which could impair the comparative reading.

(2019): 91.1 The decrease of the number of pending cases older than 2 years follows the general trend of decrease of pending cases for this category. There were no legislative changes that can explain this decrease.

(2018): The question 91_1 “Civil (and commercial) litigious cases”, includes the case-flow of civil justice, labour justice and juvenile justice. It does not include civil and labour enforcement cases.
On 1 September 2013, the new Code of Civil Procedure entered into force, establishing a new regime for the enforcement action in Portugal, based on a new paradigm, which states that the processes that run in court must stand out clearly - those who are dependent on the commission of an act of the judge or the secretary – from those who run out of court. This new model, which enables a new way of organizing tasks, of work monitoring and of differentiating responsibilities is provided for in Article 551, paragraph 5 of the new Code of Civil Procedure. This new system follows more closely the current model in other countries and, without prejudice to the specificities of each planning and method of statistical production, will facilitate the future approach to a comparison of the Portuguese system with that of other countries. From a statistical point of view, this new model has not yet however been reflected in numbers, as work is still ongoing aimed at demarcating the procedures that are in court, waiting for an act, from those that are being handled by other entities. Since is not yet possible to provide figures that reflect the amount of work taken on by the courts as referred above, the data does not include civil and labour. The number of enforcement cases for the year 2018 are: Pending cases on 1 Jan. 2018 700.638; Incoming cases:127.646; Resolved cases:222.480; Pending cases on 31 Dec. 2018: 605.804 This numbers correspond to the total number of existing procedures in Portugal in 2018, following the existing model prior to the entry into force of the said legal diploma.
For this reason, the alerts and notes transmitted in previous years with regard to comparisons between countries still remain. A comparative reading of these values must, as we have repeatedly drawn attention, be very cautious, refraining from any comparison in terms of volume or duration of cases and should be limited to the evaluation of the development indicators.
The question 91_3 ”Administrative law cases”, includes administrative and tax cases.
The number of Pending cases on 1Jan. that correspond only to tax cases is 47931
The number Incoming cases that correspond only to tax cases is 14895
The number of Resolved cases that correspond only to tax cases is 16828
The number of pending cases on 31 Dec. that correspond only to tax cases is 45998
91.1 Due to increased efficiency of first instance courts, we can notice for the last several cycles a down-word trend in respect of the number of pending cases, namely civil and commercial litigious cases

(2017): Q 91.1 - the decrease of pending cases older than 2 years can be explained by the global decrease of theses cases. There were no legislative changes that could explain this decrease.
The question 91_1 “Civil (and commercial) litigious cases”, includes the case-flow of civil justice, labour justice and juvenile justice. It does not include civil and labour enforcement cases.
On 1 September 2013, the new Code of Civil Procedure entered into force, establishing a new regime for the enforcement action in Portugal, based on a new paradigm, which states that the processes that run in court must stand out clearly - those who are dependent on the commission of an act of the judge or the secretary – from those who run out of court. This new model, which enables a new way of organizing tasks, of work monitoring and of differentiating responsibilities is provided for in Article 551, paragraph 5 of the new Code of Civil Procedure. This new system follows more closely the current model in other countries and, without prejudice to the specificities of each planning and method of statistical production, will facilitate the future approach to a comparison of the Portuguese system with that of other countries. From a statistical point of view, this new model has not yet however been reflected in numbers, as work is still ongoing aimed at demarcating the procedures that are in court, waiting for an act, from those that are being handled by other entities. Since is not yet possible to provide figures that reflect the amount of work taken on by the courts as referred above (the technical work is still on going), the data does not include civil and labour enforcement cases. The number of enforcement cases for the year 2017 are: Pending cases on 1 Jan. 2017: 804.423; Incoming cases: 148.713; Resolved cases: 249.837; Pending cases on 31 Dec. 2017: 703.299. This numbers correspond to the total number of existing procedures in Portugal in 2017, following the existing model prior to the entry into force of the said legal diploma.
For this reason, the alerts and notes transmitted in previous years with regard to comparisons between countries still remain. A comparative reading of these values must, as we have repeatedly drawn attention, be very cautious, refraining from any comparison in terms of volume or duration of cases and should be limited to the evaluation of the development indicators.
The question 91_3 ”Administrative law cases”, includes administrative and tax cases.
The number of Pending cases on 1Jan. that correspond only to tax cases is 49.943
The number Incoming cases that correspond only to tax cases is 14.707
The number of Resolved cases that correspond only to tax cases is 16.811
The number of pending cases on 31 Dec. that correspond only to tax cases is 47.839

(2016): " Item 91-1 “Civil (and commercial) litigious cases”, includes the case-flow of civil justice, labour justice and juvenile justice. It does not include civil and labour enforcement cases. On 1 September 2013, the new Code of Civil Procedure entered into force, establishing a new regime for the enforcement action in Portugal, based on a new paradigm, which states that the processes that run in court must stand out clearly - those who are dependent on the commission of an act of the judge or the secretary – from those who run out of court. This new model, which enables a new way of organizing tasks, of work monitoring and of differentiating responsibilities is provided for in Article 551, paragraph 5 of the new Code of Civil Procedure. This new system follows more closely the current model in other countries and, without prejudice to the specificities of each planning and method of statistical production, will facilitate the future approach to a comparison of the Portuguese system with that of other countries. From a statistical point of view, this new model has not yet however been reflected in numbers, as work is still on-going aimed at demarcating the procedures that are in court, waiting for an act, from those that are being handled by other entities. Since is not yet possible to provide figures that reflect the amount of work taken on by the courts as referred above, the data does not include civil and labour enforcement cases. The data on enforcement cases for the year 2016 is: pending cases on 1 Jan. 2016: 934.860; incoming cases: 158.164; resolved cases: 289.402; pending cases on 31 Dec. 2016: 803.622. These numbers correspond to the total number of existing procedures in Portugal in 2016, following the existing model prior to the entry into force of the said legal diploma. For this reason, the alerts and notes transmitted in previous years with regard to comparisons between countries still remain. A comparative reading of these values must, as we have repeatedly drawn attention, be very cautious, refraining from any comparison in terms of volume or duration of cases and should be limited to the evaluation of the development indicators. Item 91_3 ”Administrative law cases”, includes administrative and tax cases. The separate data on tax cases is as follows: pending cases on 1Jan. - 53.597; incoming cases - 16.445; resolved cases - 20.222; pending cases on 31 Dec. - 49.820. Regarding the decrease in the number of incoming administrative law cases, it results from the decrease in the number of incoming tax law cases, in particular in what concerns misdemeanour appeals".

(2015): The category “civil (and commercial) litigious cases” includes the case-flow of civil justice, labour justice and juvenile justice. It does not include civil and labour enforcement cases. On 1 September 2013, the new Code of Civil Procedure entered into force, establishing a new regime for the enforcement action in Portugal, based on a new paradigm, which states that the processes that run in court must stand out clearly - those who are dependent on the commission of an act of the judge or the secretary – from those who run out of court. From a statistical point of view, this new model has not yet however been reflected in numbers, as work is still ongoing aimed at demarcating the procedures that are in court, waiting for an act, from those that are being handled by other entities. It is not yet possible to provide figures that reflect the amount of work taken on by the courts as referred in that table. Just for information, the data on the total number of existing enforcement procedures in Portugal in 2015, following the existing model prior to the entry into force of the said legal diploma is the following: pending cases on 1 Jan. 2015: 1.000.446; incoming cases: 199.359; resolved cases: 272.191; pending cases on 31 Dec. 2015: 927.614.
The category “administrative law cases” includes administrative and tax cases. The separate data on tax cases is the following: pending cases on 1Jan - 47.866; incoming cases - 24.808; resolved cases - 19.164; pending cases on 31 Dec. - 53.510.

(2014): For 2014, data are not available due to technical constraints.

(2013): Portugal took important measures in order to improve the courts clearance rate and backlogs which resulted in an increased number of resolved non-criminal and enforcement cases. Some measures were focused primarily on enforcement cases, since they represent 70% of the total of pending cases. For example, the government adopted measures with the purpose to eliminate cases where there are no assets to execute or no procedural momentum, as well as measures with the aim to limit the number of incoming cases, establishing initial court fees. Courts with excessive number of pending cases were subject to particular assistance of specialized teams.

(2012): As for the number of incoming non-criminal and enforcement cases, the 2012 data reflect the effects of the entry into force of Decree 113-A/2011, which proceeded to a major judiciary reorganization. The figures reflect the corresponding movement of cases between organizational units. As a result, in 2012, a higher number of cases that have not entered ex novo in the Portuguese courts were taken into account. These cases have ended in the unit/court where they left and entered into the new courts where they were transferred.

Romania

(General Comment): In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.

(2021): As presented in the comments to the data communicated in the previous CEPEJ cycle, the measures taken in the pandemic period led to an increase in the stock of cases, that explain the number of pending cases on Jan 1st and also some of the values of the pending cases in courts for 2 years. At the same time, as shown in some of the data on resolved cases, although the stock at the beginning of 2021 was considerable by the enhanced activity the number of resolved cases increased

(2020): The decrease in the number of resolved cases in 2020 was caused by the context of the Covid-19 pandemic. The activity of al the courts was partially suspended between the 15-th of March until the end of May 2020 because a state of emergency was declared. During that period only few urgent cases were adjudicated. Some courts instituted preventive mesures even before the 15-th of March 2020 which included postponing non-urgent cases. After the state of emergency ended there were still in place measures that affected the normal activity of the courts like: the introduction of specific timeframes for each case, hearings through video conference, a strict limitation of human interaction at the auxiliary compartments of the courts that dealt directly with public like the Archive and the Registry office, so that requests and documents had to be submitted by post, fax or e-mail. These measures affected not only the court staff but all court users that had to adapt to the new circumstances and led to the postponement of many cases. There were also gaps in activity caused by cases of Covid-19 among the personnel of the courts. The same explanation is valid for the increased Disposition time which led to an increased numer of pending cases older than 3 years.

(2019): In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.
Referring to the non-litigious business registry cases,the differences in the statistical data are given by the dynamics in the business environment and the interactions at economic level and do not relate to any manifestation at the level of public authority. By referring to total requests that are the object of registration in the trade register, the influence is insignificant.
Referring to the administartive cases, the decrease in the number of pending cases in administrative matters can be determined by aspects such as: certain types of cases that have been exhausted before courts (e.g cases on salary rights of public servants initiated in 2010) or cases such as those on pollution taxes that were mostly exhausted before courts and for which administrative procedures have been expressly regulated as to discharge the huge workload in courts that they have generated. In terms of incoming administrative cases, when referring to a decrease in their number, similar reasons that justify the decrease in the number of pending administrative cases should be taken into consideration, namely, for example, those referring to the administrative procedures that have been expressly regulated as to discharge the huge workload in courts (e.g. regarding to the cases on pollution taxes). There is no particular explanation on the increased number of general civil and commercial non-litigious cases in 2019, resulting in a slight decrease of the CR for this category. However, it should be noticed that the operatitivity and volume of solved cases has increased.

(2018): In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.
Referring to the non-litigious business registry cases,the differences in the statistical data are given by the dynamics in the business environment and the interactions at economic level and do not relate to any manifestation at the level of public authority. By referring to total requests that are the object of registration in the trade register, the influence is insignificant.

(2017): In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.
“Administrative law cases”: indeed, the data are correct, namely there is a significant increase in the number of incoming cases in 2017 that could be explained by the changes brought in 2013 to the Law no. 554/2004 of administrative litigations; the amendments resulted in a high number of second appeals in this matter (by number of second appeals we understand all second appeals under the competence of both the Supreme Court (High Court of Cassation and Justice) and of the courts of appeal, because in this matter some of the cases shall be judged in first instance by tribunals and others by the courts of appeals).

(2016): In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.
The high clearance rate of administrative cases in previous cycles has led to lower significantly the number pending cases. The increase of the number of incoming cases is a consequence of a higher number of requests filed in administrative domain that also triggers an increase in the number of resolved cases. The decrease in the number of non-litigious pending cases as well as "other" pending cases is mostly due to lower number of incomming ases.

(2014): By the decision n° 46/2012, the Superior Council of Magistracy has decided that all the courts will implement by 1 January 2014 the IT system of collecting data. The new method is based on new definitions of the indicators. Accordingly, a case is transferred from the field “stocks” to the field “closed” only when the final decision, including its reasoning is drafted signed and communicated to the parties. For that reason, the number of pending cases on 31 December 2013 cannot be identical with the number of pending cases on 1st January 2014.
The initial total number of pending cases has increased as a result of reporting the data into Ecris database. The number of incoming cases and this of resolved cases are comparable from one year to another for the period 2010-2013. The stocks at the end of the period is in relation to the adjustment of the stocks at the beginning of the period, but comparable with 2012. Concerning the number of administrative law cases the workload has constantly decreased starting with 2012. The increase of stocks initially communicated for 2013 comes from the high number of incoming cases in 2012. The final stock of 2014 is lower also because of the lower number of the new cases in 2013. It may also be noticed that the new cases closed in 2013 was higher than in 2012. The high decrease in the number of incoming, resolved and pending administrative law cases on 31 December between 2013 and 2014 is progressive and is caused by the social climate.

(2013): With regard to the category “civil and commercial litigious cases”, because of the delays between hearings that are often very long (usually the first hearing is determined by an electronic system after a long period of time, in relation with the actual workload of judges), the new entered files are not usually finalised within a year.
With regard to the category “civil and commercial non-litigious cases”, all the indicators kept a growing trend in 2012 and 2013. As for the stock of files (pending on 31.12), the increase between 2012 and 2013 is due to the fact that during the same period the number of resolved files has also decreased.
As to the trends observed in 2013 in respect of the “non-litigious enforcement cases” and “non-litigious land registry cases”, data are correct.
As to the category “administrative law cases”, the big differences have always been a reason for concern and continuous analysis. In the report on the status of Judiciary on 2012, it was noted that “in the administrative contentious and fiscal matters, the most of the cases were related to the restitution of the tax for pollution, but also to the obligation of the authorities to register the vehicles, without the payment of the tax for pollution (obligation to perform)”. It should be mentioned that the actions of the legislative have led to the growth of the number of administrative cases in the past 5 years, at tribunals with more than 400% and at the courts of appeal with around 200%.

(2012): With regard to the category “civil and commercial non-litigious cases”, all the indicators kept a growing trend in 2012.
As to the category “administrative law cases”, the big differences have always been a reason for concern and continuous analysis. In the report on the status of Judiciary on 2012, it was noted that “in the administrative contentious and fiscal matters, the most of the cases were related to the restitution of the tax for pollution, but also to the obligation of the authorities to register vehicles, without the payment of the tax for pollution (obligation to perform)”. It should be mentioned that the actions of the legislative have led to the growth of the number of administrative cases to be solved in the past 5 years, at tribunals with more than 400% and at the courts of appeal with around 200%.

Slovak Republic

(General Comment): For 2016 data, new methodology was implemented based on the working group's conclusions and CEPEJ mission's recommendation (06/2016). Former reporting structure was not consistent with the methodology of CEPEJ, which could lead to inappropriate comparison of Slovak Republic (SR) with other countries. Also, the Ministry of Justice (MoJ) realized that evaluation of courts' performance by disposed and unresolved (decided and undecided) cases is discriminating SR in comparison with other countries in European Union (EU) as this methodology is not counting a decision of first instance court as disposed until the case becomes valid. This results into reporting such case as unresolved despite respective court has already made a decision and it is no longer in its disposition how - and more importantly when - the case will be resolved (disposed) by the second instance court. This is the nature of reporting of many "unresolved" cases on courts despite court already decided, in fact. Newly proposed way of reporting extracts the numbers of decided cases in respective court instances from "unresolved" and allocates these numbers to those court instances that made an actual decision in respective time. This means that decision validity state is not being awaited for as it could potentially contain an appeal and thus also a time that a case spends on second instance court. Upon decision's validity the case would become „disposed/resolved" at the first instance court but most probably it would not be disposed in the same period when it was decided by the (first instance) court. This past methodology (applied by 2016) resulted (visually) in accumulation of unresolved cases while some of them were already decided by first instance court.

(2021): An erroneous reporting of decided cases at the courts in 2020 had to be corrected in Pending cases at 1st January 2021 by 1128 cases (line 2. and Total of other than criminal law cases).
2.2.2 Non-litigious business registry cases - the increase in cases comming to the courts in 2019 due to the new legislation gradually stabilized over the course of the year 2020, 2021.
The category "other" encompasses bankruptcy and debt restructuring cases, including the debt elimination procedure (bankruptcy of the natural persons),inheritance proceedings and other. In covid years especialy the number of cases inheritance proceedings rose.
3. Administrative law cases - new reform of Administrative courts was expected and the clearance rate of the regional courts dropted to 80 %.

(2020): Exolanation of the discrepancies:
In the category 2.2.3. Other registry cases was added register "RPVS" - Register of public sector partners. The Register of public sector partners has the character of a register of legal and natural persons, which receives from the state, local-government and other public sector entities public financing or property above the limit specified by law. The persons who conclude a contract, framework agreement or concession contract pursuant to public procurement regulations, healthcare providers and so on. The classification of the registry in category 2.2.3. was consulted with CEPEJ organization.
In the category 2.2.2 and consequently in the category 2.2. - at the end of year 2019, the incoming cases into the business register was enormously increased due to new applied legislation, which caused high level of the pending cases at the beginning of the year 2020.
Administrative law cases - keeps the high level of pending cases.
Non-litigious business registry cases - the cause of the increase is explained below:
The Commercial Code (Act No. 513/1991 Coll) was amended by the Act No. 390/2019 Coll, which became effective from the 1st of October 2020. This amendment brought following changes (also changes to the Commercial register):
1.From October 1, 2020, it is possible to submit an application for registration of data in the Commercial Register only in electronic form (including objections to the refusal of registration)
2.Obligation of the company´s founders to submit the consent of the real-estate owner to setting up a registered seat of the company with verified signature of the owner.
3.The list of the information is being expanded in order to identify these persons more precisely. In the case of natural persons, a date of birth and a birth number must be given, if it was assigned. In the case of legal persons, their registration number must be given. The existing companies are required to complete this information by September 30, 2021.
4.The amendment also covers one of the reasons why the court is entitled to dissolve a company without liquidation. It is a breach of the obligation filing the financial statement into the collection of deeds within the specified period of 9 months from its preparation. This means, that if a company doesn't deposit this financial statement in the collection of documents within 15 months from its preparation, the registry court will decide on its dissolution without a proposal.
The other discrepancies are mainly caused by the situation in 2020 due to Covid-19 pamdemic situation.
The emergency situation due to COVID 19 has been ongoing since March 2020. Since then, hearings have been held to the necessary extent, which is determined by a decree of the Ministry of Justice. The decree was amended 4 times according to the development of the epidemic situation.
Thus, the courts were not closed in 2020, but operated in a restricted regime, and that restricted regime depended on the development of the epidemic situation. There were situations where hearings were organised to the absolute minimum, for example in April 2020, almost no hearings were held. Since May 2020, it has been up to the courts to ensure hearings to the extent necessary and in accordance with other regulations related to the pandemic situation.
In several measures in 2020, the Ministry of Justice recommended that courts organize work so that court staff and judges work from home.As for an access to the file for lawyers, it was provided.

(2019): The changes in the total number of Pending cases on 1 Jan. ref. year - the courts, which did not comply with the established methodology for reporting bankruptcy and restructuring, corrected the data in 2019 and thus the initial state of 2019, which causes differences compared to 2018 pending cases. Similar situation is in the other non-litigious cases, where the methodology for the cases (acceptance of things into custody of court) was changed due the legislation changes in the court register during the year 2019.
Line 2; 2.1;2.2;2.2.2: According to the act. no. 390/2019 Coll. on the end user of benefits for entrepreneurs, the entrepreneurs became obliged to make the corresponding entry in the Business Register by 31 December 2019. The increase in new-coming cases was mainly in the last three months of 2019 by 117 thousand cases in business register courts.
The deadline for processing proposals for the registration of end-user benefit data by the court has been postponed to 30 June 2020, due to the large expected new-coming cases of business records at the end of the year.

(2018): 1. Differences in the initial states of things as of 1 January 2018 different from the final states as of 31 December 2017 are due to the introduction of electronic data collection through the Data Collection Application (hereinafter referred to as AZU). When introducing electronic data collection in 2018, the courts were allowed to record the actual state of pending cases as of 1 January 2018 with the aim of not transmitting any inaccuracies from paper collection of previous periods. These differences should not occur in the next year due to the introduction of automatic transfer of the number of undecided cases from the end of the previous period in the electronic data collection.
2. Another reason for the differences in the opening cases as of 1 January 2018 from the closing stocks as of 31 December 2017 is the change in the classification of some court registers between rows in the table in question 91. The change of classification was carried out on the basis of the recommendation of the national correspondent for the SR and after its thorough consultation with the members of the working group GT CEPEJ - EVAL

(2017): The data in the table are not horizontally consistent. This is caused by the fact, that the data on pending cases on 1. January 2017 (the same as data on 31. December 2016 given for the previous cycle) were collected in a one-shot collection for the Justice Scoreboard 2017 and were not bound by control patterns of horizontal consistency as it is in the new electronic data collection active since January 2018. The improper initial number of unresolved cases taken from a “paper” collection of data in 2016 caused such differences. Likewise, the transition from 2015 final numbers to 2016 initial numbers were counted up manually from paper collections. We cannot therefore consider the initial numbers as of 1 January as reliable. The transition between the old system of collecting the statistical data to new one is more complicated than was expected, with the setting up of Analytical centre of the MoJ, application of CEPEJ methodology and its tools is one of the targets in the ongoing project between CEPEj and Ministry of justice of the Slovak republic.
There are still two different IT tools used to collect the statistical data from the courts to Analytical centre. Some inconsistencies in data between the old and new system persist.
The Analytical centre makes every effort to complete the transition between two systems as soon as possible to get reliable data as soon as possible.
As to administrative cases, until the 30. June 2016 the case-jurisdiction in administrative matters in the first instance stipulated by law was divided between Regional courts and the district courts. The general rule was, that the general jurisdiction in first instance lies at the Regional courts. However, there was a small number of proceedings (enumerated in law) where the District courts had the jurisdiction to act as a court of first instance. In reality, more than 90% of all administrative cases were tried by the Regional court as the courts of first instance.
Since 1. July 2016 the new Code of the administrative procedure came into force. According to this new law the Regional courts have the exclusive jurisdiction to try administrative cases as the courts of first instance.
As for the appeal procedure, there is the general rule that the appellate court is the court one level above in the structure of the court system. It means that the appeals against the decisions of the District courts are processed at the Regional courts and the appeals against the decisions of Regional court are processed at the Supreme court as the court of appeal.
In our data for administrative cases in the year 2017 there were some appeal procedures pending at Regional courts as the courts of appeal as the result of application of the previous procedural rules described in point 1. Those appeal proceedings were indicated in table to Q 97
All appeals against the decisions of Regional court (as the courts of first instance) were always tried by the Supreme court and we are presenting this data for all evaluation cycles in the table to Q 99

(2016): The new structure of data presented by the Ministry of Justice is the reason for the discrepancies and incompatibility of the data with the previous cycles. As regards the category "general civil non-litigious cases" we notice a decrease of incoming cases as of the year 2013.
In this cycle the succession cases were classified as "Other non litigious cases" while in previous years they were classified as "general civil (and commercial) non litigious cases.

(2014): The increase in the number of incoming and pending other than criminal law cases at all levels of the judiciary is due to the increase in the number of litigious cases. The Slovak judicial system for a several years faces significant increases of claims filed with the courts by debt-collecting companies and non-bank loan companies against consumers, as well as class actions of one private company against the State for alleged damages etc. The higher number of resolved administrative cases was achieved by the intensive effort to reduce the existing backlogs in administrative matters.

(2013): The Slovak judicial system was facing different types of claims which massively loaded courts of all instances. For example, there was a huge number of legal actions arisen from the loans provided by the so called “non-bank loan companies” where courts had to consider constant violations of the consumer protection law. Besides, there was a huge number of class actions against the State, carried out by one of the non-bank companies for alleged damages etc. In spite of the positive trend concerning the increase of the number of total resolved cases, the number of incoming cases was increasing even more, causing backlogs.

(2012): The number of pending enforcement and business registry cases was gradually and considerably decreasing over the period 2011-2012. As concerns the variation noticed in respect of the number of incoming and resolved administrative law cases, it was due to the fact that in 2010 a meaningful number of specific collective claims were filed and resolved.

Slovenia

(General Comment): Category 1. 'Civil (and commercial) litigious cases' at first instance includes: civil litigious cases at local and district courts, various civil cases at local and district courts, legal aid at local and district courts, international legal aid at district courts, commercial litigious cases at district courts, labour law cases at labour courts, social law cases at social court, various labour and social law at labour and social courts, legal aid at labour and social courts. insolvency cases including compulsory composition, bankruptcy of legal person, bankruptcy of physical person, bankruptcy of inheritance, compulsory dissolution, simplified compulsory composition and preventive restructuring at district courts. The number includes the labour law and social law cases (before specialised labour and social law courts) due to their similarity to litigious cases in material and procedural aspects.
Q91 - Category 2.1. 'General civil (and commercial) non-litigious cases': see Q92.
Q91 - Category 2.2.1. 'Non litigious land registry cases' at first instance includes (at local courts): land registry cases, decisions on appeals at first instance and various land registry cases.
Q91 - Category 2.2.2 'Non-litigious business registry cases ' at first instance includes (at district courts): business registry cases and various business registry cases.
Q91 - Category 2.2.3. 'Other registry cases': No cases were included in this category.
Q91 - Category 2.3. 'Other non-litigious cases': No cases were included in this category.
Q91 -Category 3. 'Administrative law cases' at first instance include (at the Administrative court): - administrative cases and various administrative cases.
Q91 - Category 4. 'Other cases': see Q93.
The above listed cases are classified into CEPEJ categories slightly differently over the years.
Q 91, 97, 99, 101 - Inconsistencies:
Inconsistencies within the tables are possible due to the peculiarity of the Supreme Court`s Data Warehouse (used in the Slovenian judiciary as the official source of data since January 1st 2012, at every court, and for providing data to the Ministry of Justice and at the Judicial Council).
It is a "live" system (dynamic reporting), meaning that the reported figures for a specific date or period of time inevitably vary for different reasons (e.g. the data was not promptly entered into the CMS; in some instances, the decision, in which category some specific new cases should be included, may be subsequently changed and when data are unified some figures change; there is also the possibility that a mistake was done when entering the data and was later detected in the quality check and corrected.)
In Data warehouse reports, every category (column in the table) is calculated (counted) separately, therefore the „Pending on 31 Dec“ may not equal to the formula (Pending 1 Jan + Incoming – Resolved) due to fore mentioned influences."

(2021): 2.2 Registry cases and 2.2.1 Non litigious land registry cases - Pending cases on 1 Jan.: decrease by approx. 50%
In 2020, the number of incoming cases decreased due to Covid-19 pandemics and its effect on the sales of real estate. Consequently, the number of pending cases at the beginning of 2021 decreased. 2.2 Registry cases and 2.2.1 Non litigious land registry cases - Incoming cases/Resolved cases: increase by approx. 25%
In 2021, the number of incoming (and consequently resolved) cases increased, most likely due to the loosening of Covid-19 restrictions and its effect on the real estate market.
2.2 Registry cases and 2.2.1 Non litigious land registry cases - Pending cases on 31 Dec.:
In 2021, the number of incoming and resolved cases increased (see above). However, the increase in resolved cases was slightly lower, hence the increase in pending cases at the end of the year (Disposition time in register cases is low – approx. 0,2 months; ratio of Resolved vs. Pending cases is approx. 65:1).
2.2.2. Non litigious business registry cases – Pending cases older than 2 years from the date the case came to the first instance court: decrease by 200%:
Please note the small (absolute) number of cases (less than 5 cases).
4. Other cases - Pending cases on 31 Dec.: decrease 38%
The majority of cases in this category are enforcement cases on the basis of authentic document in civil matters before the writ for the execution became final (all cases processed at the Central Department for Authentic Document at the Local Court in Ljubljana – exclusive jurisdiction), where the trend of decrease of pending cases is observable in 2021 and 2022. More factors could have contributed to the decrease, but no specific major reason can be identified.
4. Other cases - Pending cases older than 2 years: increase by 58%
The majority of cases in this category are enforcement cases on the basis of authentic document in civil matters before the writ for the execution became final (all cases processed at the Central Department for Authentic Document at the Local Court of Ljubljana – exclusive jurisdiction). Some of those cases are waiting for inheritance cases regarding parties to finish. Please note the small number of cases (less than 100 cases), compared to incoming cases (more than 100.000 per year).

(2020): The decrease in the number of resolved cases at 1. Civil (and commercial) litigious cases and 4. Other cases is due to the limitation of operation of courts due to Covid-19 pandemics.
The decrease in the number of pending cases at the end of the year at 2.2.1 Non litigious land registry cases (and consequently at 2.2 Registry cases) is not unusual due to the high number of incoming and resolved cases in a year compared to pending cases at the end of the year (around 1-2%).
Regarding the increase in Administrative law cases - Pending cases older than 2 years: In previous years, the Administrative court was faced with the influx of new cases, due to the implementation of the ECHR judgement 60642/08 (e.g. 24,5 % of incoming cases in 2017), as well as some new competences. This caused an increase in the number of pending and resolved cases. In the aforementioned cases, the court was also faced with new legal and factual issues, as well as administrative difficulties. In recent years, the Administrative court is also dealing with a considerable number of priority or urgent cases (e.g. asylum seekers), which means a longer waiting line for “regular” cases. Though administrative and managerial actions have been taken, the number of (older) pending cases has increased due to the aforementioned difficulties and the overburdening of the court.

(2019): In general, the trend of decrease in the number of incoming cases can be observed in all types of civil cases, causing also a decrease in the number of resolved and pending cases. In recent years, the number of incoming cases is generally decreasing due to several reasons, partly due to a better economic situation in Slovenia and partly to a successful introduction of new business models in the
Slovenian judiciary (informatisation, change of perception when litigants and debtors do not see any profit in prolonging court procedures, gradual settlement of case-law). Accordingly, in the last years, the clearance rate is at or slightly above 100%.
In 2019, a new Family Code and new Non-Contentious Civil Procedure Act stepped into force. The main change for district courts was establishing family law cases as non-litigious cases (before 2019 classified as litigious cases). Additionally, local courts became competent to decide in tutelage cases (before 2019 in competence of the executive branch).
This reflected in a decreased number of reported 1. Civil litigious cases, while the number of 2.1 General civil non-litigious cases did not change (an increase in new cases is similar to the decrease in the number of incoming cases that is generally observed).
Administrative cases: In previous years, the Administrative court was faced with the influx of new cases, due to the implementation of the ECHR judgement 60642/08 (e.g. 24,5 % of incoming cases in 2017), as well as some new competences. This caused an increase in the pending and resolved cases. In the aforementioned cases, the court is faced with new legal and factual issues, as well as administrative difficulties. Though administrative and managerial actions have been taken, an increase in the number of pending cases is expected due to the aforementioned difficulties and the overburdening of the court.

(2018): In general, the trend of decreasing number of incoming cases can be observed in all types of civil cases, causing also a decrease in number of resolved and pending cases. In recent years, the number of incoming cases is generally decreasing due to several reasons, partly due to a better economic situation in Slovenia and partly to a successful introduction of new business models in the Slovenian judiciary (informatisation, change of perception when litigants and debtors do not see any profit in prolonging court procedures, gradual settlement of case-law). Accordingly, in last years, clearance rate is at or slightly above 100%.
Administrative cases: The Administrative court is faced with the influx of new cases, due to the implementation of the ECHR judgement 60642/08 (24,5 % of incoming cases in 2017). This caused an increase in the pending and resolved cases. In these cases, the court is faced with new legal and factual issues, as well as administrative difficulties - the actions are often incomplete or the information is insufficient, filled in foreign languages, the foreign parties have yet to nominate a proxy etc. The court has established a special office to perform a preliminary examination of the actions and assist in the exchange of documents between parties, however longer times for resolving cases are expected due to the aforementioned difficulties and the overburdening of the court.

(2017): In recent years, the number of incoming cases is generally decreasing due to several reasons, partly due to a better economic situation in Slovenia and mainly to a successful introduction of new business models in the Slovenian judiciary (informatisation, change of perception when litigants and debtors do not see any profit in prolonging court procedures, gradual settlement of case-law). Considering the higher number of incoming cases (number of pending cases is approx. 20%-30% of all incoming cases), a slight variation in incoming cases might have a considerable effect on the number of pending cases. For discrepancies, see general comments.
The Administrative court is faced with the influx of new cases, due to the implementation of the ECHR judgement 60642/08 (24,5 % of incoming cases in 2017). In these cases, the court is faced with new legal and factual issues, as well as administrative difficulties - the actions are often incomplete or the information is insufficient, filled in foreign languages, the foreign parties have yet to nominate a proxy etc. The court has established a special office to perform a preliminary examination of the actions and assist in the exchange of documents between parties, however longer times for resolving cases are expected due to the aforementioned difficulties and the overburdening of the court. At the end of 2017, the first case was ready to be processed on the merits of the case.

(2016): In recent years, the number of incoming cases is generally decreasing due to several reasons, partly due to a better economic situation in Slovenia and mainly to a successful introduction of new business models in the Slovenian judiciary (informatisation, change of perception when litigants and debtors do not see any profit in prolonging court procedures, gradual settlement of case-law). Considering the higher number of incoming cases (number of pending cases is approx. 20%-30% of all incoming cases), a slight variation in incoming cases might have a considerable effect on the number of pending cases. For discrepancies, see general comments.

(2015): In recent years, the number of incoming non-litigious cases is generally decreasing partly due to a better economic situation in Slovenia and mainly to a successful introduction of new business models in the Slovenian judiciary. Considering the higher number of incoming cases (number of pending cases is approx. 15%-20% of all incoming cases), a slight variation in incoming cases have a considerable effect on the number of pending cases.

(2014): In previous cycles, insolvency cases have been accounted in former category 1. 'Civil (and commercial) litigious cases'. For 2014, they are encompassed within the item "other". The 2014 data includes labour law and social law cases decided before specialised labour and social law courts, due to their similarity to litigious cases in material (employment contract derives from civil law contract) and procedural (the court procedure in labour and social cases is based on general civil law procedure) aspects.

(2013): "Civil and commercial litigious cases" include labour law and social law cases that are proceeded by specialised labour and social law courts. Cases that do not fit exactly to the determined types of civil, commercial, non-litigious, land and business registry, enforcement and administrative law cases, were previously included in other cases. For 2014, 'Other cases' include only cases outside of the above mentioned legal fields, while the various cases are distributed among the other items. With regard to the category 'non-litigious business registry cases', the increase of the number of pending cases on 31 December 2013 can be explained with the fact that there were 8.000 more incoming cases in 2013 than in 2012, but courts were not able to handle the case-load.

(2012): "Civil and commercial litigious cases" encompasse bankruptcy proceedings, which were in the previous round counted as 'other cases'. The number of incoming non-litigious business registry cases rose, probably due to the postponed effect of the financial and economic crisis. Nevertheless, courts managed to solve almost all incoming cases. The total subsumes for the first time cases processed by the Central Department for Authentic Document (part of the Local Court of Ljubljana) which has jurisdiction over all enforcement cases. The area of land registry cases is in constant improvement since a successful computerisation project in 2003. The decrease in the number of pending cases stems from a better organisation of work and of the totally electronic procedure.

Spain

(General Comment): Regarding registry cases, Spain Land Registry and Commercial Registry do not depend on Courts. But, if one disagrees with a decission of the Register (Land or Commercial) or of the Directorate General of Legal Security and Public Faith, he/she can appeal the decision before Courts.
When an error is detected in the statistics of a Court, the latter is allowed doing regularization, what means that the Court communicates the correct figure and rectifies the wrong one even if this does not concord with figures offered for previous exercises. This situation can happen for example in the specific control of cases that the Court makes when a judge leaves the Court (called “alarde”), but in general, in any case in which the Judicial Counsellor detects an error that comes from previous exercises but cannot be localized. The system prefers to correct the data than continue and amplify the error.
These regularizations and the cumulated cases and the re-opened cases are the causes for the horizontal inconsistencies.

(2021): The recovery of activity, after the most severe restrictions of the pandemic, may have contributed to the improvement in efficiency and increased number of resolved cases.

(2020): Regarding registry cases, Spain Land Registry and Commercial Registry do not depend on Courts. But, if one disagrees with a decission
of the Register (Land or Commercial) or of the Directorate General for Registers and Notaries, he/she can appeal the decision against
Courts.

(2018): The Court of Justice of the European Union (CJEU) of December 21, 2016 and other previous Judgments have meant a massive interposition of lawsuits based on that doctrine, for the civil challenge of general conditions included in financing contracts with real estate guarantees in which the borrower is a natural person. Measures, referred to in previous CEPEJ questionnaires, of specialization of certain judicial bodies have been adopted.
Regarding registry cases, Spain Land Registry and Commercial Registry do not depend on Courts. But, if one disagrees with a decission of the Register (Land or Commercial) or of the Directorate General for Registers and Notaries, he/she can appeal the decision against Courts.

(2016): Concerning the Administrative Law cases, between 2014 and 2016, the decrease of 'Pending cases' is probably because the number of resolved cases, both in 2015 and 2016 has been higher than the number of incoming cases (reinforcement measures have been applied).

(2015): The horizontal consistency can not be respected because of reopened, cumulated and regularised cases.
Law 10/2012 governing certain fees in the area of the Administration of Justice could explain (especially in Administrative Law cases) the decrease in the number of incoming administrative cases, and logically the decrease in the number of resolved and pending cases.

(2014): The number of “civil and commercial litigious cases” decreased for 2 reasons. Since the payment order procedures do not need a decision made by a judge but are of the competence of the judicial counsellor, they have been subsumed in the category of non-litigious civil and commercial cases. Since paying court fees for natural persons has been compulsory until March this year, there has been a decrease in the incoming cases. In respect of the category "administrative law cases", it should be recalled that in 2012, there was a decrease in the number of files related to the Public Administration owing to two parameters: plaintiffs have been sentenced to pay the court fees; since 2012, they have to be assisted by a lawyer to file an administrative case, on the other hand.

(2012): Inspection services are entitled to correct the number each time they find it inaccurate. The data encompasses restarted procedures. Owing to the economic crisis, the number of civil cases increased significantly, particularly this of small claims. The number of “incoming administrative law cases” increased in 2010, due to the reduction of the salaries of civil servants. In 2012, this number decreased with the decrease in the number of files related to the Public Administration for 2 main reasons: plaintiffs are sentenced to pay the court fees; since 2012, they have to be assisted by a lawyer to file an administrative case, on the other hand.

Question 092

Austria

(2014): For the year 2014, this category has been extended to the enforcement cases.

Croatia

(2014): For 2013 and 2014, the provided examples concern only question 92: exercise of the parental care; meeting and spending time with parent; obtaining the capacity to exercise rights of minor that became parent; decision with whom the child will be living; issuing of the permit for entering into marriage before age of majority; deprivation/returning of capacity to exercise rights; deprivation/returning /prolongation of parental care; deprivation of parents' right to live with the child and raise the child; content of court will; security of evidence; setting-up/derogation of necessary passage; setting-up of court deposit, opening of a safe; verification of a contract on life-long support; amortization of documents; trust of a child with behavioural disorder; the recognition of foreign court decisions; declaring a missing person dead; co-ownership dissolution; meetings and spending time with grandmother, grandfather, sister, brother, half-sister, step-brother; land borders; regulation of relations between co-owners; restraining a child; providing legal aid; conclusion of court settlement; inheritance statement; proof of death; regulation of co-ownership relationships; boundaries and necessary passage; determination of extramarital union; other- family non-litigious proceedings; storage of the testament; providing international legal assistance; verification; other –the rest of non-litigious proceedings; international child abduction; other - proclamation of the deceased and proof of death; the appointment of members of the companies body; the appointment of auditors, temporary/interim administrator; the safeguard of evidence; the establishment of a court deposit; opening of the safe deposit box; registry cases; previous measures; forcible establishment of lien; temporary measure; temporary and previous measures, recognition of arbitration decisions; recognition of a foreign court decision; cases entering in the scope of Article 4 point 2 of the Companies Act; court insurance by the transfer of ownership and rights.

(2013): For 2013 and 2014, the provided examples concern only question 92: exercise of the parental care; meeting and spending time with parent; obtaining the capacity to exercise rights of minor that became parent; decision with whom the child will be living; issuing of the permit for entering into marriage before age of majority; deprivation/returning of capacity to exercise rights; deprivation/returning /prolongation of parental care; deprivation of parents' right to live with the child and raise the child; content of court will; security of evidence; setting-up/derogation of necessary passage; setting-up of court deposit, opening of a safe; verification of a contract on life-long support; amortization of documents; trust of a child with behavioural disorder; the recognition of foreign court decisions; declaring a missing person dead; co-ownership dissolution; meetings and spending time with grandmother, grandfather, sister, brother, half-sister, step-brother; land borders; regulation of relations between co-owners; restraining a child; providing legal aid; conclusion of court settlement; inheritance statement; proof of death; regulation of co-ownership relationships; boundaries and necessary passage; determination of extramarital union; other- family non-litigious proceedings; storage of the testament; providing international legal assistance; verification; other –the rest of non-litigious proceedings; international child abduction; other - proclamation of the deceased and proof of death; the appointment of members of the companies body; the appointment of auditors, temporary/interim administrator; the safeguard of evidence; the establishment of a court deposit; opening of the safe deposit box; registry cases; previous measures; forcible establishment of lien; temporary measure; temporary and previous measures, recognition of arbitration decisions; recognition of a foreign court decision; cases entering in the scope of Article 4 point 2 of the Companies Act; court insurance by the transfer of ownership and rights.

(2012): For the 2012 exercise, the provided indications constitute replies to both questions 92 and 93.
The non-litigious cases were divided in the following categories:
1. Non-litigious cases referred to issues on personal status (status law): restriction, deprivation and returning of capacity to exercise rights; prolongation of parental care; deprivation and restriction of parental care; permit for entering into marriage; confession of fatherhood; detention in the institutions for mental diseases; promulgation of vanished persons dead and proving of death;
2. Non-litigious cases referred to property issues: inheritance proceedings; regulation of co-ownership relations; division of property and voluntary transmission of common property; boundary regime/regulation; amortization of decrees; conduction of different registers;
3. In the scope of non-litigious cases there have been developed special, different units: bankruptcy proceedings; liquidations and forced settlements; land registry proceedings; enforcement proceedings.

Czech Republic

(2014): For all of the four exercises (2010, 2012, 2013 and 2014) the category of civil and commercial non-litigious cases encompasses cases of upbringing and maintenance of a minor. In 2014, it subsumes also declarations of admissibility of taking or keeping a person in a medical (health care) institution and declarations of death of persons.

Denmark

(General Comment): Paternity, adoption, guardianship and others in the same category; cases under inquisitorial procedures..

Finland

(General Comment): More information here; Sum-mary civil cases: https://oikeus.fi/tuomioistuimet/en/index/asiat/riita-asiat/summarycivilcases.html# ,and di-vorces: https://oikeus.fi/tuomioistuimet/en/index/asiat/perheasiat/avioero.html# .

France

(2014): In 2014, the category civil cases (and commercial) non-litigious are also included in non-litigious cases relating to enforcement.

Germany

(2012): In 2012, the value entered was calculated by deducting the contentious judgments from of all sets of proceedings that were resolved before the Local and the Regional Court in civil cases (not including those passed on within the court). Those sets of proceedings that are resolved other than by contentious judgment were particularly resolved by default, acknowledgement or waiver judgments, settlements, withdrawal of the charge or of the motion, staying of the proceedings or non-pursuance and orders in accordance with section 91a of the Code of Civil Procedure.

Ireland

(2014): Starting 2014 the category: “Appointment of care representatives” was added to the “Civil (and commercial) non-litigious cases”

Lithuania

(2014): For 2013 and 2014, the category “civil and commercial non-litigious cases” includes court orders.

(2013): For 2013 and 2014, the category “civil and commercial non-litigious cases” includes court orders.

Luxembourg

(2014): 2014: Category 2 (civil (and commercial) non-litigious cases) refers to european payment orders issued by two district courts. They are handled almost immediately, so that there is no stock at the end of the period. That is why the pending cases as well as incoming cases are classified as NAP.

(2013): 2012: Category 2 (civil (and commercial) non-litigious cases) refers to payment orders issued by district courts. They are handled almost immediately, so that there is no stock at the end of the period.

(2012): 2012: Category 2 (civil (and commercial) non-litigious cases) refers to payment orders issued by district courts. They are handled almost immediately, so that there is no stock at the end of the period.

Malta

(General Comment): The non-litigious case category is codified under Art 166A of the Code of Organisation and Civil Procedure (COCP), Chp 12 of the Laws of Malta.

Portugal

(2013): On the occasion of the 2010, 2012 and 2013 exercises, it has been specified that the category of civil (and commercial cases) litigious cases includes the case flow of civil justice, labour justice and juvenile justice.

(2012): On the occasion of the 2010, 2012 and 2013 exercises, it has been specified that the category of civil (and commercial cases) litigious cases includes the case flow of civil justice, labour justice and juvenile justice.

Slovak Republic

(General Comment): The category "civil (and commercial) non-litigious cases" includes all cases arisen from legal relationships regulated by family law (maintenance cases, custody of the child, visiting rights, guardianship, divorce cases with the ruling on rights and obligations towards the minor child etc.), cases related to assessment of the legal capacity of natural persons, reminder procedure (electronic payment orders).

Slovenia

(General Comment): Categories used in “Civil and commercial non-litigious cases”: all non-litigious civil cases at local and district courts, non-litigious commercial cases at district courts (different kinds of personal and family status, property and other disputes, provided by the Non Contentious Procedure Act or other law, procedures for issuing a payment order at local and district courts in civil matters, procedures for issuing a payment order in commercial matters at district courts, cases pursuant to the Inheritance Act at local courts, cases pursuant to the Mental Health Act at local courts; and civil enforcement cases on the basis of an enforcement title, commercial enforcement cases on the basis of an enforcement title, cases for enforcement on real-estate property, enforcement cases on the basis of authentic document in civil matters after the writ for the execution became final, temporary injunctions in civil matters, temporary injunctions in commercial matters, various enforcement cases. The above listed cases are classified into CEPEJ categories slightly differently over the years.

(2014): 2014 Category 2.1 „General civil (and commercial) non-litigious cases“at the first instance includes 1. (former category 2. „General civil (and commercial) non-litigious cases“): N, Ng, Pl, Plg, D, Pr; and 2. (former category 3. ' Non litigious enforcement cases'): I, Ig, In, VL, Z, Zg and R-i.

(2013): 2013 Civil and commercial non-litigious cases at first instance include: N, Ng, Pl, Plg, D, Pr.

(2012): 2012 "Civil and commercial non-litigious cases at first instance include: N, Ng, Pl, Plg, D and P."

Spain

(2014): For the 2014 exercise, the category “civil and commercial non-litigious cases” encompasses payment order procedures and requests for undisputed matters such as settlement proceedings and divorce with mutual consent.

(2012): For the 2010 and 2012 exercises, the category “civil and commercial non-litigious cases” includes non-litigious divorces and cases of voluntary jurisdiction and internments as well.

Question 093

Bulgaria

(General Comment): Till 2014, the sum of all civil and commercial cases (litigious and not litigious) heard by first instance courts was represented within item “other”. However, in order to ensure better consistency of the comparative analyses of the CEPEJ, starting from 2014 exercise, even the category “other” is answered by “NA”.

Croatia

(2014): In 2013 and 2014 the reply NAP in respect of the category “other” is due to the fact that a bankruptcy registry has not been established in the Republic of Croatia.

(2013): In 2013 and 2014 the reply NAP in respect of the category “other” is due to the fact that a bankruptcy registry has not been established in the Republic of Croatia.

(2012): For the 2012 exercise, the provided indications constitute replies to both questions 92 and 93. Non-litigious cases were divided in the following categories:
1. Non-litigious cases referred to issues on personal status (status law): restriction, deprivation and returning of capacity to exercise rights; prolongation of parental care; deprivation and restriction of parental care; permit for entering into marriage; confession of fatherhood; detention in the institutions for mental diseases; promulgation of vanished persons dead and proving of death;
2. Non-litigious cases referred to property issues: inheritance proceedings; regulation of co-ownership relations; division of property and voluntary transmission of common property; boundary regime/regulation; amortization of decrees; conduction of different registers;
3. In the scope of non-litigious cases there have been developed special, different units: bankruptcy proceedings; liquidations and forced settlements; land registry proceedings; enforcement proceedings.

Czech Republic

(General Comment): For 2010 and 2012 the category “other” subsumes electronic payment orders and probate proceedings, while for 2013, it encompasses only electronic payment orders. By contrast, for 2014, its content covers insolvency cases. Since 2015 category "other cases" includes insolvency cases and incidence disputes.

Denmark

(General Comment): Estate after a deceased person, notary, insolvency cases not included under 2.2.2. above..

Finland

(General Comment): More information here on Bankruptcy, Restructuring of enterprises [yrityssaneeraus], Adjustment of the debts [velkajärjestely] and Enforcement [ulosotto]:
https://oikeus.fi/tuomioistuimet/en/index/asiat/velatkonkurssiyrityssaneeraus.html
More information on Land court cases [maaoikeusasia]: https://oikeus.fi/tuomioistuimet/en/index/asiat/riita-asiat/landcourtcases.html# More information on Labour Court: https://www.tyotuomioistuin.fi/en/index/labourcourt.html#

Germany

(2014): For the 2013 and 2014 exercises, the category “other” includes: Local Court family cases; guardianship and curator cases at the family court; custodianship cases; curator cases at the custodianship court; proceedings regarding judgments and orders at the labour court.

(2013): For the 2013 and 2014 exercises, the category “other” includes: Local Court family cases; guardianship and curator cases at the family court; custodianship cases; curator cases at the custodianship court; proceedings regarding judgments and orders at the labour court.

(2012): In the ambit of the 2012 exercise the category “other” includes: family-court jurisdiction, labour courts (proceedings leading to a judgment or a decision) as well as guardianship and custodianship courts. The figures do not include 1 426 805 new legal matters related to payment proceedings before labour courts, registry office cases, inheritance cases, custody, agriculture, legal aid, deposit cases and public notice proceedings with regard to which resolution or the number of cases pending at the beginning and at the end of the year are not recorded. The figures also do not include 202 106 new legal cases related to insolvency proceedings with regard to which only resolution is recorded (292 821).

Hungary

(2013): In 2010, 2012 and 2014 the category “other” encompasses insolvency registry cases and labour litigious cases. In 2012, additionally it includes misdemeanour cases. In 2013, the category subsumes insolvency cases and non-litigious labour cases.

Ireland

(2014): From 2014, the range of 'Other cases' has been revised to incorporate the category 'certificates of taxation of legal costs issued'. This can explain the fact that different elements have been included in the category 'other' in 2013 and 2014.

Italy

(2014): In the ambit of the 2014 exercise, the category “other” encompasses the number of enforcement cases.

Lithuania

(2013): For 2010, this category encompasses only cases of administrative offence, while since 2012 it subsumes also the administrative offence cases in the process of execution.

Slovak Republic

(General Comment): The category “other” encompasses bankruptcy and debt restructuring cases, including the debt elimination procedure (bankruptcy of the natural persons), issuing of the enforcement permission for the enforcement agents, enforcement of court rulings on the visiting rights to minor child and enforcement of court fees receivables.

Slovenia

(General Comment): Category 4. „Other cases“ at first instance includes: free legal aid at district courts, labour courts and at the Administrative court, enforcement cases on the basis of authentic document in civil matters before the writ for the execution became final (all cases processed at the Central Department for Authentic Document at the Local Court of Ljubljana – exclusive jurisdiction), international attestations at district courts, attestations according to the Hague convention at district courts.

(2014): 2014 4. „Other cases“ at first instance includes: Bpp ,COVL, Ov-i, Ov-H and St [(St-01), (St-02), (St-03), (St-04) (St-05)].
In previous cycles, all the mentioned St cases have been accounted in former category 1. 'Civil (and commercial) litigious cases'."

(2013): 2013 "Other" civil law cases at first instance include: Bpp, COVL, Ov-i, Ov-H."

(2012): 2012 "Other” civil law cases at first instance include: Pom , Pom-i, R, Rg, Ov-i, Ov-H, Bpp, COVL, II Upr, I Upr.

Question 094

Austria

(General Comment): The distinction between misdemeanour criminal cases and severe criminal cases is possible only for the criminal courts. However, the total number includes administrative criminal law cases as well, where distinction is not possible.

(2021): The distinction between misdemeanour criminal cases and severe criminal cases is possible only for the ciminal courts. However the total number includes administrative criminal law cases as well, where distinction is not possible.

(2020): The distinction between misdemeanour criminal cases and severe criminal cases is possible only for the ciminal courts. However the total number includes administrative criminal law cases as well, where distinction is not possible.

(2018): The distinction between misdemeanour criminal cases and severe criminal cases is possible only for the criminal courts. However the total number includes administrative criminal law cases as well, where distinction is not possible.

(2016): Administrative criminal cases are included in misdemeanour and in total

Belgium

(General Comment): "Severe criminal cases": all cases that are dealt with by first instance criminal courts; "minor criminal cases": all cases that are dealt with by the Police courts.
First instance (criminal) courts: figures for homicide have not been included as our figures include cases of attempted homicide and (attempted) manslaughter (including attempted and manslaughter). Similarly, cases involving child pornography, sexual abuse, or minors cannot be uniquely identified in the general category of sexual offenses. In camera (council chamber) cases are not included; figures for pending cases are not available.

(2021): "Severe criminal cases": all cases that are dealt with by first instance criminal courts; "Minor criminal cases": all cases that are dealt with by the Police courts. Protectional cases - youth: 9 227 incoming cases in matters of youth protection. For this case category the number of resolved cases is not available for 2021. These are protectional cases dealt with by the juvenile court (in respect of parents, situations of concern, extremely urgent situations of concern, facts classified as offences).

(2020): "The health crisis has had an impact on the numbers.
"

(2016): Severe: all cases that are dealt with at first instance by the criminal courts of first instance; Minors: all cases that are dealt with by the police court
Three sites could not provide statistics for severe cases.

(2014): Offences handled by the police court (although this court can pronounce prison sentences) are considered as minor offences.

Bulgaria

(General Comment): For most of the crimes, the Bulgarian Criminal Code provides for a deprivation of liberty, which makes the distinction hard to be made. The offences could be divided into two categories: common offences and offences subject to private prosecution. For the common offences, the search of responsibility is subordinated to the common regime (there is a public interest concerned or public interest and personal goods). Such are the crimes against individuals (homicide, grievous or intermediate bodily harm, rape, fornication and etc.), crimes against the property (the list is not exhaustive). As to the offences subject to private prosecution, the criminal proceedings are initiated upon a complaint by the affected person (personal interests of the affected person, and usually the affected person and the perpetrator are close relatives). Those offences have a lower degree of public danger and affect less the rights of the concerned person. Such offences are the minor bodily injury, the insult, the slander and etc.

(2020): It should be noticed that since 2020, the Unified Court Information System (UIS) has been gradually introduced in all courts, developed within the project “Creating a Model for Optimizing the Court Card of Bulgarian Courts and Prosecutor's Offices and Developing a Unified Court Information System” with the financial support of Operational Program "Good Governance" 2014-2020.
Depending on the functionalities of the system, it may be possible to collect information on the next cycle according to the indicators mentioned in question 94.

Croatia

(2021): In category "Other cases" are included (from last cycle) cases related to criminal matters in first instance: execution of sanctions (imprisonment), investigation actions of a judge, cases connected to procedural matters (e.g. panel of judges decision about detention, about prolongation of detention, about confirmation or dismissal of indictment, etc.)

(2020): In category "Other cases" are included (from last cycle) cases related to criminal matters in first instance: execution of sanctions (imprisonment), investigation actions of a judge, cases connected to procedural matters (e.g. panel of judges decision about detention, about prolongation of detention, about confirmation or dismissal of indictment, etc.)
Regarding decreased number of resolved minor criminal cases: Due to the pandemic caused by COVID-19, in 2020., court proceedings for limited period in 2020 were submitted under specific conditions and measures, which contributed to decreased number of court hearings, also in minor criminal cases.
Regarding horizontal inconsistency: For most of the categories, the full horizontal inconsistency can not be ensured, due to some adjustments and changes in the Case Management System used by courts.

(2018): In category "Other cases" are included (from this cycle) cases related to criminal matters in first instance: execution of sanctions (imprisonment), investigation actions of a judge, cases connected to procedural matters (e.g. panel of judges decision about detention, about prolongation of detention, about confirmation or dismissal of indictment, etc.)

(2016): Starting from 1 June 2013, when the Act on Amendments to the Misdemeanours Act (OG 39/2013) entered into force, the inflow of first-instance misdemeanour cases displayed in this table continuously and significantly had been reduced. The number of resolved cases reduced as well, but due to a significant decrease in inflows, the number of unresolved cases reduced by the end of the period. This reflected also on High Misdemeanours Court, whose data is shown in this table.

(2014): The new Criminal Procedure Act entered into force in September 2011, introducing the investigation conducted by the State Attorney Offices (instead of court investigation), as well as new and wider opportunities for negotiating settlements. Besides, the decrease of the total number of misdemeanour cases at all levels was the main goal of adopting the Act on the Amendments of the Misdemeanour Act in 2013. The definition of misdemeanour act was changed, the principle of opportunity as well as the simplification of the procedure were introduced, more active role was given to the plaintiff etc. The Register of Unpaid Fines was established. There is no more suspension of the proceedings because of the statute of limitations.

Cyprus

(General Comment): The reason for not having data for the subcategories of cases is that there was no electronic filing system that would enable us to have statistical data on different types of cases.

(2018): There were fewer criminal cases in 2018.

(2014): As a result of the bail in, the total number of first instance criminal pending cases on 1 January 2014 increased with 27% between 2012 and 2014.

Czech Republic

(General Comment): We are not able distinguish between serious offences and minor offences. Thus only total number of cases is reported. There are no cases that could be reported in "Other cases".

(2018): We are not able distinguish between serious offences and minor offences. Thus only total number of cases is reported. There are no cases that could be reported in "Other cases"

(2014): Severe criminal cases are crimes in respect of which the law provides for a minimum term of imprisonment of 5 years. They are decided by regional courts acting in first instance. Minor criminal cases are tried by district courts in first instance, regional courts being the appellate courts in such matters.

Denmark

(General Comment): Danish Court Administration has not worked out a statistics on pending cases older than 2 years. When we categorize cases as "severe", it does not mean that privation of liberty is the end result, but based on the category chosen by the court to deal with the case could include severe cases. Minor cases are typically fines that will never have as a result of privation of liberty. Probably there are too many cases under the category "severe" then, but that is the figures we have..

(2021): 2020 was an unusual year because of the Covid-19 pandemic, related close down of society, including close down of courts. It created more pending cases as the prosecution continued to forward new cases to the courts that could not deal with it.

(2020): 2020 was an unusual year because of the Covid-19 related close down of society, including close down of courts. It created more pending cases as the prosecution continued to forward new cases to the courts that could not deal with it.

(2018): Our statistics on criminal cases does not have data on pending cases older than 2 years. We can not differentiate pending cases according to age. When we categorize cases as "severe", it does not mean that privation of liberty is the end result, but based on the category chosen by the court to deal with the case could include severe cases. Minor cases are typically fines that will never have as a result of privation of liberty. Probably there are too many cases under the category "severe" then, but that is the figures we have.

(2016): Our statistics on criminal cases does not have data on pending cases older than 2 years. We can not differentiate pending cases according to age.
The reason pending cases per 31 December 2016 has decreased is that the courts have resolved more cases than incoming cases.

(2014): For the period 2010-2014, district courts have been able to resolve more cases than the number of incoming cases, especially concerning minor criminal cases (traffic offences etc.) which have been given a higher priority. In 2012, district courts received more minor criminal cases due to a new procedure according to which the police sent cases where citizens haven’t paid their fines to courts. This was changed again in the end of 2012 where warnings were sent out first and the number of minor cases dropped therefore markedly in 2013. In 2014 the number of received minor criminal cases has gone up again following a decision of the police to step up on issuing fines for traffic offences. Besides, city courts resolved more cases through the plea guilty procedure.

(2012): The Courts of Denmark received an extraordinary appropriation in 2009 specifically to bring down backlogs. This effect can be seen in 2012, among other things in the lower number of pending cases. The increase in the number of misdemeanor and/or minor criminal cases is due to the fact that a high number of cases concerning, especially, traffic fines were handled at court level.

Estonia

(General Comment): Some horizontal inconsistencies and inconsistencies with previous year are due to the fact that data are always taken from the live database.

(2020): Other criminal cases: for example different enforcement and pretrial cases. The pandemic has affected the courts activity in criminal matters in general. The criminal procedure law was not as flexible when judges had to work online. The complete revision of the criminal procedure law is ongoing and will come into force next year.

(2018): Increase of incoming misdemeanor and minor criminal cases.

(2016): Misdemeanour cases can be joined and solved together in court. Cases that can lead to deprivation of liberty of less to five years are still included under severe criminal cases.
Because the distinction between severe and minor criminal cases is not the same with the CEPEJ, data for subcategories can be found below : Severe criminal cases : Pending cases on 1 Jan. ref. year : 803
Incoming cases : 7628
Resolved cases : 7463
Pending cases on 31 Dec. ref. year: 824
Pending cases older than 2 years from the date the case came to the first instance court : 23
Misdemeanour and / or minor criminal cases :
Pending cases on 1 Jan. ref. year : 1835
Incoming cases : 10032
Resolved cases : 10628
Pending cases on 31 Dec. ref. year: 891
Pending cases older than 2 years from the date the case came to the first instance court : 3

(2014): The variations observed over the years 2010, 2012 and 2014 are most likely due to the fact that the Ministry of Justice and the biggest court in Estonia (Harju County court) had an agreement setting the target for eliminating backlogs.

(2012): Horizontal inconsistency within the table stems mainly from the joinder and severance of criminal matters. Following a law amendment of March 2011, claims against enforcement of misdemeanour decisions are brought before bailiffs and not before courts.

Finland

(General Comment): The cases are not statistically categorised in severe criminal cases and misdemeanour and / or minor cases in Finland.
"Coercive measures": these are cases that are dealt separately from a criminal case and therefore get their own case ID-number. They include telecommunications interception and electronic surveillance, confiscation, detention on remand, detention of an alien, travel ban and other coercive measures, restraint on alienation [hukkaamiskielto] and confiscation for security. When a coercive measure is dealt within an ongoing case it does not get its own case ID-number and is not counted as a separate case.
“Military trials” deal with cases of military offences (e.g. service offences, sentry offences, absence from duty offences, obedience offences, offences by a superior officer). In addition, certain crimes against soldiers are military offences as are some criminal offences stipulated in Conscription Act (Chapter 45 of the Criminal Code). The “military trial” is a case dealt with by the district courts (excluding the district court of Åland), the Court of appeal of Helsinki and the Supreme court. In a district court the case is dealt with by a judge (as a chair) and two military members. Because of this different composition of the panel, it is referred to as “military court” even though it is a composition of the district court. Similarly, the panel in the Court of appeal and the Supreme court includes two military members.

(2021): The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on 20.1.2022 and reflects the situation on that day. The data available is: 1)Incoming cases 2)Resolved cases 3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously announced number of cases on 31 December and the now announced number of cases in 1 Jan will differ. This year we have included military court cases and co-er-cive mea-sures which were previously not included in this number.

(2020): The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly
changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on
12.1.2021 and reflects the situation on that day. The data available is: 1)Incoming cases 2)Resolved cases 3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously annouced number of cases on 31 December and the now announced
number of cases in 1 Jan will differ. Currently the calculation is further complicated by the partial implementation of the new cases
managements systems, AIPA (for general courts) and HAIPA (for administrative and special courts).

(2018): There is no particular explanation regarding the decreased clearance rate of criminal cases.

France

(2021): source SDSE

(2020):
"Comments on volumes.
Closed cases are down more than incoming cases cases, both civil/2019 and felonies/2018 (contravention are surprisingly up / 2018).
The health crisis and containment may have played on TAs (completed cases) (reducing the ability of courts to process cases) but also on NAs (new cases) (fewer misdemeanors committed, fewer cases brought to court). Prior to this, a major lawyers' strike and transportation strike had mostly affected TAs.

Germany

(General Comment): General information on the statistics used as sources for answering the questions in this section:
Once per year, the Federal Statistical Office compiles and publishes the statistics of the civil, criminal, administrative, finance, social, family and labour courts. Nationwide uniform ordinances define the scope and rules of data collection for these statistics. The courts collect the data and submit it to the statistical offices of the Länder, who check and edit the data and send it to the Federal Statistical Office. In simplified terms, the ordinances provide two different kinds of data collection sheets: The "procedural surverys" that collect data on the specifics of the proceedings happening at a court and the "monthly surveys" that track the caseload of a court. With regard to the caseload count, the monthly surveys distinguish between "caseload of proceedings covered by the procedural surveys" and "other caseload". For the cases from the first category (proceedings covered by the procedural surveys), the monthly surveys collect the number of cases pending at the beginning and at the end of a month as well as the number of received and resolved cases. For the "other caseload", the monthly surveys only count the number of received cases.
The category “severe criminal cases” includes criminal proceedings in accordance with the Criminal Code and ancillary criminal laws. Pending cases older than 2 years from the date the case came to the first instance court:
With regard to the statistics of the civil, criminal, administrative, finance, social, family and labour courts, a statistical record of the day a case came to the court only exists for the cases covered by the procedural surveys. Courts submit the data from the procedural surveys to the statistical offices after the case has been concluded for the respective court and at the respective instance. This means that the duration of a proceeding is unknown for pending cases. The monthly surveys count the number of pending cases at the beginning and at the end of a month, but do not collect any information on the date the pending cases came to the court. The statistics compiled by the Federal Statistical Office include information on the percentage of cases that were resolved within certain time frames but no numbers on how many proceedings took longer than two years. The statistic on the workload of the Local Courts in matters of non-contentious jurisdiction does not collect any data regarding the date a case first came to court.
Horizontal inconsistencies in the table:
The inconsistencies with regard to the pending cases at the end of the year also occur in the statistics published by the Federal Statistical Office. The reason for this is, that courts submit count corrections for the monthly surveys at the end of the year.

(2021): The category “misdemeanour and/or minor criminal cases” subsumes regulatory fine proceedings before criminal courts.
“Other criminal cases” include:
- proceedings at the penal execution chambers (concerning suspension of execution of the remainder of a sentence of life imprisonment or concerning suspension of execution of placement in a psychiatric hospital or in preventive detention, determinate custodial sentences, proceedings under sections 109, 110, 138 of the Prison Act (Strafvollzugsgesetz, StVollzG), proceedings under Part IV of the Act on International Legal Assistance in Criminal Matters (Gesetz über die internationale Rechtshilfe in Strafsachen, IRG) and section 71 (4) of Part II)
- proceedings regarding supervision of conduct
- complaints about costs/fees - complaints against search/seizure orders - complaints in economic cases and tax cases
- complaints in matters concerning detention - cases in matters falling within the Regulatory Offences Act (Ordnungswidrigkeitengesetz, OWiG) registered in the complaints register - other complaints - subsequent or reserved preventive detention
- proceedings regarding the order of subsequent or reserved preventive detention - proceedings regarding the suspension of execution of a sentence where the court has reserved the order of preventive detention, in the cases covered by section 462a (2), third sentence, of the Code of Criminal Procedure (Strafprozessordnung, StPO)
- proceedings before the judicial service court
- proceedings regarding health professionals, tax consultants, agents in tax matters, patent lawyers or architects
- other disciplinary proceedings - proceedings regarding legal remedies in matters of enforcement of youth custody, youth detention and remand detention
With regard to "other criminal cases", only the number of incoming cases is recorded (exception: proceedings concerning supervision of conduct).

(2018): As only the number of resolved “other cases” is available, these will not be included in the total.

(2014): The information provided in the frame of the 2014 evaluation refers to 2013 data (the 2014 data is not available).

Greece

(2021): The courts’ function in cooperation with the prosecution's offices. For example, postponed cases get to the prosecutor offices and then to the courts, in repeat 2-3 times, during the period (year). The definition of the pending cases included postponed cases or the cases the trial date has been setting out of the refence year or hasn’t been determined during the year. The data has been collected from 63 out of 63 First instance courts in Greece.

(2020): To give a brief overview of the national criminal procedure, criminal cases are filed for admission in the Public Prosecutor’s Office, where they are further investigated. If a prosecution is initiated, the cases are discussed in court. The Court of First Instance or the Court of Appeal discusses and issues a judgment on each case brought before the court. The decision can then either postpone the case (whereby the case is forwarded to the competent Prosecutor's Office for further processing), or convict/ acquit the defendants. When the case is forwarded to the competent Prosecutor's Office (after a postponement), it is uncertain if and when it will go back to the court for discussion. Criminal cases cannot be tracked down throughout the different stages of the criminal procedure at present. With the Integrated Civil and Criminal Court Case Management System (OSDDY-PP)- Phase A’, which was completed in March 2019 for 41 courts of the State, an integrated information system is implemented, which includes individual applications (subsystems) to support the operational functioning of the units of all levels of the courts involved in the flow of every case (criminal and civil), allowing the extraction of the relevant data.

(2018): To give a brief overview of the national criminal procedure, criminal cases are filed for admission in the Public Prosecutor's Office, where they are further investigated. If a prosecution is initiated, the cases are discussed in court. The Court of First Instance or the Court of Appeal discusses and issues a judgment on each case brought before the court. The decision can then either postpone the case (whereby the case is forwarded to the competent Prosecutor's Office for further processing), or convict/ acquit the defendants. When the case is forwarded to the competent Prosecutor's Office (after a postponement), it is uncertain if and when it will go back to the court for discussion. Criminal cases cannot be tracked down throughout the different stages of the criminal procedure at present. With the Integrated Civil and Criminal Court Case Management System (OSDDY-PP)- Phase A', which was completed in March 2019 for 41 courts of the State, an integrated information system is implemented, which includes individual applications (subsystems) to support the operational functioning of the units of all levels of the courts involved in the flow of every case (criminal and civil), allowing the extraction of the relevant data.

(2016): Filling in the requested information regarding the criminal procedure is not possible at the moment. To give a brief overview of the national criminal procedure, criminal cases are filed for admission in the Public Prosecutor's Office, where they are further investigated. If a prosecution is initiated, the cases are discussed in court. The Court of First Instance or the Court of Appeal discusses and issues a judgment on each case brought before the court. The decision can then either postpone the case (whereby the case is forwarded to the competent Prosecutor's Office for further processing), or convict/ acquit the defendants. When the case is forwarded to the competent Prosecutor's Office (after a postponement), it is uncertain if and when it will go back to the court for discussion. Criminal cases cannot be tracked down throughout the different stages of the criminal procedure at present. With the Integrated Civil and Criminal Court Case Management System (OSDDY-PP)- Phase A', which is expected to be completed by November 2018, an integrated information system will be implemented, which will include individual applications (subsystems) to support the operational functioning of the units of all levels of the courts involved in the flow of every case (criminal and civil), allowing the extraction of the relevant data. For 2016 the available data regarding the criminal procedure are as follows: Courts of First Instance: Criminal Cases Discussed: 473.457, Convictions/Acquittals: 206.311, Postponements: 262.433, Courts of Appeal: Criminal Cases Discussed: 59.643, Convictions/Acquittals: 24.995, Postponements: 33.601

Hungary

(General Comment): Criminal offences are severe or minor crimes. Severe crimes (bűntett) are committed intentionally and are punishable with at least two years of imprisonment. All other criminal offences are minor crimes (vétség). Crimes that are not committed intentionally are always considered as minor crimes, despite the possible punishment.
Misdemeanours (szabálysértés) are not considered as criminal offences, but are unlawful acts that are endangering the society. The authorities intervening in their respect are the police, the district office, or the National Tax and Customs Office. Their decisions can be reviewed by the relevant section of the respective district court upon request of the accused person. Generally, the court rules without oral hearings, based upon the available documents. However, it can set a hearing if it finds it necessary or if the person charged by a misdemeanor requests it. The judgment is a final and enforceable decision.
It is noteworthy that the Hungarian law identifies also the category of civil offences encompassing offences mainly against public administration. However some criminal offenses, such as property crimes involving objects of small value (under 50000 HUF), are classified in this category as well. Civil offences fall under the jurisdiction of various administrative agencies, local governments or traffic police, but not the courts.
Concerning the methodology of presentation of data, as according to the Hungarian Criminal Code not only severe crimes (bűntett), but also almost every minor crime (vétség) are punishable with imprisonment, both categories were included into the category "severe criminal cases". Thus misdemeanors (szabálysértés) were included into the category "minor criminal cases".

(2021): New types of misdemeanours were introduced into the legal system in accordance with the measures taken against the COVID-19 pandemic. As the number of incoming cases increased the number of resolved cases increased as well.

(2018): Criminal offences are severe or minor crimes. Severe crimes are commited intenitionally and are punishable with at least two years of imprisonment. All other criminal offences are minor crimes.
Misdemanours are not considered as criminal offences, but are unlawful acts that are endangering the society.

(2014): The increase in the number of incoming misdemeanour cases in 2012 and 2014 is the consequence of an amendment of the relevant legislation. This increase resulted also in higher numbers of resolved and pending cases.

(2012): For 2012, not all types of misdemeanour cases were included in the respective category. The increase in the number of incoming misdemeanour cases stems from legislative amendments. This increase resulted also in higher numbers of resolved and pending cases.

Ireland

(General Comment): Except for the Supreme Court, criminal cases are generally counted by offence rather than case due to the various ICT systems used. This is due to data collection/ ICT systems that are in use by the Court Service.
Akin to question 91, the number of pending criminal law cases cannot be provided within the frame of question 94, provided that it is not recorded in caseload data.
Misdemeanour and/or minor criminal cases include all cases triable summarily (e.g. common assault, public order offences, burglary or theft in other that aggravated circumstances).

(2021): Severe criminal cases are taken to mean indictable offences that are dealt with in the Circuit and High Court. Misdemeanour is taken to mean minor offences and indictable offences dealt with summarily in the District Court. The number of incoming cases will never equal the number of resolved cases. It is worth noting that the number of resolved cases in 2021 was a significant increase in the resolved cases from 2020. It is also worth noting that not all offences are proceeded with by the prosecutor, particularly minor offences.
Criminal cases are generally counted by offence rather than case due to the various ICT systems used

(2020): Misdemeanour and minor criminal cases are cases heard in the District Court. There were fewer such cases incoming and resolved because of Covid-19.

(2018): From 2016 extra judicial resources were applied by Senior Judiciary to the Courts dealing with some of the most serious criminal matters, which explains the increase of the number of resolved severe cases.

(2016): With regard to the number of resolved severe criminal cases, there is no particular reason explaining the observed discrepancy between 2014 and 2016, except for the fact that in 2014 figures were exceptionally high.

(2014): The previous data in respect of severe criminal cases were presented by reference to the defendant rather than to the offence(s) charged, whereas the data for 2014 reflects offence(s) charged, to align with the unit of measurement for minor criminal cases.

(2012): There were substantial reductions in the number of recorded traffic and public order offences between 2010 and 2012, and these categories of offences make up a significant proportion of the minor criminal cases that come before the courts.

Italy

(2021): In Italy there is no formal definition of minor criminal cases. For the purposes of this exercise, are considered as minor criminal cases those proceedings dealt with by the Justice of Peace Offices.

(2018): The reduction in the number of resolved first instance criminal cases, and consequently the increase in the Disposition Time, between 2018 and 2016 comes from the decriminalization measures introduced in 2016 that led to a sharp increase in the number of case dismissals in that year. Indeed, the data for 2017 are:
Incoming: 1.311.900
Resolved: 1.293.054
Pending: 1.282.406
Disposition time: 362 days
These figures show a positive trend of the DT between 2014 and 2017, maintained in 2018.

Latvia

(General Comment): Data from the first and appeal instance courts are compiled by the Court Administration, and the Court Information System is a living database that allows data to be corrected, so changes between previous periods are possible. According to 2014 data and pursuant to the Criminal Law, criminal offences are divided into criminal violations and crimes distinguished by their nature, degree of the harm and the threat to the interests of a person or the society. A criminal violation is an offence for which the law provides for a deprivation of liberty for a term exceeding fifteen days, but not exceeding three months (temporary deprivation of liberty), or a type of lesser punishment. Crimes are classified in the following way: less serious crimes (intentional offences for which the law provides for a deprivation of liberty for a term exceeding three months but not exceeding three years, as well as offences committed by negligence and for which the law provides for a deprivation of liberty for a term up to eight years); serious crimes (intentional offences for which the law provides for a deprivation of liberty for a term exceeding three years but not exceeding eight years, as well as offences committed by negligence and for which the law provides for a deprivation of liberty for a term exceeding eight years); especially serious crimes (intentional offences for which the law provides for a deprivation of liberty for a term exceeding eight years or a life imprisonment.

(2021): Pending cases: The number of pending cases in January differs from pending cases in December 2020 registered data due the living Court information system database
Severe criminal cases include all criminal cases according to the Criminal law - it includes all cases where a harmful offense (act or failure to act) committed deliberately (intentionally) or through negligence, provided for the Criminal Law, and for the commission of which criminal punishment is set out shall be considered a criminal offense. Misdemeanor and / or minor criminal cases includes all administrative infringement cases according to the Law on Administrative liability about administrative offence of a person for which administrative liability is provided for in a law or binding regulations of local governments.
Criminal cases, which are assessed according to the Latvian Criminal Law and Criminal Procedure Law, are decreasing. The reduction from 2020 was influenced by changes in legislation. However, the tendency of the decrease in the number of criminal cases has been observed for a longer period of time, and it cannot be explained by the activities of the courts, but by assumptions about the general development trends of society.
In the summer of 2020, amendments to the Criminal Procedure Law entered into force, which stipulated that the case for minor violations of the criminal law is not referred for initiation of criminal proceedings (Section 373 An investigator with a consent of a prosecutor or a prosecutor may refuse to initiate criminal proceedings, if a misdemeanor has been committed), which affected the the total number of criminal law cases received in court. A decrease in the number of criminal cases received has been observed since 2020.
In the middle of 2020, Saeima adopted Law on Administrative Liability that affected amount of incoming cases significantly. According to the law, if the person intends to use his right to appeal a decision, he/she needs to address the complain to the higher official from institution which has made this decision, but if there is no higher official, a decision may be appealed to a district (city) court. This is the main reason for decrease of incoming cases. The number of pending cases (pending for more then 2 years) has significantly decreased. The reduction of pending cases is related to the increased interest and pressure of the public, the Council of Justice and the Ministry of Justice to reduce the number of long pending criminal cases. In 2021, courts of first instance resolved more criminal cases than in previous periods, which is related to the court's ability to adapt to resolve cases in the restrictive conditions of the Covid-19.
Data of 2020 for minor criminal cases are revised for incoming and resolved cases: 5 755 incoming cases and 6 631 resolved cases.

(2020): Data on resolved severe criminal cases is decreased because of Covid-19 restrictions. We have already pointed out the limitations of court work: written procedure, prohibition of face-to-face meetings, cancellation of court hearings etc.

(2018): There may be some change in data due to court system reform.

(2016): Severe criminal cases - All sections of The Criminal Law
Misdemeanor and / or minor criminal cases - All sections of Latvian Administrative Violations Code

(2014): According to 2014 data and pursuant to the Criminal Law, criminal offences are divided into criminal violations and crimes distinguished by their nature, degree of the harm and the threat to the interests of a person or the society. A criminal violation is an offence for which the law provides for a deprivation of liberty for a term exceeding fifteen days, but not exceeding three months (temporary deprivation of liberty), or a type of lesser punishment. Crimes are classified in the following way: less serious crimes (intentional offences for which the law provides for a deprivation of liberty for a term exceeding three months but not exceeding three years, as well as offences committed by negligence and for which the law provides for a deprivation of liberty for a term up to eight years); serious crimes (intentional offences for which the law provides for a deprivation of liberty for a term exceeding three years but not exceeding eight years, as well as offences committed by negligence and for which the law provides for a deprivation of liberty for a term exceeding eight years); especially serious crimes (intentional offences for which the law provides for a deprivation of liberty for a term exceeding eight years or a life imprisonment.

(2012): According to 2012 data and pursuant to the Criminal Law, criminal offences are divided into criminal violations and crimes distinguished by their nature, degree of the harm and the threat to the interests of a person or the society. A criminal violation is an offence for which the law provides for a deprivation of liberty for a term exceeding fifteen days, but not exceeding three months (temporary deprivation of liberty), or a type of lesser punishment. Crimes are classified in the following way: less serious crimes (intentional offences for which the law provides for a deprivation of liberty for a term exceeding three months but not exceeding three years, as well as offences committed by negligence and for which the law provides for a deprivation of liberty for a term up to eight years); serious crimes (intentional offences for which the law provides for a deprivation of liberty for a term exceeding three years but not exceeding eight years, as well as offences committed by negligence and for which the law provides for a deprivation of liberty for a term exceeding eight years); especially serious crimes (intentional offences for which the law provides for a deprivation of liberty for a term exceeding eight years or a life imprisonment.

Lithuania

(General Comment): There is no separate statistical data allowing to distinguish between severe/minor/and other criminal cases. Neither the court information system is applied to this, nor the courts have obligation to provide the information on the seriousness of the crime. In the court information system offenses are described through the indication of an article (it does not show the severeness of a crime by itself).

(2018): On 1 January 2017 Amendments to the Criminal Code of the Republic of Lithuania were adopted that provide for criminal liability for persons who drove a road vehicle or taught practical driving while under the influence of alcohol more than 1,5 promilles. This change of regulation had impact on the increase of the number of criminal cases starting from 2017 (in comparison with 2016).

(2016): The crime situation changed in Lithuania - the number of registered crimes by prosecution also decreased through these years, as a result less cases were received in courts. As regards 94.1 and 94.2: the answer should be NA, the NAP was chosen for the calculation purposes.

(2012): For 2012, in contrast with the 2010 data, criminal cases in the execution process were also taken into account. The increase in the number of incoming and resolved criminal cases is due to the entry into force of the Law on Domestic Violence in December 2011. It has made compulsory the criminal investigation in respect of every single incident of domestic violence. The Lithuanian economic situation as well as the national economic priorities also account for the increase.

Luxembourg

(General Comment): The unavailability of the number of pending and incoming criminal cases is explained by the specific organisation of the workflow between courts and prosecution offices. Cases are only transferred to the courts shortly before the hearing and, if a case is not heard on the given date, it is physically returned to the prosecution until the new hearing date. Thus, there are - with a few exceptions - no cases pending before the criminal courts over a long period of time, and the number of incoming cases is more or less equal to the number of resolved cases.
Minor criminal cases represent all cases resolved by criminal order in the Police court and the district court. Severe criminal cases represent all cases resolved by a judgment at first instance in the Police, Correctional or Criminal court. “Other criminal cases” are cases that are dealt with by the investigating office.

(2018): Nous avons compté parmi les infractions mineures, toutes les affaires terminées par ordonnance pénale au tribunal de police ou au tribunal d'arrondissement. Les infractions graves représentent toutes les affaires terminées par jugement en première instance au tribunal de police, correctionnel ou criminel.
L'augmentation du nombre d'affaires résolues est due au fait que, pour les cycles précédents, les ordonnances pénales des tribunaux d'arrondissement n'étaient pas prises en compte au niveau des infractions mineures, qui comptabilisaient seulement les ordonnances pénales de justices de paix. Ainsi, pour 2016, les infractions pénales mineures reportées s'élevaient à 6460 en comptant les ordonnances pénales des tribunaux d'arrondissement, au lieu de 5454. Le total des affaires terminées a considérablement augmenté puisqu'il nous est depuis la période d'évaluation 2018-2020 possible, par l'ajout de la catégorie « Autres affaires » dans le questionnaire, de renseigner les affaires dont le cabinet d'instruction a été saisi. Les chiffres inscrits dans « autres affaires » correspondent donc aux affaires dont a été saisi le cabinet d'instruction.
Regarding the unavailability of the number of pending cases and incoming cases, Due to the specific organization of the work flow between the courts and the public prosecutor's office, files are transferred to the courts only a short time before the hearing, and, if the case is not heard at the given date, are then returned to the public prosecutor's office until the new date of the hearing. Thus, there are – with very few exceptions - no cases pending before the penal courts over a longer period of time, and the number of incoming cases equals more or less the resolved cases. With regard to civil cases, we should be able to provide information on cases pending for more than two years for the next evaluation, once the new application has been used for a longer period of time.

(2012): Courts do not have a "stock" given that cases are handled at the public prosecutor's office and are only reffered to the court shortly before the hearing. The only moment when cases are pending is between the hearing and the adoption of the decision. Usually, the jugdgment is made within 3 or 4 weeks after the hearing. Thus, data concerning incoming cases is identical to data concerning resolved cases.

Malta

(General Comment): In the Maltese legal system, all proceedings which appear before the Court of Magistrates may be punishable with a fine or imprisonment, bar a few contraventions which still appear before the Court of Magistrates and it is not possible to obtain data relating to these few cases. Nevertheless, all cases which lead to an imprisonment of ten years or more can only be heard by the Criminal Court whilst cases between 2 and 12 years may be heard by the Court of Magistrates only once the procedure before it as a Court of Criminal Inquiry is completed. Since in Malta the vast majority of the cases contemplate the possibility of imprisonment, barring a few contraventions, the cases indicated as misdemeanors/minor offences, are those cases which are heard by the Court of Magistrates (excluding those being heard as a Court of Criminal Inquiry) having a maximum punishment of 2 years imprisonment while the cases indicated as 'severe criminal offences' are those having a punishment of over 2 years (Criminal Court & Court of Criminal Inquiry).

(2020): Given that the categorisation of criminal offences in Malta does not exactly match with the CEPEJ definitions provided, only the total of such cases is being reported. An actual breakdown of the figures quoted above is as follows:
- Pending 1st January 2020 = 11899 (79 cases Criminal Court and 11820 cases Court of Magistrates)
- Incoming cases 2020 = 11086 (17 cases Criminal Court and 11069 cases Court of Magistrates)
- Resolved cases 2020 = 7321 (5 cases Criminal Court and 7316 cases Court of Magistrates)
- Pending cases 31st December 2020 = 15883 (89 cases Criminal Court and 15794 cases Court of Magistrates)

The lack of horizontal consistency results from recounts that happen throughout the year, and that ensure that the data is always as up to date as possible. However when taken as a global figure, horizontal consistency might then be lost.
The decrease in the number of incoming and resolved cases, and the ensuing high number of pending cases, results from the restrictions imposed by the pandemic on the functioning of the Courts of Law.

(2018): Given that the categorisation of criminal offences in Malta does not exactly match with the CEPEJ definitions provided, only the total of such cases is being reported. An actual breakdown of the figures quoted above is as follows:
- Pending 1st January 2018 = 11887 (61 cases Criminal Court and 11826 cases Court fo Magistrates)
- Incoming cases 2018 = 13817 (19 cases Criminal Court and 13,798 cases Court of Magistrates)
- Resolved cases 2018 = 14168 (8 cases Criminal Court and 14140 cases Court of Magistrates)
- Pending cases 31st December 2018 = 11589 (72 cases Criminal Court and 11517 cases Court of Magistrates)

The lack of horizontal consistency results from recounts that happen throughout the year, and that ensure that the data is always as up to date as possible. However when taken as a global figure, horizontal consistency might then be lost.
The decrease int he number of incoming and resolved cases is a phenomenon we are observing over the past years. The discrepancy between the data of 2016 and 2018 makes sense when one looks at the 2017 data that also shows a decrease in the caseloads from 2016. It is to be noted that the incoming caseload in 2018 is actually a bit higher than that of 2017.

(2016): In the Maltese legal system, all proceedings which appear before the Court of Magistrates may be punishable with a fine or imprisonment, bar a few contraventions which still appear before the Court of Magistrates and it is not possible to obtain data relating to these few cases. Nevertheless, all cases which lead to an imprisonment of ten years or more can only be heard by the Criminal Court whilst cases between 2 and 12 years may be heard by the Court of Magistrates only once the procedure before it as a Court of Criminal Inquiry is completed. Since in Malta the vast majority of the cases contemplate the possibility of imprisonment, barring a few contraventions, the cases indicated as misdemeanors/minor offences, are those cases which are heard by the Court of Magistrates (excluding those being heard as a Court of Criminal Inquiry) having a maximum punishment of 2 years imprisonment while the cases indicated as 'severe criminal offences' are those having a punishment of over 2 years (Criminal Court & Court of Criminal Inquiry).
This definition of severe/minor-misdemeanor cases is not fully consistent with the definition built by CEPEJ and therefore a comparison is not possible with the previous cycles. According to the Maltese categorization of cases, the number for severe criminal cases in 2016 is as follows: pending on the 1st Jan of Ref Year = 3054; Incoming cases = 827; Resolved cases = 1143; Pending cases on the 31st Dec of Ref Year = 2736. The number for minor/misdemeanor criminal cases is as follows: pending on the 1st Jan of Ref Year = 10571; Incoming cases = 15887; Resolved cases = 15682; Pending cases on the 31st Dec of Ref Year = 10805.

(2013): The 2014 data is derived from the official court statistics that are also available online at www.justiceservices.com. The horizontal discrepancy in the data at point 6 cannot be verified since the data collection in the criminal courts is not as yet automated.

Netherlands

(General Comment): Classification of minor and severe cases:
Minor offences – mainly traffic offences (speeding tickets, running red lights), petty theft, vagrancy, littering, etc.
Severe offences – driving while drunk, grand theft, violent crimes, vice, drugs/narcotics etc.

(2020): Classification of severe and minor cases:
Minor offences: mainly traffic offences (speeding tickets, running red lights) and petty theft, vagrancy, littering, etc.
Severe offences: driving while drunk, grand theft, violent crimes, vice, drugs/narcotics, etc.
Effects of the pandemic:
No in person hearings happened in the period between 17 March and April 6 2020. At the start of the pandemic, not everyone was able to work remotely due to insufficient available laptops and that many files were still coming in on paper. There were some exceptions for working remotely as well, such as security, some administrative staff (people that compiled paper files, for example), etc.
Some measures were taken: hearing in other buildings, online or hybrid, and hearings in the evenings. The age restriction for judges was upped from 70 years old to 73 years old, more criminal orders were handled by the public prosecution and more cases were handled by one judge instead of more (enkelvoudig versus meervoudig)

(2016): In 2016, there has been a strong decrease in numbers of cases compared to 2014. This decrease pertains to the group of misdemeanours, in particular the group of traffic offences ("Mulder Law"). The cases of "vorderingen dwangsom" (coercive detainment) are no longer treated by the Public Prosecution. This following complaints at the Ombudsman. These coercive detainment cases increased at first strongly in 2013 and 2014. But after that decision of the Public Prosecution The "Mulder Law" cases decreased from 200.000 in 2014, via 100.000 in 2015 to 40.000 in 2016.

Poland

(General Comment): Severe criminal cases include all offences under the Penal Code, Penal Fiscal Code and offences specified in other Acts. Misdemeanours are cases conducted under the Petty Offence Code.
The category “Other cases” covers the rest of cases conducted in criminal courts which are not connected directly with the severe criminal cases or misdemeanours (mainly cases conducted under the Code of Criminal Procedure and Petty Offences Procedure Code).

(2020): The discrepancies in Table 94. First instance courts: number of criminal law cases - compared to the previous period (2018) are mainly due to two reasons. First – the COVID19 pandemic which reduced the inflow of Misdemeanour and / or minor criminal cases (p. 2). Second – in 2020 release the number of Other cases (p. 3) was added to the table. It significantly increased the number of total cases shown in the line Total of criminal cases (1+2+3).

(2014): For the 2014 evaluation, changes in the statistical forms made possible the identification of some types of misdemeanor cases (mainly the organizational ones, which were not considered in 2012). Above this, there is a constant growth in the number of incoming cases.

(2012): The increase of the total of criminal cases and the number of severe criminal cases in respect of the item “pending cases on 1st January 2012” is due to the fact that since 2010, there was a significant increase of the inflow of cases.

Portugal

(2021): The discrepancy should be contextualised, in our view, within the framework of the effects of the Covid 19 pandemic and the consequent confinement, with a reflection on the functioning of the courts in 2020, considering that in certain periods face-to-face services were interrupted or conditioned.

(2020): 94.1 - The decrease in the number of cases completed in the category "Total of criminal law cases" between 2018 and 2020 is justified by the decrease in court activity in the year 2020 due to the Covid-19 pandemic situation.
94.2 -The decrease in the number of incoming and outgoing cases in the category "Misdemeanour and / or minor criminal cases" between 2018 and 2020 is justified by the decrease in court activity in the year 2020 due to the Covid-19 pandemic situation. Still, the number of cases pending on January 1, 2020 reduced compared to the number of cases pending on January 1, 2018, since the number of cases completed from 2018 to 2019 was relatively higher than the number of cases entered in those years. 94.3 - The increase in the number of pending cases older than 2 years in the "Other criminal cases" category in 2020 compared to 2018 may be related to reduced court activity in the year 2020 due to the Covid-19 pandemic situation.

(2018): Regarding the decrease of the numbers comparing to 2016, there were no legislative changes or others that could explain this decrease. Due to increased efficiency of first instance courts, we can notice for the last several cycles a down-word trend in respect of the number of pending cases, namely criminal law cases.

(2016): There is no specific reason explaining the decrease in the number of incoming and pending criminal cases in comparison with the values of previous cycles. There were no legislative changes or other that could explain this value. However, we can note that cases at first instance in criminal and other areas have been decreasing in the last years. In addition, this decrease may also result from the fact that the number of criminal cases registered by police forces has been decreasing.

(2012): The number of pending minor criminal cases on 1 January and 31 December 2012 decreased due to the fact that the number of misdemeanor and minor criminal resolved cases in 2010 and 2011 was significantly superior to the number of cases filed on both those years. Generally, there is a decreasing trend concerning minor offences.

Romania

(General Comment): There is no classification of severe and less severe offences in the Romanian statistics.
In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.

(2020): As stated at Q91 the context of the Covid-19 pandemic affected the activity of the courts which led to the decrease in the number of resolved cases in 2020 an increased Disposition time and an increased numer of pending cases older than 3 years. In criminal law cases postponements were reccurent in cases involving persons serving a prison senstence, because generaly they have to be brought to every court hearing which was not always possibile due to the curantine measures taken by the prison administrations.

(2018): The changes brought to the code of criminal procedure may be among the reasons for the augmentation of the total number of criminal law cases pending on January 1st between 2016 and 2018, namely for e.g. the procedure regarding the prosecutor's decision to discontinue the criminal investigation has to be confirmed by a judges/in court, according to the new provisions.

(2016): In the national Statis system, the cases are recorded on categories of pending cases as follows: - 0-1/2 years;
- 1/2-1 year;
- 1 - 1 and 1/2 years;
- 1 and 1/2 - 3 years;
- 3 - 5 years;
In the table above, last column, there are mentioned the numbers for cases pending for more than 3 years.
The total number of incoming criminal cases in first instance courts has substantially increased when compared to 2014 data (+41%). These figures have been confirmed by the CEPEJ National Correspondent.

(2014): The significant increase in the number of total pending cases on 1st of January within the period 2012 – 2014 is due to the new way of counting the statistical data by the application Statis. The time of reaching a decision is not equivalent to the time of drafting the decision. For the present evaluation, files where a decision is reached but is not drafted yet are not counted.

Slovak Republic

(General Comment): The statistical data collected by the Ministry of Justice of the Slovak republic does not allow the categorization of the criminal matters according to the types of criminal offences as defined in explanatory note.

(2020): Sources: Analytical center, Ministry of Justice of the Slovak republic

(2018): There is a big discrepancy between pending cases on 31st of December 2016 and “Pending cases on 1st of January 2018”. This is caused of two factors: The first one and major is in delivered data in 2016. In the 2017 was the data collection still in paper form and in the old methodology, as we explained already. In the same time the project Audit with the experts from CEPEJ was already influencing the newly growing Analytical center and motivated as to try collect pending cases for 2016 backward. Since there were no electronic tools for collecting data available neither for courts nor for Ministry of Justice; the result were obviously full of mistakes. Analytical center had no chance to make data check, since pending cases were never collected before, so we had to rely on the courts data without possible checkup. After 2017, when was already available electronic tool (AZU) for collecting data from courts with implemented controlling formulas, then the mistakes from previous manual collection have occurred significantly especially in the first instance criminal agenda. The second factor is, that the Clearance rate dropped from 106, 52% in 2016 to the level 101, 81% in 2018.

(2016): For 2016 data, new methodology was implemented to make the reporting structure consistent with the CEPEJ methodology and leads to better comparison of Slovak Republic (SR) with other countries. The previous methodology was not counting a decision of first instance court as resolved until the case becomes finalised at last instance. This resulted in reporting such case as unresolved despite respective court has already made a decision. This is the nature of reporting of many “unresolved” cases on courts despite court already decided, in fact. New way of reporting extracts the numbers of decided cases in respective court instances from “unresolved” and allocates these numbers to those court instances that made an actual decision in the reference period that is in correspondence with CEPEJ methodology and better comparable with other countries.

Slovenia

(General Comment): The figures in the table include the following cases: Severe criminal cases: criminal cases at local and district courts,, criminal cases against juveniles at district courts. Misdemenour cases: minor offences in regular court procedure – request for judicial protection, minor offences in regular court procedure – accusation proposals, cancellation of validity of the driver’s licence according to the legal limit of punitive points
Other cases: criminal investigations at district courts, criminal cases against juveniles in preparatory proceedings, execution of the sanction of prison, execution of criminal sanctions of foreign courts, criminal investigation actions at local and district courts, various criminal matters at local and district courts, cases of the out-of-hearing senate, clemency procedures at local and district courts, legal aid in criminal matters, international legal aid in criminal matters, cases of decisions to permit interventions within human rights and freedoms, legal aid in minor offences, international legal aid in minor offences, search of premises, setting a task for the good of the community or the local community, various cases in minor offences, compliance detention.
Regarding criminal investigations at district courts: Slovenia has a system where the state public prosecutor can request a (first instance) court to perform a criminal investigation (or individual investigatory acts). When this procedure at court is finished, the case is returned to the state prosecutor, who can decide whether to dismiss a case or file an accusatory act at the (same) court. When the accusatroy act is filed, a criminal trial (i.e. deliberating on the responsibility and sanctioning of the offender) begins.

(2021): 1. Severe criminal cases - Pending cases on 1 Jan.: increase by 22%
In 2020, the functioning of first instance courts was limited due to Covid-19 restrictions, hence the increase in pending cases at the beginning of 2021.
1. Severe criminal cases - Resolved: increase by 17%
In 2020 first instance courts resolved less cases than usual due to Covid-19 restrictions, hence the increase in resolved cases in 2021.
2. Misdemeanour and / or minor criminal cases - Pending cases older than 2 years from the date the case came to the first instance court: decrease by 34%.
The decrease is due to the more efficient work of courts in resolving older cases.
3. Other criminal cases - Pending cases on 1 Jan. ref. year: increase by 16%
In 2020, the functioning of first instance courts was limited due to Covid-19 restrictions, hence the increase in pending cases at the beginning of 2021.
In 2021, approx. 30% of pending cases and 7% of incoming/resolved cases were criminal investigation cases (see general comment).

(2020): Until now, at "1. Severe criminal cases" we have reported both criminal investigation and criminal trial cases (see general comment) for the same criminal offence. For 2020, we have excluded data on investigations to report data on criminal trials only, and criminal investigation is reported at 3. Other criminal cases. The main reason is the comparability of data between countries as criminal investigation is not within the juridiction of courts in most countries. Investigation cases, that were previously reported at 1. Severe criminal cases and are now reported under 3. Other cases represent 5-10% of all reported cases.
The number of incoming Severe criminal cases decreased by 1% in 2019 and the number of resolved cases decreased by 2% in 2019. However, in 2020 the number of incoming cases decreased by 1%, and the number of resolved cases decreased by 23%, mostly due to limitations of operations of courts due to the Covid-19 pandemics. Consequently, the number of pending cases has also increased by 22%.
The number of pending Severe criminal cases, older than 2 years increased in 2019 (by 15%) and stayed roughly the same in 2020, while the number of Misdemeanour cases stayed roughly the same in 2019 and increased significantly (by 128%) in 2020. No specific explanation can be given for any of the mentioned changes. This two factors resulted in increase in total number of pending cases older than 2 years.

(2018): Severe criminal law cases include all offences, listed in the Criminal Code. Such offences are punishable by either imprisonment, fine (monetary penalty) or in some cases with restricting the driving of motorized vehicles. Minor offences are set in other laws (not the Criminal Code) and the procedure is regulated by the Minor Offences Act. Minor offences cannot be punished by deprivation of liberty, but rather by a fine and/or other sanctions, provided by laws.
Discrepancies: This year, some of the cases, previously reported at Severe or Misdemeanor cases, are reported under new category - Other cases (for details, please see general comment). The metodology for the total number of cases reported did not change, and the changes for total are below 20%.

(2016): The observed decreases can be attributed to the decrease in the number of cases, processed by the police and the state prosecution (see Q107).

(2014): According to 2014 data, the category “severe criminal law cases” includes all offences, listed in the Criminal Code. Such offences are punishable by either imprisonment, fine (monetary penalty) or in some cases with restricting the driving of motorized vehicles. At first instance, this category encompasses: criminal cases at local and district courts (K); criminal investigations at district courts (Kpr); criminal cases against juveniles at district courts (Km); criminal investigation actions at local and district courts (Kpd); various criminal matters at local and district courts (Kr); clemency procedures at local and district courts (Po); criminal cases against juveniles in preparatory proceedings (Kmp); cases of the out-of-hearing senate (Ks); execution of the sanction of prison (IKZ); execution of criminal sanctions of foreign courts (IKZt); cases of decisions to permit interventions within human rights and freedoms (Pp). The attention should be drawn on the fact that the 2014 data is not comparable to pre-2014 results, because until 2014, only first 3 categories above were reported. In 2015, the reporting method was further improved, and other types of cases were also included in the reporting.
The minor offences are set in other laws (not the Criminal Code) and the procedure is regulated by the Minor Offences Act. The minor offences cannot be punished by deprivation of liberty, but rather by a fine and/or other sanctions, provided by laws. At first instance, this category subsumes: minor offences in regular court procedure – request for judicial protection (PR-zsv); minor offences in regular court procedure – accusation proposals (PR-obp); cancellation of validity of the driver’s licence according to the legal limit of punitive points (EPVD); compliance detention (PRuz). This category does not include: legal aid in minor offences (PomPR); international legal aid in minor offences (PomPRi); search of premises (PRhp); setting a task for the good of the community or the local community (PRnk) and various cases in minor offences (PRr).

(2012): The decrease in the number of “misdemeanour and/or minor criminal cases” in 2012 is the result of the reform in law on minor offenses which transferred the jurisdiction of some cases previously tried by courts to other authorities.
According to 2012 data, the category “severe criminal law cases” at first instance included: criminal cases at local and district courts (K); criminal investigations at district courts (Kpr); and criminal cases against juveniles at district courts (Km). The category did not encompass: criminal investigation actions at local and district courts (Kpd); various criminal matters at local and district courts (Kr); clemency procedures at local and district courts (Po); criminal cases against juveniles in preparatory proceedings (Kmp); cases of the out-of-hearing senate (Ks); execution of the sanction of prison (IKZ); execution of criminal sanctions of foreign courts (IKZt); cases of decisions to permit interventions within human rights and freedoms (Pp).

The category “misdemeanour cases and minor offences cases” at first instance included: minor offences in regular court procedure – request for judicial protection (PR-zsv); minor offences in regular court procedure – accusation proposals (PR-obp); minor offences at the transition from 2004 to 2005 (PRs); minor offences, introduced in the judicial jurisdiction after the 31.12.2004 (PRv); cancellation of validity of the driver’s licence according to the legal limit of punitive points (EPVD); compliance detention (PRuz). This category did not subsume: legal aid in minor offences (PomPR); international legal aid in minor offences (PomPRi); search of premises (PRhp); setting a task for the good of the community or the local community (PRnk); and various cases in minor offences (PRr).

Spain

(General Comment): When an error is detected in the statistics of a Court, the latter is allowed doing regularization, what means that the Court communicates the correct figure and rectifies the wrong one even if this does not concord with figures offered for previous exercises. This situation can happen for example in the specific control of cases that the Court makes when a judge leaves the Court (called “alarde”), but in general, in any case in which the Judicial Counsellor detects an error that comes from previous exercises but cannot be localized. The system prefers to correct the data than continue and amplify the error.
These regularizations and the cumulated cases and the re-opened cases are the causes for the horizontal inconsistencies.

(2021): The number of incoming severe criminal cases increased in comparison with 2020, because that was the year in which the pandemic forced mobility restrictions. The recovery of activity, after the most severe restrictions of the pandemic, may have contributed to the improvement in efficiency and increased number of resolved cases.

(2020): Possibly the pandemic, and the restrictions it entailed, have had an impact on the decrease of the number of resolved cases.

(2016): The Organic Law 1/2015 eliminated 'faltas' (misdemeanour) of the Criminal Code, qualifying some of them as minor offenses, and others as administrative infractions. Accordingly, we can observe decreases in the numbers of misdemeanour cases which also affects the total of criminal law cases.

(2014): The Law 41/2015 has amended the Criminal Procedural Law in the sense that those files opened by the police concerning crimes committed by an unknown person will not be submitted to courts but will remain at the police offices at the disposal of the judge and prosecutor, with the exception of those crimes affecting life, sexual integrity, freedom or corruption, in which case the police report will necessarily be referred to the criminal court. As a result, it is expected that the number of incoming cases before the criminal courts will decrease. In addition, the law 1/2015 amended the Penal Code by suppressing the misdemeanors which now will be judged as administrative or civil matters according to their nature or as minor crimes.

(2012): Restarted procedures were not counted because they are not really incoming cases. Besides, there was a readjustment of the statistical data in the period between 2010 and 2012. The final data on pending cases is the real data at December 2012.

Question 097

Austria

(General Comment): From January 1st, 2014 there are 11 newly found courts for administrative law in Austria, namely 9 regional administrative courts, 1 Federal Administrative Court and 1 Federal Tax Court (all courts of first instances). Furthermore, there is also the Supreme Administrative Court (final instance). With regard to administrative law cases there is no second instance. The statistical evidence of the Federal Ministry of Justice of Austria does not distinguish between the types of second instance cases mentioned under 2.1., 2.2. and 2.3. Data regarding the general categories “litigious cases” (1.) and “non-litigious cases” (2.) is available.
The number of “Other cases” (4.) is included in the category “litigious cases” (1.).

(2021): “Civil and commercial litigious cases” – the number of incoming civil litigious cases slightly increased between 2020 and 2021. The number of resolved such cases increased but to a lesser extent than incoming cases. Accordingly, the number of pending civil litigious cases at the end of the year increased. There is no explicit explanation for these variations. It should be recalled that 2020 year was a particular year due to the pandemic. In 2021, the data are back at the level of 2019.

(2017): In the area of appeal cases concerning other than criminal law cases only the categories of general civil law, labour law and social law are gathered. The administrative cases are NAP in second instance since they are presented in first and final instance.

(2016): In the area of appeal cases concerning other than criminal law cases only the categories of general civil law, labour law and social law are gathered. The administrative cases are NAP in second instance since they are presented in first and final instance.

Belgium

(General Comment): Data on pending appeals against first instance decisions of the Justices of the peace and Police courts (civil cases) are not available.

(2021): Court of appeal (civil matters): Pending cases on 1/01/2021 = 29 320 ; Pending cases on 31/12/2021 = 28 507 ; Pending cases older than 2 years from the date the case came to the second instance court = 12 133. Bron: datawarehouse (date of data extraction: 01/07/2022).

**(2020): ***Cases in the second instance courts , labor courts and cases on appeal against decisions of justices of the peace and police courts (civil matters), at the trial level.
*Court of second instance (civil matters): Cases pending as of 1/01/2020 = 30668; Cases pending as of 12/31/2020 = 29300; Cases pending for more than 2 years from the date the case is brought to the 2nd instance courts = 12391. *Labor Court: Cases pending as of 1/01/2020 = 6033; Cases pending as of 12/31/2020 = 5841; Cases pending for more than 2 years from the date the case is brought to the 2nd instance courts = 1730. Source: datawarehouse (data extraction date: 06/16/2021)
*Civil litigation cases: for 2020, there is a decrease in the number of new cases and an even greater decrease in the number of completed cases due to the pandemic that has affected the operation of the courts

(2018): Number of cases before courts of appeal, labour courts and cases of appeal against decisions of justices of the peace and police courts, at the first instance level.
Court of Appeal (civil matters): pending cases at 1/01/2018 = 33,018; pending cases at 31/12/2018 = 32,321; pending cases for more than 2 years from the date in which the case is brought before the courts of second instance = 13,507. Labour Court: pending cases at 1/01/2018 = 6236; pending cases at 31/12/2018 = 6201; pending cases for more than 2 years from the date in which the case is brought before the courts of second instance = 1535. Bron: datawarehouse (extraction 1/09/2019)
no data on pending appeals against decisions of the justices of the peace and police courts at the first instance level.
In administrative matters, there is no second instance. The Council of State is the only supreme court.

(2017): Number of cases before courts of appeal, labour courts and appeals against decisions of justices of the peace and police courts at the first instance level.
Courts of Appeal: Justice in numbers

(2016): Number of cases before courts of appeal, labour courts and cases of appeals against decisions of justices of the peace and police courts, at first instance.

Bulgaria

(General Comment): The division by types of cases in the statistical forms published by Supreme Judicial Council of Bulgaria is quite different from the CEPEJ categorisation and for that reason breakdown cannot be made. Only administrative cases are possible to differentiate due to existence of administrative courts. In Bulgaria registry cases are under the competence of the Registry agency where is the property register, the commercial register, the BULSTAD register and the Register of the Property Relations between spouses. We should mention though that under current legislation Sofia City Court keeps a public register of political parties (https://sgs.justice.bg/bg/14755) and a public register of religious denominations having the status of legal entities. Sofia City Court is a Provincial/ Regional Court and as other regional courts acts as court of first and second instance. As far as registry cases are concerned Sofia City Court acts as first instance. So, there are some “other registry cases”, however, their number is insignificant. The special place and status of the Sofia City Court among the regional courts is determined by its competences, the most important of which are: claims for the recognition and enforcement of decisions of foreign courts, as well as requests for the recognition of a decision of a foreign court by an interested party that does not have a permanent address or seat on the territory of the Republic of Bulgaria.

(2021): As it is impossible to distinguish between litigious and non-litigious cases for the present, for 2021 the following data is available as to the sum of all civil and commercial litigious and non-litigious cases: pending at the beginning 16 469; incoming 41 774, resolved 41 391 and pending at the end of the year 16 852.

(2020): "Total": the decreases in the number of pending cases is due to growth in civil and commercial cases in 2019 which continued in 2020, but at a slower pace. As it is impossible to distinguish between litigious and non-litigious cases for the present, for 2020 the following data is available as to the sum of all civil and commercial litigious and non-litigious cases: pending at the beginning 13 612; incoming 43 927, resolved 41 070 and pending at the end of the year 16 469.

(2019): See General comments

(2018): NA

(2016): There is no particular explanation for the downward trend observed between 2014 and 2016 in respect of the number of pending cases on 1 January for the categories "total" and "administrative law cases". All the data provided is correct.

(2012): In the frame of the 2012 exercise, it has been explained that the number of pending administrative law cases on 31 December 2012 has increased because of the increase of the number of incoming cases in 2010 and 2012.

Croatia

(2019): Due to legal changes, the High Administrative Court of RoC started to receive more cases from 2016. With the same amount of judges, they did not manage to cope well with this income of case, therefore pending cases increased.

(2018): In category 1. Civil (and commercial) litigious cases there has been a decrease in the number of pending cases at the beginning of the period, received cases, resolved cases and also pending cases at the end of the year. This seems to be the trend for several years now. Although these courts are resolving less cases than in previous period, due to the reduced income, pending cases are still significantly decreased. Reduced number of received civil litigious and commercial cases on second instance do not have reason in for example law changes. Simply because less cases are resolved at first instance, less appeals are lodged to the second instance.
The increased number of pending administrative law cases at the beginning and at the end of the year as well as received cases is due to the extended jurisdiction of the High administrative court following law changes. The latter led to an increased inflow of cases and difficulty for the High administrative court to cope successfully with the income of second instance cases, especially since the number of judges remain the same as before law changes. This comment was provided also for last cycle. The rest of the categories which have increase or decrease in pending cases is just an effect of the incoming or resolved cases.

(2017): The increased number of pending administrative law cases at the beginning and at the end of the year is due to the extended jurisdiction of the High administrative court following law changes. The latter led to an increased inflow of cases and difficulty for the High administrative court to cope successfully with the income of second instance cases. This comment in more details was provided also for last cycle.
In this category there is more than 20% increase of pending cases at the beginning of reference year in comparison to the beginning 2016. The reason are land registry cases. Reason for increased number of pending land registry cases is decreased number of resolved cases in relation to the number of incoming cases (87%) during previous year (2016.) which affected results for 2017. In 2017, second instance courts also resolved less than received land registry cases.
The reason for the decreased number of pending business registry cases at the beginning of 2017 in comparison to the beginning of 2016 is the number of resolved cases in relation to the number of incoming cases (104%) during 2016. The lower number of received cases and Clearance rate of 106% lead to the decrease of the number of pending business registry cases at the end of 2017. The reason for the decreased number of pending "other non-litigious cases" at the beginning of 2017 in comparison to the beginning of 2016 is the significant number of resolved cases in relation to the number of incoming cases (185%!!) during 2016. Regarding the increased number of incoming cases of this type, there are in absolute numbers very few cases (154) and although there is an increase of more than 20% in comparison to previous year, we think that there is no significant explanation for this, which would affect the trends in following cycles. As for the decrease in the number of resolved "other non-litigious cases", there is no significant explanation for this, but we think that it will not influence the trend in future cycles.
The reason for the decrease of pending civil and commercial litigious cases older than 2 years in second instance courts lays in the fact that in 2017 second instance county courts and the High Commercial Court resolved significant amount of cases in relation to received cases (122%) with special focus on older cases. This led to a decrease of more than 17% of all pending cases and more than 30% of pending cases older than 2 years.
The reason for the decrease of pending non-litigious cases older than 2 years in second instance courts lays in the fact that in 2017 second instance county courts and the High Commercial Court resolved more cases than received (103%) with special focus on older cases. This led to decrease of more than 7% of all pending cases and more than 30% of pending cases older than 2 years (of which they have few in the beginning).The reason for the decrease of pending "general civil and commercial non-litigious cases" older than 2 years in second instance courts lays in the fact that in 2017 second instance county courts and the High Commercial Court resolved more cases than received (103%) with special focus on older cases. This led to decrease of more than 7% of al pending cases and more than 30% of pending cases older than 2 years (of which they have few in the beginning).The reason of the increase of pending registry cases older than 2 years in this category is entirely due to the increase of the number of pending land registry cases older than two years. The reason is already explained - the increase of pending cases in total is due to the difficulty of second instance courts to cope with the income of these cases. Finally, in respect of administrative law cases, due to the decrease of number of pending cases of this type in total, there is also decrease for 8 cases of pending cases older than 2 years (as stated before, we do not think that this is significant change taking into consideration absolute numbers and type of cases).

(2016): Second instance land registry cases, due to introducing separate case registers for certain type of cases on second instance courts,are now traceable as such in case management system. They have been taken out from Other non-litigious cases, where they were presented in previous cycles. The number of administrative cases, both in incoming and pending cases at the end of period is increasing. This is due to the law changes, which have extend jurisdiction of this court and consequently increase income of cases and unresolved cases at the end of period.

(2014): It is noteworthy that in 2012 and 2013, the ICMS could not recognize and divide cases into litigious or non-litigious. In 2014, the ICMS was improved as Croatia introduced updated and a very detailed code table, in order to extract more detailed case types from the system. Therefore, now the distinction between all cases in litigious and non-litigious cases as well as other types of cases can be made very accurately. This change of methodology of categorisation affected the difference between pending cases on 31 December 2013 and pending cases on 1 January 2014 which will disappear in the next cycle.

(2013): In the frame of the 2013 exercise it has been explained that the discrepancies that can be observed in respect of the category “total of other than criminal cases” between the number of pending cases indicated for December 2012 and the number of pending cases communicated for January 2013, result from an administrative correction of a specific small number of cases by the second instance courts after the closure of the statistic period, which the reporting system then generates as a difference concerning previously rendered data.
As to the category “civil and commercial litigious cases”, owing to a different methodology of presentation of data, the number of pending cases in the end of 2012 does not coincide with the number of pending cases in the beginning of 2013. The number of pending cases on 31 December 2012 included second instance-civil and commercial courts’ cases, bankruptcy cases, general non-litigious cases, enforcement cases, land registry cases and company registry cases. Since 2013, it is possible to provide data on the second-instance civil and commercial litigation cases and bankruptcy cases separately from the general non-litigious cases, enforcement cases, land registry cases and company registry cases.
The variations observed with regard to the category “total of other than non-criminal law cases” for the period 2010-2013 can be explained by the negative economic situation in Croatia, which resulted in the increase of incoming commercial and civil cases before first instance courts and consequently led to the increase of the second instance cases.

(2012): As to the variations observed in respect of the “administrative law cases”, they are justified by the reform related to the administrative justice. Basically, till December 2011, they were adjudicated at the Administrative Court of the Republic of Croatia. Provided that the latter was overburdened, the two-instance administrative adjudication was introduced in January 2012. Four regional administrative courts were established as first instance courts (Zagreb, Osijek, Rijeka and Split), and former Administrative Court became second-instance High Administrative Court (appellate court).

Cyprus

(General Comment): The case flow data of the Supreme Court are included in this question as second instance cases, although Cyprus has a two-tier system, therefore the Supreme Court is the second, highest and final instance court.”

(2021): Increase in resolved cases: cases tried together.

(2020): Reducing delays in the disposition time is part of the reform process. In administrative cases in 2019 a big number of cases were tried together. The cases that had the same subject matter were filed individually but were consolidated and tried together but for statistical purposes they were calculated separately. This is the reason why number of resolved cases in 2020 might appear lower than in 2019. The difference in the pending cases in administrative cases compared with previous year is that in this figure we included the cases filed before the Administrative court of international protection which was set up.
The reason we do not have statistical data on subcategories of cases is that the electronic filing system was not introduced that would enable to have statistical data on such cases.

(2019): The Administrative law cases include the cases from the administrative court which was established in 2018.

(2017): appeals filed against decisions of the administrative courts which was established in 2016 should be included in the pending cases on 1.1.2017 as Other cases include family court appeals
Variation between 2016 and 2017 in administrative cases (incoming and resolved): this icludes appeals filed against decisions of the administrative court

(2016): The Supreme Court is the appeal court.

Czech Republic

(General Comment): It is noteworthy that the methodology of presentation of data has been changed since the 2014 exercise. In fact, for 2010, 2012 and 2013, business register cases, administrative cases and insolvency registry cases which are decided by the regional courts (second instance courts) acting as first instance courts, were included in the table concerning the case-load of second instance courts (question 97). On the contrary, since 2014, administrative cases, business registry cases and insolvency cases (and also some litigious cases) which are still decided by the second instance courts acting as first instance courts, are subsumed within the table of question 91 (which was already the case for the 2008 exercise). However, this change is not reflected in question 46 concerning the number of second instance judges because it is very difficult to distinguish among them judges working on administrative cases, business registry cases and insolvency cases (and also some litigious cases).

(2020): In general, number of incoming cases is decreasing and it follows that the numbers of pending cases and resolved are decreasing as well (the situation is getting better). This may result in some big yearly changes and discrepancies. Civil (and commercial) litigious cases: In general, number of incoming cases is decreasing (mostly because number of first instance cases is decreasing too) and it follows that the number of pending cases is decreasing as well (the situation is getting better). This may result in some big yearly changes and discrepancies.
Other cases: The variations are the result of changes in first instance agenda. This category includes insolvency cases and there were numerous legislative changes in last years. Also, it must be noted that the number of pending cases is relatively small, thus the variance is bigger.

(2019): In "Other cases" category, insolvency cases are reported.
In general, number of incoming cases is decreasing and it follows that the numbers of pending cases and resolved are decreasing as well (the situation is getting better). This may result in some big yearly changes and discrepancies.

(2018): In "Other cases" category, insolvency cases are reported.
In general, number of incoming cases is decreasing and it follows that the numbers of pending cases and resolved are decreasing as well (the situation is getting better). This may result in some big yearly changes and discrepancies.

(2017): In "Other cases" category, insolvency cases are reported. In this year the number of resolved insolvency cases greatly exceeded the number of incoming insolvency cases, which led to huge drop in pending cases at the end of the year and discrepancy appeared. The changes are connected to changes in first instance insolvency agenda.

(2016): Increase in the number of "other cases" in 2015 and 2016 is due to the change of methodology applied to these data.

(2015): Increases in the number of "other cases" are due to the change of methodology applied to the 2015 data.

(2014): In 2014, the high increase of insolvency cases is due to numerous cases of personal bankruptcies as well as to an unfavourable economic situation.

(2013): For the 2013 exercise, the totals do not include the number of non-litigious business registry cases which is not available.

(2012): For the 2012 exercise, the totals do not include the number of non-litigious business registry cases which is not available.

Denmark

(General Comment): It is noteworthy that all appellate cases are considered as “litigious cases” which explains the reply NAP for all the other categories, as well as the fact that the total coincides with the number of civil and commercial litigious cases. The number of “administrative law cases” which are litigious is encompassed in the number of “civil and commercial litigious cases”.
Another important remark concerns cases that are not first instance cases before the two High Courts and which are included in question 97. Cases that begin as first instance at one of the two High Courts are not included in the figures in table 97.

(2016): Pending cases may vary a lot depending on the ratio of resolved cases compared to incoming cases. We can observe a decrease of about 30 % of pending cases ultimo the 2016. This is due to this "residual" nature of pending cases. The decrease in the pending cases between 2014 and 2016 is because in both calendar years 2015 and 2016 the number of resolved cases exceed the number of incoming cases.

(2014): In the ambit of the 2014 exercise, it has been emphasized that due to an improved business situation, courts on all levels receive fewer cases, i.e. civil cases, enforcement cases, forced sales, insolvency cases. Generally speaking, pending cases are also reduced thereby.

Estonia

(General Comment): Some horizontal inconsistencies and inconsistencies with previous year are due to the fact that data are always taken from the live database.

(2021): In 2021, a general increase in the case load of circuit courts is observed.

(2019): Some horizontal inconsistencies and inconsistencies with previous year are due to the fact that data are always taken from the live database.

(2015): In respect of the civil and commercial non-litigious cases, the increase from 2013 in the number of pending cases resulted from the implementation of an efficiency-raising project in 2013 in Harju County Court. Accordingly, the efficiency of the latter increased significantly in civil cases. Owing to the fact that this court is the largest 1st instance court dealing with 1/3 of all of the cases in Estonia, it had an impact on the case-flow of the second instance courts (only 2 appeal courts competent in civil, criminal and administrative matters).
As to the administrative cases, it is noteworthy that as there are only 2 appeal courts in Estonia competent in civil, criminal and administrative matters, every change in the number of 2nd instance judges influences the statistics of the Courts of appeal. Between 2010 and 2012 there were a few vacant administrative judges’ positions in one of the appeal courts which had an impact on the number of pending cases

(2014): On the occasion of the 2014 exercise, it has been emphasized that there has been an ongoing reform concerning the court budgets and judicial performance indicators. Agreements have to be adopted on the occasion of the budget negotiations between the Ministry of Justice and the courts concerning the efforts that need to be undertaken in court to clear the backlog and accelerate proceedings.
As to the increase of the total of pending other than criminal cases (beginning and end of the year), the reason is that 1st instance courts started the project of clearing backlogs and accelerating proceeding earlier. As a result, the number of incoming cases in 2nd instance courts increased in 2013 and resulted also in an increase of the number of pending cases by the end of the year 2013.
For 2014, non-litigious enforcement cases are included in the category “general civil (and commercial) non-litigious cases”.

(2013): In the frame of the 2012 and 2013 exercises, several clarifications were provided.
Firstly, in respect of the civil and commercial litigious cases, the observed variations were deemed to be normal, as a part of the ordinary dynamics of the case-flow.
Secondly, in respect of the civil and commercial non-litigious cases, the increase in the number of pending cases resulted from the implementation of an efficiency-raising project in 2013 in Harju County Court. Accordingly, the efficiency of the latter increased significantly in civil cases. Owing to the fact that this court is the largest 1st instance court dealing with 1/3 of all of the cases in Estonia, it had an impact on the case-flow of the second instance courts (only 2 appeal courts competent in civil, criminal and administrative matters). Owing to that, in 2014 one civil judge's position was given to the Tallinn Appeal Court in order to raise their efficiency.
As to the enforcement procedures, they are in the competence of public bailiffs who are completely independent from the judicial system but act as public authorities. The reply NA is justified by the impossibility to distinguish in the bailiffs' information system the enforcement proceedings where the enforcement instrument is court decision from all the other enforcement proceedings where the enforcement instrument is for example a fine made by police, an administrative act made by the tax authority etc.
In respect of the land registry and business registry cases, it should be recalled that they are within the competence of the 1st instance courts. If the decision of the registry is appealed, it goes to the first instance court as a regular civil case.
As to the administrative cases, it is noteworthy that as there are only 2 appeal courts in Estonia competent in civil, criminal and administrative matters, every change in the number of 2nd instance judges influences the statistics of the Courts of appeal. Between 2010 and 2012 there were a few vacant administrative judges' positions in one of the appeal courts which had an impact on the number of pending cases.

(2012): In the frame of the 2012 and 2013 exercises, several clarifications were provided.
Firstly, in respect of the civil and commercial litigious cases, the observed variations were deemed to be normal, as a part of the ordinary dynamics of the case-flow.
Secondly, in respect of the civil and commercial non-litigious cases, the increase in the number of pending cases resulted from the implementation of an efficiency-raising project in 2013 in Harju County Court. Accordingly, the efficiency of the latter increased significantly in civil cases. Finland

(2021): The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on 20.1.2022 and reflects the situation on that day. The data available is: 1)Incoming cases 2)Resolved cases 3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously announced number of cases on 31 December and the now announced number of cases in 1 Jan will differ. Other cases are: Cases dealt in Court of Appeal as first instance, military court cases, and cases related to releasing a prisoner serving a life sentence [pitkäaikaisvankien vapauttamismenettelyasiat].

(2020): The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly
changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on
12.1.2021 and reflects the situation on that day. The data available is: 1)Incoming cases 2)Resolved cases 3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously annouced number of cases on 31 December and the now announced
number of cases in 1 Jan will differ. Currently the calculation is further complicated by the partial implementation of the new cases
managements systems, AIPA (for general courts) and HAIPA (for administrative and special courts).

(2019): The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on 22.1.2020 and reflects the situation on that day. The data available is:
1)Incoming cases 2)Resolved cases
3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously annouced number of cases on 31 December and the now announced number of cases in 1 Jan will differ. Currently the calculation is further complicated by the partial implementation of the new cases managements systems, AIPA (for general courts).

(2018): In 2017, the number of incoming cases has decreased for example due to some procedural changes and the courts have been
able to resolve more pending cases. Accordingly, the number of pending cases at the beginning of 2018 has decreased.

(2017): In 2016, the number of incoming cases has decreased (for example due to some procedural changes) and the courts have been able to resolve more pending cases. Accordingly, the number of pending cases at the beginning of 2017 has decreased.

(2016): The number of incoming cases has decreased (for example due to some procedural changes) and the courts have been able to resolve more pending cases.

(2013): The category of civil and commercial non-litigious cases includes petitions for the 2012 exercise, divorce cases and petitions (without cases included in the other sub-categories) for the 2013 exercise. As for the category “other”, according to the provided comments, in 2012 it encompasses cases, which Appeal Courts resolve as 1st instance, military justice cases and cases concerning prisoners. In 2013 it subsumes temporary procedural remedy cases, adjustment of the debts of a private individual - cases, restructuring of enterprises cases and bankruptcy cases and complaints.

(2012): The category of civil and commercial non-litigious cases includes petitions for the 2012 exercise, divorce cases and petitions (without cases included in the other sub-categories) for the 2013 exercise. As for the category “other”, according to the provided comments, in 2012 it encompasses cases, which Appeal Courts resolve as 1st instance, military justice cases and cases concerning prisoners. In 2013 it subsumes temporary procedural remedy cases, adjustment of the debts of a private individual - cases, restructuring of enterprises cases and bankruptcy cases and complaints.

France

(2021): Source Council of State and SDSE
Administrative law cases: regarding the ageing of the stock, the output of the Administrative Courts of Appeal (CAA) fell sharply in 2020 (-10%) because of the COVID-19. When the situation returned to normal, the CAAs gave priority to foreigners' litigation, which accounts for almost 50% of their entries, and the stock therefore aged mechanically.

(2020): "The health crisis and containment may have played on TAs (completed cases) (by reducing the ability of courts to process cases) but also on NAs (new cases) (fewer offenses committed, fewer cases brought to trial). Prior to this, a major lawyers' strike and a transport strike had mainly affected the TAs.
Commentary provided by the highest administrative Court : As a reminder, the measures derogating from the ordinary law of contentious administrative procedure adopted to respond to the situation arising from the health crisis caused by the Covid-19 epidemic were provided for by Ordinance no. 2020-305 of March 25, 2020, and then by Ordinance no. 2020-1402 of November 18, 2020, and Decree no. 2020-1406 of the same day. I - Concerning the rules relating to the organization or holding of hearings 1°) Use of audiovisual or any other means of electronic communication
The two orders of March 25 and November 18, 2020 provided for the possibility of using an audiovisual means of telecommunication for the holding of hearings or any other means of electronic communication.
When this device was used, it was used, in almost all the jurisdictions that had recourse to it, for less than 10% of the cases judged in collegiality during the same period.
The most common configuration used was that in which one or more members of the panel were at a distance and the president, the other members of the panel, and the parties and their counsel were in the courtroom (approximately 75% of the courts that used videoconferencing chose this configuration, and 53% of them used it for less than 10% of the cases heard by the panel). Very few courts have used video-conferencing with remote parties. The reasons for which the courts have used video-conferencing are linked to the constraints linked to the health crisis, in particular the difficulties encountered by lawyers to travel, especially in overseas territories, and the isolation imposed on certain people (judges or lawyers) declared to be in contact or recognized as fragile.
In the case of single-judge hearings, the courts have made a very measured application of the provisions allowing the use of an audiovisual means of telecommunication, since only 6 administrative courts out of 35 have indicated that they have used it. The administrative courts indicated that they had used videoconferencing, as a single judge, for the processing of emergency proceedings in matters concerning foreigners, particularly in cases where the foreigner was in administrative detention. Finally, 15 administrative courts indicated that they held summary proceedings by videoconference. For almost all of these courts, the summary proceedings judge was in the courtroom and the parties were at a distance, and less than 10% of summary proceedings cases were judged in this configuration. Travel difficulties were the main reasons why the courts of first instance held summary proceedings by videoconference. The texts applicable during the state of health emergency allowed the use of any means of electronic communication, other than videoconferencing, in case of impossibility to use it. Only a few TAs used this procedure and for less than 10% of the cases in the courts that used it.
Generally speaking, the courts have made a very measured application of the provisions of the orders allowing hearings to be held by videoconference and this use was justified by the constraints and difficulties linked to the health crisis. 2°) The provisions allowing to limit the number of persons attending the hearing were applied by a large number of courts and in a frequent manner. On the other hand, the provisions allowing the president of the court to decide that the hearing will be held without the presence of the public have been used very little. 3°) The dispensation of the public rapporteur's conclusions has been used very little by the courts. This dispensation was applied because of the vulnerable state of the public rapporteur or to limit the length of the hearings (in these cases the dispensation was granted for cases that did not present any difficulty).

(2017): As regards administrative law cases, the Council of State report indicates that it is a coincidence to have the same number for incoming and resolved cases.

(2013): 2012, 2013: The 'non-litigious matters relating to the implementation' (which answer is NA) exist but are included in the category 'non-litigious civil cases'.

(2012): 2012, 2013: The 'non-litigious matters relating to the implementation' (which answer is NA) exist but are included in the category 'non-litigious civil cases'.

Germany

(General Comment): General information on the statistics used as sources for answering the questions in this section:
Once per year, the Federal Statistical Office compiles and publishes the statistics of the civil, criminal, administrative, finance, social, family and labour courts. Nationwide uniform ordinances define the scope and rules of data collection for these statistics. The courts collect the data and submit it to the statistical offices of the Länder, who check and edit the data and send it to the Federal Statistical Office. In simplified terms, the ordinances provide two different kinds of data collection sheets: The "procedural surverys" that collect data on the specifics of the proceedings happening at a court and the "monthly surveys" that track the caseload of a court. With regard to the caseload count, the monthly surveys distinguish between "caseload of proceedings covered by the procedural surveys" and "other caseload". For the cases from the first category (proceedings covered by the procedural surveys), the monthly surveys collect the number of cases pending at the beginning and at the end of a month as well as the number of received and resolved cases. For the "other caseload", the monthly surveys generally only count the number of received cases, claims, etc..
In the monthly surveys of a court, a statistical record with regard to the stage of appeal exists for the proceedings covered by the procedural surveys, while the case count for "other caseload" generally only exists for the whole court.
Pending cases older than 2 years from the date the case came to the first instance court:
With regard to the statistics of the civil, criminal, administrative, finance, social, family and labour courts, a statistical record of the day a case came to the court only exists for the cases covered by the procedural surveys. Courts submit the data from the procedural surveys to the statistical offices after the case has been concluded for the respective court and at the respective instance. This means that the duration of a proceeding is unknown for pending cases. The monthly surveys count the number of pending cases at the beginning and at the end of a month, but do not collect any information on the date the pending cases came to the court. The statistics compiled by the Federal Statistical Office include information on the percentage of cases that were resolved within certain time frames but no numbers on how many proceedings took longer than two years. The statistic on the workload of the Local Courts in matters of non-contentious jurisdiction does not collect any data regarding the date a case first came to court.
Horizontal inconsistencies in the table:
The inconsistencies with regard to the pending cases at the end of the year also occur in the statistics published by the Federal Statistical Office. The reason for this is, that courts submit count corrections for the monthly surveys at the end of the year.

(2021): "Other": family cases at Higher Regional Courts, appeal and complaint proceedings at Regional Labour Courts
Pending civil and commercial litigious cases on 31 Dec: The discrepancy stems from a rise in pending cases at the Higher Regional Courts (approx. 33% compared to 2020). While the number of pending cases at the Higher Regional Courts has risen in all Länder, the discrepancy is especially high in Baden-Württemberg (rise of approx. 88%). The reason for this is most likely the flood of lawsuits brought against car manufracturers in connection with the "diesel emission scandal". The Higher Regional Court of Stuttgart, where a large manufracturer has its main offices, has seen a rise in pending cases of more than 100% compared to 2020.

(2020): family cases at Higher Regional Courts, appeal and complaint proceedings at Regional Labour Courts

(2019): The horizontal consistency in the table is not ensured because the data are continuously checked.

(2015): A substancial number of the Länder was unable to provide information, meaning that any amount cited would not be meaningful in substantive terms.

(2014): The 2014 data are the same as those that have been provided in 2013. No update was available.

(2013): For 2013, two Landers did not provide any information.
The category “other “ includes proceedings on complaints on appeal in family cases at the Higher Regional Courts and appellate proceedings on fact and law and proceedings on complaints on appeal at the Regional Labour Courts. In addition, given a lack of complete data, a total of 164 272 new legal cases or proceedings on complaints on appeal (in custodianship, accommodation, insolvency, estate, and costs cases, along with other complaints on appeal) were not considered in the category “other”.
Regarding the slight horizontal inconsistency for the category “administrative law cases”, it can partly be explained by the federal State structure of Germany. Moreover, data regarding incoming administrative law cases also reflected the number of appeals against decisions to grant provisional legal protection in the higher administrative regional courts and in the higher social courts; and appeals in matters of legal aid and other proceedings. In comparison with the previous years, the 2013 data are more accurate. The same applies regarding resolved cases even though no data was available for the appeals in matters of legal aid and other proceedings.
With regard to the sub-category “civil and commercial litigious cases” and the meaningful increase of the number of resolved cases, it should be noticed that in the frame of the 2013 exercise, the indicated figure encompassed the number of resolved civil and commercial litigious and not-litigious cases. For this cycle, it was impossible to distinguish between these two sub-categories.

(2012): In the frame of the 2012 evaluation it was stressed that the values regarding questions 91, 94, 97, 98, 99, 100, 101, 102, 107, 108 corresponded to data of the year 2011.

Greece

(2021): The data are from the Statistical Service of the Ministry of Justice.
The data has been collected from the 19 out of 19 Courts of Appeal in Greece.
Business registry cases do not belong anymore to the case of the courts, there is new department of a different Ministry.

(2020): Due to the pandemic, pending cases have accumulated in the courts of first instance, with the result that the courts of second instance have fewer cases to handle.
The data given for questions 97 and 98 are collected from all second instance courts. However, many fields are answered NA as only few data were collected from the second instance Courts.

(2019): The Council of State did not provide the Ministry of Justice with data regarding the Administrative law cases

(2017): Concerning Civil and Commercial litigious cases but also administrative law cases, the numbers are different from those provided in the 2016 questionnaire due to the recent operation of the OSDDY-PP and OSDDY-DD Integrated Management Systems (please see the comments provided for Q91).
Variations in the number of resolved cases are explained by the fact that in 2017 the function of the courts was not affected by the strike of the lawyers, which took place in 2016.

(2016): Any deviations from the 2015 figures are due to a new way of collecting statistics. In fact, in 2016, a working group was set up to update and simplify the content of the statistical data requested by the judicial services of the country. The working group created tables followed by detailed instructions and training in relation to the requested information. According to the instructions given to the courts, some procedures they handle, in those which there is no participation of a judge, are not included in the data collected. In addition, in 2016 a long-term abstention by the lawyers of the country took place, resulting in reduction of numbers regarding the cases.

(2012): In the ambit of the 2012 exercise, it has been stressed that, as far as the statistical information provided by the courts is concerned (e.g. replies to questions 91 and 97), the system of collecting data could not comply with the CEPEJ methodology because it was planned having altogether different national needs in mind. Thus, schematically, a case brought into the Greek judicial system gets an initial reference number. However, in the process of being tried, it gets more than one reference number according to the laws. As a result the numbers of incoming and resolved cases do not match.
Moreover, the Ministry of Justice, Transparency and Human Rights was not able to verify the accuracy of the replies, due to the lack of IT system.
Besides, recent law changes have altered the jurisdiction of courts, so the figures communicated for 2012 could not be compared with these provided for the previous evaluation cycles.

Hungary

(2021): As of 1 April 2020, a significant change was introduced concerning the competence of the Administrative Chamber. As a result of this change, all legal remedies sought for in administrative disputes were decided by the Curia after 1 April 2020. Other cases: second instance labour cases and those second instance insolvency cases that are not included in category 2.1.

(2020): The pandemic situation had a huge effect on the case flow of the courts on every level of the court system. Special regulations were adopted by the legislator to promote videoconferencing and the courts were "closed between the 16th of March and the 31th of March (during this period no procedural events could be performed at the courts). Although the courts carried out their main activities, many cases were prolonged e.g. because the parties were not able to attend the hearings. Regarding administrative cases the re-organization of administrative jurisdiction also could have an effect on the case-flow.

(2019): No specific reason was pointed out in respect of decreases observed for the period 2018 - 2019 with regard to "4. other cases".

(2017): With regard to variations observed in the numbers of “registry cases” and “other registry cases”, it is noteworthy that the content of these categories is the same for the last four cycles. As the legislation on civil societies was amended in 2014 this resulted in an increased number of registry cases, but since then the number of incoming cases is decreasing.

(2016): With regard to the pending cases, it is noteworthy specifying that the decrease of the “backlog” of the courts is an overall trend in the Hungarian judiciary.
As for the other variations observed within the frame of question 97, the “raw” figures in most of the categories can be considered as relatively low figures (e.g. some hundreds in the whole country), so even a not so huge increase or decrease result in a large percentage change.

(2014): In 2014, in contrast with the 2013 evaluation, some registration cases were also included within the category “civil and commercial non-litigious cases”. The item “other registry cases” includes registration of civil societies. The item “other non-litigious cases” includes court mediation and non-litigious labour cases.
The category “other” encompasses insolvency cases and labour cases.

Ireland

(General Comment): Administrative law cases are included in the number of Civil (and commercial) litigious cases.

(2020): Reduced cases due to COVID-19 pandemic. During the most restrictive lockdowns, only essential proceedings could be dealt with, but as guidance allowed, case volume increased. Urgent and essential cases continued to be heard throughout. This included domestic violence and criminal proceedings. All written judgments were delivered electronically and published on the Courts Service website, courts.ie.
Attendance at Court offices was by appointment only to ensure that footfall could be safely managed.
The Court of Appeal quickly adopted the use of video technology and made greater use of electronic documentation to facilitate its work. Procedures were introduced to ensure that justice was administered in public. Judgments were delivered electronically. Waiting times for a hearing were improved, to a certain extent, by a net reduction in the numbers of new cases coming into the list from other jurisdictions. By year end, there was a net improvement in the numbers of cases waiting to be dealt with compared to 2019.

(2017): The number of resolved civil and commercial litigious cases reflects a significant reduction in disposal of second instance appeals by comparison with that returned in the previous reporting cycle.

(2016): As concerns the number of resolved "Civil and commercial litigious cases", 2016 data reflects a significant increase in disposal of second instance appeals over that in the previous reporting cycle. Accordingly, the total of resolved cases is affected.

Italy

(General Comment): · Non-litigious enforcement cases are not in the competence of the Courts of Appeal.
· With regard to the administrative cases (which number is provided only since 2014), the appeals are dealt with by the Council of State (Consiglio di Stato) which is a legal-administrative consultative body ensuring the legality of public administration in Italy. The Council has jurisdiction on acts of all administrative authorities, except when these authorities lack discretionary power, in which case the dispute is considered to be one of civil law. Figures referring to the activity of the Council of State are inserted in the frame of question 99 and not question 97.

(2021): There are no "other cases"
Figures in 2020 were hugely affected by the pandemic

(2020): In 2020 the case flow was highly affected by the COVID-19 pandemic and the consequent temporary shutdown of courts. This had an impact on both incoming and resolved cases, which fell quite considerably compared to 2019. However, the fall in the number of resolved cases was less drastic than that of incoming cases, resulting in a clearance rate (CR) higher than 100% and, hence, in a reduction in the number of the unresolved cases (i.e. the pending cases at the end of the period). The COVID-19 pandemic also had a strong impact on the disposition time (DT).

(2018): -

(2017): The number of pending “civil and commercial non-litigious cases”, older than 2 years, decreased between 2016 and 2017. Generally speaking, pending cases older than 2 year have priority. However, in this specific case, the important reduction (in %) is mainly due to the fact that the numbers are small.

(2016): As regards the variations concerning the category "general civil (and commercial) non litigious cases", it should be noted that the Ministry of Justice has recently implemented a data warehouse system that can collect a huge number of data and events pertaining to millions of civil cases. The new DWGC (Data Warehouse for Civil Justice) is now fully operational and it represents a major improvement in terms of statistics and quality. Since 2015, data pertaining to Q.97 is extracted from the above Datawarehouse and it is to be considered more accurate than the figures provided in the past.
It should be noted that in 2014 for many cases it was not possible to distinguish between litigious and non-litigious cases because they were coming together in a bundle. With the data warehouse it is possible to tell whether any given procedure has either litigious or non-litigious nature. Besides, when comparing pending cases on 31 Dec 2014 with pending cases on 1 Jan 2016, the variations are less important.

(2015): The appeal of administrative case is dealt by the Council of State (Consiglio di Stato) which is a legal-administrative consultative body that ensures the legality of public administration in Italy. The council has jurisdiction on acts of all administrative authorities, except when these authorities lack discretionary power, in which case the dispute is considered to be one of civil law.

Figures referring to the activity of the Council of State (second instance of administrative justice) have been submited to Q.99 rather than Q.97.

Figures on Q.97 (points 1 and 2) have been extracted from a new IT system called “Civil Data warehouse”. This new system allows us to get in-depth information on single proceedings. Before the implementation of such data warehouse, statistics were based on aggregated variables that only partially could distinguish between litigious and non-litigious cases.
All cases dealt by the Supreme Court of Cassation has always a litigious nature.

Latvia

(General Comment): Data from the first and appeal instance courts are compiled by the Court Administration, and the Court Information System is a living database that allows data to be corrected, so changes between previous periods are possible. In accordance with the provisions related to data gathering, all information must be recorded in the Court Information System within 3 days. However, the Court Information System functionality for the statistical reports provides in the System recorded figures at the end of the year. Consequently, submissions received in the previous year but registered the next year are considered as incoming cases for the new year.
Justice statistics do not distinguish between “non-litigious enforcement cases” and “non-litigious business registry cases” because such types of cases are not defined in the Civil Code. Accordingly, the reply in their respect is NAP. At any rate, both of these sub-categories of cases are not within the competence of courts neither in first instance (similar to the “non-litigious land registry cases”), nor in second instance. By contrast, the “non-litigious land registry cases” are dealt with by the regional courts in second instance and they are within the competence of the Land Registry Office only in first instance.

(2021): Comparing to the previous period, the number of pending civil cases on 1 Jan is lower due the restriction measures of the Covid-19 spreading in 2019 and 2020. However indicator of pending administrative law cases on the beginning of year is lower than previous period due the high CR in 2020.
The reduction of pending cases is related to the increased interest and pressure of the public, the Council of Justice and the Ministry of Justice to reduce the number of long pending cases.

(2020): Data on civil (commercial) litigious cases (number of resolved and incoming cases) is lower due to the Covid19 pandemic. On March 14 2020 there was the state of emergency that affected the work of courts. In order to mitigate potential risks of virus, oral proceedings that did not involve serious violations of rights were cancelled. This restriction directly affected the number of resolved cases. Also, there were restrictions on appearance of persons in the court, that affected the number of new claims or request - incoming cases. The first state of emergency lasted till June 2020. The second state of emergency started in November 2020.
Number on civil (commercial) non - litigious cases include the data like in the first instance. Mainly there are cases on undisputed enforcement. Usually, non-litigious cases are resolved in written (not oral) process, and during State of emergency oral processes were not allowed, but there were no restriction on written process. According to this the number of non-litigious cases are higher.
Number on incoming administrative cases are lower. It is connected with restrictions of state emergency situation when representatives from institutions could not check, revise, visit companies (individuals) in the face-to-face meetings.

(2019): Decrease of pending administrative cases us due to many result cases in previous period
The number of Non-litigious civil cases is very low, that's why percentage isn't good qualifier

(2018): Partially due to court system reform, Court Information System database has undergone several error checks and data clean-ups, that has affected amount of cases, especially – pending. Data on court statistics are being calculated by automated systems and records on changes that affect data in database are not available. Any changes to the Court Information System can affect the data.

(2017): As regards the decrease from 2016 in administrative law cases pending on 1 Jan, it can be explained as there were much more resolved cases than incoming in previous cycle. As regards the decrease in the total of other than criminal pending cases, it can be explained as there was a change of pending civil law cases in second instance. This might be an issue due to reclassifying the starting moment of a court case. Also, much more resolved cases than incoming cases has decreased the amount of unresolved cases on 31 Dec.

(2016): The increase in pending civil cases is due to fewer resolved cases in 2015. Decrease in pending Administrative cases is due to more resolved cases in 2015.

(2014): In the frame of the 2013 and 2014 exercises it has been indicated that the category “other” includes the following types of cases from the Supreme Court : cases related to moral and physical damages; copyright related cases; family relationship; deprivation of citizenship; labour law cases; cases in respect of inheritance rights.

(2013): In the frame of the 2013 and 2014 exercises it has been indicated that the category “other” includes the following types of cases from the Supreme Court : cases related to moral and physical damages; copyright related cases; family relationship; deprivation of citizenship; labour law cases; cases in respect of inheritance rights.

(2012): The decreases observed in 2012 with regard to the totals in respect of the different items (pending, incoming and resolved cases) are the consequence of the evolutions noticed for each of the sub-categories in respect of the number of incoming cases. The decrease of the latter and the improvement of the judicial efficiency resulted in a decrease of the number of pending cases. The end of the economic crisis and the strengthening of the courts’ capacity are general factors which have to be taken into account when analysing this positive trend.
As to the sub-category “civil and commercial litigious cases“, the increase of the number of pending cases on 1 January 2012 is due to the increase of the number of incoming cases in different categories of cases such as different types of bankruptcy cases which know a long processing time. The duration of these special types of bankruptcy cases cannot be shortened by improving the efficiency of the judiciary. The increase of the number of resolved cases can be explained by the improvement of the work capacity of courts.
As to the sub-category “civil and commercial non-litigious cases”, the decrease of the number of resolved cases and pending cases on 1 January 2012 and 31 December 2012 can be explained by the transfer of a part of the cases from the first instance courts to the Land Registry Department, following the legislative reform of 1 January 2012. The number of incoming cases has decreased essentially due to external (socio-economic) factors, namely the gradual exit from the economic crisis during 2010-2013.
As to the sub-category “non-litigious land registry cases”, the increase of the number of resolved cases between 2010 and 2012 can be explained by the courts work reviewing a large number of cases in the law limited time because of external factors causing an increase of the number of incoming cases before the entry into force of the new provisions of the Civil Procedure Law on 1 January 2012.
As to the sub-category “administrative law cases”, the decrease of the number of pending cases on 1 January 2012 can be explained by the courts work, namely the improvement of the judicial capacity and the decrease of the number of incoming cases due to external factors as public activity resubmission to the Administrative Court and internal factors. The decrease of the number of resolved cases can be explained by the limited capacity of courts work, the complexity of the cases, the parties’ failure to appear for court hearings, etc. The decrease of the number of pending cases on 31 December can be explained by the improvement of the judicial capacity of courts and decrease of incoming cases due to external factors.
There are no cases in the sub-category “other”. All cases are distributed among the mentioned categories No.1, No.2 and No.6.
The decreases observed with regard to the totals in respect of the different items (pending, incoming, resolved cases) are the consequence of the evolutions noticed for each of the sub-categories in respect of the number of incoming cases. The decrease of the latter and the improvement of the judicial efficiency resulted in a decrease of the number of pending cases on 1 January and 31 December. The end of the economic crisis and the strengthening of the courts’ capacity are general factors which have to be taken into account when analysing this positive trend.
As to the sub-category “civil and commercial non-litigious cases”, the increase of the number of resolved cases between 2012 and 2013 can be explained by the long pending backlog of complex cases before the courts of the second instance.

Lithuania

(General Comment): In Lithuania, statistical data on case flow and their classification are made according to the specific regulations and are mainly based on the institutes of Civil, Criminal Codes and the codes of Civil and Criminal procedures, as well as the Code of Administrative Offences and the law on Administrative procedure. Therefore figures for some of the types of cases are unavailable because there is no such classification while making statistical reports. In respect of the variations that can be observed between figures provided for the different evaluation cycles and in the light of the above described peculiarity of the statistic system of Lithuania, it is noteworthy that cases the number of which is not available are included in other categories, i.e. “civil litigious”, “civil non-litigious”. Accordingly, the indicated totals are relevant. Second instance courts deal with some non-litigious cases, but their number is insignificant.

(2021): Other cases include appeal cases regarding decisions announced by the district courts in cases of administrative offenses.
The number of incoming administrative cases were increased in 2021 due to 1214 cases received in Vilnius Regional Administrative Court and the Regional Administrative Court regarding asylum (due to decisions taken by the Migration Department under the Ministry of Internal Affairs not to consider the request for granting asylum or decisions not to grant asylum). Only 335 such cases were examined.

(2020): Second instance courts deal with some non-litigious cases, but their number is insignificant.

(2019): "Other": administrative offence cases (including cases in process of enforcement (execution)).
"Administrative cases" - the data provided encompasses cases dealt with by the Supreme Administrative Court of Lithuania; it is to notice that these figures include apellation cases (on decisions of the court of first Instance) well as cases that are heard in the Supreme Administrative Court of Lithuania as sole instance.
"Pending cases older than two years": the decrease is due to the fact that cases pending for more than 2 years have been resolved.

(2018): The decrease in "other cases" (4), i.e. administrative offence cases (including cases in process of enforcement (execution), at second instance courts (appeal) in 2017-2018 period was related to the decreased number of resolved administrative offence cases in the first instance courts (see Q091).

(2017): As regards the category "other cases" which refers to cases of administrative offences and cases of administrative offences in process of enforcement (execution), the observed decreases in their numbers (pending at the beginning of 2017, incoming, resolved, pending at the end of 2017) are the consequence of the entry into force of the new Code of Administrative Offences.

(2016): The changes in number of cases are mainly related to the increased number of resolved administrative cases in the first instance administrative courts in 2015 and 2016 (the courts were fighting backlogs from previous years) and the renewed processes that were suspended in the second instance court due to the application to the Constitutional Court of the Republic of Lithuania (related to salaries of civil servants, decreased pensions, etc.).

(2014): The increase between 2013 and 2014 in number of cases can be explained by the increase in the number of incoming administrative cases and cases of administrative offence. They were mostly cases on remuneration of public servants in 2013 due to the decision of the Constitutional Court of the Republic of Lithuania, which recognized the laws on the reduction of the remuneration of state servants and judges unconstitutional. This also had an effect on the significant increase of the category “other cases” since this situation resulted in the increase of the number of cases of administrative offence (in execution process).

Luxembourg

(2021): The increased number of pending administrative law cases at the beginning of 2021 is a consequence of the increase in the number of pending administrative law cases at the end of 2020. In this respect, it should be recalled that the decrease of the Clearance rate for 2020 was mainly due to the increase in the number of appeals, in particular those relating to the general development plan of the City of Luxembourg. These cases had entered the first instance from January to March 2018, while the related judgments, consolidated by the administrative court, were delivered between May and September 2020. The related appeals, 51 in number, were filed between July and November 2020 and were still under investigation on 31 December 2020 due to the fixed time limit regime of investigation, but also due to the pandemic and the introduction of crisis legislation involving a suspension of appeal timeframes.

(2020):

Administrative cases - the decrease in the RC for 2020 is primarily due to the increase in the number of appeal motions, particularly those related to the City of Luxembourg's general development plan. These cases were entered in the first instance from January to March 2018, while the related judgments, consolidated by the Administrative Court, were issued between May and September 2020. The related appeals, numbering 51, were filed between July and November 2020 and were still being processed on December 31, 2020, due to the fixed timeframe regime (suspension from July 16 to September 15 - one month for the answer - one month for the reply - one month for the rejoinder), but also due to the pandemic and the implementation of crisis legislation involving a suspension of the appeal deadlines (until June 24, 2020). Thus, in addition to the increase in the number of requests for appeal, their investigation has been postponed, leading to an increase in the number of cases pending as of December 31, 2020. Throughout 2020, the Administrative Court was essentially up to date and disposed of cases as soon as they had been heard. The same is true in 2021.

(2019): Civil and commercial litigious cases pending at the beginning of the year have been restated in relation to those available at the time of the 2018-2020 evaluation cycle. The introduction of a new case management application at the Court of Appeal (JUCIV) has made it possible to identify a number of cases, still listed as pending, which were in fact completed.

(2016): It is a fact that the number of appeals before the Court decreased between 2014 and 2016. A key reason is that the number of appellate judgments rendered by the court has decreased significantly. The first reason is that the court had to evacuate a large number of cases as a matter of priority under the so-called accelerated procedure provided for by the law of 18 December 2015 on international protection. For the judicial year 2015/2016, 355 judgments out of a total of 938 judgments (excluding striking off) were rendered in accelerated proceedings and therefore not subject to appeal.

(2013): 2013: because of the international events that have increased the number of asylum seekers, the administrative courts that have jurisdiction in case of appeal against a refusal of refugee status, have, in particular in 2013 but already during the 3-4 previous years, known a significant increase in this very specific litigation both at first instance level and appeal level.

Malta

(2020): The decrease in the Incoming caseload results from the disruption of the pandemic on the court operations.
In the second instance courts, we are still unable to distinguish precisely between the cases that are appealed. Thus, Administrative law cases are included in the number of Civil (and commercial) litigious cases.

(2019): Total other than criminal cases - resolved cases: The data shows an increase in the resolved cseload of the 2nd instance courts and in fact, the pending caseload at the end of the year is less than that registered in 2018. These courts were more efficient in 2019.

(2017): In Malta, the civil second instance courts comprise the Civil Court of Appeal in its Inferior and Superior Jurisdiction. To date, whilst we can collect the data relating to the incoming, resolved and pending caseloads of these courts, we cannot easily distinguish between the sub-divisions of case typology outlined above. What we can tell for sure is that all cases filed before the Courts of Appeal are civil and commercial litigious cases (including a minority of administrative law cases) so the figures provided at Category 1 reflect the global total of cases heard at the second instance courts. Non-litigious cases are not filed before these courts (hence NAP answers).
Concerning the variation between 2016 and 2017 in the pending cases older than 2 years, the reason is due to a different methodology used in 2016 and in 2017.

(2016): Regarding Civil (and commercial) litigious cases: 2015 was the best year in terms of number of resolved cases, mainly because the judiciary were trying hard to conclude cases that were ready for sentencing. In fact, our efficiency indicators reflected this effort. As regards to the other data, we do not, as yet, have those statistics at hand and hence, the last 3 evaluations were marked as NAP.

(2014): The discrepancy in the data provided for 2014 as “pending cases on 31st December 2014” results from an internal exercise being carried out by the Court Administration in which cases that have been prescribed, are being cleaned from the system. This exercise is going to be carried out more frequently so that it does not reflect in discrepancies in the data that is published.

(2013): The significant increase of the number of civil and commercial litigious cases between 2010 and 2013 was due to the fact that the number of appeals has increased substantially in the past few years and the jurisdiction of the Court of Appeal has been extended to include also appeals from large public contract awards. Accordingly, the Court of Appeal was not in a position to manage the considerable influx of cases.

(2012): In 2012, a number of judges in the Appeal Court retired and their replacement took some time to materialise, as a result of which, the number of decided cases decreased.

Netherlands

(General Comment): It is not possible to differentiate between litigious and non-litigious cases at second instance. The financial registrations at first instance make a clear distinction between types of cases (that the answer for first instance can be based upon), but for second instances this differentiation does not exist (and thus, the registration is all the same).
As to the lack of horizontal consistency that can be observed, the reason is that the official number of cases pending on January 1st is determined at different time then the other 3 categories (official incoming, official resolved, official pending on December 31st). Due to time lags in registration and dynamics in the data systems, if the cases pending on January 1st are measured at the same time as the others, the result would be different.

(2021): The number of incoming administrative law cases increased between 2020 and 2021, most probably due to the pandemic. Especially, the number of appeals for tax cases is higher in 2021.

(2020): It is not possible for us to differentiate between litigious and non-litigious cases at second instance. In short, we can provide this for first instance because the financial registrations makes clear distinction between types of cases (finances differ) that we can base that answer on, but for second instances, this differentiation in finances does not exist and thus, the registration is all the same.

(2019): .

(2018): If there is an appeal, cases are litigious in my view. I would tend to enter the value "0", but since the question is being asked, you probably see things differently. So I chose the answer "NA"

(2017): Administrative law cases, litigeous plus non-litigeous.

(2016): Administrative law cases, litigeous plus non-litigeous.

Poland

(General Comment): The Supreme Administrative Court is also the court of second instance and it is impossible for the Statistics Division to divide its cases statistics and identify the number of second instance cases on the one hand, and the number of third instance cases, on the other hand. The total number of administrative law cases dealt with by the Supreme Administrative Court is provided within the frame of Q97, while Q99 is replied by NA.
The category „Other cases” includes appeals and complaints concerning social insurance, minors and others.

(2021): The category „Other cases” includes appeals and complaints concerning social insurance, minors and others.
* administrative law cases - The figures given to you on the receipt of cases at the Supreme Administrative Court and their settlement were affected primarily by two circumstances, i.e. changes in the organizational structure of the Supreme Administrative Court (NSA) and the related transfer of cases between departments, and, as indicated above, restrictions on court operations due to the declared epidemic state in Poland.
As of January 1, 2021, new additional adjudicatory divisions were established in the Finance Chamber and the General Administrative Chamber. Some cases from Divisions I and II of both chambers were transferred to the newly created Division III. These actions had a significant impact on the way the statistics were read.
According to the data provided to you, in 2020 the NSA completed 15786 cases registered in the "SK" repertory (cassation complaints, complaints for the resumption of proceedings). However, this number includes not only cases completed by issuing a substantive decision, but also cases closed due to their transfer to a new department. There were 3115 such cases in 2020. Given the above, the real efficiency in 2020 was 88%, not 110% as reported. Cases closed in the Finance Chamber of the Supreme Administrative Court in 2020 were, in turn, in large part added to the impact in 2021, for they were re-registered in another judicial department.
The re-registration of the aforementioned cases in the Financial Chamber, as well as the re-registration of cases in the General Administration Chamber for similar reasons (4079 cases) were recorded in the total number of cases received by the NSA in 2021. Hence, 7194 cases (re-registered) would have to be deducted from the total number of 26873, which was given to you in earlier correspondence. Thus, the real flow of new cases to the NSA was 19679.
The data on the completion of cases for 2021 shows that 17111 cases were completed at the NSA. It should be noted that this figure also includes cases closed in the General Administration Chamber due to their transfer to Division III. Such cases, as mentioned, were 4079. Thus, it can be assumed that in 2021 the NSA completed 13032 cases through their substantive settlement. These data, in turn, allow us to assume that the NSA's adjudication efficiency in 2021 was 67%.
Despite the decrease in efficiency in 2021 compared to the previous year, it should be noted that in 2021 the NSA settled more cases than in 2020. On the other hand, undoubtedly, the higher inflow of cases to the NSA was due to the increased number of complaints filed with provincial administrative courts, as discussed in more detail in point 1. The increased inflow of cases to the NSA was also due to a partial blockage in the circulation of documentation between administrative courts of both instances, which occurred especially during the first phase of the pandemic (March-May 2020). During this period, far fewer cases were submitted to the NSA, which consequently translated into an increase in impact in the following months of 2020 and 2021. In turn, referring to issues related to the number of cases handled at the NSA in 2021, one can additionally point to staff shortages resulting from the retirement of some judges and the fact that more than a quarter of full-time positions were unfilled (more than 20% of judicial positions remained unfilled). In addition, the COVID-19 pandemic necessitated the reorganization of the Court's work by providing parties with the opportunity to attend hearings remotely. For technical reasons, fewer cases may be handled at remote hearings than at land-based hearings.

(2020): “Other than criminal law” cases: compared to the previous period (2018), decreases in the numbers of "incoming cases" before courts and "resolved cases" result from the COVID19 pandemic. As regards increases in the number of pending cases, they are due to increased amount of unresolved specific categories of cases in civil litigious procedures (e.g.claims under the loan agreement) and civil non-litigious procedures (e.g. division of the property). Administrative law cases : In 2020, the court disposed of 57.70% of all cases within 12 months, and within up to 24 months 78.66%. With regard to cassation complaints, 44.06% of cases were dealt with within 12 months. As far as complaints are concerned, 75.99% are settled within 2 months, while within 12 months the rate is 99.57%. 4. "4.Other cases": From the analysis of annual information for 2020 at the level of district courts and appellate courts in the labour and social security division, the following factors had an impact on the decrease in the degree of control of the impact (and thus the number of cases handled) and the increase in the average duration of proceedings in Ua, Uz and AUa and AUz cases in relation to 2019: - restrictions on court activity in 2020 related to the Covid-19 pandemic, due to the declaration of an epidemic state in the territory of the Republic of Poland from 20 March 2020 and the associated need for quarantine, sick leave, isolation, the need to provide care for children under 8 years of age, remote working, resulting in a reduction in the work of adjudicators, clerks and experts; - Insufficient number of experts on the list of expert witnesses compared to the number of cases requiring an opinion and the need to carry out joint or multiple expert opinions from different specialities, refusal of experts to carry out examinations necessary for their opinion (as a result of the epidemic situation in relation to SARS-CoV-2 infections), - a large number of suspended cases resulting from the regulation of the Act of 19 June 2020 on amending the Act on pensions from the Social Insurance Fund (Journal of Laws of 2020, item 1222), concerning a group of women born in 1953 (in these cases the proceedings were suspended by law as of 10 July 2020 until the pension authority issues a new decision recalculating the benefit of entitled persons, but not earlier than after 6 months from the suspension).

(2019): The decrease of Clearance Rate for 1. Civil and commercial litigious cases and 4. Other cases in 2019 compared with 2018 is caused by increased value of incoming cases. For 1. Civil and commercial litigious cases: from 141 045 cases in 2018 to 155 341 cases in 2019 (increase of 10%) and for 4. Other cases: from 41 242 cases in 2018 to 44 233 cases in 2019 (increase of 7%). The number of judges hearing in these type of cases in 2019 was at comparable level like in 2018 so the number of cases per one judge had increased automatically. In 2019, 16,844 cassation appeals (3,385 appeals less than in 2018) and 80 appeals for reopening the proceedings were submitted to the Supreme Administrative Court. From the previous period, 27,649 complaints and 28 applications for reopening of proceedings remain to be considered. In total, the Supreme Administrative Court had to consider 44,493 cassation appeals. In 2019, a total of 16,375 cassation complaints were examined. In 3,465 cases, the Supreme Administrative Court allowed the cassation appeal (21.16%), dismissed 11,721 cassation appeals (71.58%), and settled 1,189 in a different way (7.26%). Apart from cassation appeals, in 2019 the Supreme Administrative Court handled 4,665 complaints against decisions (orders) of courts of first instance, of which 715 allowed the appeal (15.36% of all appeals), and in 3,773 cases, the Supreme Administrative Court dismissed the appeal (80.88%), and it handled 177 matters in a different way (3.79%).
Moreover, the Supreme Administrative Court examined 162 complaints about violation of a party's right to hear a case in court proceedings without undue delay, of which 4 were admitted (2.47% of all settlements of this type), 60 were dismissed (37.04%), and 98 were settled in other way (60.49%).
In 2019, the Supreme Administrative Court handled 42.33% of all cases within 12 months, and 80.43% within 24 months. With regard to cassation complaints, 23.54% of the cases were settled within 12 months. In the case of complaints, 91.13% are examined by 2 months, and within 12 months, this ratio is 99.72%.

(2017): 2.2.2. There is not any specific explanation for observed increase. We can indicate only that mentioned increase is related especially to Register of Pledges.
As regards General civil (and commercial) non-litigious cases, we have validated previous data and we have made some corrections. We also indicate that a number of pending cases on 1 Jan. ref. year have been increased due to higher number of incoming cases in 2016.

(2016): Within the changes in business registry cases we can observe significant increase in all types of Application for registration (first registration) cases, but there is also considerable increase in general business cases (changes in the registry, including cases of removing from registry).
In 2016 there were serious problems with the information system which is in use in electronic proceedings therefore the number of pending cases had increased.

Portugal

(General Comment): Since 2007, statistical data concerning pending cases in 2nd instance judicial courts are collected through the courts information systems. Being a dynamic system, allowing regular corrections and up-dating, this data collection may lead to oscillation data from previous years resulting in variations in pending cases.
In Portugal, there are not non-litigious cases in superior courts.
The category "other" does not exist in the higher instances.
It is noteworthy that before 2015, data concerning the total of “other than criminal law cases” did not include administrative law cases. Since 2015, administrative law cases are included in the total which explains the significant increase of cases.

(2021): The decrease in the number of pending cases is related to the fact that in 2020 the number of cases that were completed in the second instance courts was higher than the number of new cases. This downward trend in pending cases has been constant since 2016.

(2020): The decrease in the number of cases under the category "Civil (and commercial) litigious cases" between 2018 and 2020 is justified by the decrease in court activity in 2020 due to the Covid-19 pandemic situation. The number of cases pending on December 31, 2020 has reduced compared to the number of cases pending on December 31, 2018, since the number of cases completed from 2018 to 2020 was relatively higher than the number of cases entered in those years. The increase in the number of cases completed in Administrative Courts between 2018 and 2019 may be justified by the increase in the number of judicial magistrates working in these courts. Even so, despite this increase in cases completed, there was an increase in the number of cases pending on January 1, 2020 compared to the number of cases pending on January 1, 2018, considering that the number of cases completed from 2018 to 2019 was still relatively lower than the number of cases entered in those years.

(2019): This increase of resolved cases can be explained by the increase on the number of judges in Administrative Courts.

(2018): Regarding the increase in the number of pending administrative law cases comparing to 2016, there were no legislative changes or others that could explain this variation".

(2016): There is no specific explanation as regards the increase in the number of civil and commercial litigious cases pending on 1 January 2016 between 2015 and 2016. The question 97_3 "Administrative law cases", includes administrative and tax cases.
The number of Pending cases on 1Jan. that correspond only to tax cases is 3.909
The number Incoming cases that correspond only to tax cases is 1.809
The number of Resolved cases that correspond only to tax cases is 1.663
The number of Pending cases on 31 Dec. that correspond only to tax cases is 4.055

(2015): The question 97_3 "Administrative law cases", includes administrative and tax cases.

Romania

(General Comment): It is worth specifying that, since 2010, the first table (question no. 91) centralizes all the first instance cases (irrespective of the level of the courts), the second table (question no. 97) centralizes all the second instance cases – appeal (irrespective of the level of the court) and table no. 3 (question no. 99) shows the statistical data on all second appeal cases (last instance cases) from all courts (irrespective of their level).
In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.

(2021): As stated at Q91 the context of the Covid-19 pandemic affected the activity of the courts which led to the decrease in the number of resolved cases, therefore the the stock with old cases increased in some cases.

(2020): As stated at Q91 the context of the Covid-19 pandemic affected the activity of the courts which led to the decrease in the number of resolved cases in 2020 an increased Disposition time and an increased numer of pending cases older than 3 years.

(2019): In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.

(2018): In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.
The increase in the number of cases in appeal reflects the changes in the procedural provisions in the new codes; the jurisdiction of the courts in judging appeals and second appeals has changed. Accordingly, the number of appeals in the New Civil Procedural Code includes the number of appeals and second appeals from the Old Code and shows continous increase since the entry into force of the provisions.

(2017): In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.
The increase in the number of cases in appeal reflects the changes in the procedural provisions in the new codes; the jurisdiction of the courts in judging appeals and second appeals has changed. Accordingly, the number of appeals in the New Civil Procedural Code includes the number of appeals and second appeals from the Old Code and shows continous increase since the entry into force of the provisions.

(2016): In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.
The general increase in the number of cases in appeal reflects the changes in the procedural provisions in the new codes; the jurisdiction of the courts on judging appeals and second appeals has changed. Accordingly, the number of appeals in the new Civil Procedure Code includes the number of appeals and second appeals from the old Code and shows continuous increase after 2014.

(2014): By the decision n° 46/2012, the Superior Council of Magistracy has decided that all the courts will implement by 1 January 2014 the IT system of collecting data. The new method is based on new definitions of the indicators. Accordingly, a case is transferred from the field “stocks” to the field “closed” only when the final decision, including its reasoning is drafted signed and communicated to the parties. For that reason, the number of pending cases on 31 December 2013 cannot be identical with the number of pending cases on 1st January 2014.
The meaningful increases in figures observed between 2012 and 2014 are due to the fact that, in relation to the appeal, beyond the differences recorded in Statis, there was a change of jurisdiction in civil matters. Accordingly, the appeal (apel) became the main instrument to challenge a decision.

(2013): With regard to the category “civil and commercial litigious cases”, the observed evolutions between 2010 and 2013 are due to the fact that following the changes in the procedural provisions in the new codes, the jurisdiction of the courts on judging appeals and second appeals has changed. Accordingly, the number of appeals in the new Civil Procedure Code includes the number of appeals and second appeals from the old Code. Thus, even if the number of solved files in second instance is higher in 2013 than in the previous year, the number of new appeals (incoming cases in second instance) is higher. This explains the growth of the workload in the last period of time on these courts, although previously the trend was descending.
With regard to the category “civil and commercial non-litigious cases”, the analysis of data and the noticed evolutions and variations between 2010 and 2013 should be qualified. In fact, the figures are not so high and the growth and regress of a few cases during one year lead to relatively important variations. For example, a growth of only 8 cases at the end of the year will reflect a growth of 35%. The same reasoning should be applied with regard to the category “non-litigious land registry cases” where a growth of only 122 cases at the beginning of the year will reflect a growth of over 40%.
In respect of the category “non-litigious enforcement cases”, the considerable increases between 2010 and 2013 with regard to all the items (pending cases, incoming and resolved) were the consequence of the new distribution of competences between courts. Since 2013, all the enforcement cases are in the jurisdiction of the courts of appeal. The number of cases in third instance decreased correlatively.
Following the changes in the procedural provisions made in 2013, the second appeal, as means of review in the field of non-litigious business registry, became appeal, in accordance with the new principles of the Civil Procedure Code as regards the means of review.

Slovak Republic

(2021): Explained in the table.

(2020): More significant decline of incoming cases and resolved cases as well in the Second instance courts as a result of a pandemic situation. In the category 3. Administrative law cases was only one pending case on 1 January 2020, which was resolved during the year and no case came into the Second instance courts in the year 2020.
The number of non-litigious business registry cases is included in "general civil and commercial non-litigious cases".

(2019): The decrease in the number of cases (especially incoming and pending on 31 December) was not analysed yet but we can confirm that there were no significant changes in the system or legislation.

(2018): The discrepancies in the number of pending cases as of 1 January 2018 in comparison with the final numbers as of 31 December 2017 were caused due to the introduction of electronic data collection through the Data Collection Application (hereinafter referred to as AZU). When introducing the electronic data collection in 2018, the courts were allowed to record the actual state of pending cases as of 1 January 2018 with the aim of not transmitting any inaccuracies from paper data collection of previous periods. These differences should not occur in the next year, given the introduction of automatic transfer of the number of undecided cases from the end of the previous period in the electronic data collection

(2017): As regards the trends of the decrease in all monitored indicators, the decrease in caseload at first instance courts has a secondary impact on the drop in caseload at the courts of appeal. We did not analyse in details the cause of decrease and the detail structure of caseload. The decrease of caseload has the positive effect of raising the CR to 121% and decreasing of total number of pending (unresolved) cases.
The data in the table are not horizontally consistent. This is caused by the fact, that the data on pending cases on 1. January 2017 (the same as data on 31. December 2016 given for the previous cycle) were collected in a one-shot collection for the Justice Scoreboard 2017 and were not bound by control patterns of horizontal consistency as it is in the new electronic data collection active since January 2018. The improper initial number of unresolved cases taken from a “paper” collection of data in 2016 caused such differences. Likewise, the transition from 2015 final numbers to 2016 initial numbers were counted up manually from paper collections. We cannot therefore consider the initial numbers as of 1 January as reliable. The transition between the old system of collecting the statistical data to new one is more complicated than was expected, with the setting up of Analytical centre of the MoJ, application of CEPEJ methodology and its tools is one of the targets in the on-going project between CEPEJ and Ministry of justice of the Slovak republic.
There are still two different IT tools used to collect the statistical data from the courts to Analytical centre. Some inconsistencies in data between the old and new system persist.
The Analytical centre makes every effort to complete the transition between two systems as soon as possible to get reliable data as soon as possible.
As to administrative cases, since 1 July 2016 the appeals against the decisions of the District courts are processed at the Regional courts and the appeals against the decisions of Regional court are processed at the Supreme court as the court of appeal.
In our data for administrative cases in the year 2017 there were some appeal procedures pending at Regional courts as the courts of appeal as the result of application of the previous procedural rules described in point 1. Those appeal proceedings appear in this table. All appeals against the decisions of Regional court (as the courts of first instance) were always tried by the Supreme court and we are presenting this data for all evaluation cycles in the table to Q 99

(2016): The new structure of data presented by the Ministry of Justice influenced also the second instance. Registry cases are all included in 2.1 and can not be separated by categories.

(2014): In respect of the variations observed in 2014 with regard to the category “administrative law cases”, it is worth mentioning that the low number of cases makes small absolute variation large in relative terms.

(2013): For 2013, a general remark was provided in respect of questions 91, 97 and 101, explaining that there were no specific reasons justifying the variations in the numbers of cases of the particular categories. It was stressed that the Slovak judicial system was facing different types of claims which massively loaded courts of all instances. For example, there was a huge number of legal actions arisen from the loans provided by the so called “non-bank loan companies” where courts had to consider constant violations of the consumer protection law. Besides, there was a huge number of class actions against the State, carried out by one of the non-bank companies for alleged damages etc. The capacity of the court staff to resolve all of the filed cases in the appropriate time period was limited despite the measures which have been taken. In spite of the positive trend concerning the increase of the number of total resolved cases, the number of incoming cases was increasing even more, causing backlogs.

Slovenia

(General Comment): The distribution of cases for Q97 is the same as for Q91.
Inconsistences noticed are due the Data Warehouse system explained in Q91.

(2021): All categories - Pending cases on 1 Jan.: decrease by approx. 50%
In 2020, the functioning of first instance courts was limited due to Covid-19 restrictions (and the number of resolved cases at first instance courts decreased). As second instance courts deal with the majority of cases without hearing of parties, their functioning was not affected that much. The number of appeals coming from first instance decreased, which resulted in the decrease of pending cases at second instance courts at the beginning of 2021.
Resolved cases: The decrease in the number of resolved cases is due to two factors: 1. impact of Covid-19 pandemics, namely the higher number of judges and court staff on sick leave or quarantined (compared to 2020), and 2. more general human resources issues (retirement of judges, prolonged sick leaves etc.).
Categories 1, 2 and 2.1 - Pending cases on 21 Dec.: increase by approx. 10-30%
Higher courts resolved approx. 10% less cases in 2021, which resulted in a greater increase of pending cases on 31. Dec (Disposition time in higher courts is low – 1-2 months; ratio of Resolved vs. Pending cases is approx. 10:1)
Categories 2.2/2.2.1 - Pending cases on 21 Dec.: increase by approx. 60/90%
Please note the increase in resolved land registry cases in 2021 (Q91) which may result in an increase of appeals, and small (absolute) number of cases at second instance (20-30 pending cases).
Category 2.2.2 - Pending cases on 21 Dec.: decrease by approx. 25%
Please note the small (absolute) number of cases at second instance (less than 5 pending cases).

(2020): The decrease in pending cases at the beginning and the end of the year is due to the fact that higher courts are sucesfully reducing the number of pending cases. The decrease in incoming and resolved cases is partially due to the national trend observed in general, and paritally due to the limitation of operation of courts due to Covid-19 pandemics.
The discrepancies in categories 2.2.1. Non litigious land registry cases and 2.2.2 Non-litigious business registry cases (and subsequently in 2.2. Registry cases), as well as at Pending cases older than 2 years from the date the case came to the second instance court are due to a small absolute number of cases.

(2019): No particular explanation can be given for the general decrease of incoming cases (national trend) which resulted in the decrease in the number of incoming and pending cases.
The increase in incoming Non-litigious business registry cases in 2018 resulted in an increased number of pending cases in the beginning of 2019. Please note small (absolute) number of cases.

(2018): No particular explanation can be given for the general decrease of incoming cases (national trend), as well as for the increase in number of incoming registry cases.

(2017): In recent years, the number of incoming cases is generally decreasing due to several reasons, partly due to a better economic situation in Slovenia and mainly to a successful introduction of new business models in the Slovenian judiciary (informatisation, change of perception when litigants and debtors do not see any profit in prolonging court procedures, gradual settlement of case-law). Considering the higher number of incoming cases (number of pending cases is approx. 20%-30% of all incoming cases), a slight variation in incoming cases might have a considerable effect on the number of pending cases.

(2016): In recent years, the number of incoming cases is generally decreasing due to several reasons, partly due to a better economic situation in Slovenia and mainly to a successful introduction of new business models in the Slovenian judiciary (informatisation, change of perception when litigants and debtors do not see any profit in prolonging court procedures, gradual settlement of case-law). Considering the higher number of incoming cases (number of pending cases is approx. 20%-30% of all incoming cases), a slight variation in incoming cases might have a considerable effect on the number of pending cases.

(2015): In recent years, the number of incoming non-litigious cases is generally decreasing partly due to a better economic situation in Slovenia and mainly to a successful introduction of new business models in the Slovenian judiciary. Considering the higher number of incoming cases (number of pending cases is approx. 15%-20% of all incoming cases), a slight variation in incoming cases have a considerable effect on the number of pending cases.

(2013): 2013 The area of land registry cases has been in constant improvement since a successful computerisation project in 2003 – the average disposition times have fallen from 18 months to 2 weeks. The lowering of the number of pending cases is the consequence of a better organisation of work and of the totally electronic procedure.

(2012): 2012 The figures of pending cases on 1 January 2012 for civil litigious cases (as well as for incoming, resolved and pending cases on 31 December 2012) are higher than in the previous exercise, because we included in this category the cases of bankruptcy proceedings (including: compulsory composition, bankruptcy of legal person, bankruptcy of physical person, bankruptcy of inheritance and compulsory dissolution), which were counted as 'other cases' in the previous evaluation cycle. The example in the questionnaire for this 7th category was ‘insolvency registry cases’, so we mistakenly included here all the cases pursuant to the Financial Operations, Insolvency Proceedings and Compulsory Dissolution Act handled by district courts. These are not insolvency registry proceedings, but are to be understood as litigious proceedings according to the CEPEJ Explanatory note.
With regard to the category "administrative law cases, in the previous round we included appeals in administrative disputes, which are lodged with and dealt with by the highest instance court, namely the Supreme Court of the Republic of Slovenia in this category (Q 97.6). To ensure internally consistent answers we decided to provide the data in this chapter regarding the instance of the court that decides on the case not the instance of the procedure in which the cases is decided. This means that all the cases that are addressed by the Supreme Court of the Republic of Slovenia are taken into account at question 97.

Spain

(General Comment): When an error is detected in the statistics of a Court, the latter is allowed doing regularization, what means that the Court communicates the correct figure and rectifies the wrong one even if this does not concord with figures offered for previous exercises. This situation can happen for example in the specific control of cases that the Court makes when a judge leaves the Court (called “alarde”), but in general, in any case in which the Lawyer of the Administration of Justice detects an error that comes from previous exercises but cannot be localized. The system prefers to correct the data than continue and amplify the error.
These regularizations and the cumulated cases and the re-opened cases are the causes for the horizontal inconsistencies. It is noteworthy that the small (probably insignificant) number of Registry cases that arrive to the Second Instance is not distinguished of the Litigious cases. This is why, the total number of cases can be provided.
Regarding "other non-litigious cases", the most correct answer is NA (because we can appeal against certain decisions of 'voluntary jurisdiction' not included in the CEPEJ categories).

(2021): For civil and commercial litigious cases the number of incoming cases increased in comparison with 2020, because that was the year in which the pandemic forced mobility restrictions. This also affected the increases of the number of pending cases at the end of the year.

(2020): There is an increase in the number of incoming administrative appeal cases in the Autonomous Regions High Courts. It is possible that certain modifications in the Contentious Administrative Jurisdiction, as well as the Judgement of the Constitutional Court in 2015 that eliminated the fees to appeal, have had an impact on the number of incoming cases.

(2019): "Civil and commercial litigious cases": the increased number of pending cases at the beginning of the year is partly due to the low clearance rate in 2018. In general there is an increase in incoming issues. In civil law many appeals are related to cases of general conditions included in financing contracts with real estate guarantees in which the borrower is a natural person (object of massive cases in Spain since the doctrine of the CJEU).
"Administrative cases": The increase of administrative appeals may probably be due to Aliens (inmigration) cases, which had a strong increase in resolution in 2018.

(2018): The Court of Justice of the European Union (CJEU) of December 21, 2016 and other previous Judgments have meant a massive interposition of lawsuits based on that doctrine, for the civil challenge of general conditions included in financing contracts with real estate guarantees whose Borrower is a natural person. Measures, referred to in previous assessments, of spatialization of certain judicial bodies have been adopted. In 2018, the appeales to the judgments in matters of individual suitcases against general conditions included in financing contracts with real estate guarantees whose borrower is a natural person have reached the Provincial Courts (second Instance). The small (probably insignificant) number of Registry cases that arrive to the Second Instance is not distinguished of the Litigious cases. This is why the total number of cases can be provided

(2016): In respect of the increase in the number of incoming civil and commercial litigious cases as well as the increase of the total of incoming cases between 2014 and 2016, it should be mentioned that since March 2015 the fees to bring a case to the court were abolished in case of natural persons. Besides, in July 2016, the Constitutional Court declared the nullity of the fees to appeal.

(2015): Law 10/2012 governing certain fees in the area of the Administration of Justice could explain (especially in Administrative Law cases) the decrease in the number of incoming administrative cases, and logically the decrease in the number of resolved and pending cases.

(2014): For the 2014 exercise, the decrease of the number of pending administrative law cases in the beginning and in the end of the year is the result of the decreases observed and explained in fist instance.

(2012): In the frame of the 2012 exercise, the lack of horizontal consistency with regard to the total number of pending cases on 31 December has been explained by the fact that inspection services are entitled to correct the number each time they find it inaccurate. Moreover, the horizontal inconsistency is also a result of the inclusion within the table of data related to restarted procedures, while there is not a specific item dedicated to this category of cases.

Question 098

Austria

(2020): "Misdemeanour and / or minor criminal cases": compared to the previous 10 years the pending, incoming and resolved cases in this category in the year 2020 showed a slight decrease. There is no specific explanation for this circumstance.

(2016): There is significant discrepancy in the number of incomming and resolved misdemeanour cases because the administrative criminal cases of second instance are included in third instance.

Belgium

(General Comment): Severe criminal cases: cases appealed to the Appellate court (criminal matters).
Minor criminal cases: appeals before the first instance criminal courts (“jurisdictions correctionnelles”) against decisions of the Police courts (thus cases dealt with by the first instance criminal courts at second instance).
Criminal law cases encompass also cases dealt with by the Investigation chamber (Chambre des mises en accusation). The latter has competence for controlling judicial investigations, namely it controls pre-trial detention, and decides on referral to the trial judge.

(2021): Protectional cases - youth: these cases have been included in point 2 "Minor criminal cases". Here are the figures: pending cases on 1/01/2021 = 337; pending cases on 31/12/2021 = 306; Pending cases older than 2 years from the date the case came to the second instance court = 124. Bron: data warehouse (data extraction date: 01/07/2022).
The category “3. Other criminal cases” corresponds to the cases dealt with by the Investigation Chamber (Chambre des mises en accusation).

(2020): "Second instance Courts (Criminal Matters): * Totals: Cases pending as of 1/01/2020 = 9434; Cases pending as of 12/31/2020 = 9317; Cases pending for more than 2 years from the date the case is brought to the 2nd instance courts = 2616.
* Serious offenses (involves correctional and indictment division cases): Cases pending as of 1/01/2020 = 9095; Cases pending as of 12/31/2020 = 8981; Cases pending for more than 2 years from the date the case is brought to the 2nd instance courts = 2499.
* Minor offences: youth cases are included in the figures shown in the table (1,374 new cases and 1,377 completed cases respectively). Also noteworthy are the youth cases: Cases pending on 1/01/2020 = 339; Cases pending on 31/12/2020 = 336; Cases pending for more than 2 years from the date the case is brought to the 2nd instance courts = 117.
Source: datawarehouse (data extraction date: 16/06/2021)
*For 2020, there is a decrease in the number of new cases and in the number of completed cases due to the pandemic that affected court operations."

(2016): The category "Severe criminal cases" concerns appeals to the courts of appeal against the judgements of the courts of first instance ruling in criminal matters. The category "Misdemeanour and / or minor criminal cases" refers to appeals to the courts of first instance against decisions of police courts in criminal matters.

Bulgaria

(2020): The specified sum does not include proceedings for which no penalties are imposed (pre-trial proceedings, enforcement proceedings). These proceedings are within the competence of other bodies in the Republic of Bulgaria.

(2018): NA

Croatia

(2021): In category "Other cases" are included cases of execution of imprisonment sanctions on county courts in second instance.

(2018): Starting from 1 June 2013, when the Act on Amendments to the Misdemeanors Act (OG 39/2013) entered into force, the inflow of first-instance misdemeanor cases had been reduced up to the point where there was no more justification for keeping specialized courts for these types of cases. This led also to continuous decrease of second instance misdemeanor cases, which is also the case in this reporting cycle.
Category "Other cases" - category introduced in this cycle: in case of Croatia, cases calculated here are cases of execution of imprisonment sanctions on county courts in second instance.

(2016): Starting from 1 June 2013, when the Act on Amendments to the Misdemeanours Act (OG 39/2013) entered into force, the inflow of first-instance misdemeanour cases displayed in this table continuously and significantly had been reduced. The number of resolved cases reduced as well, but due to a significant decrease in inflows, the number of unresolved cases reduced by the end of the period.

(2014): According to 2014 data and pursuant to the Act on the Amendments of Misdemeanour Act which entered into force in 2013 (OG 39/13), possession of drugs for personal usage is no longer a criminal act but a misdemeanour act. That provision enabled disburdening of the county courts. Furthermore, municipal courts became competent for criminal act of unauthorized production and trafficking of drugs (which was previously in the jurisdiction of county courts and made a share of 40-50% of all cases dealt with by the county courts).

(2013): Generally speaking, the decrease of the total number of misdemeanour cases at all levels was the main goal and purpose of adopting the Act on the Amendments of the Misdemeanour Act in 2013 (OG 39/13) in which the definition of misdemeanour act was changed, the principle of opportunity as well as the simplification of the procedure were introduced, the more active role was given to the plaintiff. Moreover, specific measures were introduced: if the fine is paid when caught in committing a misdemeanour offence, it is considered as paid if the half of the amount was paid immediately, and if the deadline was prescribed, it is considered as paid if the 2/3 of the amount was paid. Moreover, the enforcement procedure conducted on monetary assets is more efficient. The Register of Unpaid Fines was established.
According to the new misdemeanour provisions, there is no suspension of the proceedings because of the statute of limitations. Every court decision is being enforced, fines are being paid, therefore strengthening the general prevention and withdraw of committing misdemeanour offences. All of the above said leads to the reduction of the number of misdemeanour cases at both courts' instances: misdemeanour courts and High Misdemeanour Court of the Republic of Croatia

Cyprus

(General Comment): The case flow data of the Supreme Court are included in this question as second instance cases, although Cyprus has a two-tier system, therefore the Supreme Court is the second, highest and final instance court."

(2020): with regard to criminal appeals less were filed.

(2016): There was an increase in the cases pending between 2014 and 2016. With regard to the increase of number of cases resolved this was due to the creation of the administrative court and therefore the Supreme court did no longer had to deal with first instance administrative cases.

Czech Republic

(General Comment): We are not able distinguish between serious offences and minor offences. Thus only total number of cases is reported. There are no cases that could be reported in "Other cases".
The data provided involves appeals and complaints (corrective measure against a resolution). Instead of "Pending cases older than 2 years from the date the case came to the second instance court" "Pending cases older than 1 year from the date the case came to the second instance court" are provided.

(2021): The number of pending cases older than 2 years is very low in second instance and thus it follows that there is a big variance in the data between years.

(2012): In the frame of the 2012 evaluation cycle, it has been specified that the total number of criminal cases includes severe criminal cases decided by second instance courts acting in first instance and appeals against decisions of the first instance courts in criminal matters. On the contrary, in 2010, the total encompassed only the number of appeals, while the number of severe criminal cases was not subsumed. Accordingly, due to the different methodology of presentation of data, the comparison between the 2010 and 2012 figures should be qualified.

Denmark

(General Comment): All criminal cases at 2nd instance are considered severe as they would otherwise not become 2nd instance criminal cases. We can not differentiate pending cases depending on their age. There might be cases though that would not fulfil the criteria of a severe case. About one third of the cases may be smaller or bigger issues from the cases in the district courts that are appealed to one of the two High Courts before proceeding at the district courts and then finally settled in the district court. It is not possible to see if it an issue is from a severe case in the district or a case that is not severe. Then the whole case may afterwards be appealed to one of the two High Courts when the district courts have come to a final judgment.

(2020): 2020 was an unusual year because of the Covid-19 related close down of society, including close down of courts. It created more pending cases as the prosecution continued to forward new cases to the courts that could not deal with it.

(2016): All criminal cases at 2nd instance are considered severe as they would otherwise not become 2nd instance criminal cases. We can not differentiate pending cases after how old they are.

Estonia

(General Comment): Some horizontal inconsistencies and inconsistencies with previous year are due to the fact that data are always taken from the live database. Other criminal cases: The enforcement and pretrial cases do not exist in the second instance.

(2020): The pandemic has affected the courts activity in criminal matters in general. The criminal procedure law was not as flexible when judges had to work online. The complete revision of the criminal procedure law is ongoing and will come into force next year.

(2016): Discrepancies are due to the numbers being quite small. Number of incoming cases depends on the crimes being committed and the number of resolved cases depends on.
Because the distinction between severe and minor criminal cases is not the same with the CEPEJ, data for subcategories can be found below :
Severe criminal cases : Pending cases on 1 Jan. ref. year : 71
Incoming cases : 745
Resolved cases : 762
Pending cases on 31 Dec. ref. year: 54
Pending cases older than 2 years from the date the case came to the first instance court : 0
Misdemeanour and / or minor criminal cases :
Pending cases on 1 Jan. ref. year : 9
Incoming cases : 208
Resolved cases : 214
Pending cases on 31 Dec. ref. year: 3
Pending cases older than 2 years from the date the case came to the first instance court : 0

(2014): The variations observed over the years 2010, 2012 and 2014 are most likely due to the fact that the Ministry of Justice and the biggest court in Estonia (Harju County court) had an agreement setting the target for eliminating backlogs.

Finland

(General Comment): The cases are not statistically catecorised in severe criminal cases and misdemeanour and / or minor cases in Finland.

(2021): The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on 20.1.2022 and reflects the situation on that day. The data available is: 1)Incoming cases 2)Resolved cases 3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously announced number of cases on 31 December and the now announced number of cases in 1 Jan will differ.

(2020): The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly
changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on
12.1.2021 and reflects the situation on that day. The data available is: 1)Incoming cases 2)Resolved cases 3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available
data. Because of the dynamic nature of the system, the previously annouced number of cases on 31 December and the now announced
number of cases in 1 Jan will differ. Currently the calculation is further complicated by the partial implementation of the new cases
managements systems, AIPA (for general courts) and HAIPA (for administrative and special courts).

France

(2021): Source SDSE

(2020): "The health crisis and containment may have played on TAs (completed cases) (by reducing the ability of courts to process cases) but also on NAs (new cases) (fewer offenses committed, fewer cases brought to trial). Prior to this, a major lawyers' strike and transportation strike had mostly affected TAs.
"

Germany

(General Comment): General information on the statistics used as sources for answering the questions in this section:
Once per year, the Federal Statistical Office compiles and publishes the statistics of the civil, criminal, administrative, finance, social, family and labour courts. Nationwide uniform ordinances define the scope and rules of data collection for these statistics. The courts collect the data and submit it to the statistical offices of the Länder, who check and edit the data and send it to the Federal Statistical Office. In simplified terms, the ordinances provide two different kinds of data collection sheets: The "procedural surverys" that collect data on the specifics of the proceedings happening at a court and the "monthly surveys" that track the caseload of a court. With regard to the caseload count, the monthly surveys distinguish between "caseload of proceedings covered by the procedural surveys" and "other caseload". For the cases from the first category (proceedings covered by the procedural surveys), the monthly surveys collect the number of cases pending at the beginning and at the end of a month as well as the number of received and resolved cases. For the "other caseload", the monthly surveys generally only count the number of received cases, claims, etc..
In the monthly surveys of a court, a statistical record with regard to the stage of appeal exists for the proceedings covered by the procedural surveys, while the case count for "other caseload" generally only exists for the whole court.
The answer to Q98 includes the cases that appear in the monthly surveys of the Higher Regional Courts as "other caseload" and that can definitely be identified as second instance cases due to their subject (complaints and objections in regulatory fining proceedings). However, some second instance cases are also included under "other cases" in Q94.
The category "other cases" in Q94 includes the cases that appear in the monthly surveys of the Regional Courts as "other caseload", which means that these cases are actually first and second instance cases. Due to the above mentioned structure of data collection, a distinction between 1st and 2nd instance cases ist unfortunately not possible for these cases.
Pending cases older than 2 years from the date the case came to the first instance court:
With regard to the statistics of the civil, criminal, administrative, finance, social, family and labour courts, a statistical record of the day a case came to the court only exists for the cases covered by the procedural surveys. Courts submit the data from the procedural surveys to the statistical offices after the case has been concluded for the respective court and at the respective instance. This means that the duration of a proceeding is unknown for pending cases. The monthly surveys count the number of pending cases at the beginning and at the end of a month, but do not collect any information on the date the pending cases came to the court. The statistics compiled by the Federal Statistical Office include information on the percentage of cases that were resolved within certain time frames but no numbers on how many proceedings took longer than two years. The statistic on the workload of the Local Courts in matters of non-contentious jurisdiction does not collect any data regarding the date a case first came to court.
Horizontal inconsistencies in the table:
The inconsistencies with regard to the pending cases at the end of the year also occur in the statistics published by the Federal Statistical Office. The reason for this is, that courts submit count corrections for the monthly surveys at the end of the year.

(2021): "Other": complaints in regulatory fining proceedings at the Higher Regional Courts (according to Section 80 of the Act on Regulatory Offences), objections in regulatory fining proceedings according to the Competition Act
With regard to these cases, only the number of incoming cases is recorded. Pending minor criminal cases on 1 Jan: The number of incoming cases was lower in 2020 than in 2019 and the number of resolved cases higher, resulting in a lower number of pending cases at the end of 2020. A reason for this development could not be identified.

(2020): complaints in regulatory fining proceedings at the Higher Regional Courts (according to Section 80 of the Act on Regulatory Offences), objections in regulatory fining proceedings according to the Competition Act

(2016): The category “severe criminal cases" (line 2) includes criminal proceedings in accordance with the Criminal Code (Strafgesetzbuch, StGB) and ancillary criminal laws. The category “minor criminal cases” (line 3) includes regulatory fine proceedings before the criminal courts.

(2014): According to 2014 data, the category “severe criminal cases” included criminal proceedings in accordance with the Criminal Code and ancillary criminal laws. The category “misdemeanour and/or minor criminal cases” subsumed regulatory fine proceedings before criminal courts.
The information provided in the frame of the 2014 evaluation refers to 2013 data (the 2014 data is not available).

(2012): According to 2012 data, the category “severe criminal cases” included criminal proceedings in accordance with the Criminal Code and ancillary criminal laws. The category “misdemeanour and/or minor criminal cases” subsumed regulatory fine proceedings before criminal courts.

Greece

(2021): The data are from the Statistical Service of the Ministry of Justice. The courts function in cooperation with the prosecutions offices. For example, postponed cases get to the prosecutor offices and then to the courts, in repeat 2-3 times, during the period (year). The definition of the pending cases included postponed cases or the cases for which the trial date has been setting out of the refence year or hasn't been determined during the year. The data has been collected from 19 out of 19 Courts of Appeal in Greece.

(2020): Due to the pandemic, pending cases have accumulated in the courts of first instance, with the result that the courts of second instance have fewer cases to handle.
The data given for questions 97 and 98 are collected from all second instance courts. However, many fields are answered NA as only few data were collected from the second instance Courts.

(2018): To give a brief overview of the national criminal procedure, criminal cases are filed for admission in the Public Prosecutor's Office, where they are further investigated. If a prosecution is initiated, the cases are discussed in court. The Court of First Instance or the Court of Appeal discusses and issues a judgment on each case brought before the court. The decision can then either postpone the case (whereby the case is forwarded to the competent Prosecutor's Office for further processing), or convict/ acquit the defendants. When the case is forwarded to the competent Prosecutor's Office (after a postponement), it is uncertain if and when it will go back to the court for discussion. Criminal cases cannot be tracked down throughout the different stages of the criminal procedure at present. With the Integrated Civil and Criminal Court Case Management System (OSDDY-PP)- Phase A', which was completed in March 2019 for 41 courts of the State, an integrated information system is implemented, which includes individual applications (subsystems) to support the operational functioning of the units of all levels of the courts involved in the flow of every case (criminal and civil), allowing the extraction of the relevant data.

(2016): Filling in the requested information regarding the criminal procedure is not possible at the moment. To give a brief overview of the national criminal procedure, criminal cases are filed for admission in the Public Prosecutor's Office, where they are further investigated. If a prosecution is initiated, the cases are discussed in court. The Court of First Instance or the Court of Appeal discusses and issues a judgment on each case brought before the court. The decision can then either postpone the case (whereby the case is forwarded to the competent Prosecutor's Office for further processing), or convict/ acquit the defendants. When the case is forwarded to the competent Prosecutor's Office (after a postponement), it is uncertain if and when it will go back to the court for discussion. Criminal cases cannot be tracked down throughout the different stages of the criminal procedure at present. With the Integrated Civil and Criminal Court Case Management System (OSDDY-PP)- Phase A', which is expected to be completed by November 2018, an integrated information system will be implemented, which will include individual applications (subsystems) to support the operational functioning of the units of all levels of the courts involved in the flow of every case (criminal and civil), allowing the extraction of the relevant data. For 2016 the available data regarding the criminal procedure are as follows: Courts of First Instance: Criminal Cases Discussed: 473.457, Convictions/Acquittals: 206.311, Postponements: 262.433, Courts of Appeal: Criminal Cases Discussed: 59.643, Convictions/Acquittals: 24.995, Postponements: 33.601

Hungary

(2021): As it was mentioned at the first instance, the introduction of new types of misdemeanours resulted in a higher number of incoming cases. As a result of the increase of incoming cases the number of resolved cases was also higher.

(2014): The increases over the period 2010-2014 regarding misdemeanour and/or minor criminal cases, is due to the constant increase of incoming and resolved first instance cases starting from 2010, which led to the increase in the number of second instance incoming cases.

Ireland

(General Comment): Except for the Supreme Court, criminal cases are generally counted by offence rather than case due to the various ICT systems used. This is due to data collection/ ICT systems that are in use by the Court Service.

(2020): Reduced misdemeanour/minor cases due to COVID-19 pandemic. During the most restrictive lockdowns, only essential proceedings could be dealt with, but as guidance allowed, case volume increased. Urgent and essential cases continued to be heard throughout. This included domestic violence and criminal proceedings. All written judgments were delivered electronically and published on the Courts Service website, courts.ie. Attendance at Court offices was by appointment only to ensure that footfall could be safely managed.
The Court of Appeal quickly adopted the use of video technology and made greater use of electronic documentation to facilitate its work. Procedures were introduced to ensure that justice was administered in public. Judgments were delivered electronically. Waiting times for a hearing were improved, to a certain extent, by a net reduction in the numbers of new cases coming into the list from other jurisdictions. By year end, there was a net improvement in the numbers of cases waiting to be dealt with compared to 2019.
Offences are counted here rather than number of cases. There were 260 appeals in respect of 1,405 offences lodged in the Court of Appeal (Criminal) in 2020. The Court disposed of 367 appeals in respect of 1,719 offences.

(2018): With regard to the category "resolved cases", the figures reflect a continuing increase in disposal of second instance appeals disposed of over that in the previous reporting cycle (2016 data) due to the establishment of the Court of Appeal.

(2016): Data on resolved cases reflect a significant increase in disposal of second instance appeals due to the establishment of the Court of Appeal. Concerning the number of incoming severe criminal cases, 2016 data reflects the receipt by the Court of Appeal of a substantial number of pending appeals following its establishment.

(2014): The increase of 161% between 2012 and 2014 in the number of incoming cases and the increase of 101% in the number of resolved cases are due to a change in the unit of measurement for criminal cases from a defendant related unit to an offence related unit.

Italy

(General Comment): In Italy there is no formal definition of “minor criminal cases”. For the purposes of this exercise are considered as minor criminal cases those proceedings dealt with by the Justice of Peace Offices which have been appealed (to Tribunal).

(2021): Figures in 2020 were hugely affected by the pandemic

(2018): -

(2016): With regard to second instance criminal cases, in 2014-2015 a new case management system was introduced. This has negatively affected the statistics for those two years. Statistics for 2016 are definitely more robust and consistent. Besides, when comparing pending cases on 31 Dec 2014 with pending cases on 1 Jan 2016, the variations are less important.

Latvia

(General Comment): Data from the first and appeal instance courts are compiled by the Court Administration, and the Court Information System is a living database that allows data to be corrected, so changes between previous periods are possible. The figures reflect data of second instance courts and the Supreme Court Criminal chamber. The latter is the appellate body in respect of cases decided by regional courts acting as courts of first instance. Statistics related to the Supreme Court are mentioned only within the total, because till 2009 the statistics were compiled by a specially hired expert.

(2021): In the middle of 2020, Saeima adopted Law on Administrative Liability that affected amount of incoming cases significantly in the first instance courts. According to the law, if the person intends to use his right to appeal a decision, he/she needs to address the complain to the higher official from institution which has made this decision, but if there is no higher official, a decision may be appealed to a district (city) court. This is the main reason for decrease of incoming cases in the first instance courts and in appeal courts as well.
The reduction of pending cases is related to the increased interest and pressure of the public, the Council of Justice and the Ministry of Justice to reduce the number of long pending criminal cases.

(2020): In 2020 there was changes in Administrative Procedure Law, that might affect the amount of resolved cases. Furthermore, number of misdemeanour and / or minor cases are higher in the appeal courts because in last years the Constitutional court has declared several norms on administrative infringements are not incompatible with the Constitution of Latvia. This led to an increase of incoming administrative cases.

(2018): Partially due to court system reform, Court Information System database has undergone several error checks and data clean-ups, that has affected amount of cases, especially – pending. Data on court statistics are being calculated by automated systems and records on changes that affect data in database are not available. Any changes to the Court Information System can affect the data.

(2014): In 2014, the statistics of the Supreme Court Criminal Chamber were the following: pending cases on 01.01.2014: 139; incoming cases: 19; resolved cases: 73; pending cases on 31.12.2014: 0.
Due to a court reform, the Chamber of Criminal Cases of the Supreme Court has been liquidated as from 1 January 2015. All cases, which were not resolved on 31 December 2014, were transferred to regional courts.

Lithuania

(General Comment): There is no separate statistical data allowing to distinguish between severe/minor/and other criminal cases. Neither the court information system is applied to this, nor the courts have obligation to provide the information on the seriousness of the crime. In the court information system offenses are described through the indication of an article (it does not show the severeness of a crime by itself).

Luxembourg

(General Comment): 0

(2018): Concernant le nombre d'affaire résolues en matière d'affaire pénales grave, une baisse des recours introduits à la Cour d'appel est observée depuis ces dernières années, en conséquence les affaires terminées ont diminué en 2018. Concernant le nombre d'affaire résolues en matière d'affaire pénales mineures, le chiffre plus élevé des affaires d'infractions mineures s'explique par le fait qu'en 2017, 59 recours avaient été introduits sur des jugements du tribunal de police et que ces recours ont été traités pour partie en 2018 seulement.

Malta

(2021): During 2021, the criminal courts were still largely effected by Covid restrictions. Given that these particular courts did not introduce video-conferencing, it was not possible to counteract the increasing incoming caseload with an equally increasing resolved caseload. As a result of this imbalance, the efficiency parameters of the criminal courts suffered. Having said this, following the removal of the pandemic restrictions, sincere efforts have been made in order to restore the efficiency of the criminal courts to the former levels.

(2020): The above data reflects the aggregate scores of the Criminal Court of Appeal in its Superior and Inferior Jurisdiction. The pandemic restrictions effected the caseload of the Court.

(2018): Given that in the Maltese legal system, the definition of severe/ minor-dismeneanor cases is not fully consistent with the definition built by CEPEJ, the data for these types of cases for Malta, is going to be presented within this section: For severe cases: Pending caseload at 1st January 2018 = 32; Incoming cases = 6; Resolved cases = 14; Pending cases on the 31st December = 21. Minor/ misdemeanour criminal cases: 1st January 2018 = 1266; Incoming cases = 445; Resolved cases = 644; Pending cases on the 31st December = 1018.

(2016): There was an increase in the pending caseload of the Court of Criminal Appeal, Inferior Jurisdiction.
In the Maltese legal system, the definition of severe/minor-misdemeanor cases is not fully consistent with the definition built by CEPEJ and therefore a comparison is not possible with the previous cycles. According to the Maltese categorization of cases, the number for severe criminal cases in 2016 is as follows: pending on the 1st Jan of Ref Year = 26; Incoming cases = 15; Resolved cases = 10; Pending cases on the 31st Dec of Ref Year = 32. The number for minor/misdemeanor criminal cases is as follows: pending on the 1st Jan of Ref Year = 1214; Incoming cases = 629; Resolved cases = 485; Pending cases on the 31st Dec of Ref Year = 1358.

(2012): In 2012, the increase of the number of criminal cases resulted from the fact that for some time the number of judges hearing the appeals, particularly in the Criminal Court of Appeal (Inferior Jurisdiction), was reduced due to retirement and re-allocation of duties. Accordingly, the number of appeals in the inferior jurisdiction increase considerably.

Netherlands

(2014): The reason for the horizontal inconsistency in 2014 is that the figures from the 4 columns of the table are not retrieved at the same time. The number of pending cases on Jan 1st is determined one year before the other 3 columns can be filled. One year later it is possible to determine the number of incoming cases, the number of resolved cases and the number of pending cases on Dec 31st. The definition of 'pending' together with dynamic changes in the registration system mean that the number of pending cases on Jan 1st will have changed. To ensure horizontal consistency, all the 4 columns should be determined after the years' end which would imply to overrule a previously determined and official (i.e. published) number of pending cases on Jan 1st.

Poland

(General Comment): Severe criminal cases includes all offences under the Penal Code, Penal Fiscal Code and offences specified in other Acts. Misdemeanours are cases conducted under the Petty Offence Code. The category "Other cases" covers the rest of cases conducted in criminal courts which are not connected directly with the severe criminal cases or misdemeanours. Mainly these are cases conducted under the Code of Criminal Procedure and Petty Offences Procedure Code, e.g: complaints against the discontinuation of the proceedings, complaints against the application or extension of pre-trial detention, complaints against the ordering the execution of a substitute prison sentence, complaints against a failure to grant parole.

(2021): Severe criminal cases includes all offences under the Penal Code, Penal Fiscal Code and offences specified in other Acts. Misdemeanours are cases conducted under the Petty Offence Code.
The category "Other cases" covers the rest of cases conducted in criminal courts which are not connected directly with the cevere criminal cases or misdemeanours (mainly cases conducted under the Code of Criminal Procedure and Petty Offences Procedure Code).

(2020): Variations in the number of criminal law cases in 2020 compared to the previous period (2018) are mainly due to two reasons. First – the COVID19 pandemic which reduced the inflow of severe criminal cases (p. 1) and misdemeanour and / or minor criminal cases (p. 2). Second – in 2020 release, the number of Other cases (p. 3) was added to the table. It significantly increased the number of total cases shown in the line Total of criminal cases (1+2+3).

(2012): The increase of the total of criminal cases and the number of severe criminal cases in respect of the item "pending cases on 1st January 2012" is due to the fact that since 2010, there was a significant increase of the inflow of cases".
As to the number of minor cases, there was a change in the statistical system which resulted in aggregating some categories of cases considered as minor with other criminal second instance cases. Accordingly, it was impossible to include them in the provided figures.

Portugal

(General Comment): When courts handle appeal cases it is not possible to separate appeals that had in their origin a criminal case or a misdemeanor case.

(2016): There is no specific reason explaining the increase in the number of pending criminal cases on 31 December 2016 in comparison with the values of the previous cycle. There were no legislative changes or other that could explain this change.

Romania

(General Comment): There is no classification of severe and less severe offences in the Romanian statistics.

(2016): In the national Statis system, the cases are recorded on categories of pending cases as follows: - 0-1/2 years;
- 1/2-1 year;
- 1 - 1 and 1/2 years;
- 1 and 1/2 - 3 years;
- 3 - 5 years;
In the table above, last column, there are mentioned the numbers for cases pending for more than 3 years.

(2014): The significant increase of the total of criminal cases in respect of all the enumerated categories (pending, incoming and resolved cases) in 2014 is due to the entry into force of the new Codes and the changes of jurisdiction.

(2012): The decrease of the total of criminal cases in 2012 in respect of all the enumerated categories (pending, incoming, resolved cases) is due to the entry into force of Law n° 202/2010, the so called “small reform law”. Consequently, the legal remedy of appeal (appeal on the merit) has been abolished in several criminal matters, remaining only the “recurs” (“appeal on law”).

Slovak Republic

(2020): Sources: Analytical center, Ministry of Justice of the Slovak republic

(2016): The 2016 data are based on the new methodology which may cause inconsistency comparing to previous cycles. The 2014 data are based on the methodology that covered only two main criminal court registers, while the 2016 data are based on the methodology that covers more than two criminal court registers. This makes the basic and key difference.

Slovenia

(General Comment): For explanation on severe criminal cases and minor offences please see comment to Q94.
The figures for severe criminal law cases at second instance include criminal cases (Kp).
The figures for minor offences cases at second instance include:
- PRp-zsv – minor offences in regular court procedure – request for judicial protection,
- PRp-obp – minor offences in regular court procedure – accusation proposals,
- EPVDp – cancellation of validity of the drivers license according to the legal limit of punitive points,
The figures for other cases include:
- Kr – various criminal cases,
- PRnkp – setting a task for the good of the community or the local community,
- PRr – various cases in minor offences,
- PRuzp – compliance detention.

(2021): All categories - Pending cases on 1 Jan.: decrease by approx. 10-70%
In 2020, the functioning of first instance courts was limited due to Covid-19 restrictions (and the number of resolved cases at first instance courts decreased). As second instance courts deal with the majority of cases without hearing of parties, their functioning was not as affected that much. The number of appeals coming from first instance decreased, which resulted in the decrease of pending cases at second instance courts at the beginning of 2021.
2. Misdemeanour and / or minor criminal cases – Incoming/Resolved cases: increase by approx. 150/90%, Pending cases on 21 Dec.: increase by approx. 1400% (this also reflected in Total)
The increase in incoming cases at second instance in 2021 is mostly due to two factors: 1) according to the Minor Offences Act, the appeal in minor offences in regular court procedures – request for judicial protection was limited (depending on the criteria - sanction). At the end of 2020 the Constitutional court established that the aforementioned limitation for appeal was unconstitutional, which lead to the increase in the number of appeals in 2021; 2) In 2021, the higher court, competent for the coastal region received multiple cases of fishermen regarding border-crossing issues (in relation to the Arbitration under the arbitration agreement between the government of the Republic of Croatia and the Government of the Republic of Slovenia; PCA CASE NO. 2012-04). Despite the efforts (see the number of resolved cases), the number of pending cases at the end of the year increased (Disposition time in higher courts is low – less than 1 month; ratio of Resolved vs. Pending cases is approx. 33:1).

(2020): The decrease in pending cases at the beginning and the end of the year is due to the fact that higher courts are sucesfully reducing the number of pending cases. the decrease in incoming and resolved cases is due to the limitation of operation of courts due to Covid-19 pandemics
The discrepancies at Pending cases older than 2 years from the date the case came to the second instance court are due to a small absolute number of cases.

(2018): Discrepancies: This year, some of the cases, previously reported at Severe or Misdemeanor cases, are reported under new category - Other cases (for details, please see general comment). The metodology for the total number of cases reported did not change, and the changes for total are below 20%.

(2016): The observed decreases can be attributed to the decrease in the number of cases, processed by the police and the state prosecution (see Q107).

(2014): According to 2014 data, the figures for “severe criminal law cases” at second instance includes: criminal cases (Kp) and various criminal cases (Kr). In this respect, it should be highlighted that the 2014 data is not comparable to pre-2014 results, because until 2014, only first category was reported. In 2015, the reporting method was further improved, and other types of cases were also included in the reporting.
The figures for “minor offences cases” at second instance included: minor offences in regular court procedure – request for judicial protection (PRp-zsv); minor offences in regular court procedure – accusation proposals (PRp-obp); cancellation of validity of the drivers license according to the legal limit of punitive points (EPVDp); compliance detention (PRuzp); setting a task for the good of the community or the local community (PRnkp); various cases in minor offences (PRr).

(2012): According to 2012 data, the figures for “severe criminal law cases” at second instance included criminal cases (Kp) and excluded various criminal cases (Kr).
The figures for “minor offences cases” at second instance included: minor offences in regular court procedure – request for judicial protection (PRp-zsv); minor offences in regular court procedure – accusation proposals (PRp-obp); minor offences at the transition from 2004 to 2005 (PRps); minor offences, introduced in the judicial jurisdiction after the 31.12.2004 (PRpv); cancellation of validity of the driver’s licence according to the legal limit of punitive points (EPVDp); and compliance detention (PRuzp). The category did not include: setting a task for the good of the community or the local community (PRnkp) and various cases in minor offences (PRr).
The decrease of the number of “misdemeanour and/or minor criminal cases” before courts in 2012 is the result of the reform in law on minor offenses which transferred some of the jurisdiction in cases previously tried by courts to other authorities.

Spain

(General Comment): When an error is detected in the statistics of a Court, the latter is allowed doing regularization, what means that the Court communicates the correct figure and rectifies the wrong one even if this does not concord with figures offered for previous exercises. This situation can happen for example in the specific control of cases that the Court makes when a judge leaves the Court (called “alarde”), but in general, in any case in which the Lawyer of the Administration of Justice detects an error that comes from previous exercises but cannot be localized. The system prefers to correct the data than continue and amplify the error.
These regularizations and the cumulated cases and the re-opened cases are the causes for the horizontal inconsistencies.

(2021): The number of incoming and pending cases for both severe and minor criminal case categories increased in comparison with 2020, because that was the year in which the pandemic forced mobility restrictions. The recovery of activity, after the most severe restrictions of the pandemic, may have contributed to the improvement in efficiency and increased number of resolved minor criminal cases.

(2020): The reduction in criminal appeals during 2020 may be an effect of the pandemic.

(2016): The number of pending severe criminal cases decreased due to the decrease in the number of incoming cases. The decreases observed in respect of the numbers of Misdemeanour cases can be due to the elimination of "Faltas" (Misdemeanour cases) by the Organic Law 1/2015. Some of theme were transformed in minor offences, but other disappeared or were transformed in administrative infractions.

(2012): The lack of horizontal consistency in 2012 was due to the number of restarted procedures that were not counted in the boxes of the questions because they are not really incoming cases. Besides, there was a readjustment of the statistical data in the period between 2010 and 2012. The final data provided in the questionnaire, and shown in the box of pending cases is the real data at December 2012.

Question 099

Austria

(2021): Discrepancy between number of pending administrative law cases on 31 December 2020 and number for pending administrative cases on 1 January 2021: 3043 procedures adopted from previous years and 139 procedures completed in previous years and reopend in the reference year. "Administrative law cases": The COVID-19 pandemic posed significant and new challenges to international and government institutions worldwide, including the Supreme Administrative Court. Social distancing necessary to combat the pandemic required profound changes in the service of the Supreme Administrative Court to guarantee its functioning. In addition to internal organisational measures such as the possibility of remote work and new electronic communication tools, changes to the legal framework were necessary to enable the passing of resolutions via circular letter without physical contact between the members of the judicial body. These legal changes became effective in the course of 2020 and 2021. The continuing high level of new cases in asylum and aliens law is due to the numerous applications for international protection filed in Austria from 2015 onwards. The increase in staff at both the Federal Office for Immigration and Asylum and the Federal Administrative Court has led to an increase in the number of cases dealt with by these authorities and thus also in the number of cases brought before the Supreme Administrative Court, which has now been at a relatively high level for several years.

(2020): Discrepancy between number of pending administrative cases on 31 December 2019 and number fo pending administrative cases on 1 January 2020: the number of 3 064 pending administrative cases on 1 January 2020 corresponds to 2762 procedures adopted from previous years and 302 procedures completed in previous years and reopend in the reference year.
Pending administrative law cases older than 2 years: the observed increase is a consequence of the high number of cases in the field of asylum and aliens.

(2019): The reason for the increased number of incoming administrative cases and accordingly the increase in the number of pending administrative cases is related to the high number of cases in the field of asylum and aliens law characterizing the period 2016 - 2019.

(2018): The reasons for this increase of the incoming administrative cases is related to the high number of cases in the field of asylum and aliens law.

(2017): To 3.:
Because of the model of business cases installed at the Supreme Administrative Court pending cases at the begin of a reporting year have to be analysed by calculation. Incoming cases are substracted from the sum of resolved cases and of pending cases at the end of the reporting year. New applications within the same case cause a reopening of the concerned cases. Thus the number of pending cases changes. Therefore a completly consistent image of figures of pending cases from the end of previous year and those from the begin of the current year is not feasible.

(2016): The big variation is due to the fact that this cycle the administrative cases were included.
The administrative courts were established January 1st 2014. After their establishment the data of the administrative courts is introduced this cycle for the first time.

Belgium

(General Comment):
Civil, social and tax cases at the Court of Cassation
Administrative cases - cases “in cassation” at the Council of State (Conseil d’Etat).
The lack of horizontal consistency for administrative cases is due to the fact that the number of judgments does not necessarily correspond to the number of cases closed. For example, a judgment closing two cases is recorded as one judgment.

(2021): “Civil (and commercial) litigious cases”: in 2021, the Court of cassation managed to adopt a higher number of final decisions compared to 2020 (973 final decisions in 2021 compared to 853 in 2020). This is largely due to a series of 72 similar cases in which final decisions were delivered in 2021, as well as to the endeavours to increase the number of final decisions in tax matters (+30 final decisions compared to 2020). The number of incoming civil (and commercial) litigious cases in 2021 is more or less comparable to the one in 2020. In the long term, an upward general trend is to be noticed. However, more specific evolutions have been observed within this case category: in 2021, compared to 2020, the number of incoming civil cases (including commercial and administrative cases), as well as the number of incoming social cases has slightly decreased, while the number of incoming tax cases has increased. The latter is increasing from year to year.
The category “2.3 Other non-litigious cases” encompasses cases related to requests for judicial assistance introduced before and dealt with by the Court of cassation in 2021.
The category “4. Other cases”, concerns disciplinary cases brought before and resolved by the Court of cassation in 2021. Incoming disciplinary cases, as well as resolved disciplinary cases are higher in 2021 compared to 2020 (+ 15 incoming cases; + 11 final judgments). Given that the Court processes a small number of disciplinary cases each year, it is not possible to draw relevant conclusions based on the observed variations.
“3. Administrative law cases”: data communicated by the State Council; in respect of the number of resolved cases, there were 170 final decisions and 255 non-admission orders.

(2020): In the category '1. contentious civil (and commercial) cases' are included the C, F and S cases (civil; fiscal and social cases) that were filed/processed before the Court of Cassation in 2020.
The category '4. other cases' contains the D cases (disciplinary cases) filed before/processed by the Court of Cassation.
It should be noted that the Court of Cassation is also competent to decide on applications for legal aid. The category 3 ""administrative cases"" was provided by the highest adminsitartive Court.
(source Cour de Cassation)
With regard to the category ""administrative cases"" (Council of State), for completed cases: it should be noted that the figure of 479 covers 177 final judgments and 302 orders of non-admission. (source Council of State). It should be noted that the lack of horizontal coherence is due to the fact that the number of judgments does not necessarily correspond to the number of closed cases. For example, a judgment that closes two cases is recorded as a single judgment.
In 2020, the number of new administrative cases increased compared to 2019. However, due to the exceptional situation caused by COVID, the State Council could not keep up with the flow of cases and even though the number of completed cases increased compared to 2019, the number of pending cases at the end of 2020 increased. "

(2019): Civil, social and fiscal affairs at the supreme Court. A dministrative cases are the cases 'in cassation' at the Council of State.

(2018): Civil, social and tax cases at the Court of Cassation
Administrative affairs = cases "in cassation" at the Council of State

(2017): civil and commercial cases: cases in roles C, S and F at the Court of Cassation
administrative cases: cases before the Council of State "in cassation": Out= 221 judgments and 214 non-admission orders

(2016): Civil, social and fiscal cases at the Court of Cassation
Administrative cases ="cassation" cases in the State Council
The decrease in administrative cases is due to a reduction in referrals to the Council of State for this type of case.

(2014): 2014: The civil and commercial cases include cases of roles C (private and public law), F (tax law) and S (employment law) of the Court of cassation.
Administrative cases fall within the decisions of the Council of State in cassation.

Bulgaria

(General Comment): The data on the supreme courts are provided by the Supreme Court of Cassation and the Supreme Administrative Court on the basis of the information extracted from the case management systems implemented in these courts. The software of the Supreme Court of Cassation for extraction of statistical data is made according to a methodology developed in the Supreme Court of Cassation, as the codes for the respective type of cases are formed by a working group of judges in the Supreme Court of Cassation. This software, which allows the SCC to extract the statistics needed to answer Question 99, is different from the product used for other courts.
Since 2020, the Unified Court Information System (UIS) has been gradually introduced in all courts, developed within the project “Creating a Model for Optimizing the Court Card of Bulgarian Courts and Prosecutor's Offices and Developing a Unified Court Information System” with the financial support of Operational Program "Good Governance" 2014-2020.
Administrative law cases- When preparing the statistical data for the judicial proceedings in the Supreme Administrative Court, existing specifics in connection with the formation and administration of the cases should be taken into account, which can be used to explain the discrepancies in the data. Part of the cases that have already been recorded as closed/completed in the statistics can be reopened, for example, when a party to the proceedings submits a request to cancel an effective court act. In the court's statistics, these cases, already declared closed, are again placed in the "pending" column, although at the time of their reporting, they have not yet been scheduled for consideration in an open court session. The final /total/ number of pending cases in the statistics of the Supreme Administrative Court also changes with the addition of cases on cancellation requests.

(2021): There are also some other non-litigious cases that are not included in the data. However, their number is insignificant. Concerning the category "Civil and commercial litigious cases": the reasons for the difference between 2020 and 2021 are twofold: the large increase in caseloads in 2021 and the critical staffing of the Supreme court of cassation. 1. There are 836 pending cases as of December 31, 2021 more compared to those at the end of 2020, as the cases received in 2021 were 1105 more than those who entered in 2020. As a result of the amendments to the Civil Procedure Law, access to cassation appeals was expanded from the beginning of 2020 in cases related to consumer disputes, which in turn caused an increase in the number of cassation cases in the Civil College/Chamber and the Commercial College/Chamber. 2. The court in 2021 is not sufficiently staffed due to delays in the competitions for the appointment of judges in the Supreme Court, as well as due to the retirement of judges in 2021 - in the Civil College/Chamber - 3 judges, and in the Commercial College/Chamber - 1 judge.

(2020): The number of pending administrative cases decreased meaningfully because of reorganization of work in the Supreme Administrative Court (SAC). By issuing an internal order The Chairman/President of the SAC increased the workload of each judge to achieve these results.
The difference of two cases in the horizontal calculation/consistensy (indicated by the SCC 3863 cases instead of 3865-Pending cases on 31 Dec. ref. year) is due to two cases found in 2020, which were completed in the SCC in a previous period (before 2020), but were not correctly filled in then with all the details needed by the software to report the cases as completed. The adjustment was made in 2020, which actually reduces the number of cases for consideration by two, and the number of completed cases does not increase because the cases were completed in a previous period - before 2020.

(2019): There are some non-litigious cases that are not included in the data but their number is insignificant.

(2018): There are also some other non-litigious cases that are not included in the data. However their number is insignificant. The number of pending administrative cases older than 2 years decreased meaningfully because of reorganization of work in the Supreme Administrative Court (SAC). By issuing an internal order The Chairman/President of the SAC increased the workload of each judge to achieve these results.

(2017): The answer for 2. Non litigious cases (2.1+2.2+2.3) is NAP for previous cycles as well.

(2016): The increase in the number of pending administrative law cases (in the beginning and at the end of the year) is explained by the fact that data has been provided by different sources for 2014 and 2016.

Croatia

(2017): Regarding the answers in this question, cases dealt with by the Supreme Court of the Republic of Croatia, as the highest instance court in the RoC, have been presented. We are unable to show separately the required categories. The Supreme Court of the RoC is in the process of preparing the implementation of the ICMS, which will in future enable the expression of cases by types. Source for this data is published data by the Supreme Court of the RoC for year 2017 on their website.

(2016): Due to a large influx of revision proceedings and a slower solving of cases in 2014 and 2015, at the beginning of 2016 the number of pending cases continues to increase. However in 2016 the Supreme Court of the Republic od Croatia significantly resolved more cases than in previous cycle and the number of pending cases had decreased compared with 2015 althought not when compared with 2014.

(2015): In the table 99. cases dealt by the Supreme Court of the Republic of Croatia, as the highest most instance court, have been presented. We are unable to show separately the required categories. The Supreme Court is in the process of preparing the implementation of the ICMS, which will in future enable the expression of cases by types.

(2014): After the new standardization of the audit, the Supreme Court has started to be less up-to-date since the number of received cases is far beyond the number of cases which the existing judges and advisors at the Supreme Court may solve. In resolving the cases at the Supreme Court, advantage is given to urgent cases (determined by laws) and to old cases.

Cyprus

(General Comment): Q99 is NAP because Cyprus has a two tier system therefore the supreme court is the second, highest and final instance court.

(2018): Cyprus only has a two tier system. The Court of Appeal is also the Supreme Court, therefore the relevant data could be found in the section on second instance cases.

(2016): The supreme court is the appeal court

Czech Republic

(General Comment): Other cases: This category includes appeals in last (third) instance of insolvency cases and incidence disputes.

(2021): Other cases: This category includes appeals in last (third) instance of insolvency cases and incidence disputes.

(2020): Civil (and commercial) litigious cases: After several years of steady growth in the incoming cases, the incoming cases started to decrease in 2018. This is mainly due to legislative changes and drop in first and second-instance agenda in previous years. Thanks to this decrease the Supreme court was able to resolve part of its backlog and thus pending cases significantly decreased.
Civil (and commercial) non litigious cases: The variations should be put into perspective due to small absolute values.
Administrative cases: The Supreme court is overburdened and encounter difficulties to resolve its cases thus the number of pending cases grow quite quickly. It is connected to grow in number of administrative first-instance cases and growing tendency to fill an appeal to Supreme Administrative Court.
Other cases: This category includes appeals in last (third) instance of insolvency cases and incidence disputes. The changes are the result of changes in second-instance agenda. Also, it must be noted that the number of pending cases is relatively small, thus the variance is bigger.

(2019): Court was overburdened last year (there was much higher number of incoming cases than it managed to resolve), so there is a big increase in the number of pending Administrative cases.

(2018): The category “other” includes appeals in last (third) instance of insolvency cases and incidence disputes.

(2017): The category “other” includes appeals in last (third) instance of insolvency cases and incidence disputes. This whole agenda is relatively new (since 2008) and it takes quite a long time to resolve a case (several years). Since the agenda is new, it took several years before the number of first-instance incoming cases stopped growing and reach somehow stable level. Of course, the number of appeals (second instance) and incoming case second instance cases started to grow as well, but later. For simplicity, it can be said that Supreme Court deals with appeals in final (third instance). It follows that the number of final instance cases in this agenda also started to grow and again, later than the number of incoming cases in second instance. Thus the number of incoming cases in this agenda (insolvency cases and incidence disputes) is currently growing. The court seems to be struggling to deal with this growth in number of incoming cases, yet it is difficult to understand the reasons behind it, as the growth does not seem to be very high in absolute numbers.

(2016): In 2016 the administrative cases were added and for that reason all numbers show variation. Previously the number of administrative cases on this instance was NA.

(2012): In the frame of the 2012 evaluation cycle, it was specified that the civil and other cases are within the competence of the Supreme Court, while the administrative cases are within the competence of the Supreme Administrative Court.

Denmark

(General Comment): All cases at the Supreme Court are considered litigious.

(2021): There is no special reason explaining the increase in the number of incoming cases. It should be recalled that 2020 was a special year because of the lockdown. The Supreme court depends on the two High Courts to receive cases and they send a few more cases to the Supreme court in a year without lockdown compared with 2020.

(2019): resolved and incoming cases have not markedly changed. So it is pending cases that varies. But pending cases are residual numbers and will typically vary from year to year.

(2018): In the Danish context, non-litigious cases do not make sense. Pending cases may vary as it is residual in nature and is depending on the number of incoming and resolved cases and the ratio between those two.
it is also important, when we talk discrepancy, that there is a year between previous and present year (2016 - 2018). 2017 is missing, so data - in particular pending cases - may vary.

(2017): Pending cases primo and ultimo 2017 for the Supreme Court is found based on pending cases ultimo 2016, received cases in 2017 and resolved cases in 2017. Put differently, pending cases are now generated based on pending ultimo 2016 and cases in 2017.

(2016): In the Danish context, non-litigious cases do not make sense. Pending cases may vary as it is residual in nature and is depending on the number of incoming and resolved cases and the ratio between those two.

(2015): The number of incoming cases ("other than criminal cases") dropped between 2010 and 2015. Since the instance reform in 2007, the Supreme Court is now almost only a third instance court (instead of being partly a second instance court and partly a third instance court). Indeed, first instance pending cases at the two High Courts in 2007 have gradually already been appealed or finalised.

(2014): In the frame of the 2014 exercise, the attention was drawn on the fact that the number of incoming and resolved cases before the Supreme Court was still falling, since the reform of 1st January 2007. Before 2007, many cases started in one of the two High Courts and could be appealed directly to the Supreme Court as second instance. Since 2007, almost all cases start at the lowest level and consequently, much fewer cases are appealed to the Supreme Court. This effect of still fewer cases appealed to the Supreme Court following the reform could still be seen from 2012 to 2014.

Estonia

(General Comment): It is noteworthy that the discrepancies that can be observed between the number of pending cases indicated for December of one year and the number of pending cases communicated for January of the next year, are due to the fact that the statistic system is alive and courts are entitled to modify and up-date data at any time.
Moreover, differences in the horizontal consistency may be explained by the fact that during the proceedings some cases are joined and some are disjoined.

(2016): The number of pending cases has increased because the number of cases where the Supreme Court has decided to open proceedings in the Supreme Court has increased.

Finland

(General Comment): The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on 20.1.2022 and reflects the situation on that day. The data available is: 1)Incoming cases 2)Resolved cases 3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously announced number of cases on 31 December and the now announced number of cases in 1 Jan will differ. The "other" referes to insurance cases, land law cases, petitions (for example, reversals of final judgements) and pardons in the Supreme Court.

(2021): The number of incoming administrative cases has been on the decline for the last years.
Variations observed in respect of "civil and commercial litigious cases" are due to yearly fluctuations.

(2020): The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly
changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on
12.1.2021 and reflects the situation on that day. The data available is: 1)Incoming cases 2)Resolved cases 3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously announced number of cases on 31 December and the now announced
number of cases in 1 Jan will differ.

(2019): The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on 22.1.2020 and reflects the situation on that day. The data available is:
1)Incoming cases 2)Resolved cases
3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously annouced number of cases on 31 December and the now announced number of cases in 1 Jan will differ. Currently the calculation is further complicated by the partial implementation of the new cases managements systems, AIPA (for general courts) and HAIPA (for administrative and special courts).

(2018): The total of incoming other than criminal cases decreased slightly in 2018 compared to 2017. The number of administrative law cases decreased slighty in 2018 but is still high. The general increase is mostly a consequence of the asylum crisis and the fact that cases from the administrative courts have reached the highest instance in 2017 and 2018.

(2017): The total of incoming other than criminal cases increased for the period 2016-2017. This increase is mostly due to the increase in the number of administrative law cases as a consequence of the asylum crisis and the fact that cases from the administrative courts have reached the highest instance in 2017 (which was not the case in 2016).

(2016): Courts were able to resolve more cases because the number of incoming cases decreased. The Supreme Administrative court got more resourses and personnel due to the asylum crisis, but cases from the administrative courts have still not reached the highest instance.

(2014): In respect of the variations observed between 2012 and 2014 data, it is noteworthy that the statistics system has changed. Data is not received any more from the Central Statistical Office of Finland. Instead, the Ministry of Justice receives information directly from processing systems. This method of compilation of statistics does not quite support answering the question, as the information is run periodically and not daily. As a result, some discrepancies occur. As the system does not provide the numbers for 1 January 2014, it is necessary to calculate them separately from the correct data obtained on a later date.

France

(2021): source SDSE and Council of State

(2020): "The health crisis and containment may have played on TAs (completed cases) (by reducing the ability of courts to process cases) but also on NAs (new cases) (fewer offenses committed, fewer cases brought to trial). Prior to this, a major lawyers' strike and a transport strike had mainly affected the TAs.
Commentary provided by the Conseil d'Etat: As a reminder, the measures derogating from the ordinary law of contentious administrative procedure adopted to respond to the situation arising from the health crisis caused by the Covid-19 epidemic were provided for by Ordinance no. 2020-305 of March 25, 2020, and then by Ordinance no. 2020-1402 of November 18, 2020, and Decree no. 2020-1406 of the same day. I - Concerning the rules relating to the organization or holding of hearings 1°) Use of audiovisual or any other means of electronic communication
The two orders of March 25 and November 18, 2020 provided for the possibility of using an audiovisual means of telecommunication for the holding of hearings or any other means of electronic communication.
When this device was used, it was used, in almost all the jurisdictions that had recourse to it, for less than 10% of the cases judged in collegiality during the same period.
The most common configuration used was that in which one or more members of the panel were at a distance and the president, the other members of the panel, and the parties and their counsel were in the courtroom (approximately 75% of the courts that used videoconferencing chose this configuration, and 53% of them used it for less than 10% of the cases heard by the panel). Very few courts have used video-conferencing with remote parties. The reasons for which the courts have used video-conferencing are linked to the constraints linked to the health crisis, in particular the difficulties encountered by lawyers to travel, especially in overseas territories, and the isolation imposed on certain people (judges or lawyers) declared to be in contact or recognized as fragile.
In the case of single-judge hearings, the courts have made a very measured application of the provisions allowing the use of an audiovisual means of telecommunication, since only 6 administrative courts out of 35 have indicated that they have used it. The administrative courts indicated that they had used videoconferencing, as a single judge, for the processing of emergency proceedings in matters concerning foreigners, particularly in cases where the foreigner was in administrative detention. Finally, 15 administrative courts indicated that they held summary proceedings by videoconference. For almost all of these courts, the summary proceedings judge was in the courtroom and the parties were at a distance, and less than 10% of summary proceedings cases were judged in this configuration. Travel difficulties were the main reasons why the courts of first instance held summary proceedings by videoconference. The texts applicable during the state of health emergency allowed the use of any means of electronic communication, other than videoconferencing, in case of impossibility to use it. Only a few TAs used this procedure and for less than 10% of the cases in the courts that used it.
Generally speaking, the courts have made a very measured application of the provisions of the orders allowing hearings to be held by videoconference and this use was justified by the constraints and difficulties linked to the health crisis. 2°) The provisions allowing to limit the number of persons attending the hearing were applied by a large number of courts and in a frequent manner. On the other hand, the provisions allowing the president of the court to decide that the hearing will be held without the presence of the public have been used very little. 3°) The dispensation of the public rapporteur's conclusions has been used very little by the courts. This dispensation was applied because of the vulnerable state of the public rapporteur or to limit the length of the hearings (in these cases the dispensation was granted for cases that did not present any difficulty).

(2014): 2014: The statistics of the Court of Cassation are not based on the same information system as the ones of courts of first instance and appeal courts. If discontinued cases of the category non-litigious cases may be subject to an appeal, it is not possible to identify them, they are included in the figure given for civil litigious cases. Thus, the total figure is the one retained.

Germany

(2021): The statistics of the Federal Court of Justice do not differentiate between litigious and non-litigious cases. The data given under Nr. 1 represents all appeal cases in civil matters at the Federal Court of Justice (including family matters).
"Other Cases": Data represents labour law cases at the Federal Labour Court.
The annual report of the Federal Labour Court doesn't provide an explanation for the decrease in incoming cases and resolved cases. According to press reports, the decrease in incoming cases might be due to the good economic situation prior to the pandemic (less dismissal cases). The decrease in resolved cases might be due to a rising number of cases, in which an involvement of the European Court of Justice is necessary.

(2015): The data provided date from 2014. At present, no data are available for 2015.
It is not possible to distinguish between litigious civil cases, respectively commercial cases, and those that are non-litigious. Accordingly, number 1 of the answer to question 99 includes all appeals on points of law brought in the civil matters before the Federal Court of Justice (Senates for civil matters including family law matters). However, the number of proceedings dealt with and concluded by litigious rulings in 2014 amounts to 600.

(2014): The 2014 data are the same as those that have been provided in 2013. No update was available.

(2013): For 2013, two Landers did not provide any information. Data provided for the civil (and commercial) litigious cases include all appeals lodged encompassing litigious and non-litigious cases as well as family law cases.

(2012): In the frame of the 2012 evaluation it was stressed that the values regarding questions 91, 94, 97, 98, 99, 100, 101, 102, 107, 108 corresponded to data of the year 2011.

Greece

(2021): The fact is that Supreme Court couldn't split the number of civil cases on each category provided in the table. The correct numbers for Categories 1+2 are the following: 2300 pending cases on 1 Jan. ref. year, 2 644 incoming cases, 2 262 resolved cases and 2 682 Pending cases on 31 Dec. ref. year.

(2020): No data were collected from Supreme Courts regarding incoming and resolved cases. Therefore, we were unable to provide the relevant evaluable data.

(2018): "the discrepancy between the number of the resolved cases of 2017 and of 2018 for administrative law cases is due to the combination of the following factors:
-in 2018 a number of difficult cases, that had to do with the system of social insurance, was about to be completed
-lawyers become familiar with the filters regarding the cassation and its strict prerequisites, which lead to less rejections of cases as inadmissible and subsequently to a higher number of cases being discussed as far as their real facts are concerned.
-for the abovementioned reason the fast procedure provided for by the relevant code of procedure is not so often implemented
-there are still vacant places of councellors of state, i.e. of the highest rank."

(2017): "Administrative law cases": the number of incoming cases decreased in mainly two sections of the Council of State (i.e. section b for tax issues (-239 cases) and section d for general issues (-692)).

(2016): Previous data concerning the total did not include administrative law cases.

Hungary

(2021): Other cases: insolvency cases, review procedures in labour cases, uniformity complaints
Administrative Chamber
As of 1 April 2020, a significant change was introduced concerning the competence of the Administrative Chamber. As a result of this change, all legal remedies sought for in administrative disputes were decided by the Curia after 1 April 2020. This caused a significant increase in the caseload which was substantially higher than any number of incoming cases in the previous years, regarding the year 2021 as a whole. The change in the competences had an impact for the whole year 2021, due to which administrative legal remedy cases accounted for almost half of the total number of incoming cases at the Curia. Because of the change, the number of administrative judges was increased, and the increased judicial staff managed to resolve the surplus in a timely manner.
Civil Chamber
In comparison to 2020 data, the increase in the number of incoming civil and commercial litigious (line 1) can be explained by the fact that the incoming appeal (second instance) cases were higher by almost 40%. Regarding the appeal cases, the Curia experienced a temporary fallback in 2020; however, as the pandemic situation got better, lower courts could resolve more cases. So, the increase experienced in 2021 is explained by the low base value in 2020, as well as by the improvement in the COVID-19 pandemic situation.
The increase in the number of incoming general civil non-litigious cases (line 2.2.1) can be explained by the increase of cases initiated for the designation of the competent court to two and a half times. Despite the fact that the Civil Division of the Civil Chamber had resolved two times more cases than in the previous year, still there was a significant number of 'designation cases' remained pending.
2.1. Civil and commercial non-litigious cases referred to the Curia through an appeal or a petition for review, cases concerning recusal of judges, cases concerning the designation of the competent court, cases concerning an objection filed because of allegedly excessive duration of the proceedings.
2.2. This is an aggregate of the numbers reported under lines 2.2.1, 2.2.2, and 2.2.3.
2.2.2. Business registry cases referred to the Curia through an appeal or a petition for review.
2.2.3. Review proceedings concerning the registry of civil organizations and other non-profit organizations.
2.3. Review proceedings initiated in non-litigious labour cases, as well as non-litigious proceedings related to labour litigation, initiated for the designation of the competent court.

(2020): The pandemic situation had a huge effect on the case flow of the courts on every level of the court system. Special regulations were adopted by the legislator to promote videoconferencing and the courts were "closed between the 16th of March and the 31th of March (during this period no procedural events could be performed at the courts). Although the courts carried out their main activities, many cases were prolonged e.g. because the parties were not able to attend the hearings. Regarding administrative cases the re-organization of administrative jurisdiction also could have an effect on the case-flow.

(2017): The number of incoming cases decreased in most of the observed categories at the Supreme Court. This also resulted in a decrease in the number of resolved cases thus the number of pending cases increased.

(2016): Generally, the increase in the number of incoming cases at the Kúria (Hungarian Supreme Court) for 2016 is the result of the increasing use of extraordinary remedies by the parties. As the number of incoming cases increased, it resulted in an increase in the other categories as well.

(2014): In 2014, in contrast with the 2013 evaluation, some registration cases were also included within the category "civil and commercial non-litigious cases". The item "other registry cases" includes registration of civil societies. The item "other non-litigious cases" includes court mediation and non-litigious labour cases.
The category "other" encompasses insolvency cases and labour cases.
On the occasion of the 2014 exercise, it has been stressed that one of the main aims of the judicial reform of January 1, 2012 was that the President of the Supreme Court (Kúria) and the Supreme Court itself should focus more on the quality of judicial work. As the President of the Supreme Court was released from the burden of the central administration of the court system, the Kúria was able to reduce its backlog as well as to focus more on the consistency of the national jurisdiction.

Ireland

(General Comment): Administrative law cases are included in the number of Civil (and commercial) litigious cases.

(2020): Reduced cases due to COVID-19 pandemic. During the most restrictive lockdowns, only essential proceedings could be dealt with, but as guidance allowed, case volume increased. Urgent and essential cases continued to be heard throughout. All written judgments were delivered electronically and published on the Courts Service website, courts.ie.
Both the Supreme Court and Court of Appeal quickly adopted the use of video technology and made greater use of electronic documentation to facilitate their continued work. Procedures were introduced to ensure that justice was administered in public. Both jurisdictions delivered their judgments electronically. Waiting times for a hearing in both Courts were improved, to a certain extent, by a net reduction in the numbers of new cases coming into their lists from other jurisdictions. By year end in both Courts, there was a net improvement in the numbers of cases waiting to be dealt with compared to 2019.

(2019): There has been an overall increase in the appeals in civil matters to the Supreme Court from 2016 and it is expected at this stage that this trend will continue into next year.

(2018): There has been an overall increase in the appeals in civil matters to the Supreme Court from 2016 and it is expected at this stage that this trend will continue into 2019.

(2017): Since the establishment of the Court of Appeal in 2014, the number of pending cases at third instance has fallen. However, the number of incoming cases at third instance has slightly increased between 2016 (164) and 2017 (190).

(2016): The reduced number of incoming and resolved cases reflects the consequences of the establishment of the new Court of Appeal which came into operation in October 2014.

(2015): The reduction in the number of incoming cases to the Supreme Court substantially reflects the change in the jurisdiction of the Supreme Court from that of a second instance appeal court to an appeal court which is primarily third instance in nature

(2014): 2014: Variation: The significant increase in the number of resolved civil (and commercial) litigious cases between 2012 and 2014 reflects a significant exercise undertaken by the Supreme Court in reviewing its caseload in preparation for the establishment in 2014 of the new Court of Appeal (which has assumed the previous second instance jurisdiction of the Supreme Court), which resulted in the striking out or withdrawal of a significant number of appeals then pending before the Supreme Court.

Italy

(General Comment): · With regard to the administrative cases (which number is provided only since 2014), the appeals are dealt with by the Council of State (Consiglio di Stato) which is a legal-administrative consultative body ensuring the legality of public administration in Italy. The Council has jurisdiction on acts of all administrative authorities, except when these authorities lack discretionary power, in which case the dispute is considered to be one of civil law. Figures referring to the activity of the Council of State are inserted in the frame of question 99 and not question 97. · In Italy, non-litigious enforcement cases are not heard by the highest instance court. The latter only hears litigious enforcement cases.

(2021): "Other cases" represent residual cases, such as those concerning the competence or jurisdiction of the courts, or those concerning the correction of the so-called material errors committed by the Supreme Court.

(2019): Other cases represent residual cases, such as cases regarding the competence or jurisdiction of the courts, correction of material errors.

(2018): The increase of the incoming civil litigious cases is ascribed to proceedings related to immigration matters. There is no specific explanation for the increase of resolved administrative cases. Other cases represent residual cases, such as cases regarding the competence or jurisdiction of the courts, correction of material errors.

(2017): The category "other cases" at Q.99 (Supreme Court) represents residual cases such as cases regarding the competence/jurisdiction of the court, corrections of material errors, etc. The 25% variation (in terms of number of resolved cases) has no particular explanation. Please also note that this category do not exist at first and second instance.

(2016): "Other cases" represent residual cases such as cases regarding the competence/jurisdiction of the court, corrections of material errors, etc. In respect of this category, the numbers are small and the observed variations should be put into perspective.

(2014): · In the frame of the 2014 exercise, it has been indicated that figures subsumed within the category "other" represent really residual cases (such as cases regarding the competence/jurisdiction of the court, corrections of material errors, etc.).

· As to the increases observed in respect of the "total of other than criminal law cases" with regard to all the items (pending, incoming, resolved cases), it is noteworthy that in 2014 for the first time "administrative law cases" dealt with by the Council of State were considered. If looking only to "civil (and commercial) litigious cases", the differences are not that big. In general terms the Supreme Court of Cassation resolves fewer cases than incoming cases.

(2012): In the frame of the 2012 exercise, it has been specified that non-litigious enforcement cases are not heard by the highest instance court which hears only litigious enforcement cases. Before 2012, only litigious enforcement cases have been provided. For 2012, data related to litigious enforcement cases are the following: initially pending: 1090; incoming: 221; resolved: 413; finally pending: 898.

Latvia

(2021): Total number of incoming administrative cases and civil cases has decreased significantly; taken measures to handle backlog of administrative cases has resulted in increased turnover, this has resulted in falling numbers of pending cases. To handle backlog of administrative cases, two additional posts of judges were created for the years 2021 and 2022.
For some type of listed cases the total numbers are so small, that even 2-3 cases give discrepancy ratio of 100 % or even more.

(2020): There has been gradual decrease of incoming cases: civil cases 1336 (2018), 1164 (2019), 1127 (2020) and administrative cases 850 (2018), 844 (2019), 826 (2020). There has been increase of examined cases per judge of the Administrative chamber (+4) and there was additional judge from the Civil chamber allocated to deal with administrative cases (February-September 2019) and substitute judge working at the Supreme Court (September-December 2020). As result the clearance rate for administrative cases in 2019 was 113% and in 2020 was 114%.
The clearance rate for civil cases (Civil chamber) was 120% which is explained by decrease of incoming cases and high number of examined cases per judge (97 cases). Decrease of non-litigious land registry cases is explained, first, by decrease of total numbers of transaction, for example according to the statistics published by the State Cadastre, total number of transaction of land with buildings was 21619 in 2019 and 18616 in 2020. And, second, because majority of land registry cases of previous years concerned aspects of transformation of property rights (privatization and restitution) and economic activity before economic crises of 2008/2009 which are solved by now. Starting from 2019 the Supreme Court uses the same categories of cases as it is used in the first and second instance courts. Therefore previously used category „other cases" disappears.

(2019): Starting from 2019 the Supreme Court has changed system of classification of cases under different categories for civil cases. During this change we encountered problem of reclassification of cases registered during previous years. This reclassification had as objective to introduce the detailed classification used for first and second instance courts. Statistics for the reference year 2019 encompasses results from both categories. Since 2015 number of unresolved administrative cases increased. During year 2018 additional recourses were allocated to the Administrative department (chamber) of the Supreme Court, including additional judges. As the result, number of resolved cases in 2019 increased. For next coming two years there are two additional judges envisaged for the Administrative department.
Other non-litigious cases (2.3) are specific enforcement procedures which are regarded as uncontested for our civil procedure. These have been received via the specific procedure of a protest submitted by the Prosecutors General Office. The number became available as the result of introduction of the detailed classification regime.

(2018): Supreme Court does not rely only on data in the Court Information System, they keep separate sheet for statistics

(2017): Supreme court has provided data for questions 1 & 2. As regards the decrease of Civil (and commercial) litigious cases, there was a major performance raise in 2016. Also, the Supreme court has only recently begun to collect statistics on their work performance and thus there was and still are some NA answers for CEPEJ questionnaire

(2016): Supreme court had accumulated too many unresolved cases and 1/3 of those ar older than 2 years so they have have made some changes and acheaved progess.

(2015): An explanation for the rather large difference in case count for general civil and commercial non-litigious cases are changes in civil proceedings - while in 2014 undisputed compulsory execution cases were also heared by Supreme Court, in 2015 it was tasked with hearing decisions from Land registry, sworn baillifs and notaries only.

(2012): In 2012, the decrease of the total of cases before the higher instance courts correlates with the general decrease of the number of civil cases.

Lithuania

(General Comment): Other cases - jurisdictional cases and cases based on requests to resume proceedings in cases of administrative offenses.

(2020): In 2019, the Supreme Court of Lithuania examined fewer cases than were received, therefore the number of pending cases increased at the end of the year. However, it should be noted that in 2019 the Supreme Court of Lithuania has provided a number of important and particularly socially sensitive interpretations in both civil, criminal and administrative offences cases. The decrease in the number of resolved civil and commercial litigious cases and accordingly the increase in the number for pending cases at the end of 2020 are due to the reduction in the number of judicial posts and the lengthy appointment by Parliament procedures for vacancies.

(2019): Other cases - jurisdictional cases and administrative offences cases.
Over the last five years, there has been an almost consistent decline in cases, including cassation appeals. In 2019, as compared to 2015, 20 percent less civil cassation appeals were filed and 17 percent fewer civil cassation cases were accepted, 43 percent fewer civil cassation cases were examined. In 2019, the Supreme Court of Lithuania examined fewer cases than were received, therefore the number of pending cases increased at the end of the year.
However, it should be noted that in 2019 the Supreme Court of Lithuania has provided a number of important and particularly socially sensitive interpretations in both civil, criminal and administrative offences cases.

(2018): The number of civil (and commercial) litigious cases (1.) of the cassation instance court (Supreme Court) pending at the end of the year decreased due to the general decrease of resolved cases at first instance. In 2018 the number of civil cases resolved at first instance courts decreased by 10.89% compared to 2017 and was 15.03 % lower than in 2016. This led to the slightly lower inflow and larger number of resolved cases, therefore, to the decreased number of pending cases at the end of the year.

(2016): NA was changed to NAP only for calculation purpose -situation hasn't changed.

(2014): In the frame of the 2014 exercise, it has been indicated that the Supreme Court of Lithuania received 1369 appeals (cassation) in criminal cases and 2794 appeals (cassation) in civil cases. 677 appeals in criminal cases and 2038 in civil cases were returned to the complainants.
2014: Different category of cases as in Q91, 97 and 99 exist in Lithuania, but they are all under the category 1. Civil (and commercial) litigious cases and it is not possible at this point to distinguish them from other cases.
The increase between 2013 and 2014 in number of cases can be explained by the increase in the number of incoming administrative cases and cases of administrative offence. They were mostly cases on remuneration of public servants in 2013 due to the decision of the Constitutional Court of the Republic of Lithuania, which recognized the laws on the reduction of the remuneration of state servants and judges unconstitutional. This also had an effect on the significant increase of the category "other cases" since this situation resulted in the increase of the number of cases of administrative offence (in execution process).

Luxembourg

(General Comment): The pending files are now detailed between criminal and civil/commercial cases, thus this additional information is now available. There is no cassation possibility against the decisions of the administrative court of appeal.

(2021): The number of incoming cases depends on the appeals lodged which the Court has no influence on and which is, among other things, a function of the number of decisions taken at the level of the other instances. In 2020, the number of decisions taken by the different instances has decreased compared to the previous years, which can explain the decreased number of incoming cases before the Court of Cassation. The legislation has not changed since the previous reference period.

(2019): Pending cases at the beginning of the year have been restated in relation to those available at the time of the 2018-2020 evaluation cycle. The introduction of a new case management application at the Court of cassation (JUCIV) has made it possible to identify a number of cases, still listed as pending, which were in fact completed.

(2018): Comparing 2016 to 2018, the increase in pending cases at the end of the period is 40.73%. However, there was already a clear increase in cases pending at the end of the period between 2016 and 2017, which is largely explained by a larger number of new cases in 2017. Between 2017 and 2018, the variation in cases pending at the end of the period is + 5%, which does not seem excessive, especially taking into account the low numbers.

(2017): Q99: total and civil and commercial litigation cases: the slight increase in the number of incoming cases in 2017 and the relatively stable number of resolved cases explain the increase in the number of pending cases at the end of 2017 to 109 .

(2014): 2014: several categories are in NAP because the Court of Cassation has no jurisdiction over these categories.

Malta

(2017): In Malta the 2nd instance courts are the highest instance. Hence the NAP answer to this section.

(2016): In Malta the 2nd instance courts are the highest instance. Hence the NAP answer to this section.

Netherlands

(General Comment): Information in this section is taken from the annual report of the High Court. The formula for pending cases on 31 December might not work satisfactory – there will be a gap between pending cases at the ent of the year and the number of pending cases at the beginning of the year + incoming cases -/- resolved cases. The gap is caused by cases that are labelled 'outflow other'. These are cases that do not get resolved because of administrative reasons (for instance, the appeals is filed to late, or mandatory court fees have not been paid and there is no dispensation).

(2021): The formula for pending cases on 31 December might not work satisfactory – there will be a gap between pending cases at the ent of the year and the number of pending cases at the beginning of the year + incoming cases -/- resolved cases. The gap is caused by cases that are labelled 'outflow other'. These are cases that do not get resolved because of administrative reasons (for instance, the appeals is filed to late, or mandatory court fees have not been paid and there is no dispensation).
2 – Non-litigious cases: in theory, it might possible these cases get to the Supreme Court, but the numbers are not specified for the courts.
3 – Administrative law cases: please note that the Dutch Supreme Court only handles tax cases and some social security cases. There is not third instance court for other administrative cases in the Netherlands, so these are not included in the numbers given. 4 – Other cases: There might be other cases in separate courts, but these numbers are not nationally available. Regarding discrepancy: There are always factors that might influence the number of cases the SC handles in a year. There are no published numbers identifying the various types of cases the tax chamber handles. As mentioned before, we can provide a more general explanation for an increase in SC cases and/or disposition time. For example, delays or catch up in lower courts (increasing/lowering the number of incoming cases), new laws or changes in law that the SC must answer, cases may become more complex due to increasing complexity of laws and differences (and thus, cases may take longer), or cases that are connected are grouped to deal with in clusters (meaning more cases for a longer time). While a specific cause cannot be clearly pinpointed, all these factors might influence the numbers.

(2020): With regard to 2. Non litigious cases: In theory, it is possible these cases get to the Supreme Court, but these cases are not specified in available numbers for the courts.
With regard to 3. Administrative law cases: Please note that the Dutch Supreme Court only handles tax cases and some social security cases. There is no third instance court for other administrative cases in the Netherlands, so these are not represented in this number.
With regard to 4. Other cases: There might be other cases in separate courts (Kamers), but these numbers are not available nationally.
With regard to the discrepancies: there are always some factors that might be of influence on the number of cases the Supreme Court handles in a year. It might be due to delays or catch ups in lower courts (so incoming cases are lower/higher), new laws or changes in law that the SC must answer (like covid-regulations), cases may become more complex because laws and differences are more complex (as a result cases may take longer), or cases that are connected that are grouped to deal with in clusters (meaning more cases for a longer time). While we cannot clearly pinpoint a 'cause' of the discrepancies, all these factors mentioned might influence the numbers.

(2019): Reason for discrepancies: discrepancies seem higher, as absolute values are lower. When asked, the High Court explains that there is always an eb and flow of cases due to several factors.

(2018): Cases handled by the High Court are 'litigious' by nature (= cases are settled at first instance if one party remains inactive)

(2017): the answer to this question is still not available.

(2016): A the moment the Supreme Court has not the data available to answer this question. The National Correspondent is consulting the Supreme Court to improve this situation.

Poland

(General Comment): The Supreme Administrative Court is also the court of second instance and it is impossible for the Statistics Division to divide its cases statistics and identify the number of second instance cases on the one hand, and the number of third instance cases, on the other hand. The total number of administrative law cases dealt with by the Supreme Administrative Court is provided within the frame of Q97, while Q99 is replied by NA.
While the Supreme Court considers non-contentious cases, there is no inclusion of this category of cases in the internal statistics. Accordingly, the reply is NA.

**(2021): ***1. They include cases conducted in the Civil Chamber, the Labor and Social Insurance Chamber Chamber and the Chamber for Extraordinary Control and Public Affairs, including those with the reference NSNc
*4)The data includes cases conducted in the Chamber for Extraordinary Control and Public Affairs with the references NSK, NSKP, NZP, NZ, NSW, NSP NKRS, NWW, and NO signatures. These are cases that fall under the jurisdiction of the Extraordinary Control and Public Affairs Chamber mainly in the field of public law public, i.e., other than extraordinary complaints in both civil and criminal cases (which have been assigned to civil and criminal cases shown in boxes 99 and 100, respectively),
For example, cases in the field of telecommunications regulation, energy, competition protection, but also appeals against resolutions of the National Judicial Council.
*4)Other cases are also disciplinary cases resolved in the Disciplinary Chamber of the Supreme Court.
In the case statistics of the Chamber Civil, Labor and Social Security Chamber, as well as in the statistics of civil cases (extraordinary complaints) of the Extraordinary Control and Public Affairs Chamber, there was an increased receipt in 2021 compared to 2020.This was an increase so significant that the statistics of cases handled declined compared to 2020.It should be assumed that - similar to previous years previous years, the general reason for the less favorable statistics are further organizational changes within the Supreme Court and the impact of the dispute over judicial reform on the efficiency of the work of Supreme Court judges. In addition, following the assumption of the post of President of the Civil Chamber of the Supreme Court by prof. Joanna Misztal-Konecka, there has been a review of the observance of the order in which cases are received in their allocation to individual judges. The Office Instruction was then modified in the part concerning the system of case numbers. Some cases were then assigned new case numbers, which could lead to an artificial overestimation of the number of cases with an unchanged rate of their handling.

**(2020): ***Civil cases :- litigious cases heard by the civil chamber and the labour and social insurance chamber: Civil Chamber - pending cases on 1 Jan - 2596, incoming cases - 4360, resolved cases - 5518, pending cases on 31th Dec - 1438; Labour and social insurance chamber - pending cases on 1 Jan - 2161, incoming cases - 1535, resolved cases - 1938, pending cases on 31th Dec - 1758; *Other cases: - cases pertaining to public law, decided by the Chamber for Extraordinary Control and Public Issues and disciplinary cases resolved in the Disciplinary Chamber of the Supreme Court: the Chamber for Extraordinary Control and Public Issues - pending cases on 1 Jan - 149, incoming cases - 6696, resolved cases - 6710, pending cases on 31th Dec - 135; the Disciplinary Chamber of the Supreme Court: pending cases on 1 Jan - 105, incoming cases - 312, resolved cases - 395, pending cases on 31th Dec - 22; Other cases: *These increases must be explained by the election year, in which the Chamber of Extraordinary Control and Public Affairs dealt with numerous protests. This has resulted in a substantial increase in the dynamics of cases in this Chamber.
Discrepancies - Administrative law cases - see data in Q97 and general comment to that question.

(2019): 1. Civil cases = civil cases + labour and social security cases;
4. Other cases = public law cases + disciplinary cases;
3. Data from Supreme Administrative Court; “1. Civil and commercial litigious cases”: Pending cases on 1 Jan. ref. year : 2586 (civil cases) + 2010 (labour and social security cases); Incoming cases :5105 (civil cases) + 2480 (labour and social security cases); Resolved cases: 5095 (civil cases) + 2329 (labour law and social security cases); Pending cases on 31 Dec. ref. year: 2596 (civil cases) + 2161 (labour and social security cases);
“4.Other cases”: Pending cases on 1 Jan. ref year: 117 (disciplinary cases) + 215 (public law cases); Incoming cases: 269 (disciplinary cases) + 894 (public law cases); Resolved cases: 281 (disciplinary cases) + 955 (public law cases); Pending cases on 31 Dec. ref. year: 105 (disciplinary cases) + 154 (public law cases).
Public law cases and disciplinary cases were not entered in the table in 2018. Public law cases in 2018: Pending cases on 1 Jan. ref. Year – no data; Incoming cases – 293; Resolved cases – 81; Pending cases 31th December – 212; Disciplinary cases in 2018 : In 2018 the Disciplinary Chamber of the Supreme Court received a total of 161 cases, of which 52 to the First Department and 109 to the Second Department. In the First Department, in 2018, 11 cases were resolved. In the Department of the Second Disciplinary Chamber, 17 cases were considered and completed in terms of content, and 16 cases formally (data from the Supreme Court activity report for 2018).

(2016): In 2014 the Administrative Supreme court cases were not included and they are reintroduced in this cycle. In regard to administrative law cases we kindly indicate that administrative cases are excluded from the jurisdiction of the common courts. Administrative cases are proceeded by the Voivodship Administrative Courts and Supreme Administrative Court, which are only competent to proceeded such cases.

(2012): In the frame of the 2012 exercise, it has been indicated that the Supreme Court provided the Ministry of Justice with data set that allowed summing up non-criminal cases with administrative cases of the Supreme Administrative Court. Therefore it was possible to include both data-sets.

Portugal

(General Comment): In Portugal, there are not non-litigious cases in superior courts.
The category "other" does not exist in the higher instances.
It is noteworthy that before 2015, data concerning the total of “other than criminal law cases” did not include administrative law cases. Since 2015, administrative law cases are included in the total which explains the significant increase of cases.

(2021): The increase in the number of cases pending on 1 January 2021 is related to the fact that in 2020 the number of cases brought was slightly higher than the number of cases completed. There is no specific explanation for these values.

(2020): There was an increase in the number of cases pending from 2018 to 2020 at the Supreme Court of Justice, considering that the number of cases that ended from 2018 to 2020 was relatively lower than the number of cases brought in those years. The rise in the number of pending cases in the year 2020 is also partly explained by the decrease in court activity in the year 2020 due to the Covid-19 pandemic situation.

(2019): 99 (total) - the increase on the number of pending cases vis a vis 2018 is explained by the fact that the closed cases from 2018 to 2019 were relatively inferior to the number of incoming cases in those years. There were no legislative changes that could explain these numbers.
99.1 - the increase on the number of pending cases vis a vis 2018 is explained by the fact that the closed cases from 2018 to 2019 were relatively inferior to the number of incoming cases in those years. There were no legislative changes that could explain these numbers.

(2018): Regarding the slight decrease in the number of pending civil and commercial litigious cases at the beginning of the year 2018, comparing to 2016, there were no legislative changes or others that could explain this decrease

(2017): Q99.1 - The decrease in the number of pending civil and commercial litigious cases on 31 december 2017 is explained by the fact that the number of resolved cases in 2017 was superior to the number of incoming cases in the same year. There were no legislative changes or other that can explain this decrease.

(2016): In Portugal, there are not non-litigious cases in superior courts.
The category "other" does not exist in the higher instances.
It is noteworthy that before 2015, data concerning the total of “other than criminal law cases” did not include administrative law cases. Since 2015, administrative law cases are included in the total which explains the significant increase of cases.
The question 99.3 “Administrative law cases”, includes administrative and tax cases.
The number of Pending cases on 1Jan. that correspond only to tax cases is 783
The number Incoming cases that correspond only to tax cases is 1.039
The number of Resolved cases that correspond only to tax cases is 946
The number of Pending cases on 31 Dec. that correspond only to tax cases is 876

(2015): The question 99.3 “Administrative law cases”, includes administrative and tax cases.

Romania

(2021): The increase in Pending cases older than 2 years for administrative cases could be explained both by the significant increase in 2017 of the number of incoming cases of this type and by the limited capacity for resolving cases during the pandemic crises (from 30038 in 2019 to 26800 in 2020); therefore, the effect shall be seen in terms of statistics after 3 years in the number of pending cases (according to our statistical application the pending cases are registered in the category cases pending for more than 3 years).

(2019): In 2017 there was a significant increase in the number of incoming administrative cases explained by the modifications in terms of procedure, namely amendments regarding the jurisdiction for administrative cases brought in 2013 that might have generated later effects in terms of number of "second appeals" (peculiarity of our system). Since 2017 and the described peak, the number of incoming administrative cases is decreasing.

(2018): The differences compared to the previous cycle are due to changes brought by the Constitutional Court's decisions to the interpretation given by the High Court of Cassastion and Justice to the legislation regarding the increasing number of incoming civil litigious cases and the decreasing number of civil litigious cases pending for more than 2 years.

(2017): In the national Statis system, the cases are recorded on different categories of pending cases. So, for the last column, there are mentioned the numbers for cases pending for more than 3 years. The increase in the number of incoming administrative cases may be explained by the modifications in terms of procedure, namely modifications regarding the jurisdiction for administrative cases brought in 2013 that might have generated later effects in terms of number of "second appeals" (peculiarity of our system); moreover, there should be mentioned that the number of second appeals in this question, refers to both the second appeals judged by the supreme court (High Court of Cassation and Justice) and by the courts of appeals, aspect that is valid even for the previous cycles.

(2016): In the national Statis system, the cases are recorded on different categories of pending cases. So, for the last column, there are mentioned the numbers for cases pending for more than 3 years. As result of the changes in the procedural provisions in the new codes; the jurisdiction of the courts on judging appeals and second appeals has changed and some of the cases that were under the jurisdiction of the High Court are now under the jurisdiction of the courts of appeal Consequently the number of cases in Supreme court shows significant decrease in all categories.

(2014): By the decision n° 46/2012, the Superior Council of Magistracy has decided that all the courts will implement by 1 January 2014 the IT system of collecting data. The new method is based on new definitions of the indicators and offers data with greater value for 2014. This partly explains the considerable increase of the number of pending administrative cases on 1st January between 2012 and 2014. Besides, the number of incoming cases in 2013 was higher than in 2014.

(2013): In respect of the administrative law cases, until 2013, there was only a second appeal that is encompassed in the answers to question 99.

Slovak Republic

(General Comment): The collected statistical data for the Supreme Court do not distinguish the litigious and non-litigious cases. In the civil and commercial matters the Supreme court decides primarily on the applications for appellate review on legal questions. In the commercial cases it decides also in the appellate procedure against the decisions of the Regional courts as the courts of first instance. The administrative cases at the Supreme Court level includes the remedy procedures against the decisions of the Regional courts as the courts of first instance. Depending on the type of the administrative procedure it might be appeal procedure or the cassation review procedure.

(2021): As to the number of administrative law cases, in August 2021, the Supreme Administrative Court of the Slovak Republic was established as a separate institution and it took over all the administrative law cases of the Supreme Court of the Slovak Republic. Therefore, the above-mentioned figures of the administrative law cases cover only the period from January to July 2021.

(2020): Decline of incoming cases and resolved cases as well in the Supreme court as a result of a pandemic situation.

(2019): No cases in the category other cases
Line 1: A significant drop in the number of cases for 2019 compared to 2018 has been caused by a massive decrease of incoming cases of a certain plaintiff - Pohotovosť s. r. o., a legal person which back then overwhelmed the Supreme Court´s Civil and Commercial law divisions with thousands of appeals and caused an abnormal caseload. Therefore, the indicators for 2019 should be considered as regular average numbers. Compared to e.g. 2018 and previous years which were rather exceptional.

(2018): The decrease in numbers of both incoming and resolved other than criminal cases may be explained by two important issues. First of all this is the complex change of the Civil and Administrative court procedure by introducing the new procedural rules which came into force since 1 July 2016. The other reason is the decrease of the caseload at the lower courts which naturally influence the number of cases at the Supreme court level.

(2017): The decrease in numbers of both incoming and resolved cases must be understood in connection with the data for previous years. As we explained in previous cycles (data 2014, 2015, 2016), at the level of the Supreme Court of the Slovak Republic there was the enormous increase of incoming (and resolved) cases related to consumer protection in civil and enforcement procedure. We recorded in previous years thousands of recurring submissions of several private loans' companies. These submissions started to be processed quicker and subsequently, its number dropped. The similar explanation is relevant also for the administrative cases.
As regards the variations, some inconsistencies in data between the old and new system persist, and they can be explained as the transition between the old system of collecting the statistical data to new one is more complicated than was expected, with the setting up of Analytical centre of the MoJ, application of CEPEJ methodology and its tools is one of the targets in the on-going project between CEPEJ and Ministry of justice of the Slovak republic.
There are still two different IT tools used to collect the statistical data from the courts to Analytical centre. The Analytical centre makes every effort to complete the transition between two systems as soon as possible to get reliable data as soon as possible.
As to administrative cases, in the year 2017 there were some appeal procedures pending at Regional courts as the courts of appeal as the result of application of the previous procedural rules described in point 1. All appeals against the decisions of Regional court (as the courts of first instance) were always tried by the Supreme court and we are presenting this data for all evaluation cycles in this table.

(2016): The enormous increase of the incoming cases is related to consumer protection in civil and enforcement procedure.

(2013): For 2013, a general remark was provided in respect of questions 91, 97 and 101, explaining that there were no specific reasons justifying the variations in the numbers of cases of the particular categories. It was stressed that the Slovak judicial system was facing different types of claims which massively loaded courts of all instances. For example, there was a huge number of legal actions arisen from the loans provided by the so called "non-bank loan companies" where courts had to consider constant violations of the consumer protection law. Besides, there was a huge number of class actions against the State, carried out by one of the non-bank companies for alleged damages etc. The capacity of the court staff to resolve all of the filed cases in the appropriate time period was limited despite the measures which have been taken. In spite of the positive trend concerning the increase of the number of total resolved cases, the number of incoming cases was increasing even more, causing backlogs.

Slovenia

(General Comment): The Supreme court has Criminal, Civil, Commercial, Labour and Social and Administrative department, The categories 1., 2.1 and 2.2.1 include corresponding cases from Civil, Commercial and Labour and Social departments registers. Category 3. includes registers of the Administrative department. The distribution of cases for Q99 is the same as for Q91.
Inconsistences noticed are due the Data Warehouse system explained in Q91.

(2021): 1. Civil (and commercial) litigious cases - Pending cases on 1 Jan.: decrease by approx. 40%
In 2020, the functioning of first instance courts was limited due to Covid-19 restrictions (and the number of resolved cases at first instance courts decreased). As the Supreme Court deals with the majority of cases without hearing of parties, its functioning was not affected as much and it managed to resolve more cases than it had received.
2. Non litigious cases (2.1+2.2+2.3); 2.1 General civil (and commercial) non-litigious cases; 2.2 Registry cases; 2.2.1 Non litigious land registry casesPlease note the small (absolute) number of cases at the Supreme Court instance.

(2020): Please note, the procedure of manifested inadmissibility cases are included in figures above.
The decrease in the number of (all) pending cases is due to the efficient work of the court in 2019 and 2020. Discrepancies in sub categories (form 1. through 3) are due to a small absolute number of cases).

(2019): The differences are due to a small (absolute) number of cases in some legal areas. The decrease in pending cases at the end of 2019 is due to more efficient work of the Supreme court (changes in criteria for manifested inadmissibility in 2017).

(2018): Administrative cases - in 2017, the procedure of manifested inadmissibility was introduced in aministrative cases, reducing the number of incoming (as well as resolved and pending) cases. As for other categories and Total, the difference is due to more efficient work of the Supreme court and due to aforementioned reason.
Please note, the procedure of manifested inadmissibility cases are included in figures above.

(2017): Administrative cases: the higher number of pending administrative law cases older than two years is partially a result of higher workload of the court. Partially this is the consequence of the fact that some older cases are waiting on the decision of the Constitutional court regarding laws in question (mainly taxes and public access to information issues).

(2015): Differences in pending, incoming and resolved cases Non litigious and administrative cases are mainly due to the small absolute number of cases and the nature of the cases (most complicated cases).

(2014): 2014: Variations: The numbers in that almost all categories for 2014 deviates more than +/- 20% from the 2012 data. This is due to a small (absolute) number of cases but also because the number of judges is smaller when compared to first and second instance and a single absence due to prolonged illness has a significant impact on the solving of some types of cases. We also believe that changes in economy (financial crisis), as well as in legislation, had impact on the overall statistics, but since cases at the Supreme Court level are "filtered" through courts of first and second instance, a direct connection cannot be established.

(2012): 2012: The decrease of the number of pending cases at the Supreme Court of the Republic of Slovenia can be attributed to different factors. On one hand procedural legislation has changed. Following the changes to the Administrative Dispute Act (2007) and the Civil Procedure Act (2008) the Supreme Court has now the right to decide in these types of cases whether to review a case or not. With the reform the admissibility criteria have changed and revision is now a remedy that depends mainly on the discretion of the Supreme Court. Now revision is admissible only, if the case raises a question of law of fundamental significance or if the development of law or the preservation of uniformity of case law requires a decision by the Supreme Court. The number of all incoming cases for the whole Supreme Court has dropped considerably from more than 5 000 in 2008 to less than 4000 in 2012). On the other hand this is the consequence of changes in human resources management. Firstly, the number of judicial advisers has risen and secondly, several judicial advisers were transferred from less burdened departments to those with more pending cases and consequently the productivity has risen and the number of pending cases decreased.

Spain

(General Comment): When an error is detected in the statistics of a Court, the latter is allowed doing regularization, what means that the Court communicates the correct figure and rectifies the wrong one even if this does not concord with figures offered for previous exercises. This situation can happen for example in the specific control of cases that the Court makes when a judge leaves the Court (called “alarde”), but in general, in any case in which the Lawyer of the Administration of Justice detects an error that comes from previous exercises but cannot be localized. The system prefers to correct the data than continue and amplify the error. These regularizations and the cumulated cases and the re-opened cases are the causes for the horizontal inconsistencies.

(2021): The recovery of activity, after the most severe restrictions of the pandemic, may have contributed to the entry of more cases, as well as to greater efficiency and increased number of resolved cases. The comparison is with 2020, the year in which the pandemic forced mobility restrictions.

(2020): In administrative law cases, judgements based on the unified doctrine related Tax on the Retail Sales of Certain Hydrocarbons facilitated the resolution of cases in previous years and partly caused the good clearance rate of the Supreme Court Administrative Room in 2019. However, there were fewer of these cases in 2020, so the number of resolved cases decreased.

(2019): In respect of administrative law cases, the very positive clearance rate in 2018, added to the trend that continues being positive in 2019, explains the decrease in pending cases.

(2018): The Administrative Procedural Law allows the inadmissibility of the cassation appeal by resolution of a lower level than Civil Procedural Law. This explains partially the different clearance rate between this two rooms.
In relation to the good resolution rate in Administrative is due in part to this cause: In previous years, a Judgement of the Court of Justice of the European Union declared Spanish law contrary to Community law authorizing the tax on retail sales of certain hydrocarbons. This fact meant the massive presentation of claims for the patrimonial responsibility of the State for the undue payment of the so-called "sanitary cent". Once the Supreme Court established jurisprudence, many of these cases were resolved more quickly.

(2017): The cause of the raise of administrative cases (pending at the beginning of 2017 and resolved) in the Supreme Court is the reform of the cassation appeal by the Final Disposition Third of the Organic Law 7/2015, and, on the other hand, a new organisation of the Third Courtroom.

(2016): As concerns the variations observed between 2014 and 2016 regarding the categories "total of other than criminal law cases"; "civil and commercial litigious cases"; "administrative law cases", it should be noted that:
- the increase in the number of cases in civil matters is due to the increase in conflicts of competence entered and resolved as well as the increase in the number of resolutions of appeals for unification of doctrine.
- the high increase in administrative matters is due to the massive presentation of claims for the State's patrimonial responsibility for the undue payment of the called "sanitary cent", because of the Judgement of the Court of Justice of the European Union that declared contrary to the Community law the Spanish law that authorized the Tax on Retail Sales of Certain Hydrocarbons.

(2015): Regarding administrative cases in 2015, there was a significant flow of incoming cases related with tax on retail sales of certain hydrocarbons. But before that, since 2011, the incoming administrative cases dropped due to the Law of courts' fees.

(2014): For the 2014 exercise, the decreases observed in respect of the number of pending administrative law cases in the beginning of the year and the number of resolved administrative law cases, are the result of the decreases observed and explained in fist instance.
The increase in the number of pending civil and commercial litigious cases on 31 December between 2012 and 2014 is due to the economic crisis which resulted in the increase of the number of cases in the civil jurisdiction.

(2012): For the 2012 evaluation cycle, the category of civil and commercial litigious cases includes data on labour matters, special matters and military matters.

Question 100

Austria

(2021): The total figure includes data on administrative criminal cases before the Supreme Administrative Court.

(2020): The total figure includes data on administrative criminal cases before the Supreme Administrative Court.

(2016): The big variation is due to the fact that this cycle the administrative cases were included.
The administrative courts were established January 1st 2014. After their establishment the data of the administrative courts is introduced this cycle for the first time.

Belgium

(General Comment): "The total corresponds to the criminal law cases (roll P) of the Court of Cassation.
Source: Hof van Cassatie van België - Cour de cassation de Belgique - Kassationshof von Belgien
Justitiepaleis - Poelaertplein 1 - 1000 Brussel
Palace of Justice - Place Poelaert 1 - 1000 Brussels
Council of State
Rue de la Science 33 Wetenschapsstraat
1040 Brussels - Brussel
http://www.raadvst-consetat.be"

(2021): Remarks on the evolution of criminal cases:
While the number of incoming criminal cases brought before the Court of Cassation each year remained relatively stable between 2016 and 2020, this number increased sharply in 2021, with 345 additional units compared to 2020. This is an increase of 25.50% in one year. At present, it is not clear whether this increase is a one-off and attributable to rather occasional circumstances or whether it is the harbinger of a period of significant growth in the number of criminal cases. It goes without saying that this sudden development will have to be monitored closely in the years to come.
Of necessity, the Court of Cassation has succeeded in significantly increasing the number of final judgments handed down in criminal cases in 2021 compared to 2020 (+237 units). This is an increase of 17.27%. However, these efforts could not prevent the criminal caseload at the end of 2021 from increasing for the first time in years, especially with 89 units compared to the criminal caseload at the end of 2020.

(2016): Cases on the 'p' list of the Court of Cassation
the downward trend in the input of criminal cases is due to the tightening of access conditions: stricter time limits, obligation to serve notice of appeal, compulsory intervention by a lawyer trained in the cassation technique, abolition of immediate appeal against interlocutory judgments, abolition of the Court of Cassation's review of pre-trial detention, except for the first confirmation of the arrest warrant. To all this it must be added the introduction of a rapid and non-adversarial procedure allowing appeals that are not substantiated or manifestly inadmissible or unfounded to be refused.

Bulgaria

(General Comment): The software of the Supreme Court of Cassation for extracting statistics is different from the product used for other courts. The division of criminal cases according to the criteria set out in Question 100 was made on the basis of the definitions of the CEPEJ.
In the category “other criminal cases” are included: cases with charges on corpus delicti which doesn’t have independently application; cases on Chapter XXXIII Criminal Procedure Code (re-opening of criminal cases); private cassation proceedings (change of local jurisdiction, jurisdiction disputes, proceedings on returning of cassation claim/protest etc.); procedures regarding execution of judicial acts that are entered into force; proceedings regarding administration and/or movement of cases etc.

(2021): Explanation related to all differences reported under item 2 "Misdemeanors and/or minor criminal cases" (31.8%, 22.73%, -20.69%) and item 3 "Other criminal cases" (-45 % and 54.55%.):the reasons for the differences in percentages for the above types of cases compared to 2020 are mathematical. The figures for all the listed indicators for the reference years 2020 and 2021 are small, respectively, and the differences are small as an absolute value and do not reflect a significant change in the work on criminal cases in the Supreme Court of Cassation, but are recalculated in a large percentage difference. A more detailed mathematical explanation is obtained if each of these indicators is calculated, what percentage it represents in relation to the total number of cases for examination for the corresponding year, received by the Criminal Board of the Supreme Court. In 2020, there were 1 328 cases for consideration, while in 2021 - 1 407 cases. Taking into account the total number of cases for consideration in 2020 and 2021, the difference for which an explanation is due varies in absolute value from 0.76% to -1.79%. It is too small to be an indication of a significant change in the work of the Supreme Court of Cassation in criminal cases.

(2018): The “Other cases” group are: cases where the punishment for a committed crime depends on the punishment for other crime, that is established in the main text of the Criminal Code – it could be an offence of more severe or lightly punishment; cases on procedures related to the main case; cases on claims for re-establishment of criminal case; cases on jurisdiction disputes; cases on interpretation of a judicial act; cases on rehabilitation; cases that were instituted on a private appeal, etc. Some cases which were previously counted in misdemeanour/minor are now indicated under “other” which explains the decrease in the number of misdemeanour/minor criminal cases in respect of all categories – pending, incoming and resolved cases.

(2016): Comment on question 100
Till 2015 only the Supreme Court of Cassation was hearing the requests for resumption of criminal cases. In 2015 the Criminal Procedure Code was amended with the Law For Amendment and Supplementation of Criminal Procedure Code /SG, 42/2015/. According to the amendment the request for resumption of the criminal case grounded on art. 422, par. 1, p. 5 of the Criminal Procedure Code shall be heard by the respective court of appeal, when the judgments under art. 419 of the Criminal Procedure Code were decreed by a regional or district court, except of the new verdicts.
As a result of the legislative amendment, a significant part of the requests under Chapter Thirty-three of Criminal Procedure Code are heard by the courts of appeal in the state.
The above led to reduction in the number of cases related to the resumption of criminal cases heard by the Supreme Court of Cassation. This is also the reason for the presence of more than 20% deviation from the total number of criminal cases heard by the Supreme Court of Cassation during 2016 than those from previous years.

(2014): In the annual report of the Supreme Court of Cassation in 2012 (criminal division) the cases pending at the end of the reporting period were 260. In the report for 2013 the pending cases at the beginning of the period were 602 and the pending cases at the end of the reporting period were 671. Under Table 1 of the report for 2012, there is a note that the pending cases which are not included in the number of adjourned and private proceedings were filed in December 2012 at the registry of the Supreme Court of Cassation and are scheduled for consideration in January and February 2013. As a result, the total number of pending cases in 2014 appears much higher than in 2012.

Croatia

(2021): There has been a decrease of incoming criminal law cases between 2020 and 2021 following the establishment of the High Criminal Court on 1st of January 2021, which took over part of the previous Supreme Court’s jurisdiction.

(2018): The table shows cases under the jurisdiction of the Supreme Court of the epublic of Croatia, as the highest judicial authority in the Republic of Croatia.

(2016): The table shows cases under the jurisdiction of the Supreme Court of the Republic of Croatia, as the highest judicial authority in the Republic of Croatia. We are not able to present the data separately for “Severe criminal cases” and “Misdemeanour and/or minor criminal cases” due to the fact that the implementation of the Integrated Case Management System at the Supreme Court of the Republic of Croatia is underway. It will enable the track record of the cases by type.
The significant decrease of the number of pending cases at the beggining of 2016 in the Supreme Court is due to the fact that since beginning of 2014 this court continuously solves more cases than it receives and also because in 2015 there was a further reduction in inflow of cases.

(2014): For 2014, the table shows cases under the jurisdiction of the Supreme Court, as the highest judicial authority in the Republic of Croatia. Data on “severe criminal cases” and “misdemeanour and/or minor criminal cases” could not be presented separately due to the fact that the implementation of the Integrated Case Management System at the Supreme Court of the Republic of Croatia is underway. It will enable the track record of the cases by type.
When comparing 2012, 2013 and 2014 data, it can be noticed a trend of decrease of the total number of incoming criminal cases, which is a result of legislative amendments, suspension of extraordinary legal remedy (request for extraordinary mitigation of penalty), as well as the decrease of the number of cases in which the decision about an appeal to investigative imprisonment needs to be decided on.

Cyprus

(General Comment): The peculiarity of the judicial system of Cyprus is that the Supreme Court is the appeal and the final instance court.

(2020): The Supreme Court is also the appeal court

(2018): Cyprus only has a two tier system. The Court of Appeal is also the Supreme Court, therefore the relevant data could be found in the section on second instance cases.

(2016): The supreme court is the appeal court

Czech Republic

(General Comment): We are not able distinguish between serious offences and minor offences. Thus only total number of cases is reported. There are no cases that could be reported in "Other cases"

(2020): Total of criminal cases: The variations should be put into perspective due to small absolute values.

(2018): We are not able distinguish between serious offences and minor offences. Thus only total number of cases is reported. There are no cases that could be reported in "Other cases"

Denmark

(General Comment): All cases at the Supreme Court are considered severe.

(2018): Data are from the yearly report 2018 from the Supreme Court,
http://www.hoejesteret.dk/hoejesteret/embedsregnskab/Documents/Årsberetning2018.pdf

(2016): Based on the data the Danish Court Administration got, it is not possible to show pending criminal cases.

(2014): For 2014, the number of pending criminal cases was not available.
The number of received criminal cases has fallen all the years since 2010, except from 2014 where it went up with 7 cases and the same number of criminal cases were received as in 2012. It is worth mentioning that the Danish Court Administration differentiates between cases that are fully appealed and cases in respect of which a specific point is appealed (i.e. should the person being charged stay in custody while the case is on-going). The number of cases fully appealed has varied between 27 and 14 over the period 2010-2012-2013-2014 (in 2013 and 2014 there were 14 received cases). Completed “full cases” have varied between 32 and 12 cases (in 2014 there were 12 completed criminal cases). The rest of the cases were related to specific questions.
Therefore, and due to the instance reform as well, the Supreme Court has over the years dealt with fewer and fewer cases.

Estonia

(General Comment): The Supreme Court is the court of cassation, therefore only those cases are heard which have been given leave to appeal (i.e. that have been declared admissible for proceedings in the Supreme Court). The data presented shows the number of cases which have been actually heard by the Supreme Court and not the number of appeals. The Supreme Court is not required to give reasons in its ruling on the admissibility of the appeals.

(2021): The Supreme Court did not provide a specific explanation with regard to the decrease in the number of resolved criminal cases, but if we look the overall reasons, they are Covid-19 related.

(2020): The pandemic has affected the courts activity in criminal matters in general. The criminal procedure law was not as flexible when judges had to work online. the complete revision of the criminal procedure law is ongoing and will come into force next year.

(2016): Numbers are quite small. No special reason for discrepancies. Because the distinction between severe and minor criminal cases is not the same with the CEPEJ, data for subcategories can be found below :
Severe criminal cases : Pending cases on 1 Jan. ref. year : 18
Incoming cases : 82
Resolved cases : 73
Pending cases on 31 Dec. ref. year: 27
Pending cases older than 2 years from the date the case came to the first instance court : NA
Misdemeanour and / or minor criminal cases :
Pending cases on 1 Jan. ref. year : 6
Incoming cases : 26
Resolved cases : 29
Pending cases on 31 Dec. ref. year: 3
Pending cases older than 2 years from the date the case came to the first instance court : NA

(2014): The variations observed in 2014 are not of importance, since the numbers are small.

(2012): In 2012, the higher number of criminal cases compared to 2010 was a result of the higher number of cases where the decision of the lower court was appealed. As regards the number of misdemeanour cases before the Supreme Court, the number of appeals was not much lower compared to 2010 but the number of cases accepted by the Supreme Court was lower (in 2010 the Supreme Court declared admissible 35% of the appeals, while in 2012 only 21% of the appeals were accepted).

Finland

(General Comment): The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on 20.1.2022 and reflects the situation on that day. The data available is: 1)Incoming cases 2)Resolved cases 3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously announced number of cases on 31 December and the now announced number of cases in 1 Jan will differ.

(2021): Variations observed in respect of criminal cases are due to yearly fluctuations.

(2020): The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly
changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on
12.1.2021 and reflects the situation on that day. The data available is: 1)Incoming cases 2)Resolved cases 3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously announced number of cases on 31 December and the now announced
number of cases in 1 Jan will differ.

France

(General Comment): The total number of resolved cases corresponds to judgments of cassation, cassation without referral and dismissal of the appeal. The other judgments handed down by the criminal chamber of the Court of Cassation are not counted. It is not possible to distinguish the litigation of the Court of Cassation by type of offence. The item "serious criminal cases" includes all appeals before the Court of cassation. It should be noted that the appeals mainly concern crimes and offences. The share of minor criminal cases is residual. The data are taken from the annual activity report of the Court of Cassation. Priority questions of constitutionality are not taken into account.

(2021): Source SDSE

(2020): The health crisis and the lockdown may have had an impact on TAs (completed cases) (by reducing the capacity of courts to process cases) but also on NAs (new cases) (fewer offenses committed, fewer cases brought to court). Prior to this, a major lawyers' strike and a transport strike had mainly influenced TAs.

Germany

(2021): It is not possible to differentiate between "severe criminal cases" and "minor criminal cases" (NA). The total number of cases represents the number of appeals, including referrals and regulatory offences pursuant to the Act on Regulatory Offences (OWiG) as well as regulatory offences pursuant to the Act Against Restraints of Competition (GWB) and the Energy Act (EnBW) before the criminal panels (including antitrust panel).
There were more incoming cases in 2021 than 2020 and also more pending cases at the beginning of the year 2021 than 2020. As a result, the number of pending criminal cases on 31 December 2021 increased. No special reason could be identified for this development. The annual report of the Federal Court of Justice doesn't provide any information on this matter.

(2020): It is not possible to differentiate between "severe criminal cases" and "minor criminal cases" (NA). The total number of cases means the number of appeals on points of law, including referrals and regulatory offences pursuant to the Act on Regulatory Offences (OWiG) as well as regulatory offences pursuant to the Act Against Restraints of Competition (GWB) and the Energy Act (EnBW) before the criminal panels (including antitrust panel).

(2018): It is not possible to differentiate between "severe criminal cases" and "minor criminal cases" (NA). The total number of cases means the number of appeals on points of law, including referrals and regulatory offences pursuant to the Act on Regulatory Offences (OWiG) as well as regulatory offences pursuant to the Act Against Restraints of Competition (GWB) and the Energy Act (EnBW) before the criminal panels (including antitrust panel).

(2016): It is not possible to differentiate between "severe criminal cases" and "minor criminal cases" (NA). The total number of cases means the number of appeals on points of law, including referrals and regulatory offences pursuant to the Act on Regulatory Offences (OWiG) as well as regulatory offences pursuant to the Act Against Restraints of Competition (GWB) and the Energy Act (EnBW) before the criminal panels (including antitrust panel).

(2014): The 2014 data reflects an overview of the case workflow processed by the Senates for Criminal Matters of the Federal Court of Justice (statistics for the year 2014). For 2014, it was not possible to distinguish between categories of “severe criminal cases” and “minor criminal cases”. The total number of criminal proceedings concerns appeals on points of law, including matters submitted to the Federal Court of Justice for its review of the principle of the matter and misdemeanour cases pursuant to the Act on Regulatory Offences. It also includes misdemeanours pursuant to the Act on Restraints of Competition that are pending before the Senates for Criminal Matters of the Federal Court of Justice (including the Senate for Anti-Trust Matters).
It is noteworthy that as there were only very few “minor criminal cases” in the previous cycles, the figures remain comparable for the last three evaluations.

Greece

(2021): There are no Other criminal cases at the level of the Supreme Court, these proceedings appear only at First instance and Appeals courts and prosecutors’ offices, therefore category 3. should be NAP.

(2020): There were no data collected for this question.

(2016): With regard to the category "pending cases on 1 January 2016", the abnormality of the figures is due to the fact that the postponed cases because of the abstention of the lawyers in 2015 were not considered as pending to the backlog of the court.
In 2016 a long-term abstention by the lawyers of the country took place, resulting in reduction of the number of resolved criminal law cases. Accordingly, the number of pending criminal law cases increased.

Hungary

(2021): In case of severe criminal cases, the fallback of the clearance rate can be explained on one hand by the pandemic situation; on the other hand, by the fact that in years 2020 and 2021, almost 50% of the judges of the Criminal Chamber retired. The vacant judicial positions were already filled. The increase in the number of motions for review can be explained by an increased activity of defendants and their defence counsels. Any objective reason for that increased activity cannot be established.

Ireland

(2020): Reduced cases due to COVID-19 pandemic. During the most restrictive lockdowns, only essential proceedings could be dealt with, but as guidance allowed, case volume increased. Urgent and essential cases continued to be heard throughout. All written judgments were delivered electronically and published on the Courts Service website, courts.ie.
Both the Supreme Court and Court of Appeal quickly adopted the use of video technology and made greater use of electronic documentation to facilitate their continued work. Procedures were introduced to ensure that justice was administered in public. Both jurisdictions delivered their judgments electronically. Waiting times for a hearing in both Courts were improved, to a certain extent, by a net reduction in the numbers of new cases coming into their lists from other jurisdictions. By year end in both Courts, there was a net improvement in the numbers of cases waiting to be dealt with compared to 2019.

(2018): The increase in incoming and resolved caseload reflects arrangements on foot of the establishment of the Court of Appeal and the new appellate jurisdiction of the Supreme Court.

(2016): The increase in incoming and resolved caseload reflects arrangements on foot of the establishment of the Court of Appeal and the new appellate jurisdiction of the Supreme Court.

Italy

(General Comment): Under "minor criminal cases" fall cases against justice of peace's decisions and cases against first and second instance decisions regarding minor offences which are punished with fines.
“Other cases” represent proceedings regarding jurisdiction or competence conflicts, proceedings pending in other countries (rogatory) or procedures regarding the correction of the so-called material errors committed by the Supreme Court.

(2021): * Most discrepancies between 2021 and 2021 data are due to the fact that in 2020 the activity of the courts was hugely affected by the pandemic.
**Moreover, small number often lead to large percentage variations.

(2020): 2."minor criminal cases" represent cases against justice of peace's decisions and cases against first and second instance judges’ decisions, regarding minor offences that are punished with fines. 3. “Other cases” Can be related to procedures pending in first or second instances (jurisdiction or competence conflicts between other courts), or pending in other countries (rogatory or capture instances); “Other cases” can be also related to decisions regarding the execution of imposed punishments (for example regarding the end or a change (home detention) of the imprisonment), or can be related to the correction of material errors on Highest Court’s sentences.

(2018): Following the introduction of the new item “other” at Q100, the Supreme Court has revised and ameliorated their classification of cases. The misdemeanour category now includes not only the proceedings coming from the justice of peace offices but also all those minor offences which are punished with fines. “Other cases” (point 3) can be related to procedures pending in first or second instances (jurisdiction or competence conflicts between other courts), or pending in other countries (rogatory or capture instances); “Other cases” can be also related to decisions regarding the execution of imposed punishments (for example regarding the end or a change (home detection) of the imprisonment), or related to the correction of material errors on Highest Court’s sentences.

(2016): In respect of minor criminal cases, the numbers are small and the observed variations should be put into perspective.

Latvia

(2021): Total number of pending cases has significantly increased. Measures to handle this problem have been adopted and are under implementation. There are amendments to the Criminal Procedure Law adopted (https://likumi.lv/ta/id/336542-grozijumi-kriminalprocesa-likuma , in force since 3.11.2022.) to transfer competence to review specific agreement process cases to the regional courts. Some internal case management arrangements have been put into action.

(2020): During last two years 3 out of 8 judges (after increase of number of judges – 9 judges) have retired. Some additional time was needed to replace them (competition and appointment). There was significant decrease of examined cases in 2020 (clearance rate was 102% in 2019 and 95% in 2020) and increase of received cases in 2019: 734 (2018), 764 (2019) and 686 (2020).

(2018): Supreme Court does not rely only on data in the Court Information System, they keep separate sheet for statistics

Lithuania

(2020): general decrease of number of cases

(2016): The number of admitted cassation claims decreased in 2015 and in 2016 was almost the same as in 2015. Besides, the number of resolved cases increased in 2015 due to the aim to comply with the timeliness.

Luxembourg

(General Comment): The Court of cassation makes a legality control, independant from the severity of the infraction. The pending files are now detailed between criminal and civil/commercial cases, thus this additional information is now available.

(2020): "The number of new cases depends on the appeals filed, on which the Court has no influence, and which is, among other things, a function of the number of decisions taken by the other courts. In 2020, the number of decisions taken by the different instances has decreased compared to the previous years, which can explain the decrease of new cases at the Court of Cassation. The legislation has not changed since the previous reference period.
The decrease in pending cases can be explained by the decrease in new cases in 2020, since the number of decisions taken remained stable between 2018 and 2020.
"

Malta

(2018): NA

Netherlands

(General Comment): No distinction is made between severe criminal cases, misdemeanors and/or minor criminal cases in the numbers and accounts kept by the Dutch SC.
The gap in horizontal consistency is caused by cases that are labeled as ‘outflow other’ (in Dutch: uitstroom overig). These are cases that do not get resolved because of administrative reasons (for instance: the appeal is filed too late, or mandatory court fees have not been paid and there is no dispensation).

(2021): No distinction is made between severe criminal cases, misdemeanors and/or minor criminal cases in the numbers and accounts kept by the Dutch SC.
Pending cases at the end of the year are not equal to the number of pending cases at the beginning of the year + incoming cases - solved cases

(2020): In the numbers and accounts that are kept by the Dutch Supreme Court, no distinction is made between severe criminal cases and misdemeanours and/or minor criminal cases.
With regard to the discrepancies: there are always some factors that might be of influence on the number of cases the Supreme Court handles in a year. It might be due to delays or catch ups in lower courts (so incoming cases are lower/higher), new laws or changes in law that the SC must answer (like covid-regulations), cases may become more complex because laws and differences are more complex (as a result cases may take longer), or cases that are connected that are grouped to deal with in clusters (meaning more cases for a longer time). While we cannot clearly pinpoint a 'cause' of the discrepancies, all these factors mentioned might influence the numbers. The gap of 213 is caused by cases that are labeled as ‘outflow other’ (in Dutch: uitstroom overig). These are cases that do not get resolved because of administrative reasons (for instance: the appeal is filed too late, or mandatory court fees have not been paid and there is no dispensation).

Poland

(General Comment): The Supreme Court does not divide its statistics into categories corresponding to those defined and used by the CEPEJ.

(2020): The dynamics of the movement of cases of 2020 in the work of the Criminal Chamber of the Supreme Court was due to changes of a personnel nature. In addition, some of the disciplinary cases of advocates were submitted for consideration to the Criminal Chamber on the basis of decisions of the First President of the Supreme Court made in the period until May 2020 or decisions of the President of the Supreme Court directing the work of the Criminal Chamber at a later date, as the Disciplinary Court of the Polish Bar Association refers files of disciplinary cases with cassation appeals to the Criminal Chamber, recognizing that the Disciplinary Chamber should refrain from examining them. At the same time, the above-standard involvement in the work of judges, assistants and all other employees of the Criminal Chamber allowed for an increase in the number of cases dealt with.

(2018): Number of incoming cases has increased due to implemented law changes in Code of Criminal Procedure. On 15 April 2016 entered into force regulations about complaints against appellate court judgments. Parties may complain to the Supreme Court of the Republic of Poland against an appellate court judgment revoking a judgment of the court of the first instance and referring the case for reconsideration. In the first period of functioning of mentioned regulations there were not many incoming cases. The situation changed in 2018. We have observed that many cases incoming on the base of regulations implemented in 2016. Moreover, in 2018 were carried on some organisational changes e.g. Military Chamber of Supreme Court has been closed and all cases were moved to Criminal Chamber.

Portugal

(General Comment): The communicated data reflects the case-flow of criminal cases before the highest instance courts. “Misdemeanor cases” are never taken to high instance courts.

(2020): The increase in the number of criminal cases pending on January 1, 2020 compared to the number of cases pending on January 1, 2018, at the Supreme Court is justified by the fact that the number of cases completed from 2018 to 2019 was relatively lower than the number of cases entered in those years.

(2016): In Portugal, misdemeanour/minor criminal cases may not be dealt in the Supreme Court of Justice.

(2012): The number of pending cases has decreased between 1 January 2010 and 1 January 2012 due to the fact that the number of resolved cases in that period was superior to the number of incoming cases. Conversely, in the period between 31 December 2010 and 31 December 2012, the number of incoming cases was superior to the number of resolved cases, which resulted in the increase of the number of pending cases. In addition, the number of pending cases at 1 January 2010, as well as the number of incoming cases in 2010 benefited from the effect of the change of the Criminal Procedure Code (Law n.48/2007) that narrowed the access to the High Judicial Superior Council. In the years 2011 and 2012, this effect was diluted, leading to a slight increase of the pending cases on 31 December 2012.

Romania

(2021): according to the application for statistics

(2018): The increase in the total of criminal law cases incoming between 2016 and 2018 can be explained by the retrail / re-examination of a high important number of cases (to be noted that none of these cases were new) according to the Constitutional Court's decision that brought changes to the interpretation given by the High Court of Cassation and Justice in the matter of judicial organisation.

(2016): The jurisdiction of the courts on judging appeals and second appeals has changed and some of the cases that were under the jurisdiction of the High Court are now under the jurisdiction of the courts of appeal Consequently the number of cases in Supreme court shows significant decrease in all categories.
In the national Statis system, the cases are recorded on categories of pending cases as follows: - 0-1/2 years;
- 1/2-1 year;
- 1 - 1 and 1/2 years;
- 1 and 1/2 - 3 years;
- 3 - 5 years;
In the table above, last column, there are mentioned the numbers for cases pending for more than 3 years.

(2014): The significant decrease between 2012 and 2014 of the total of criminal cases in respect of the following categories – incoming, resolved and pending on 31st December, is due to the entry into force of the new Codes and the changes of jurisdiction.

(2012): The important increase of the total of criminal cases pending on 1 January 2012 is the consequence of the entry into force of Law n° 202/2010. Consequently, the legal remedy of appeal (appeal on the merit) has been abolished in several criminal matters, remaining only the “recurs” (“appeal on law”). It resulted in an increase of the number of “recurs”.

Slovak Republic

(General Comment): The collected statistical data does not distinguish between the two types of criminal offences.

(2018): The decrease in incoming and resolved cases is influenced by the decrease of the caseload at the lower courts

(2016): During 2015 there were more pending cases created

Slovenia

(General Comment): For explanation on severe criminal cases and minor offences please see comment to Q94.
Figures for severe criminal law cases at the highest instance include:
- Kp – appeals in criminal cases,
- Ips – requests for protection of legality in criminal cases, against a decision ordering or prolonging a detention, extraordinary mitigation of punishment,
- I Kr – other criminal cases – delegations, jurisdiction disputes, prolongation of detention, other.
Figures for minor offences cases at the highest instance include:
- IV Ips – requests for protection of legality in minor offences cases.

(2021): Discrepancies: Please note the small (absolute) number of cases at the Supreme Court instance.

(2020): The discrepancies are due to a small absolute number of cases.

(2018): Discrepancies are due to small (absolute) of cases which fluctuate between years.
For distinction see general comment.

(2016): The observed decreases can be attributed to the decrease in the number of cases, processed by the police and the state prosecution (see Q107).

(2014): According to 2012 and 2014 data, figures for “severe criminal law cases” at the highest instance include: appeals in criminal cases (Kp); requests for protection of legality in criminal cases (I Ips); requests for protection of legality against a decision ordering or prolonging a detention (XI Ips); extraordinary mitigation of punishment (IX Ips); other criminal cases – delegations, jurisdiction disputes (I Kr); other criminal cases – prolongation of detention (II Kr); other criminal cases (III Kr). Figures for “minor offences cases” at the highest instance include requests for protection of legality in minor offences cases (IV Ips).

(2012): The decrease of the number of “misdemeanour and/or minor criminal cases” before courts in 2012 is the result of the reform in law on minor offenses which transferred some of the jurisdiction in cases previously tried by courts to other authorities.
According to 2012 and 2014 data, figures for “severe criminal law cases” at the highest instance include: appeals in criminal cases (Kp); requests for protection of legality in criminal cases (I Ips); requests for protection of legality against a decision ordering or prolonging a detention (XI Ips); extraordinary mitigation of punishment (IX Ips); other criminal cases – delegations, jurisdiction disputes (I Kr); other criminal cases – prolongation of detention (II Kr); other criminal cases (III Kr). Figures for “minor offences cases” at the highest instance include requests for protection of legality in minor offences cases (IV Ips).

Spain

(General Comment): The Criminal Procedure Law was amended by Law 41/2015, and thus the scope of the cassation appeal that reach the Supreme Court in Criminal Matters was broadened. The objective of the Law was to try to homogenize the doctrine in criminal matters, since previously, in cases that had not criteria of Supreme Court, the criteria of the Provincial Courts could be different.
When an error is detected in the statistics of a Court, the latter is allowed doing regularization, what means that the Court communicates the correct figure and rectifies the wrong one even if this does not concord with figures offered for previous exercises. This situation can happen for example in the specific control of cases that the Court makes when a judge leaves the Court (called “alarde”), but in general, in any case in which the Lawyer of the Administration of Justice detects an error that comes from previous exercises but cannot be localized. The system prefers to correct the data than continue and amplify the error.
These regularizations and the cumulated cases and the re-opened cases are the causes for the horizontal inconsistencies.

(2021): In 2021, the recovery of greater activity (after the restrictions of the pandemic) has been able to contribute to greater efficiency and increased number of resolved cases.

(2020): Considering the broadening the scope of the cassation appeal that reach the Supreme Court, the number of cases has been increasing. Already in 2018, the final pending cases were higher than the initial. In 2019, those incoming also increased. All this resulted in significant increase in the number of pending cases at the end of 2020.

(2014): The number of total criminal pending cases on 31 December has decreased of 30% between 2012 and 2014. It has to be noted that both in 2013 and 2014, the Supreme Court has resolved more cases than the number of incoming cases.

Question 101

Austria

(General Comment): "Employment dismissal cases": The Austrian court system knows labour law cases. These contain employment dismissal cases as well as all other disputes between employer and employee (e.g. concerning payment of wages, discrimination) and between employer and the works council. Dismissal cases are not being evaluated separately in the standard statistical tools of the Federal Ministry of Justice of Austria.

(2020): Insolvency cases: the observed decreases between 2019 and 2020 are due to the pandemic. Data on intentional homicide an robbery cases were delivered for the year 2018 due to a special evaluation that had taken place. Because of this special evaluation data for 2018 was available. The standard statistical tools do not enable enquiries to pending cases of a certain category (regarding certain criminal offences) to a specific date in the past.

(2019): The decreae in the number of incoming cases related to the right of entry and stay of aliens stems from the decline in migration flows. Accordingly, the number of pending cases at the end of 2019 decreased.

Belgium

(General Comment): Insolvency: the number of incoming and resolved cases includes cases of the company court concerning insolvency, as well as closed cases of the labour tribunal concerning collective debt settlement. Only figures for incoming and resolved cases are available. Incoming cases: refers to all registered cases concerning a bankruptcy "nature of case", cases to which a bankruptcy number has been assigned or cases registered on a specific bankruptcy roll.

(2021): Insolvency: the number of incoming (and resolved) cases includes cases of the company court concerning insolvency, as well as closed cases of the labour tribunal concerning collective debt settlement. In 2021, before the company court there were 37626 incoming insolvency cases, and 59074 resolved cases. Before the labour tribunal there were 8515 incoming cases related to collective debt settlement and 17659 resolved cases.

(2020):
For 2020, there is a decrease in the number of new cases and an even greater decrease in the number of completed cases due to the covid-19 pandemic.

(2019): In matters relating to asylum seekers, the line between an asylum case and a migration case is not always easy to draw. Thus, 'asylum' cases are very cyclical. The figures were communicated by the Foreigners Litigation Council.

(2018): As a result of the new rules for counting and recording cases, the number of contentious divorce cases is lower than the one in the previous years.
Bankruptcy cases do not include cases that have been managed by the Regsol system and procedure since mid-2017. The number of pending and resolved cases cannot be calculated due to the unreliability of the available data.
Cases concerning asylum seekers include asylum cases before the Aliens Litigation Council (e. g. applications for recognition of refugee status or granting of the subsidiary protection status). Cases relating to the right of entry and residence include migration cases before the Aliens Litigation Council (appeals for annulment of individual decisions taken pursuant to the Act on Access to the Territory, Residence, Establishment and Removal of Foreign Nationals).

(2017): Appeals lodged with the Aliens Litigation Council (Conseil du contentieux des Etrangers (CCE)) in the context of an asylum procedure
migration litigation.

(2016): "Justice of the peace: no data for pending cases (start + end)
civil courts of first instance and family courts: no data for pending cases (start + end)
Youth courts: no data for Eupen, Leuven, Brussels (Dutch-speaking), Tournai, Mons; no data for resolved cases, pending cases and lenght of criminal courts of first instance: no data for Turnhout, Tongeren, Hasselt, Leuven, Charleroi, Eupen; no data for durations and breakdown by type of offence; police courts : no data for civil cases: no data for new cases, pending cases and commercial court length: concerns (only) the following roles: general role (including contested claims), role of motions and role of summary proceedings. It should be noted that the number of resolved cases is only an estimation - this figure has been calculated on the basis of the last judgment and this judgment closes the case. Consequently, not all the following cases are taken into account in this calculation: cases that have been the subject of another judgement after the judgement ending the case, and cases in which no judgement has been pronounced; no data for pending cases. Insolvency (commercial courts) :
Due to unreliable data, figures for pending and resolved insolvency cases (commercial courts) cannot be provided. With regard to insolvency (commercial courts), it should be noted that: - incoming cases: cases registered with a insolvency nature, cases with a insolvency number or cases registered on a dedicated insolvency list. Cases relating to liquidations/dissolutions, business continuity law and commercial investigations (not leading to insolvency) are not recorded. Filter: nature group of the insolvency case or insolvency number or entry on the roll F, G, H, K, L, V.
Bankruptcies include business insolvency proceedings (Commercial Court) and personal insolvency proceedings (collective debt settlement with the labour court).
With regard to the "litigious divorce cases" category, the variations in the number of incoming cases and the number of resolved cases are due to the fact that, unlike the previous cycles (2014, 2015), the 2016 data do not include divorces with mutual consent. The category "insolvency cases" in 2016 encompasses insolvency proceedings of companies (Commercial Court) and personal insolvency proceedings (collective debt settlement before the Labour Court) that were not included in previous cycles."

(2015): The insolvency cases provided only include cases regarding individuals and not the ones concerning companies.

Bulgaria

(General Comment): Since there is no centralised Case Management System, the information on number of cases was summed up on the bases of the data collected from different courts and some mistakes are possible due to non-existence of control mechanism to check all the incoming courts data and spot eventual anomalies. Accordingly, some discrepancies can appear between data communicated for different cycles.

(2021): The Supreme Judicial Council does not collect separate statistics just for employment dismissal cases, but to them are also added the claims for annulment of the imposed disciplinary sanction "reprimand" and "warnings of dismissal".

(2020): The Supreme Judicial Council does not only collect separate statistics for "Employment dismissal cases", but also adds claims for revocation of the imposed penalty "remark" and "dismissal warnings". If this overall statistic will be useful for this row in the table of Q101, then the data for it are the following:
1. Pending cases on 1 January of the reference year - 749
2. Incoming cases - 1301
3. Resolved cases - 1121
4. Pending cases on 31 December of the reference year - 929
The increased number of pending “employment dismissal cases” and “insolvency cases” could be the result of the epidemiological situation in the country related to the spread of COVID - 19, as well as to the emergency measures introduced by the Government of the Republic of Bulgaria.

(2019): "Employment dismissal cases": the Supreme Judicial Council does not collect separate statistics only for the type of cases “employment dismissal cases”, but also adds in the statistics the claims for revocation of the imposed penalty "remark" and "dismissal warnings". "Cases relating to asylum seekers": in connection with the observed significant decrease in the number of cases received in 2018 and 2019 (217 in 2018 and 98 in 2019, respectively), we note that this is probably due to the significantly reduced number of foreign nationals, who sought asylum in the Republic of Bulgaria in 2019(2536 in 2018 and 309 in 2019, respectively).

(2018): The number of dismissal cases includes: "Claims for protection against unlawful dismissal and claims for annulment of the penalty imposed" note "and" warning of dismissal ".
There is no specific explanation as to why insolvency proceedings decreased during the reference 2018. There is also no specific explanation as to why the number of employment dismissal cases decreased.

(2017): Since there is no centralised Case Management System, the information on number of cases was summed up on the bases of the data collected from different courts and some mistakes are possible due to non-existence of control mechanism to check all the incoming courts data and spot eventual anomalies. Accordingly, some discrepancies can appear between data communicated for different cycles.

(2016): There is no particular explanation in respect of the observed variations. All the data provided is correct.

(2013): The increase in the number of pending insolvency cases on 1 January 2013 is due to the overall increase in the number of incoming cases justified by macroeconomic reasons, namely the global financial crisis.

Croatia

(2021): Between 2020 and 2021, there was an increase of incoming insolvency cases because from April 2020 until October 2020, due to the Covid-19 pandemic, a special law was in force (Law on intervention measures in foreclosure and bankruptcy proceedings for the duration of special circumstances) and there were no incoming bankruptcy and enforcement cases in courts.

(2019): Courts competent for "employement dismissal cases" solved more cases during 2018., which led to the decrease of pending cases at the end of 2018./beginning of 2019.
As regards insolvecies, in previous years, due to some legislative changes we had higher income of insolvency cases. The income of shortened bankruptcy procedures which was product of those changes stopped, so this is income is rather "normal" for Croatia (more or less similar to the income in years before aforementioned changes).

(2018): The reason for decreasing the number of pending insolvency cases lies in the new Bankruptcy Act, which entered into force in September 2015. Since then, and throughout the first half of 2016, many shortened bankruptcy proceedings have been initiated ex officio and finished in relatively short period (that was "unnaturally" large income of simple insolvency cases). Cycles defined in aforementioned Law of initiating these procedures by FINA finished, so 2018. actually reflects regular state of insolvency proceedings regarding income of insolvency cases.

(2017): "Litigious divorce cases" - regarding the decrease in the number of pending cases at the beginning of reference year in comparison to the beginning 2016., the reason lays in the fact that first instance municipal courts resolved significant number of cases in relation to the number of incoming cases (148%!!) during 2016., while the income of these cases, as stated in previous cycle decreased in comparison to the 2015. In 2017, courts resolved less cases than in 2016., but nevertheless more than they received which led to the decrease of pending cases at the end of 2017.
"Employment dismissal cases": Regarding the decrease in the number of pending cases at the beginning of reference year in comparison to the beginning 2016., the reason lays in the fact that first instance municipal courts resolved significant number of cases in relation to the number of incoming cases (133%!!) during 2016. Municipal courts received less cases of this type. The reason lays in the fact that in general, income of labour cases decreased in 2017. with no specific reason in sense of law changes etc. Lower number of recieved cases and Clearance rate of 137% lead to the decrease of the number of pending cases at the end of 2017.
Insolvency cases: in 2015. new Insolvency act was introduced. Significant number of companies were subject of shorened insolvency proceeding conducted by commercial court. Cycles defined in aforementioned Law of initiating these procedures by FINA finished by the mid of 2016., so 2017. reflects regular „movement“ of insolvency cases.

(2016): Regarding insolvency cases, 2015 was the year when, by introducing new Insolvency act, significant number of companies were subject of shortened insolvency proceeding conducted by commercial courts. Cycles defined in aforementioned Law of initiating these procedures by FINA finished, so 2016 actually reflects regular state of insolvency proceedings regarding income of insolvency cases. Relating the reduced number of incoming divorce cases, the number of divorces with minor children dropped in 2016. Namely, according to the new Family Law which came into force on 1 November 2015, couples with children, before initiating the court proceeding, have to undergo mandatory family mediation at social welfare centres. This fact postpones court proceedings and therefore there are fewer cases in court in 2016.

(2015): Regarding the Litigious divorce cases, the Republic of Croatia point out that in 2015 there have been amendments to the Family Act, due to which a certain number of family cases were no more resolved in a litigious, but in non-litigious proceedings. For this reason, the number of cases in this category for 2015 is presented decreased (e.g. if these cases remained within the same category, the result would be as follows: Pending at the beginning of 2015 – 4 595, Incoming – 9 253, Resolved – 8 756 and Pending at 31.12.2015 – 5 092 cases).

There is an increase of incoming insolvency cases due to the fact that on 1 September 2015 the new Insolvency Act came into force. The Act stipulates that the court will conduct an shortened insolvency proceedings regarding the legal person if the following conditions are met:
- If it has no employees
- If the FINA Register has unexecuted orders for forced payment for a continuous period of 120 days
- If preconditions for a second proceeding for deletion from the court registry are not fulfilled.

The Financial agency (FINA) is obliged, for legal persons who, on the day of the entry of the Insolvency Act into force, have had unexecuted orders for forced payment in the FINA Register for a continuous period of 120 days submit request to the court to initiate the shortened insolvency proceeding.

In view of the above provisions and the fact that at the time of the entry into force of the Insolvency Act there was more than 20.000 legal persons for which the preconditions were met to initiate the shortened insolvency proceedings, the number of incoming insolvency cases in 2015 increased significantly compared to previous years.

(2014): The increase in the number of pending bankruptcy cases on 1st January 2014 is due to the fact that many companies have gone bankrupt in 2013, thus there were a large inflow in 2013 in relation to other periods. The same reason accounts for the decrease in the number of incoming bankruptcy cases in 2014, when compared with the outlier in 2013.

(2013): The category “employment dismissal cases” includes dismissal of employment contract cases, determination of employment relationship cases and termination of employment cases.

Cyprus

(General Comment): Reducing delays in the disposition time is part of the reform process. Some data are missing because we did not have an electronic filing system.
The increase in the number of employment dismissal cases since 2010 is the result of the crisis.

(2021): In the previous cycle the number was higher because a bundle of cases were tried together.

(2019): The number of cases relating to asylum seekers reflects the period between June 2019 (date of establishment of the Administrative court for international protection) till December 2019.
The incoming and resolved employment dismissal cases include a bundle of 204 cases concerning overtime arrears against the Cyprus telecommunication authority.

(2017): in the litigious divorce cases 192 cases pending on 1.1.16 of the family court of Famagusta were not included
Concerning the employment dismissal cases, the variation (decrease) between 2016 and 2017 is due to the fact that in 2016 many cases were filed after companies were closed many of which were later withdrawn.

Czech Republic

(General Comment): It is not possible to provide the data on “employment dismissal cases”, “Robbery cases” and “Intentional homicide” since the source of data we mostly use for CEPEJ reporting does not distinguish case types to such a detail. We have these (more detailed) data from other sources, which however contains only cases, where the decision is legally effective. And thus, we can provide number of cases, where the decision is legally effective, average case length etc. However, this data does not allow us to determine number of incoming cases, pending cases or resolved cases.

(2020): In last years, there were many legislative changes in insolvency law. That results in relatively big changes in the number of cases.

(2019): There was a legislative change in insolvency law. We believe that this change resulted in significant grow in the number of incoming cases. The number of resolved cases also increased. The reason might be that number of incoming cases peaked in 2013 and the length of many insolvency cases is 5 years due to legislative reasons.

(2017): This is relatively new and very specific agenda, which usually takes 5 years to resolve. There was an increase in case fillings five years ago, which resulted in growth in the number of resolved cases nowadays. On the other hand, for various reasons (including legislative changes) the number of incoming cases is decreasing.
There was an amendment of insolvency law in 2017 which introduced e. g. obligatory processing of insolvency motion by specialised entities or broadening of reasons for discontinuance of proceedings due to the lack of, or little, estate.

(2013): The increasing trend concerning the category of insolvency cases is due to the economic situation. More particularly, the number of personal bankruptcies is increasing.

Denmark

(General Comment): To be sure to have consistent information, pending cases prior to the period in question is calculated based on received, finalized and pending cases ultimo the period in question. It should be noticed that all cases from the District Courts regarding marriage and paternity/maternity are considered litigious divorce cases.
We have not answered the question regarding how many pending cases exceed 2 years.

(2021): To be sure to have consistent information, pending cases prior to the period in question is calculated based on received, finalized and pending cases ultimo the period in question. It should be noticed that all cases from the District Courts regarding marriage and paternity/maternity are considered litigious divorce cases.
We have not answered the question regarding how many pending cases exceed 2 years. "Pending litigious divorce cases on 31 December 2021": The reason for the high figure in 2021 is that the courts resolved 800 fewer cases than they received. A new administrative set-up to deal with divorse cases was introduced and created backlogs.

(2020): Litigious divorce cases: The reason for the discrepancies is a new system to deal with Family cases from April 2019 that gave more cases in 2020.
Insolvency cases: There was a market increase in the number of bankruptcy cases at the Maritime and Commercial Court in 2020 compared to 2018 following a number of backlogged forced closures of companies in 2019 by the Danish Commerce and Companies Agency.
Employment dismissal cases, robbery cases and intentional homicide cases are not registered under these categories in the case registration system. Employment dismissal cases are just civil cases, and the two criminal cases are registered under criminal cases.

(2019): It should be noticed that all cases from the District Courts regarding marriage and paternity/maternity are considered litigious divorce cases. From April 1, 2019 a new law addressing divorces and togetherness with children and legal housing for children was implemented. It may have had an effect in the number of cases as administrative decisions to some degree become court decisions.
There is a change of numbers of pending insolvency cases as we succeeded to include the Maritime and Commercial Court's pending insolvency cases in the overall figure. We can see over numbers of years, that there is an increasing number of bankruptcy cases. This can be seen too from 2018 to 2019 where there is an increase in the number of bankruptcy cases.

(2018): It should be noticed that all cases from the District Courts regarding marriage and paternity/maternity are considered litigious divorce cases.
There is a change of numbers of pending insolvency cases as we succeeded to include the Maritime and Commercial Court's pending insolvency cases in the overall figure.

(2016): Please note concerning insolvency: The number of cases concerning compulsory dissolution of companies has increased markedly due to new regulation where it is possible to start a company without starting capital. Accordingly, more companies are started, but more companies are also then closed. As concerns the number of pending insolvency cases, the data refers only to district courts given that data related to the Maritime and Commercial court is not available.

(2015): A decrease in the number of litigious divorce cases can be observed from 2010, it is most likely due to a change in the administrative proceedings, i.e. fewer cases end up in the courts.

Estonia

(General Comment): It is noteworthy that the discrepancies that can be observed between the number of pending cases indicated for December of one year and the number of pending cases communicated for January of the next year, are due to the fact that the statistic system is alive and courts are entitled to modify and up-date data at any time.
It is possible to observe differences in the horizontal consistency since during the proceedings some cases are joined and some are disjoined.

(2019): For all the discrepancies - the numbers are so small so that's why the percentage is so significant.

(2015): The numbers of pending, incoming and resolved employment dismissal cases decreased from 2012 (compared to 2010). This variation is supposedly related to the fact that more cases are effectively resolved by the labour dispute committees, less cases arrive to the courts.
In 2014, the number of resolved litigious divorce cases increased. This is justified by the fact that courts are working more efficiently and have accelerated the proceedings.

(2014): The increase in the number of resolved litigious divorce cases in 2014 is justified by the fact that courts are working more efficiently and have accelerated the proceedings.

(2012): The decrease in the numbers of pending, incoming and resolved employment dismissal cases in 2012 is supposedly related to the fact that more cases are effectively resolved by the labour dispute committees, less cases arrive to the courts.

Finland

(2021): The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on 20.1.2022 and reflects the situation on that day. The data available is: 1)Incoming cases 2)Resolved cases 3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously announced number of cases on 31 December and the now announced number of cases in 1 Jan will differ. At this point only cases registered as murder offences have been included in the statistical year of 2020. Cases from the statistical year of 2021, in addition to murder offences, include the following offences: murder, manslaughter, homicide and infanticide made with terrorist intent.

(2020): The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly
changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on
12.1.2021 and reflects the situation on that day. The data available is: 1)Incoming cases 2)Resolved cases 3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously annouced number of cases on 31 December and the now announced
number of cases in 1 Jan will differ. Currently the calculation is further complicated by the partial implementation of the new cases managements systems, AIPA (for general courts) and HAIPA (for administrative and special courts).

(2019): The case management systems from which the data is collected are not static reporting tool but a dynamic and constantly changing system. So the exact number depends on the day the data is taken from the system. Part of the data here is collected on 22.1.2020 and reflects the situation on that day. The data available is:
1)Incoming cases 2)Resolved cases
3)Cases pending on the data collection date. The number of pending cases as of 1 January has been calculated based on the available data. Because of the dynamic nature of the system, the previously annouced number of cases on 31 December and the now announced number of cases in 1 Jan will differ. Currently the calculation is further complicated by the partial implementation of the new cases managements systems, AIPA (for general courts) and HAIPA (for administrative and special courts). According to Finnish Immigration Service the number of asylum seekers arriving to Finland continued to be low (see, for example, https://tilastot.migri.fi/#decisions/23330?l=en&start=588&end=599)
“Cases relating to the right of entry and stay of aliens”: the number of resolved cases increased considerably between 2018 and 2019 resulting in a decrease in the number of pending cases at the end of 2019. In this regard, it should be noticed that courts have reorganized their resources internally. They have allocated more resources to these types of cases, and this way keep reasonable the time the case is pending in the court. Also, in 2019 the administrative courts got 119 more staff as follows: 65 judges, 27 referendaries and 27 clerical staff.

(2018): In 2016, the number of incoming cases relating to asylum seekers increased dramatically due to the asylum crisis. In 2018, the number of incoming cases relating to asylum seekers was considerably lower than in 2016.
For the decreased number of resolved cases relating to the right of entry and stay for aliens, the only explanation is the general bigger case load in the administrative courts.

(2017): Cases relating to the right of entry and stay for aliens: includes the cases conserning deportation, permits of residence and
removing from the country.
Cases related to Asylum seekers: the number of pending cases at the beginning of 2017 increased drastically as a consequence of the important number of incoming cases in 2016; the number of incoming cases in 2017 decreased compared to 2016 which allowed courts to better deal with pending cases (the number of resolved cases increased considerably in 2017, while the number of pending cases at the end of 2017 decreased).

(2016): The number of resolved cases pertaining to intentional homicide has decreased for the period 2014 - 2016. The category "Cases relating to the right of entry and stay for aliens" includes cases concerning deportation, permits of residence and removing from the country.

(2013): The category “insolvency cases” includes only bankruptcy cases dealt with by District Courts and not restructuring of enterprises cases.

France

(2021): Source SDSE

(2020): The health crisis and the lockdown may have had an impact on TAs (resolved cases) (by reducing the capacity of courts to process cases) but also on NAs (incoming cases) (fewer offenses committed, fewer cases brought to court). Prior to this, a major lawyers' strike and a transport strike had mainly influenced TAs.

(2019): Problems related to data feedback make it impossible to have information on robberies and intentional homicides. Concerning cases relating to asylum seekers, the 2019 activity report of the National Asylum Court states that: "The year 2019 was marked by sustained activity: while the number of incoming cases stabilised in 2019 at 59,091 cases, an increase of less than 1% compared to 2018, the number of decisions handed down reached an all-time high of 66,464 cases, an increase of 40.5% compared to the previous year. This result was made possible thanks to the mobilisation of all the permanent judges, temporary judges and agents, as well as to the significant reinforcements that the Court benefited from this year. The court was thus able to create a sixth section and five new chambers in the space of a few weeks, open six new courtrooms and recruit, train and integrate more than 87 new judges on a temporary basis (“vacataires”) and 175 new staff, including 91 rapporteurs”.

(2018): The particular context of asylum applications in France and the sustained activity of the French Office for the Protection of Refugees and Stateless Persons (OFPRA) explain the high number of applications before the National Court of Asylum. Indeed, the CNDA's exclusive mission is to rule on appeals against decisions taken by OFPRA that do not satisfy asylum seekers. In addition, the number of appeals has tended to increase over the past ten years, increasing by a factor of 2.7 between 2008 and 2018.
Asylum seekers: National Court of Asylum
Data on the right of entry and residence of foreigners: data provided by the report of the Council of State on the number of proceedings processed by the administrative courts
For bankruptcies, business bankruptcies were used. The decrease in redundancies is explained by the increase in the number of contractual breaches of employment contracts.

(2017): With regard to cases concerning asylum seekers and cases concerning the right of entry and residence of foreigners, migratory phenomena explain this evolution.

(2016): The category “insolvency” refers to business bankruptcies (opening of receivership proceedings, opening of immediate judicial liquidation, recovery plans pronounced after protection, judicial liquidation pronounced after protection) have been taken into account. 2016 data on asylum seekers: National Court of Asylum at the State Council (Conseil d’Etat); 2016 data on the right of entry and residence of foreigners: Judge of freedoms and detention.

Germany

(General Comment): Litigious divorce cases, employment dismissal cases, insolvency cases:
Once per year, the Federal Statistical Office compiles and publishes the statistics of the civil, criminal, administrative, finance, social, family and labour courts. Nationwide uniform ordinances define the scope and rules of data collection for these statistics. The courts collect the data and submit it to the statistical offices of the Länder, who check and edit the data and send it to the Federal Statistical Office. In simplified terms, the ordinances provide two different kinds of data collection sheets: The "procedural surverys" that collect data on the specifics of the proceedings happening at a court and the "monthly surveys" that track the caseload of a court. With regard to the caseload count, the monthly surveys distinguish between "caseload of proceedings covered by the procedural surveys" and "other caseload". For the cases from the first category (proceedings covered by the procedural surveys), the monthly surveys collect the number of cases pending at the beginning and at the end of a month as well as the number of received and resolved cases. For the "other caseload", the monthly surveys only count the number of received cases.
2.1 General civil (and commercial) non-litigious cases: The figure represents the number of non-litigious enforcement cases. In the monthly survey for the statistics of the civil courts, these cases fall into the category of "other caseload". This is the reason why only the number of incoming cases is available.
The number of incoming cases and pending cases at the beginning and at the end of a year is unavailable because the statistics do not break down those numbers with regard to specific case types such as litigious divorce cases and employment dismissal cases. For the insolvency cases only the number of incoming cases is available because these cases fall into the category of "other cases" on the monthly surveys. With regard to the insolvency cases (but not for other case types in this category), the monthly surveys also collect the number of pending cases at the end of the month.
The number of robbery and intentional homicide cases is taken from the criminal prosecution statistics that is also published by the Federal Statistical Office and basically collects data on final convictions issued by the criminal courts. As this statistic focusses on the verdicts more than the procceding it does not include any information on caseload (incoming, pending) or timeframes.
Pending cases older than 2 years from the date the case came to court:
With regard to the statistics of the civil, criminal, administrative, finance, social, family and labour courts, a statistical record of the day a case came to the court only exists for the cases covered by the procedural surveys. Courts submit the data from the procedural surveys to the statistical offices after the case has been concluded for the respective court and at the respective instance. This means that the duration of a proceeding is unknown for pending cases. The monthly surveys count the number of pending cases at the beginning and at the end of a month, but do not collect any information on the date the pending cases came to the court. The statistics compiled by the Federal Statistical Office include information on the percentage of cases that were resolved within certain time frames but no numbers on how many proceedings took longer than two years. The statistic on the workload of the Local Courts in matters of non-contentious jurisdiction does not collect any data regarding the date a case first came to court.

(2021): Insolvency cases: The number of insolvency cases was unusually low in 2020. Due to the pandemic, the duty to file an insolvency petition was suspended (business insolvencies). Additionally, in the last quarter of 2020 a new law on the discharge of residual debt was passed. The new law aims to facilitate a financial restart after an insolvency proceeding (consumer insolvencies). It is possible that a number of consumers decided to file for insolvency in 2021 in anticipation of the new law. The suspention of the duty to file an insolvency petition for businesses ended on 30 April 2021.
Robbery cases and intentional homicide cases (resolved cases): As of 15 November 2022, data for 2021 was not yet available.

(2020): Business insolvencies: due to the Corona crisis, the duty to file an insolvency petition was suspended until 31 December 2020; Consumer insolvencies: in the last quarter of 2020 a new law on the discharge of residual debt was passed. The new law aims to facilitate a financial restart after an insolvency proceeding: it is possible that a number of consumers decided to file for insolvency at a later point in anticipation of the new law.

(2019): 2017 was the peak of cases at the administratition courts regards asylum-seeker. The cases decrease constantly since then:
(2015: 50 422 / 2016: 141 046 / 2017: 260 160 / 2018: 108 917 / 2019: 82 598)

(2018): Regarding the number of cases relating to asylum seekers, there were many unresolved cases in 2017 (see Scoreboard data 2017 (rise of asylum seekers since 2015)). Schleswig-Holstein: With regard to this question, no data are available for 2018 for Employment dismissal cases for pending cases on 31 Dec ref. year. The data from 2017 have therefore been included.
With regard for all Länder, no data are available for 2018 for the cases of Robbery and Intentional homicide (resolved cases) yet. The data from 2017 have therefore been included.

(2017): Cases relating to asylum seekers: there is an important increase due to the rise of asylum seekers since 2015.
Pending cases on 31 Dec ref - Insolvency:
With regard to this question, no data are available for 2017 from Bavaria, Bremen and Mecklenburg-Vorpommern. The data from 2016 have therefore been included.
Hamburg
The figures show the number of insolvency proceedings at the end of the reporting period in terms of natural and legal persons (IN) and according to foreign law (IE) but excluding consumer insolvency proceedings (IK), Source: judicial statistics
Hesse
Total number of insolvency proceedings as of 31 December 2017, not broken down into proceedings that have already been opened or into IN/IK/IE proceedings. The data were taken from table Z1.4 “Civil matters before the local courts” provided by the Hesse Statistics Office (serial numbers 161.00, 161.50, 162.00 und 163.00).

(2016): Employment dismissal cases: The variation between this cycle and the previous cycle for resolved cases is not explained.

(2015): A substancial number of the Länder was unable to provide information, meaning that any amount cited would not be meaningful in substantive terms.

(2014): The 2014 data are the same as those that have been provided in 2013. No update was available.

(2013): For 2013, two Lander did not communicate any reply. As to dispute divorce cases only the number of conclusions by way of an order of divorce was provided. As to divorce proceedings (2013) overall, the following data were available: pending on 1 January 2013: 85 780; incoming: 119 123; resolved: 156 951; pending on 31 December 2013: 85 124. As to insolvency cases, only data on incoming cases was provided as well as on legal cases still pending at year end. Nevertheless, not all Lander were able to give information on both of these points. To this extent the information is incomplete.

(2012): The number of resolved litigious divorce cases refers to resolution by divorce decree only. However, the data in respect of the total number of divorce cases (2011) are complete: pending on 1 January 2011: 63 363; incoming: 66 194; resolved: 215 769 (of which 190 258 by divorce decree); pending on 31 December 2011: 58 773.

Greece

(General Comment): In criminal matters, the justice system in Greece presents the following peculiarity: postponed cases get to the prosecutor offices and then to the courts, in repeat 2-3 times, during the period (year). The definition of the pending cases includes postponed cases or the cases for which the trial date has been setting out of the refence year or hasn’t been determined during the year. Accordingly, there are horizontal discrepancies in the table.

(2021): In criminal matters, the justice system in Greece presents the following peculiarity: postponed cases get to the prosecutor offices and then to the courts, in repeat 2-3 times, during the period (year). The definition of the pending cases includes postponed cases or the cases for which the trial date has been setting out of the refence year or hasn’t been determined during the year. Accordingly, there are horizontal discrepancies in the table.

(2020): Evidence has been provided by different courts, but not by their totality, so there is not enough data to give a full answer.

(2019): Competent Authorities and Courts did not provide us with the relevant data

(2017): "cases relating to asylum seekers": the number of incoming cases and the number of resolved cases increased compared to 2016 due to an increased inflow of cases. As regards the number of pending cases at the end of the year: the deviation between the respective data of 2016 is due to the transition of the data from hard copy to a new information (IT) system called "Integrated Court Management System for the Administrative Justice (OSDDY-DD)". This deviation that has already been taken into account by the Central Organizational Committee for the due implementation of OSDDY-DD, is expected to lapse gradually within the next years. Furthermore, deviations have also emerged from the new way of collecting statistical data that the central Organizational Committee is trying to establish in order to ensure the uniform input of data by each court and from recent verifications of relevant numerical data that were subsequently sent by the courts. Finally, discrepancies are also due to errors of the information system itself, for which an effort is being made to identify and inform about, the contractor of the system. Cases relating to the right of entry and stay for aliens: the number of acts of removal/expulsion of foreigners has been reduced, since most of them who are now entering the county, seek asylum, something that explains the respective increase in asylum cases within 2017.

(2016): Except for the categories “cases relating to asylum seekers (refugee status under the 1951 Geneva Convention)” and “cases relating to the right of entry and stay for aliens”, the relevant data are not available electronically for the moment, therefore their extraction is not possible.

Hungary

(2020): The pandemic situation had a huge effect on the case flow of the courts on every level of the court system. Special regulations were adopted by the legislator to promote videoconferencing and the courts were "closed between the 16th of March and the 31th of March (during this period no procedural events could be performed at the courts). Although the courts carried out their main activities, many cases were prolonged e.g. because the parties were not able to attend the hearings. The increase of the number of incoming and resolved Employment dismissal cases is the result of technical changes and transfer of responsibilities from the Administrative and Labour Courts to the Regional Courts. In March 2020, the Administrative and Labour Courts were dismissed, and the pending cases were transferred to the Regional Courts, which deal with these cases on first instance since April 1, 2020. As a result, these cases were technically administered as "incoming" cases at the Regional Court and as "resolved" cases at the Administrative and Labour Courts.

(2017): Regarding the categories “insolvency”, "robbery" and "intentional homicide" the number of pending cases on 1st of January differ from the closing number of the previous year because of data collection problems at certain regional courts.

(2016): With regard to the category “employment dismissal cases”, as the number of incoming cases decreased it resulted in a decrease in the other categories as well. The reason of the decrease in the number of incoming cases might be outside of the court system. With regard to the category “insolvency cases”, the methodology of data collection changed from the year 2015 to 2016. Accordingly, there is a discrepancy between the number of insolvency cases pending on 31 December 2015 and the number of insolvency cases pending on 1 January 2016.
With regard to "robbery cases" and "intentional homicide", currently the database contains some invalid data for these categories, so before solving this problem no valid data may be given.

(2015): Regarding the category "litigious divorce cases", the data provided for 2015 cannot be compared with the previous years as the statistical system has changed. As a result of an amendment of the code of civil procedure, litigious divorce cases were included in a new statistical category. This resulted in a starting number of "0" litigious divorce case at the beginning of the year 2015.

(2014): The decrease in the number of pending employment dismissal cases on 31 December over the period 2012-2014 is a consequence of the decrease in the number of incoming cases. Another reason was the establishment of 20 Administrative and Labour courts and 6 Regional Administrative and Labour Divisions in January 2013. The former are specialized first instance courts dealing with cases concerning the review of administrative decisions and employment relationships. The latter are special departments that coordinate the professional work of Administrative and Labour Courts, providing a professional platform for judges to discuss actual issues in administrative and labour matters.

Ireland

(General Comment): Under the Insolvency category above the figures reflect both corporate and personal insolvency cases. Insolvency figures include both litigious and non-litigious cases.

(2021): For serious crimes, our systems include robbery cases with fraud and other crimes of dishonesty and therefore we cannot provide a number of robbery cases disposed of. The numbers are correct and no explanation of the discrepancies can be provided.

(2020): We have no explanation as to why more of litigious divorce and insolvency cases were received. We have validated the figures and they are correct. There was a significant decrease in the number of resolved robberies in 2020. Covid-19 had a significant effect across the Courts.

(2019): There was a decrease in bankruptcy and alternative personal insolvency application by debtors and to bankruptcy as a remedy by creditors in 2019. The overall amount of personal insolvency cases fell from 2,909 in 2016 to 1,496 in 2019

(2018): There was a decrease in bankruptcy and alternative personal insolvency application by debtors and to bankruptcy as a remedy by creditors in 2018. The overall amount of personal insolvency cases fell from 2,909 in 2016 to 1,526 in 2018"

(2017): The entered under "Cases relating to asylum seekers (refugee status under the 1951 Geneva Convention)" represent judicial review applications relating to asylum cases generally. We are not in a position to provide definitive data on the specific case category indicated on "Cases relating to the right of entry and stay for aliens ".
"Employment dismissal cases": we regret that we cannot definitively explain the reason for the decrease: there is no necessary connection between improvement in the economy and the number of disputes arising from employment dismissal.

(2016): With regard to the category "insolvency cases", 2016 data on incoming and resolved cases reflect a significant increase in recourse to personal insolvency procedures by debtors (there were 2730 personal insolvency and bankruptcy proceedings in 2016 compared to 941 in 2014).

(2015): 2015 figure should be 2368. The large increase is substantially due to a large increase in the number of applications for Debt Relief notices, Debt Settlement Arrangements and Personal Insolvency Arrangements

(2014): The significant increase in the number of incoming and resolved insolvency cases between 2013 and 2014 reflects the introduction of a new range of statutory personal insolvency remedies.

Italy

(General Comment): With regard to the insolvency cases, the peculiarity of the Italian system consists in distinguishing between “insolvency applications” and “insolvency cases”. The former category concerns the litigious part of the proceeding where creditors and debtors have different goals (dispute). The latter category concerns the part of the proceeding where the judge has already established the insolvency / bankruptcy of the debtor and the case is all about the management of the assets and proceeds of the debtor. Figures at questions 101 and 102 refer to “insolvency applications” rather than “insolvency cases”.

(2021): The decrease in the number of incoming employment dismissal cases might partially be explained by the extension of the ban on dismissal which was initially intended to address the covid emergency. Therefore, the decrease in the number of pending cases is the result of the decrease of incoming cases.

(2018): Employment dismissal cases are strongly correlated with the economic trend. The number of employment dismissal cases used to be very high when the economic crisis was at its peak. Now the economy is getting better and therefore the number of these cases is going down.
The strong increase of cases related to asylum seekers was even addressed by the president of the Supreme Court during his speech on the occasion of the inauguration of the judicial year. The reason of such increase depends on the immigration flow. Cases related to the right of entry and stay for aliens are dealt by the administrative justice and for this reason they were not considered in 2016.

(2017): Asylum seekers cases represent a growing phenomenon. For this reason, a new piece of legislation (L.46/2017) which came into force in 2017, introduced a series of procedures with the aim of speeding up this kind of proceedings. In particular, the main innovations of the above regulatory intervention include the establishment of specialized sections within the courts. Such specialized sections deal exclusively with immigration and international protection cases. The Italian courts are not involved in the activities concerning the right of entry and stay of aliens. The competent body is the Ministry of internal affairs. For further information about this topic please visit http://poliziadistato.it/articolo/10618-Entering_Italy

(2016): With the introduction of the data warehouse system we can now identify specific types of proceedings (e.g. employment dismissal cases) more precisely.
The figures provided for both litigious divorce and insolvency cases (year 2016) are correct but there is no particular reason explaining the observed variations. With regard to the insolvency cases, the peculiarity of the Italian system consists in distinguishing between “insolvency applications” and “insolvency cases”. The former category concerns the litigious part of the proceeding where creditors and debtors have different goals (dispute). The latter category concerns the part of the proceeding where the judge has already established the insolvency / bankruptcy of the debtor and the case is all about the management of the assets and proceeds of the debtor. The figures at questions 101 and 102 refer to “insolvency applications” (the litigious part of this kind of proceedings) rather than “insolvency cases”.

(2015): Litigious divorce case in 2015 have been extracted from the “Civil Data warehouse”. While in 2014 they were taken from the previous system. To harmonise the data between the cycles the 2014 was updated with the values derived from the data warehouse too

(2014): The project called “Civil Datawharehouse” supposed to enable to look at each single procedure individually, has been implemented. However, the output is still under “test phase”.

(2012): The number of litigious divorce cases, has been affected by the implementation of a different classification of civil cases.

Latvia

(2021): Limiting the spread of COVID-19 and mitigating the economic difficulties that may arise with restrictions, in March 2021 the Saeima adopted the Law on the Suppression of Consequences of the Spread of COVID-19 Infection, Section 22 of which stipulated that Until 1 September 2021, the creditor are prohibited from submitting an application for insolvency proceedings of a legal person if any of the features of insolvency proceedings of a legal person referred to in Section 57, Paragraph one, Clause 1, 2, 3, or 4 of the Insolvency Law exists, which affected the number of cases received in court. In 2021, there was a decrease in resolved insolvency cases, which was related to the restrictive measures in the field of insolvency process due to the COVID-19 pandemic.
In 2021, the number of received and resolved cases of the intentional homicide has returned to the level of previous years, and the decrease in the number of cases found in 2020 is no longer observable.
The number of pending cases (pending for more then 2 years) has significantly increased for litigious divorce cases, robbery cases and intentional homicide cases. The changes are related to the decisions taken in previous years to limit the spread of the COVID-19: resolving cases in the written procedure if it was possible. However, the types of cases mentioned above (specific Litigous cases) often require face-to-face meetings.

(2020): There are minor changes in statistical data due to Covid-19 pandemic. The pandemic affected the hearings of the cases and procedure, because there were several case groups that were solved in written way affecting average length of the hearings.

(2019): Data on court statistics are being calculated by automated systems, we do not keep track on any changes that affect data in database.

(2018): Partially due to court system reform, Court Information System database has undergone several error checks and data clean-ups, that has affected amount of cases, especially – unresolved. Data on court statistics are being calculated by automated systems, we do not keep track on any changes that affect data in database. Any changes to the Court Information System can affect the data.

(2017): Data updated after court reorganisation in 2018.

(2016): Data updated after court reorganisation in 2018.

(2013): The number of pending insolvency cases in the beginning and in the end of the year increased because of the special handling procedures for insolvency cases set forth by the Civil Procedure Law. The duration of insolvency proceedings is mostly affected by external economic factors. The increase in the number of incoming insolvency cases is justified by external factors such as public activity submitting applications on legal protection of individuals in cases of insolvency. The increase of the resolved insolvency cases is due to the gradual improvement of the capacity of the courts work following the adoption of the new provisions of the Civil Procedure Law in 2012.

(2012): The decrease in the number of “litigious divorce cases” (pending, incoming, resolved) is due to the decrease in the number of incoming cases owing to the impact of external factors such as depopulation, decline in the number of marriages etc. As to the category “employment dismissal cases”, the decreases noticed in respect of all the items can be explained by external socio-economic factors such as the decrease of the unemployment after the end of the economic crisis.

Lithuania

(2021): The decrease in insolvency cases category could be due to the initiative of the Council of Judges adopted in 21 April 2020
entered into force in 25 April 2020 The impact of the consequences of the novel coronavirus (COVID-19) on Lithuania
Law no. XIII-2861, which was temporarily (until 31 December 2020) the initiation of the insolvency process was suspended. It is noteworthy that out of 1212 civil cases on bankruptcy of legal entities, which had been examined in 2021, the majority - 860 cases - were received by 25 April 2020.

(2020): Pending on 31 December 2020 litigious divorce cases: the result of the decrease in the number of incoming cases and the compulsory mediation in pretrial stage.
Insolvency cases: general decrease in number of cases
Roberry cases: general decrease in number of cases

(2019): In common the number of pending cases decreeses, this shows the efficient work of the courts.
Employment dismissal cases - the decrease of incoming and resolved cases might be due to the effective functioning of the Labor Disputes Commission (a mandatory pre-litigation labor dispute resolution body for individual and collective labor disputes).
Insolvency cases - in 2019 the number of bankruptcy proceedings compared to 2018 remained stably consistent, depending on the economic situation. The general number of received criminal cases has decreased. This may have been caused by the reduced level of crime in the Republic of Lithuania. In 2019, compared to 2018, fewer crimes were registered and fewer criminal proceedings were received. According to the publications of the Department of Informatics and Communications under the Ministry of the Interior of the Republic of Lithuaniadata, in 2019 51 449 criminal offenses were recorded (57 830 in 2018 and 63 846 in 2017). Cases relating to the right of entry and stay for aliens - general political situation in Lithuania and situation in EU on this issue led to the decrease of incoming cases in 2019.

(2018): Employment dismissal cases - the decrease of incoming and resolved cases might be due to the effective functioning of the Labor Disputes Commission (a mandatory pre-litigation labor dispute resolution body for individual and collective labor disputes).
Insolvency cases - the decrease of incoming cases might be due to the decrease of debtors (legal entities). Robbery cases - the decrease of incoming and resolved cases might be due to a general decrease in crimes to property. Cases relating to the right of entry and stay for aliens - general situation in EU on this issue led to the increase of incoming cases in 2017 and consequently to the increase of pending cases at the beginning of 2018. The number of ressolved cases is higher due to higher number of incoming and correspondently pending cases. Cases relating to asylum seekers fall within the cases relating to the right of entry and stay for aliens or other administrative cases.

(2017): Cases relating to asylum seekers fall within the cases relating to the right of entry and stay for aliens or other administrative cases.
The number of incoming cases related to the right of entry and stay for aliens is related to the number of requests from residents of countries where were no requests before (countries where are no military actions carried) and such requests are often declined by the Migration department.
The decrease in the number of pending employment dismissal cases at the end of the year is explained by the fact that courts are successfully fighting the backlog.
Variations observed in respect of the number of pending litigious divorce cases appear important mainly due to the small numbers.

(2016): For the reference year 2016 cases relating to asylum seekers fall within the cases relating to the right of entry and stay for aliens or other administrative cases.

(2013): Variations observed in respect of the categories “employment dismissal cases” and “litigious divorce cases” are justified mainly by fluctuations in the number of incoming cases (due to the crisis, developments of the constitutional doctrine or amendments in law). In 2013, the number of district courts has been reduced to 49, resulting in a transfer of cases from one year to another from several/two courts to one court.

Luxembourg

(General Comment): The unavailability of the number of pending and incoming criminal cases is explained by the specific organisation of the workflow between courts and prosecution offices. Cases are only transferred to the courts shortly before the hearing and, if a case is not heard on the given date, it is physically returned to the prosecution until the new hearing date. Thus, there are - with a few exceptions - no cases pending before the criminal courts over a long period of time, and the number of incoming cases is more or less equal to the number of resolved cases.

(2021): "Robbery cases": After the strict health measures in 2020, robbery cases dealt with by criminal and correctional chambers of the courts returned in 2021 to a level 17% above the level observed in 2018.
"Intentional homicide": After the strict health measures in 2020, the number of resolved intentional homicide cases returned in 2021 to a level 5% higher than in 2018.

(2020):
""""Contentious divorce"": compared to the figures provided for the court systems assessment for 2018, new divorce cases had already increased significantly in 2019. It appears that at the end of 2018, there were a number of pending divorce petitions, awaiting the entry into force of the June 27, 2018 law establishing the family court judge (JAF law) on November 1, 2018. During the first two semesters of 2019, divorces were pronounced in a dual regime: on the one hand, cases filed under the old law were evacuated, and the JAF law, providing for very short deadlines, made it possible to close a greater number of cases in less time than was the case under the old procedure. Compared to the 1,070 new cases recorded in 2019, there is actually a 14% decrease in new cases in 2020.
""Robbery with violence"" The decrease observed between 2018 and 2020 of 23% of completed cases in violent robbery can be explained on the one hand by the decrease in new cases in this area and on the other hand by the general decrease in judgments issued during 2020 and related to the health situation.
Voluntary manslaughter cases include attempted homicides. The observed decrease between 2018 and 2020 of 27% of completed cases in intentional homicide can be explained on the one hand by the decrease in new cases in this area and on the other hand by the general decrease in judgments handed down during the year 2020 and related to the health situation. "

(2019): Compared to 2018 data, the number of incoming divorce cases has increased significantly. It seems that at the end of 2018, there was a number of pending divorce petitions, awaiting the entry into force of the law of 27 June 2018 establishing the family court judge (JAF law) on 1 November 2018. During the first two semesters of 2019, divorces were pronounced under a dual regime: on the one hand, cases filed under the old law were dismissed, and on the other hand, the JAF law, which provides for very short deadlines, made it possible to close a greater number of cases in less time than was the case under the old procedure.
“Cases relating to asylum seekers”: as we previously indicated in our 2018 comment, variations in the number of incoming and the number of resolved cases depend on factors external to the administrative courts. The variations are probably related to applications for international protection and especially the decisions taken in relation to these applications by the Ministry of Foreign and European Affairs (see https://maee.gouvernement.lu/content/dam/gouv_maee/directions/d8/publications/statistiques-en-mati%C3%A8re-d-asyle/Bilan-2019-Asile-Immigration-et-Accueil.pdf).

(2018): With regard to the number of incoming divorce cases, compared to the numbres provided for the 2017 scoreboard, they increased by only 8%. Since 2017, we have seen an acceleration in the number of divorce applications in 2018 since, before the entry into force of the law of the 27th of June 2018 establishing the Family Court (JAF law) and reforming the divorce procedure, many proceedings initiated under the former law were dismissed as a priority. In addition, the numbers for asylum seeker cases have decreased by 5% compared to the numbers available for 2017. The variation in incoming cases and resolved cases is linked to factors which are external to administrative courts and it is probably linked to the decrease in 2018 in applications for international protection and especially in decisions taken in relation to these issues. Finally, the number of cases resolved in 2016 concerning the entry and residence of foreigners was particularly high, this can be explained, among other things, with the creation of a new chamber in 2016 at the Administrative Court, the complexity of the cases, which can vary, as well as the delays in the investigation which can affect the date of delivery. The number of resolved cases related to the right of entry and residence of foreigners remains unchanged from the cases resolved in 2017.

(2017): Litigious divorce cases: The increase in the number of incoming cases in 2017 may have its origin in the fact that parliamentary proceedings had been initiated to reform the existing divorce procedure, which was intended to repeal the contentious divorce procedure. The Act of 27 June 2018 establishing the Family Court (juge aux affaires familiales) and reforming divorce and parental authority was initially supposed to come into force in the beginning of 2018 but it will only come into force on 1 November 2018. This law is also amending: 1. the New Code of Civil Procedure; 2. the Civil Code; 3. the Criminal Code; 4. the Social Security Code; 5. the Labour Code; 6. the amended Act of 11 November 1970 on the transfer and seizure of work pay and pensions; 7. the amended Act of 7 March 1980 on the organisation of the judiciary; 8. the amended law of 10 August 1992 on the protection of young people; 9. the amended law of 27 July 1997 on insurance contracts; 10. the amended law of 9 July 2004 on the legal effects of certain partnerships; 11. the law of 27 June 2017 adopting a multiannual programme for recruitment to the judiciary and amending the amended law of 7 March 1980 on judicial organisation. In addition, an increasing number of divorces between asylum seekers can be noticed.

Cases relating to asylum-seekers (refugee status under the 1951 Geneva Convention)[incoming cases and resolved cases]: the increase in the number of incoming and resolved cases is due to factors external to administrative courts and is probably linked to the general increase in 2017 in the number of applications and decisions taken in relation to asylum claims (see https://statistiques.public.lu/fr/actualites/population/population/2018/01/20180117/20180117.pdf).

Cases relating to the right of entry and residence of aliens [resolved cases]: the number of resolved cases in 2016 was particularly high, which can be explained by, inter alia, the creation of a new chamber in 2016 at the Administrative Court, the complexity of cases which may vary as well as the length of investigation proceedings, which may affect the date of delivery of the decision.

(2016): For insolvency cases the number of incoming and resolved cases is identical because these cases are treated immediately.

(2013): The number of employment dismissal cases corresponds to the incoming cases brought before the three competent courts. All these cases, with some exceptions, are generally heard and resolved within a few months. Regarding insolvency cases, they are all considered as urgent and are heard, at the latest one month after they are brought before the court.

Malta

(2021): There was a registered increase in insolvency cases throughout 2021 that has been confirmed by the Court Services Agency.

(2020): Less incoming and resolved cases due to court closure.

(2019): Following the establishment of the Civil Court, Commercial Division, a number of insolvency cases previously filed before other courts were still being transferred to the new Court and hence the relatively high number of incoming cases in previous years. The Commercial Court is now fully operational and receiving new cases filed before it. Hence this figure is presumed to reflect more faithfully the cases of insolvency filed within a year.

(2017): The employment dismissal cases are not heard by the courts but rather by the Industrial Tribunal which is separate from courts and has no connection whatsoever to courts or the Ministry of Justice. Cases related to asylum seekers are processed by the Refugee Commission and heard by the Refugee Appeals Board, which is an entity separate from the courts. Therefore such data is NAP. The Office of the Refugee Commissioner (RefComm) is regulated by The Refugees Act, Chp 420 of the Laws of Malta, and its main responsibly is to receive, process and determine applications for international protection in Malta, as stipulated by the Refugees Act, amended by Act VI and VII in 2015 and its Subsidiary Legislation 420.07 on Procedural Standards in Examining Applications for Refugee Status Regulations. This Office is also bound by the obligations assumed by Malta under the 1951 Geneva Convention relating to the status of Refugees and its 1967 Protocol, as well as its obligations under European Directive 2011/95/EU, European Directive 2013/32/EU and the Dublin Regulation.
RefComm implements a single asylum procedure. It first examines whether the applicant fulfils the criteria to be recognised as a refugee according to law, and in the case of those applicants who do NOT meet the criteria to be recognised as refugees, the Office proceeds to examine whether the applicant fulfils the criteria for subsidiary protection according to law. The applicant is informed in writing about the decision issued by the Office of the Refugee Commissioner. The reasons in fact and in law are stated in the decision. In the case of a negative decision, applicants are informed of their right to enter an appeal against this decision to the Refugee Appeals Board. Information on how to challenge a negative decision is given in writing to those applicants whose application was rejected with regards to refugee status and/or subsidiary protection status. This is an administrative review and involves the assessment of facts and points of law. An asylum seeker has 2 weeks to appeal since the day in which the written negative decision by the Refugee Commission has been received. Whilst the Refugee Appeals Board does not accept late appeals, it does have suspensive effect.
An onward appeal is not provided in the law in case of a negative decision from the Refugee Appeals Board. However, judicial review of the decisions taken by the Board is possible before the First Hall of the Civil Court, limited only to an enquiry into the validity of the administrative act. However, such information is not available. Judicial review does not deal with the merits of the asylum claim, but only with the manner in which the concerned administrative authority reached its decision. At this stage, applicants could be granted legal aid if eligible under the general rules for legal aid in court proceedings.

(2016): Litigious cases: the number of incoming and resolved cases has been on the increased every year.

Netherlands

(General Comment): There are a few numbers available, but NL does not register whether cases are litigious or not in the manner asked here.

(2020): There are some numbers available on this, but we don’t register whether cases are litigious or not in this manner.

(2018): As for the number of resolved employment dismissal cases, it dropped significantly in recent years, most probably because of the shortage in labour or low unemployment

(2017): The distinction of litgious cases is only available for resolved cases.

(2016): A the moment the Supreme Court has not the data available to answer this question. The National Correspondent is consulting the Supreme Court to improve this situation.

Poland

(General Comment): As regards criminal cases heard in cours - only total numer of such cases is collected (without the breakdown by the type of crime commited). The breakdown by the articles of Criminal Code is used while collecting statistics on convicted persons (both in first and second instance).
Lack of horizontal consistency in the table in respect of divorce cases: in respect of this case type, he horizontal consistency is not always ensured. Sometimes the case incoming to the court as „divorce" may be adjudicated as „separation" or the case incoming to the court as „separation" may be adjudicated as „divorce".

(2020): The discrepancies in Table 101. Number of specific litigious cases received and processed by first instance courts - compared to the previous period (2018) are mainly due to the significant increase in number of cases of personal bankruptcy (in the „incolvency" category). The amendment to the bankruptcy law made it much easier to obtain the right to bankruptcy for a natural person, therefore the number of such cases brought to court has been increasing for several last years.

(2019): *) In divorces cases the number of Pending cases on 31 Dec ref. year is not equal to pending cases on January + Incoming cases - resolved cases because some cases brought to the court as a divorce cases may be judged after a trial as a separation.
*)The number of incoming insolvency cases has been increasing in recent years, inter alia, due to the significant increase in number of cases of personal bankruptcy. The amendment to the bankruptcy law made it much easier to obtain the right to bankruptcy for a natural person, therefore the number of such cases brought to court has increased many times.

(2018): In regard to litigious divorce cases, please note that pending cases on 1 Jan. ref. year plus incoming cases minus resolved cases are not equal pending cases on 31 Dec. ref. year. In some judicial proceedings parties decided to change their decision and do not get divorce but they get separation. In that situations incoming cases are classified as divorce cases but in resolved cases they are classified as separation cases which are included in different statistical position.

(2017): Changes in insolvency cases pending on 31 Dec are probably caused by implemented organizational changes in courts.

(2016): The growth of the number of insolvency cases is a result of the amendment of The Bankruptcy and Reorganisation Act which entered into force on the 31 December 2016.
It should be noted, that this is a very important change, which simplifies the submission of requests for consumer bankruptcy. It also implemented solutions for insolvent consumers which facilitate reaching deal with their creditors. The amended regulations do not establish automatisation in declaring consumer bankruptcy - it is still a legal proceeding. Every time the consumer must fulfil a number of conditions, which are subject to an individual assessment conducted by the judge.
Since the implementation of this act, the number of incoming insolvency cases has increased singnificantly (300 in 2014, 8694 in 2016).

Portugal

(General Comment): Since 2007, statistical data concerning pending cases in 1st instance judicial courts are collected through the courts information systems. Being dynamic systems, allowing regular corrections and up-dating, the data collection may lead to oscillation data from previous years resulting in variations in pending cases.

(2021): The increase in the number of pending cases on 1 January 2021 is related to the fact that in 2020 the number of incoming cases was higher than the number of completed cases. This situation should be contextualised, in our view, within the framework of the effects of the Covid 19 pandemic and the consequent confinement, with a reflection on the functioning of the courts in 2020, considering that in certain periods face-to-face services were interrupted or conditioned.

(2020): The increase in the number of employment dismissal cases pending from 2018 to 2020 is largely justified by the fact that in 2020 the number of the cases filed was much higher than the number of cases completed. This is be partly justified by the decrease in court activity in 2020 due to the Covid-19 pandemic situation.
The number of pendinginsolvency cases as of January 1, 2020 has decreased compared to the number of cases pending as of January 1, 2018, as the number of cases completed in 2018 and 2019 was relatively higher than the number of cases entered in those years. The decrease in the number of insolvency cases completed between 2018 and 2020 is justified by the decrease in court activity in 2020 due to the Covid-19 pandemic situation.
Robbery and intentional homicide: At the trial stage, the classification of the type of crime in criminal cases is done only at the time the case ends, so it is not possible to provide data on the movement of cases before the case is finished.

(2019): The number of insolvency pending cases has decreased in relation to 2018, because the number of resolved cases has increased. In addition, the number of insolvency cases in 2018 decreased due to a more favourable economic situation. Finally, this decrease follows the decrease in pending cases in the civil procedural area in global terms.

(2018): The decrease of the number of pending cases follows the global general tendency of decrease of the number of civil and labor cases filed and pending. We have not identified any legislative or other changes that could directly justify the decrease of such cases.

(2017): The number of pending employment dismissal cases decreased in 2017 in relation to2016. This was due to the fact that the numer of resolved cases in 2016 was superior to the number of new cases that year. The number of cases in 2016 decreased as a result of a better economic environment.
In addition, labour cases have been decreasing in global terms.
The number of pending insolvency cases decreased in 2017 in relation to2016. This was due to the fact that the numer of resolved cases in 2016 was superior to the number of new cases that year. The number of cases in 2016 decreased as a result of a better economic environment.
In addition, civil procedural cases have been decreasing in global terms.

(2016): - The decrease in the number of pending cases in the beginning of 2016 in relation to 2015 in respect of litigious divorce cases, employment dismissal cases and insolvency is explained by the fact that the number of resolved cases in 2015 was superior to the number of incoming cases that year. There is no specific explanation as regards the decrease in the number of these cases (for example legislative changes). However the decrease of these cases follow the general trend of the decrease of incoming and pending cases in civil and labour matters.
- The decrease in the number of pending cases in the end of 2016 in relation to 2015 in respect of litigious divorce cases, employment dismissal cases and insolvency is explained by the fact that the number of resolved cases in 2016 was superior to the number of incoming cases that year. There is no specific explanation as regards the decrease in the number of these cases (for example legislative changes). However the decrease of these cases follow the general trend of the decrease of incoming and pending cases in civil and labour matters.

(2015): The decrease in the number of employment dismissal cases follow the general trend of the decrease of incoming and pending cases in labour matters.

(2013): The number of incoming litigious divorce cases is decreasing since 2010, entailing a decrease in the number of pending cases. Between 2010 and 2013, the clearance rate has remained stable, with values above 100%. Besides, the number of marriages has decreased in these last years. In 2012, legislative and other measures were adopted with the objective to accelerate procedural times of insolvency cases. These measures have allowed courts to respond more promptly to the increasing number of insolvency cases.

Romania

(General Comment): In the national Statis system, the cases are recorded on different categories of pending cases. So, in the last column, there are number of cases pending for more than 3 years instead of 2.

(2021): The decrease in the number of incoming employment dismissal cases is linked to the decrease in the number of this type of pending cases. A similar explanation can be given for the robbery cases. The decrease in the number of resolved cases of intentional homicide is linked to the decrease in the number of incoming intentional homicide cases. However, at least some of the increase, such as for the divorce cases, may be caused by the context of Covid 19 pandemic period since the number of pending cases on January 2021 increased since the previous cycle.

(2020): The increase in the number of employment dismissal cases may be attributed to a complex set of socio-economical factors and we do not have the data analisis in this matter. However, at least some of the increase may be caused by the context of Covid 19 pandemic that affected a lot of economic sectors that may have caused a suge in employment dismissal cases.

(2019): As to the increased number of cases relating to asylum seekers at the beginning of 2019, the reason is the increased number of incoming cases in 2018 due to the increase of the migration as a phenomenon

(2018): The augmentation of cases related to asylum seekers is due to the increase of the migration as a phenomenon

(2017): With regard to "cases related to asylum seekers" the increase in the number of incoming cases in 2017 may be determined by the extended phenomenon of immigration lately registered in Europe. Referring to the decrease in the number of resolved cases related to the right of entry and stay for aliens (resulting in an increased number of pending cases on 31 December 2017) there is not an objective reason that may explain this statistical data.

(2016): The decrease of pending Employment dismissal cases is due to high Clearance Rate in 2015. Regarding insolvency cases, the decrease observed for the period 2014-2016 was determined, on the one hand, by the change in economic conditions and the re-launching of the companies' potential. On the other hand, the reform of insolvency legislation (Law 85/2014) encouraged early recovery prior to insolvency and, balancing the protection of creditors with that enjoyed by debtors, has reduced the tendency of borrowers to use this judicial procedure.

(2015): One may notice an important decrees of first instance new cases in administrative law and insolvency as a cause of legislative amendments dating from 2012. The same reason is for increases of numbers in appeal and decreases in second appeal, except for special laws like administrative law.

(2014): By the decision n° 46/2012, the Superior Council of Magistracy has decided that all the courts will implement by 1 January 2014 the IT system of collecting data. The new method is based on new definitions of the indicators. Accordingly, a case is transferred from the field “stocks” to the field “closed” only when the final decision, including its reasoning is drafted signed and communicated to the parties. For that reason, the number of pending cases on 31 December 2013 cannot be identical with the number of pending cases on 1st January 2014.
The decrease of the number of resolved litigious divorce cases between 2013 and 2014 was due to the socio-economic conditions.

(2013): In respect of the category “litigious divorce cases”, the decrease of the number of cases in 2013 may have social causes and may also reflect the alternative instruments to litigious divorce (.g. divorce in front of notaries).
In respect of the category “employment dismissal cases”, because of the delays on the first hearings allocated by the new automatic system implemented with the new Civil Procedure Code, even if the number of the new entered cases has decreased, the total volume of activity was focused on stocks. The problem enters on a normal path in 2013.

(2012): In respect of the category "litigious divorce cases", the decrease of the number of cases in 2012 may have social causes and may also reflect the alternative instruments to litigious divorce (.g. divorce in front of notaries).

Slovak Republic

(2021): The data listed in the category "Roberry case" and "Intentional homicide" represent the number of convicted persons in legally closed cases. These are data obtained from the database of legally closed cases, which are marked as completed in statistical reporting, and therefore the data is only available for the category " Resolved cases". Since 2018, the number of convicted persons is not reported according to the most severe criminal offense, but convictions for all criminal offenses are taken into account (i.e. in the event that a person was convicted of committing several criminal offenses, the person in question is reported as convicted for each criminal offense separately).

(2020): More significant decline of incoming cases and resolved cases as well in the courts as a result of a pandemic situation. In the employment dismissal cases the rate of the discrepancy is not so high in comparison with 2019.

(2019): Note 1: The data in the "Roberry case" and "Intentional homicide" categories represent the number of convicted persons in legally finished cases (resolved cases). These are the data obtained from the database of legally completed/finished cases, which are reported as resolved cases in the statistical reporting, and therefore the data are only available in the category "Resolved cases". Since 2018, the number of convicted persons has not been reported according to the most severe criminal offense, but convictions for all criminal offenses are taken into account. This means that if a person has been convicted of more than one crime (for example 2), the person is reported as convicted of each crime separately (it means twice).
Note 2: The difference between pending cases on 1 Jan. 2019 and the final state pending cases on 31st of December 2018, is due to the findings of a non-uniform method of reporting cases in the insolvency agenda among the our courts. Based on these findings, the courts were instructed/directed on how to report the number of decided insolvency cases. Subsequently, the courts were allowed to record the actual state of pending cases on 1 Jan. 2019, that the methodology is the same for all courts and in the whole year (2019) period. For the next year, these differences should not occur, due to the automatic transfer of the data from the end of period (2019) into the beginning of the monitored period 2020 in the electronic data collection.

(2018): Note 1:Differences in the initial states of things as of 1 January 2018 different from the final states as of 31 December 2017 are due to the introduction of electronic data collection through the Data Collection Application (hereinafter referred to as AZU). When introducing electronic data collection in 2018, the courts were allowed to record the actual state of pending cases as of 1 January 2018 with the aim of not transmitting any inaccuracies from paper collection of previous periods. These differences should not occur in the next year, given the introduction of automatic transfer of the number of undecided cases from the end of the previous period in the electronic data collection.
Note 2: The increasing number of insolvency cases is caused by an important amendment of the Act on bankruptcy. The personal bankruptcy of the natural persons has been introduced in march 2017 and in 2018 we registered significant increase of new cases. Note 3: Data in the "Robbery case" and "Intentional homicide" categories represent the number of convicted persons in lawfully completed cases. These are data obtained from the lawfully completed database, which are classified as equipped in the statistical reporting and therefore data are only available for " Since 2018, the number of convicted persons has not been reported according to the strictest crime, but convictions for all crimes are taken into account (i.e. if the person has been convicted of several offenses, the person is reported as convicted for each crime separately).

(2017): Q101 : The data in the table are not horizontally consistent. This is caused by the fact, that the data on pending cases on 1. January 2017 (the same as data on 31. December 2016 given for the previous cycle) were collected in a one-shot collection for the Justice Scoreboard 2017 and were not bound by control patterns of horizontal consistency as it is in the new electronic data collection active since January 2018.
As regards the variations, some inconsistencies in data between the old and new system persist, and they can be explained as the transition between the old system of collecting the statistical data to new one is more complicated than was expected, with the setting up of Analytical centre of the MoJ, application of CEPEJ methodology and its tools is one of the targets in the on-going project between CEPEJ and Ministry of justice of the Slovak republic.
There are still two different IT tools used to collect the statistical data from the courts to Analytical centre. The Analytical centre makes every effort to complete the transition between two systems as soon as possible to get reliable data as soon as possible.
The increase in litigious divorce cases is influenced by significant decrease in the clearance rate (CR) to 79% in previous year 2016. The reason for the reduced CR can be found in the change of records of divorce without children from register C to the register of Pc, which was carried out in the middle of 2016, and with this change the organizational shift of the relevant number of judges into another department was not parallel.
The increase in the numbers of insolvency cases was significantly influenced by the legislative changes related to the personal bankruptcy of natural persons. Since 1.3.2017 the simplified access to personal bankruptcy and the possibility of debt elimination of natural persons is in effect. The impact of this changes was immediate in both incoming and resolved cases.

(2016): Comparison with previous cycles is not possible due to the change of methodology of calculation of cases introduced by the Analytical centre. The methodology now can identify cases finalised at each instance. The inconsistency between pending cases at the beginning of 2016 and pending at the end of 2015 is disturbed because of introduction of new methodology of calculation by the Analytical centre .

Slovenia

(General Comment): The number of litigious cases does not include litigious cases regarding the custody of children without divorce (as partners were not married to begin with).

(2021): Litigious divorce cases- Pending cases on 1 Jan.: increase by 26%
In 2020, the functioning of first instance courts was limited due to Covid-19 restrictions, hence the increase in pending cases at the beginning of 2021.
Litigious divorce cases - Resolved cases: increase by 24%
In 2020, the functioning of first instance courts was limited due to Covid-19 restrictions. Cconsequently, the number of resolved cases decreased. In 2021 with the loosening of Covid-19 restrictions, the number of resolved cases increased.
Employment dismissal cases - Pending cases on 1 Jan.: increase by 61%
In 2020, the functioning of first instance courts was limited due to Covid-19 restrictions, hence the increase in pending cases at the beginning of 2021.
Employment dismissal cases - Incoming cases: decrease by 29%
The number of incoming cases most probably decreased due to numerous state measures aiming to aid the economy. Cconsequently, the employers delayed their preventive measures (in 2022, the number of incoming cases increased).
Employment dismissal cases - Resolved cases: increase by 27%
Employment dismissal cases are considered urgent, therefore the courts were working on cases despite Covid-19 restrictions.
Employment dismissal cases - Pending cases on 31 Dec.: decrease by 27%
The number of incoming cases decreased and the number of resolved cases increased (see above). Cconsequently, the number of pending cases decreased. Employment dismissal cases - Pending cases older than 2 years from the date the case came to the first instance court - decrease by 25%:
Please note the small (absolute) number of cases.
Insolvency - Pending cases older than 2 years from the date the case came to the first instance court - decrease by 19%:
The biggest decrease is in the number of personal bankrupcies, which reppresent 71% of all pending cases, older than 2 years. Intentional homicide cases and Robbery cases: Please note the small (absolute) number of cases.
GC
Insolvency - Pending cases older than 2 years
Please note that the personal insolvency cases are considered resolved only when the assets have been liquidated and the trial period for the discharge of debts (that can be set to last from 6 months to 5 years) has ended.

(2020): Litigious divorce cases - the decrease in number of incoming and resolved cases is due to limitations of operation of courts due to the Covid-19 pandemics.
Employment dismissal cases – the number of incoming cases increased by 29% in 2020 (increase by 1% in 2019), which is likely connected to Covid-19 (downsizing of businesses as a consequence of the impact of Covid-19 pandemics to some economy sectors e.g. tourism, restaurants and bars, catering, etc.), while the number of resolved cases decreased by 7%, due to limitations of operation of courts due to the Covid-19 pandemics. Consequently, the number of pending cases has increased by 61%. Insolvency cases - The number of incoming cases is decreasing (personal bankruptcy from 2014 on and bankruptcy of legal persons from 2018 on), therefore the number of resolved and pending cases is also decreasing.
The discrepancies regarding other categories are due to a small (absolute) number of cases.

(2019): The change in case-flow of cases related to asylum seekers and cases relating to the right of entry and stay for aliens cannot be contribuited to legislature or organisational changes, but rather to the enforcement of policies of the state regarding the general immigration situation in the region.
The absolute number of these cases are low. In 2018, the clearance rate for cases related to asylum seekers had been 94% (for cases related to aliens above 100%) and in 2019 the clearance ratio had been very close to 100% for both types of cases.

(2018): Employment dismissal cases- No special reason for decreased number of incoming cases can be given. The decreased number of incoming cases affecte the number of resolved and pending cases.
Insolvency- Personal insolvency accounts for more than half of the insolvency cases. The decrease in incoming insolvency cases reflects the smaller number of new personal insolvency cases (we can speculate that the higher number of personal insolvency cases in previous years was the effect of the past economic crisis). The increase in resolved cases can be explained by the elapse of probation periods (typically 2-5 years) in personal insolvency cases and more efficient liquidation of assets in cases of business subject insolvency. The number of insolvency cases for business subjects did not vary significantly in recent years.
Cases related to asylum seekers - A decreased number of incoming cases can be attributed to the immigration crisis. The increased number of incoming cases affecte the number of resolved and pending cases.
Cases relating to the right of entry and stay for aliens - No special reason for decreased number of incoming cases can be given. The decreased number of incoming cases affecte the number of resolved cases.
Robbery - The difference in number of resolved cases can be attributed to small (absolute) number of cases.
Intentional homicide - The difference in number of resolved cases can be attributed to small (absolute) number of cases.

(2017): Personal insolvency accounts for more than half of the insolvency cases (61% new cases in 2017 and 75% in 2015). The decrease in incoming insolvency cases reflects the smaller number of new personal insolvency cases (we can speculate that the higher number of personal insolvency cases in previous years was the effect of the past economic crisis). The increase in resolved cases can be explained by the elapse of probation periods (typically 2-5 years) in personal insolvency cases and more efficient liquidation of assets in cases of business subject insolvency. The number of insolvency cases for business subjects (approx 34% of all new cases in 2017) did not vary significantly in recent years.

(2016): Differences (insolvency cases):
The effects of the past economic situation are still producing a high number of incoming insolvency cases, with a high percentage of personal bankruptcies. Following the legislation changes, introducing new, simplified types of (preventive) compulsory settlement, there has been an increase in pending cases due to the overburdening of courts with new cases, as well as lengthy procedures (the case cannot be resolved until the debtor's assets are liquidated – corporate; the case cannot be resolved until the end of probation period for the discharge of debt – personal insolvency; in this period the court cannot influence the duration and the case is still classified as not finished).

(2015): The effect of the economic situation are still effecting a high number of incoming insolvency cases, with a high percentage of personal bankruptcies (approx. 70%). The recent legislation changes introduced new, simplified types of (preventive) compulsory settlement which also led to new incoming cases.
The increase in pending cases is due to the overburdening of courts with new cases, as well as lengthy procedures (the case cannot be resolved until the debtor's assets are liquidated – corporate; the case cannot be resolved until the end of probation period for the discharge of debt – 2-5 years; in this period the court cannot influence the duration and the case is still classified as not finished).
Differences for robbery and intentional homicide is due to the small absolute number of cases.

(2014): The number of incoming insolvency cases is still high due to the effect of financial crisis. Besides, legislative amendments (2013) abolished the right for legal persons to apply for legal aid for financing the advances of the costs of the bankruptcy proceedings (legal persons are now exempt from paying such advance in all cases). The insolvency case is deemed resolved when the assets are liquidated and the creditors are paid (or in case of personal bankruptcy, if the dismissal of debts was requested, until such decision takes place). In cases of big companies as debtors, the sale of all assets can take years; and in cases of physical persons the "probation" period (between 2 and 5 years) must elapse, before the court can decide on dismissal of the debts.

(2013): The number of incoming insolvency cases constantly rises due to the effect of general economic crisis which resulted in a higher number of insolvent companies. The increase in the number of unresolved cases can also be attributed to a high number of proceedings of bankruptcies of physical persons. In these cases most debtors apply for conditional release of debt, where the trial period can last from 2-5 years.

(2012): The number of pending employment dismissal cases on 1 January 2012 decreased because employment dismissal cases are priority cases within labour courts. As robbery cases, are included criminal offences defined in the Criminal Code as Robbery and Larceny in the Form of Robbery. As intentional homicide, are included criminal offences defined in the Criminal Code as Murder, Voluntary Manslaughter and Infanticide. The data includes criminal cases against adult and juvenile offenders and excludes attempts.

Spain

(General Comment): When an error is detected in the statistics of a Court, the latter is allowed doing regularization, what means that the Court communicates the correct figure and rectifies the wrong one even if this does not concord with figures offered for previous exercises. This situation can happen for example in the specific control of cases that the Court makes when a judge leaves the Court (called “alarde”), but in general, in any case in which the Judicial Counsellor detects an error that comes from previous exercises but cannot be localized. The system prefers to correct the data than continue and amplify the error.
These regularizations and the cumulated cases and the re-opened cases are the causes for the horizontal inconsistencies.

(2021): Explanation of the increased number of resolved employment dismissal cases: The recovery of greater activity (after the restrictions of the pandemic) has been able to contribute to greater efficiency.
Explanation of the increased number of incoming insolvency cases: The complex economic context, derived in part from the pandemic.
Explanation of the increased number of resolved insolvency cases: The recovery of greater activity (after the restrictions of the pandemic) has been able to contribute to greater efficiency.

(2020): The decreasing number of resolved divorces cases has been parallel to that of incoming cases, which has also decreased, with a special decrease in 2020 in part as effect of pandemic on work of courts.
Increase in dismissal cases is observed since 2019.
The increase in incoming and resolved insolvency cases is mainly focused on the cases of insolvency of natural persons.

(2019): Concerning cases relating to asylum seekers and cases relating to the right of entry and stay for aliens, the increased number of pending cases at the beginning of 2019 is coherent with the increase in incoming cases in previous cycle.

(2018): Variations in respect of cases relating to asylum seekers and cases relating to the right of entry and stay for aliens are due to the migration crisis

(2017): Migratory crisis can explain the raise of asylum seekers judicial cases.

(2016): As concerns employment dismissal cases: in 2014, 2015 and 2016 an important decrease in the number of incoming cases has been observed. While the resolved cases have kept similar numbers, so, every year the number of resolved cases has been higher than the number of incoming cases. As concerns insolvency cases: the decrease in the number of incoming cases may be due to a certain decrease in some effects of the economic crisis.

(2015): The horizontal consistency can not be respected because of reopened, cumulated and regularised cases.
Because of the economic restrictions and the increasing number of companies with financing problems, the number of employment dismissal cases and the number of insolvency cases brought to courts have remarkably increased in 2014.

(2014): Because of the economic restrictions and the increasing number of companies with financing problems, the number of employment dismissal cases and the number of insolvency cases brought to courts have remarkably increased in 2014.

Indicator 4: Public prosecution services - Case flow management

Table 4.1.1 (2021): Public prosecution: Case flow management in 2021

Bulgaria: The number of discontinued cases includes also those terminated due to the expiration of the statute of limitations which number is a fact of objective reality, not depending on the prosecution.

Denmark: The high value for processed cases is due to the “post-registration of charges” that takes place after the case has been reported to the prosecution office. The number of processed cases includes both cases dismissed by the police and cases dismissed by the public prosecutor.

Slovenia: In 2021, the reporting changed to include cases of discontinued criminal complaints against unknown offenders due to the expiration of statute of limitations in the category (3) Processed cases (previously excluded).

Bulgaria: The number of discontinued cases includes also those terminated due to the expiration of the statute of limitations which number is a fact of objective reality, not depending on the prosecution.

Denmark: The high value for processed cases is due to the “post-registration of charges” that takes place after the case has been reported to the prosecution office. The number of processed cases includes both cases dismissed by the police and cases dismissed by the public prosecutor.

Slovenia: In 2021, the reporting changed to include cases of discontinued criminal complaints against unknown offenders due to the expiration of statute of limitations in the category (3) Processed cases (previously excluded).

Bulgaria: The number of discontinued cases includes also those terminated due to the expiration of the statute of limitations which number is a fact of objective reality, not depending on the prosecution.

Denmark: The high value for processed cases is due to the “post-registration of charges” that takes place after the case has been reported to the prosecution office. The number of processed cases includes both cases dismissed by the police and cases dismissed by the public prosecutor.
Slovenia: In 2021, the reporting changed to include cases of discontinued criminal complaints against unknown offenders due to the expiration of statute of limitations in the category (3) Processed cases (previously excluded).

Indicator 4: Systems for measuring and evaluating the performance of courts

Comments provided by the national correspondents

organised by country

Question 055. Number of public prosecutors (on 31 December of the reference year). (Please give the information in full-time equivalent and for posts actually filled, for all types of courts – general jurisdiction and specialised courts).

Question 107. Public prosecutors: Total number of 1st instance criminal cases.

Question 107-1. If the guilty plea procedure exists, how many cases were concluded by this procedure?

Question 109. Do the figures provided in Q107 include traffic offence cases?

Question .

Question .

Austria

Q055 (General Comment): Data is presented in full time equivalent.

Q055 (2014): The numerical values provided in the table are rounded. The accurate figures are: total – 344,83 (171,52 males and 173,31 females); prosecutors at first instance level – 308,69 (147,13 males and 161,56 females); prosecutors at second instance (court of appeal) level – 20,94 (13,04 males and 7,90 females); prosecutors at Supreme Court level – 15,20 (11,35 males and 3,85 females).

Q055 (2012): In 2012, the various tasks were more exactly assigned to the number of full time equivalents - dealing with tasks of the prosecution on the one hand and the administrative tasks on the other hand.

Q107 (General Comment): "3.1.3 Discontinued by the public prosecutor for reasons of opportunity": discontinued investigations for reasons of opportunity are only counted by persons against which the investigation was discontinued. In one case, more than one person can be accused and the investigation can be discontinued for reasons of opportunity against more than one accused person. Therefore, the person-count was not delivered because it is inconsistent with the case-count (3.1.1, 3.1.2 and 3.1.4). The number of cases in which an investigation was discontinued for reasons of opportunity is included in the number provided for 3.1.1 and 3.1.2 but cannot be evaluated separately with the standard statistic tools of the Federal Ministry of Justice of Austria.

The provided number of cases discontinued for other reasons (3.1.4) contains cases discontinued because the offender is fugitive or an investigation may not be instituted or continued by law (e.g. because of diplomatic immunity of the offender), also cases (investigations) that were not instituted in the first place because the of a lack of an initial suspicion and all other cases that were discontinued but can not be allocated to one of the above mentioned reasons or the other reasons under 3.1.

Under 3.3, closed cases against unidentified offenders were counted which were discontinued because of another reason than not identifying the offender in the end (mostly cases in which at least one formerly unidentified offender could be identified and therefore the case against the unidentified offender(s) is closed and another (new) case against the known offender(s) is opened).

Q107 (2020): The Austrian code of criminal procedure knows measures that the public prosecutor can take in cases of minor criminal offences (“Diversion”). Comparable measures have to be taken by the public prosecutor under certain circumstances under the addictive drug act (“Suchtmittelgesetz”). Until 2019, the last-mentioned cases were counted as files “discontinued by the public prosecutor due to the lack of an established offence or a specific legal situation” (3.1.2). Since 2020, these cases are now counted as “concluded by a penalty or a measure imposed or negotiated by the public prosecutor” (3.2). These changes explain the higher number of cases under 3.1.2. Cases brought to court declined mainly because in 2020 there were far less incoming cases (-13 % compared to 2018).
The number of persons against which an investigation was discontinued by the public prosecutor for reasons of opportunity in 2020 is 9 672.

Q107-1 (General Comment): There is no guilty plea procedure in Austria.

Q109 (General Comment): The courts only deal with damages to property and negligent bodily injuries caused by traffic accidents in civil and criminal proceedings; offences which do not lead to damages or injuries are punished by administrative bodies (e.g. speeding, having worn-out tires, drunk-driving).

Belgium

Q055 (2021): Source: FPS Justice - Directorate General for the Judiciary, HR Department of the Judiciary, Notaries and Enforcement agents
Q055 (2020): Support Service of the College of Public Prosecutors

Q055 (2014): In 2014, the number of professional prosecutors includes the heads of division of the 15 public prosecutors' offices and the heads of the 8 prosecution offices within labour courts.
Q107 (General Comment): "Since the reform of the judicial landscape that came into effect on April 1, 2014, our country has 15 "first degree" public prosecutors' offices (14 public prosecutors' offices + federal prosecutor's office). The data of the federal prosecutor's office are not included here.
The data only concern correctional offenses committed by persons of legal age and persons who are not (yet) identified. Proceedings against minors are handled by the youth section of the public prosecutor's office. The unit of account is a criminal case: a case can have none, one or more defendants and/or one or more offences.
Dismissals for 'other reasons' refer only to cases in which it was possible to determine in the database that they had been closed by a dismissal for which the reason was not entered or was not correctly registered. In fact, when the reason is correctly recorded, the case is then entered under headings 3.1.1, 3.1.2 or 3.1.3. Therefore, the 'other reasons' heading is for 'unknown reasons' and therefore does not include 'special' reasons." "

Q107 (2021): Annual statistics of the Public Prosecution services - Search and prosecution of criminal cases by the public prosecutor's offices at the courts of first instance (http://www.om-mp.be/stat): tables 1, 6, 9 and 11.
The figures in the table have been extracted from the database of the College of General public prosecutors, which is fed by the records of the correctional sections of the public prosecutors' offices at the courts of first instance (MaCH system).
The unit of account is a criminal case: a case can have none, one or more defendants and/or one or more offences.
For point 3.4: In order to count the number of cases brought to courts (55 585 cases), we counted on the one hand all the cases that were closed as a result of a direct summons (41 324 cases) and on the other hand all the cases that were closed as a result of a first fixation before the council chamber in the framework of the settlement of the proceedings (14 261 cases). Indeed, all these cases are also counted as cases closed by the prosecution in the annual statistics of the Public Prosecution services (see table 9).
Additional information on point 3.2:
Of the 100 567 cases closed by a sanction or a measure imposed or negotiated by the King prosecutor (see table 9), 55 167 cases were closed following the payment of a penal transaction; 23 743 cases were closed following an administrative sanction; 19 169 cases were closed as a result of pre-trial probation; 2 446 cases were closed following a successful mediation procedure and measures; 42 cases were closed after referral to the head of the corps.

Q107 (2020): "The figures in the table have been extracted from the Data Bank of the College of Public Prosecutors, which is fed by the records of the correctional sections of the Public Prosecutor's Offices at the first instance courts (MaCH system). The data presented below correspond to the status of the database as of January 9, 2021. Useful notes for the interpretation of the data:
Of the 88,614 cases that ended with a sanction or a measure imposed or negotiated by the public prosecutor
- 48,205 cases were closed following the payment of a penal transaction, - 22,091 cases were closed following an administrative sanction
- 15.969 cases were closed as a result of pre-trial probation,
- 2.308 cases were closed following a successful criminal mediation procedure, - 41 cases were closed after referral to the head of the corps.
Of the 122,581 cases closed by the public prosecutor for other reasons. These are :
- 6,249 cases in which the suspect is the subject of an alert. Once the suspect has been discovered, the case can be reopened.
- 40,748 cases that were referred for disposition. A case that has been sent for disposal is a closed case for the prosecutor's office (its division) that made the decision. The recipient of this case will open a new case and start the judicial investigation.
- 75,584 cases were joined. If one or more cases are joined to a parent case, all subsequent decisions are registered in the parent case. The daughter case receives the joinder decision.
In order to count the number of cases brought before the courts (47,274 cases), in contrast to previous years, we counted on the one hand all cases that were closed as a result of a direct summons (33,105 cases) and on the other hand all cases that were closed as a result of a first determination before the council chamber within the framework of the settlement of the proceedings (14,169 cases). In fact, all these cases are also counted as cases closed by the public prosecutor's office in the annual statistics of the public prosecutor's office.
In the previous questionnaires we only counted direct summonses from the Public Prosecutor's Office to the correctional chambers (31,737 cases in 2020), summonses via accelerated procedure (1,159 cases in 2020) and correctionalizations (78 cases in 2020) and referrals to the correctional chambers of the courts following a first fixation before the council chamber within the framework of the settlement of the procedure (7,592 cases in 2020). A part of these referrals relates to cases that were initiated as a result of a civil action. Therefore, these cases were not initiated by the prosecution.
The numbers of incoming, processed and pending cases have all increased for the same reason. Indeed, in 2020, the health crisis due to the outbreak of COVID-19 began. The government took measures to combat this crisis, including several periods of containment. The Public Prosecutor's Office was responsible for taking criminal action against non-compliance with these measures, which explains the sharp increase in the number of new cases and the fact that, at the same time, the flow of other types of cases did not decrease in the same proportions.
Pending cases are cases that are being processed at a given time. If the inflow increases significantly, the number of pending cases will increase accordingly and reach a higher level.
The increase in the "terminated with penalty" and "brought to court" headings is also related to the health crisis. The primary response to a COVID-19 non-compliance violation was a settlement (recorded under "terminated by penalty"). In the case of
Q107 (2016): 2016 statistical data are not (yet) available due to the change in ITC applications used in Public Prosecution.

Q107 (2014): In 2014, on top of the 447 132 discontinued cases listed in Q107 and Q108, 36 914 other discontinued cases have to be added (administrative fine, pretorian probation, identification of the offender, unknown reason). Actually, in 2014, 484 046 cases were discontinued. Out of the 10 126 cases concluded by a penalty or a measure imposed or negotiated by the public prosecutor, 7 363 cases were concluded by the payment of a criminal transaction and 2 763 cases - by a successful criminal mediation procedure.

Q107 (2012): In 2012, on top of the 478 505 discontinued cases listed in Q107 and Q108, 37 471 other discontinued cases have to be added (administrative fine, pretorian probation, identification of the offender, unknown reason). Actually, in 2012, 515 976 cases were discontinued. Out of the 9 477 cases concluded by a penalty or a measure imposed or negotiated by the public prosecutor, 6 677 cases were concluded by the payment of a criminal transaction and 2 800 cases - by a successful criminal mediation procedure.

Q107-1 (General Comment): The guilty plea procedure was introduced by the law of February 5, 2016 (Article 216 of the Code of Criminal Investigation), which entered into force on February 29, 2016.
According to Article 216 of the CIC, §1, al.1 "For acts that do not appear to be of a nature to be punishable by a main correctional imprisonment of more than five years, the public prosecutor may, either ex officio or at the request of the suspect or defendant or his/her lawyer, propose the application of the "procedure of prior acknowledgement of guilt" defined in this article, if the suspect or defendant admits to being guilty of the acts attributed to him/her".

Q109 (General Comment): The data do not include traffic law cases, cases handled by the labor auditorates, or appeals against police decisions handled by the correctional prosecutor's office.
Q109 (2021): The data do not include traffic law cases, cases handled by the labor auditorates, or appeals against police decisions handled by the correctional prosecutor's office.

Bulgaria

Q055 (General Comment): The provided data refers to the actual number of employed persons for the year of reference.

Q055 (2016): 1511 is the total number of working prosecutors at 31.12.2016; 888 prosecutors at first instance level includes – the prosecutors from 113 Regional Prosecutor`s Offices and 1 Specialized Prosecotr`s Office; 500 prosecutors work in 28 District Prosecutor`s Offices, 7 Appelate Prosecutor`s Offices and 3 Military District Prosecutor`s Offices; 123 are the prosecutors working in Supreme Prosecutor`s Office of Cassation and Supreme Administrative Prosecutor`s Office and 1 Prosecutor General. (The indicated numbers do not include the number of the investigative magistrates in the investigative departments at District Prosecutor`s Offices and National Investigation Service and their administrative heads.

Q055 (2014): For 2014, the number of prosecutors acting at 1st instance includes prosecutors of the regional prosecutor's offices, specialized prosecutor's offices and the military prosecutor's offices. The number of prosecutors acting at 2nd instance includes prosecutors from district and appellate prosecutor's offices. The number of prosecutors at Supreme Court level includes prosecutors from the Supreme Prosecutor's Office of Cassation, Supreme Administrative Public Prosecutor's Office, and the Prosecutor GeneralIn contrast with the 2012 evaluation, the number of investigators in the District Investigation Departments at the District Prosecutor's Offices and the National Investigation Service is not taken into consideration for 2014.

Q055 (2012): For 2012, the total includes 512 magistrates with position of "investigator in the Investigation Department at the District Prosecution Office". Conversely, these 512 magistrates are not subsumed in the number of prosecutors at 1st instance level. The number of prosecutors at 2nd instance level including Prosecutor's Office of Appeal and Military District Prosecutor's Office encompasses 451 prosecutors and 433 investigators in the Investigation Departments at the District Prosecution Offices and military investigators. The number of prosecutors at Supreme Court level includes 128 prosecutors and 79 investigators at the National Investigation Service.

Q107 (General Comment): 1) "Pending cases on 1 Jan. ref. year": the unresolved pre-trial proceedings (PTPs) by a prosecutor as of 1 January of the reference year are reported.
2) "Incoming/received cases": the closed PTPs;
3) "Processed cases": the decided PTPs by a prosecutor and is the total value of the data from four indicators (3.1 + 3.2 + 3.3 + 3.4), with reflected types of decisions under the PTPs;
3.1.) "Discontinued during the reference year": the terminated PTPs (including those by prescription) are reported and the total value of the data from the next four indicators (3.1.1 + 3.1.2 + 3.1.3 + 3.1.4.), with reflected types of terminations;
3.1.1) "Discontinued by the public prosecutor because the offender could not be identified" indicates NAP ;
3.1.2) "Discontinued by the public prosecutor due to the lack of an established offense or a specific legal situation": the terminated PTPs, incl. those by prescription;
3.1.3) "Discontinued by the public prosecutor for reasons of opportunity " the NAP is indicated (analogous to the previous questionnaires); 3.1.4) the indicator "Discontinued for other reasons" indicates NAP;
3.2) "Concluded by a penalty or a measure imposed or negotiated by the public prosecutor " is indicated NAP;
3.3) "Cases closed by the public prosecutor for other reasons": the suspended PTPs are reported, as well as the PTPs sent by competence (for the respective prosecutor's office, although these cases are essentially unresolved they are closed);
3.4) "Cases brought to court" the submitted PDs in the court are reported;
4) "Pending cases on 31 Dec. ref. year": the number of pending cases at the end of the year refers to the unresolved pre-trial proceedings by a prosecutor. Regarding the cases sent by competence, the mathematical calculation for collecting the values is not applicable for the two prosecutor's offices - one that sent it by competence (according to the rules of local, functional or special competence), for which the case was decided "closed case for other reasons" and the other, which accepted it within its competence, if at the end of the year the same case remained pending, the latter is included in the above data.

Q107 (2021): 3.1. Discontinued during the reference year (3.1.1+3.1.2+3.1.3+3.1.4.)
The number of discontinued cases in the reference year (in the case of 2021) is 101626. This number includes all discontinued criminal proceedings by the prosecutor in the year on the basis of Art. 24 of the Criminal Procedure Code, including those terminated due to the expiration of the statute of limitations on the basis of Art. 24, para. 1, item 3 of the Criminal Procedure Code (criminal liability is extinguished due to the expiration of the statute of limitations).
The number of cases terminated on statute of limitations grounds is a fact of objective reality, which does not depend on the prosecution. This number is a function of the number of the pending pre-trial proceedings, incl. suspended (predominantly due to failure to establish the perpetrator of the crime during the investigation), as well as the specific crime on which the case is being prosecuted, as the absolute statute of limitations for seeking criminal liability is different and depends on the amount of the penalty provided for in the Criminal Code for the relevant crime (according to Art. 81 of the Criminal Code).
The increase in the number of dismissed cases for 2021 compared to those dismissed in 2020 is mainly due to the greater number of dismissed cases by the prosecutor on the grounds of absolute statute of limitations for prosecution, which obliges the prosecutor to dismiss the case on the basis of Art. 24, para. 1, item 3 of the Criminal Procedure Code. This conclusion is supported by the statistical data for the two years - in 2021, the dismissed cases, on grounds other than the statute of limitations, are relatively similar: 32,400 for 2021 compared to 32,002 for 2020. However, those dismissed on statute of limitations grounds in 2021 are 69,226, and in 2020 - 42565. It can be seen that in 2021 the terminated pre-trial proceedings were significantly more than in the previous year. There is no evidence that this increase is due to any special or extraordinary circumstance that occurred in 2021. Each year the number of cases dismissed on statute of limitations grounds is different and this is due to the above reasons.

Q107 (2020): Question 107:
1)"Pending cases on 1 Jan. ref. year" the unresolved pre-trial proceedings (PTPs) by a prosecutor as of 1 January of the reference year are reported.
2)“Incoming/received cases” are reported the closed PTPs (analogous to the previous questionnaires);
3)“Processed cases” are reported the decided PTPs by a prosecutor and is the total value of the data from four indicators (3.1 + 3.2 + 3.3 + 3.4), with reflected types of decisions under the PTPs;
3.1.)“Discontinued during the reference year” the terminated PTPs (including those by prescription) are reported and is the total value of the data from the next four indicators (3.1.1 + 3.1.2 + 3.1.3 + 3.1.4.), with reflected types of terminations;
3.1.1)"Discontinued by the public prosecutor because the offender could not be identified" indicates NAP (similar to the previous questionnaire);
3.1.2 "Discontinued by the public prosecutor due to the lack of an established offence or a specific legal situation" are reported the terminated PTPs, incl. those by prescription (similar to the previous questionnaires);
3.1.3)"Discontinued by the public prosecutor for reasons of opportunity " the NAP is indicated (analogous to the previous questionnaires); 3.1.4) the indicator "Discontinued for other reasons" indicates NAP (similar to the previous questionnaire);
3.2)"Concluded by a penalty or a measure imposed or negotiated by the public prosecutor " is indicated NAP (analogous to the previous questionnaires);
3.3)“Cases closed by the public prosecutor for other reasons” the suspended PTPs are reported, as well as the PTPs sent by competence (for the respective prosecutor's office, although these cases are essentially unresolved they are closed). It is not obligatory for the prosecutor's office, which sent the case within its competence, to conduct a full investigation. If a ground for the competence of another prosecutor's office is established under the rules of local, functional or special competence, the case shall be sent to the respective prosecutor's office for continuation of the investigation. The grounds for determining the competence are exhaustively specified in the CPC (Chapter Four, Section II of the CPC, Article 35 et seq. Of the CPC, Article 195 of the CPC, Articles 396-398 of the CPC, Article 411a of the CPC);
3.4) in the indicator “Cases brought to court” the submitted PDs in the court are reported (analogous to the previous questionnaires);
4) in the indicator “Pending cases on 31 Dec. ref. year” the unresolved PDs by a prosecutor as of December 31of the reference year are reported;
Concerning the increase in the number of processed cases between 2018 and 2020, the number of "cases closed by the prosecutor for other reasons", taken into consideration for this cycle, makes the differnce.

Q107 (2018): 1) The number of the terminated pre-trial proceedings has been given under indicator 'Received during the reference year' (similar to previous questionnaires);
2) The number of the terminated pre-trial proceedings, including those on limitation has been given under indicator "Discontinued during the reference year (see Q108 below)";
3) NAP has been indicated under indicator "Concluded by a penalty or a measure imposed or negotiated by the public prosecutor" (similar to previous questionnaires);
4) The number of the pre-trial proceedings that have been brought to court is given under indicator "Cases brought to court" (similar to previous questionnaires).

Q107 (2014): In 2014, prosecutors dealt with 139153 pre-trial proceedings for which cases were transferred to court; 75834 were terminated on account of the absence of a crime or other grounds provided for by law. A prosecutor may not terminate the pre-trial proceeding on the ground the perpetrator cannot be identified, unless the limitation period for prosecution has expired (42 588). A prosecutor cannot impose punishment without the approval of a judge. The parties can conclude an agreement (approved by the judge) for some crimes before the case is sent to court (11561), or during the trial (data is not available). Court proceedings can be reduced if during the preliminary hearing, the defendant fully admits the facts stated in the indictment (3505 cases).

Q107 (2012): In 2012, prosecutors dealt with 144950 pre-trial proceedings for which the investigation has been completed and the cases were transferred to court. 91523 pre-trial proceedings were terminated on account of the absence of a crime or other grounds explicitly provided for by the law. A prosecutor may not terminate the pre-trial proceeding on the ground the perpetrator cannot be identified, unless the prescribed limitation period for prosecution has expired. Terminated pre-trial proceedings conducted against an unknown perpetrator due to the expiration of the statutory limitation periodwere 59 063, and are part of the total of terminated cases. A prosecutor cannot impose punishment without the approval of a judge.

Q107-1 (General Comment): "Total number of guilty plea procedures" indicates the total value of the next two indicators;
"Before the main trial": the agreements submitted by a prosecutor to the court are taken into account;
"During the main trial": a value is indicated, which is the sum of the number of agreements under Article 384 of the Criminal Procedure Code (with a person or for any of the crimes), concluded by the prosecutors in a court phase (after an indictment has been filed), as well as by the number of procedures under the abbreviated court investigation under Article 371, item 2 of the CPC (under Chapter Twenty-eight of the CPC, pursuant to Article 373, para. 3, supra Article 372, para. 4, supra Article 371, item 2 CPC), under which there have been convictions and acquittals.

Q107-1 (2020): Question 107–1:
– the indicator "Total number of guilty plea procedures" indicates the total value of the next two indicators;
– in the indicator "Before the main trial" the agreements submitted by a prosecutor to the court are taken into account (analogous to the previous questionnaires);
– in the indicator "During the main trial" a value is indicated, which is the sum of the number of agreements under Article 384 of the Criminal Procedure Code (with a person or for any of the crimes), concluded by the prosecutors in a court phase (after an indictment has been filed), as well as by the number of procedures under the abbreviated court investigation under Article 371, item 2 of the CPC (under Chapter Twenty-eight of the CPC, pursuant to Article 373, para. 3, supra Article 372, para. 4, supra Article 371, item 2 CPC), under which there have been convictions and acquittals (similar to the previous questionnaires).

Q107-1 (2018): 1) The total amount of the following two indicators is given under indicator "Total number of guilty plea procedures";
2) The number of the agreements that were brought to court by a public prosecutor is given under indicator "Before the court case" (similar to previous questionnaires;
3) The indicated amount is sum of the number of the agreements under Art. 384 of the Criminal Procedure Code (with a person or for some offence) concluded by the prosecutors in the judicial phase (after an indictment), as well as the number of procedures under an expedited procedure by Art. 371, it. 2 of the Criminal Procedure Code (under Chapter Twenty Eight of the Criminal Procedure Code in accordance with Art. 373, Para. 3, in conjunction with Art. 372, Para. 4 and in conjunction with Art. 371, it. 2 of the Criminal Procedure Code) under which convictions and acquittals have been imposed, is given under indicator "During the court case".

Q109 (2021): Statistical reporting of the PORB. The data are derived from the statistical reporting of the PORB, according to indicators and order, approved by the Prosecutor General with the Instruction for the organization of the information activity in the PORB.

Croatia

Q055 (General Comment): The provided data encompasses all officials in the public prosecutors' offices, including heads of the public prosecutors' offices (the Public Prosecutor of the Republic of Croatia, county and municipal public prosecutors, the head of the Bureau for Combating Corruption and Organised Crime) and all public prosecutors deputies. The number of prosecutors at the first instance level includes all municipal public prosecutors, their deputies, as well as the head of the Bureau for Combating Corruption and Organised Crime and his deputies. The number of prosecutors at the second instance (court of appeal) level includes all county public prosecutors and their deputies. The number of prosecutors at the Supreme Court level includes the Public Prosecutor and his deputies.

Q055 (2018): The above information includes all officials in the public prosecutor's offices – all public prosecutors (heads of prosecution offices) and public prosecutors' deputies (deputies of the Public Prosecutor, deputies of the Head of the Bureau for Combating Corruption and Organised Crime and deputies of the county and municipal public prosecutors).
The number of prosecutors at the first instance level includes all municipal public prosecutors (heads of municipal prosecution offices and Head of the Bureau for Combating Corruption and Organised Crime), their deputies, as well as the deputies of the Head of the Bureau for Combating Corruption and Organised Crime. The number of prosecutors at the second instance level (court of appeal) includes all county public prosecutors (heads of the county prosecutors' offices) and their deputies. The number of prosecutors at the supreme court level includes the Public Prosecutor General and his deputies.

Q055 (2012): In 2012, the public prosecutors' Office of the Republic of Croatia employed 21 officials. The county public prosecutors' offices employed 155 officials, and the municipal public prosecutors' offices employed 410 officials. Out of 617 officials, 385 or 62.4% were women. The number of officials remained the same as in 2011. As of 31 December 2012, 7 public prosecutor's posts and 130 deputy public prosecutor's posts were vacant.
Q107 (General Comment): Discontinued for other reasons: cases can be discontinued for reasons such as circumstances which exclude guilt, the fact that there is no reasonable suspicion that the suspect committed particular criminal offence, in the case when criminal complaint is not credible. The reason for discontinue the case can be if the data in the criminal complaint indicate the conclusion that the complaint is not credible.
Cases closed by the public prosecutor for other reasons: cases can be closed for reasons such as the existence of circumstances that preclude the guilt of the defendant or there is no evidence that the defendant committed the offence. Other reasons: If the data in the criminal complaint indicate the conclusion that the application is not credible.

Q107 (2021): Source of information: Report of the Chief State Attorney of the Republic of Croatia on the work of State Attorney's offices in 2021
3.1. the total number of cases completed by adopting a decision rejecting criminal charges or a decision terminating the investigation is presented, however, statistical data are not kept by categories requested in the table
3.1.3. There was 523 discontinued cases by the public prosecutor for reasons of opportunity (data covers juvenile perpetrators only because data in relation to other perpetrators is not available).

Q107 (2020): Reason for decreased number of incoming cases same as for the courts - pandemic of COVID-19.
Discontinued cases decreased - same as for the courts (COVID-19), please see comment in Q091.
For the category 3.1. Discontinued during the reference year (3.1.1+3.1.2+3.1.3+3.1.4.), PP is not able to differ categories 3.1.1., 3.1.2 and 3.1.4.

Q107 (2018): Compared with the data discrepancies from 2016 data, it is evident that the total number of cases received in the State Attorney's Office in 2018 decreased, which is why all other reported figures from 2018 are relatively smaller compared to the 2016 data.
Q107 (2016): Under discontinued cases we consider cases in which criminal charge was dismissed and cases that were suspended during criminal proceedings.
Data on the number of cases that were concluded by a penalty or a measure imposed or negotiated by the public prosecutor (conditional deferral and agreement) do not include cases against juveniles and persons aged between 18 and 21 (younger adults) because for these persons we do not have separate information on how many cases have been completed by a penalty or measure imposed or negotiated by the public prosecutor and how much by use of opportunistic principle. Therefore data on juvenile and younger adults are reported in cases that the State Attorney discontinued (dismissal by use of opportunistic principle).

Q107 (2014): Variations between 2012 and 2014 are due to amendments in criminal law. Namely, in 2013, the new Criminal Act entered into force by which some criminal acts are decriminalized. The legal understanding of the Criminal Department of the Supreme Court of 27 December 2012, on the amount of indeterminate values, prescribes that the legal characteristics of criminal offences such as theft, embezzlement, defraudation and fraud, described as a matter of small value, represent a matter whose value does not exceed HRK 2,000.00 (instead of the previously HRK 1,000.00). Thus, a large number of criminal proceedings on offences related to property matters, which were so far initiated by the State attorney, are now initiated upon a private complaint.

Q107-1 (General Comment): In criminal proceedings, the defendant is granted the right to plead guilty (for all or a number of the counts of the charge) and reach agreement on the sanction. If the defendant pleads guilty and no agreement on the sanction is reached, the panel shall confirm the indictment and a trial must be scheduled. The parties may negotiate on the conditions of pleading guilty and agreeing on a sanction. During these negotiations, the defendant shall have a defence counsel. If the president of the panel is served with a confirmed indictment to which the accused has pleaded guilty, the proposing of evidence for the trial shall be limited only to the evidence which concerns the decision on criminal-law sanctions. Where the accused pleads guilty to all counts of the charge, the president of the panel shall instruct him/her that he/she may immediately state his/her position on all the circumstances that incriminate him/her and present all the facts in his/her favour, after which the accused shall be interrogated. The guilty plea does not exempt the court from its duty to present other evidence as well. If the confession of the accused at the trial is complete and in accordance with the evidence already gathered, the court shall, in the course of evidentiary proceedings, present only those pieces of evidence that relate to the decision on punishment or other sanction. The State Attorney's Office keeps only a track record on the judgments rendered by the court in the guilty plea procedure and no distinction can be made between the number of guilty plea procedures "before the court case" and their number "during the court case".

Q107-1 (2021): Source of information: Report of the Chief State Attorney of the Republic of Croatia on the work of State Attorney's offices in 2021
Data under Severe criminal cases refers to cases under the jurisdiction of county state attorney's offices and the Office for the Suppression of corruption and organised crime
Data under Misdemeanour and / or minor criminal cases refers to cases under the jurisdiction of municipal state attorney's offices, noting that certain severe criminal cases are also within their jurisdiction, however, statistical data are presented in total for all criminal offences under the jurisdiction of municipal state attorney's offices, without separating them into "lighter" and "more serious" criminal offences.

Q107-1 (2016): In total, in 2016, 440 judgements were given under the agreement of the parties in which the accused pleaded guilty (total number of guilty plea procedures is 440), but there is no data on how many cases it occurred before the court case or during the court case. Regarding the data from the previous cycle, there has been a decrease in the number of judgements by the agreement of the parties in which the defendant pleaded guilty because during the previous period in only one criminal case that was within the jurisdiction of the Office for the Suppression of Corruption and Organized Crime with over three hundred defendants, an agreement was reached with a large number of defendants, which ultimately affected a significant increase in the number of judgments given by the parties' agreement.

Cyprus

Q055 (2020): The number includes also legal advisors to the Attorney General's office.
The number increased because more positions of prosecutors were approved.
Q055 (2014): All prosecutors appear before all courts.

Czech Republic

Q055 (General Comment): The Czech Republic is endowed with a system of 4 levels of State prosecution offices: district, regional, high and supreme. The number of high public prosecutors is included in the number of prosecutors at second instance level.
Q107 (2021): In 2019, we have changed the methodology of reporting for CEPEJ.
In addition, the prosecutor can deal with the case in many ways. We tried to make the data work and the sums to make sense. E.g. Pending cases on 1 Jan. ref. year + Incoming/received cases - Processed cases = Pending cases on 31 Dec. ref. year. However, we would like to state that data comes from various sources and may be sometimes tricky to deal with.
There are many reasons why the prosecution could be discontinued. It is difficult to say under which category they should be included (3.1.2 or 3.1.4). However, the reasons may include following: 1. If such prosecution concerns a person who is exempt from the competencies of the law enforcement authorities or a person for whom the law requires an official consent for their prosecution, if such consent was not awarded by an entitled authority, unless the exemption is temporary or unless the criminal prosecution of the person is inadmissible due to lack of consent only temporarily; 2. if it concerns a person who is below the age of criminal responsibility 3. if it is against a person whose mental illness that occurred after the criminal offence was committed makes it permanently impossible for them to understand the purpose of the criminal prosecution 4. and many others.

Q107 (2020): Last year, we have changed the methodology of reporting for CEPEJ.
In addition, the prosecutor can deal with the case in many ways. We tried to make the data work and the sums to make sense. E.g. Pending cases on 1 Jan. ref. year + .Incoming/received cases - Processed cases = Pending cases on 31 Dec. ref. year. However, we would like to state that data comes from various sources and may be sometimes tricky to deal with.
There are many reasons why the prosecution could be discontinued. It is difficult to say under which category they should be included (3.1.2 or 3.1.4). However, the reasons may include following: 1. If such prosecution concerns a person who is exempt from the competencies of the law enforcement authorities or a person for whom the law requires an official consent for their prosecution, if such consent was not awarded by an entitled authority, unless the exemption is temporary or unless the criminal prosecution of the person is inadmissible due to lack of consent only temporarily; 2. if it concerns a person who is below the age of criminal responsibility 3. if it is against a person whose mental illness that occurred after the criminal offence was committed makes it permanently impossible for them to understand the purpose of the criminal prosecution 4. and many others.

Q107 (2018): This year, we have changed the methodology of reporting for CEPEJ, thus some number strongly deiffers from previous data.
Also, there are many other ways how the prosecutor can deal with the case. Thus sum of discontinued during the reference year + Concluded by a penalty or a measure imposed or negotiated by the public prosecutor + cases brought to court is smaller than number of cases received during the year.

Q107 (2016): The correct number of received cases for 2014 should be 313958.

Q107-1 (2021): There was a legislative change which make several changes regarding the guilty pleas - it easier to plead guilty and achieve guilty plea. The biggest change is that it is possible to get guilty plea for the most serious crimes. As a result the number of guilty pleas is rapidly rising.

Q107-1 (2020): There was a legislative change which make it easier to plead guilty and achieve guilty plea. The biggest change is that it is possible to get guilty plea for the most serious crimes.

Denmark

Q055 (General Comment): The public prosecutors are the Director of Public Prosecutions, the state prosecutors, the police directors as well as the persons who are assumed to assist them in the judicial processing of criminal cases.
Organizationally, the Prosecution Service consists of the Director of Public Prosecutions and state prosecutor's offices (central prosecution service) with associated police districts (local prosecution service).
The Director of Public Prosecutions and selected employees appear before the Supreme Court. At the end of 2021, 58 prosecutors were employed at the Director of Public Prosecutions office. 6 of them appear before the Supreme Court. The Director of Public Prosecutions is superior to the other public prosecutors and supervises them and handles complaints about decisions made by the state prosecutors office as the first instance. The state prosecutors' offices appear before the high courts (second instance – court of appeal). The state prosecutors supervise the police directors' handling of criminal cases and handle complaints about decisions made by the police directors regarding criminal prosecution.
The directors of police and the public prosecutors who are employed by them appear before the district courts.
The number is the actual number of employees in full-time equivalent as of December 2021. Full-time equivalents are allocated on the 1st of the month, and it is therefore not possible do draw a precise number for 31 December. The number is therefore drawn for 1 December 2021 and scaled up to a full year. The actual numbers of full-time equivalents are calculated as digitals numbers which is not possible to add in the questionnaire. This is why the total number of prosecutors does not add up when compared to the number of males and females.

Q055 (2021): The number is the actual number of employees in full-time equivalent as of December 2021. Full-time equivalents are allocated on the 1st of the month, and it is therefore not possible do draw a precise number for 31 December. The number is therefore drawn for 1 December 2021 and scaled up to a full year. The actual numbers of full-time equivalents are calculated as digitals numbers which is not possible to add in the questionnaire. This is why the total number of prosecutors does not add up when compared to the number of males and females.

Q055 (2016): The observed discrepancies are due to ordinary changes in staffing.

Q055 (2014): The variations over the period 2012-2014 are due to the fact that in 2012, information was missing about prosecutors engaged in tasks concerning administrative cases (Ledelsessekretatiat) and prosecutors employed by the national police (Rigspolitiet).

Q107 (General Comment): The number of processed cases includes both cases dismissed by the police and cases dismissed by the public prosecutor. The reason that processed cases includes both the police and prosecution service is that we cannot always distinguish closed/finished cases between the police and prosecution service as they are often archived in police departments regardless of who processed the case

Q107 (2021): It is not possible to subtract numbers on discontinued cases in the format in Q 3.1.1. + 3.1.2 + 3.1.4, as the legal basis in Denmark (sections 721 and 749 of the Administration of Justice Act) is not devided in such subsectors.
Regarding point 3.1.3 in question 107, it is not possible to account for one specific reason behind the increased number of discontinued cases for reasons of opportunity. However, during 2021 we have had an increased effort in lowering the amount of pending cases. This can partly explain the surge of discontinued cases in 3.1.3.

Q107 (2020): It is not possible to subtract numbers on discontinued cases in the format in Q 3.1.1. + 3.1.2 + 3.1.4, as the legal basis in Denmark (sections 721 and 749 of the Administration of Justice Act) is not devided in such subsectors. The data source used in points 1 and 4 (data that do not include post-registration of charges) are different from the data source used in points 2 and 3 (data that includes post-registration of charges). Hence, data does not fit the formula: (pending at the beginning of the year + incoming) – resolved = pending at the end of the year) due to post-registrations of further charges. The number of incoming charges has decreased considerably between 2018 and 2020. This is due to a change in the way we measure the number of incoming charges. The new way of measure incoming cases more correctly than the previous way of measuring as the new way contains all incoming charges and not all processed charges as the previous way did. The number of incoming cases in 2018 is 245.687 when using the new way of measuring.

Q107 (2018): Please note that there has been a mistake with the previous data collection for 2006, 2008, 2010, 2012, 2014 and 2016 concerning question 107 and 108. This is due to missing information and collection of data from the Danish Administration of Justice Act. In the future we will make sure that every information is incorporated.

Q107 (2016): Cases concluded by a penalty or a measure imposed or negotiated by the public prosecutor include cases concluded by the police as these cases are indistinguishable in the case handling system.
Q107 (2014): The increase in the number of cases charged by the public prosecutor before the courts is a result of an increased preliminary charge rate (police) and an increased prosecution rate (public prosecutor). The conviction rate is unchanged over the period despite the increase in both the preliminary charge rate and the prosecution rate.

Q107-1 (General Comment): Denmark does not have a definition of "severe criminal cases" and "minor criminal cases". The answer covers the number of counts (measured by charges per person). In 2021, the number of complexes are 2997. There has been a decrease in the number of guilty plea procedures. The Director of Public Prosecutions has no explanation for this. In Denmark, a guilty plea procedure is concluded by a court hearing, not a main trial. Instead of an indictment, the Prosecution Service sends the case to the court with a charge sheet describing the offence. The court must in a court hearing ensure that the conditions for proceeding the case as a guilty plea procedure are present. The answer regarding whether the case was concluded before/during the main trial differs from last year´s answer, as guilty plea procedures are correctly concluded before the main trial, as the confession must subsequently be validated by a judge.

Q107-1 (2021): Denmark does not have a definition of "severe criminal cases" and "minor criminal cases". The answer covers the number of counts (measured by charges per person). In 2021, the number of complexes are 2997. There has been a decrease in the number of guilty plea procedures. The Director of Public Prosecutions has no explanation for this. In Denmark, a guilty plea procedure is concluded by a court hearing, not a main trial. Instead of an indictment, the Prosecution Service sends the case to the court with a charge sheet describing the offence. The court must in a court hearing ensure that the conditions for proceeding the case as a guilty plea procedure are present. The answer regarding whether the case was concluded before/during the main trial differs from last year´s answer, as guilty plea procedures are correctly concluded before the main trial, as the confession must subsequently be validated by a judge. The data is registrered through a case-filing tool, POLSAS. POLSAS is first and foremost a case-filing tool, which may be subject to human entry-error. Furthermore, the number of guilty plea procedures can fluctuate on a yearly basis for a variety of reasons. We cannot conclude anything of substance regarding the decrease without a manual investigation.

Q107-1 (2020): The discrepancy is due to the method of calculation. In 2018 the answer covers the number of complexes of cases, and the answer in 2020 covers the number of counts (measured by charges per person). In 2020 the number om number of complexes are 3.449.

Estonia

Q055 (General Comment): The categorization of questions 55 and 56 regarding public prosecutors do not exist in Estonia.

Q107 (General Comment): The number of incoming cases is given by registered crimes while the number of cases resolved is given by the number of persons in respect of whom a procedural decision has been made.
Q107 (2020): The number of incoming cases is given by registered crimes. the number of cases resolved is given by the number of persons in respect of whom a procedural decision has been made.
Q107 (2018): The data for 2018 evaluation cycle are checked and confirmed. The data are not comparable with 2016, because the source of the data changed.

Q107 (2016): For this cycle, calculations are based on cases not persons or crimes. One case, especially when brought to court or concluded by penalty, often involves several crimes and persons.
Q107 (2012): As to the item “cases charged by the prosecutor before the courts”, the 2010 data referred to settlement proceedings, while the 2012 data includes only cases that were terminated by a prosecutor in case of lack of public interest in proceedings and in case of negligible guilt. These cases are also included under “cases discontinued by the prosecutor”. The category “cases charged by the public prosecutor before the courts” includes cases where a person has been sent to court in order to impose coercive psychiatric treatment by a court and cases which have been sent to court in order to request termination of criminal proceedings (the latter was not taken into account in previous reports).

Q107-1 (2018): The data for 2018 evaluation cycle are checked and confirmed. The data are not comparable with 2016, because the source of the data changed.
Q107-1 (2012): The total number of guilty plea procedures for 2012 was 4 980.

Q109 (2020): Only the ones that are classified as criminal offences.

Q109 (2016): It includes only a minority of traffic offences that are punisheable according to Penal code, these are more serious offences like causing an accident with injured victims, drunk driving above medium-intoxication level and repeated driving without licence.
Q109 (2014): The 2014 data encompasses only severe drunk driving and accidents with serious bodily casualties.

Finland

Q055 (General Comment): The National Prosecution Authority comprises the Office of the Prosecutor General that acts as the general administrative unit, and five prosecution districts: Southern Finland, Western Finland, Northern Finland, Eastern Finland and Åland. The National Prosecution Authority has 34 offices around Finland. The Prosecutor General is the supreme prosecutor and the head of the prosecution service. The Prosecutor General directs and develops prosecutorial activity by issuing general instructions and guidelines to the prosecutors. She/he also appoints district prosecutors. The Prosecutor General may take over a case from a prosecutor, but cannot order a prosecutor to decide the case in any given manner. She/he can also self-decide on the bringing of charges and designate a prosecutor to pursue the case in the courts. The Deputy Prosecutor General decides the matters in his/her competence on the same authority as the Prosecutor General. He/she also acts as a deputy for the Prosecutor General when necessary. For regular prosecutorial tasks, the Office of the Prosecutor General has state prosecutors whose jurisdiction covers the entire country. Most criminal matters (89 256 cases annually) are dealt with by the prosecution areas. The Office of the Prosecutor General deals mainly with criminal cases with wider significance to society as a whole, a few dozen every year. Prosecutors in Finland are not bound on Court instances, and every prosecutor is expected to, in a normal situation, to handle and prosecute the criminal case all the way to the Supreme Court, if needed.

Q055 (2020): Prosecutors in Finland are not bound on Court instances.

Q107 (2021): 3.2 Notice cases of summary fines are not included. The number of summary fines in 2021: 34 306.
3.3: Consist of internal transfers of cases between prosecution districts, joining of cases and technical decisions.

Q107 (2020): Comments: 3.2 Notice cases of summary fines are not included. The number of summary fines: 38433.
The decrease in the number of cases “3.2. Concluded by a penalty or a measure imposed or negotiated by the public prosecutor” is due to a change in the law. The law on certain type of fine (rangaistusmääräysmenettely) was abolished in 2016 and replaced with the law on fines and summary penalty fee (laki sakon ja rikesakon määräämisestä (754/2010). According to this law, the police can order the summary penal fee. This page, in Finnish, shows figures of the amount in euros of these summary fines imposed by prosecutors (2nd graph) and by the police (3rd graph).
https://www.oikeusrekisterikeskus.fi/fi/index/tietopalvelu/tilastotjaavoindata/sakot.html
3.1.4 Discontinued for other reasons and 3.3. Cases closed by the public prosecutor for other reasons: The prosecutor must waive prosecution if: (1) the prerequisites for the bringing of charges provided in section 6, subsection 1 are not met; (2) the prosecutor waives prosecution on the basis of section 6, subsection 2; (3) the injured party has not requested that charges be brought or another special prerequisite provided in law for the bringing of charges referred to in section 2, subsection 2 is not met and the nature of the case requires that a separate decision be made. The prosecutor may waive prosecution if: (1) if no sentence more severe than a fine is to be anticipated for the offence and the offence, with consideration to its detrimental effects or the degree of culpability of the offender manifested in it, is to be deemed petty as a whole; and (2) if the suspect had not reached the age of eighteen at the time of the commission of the suspected offence and no sentence more severe than a fine or imprisonment for at most six months is to be anticipated for this offence and it is to be deemed to be more the result of lack of understanding or thoughtlessness than of heedlessness of the prohibitions and commands of the law. In addition, the prosecutor may waive prosecution, unless an important public or private interest requires otherwise if: 1) if criminal proceedings and punishment are to be deemed unreasonable or inappropriate in view of a settlement reached by the suspect in the offence and the injured party, the other action of the suspect in the offence to prevent or remove the effects of the offence, the personal circumstances of the suspect in the offence, the other consequences of the act to him or her, the welfare and health care measures undertaken and the other circumstances; (2) under the provisions on joint punishment or on the consideration of previous punishments in sentencing, the suspected offence would not have an essential effect on the total punishment; or (3) the expenses in continuing to consider the case would be in manifest disproportion to the nature of the case and to the sanction possibly to be expected in it. Also, If charges are being considered for two or more offences for which the same person is suspected and if he or she has contributed to the clarification of one or more of the suspected offences, the prosecutor may decide not to bring charges for all of the suspected offences. However, charges shall be brought if required by an important public or private interest.

Q107 (2018): With regard to the observed decrease in the number of cases "concluded by a penalty", there were 507 penalty notices given by the prosecutor in 2016 but only 23 in 2018.
Q107 (2016): The number of discontinued cases during the reference year includes the number of cases in which the prosecutor has waved the charges before trial and restricted the preliminary investigation in a way that the case is not brought to trial. For 2014, only the cases in which the prosecutor has waved the charges before trial have been informed.

Q107 (2014): The number of 1st instance criminal cases concluded by a penalty or a measure imposed or negotiated by the public prosecutor decreased over the years 2010, 2012 and 2014. According to the annual report for 2014 of the Prosecution Service, the number of summary penal judgments decreased by 9 % (2013 – 2014; 59 in numbers). According to the report of 2013, the number of summary penal judgments decreased by almost 19 % (2012 – 2013; 151 in numbers). Some organisational changes were carried out during that time period. Besides, the number of incoming cases decreased, but the degree of difficulty/complexity increased.
Q107-1 (General Comment): The possibility of plea bargaining was introduced to the Finnish legal system in the beginning of year 2015. The aim of the reform was to allocate the resources of the national authorities in a more effective way and to speed up both the pre-trial phase of the criminal process and the court proceedings. A defendant can agree to plead guilty to a particular charge in exchange for a more lenient sentence. The prosecutor may also decide not to prosecute for one or for several of the suspected crimes. Plea bargaining can be used if the injured party has no demands in the matter and if he/she agrees to plea bargaining. Plea bargaining can be used when a person is suspected of a crime carrying a maximum sentence of six years' imprisonment. It cannot be used for crimes like homicide, causing bodily injury and sex offences or when the injured party is a child. Plea bargain is also applicable for white-collar crimes.

Q107-1 (2020): The known number of guilty plea procedures is 80. However, the number could be higher as the use of this procedure is not systematically reported, especially when it takes place during the main trial.
Q107-1 (2018): There were less than 100 plea bargaining cases in 2018. The exact number is not available.

Q107-1 (2016): The possibility of plea bargaining was introduced to the Finnish legal system in the beginning of this year. A defendant can agree to plead guilty to a particular charge in exchange for a more lenient sentence. The prosecutor may also decide not to prosecute for one or for several of the suspected crimes. Plea bargaining can be used if the injured party has no demands in the matter and if he/she agree to plea bargaining. Plea bargaining can be used when a person is suspected of a crime carrying a maximum sentence of six years' incarceration. It cannot be used for crimes like homicide, causing bodily injury and sex offences or when the injured party is a child. Plea bargain is also applicable for white-collar crimes. Legislation regarding plea bargaining was approved in August 2014, and the changes entered into force on 1 January 2015. The aim of the reform was to allocate the resources of the national authorities in a more effective way and to speed up both the pre-trial phase of the criminal process and the court proceedings. The Parliament has required the Ministry of Justice to follow up on and evaluate how the legislation on plea bargaining is being applied and implemented and to provide the Law Committee with a report on how the legislation functions by the end of 2017.

Q107-1 (2014): The possibility of plea bargaining was introduced in 2015. A defendant can agree to plead guilty to a particular charge in exchange for a more lenient sentence. The prosecutor may also decide not to prosecute for one or for several of the suspected crimes. Plea bargaining can be used if the injured party has no demands in the matter and if s/he agrees to plea bargaining. It can be used when a person is suspected of a crime carrying a maximum sentence of six years' incarceration. It cannot be used for crimes like homicide, causing bodily injury and sex offences or when the injured party is a child. Plea bargain is also applicable for white-collar crimes.

France

Q055 (2021): Data taken from an extraction of the LOLFI SIRH - Number of public prosecutors on 31/12/2021. The values are expressed in FTEs.
Source DSJ
The data have been rounded upwards from 0.5 and downwards below, with the exception of the data relating to the number of male prosecutors at the Courts of appeal (the exact figure is 249.6) in order to ensure vertical consistency.

Q055 (2020): Only the judicial order is concerned

Q055 (2014): For 2014, State prosecutors, heads of public prosecution services, are included.

Q055 (2012): For 2012, only prosecutors of courts of law appointed by 31 December 2012 were counted.

Q107 (General Comment): The complexity and diversity of data on criminal cases do not allow an estimation of the number of pending cases.
Q107 (2021): source SDSE

Q107 (2016): Among the cases discontinued by the public prosecutor, a distinction should be carried out between the mass of cases that could not be prosecuted because they were not elucidated or insufficiently characterized (3112642) and cases that could be prosecuted but were dismissed in accordance with the opportunity principle (191430).

Q107-1 (2021):
source SDSE
Increase in the number of guilty plea procedures: 2020 was marked by a significant drop in activity (caused by the lawyers' strike movement initiated in the second half of 2019 and which continued at the beginning of 2020, then by the slowdown in court activity under the effect of the COVID-19 pandemic and successive lockdowns of the population) and 2021 by a return to normal activity in the courts. It is also necessary to take into account the impact of the law n° 2019-222 of 23 March 2019 on the nature of cases under the CRPC procedure.

Q107-1 (2016): The procedure of appearance on preliminary admission of guilt is a form of prosecution initiated by the prosecutor. In 2016, this procedure was initiated against 92213 perpetrators. Some of these proceedings failed either because the author failed to appear, or because no agreement could be reached on the sentence, or because the judge refused to approve the agreement between the author of the offence, his/her lawyer and the prosecutor. In 2016, the courts certified 75055 convictions in court on a plea of guilty.

Q107-1 (2014): It was not possible to distinguish between guilty plea agreements before the case is brought to court and guilty plea agreements concluded during judicial proceedings. Only the public prosecutor has competence for initiating such procedure when the facts are admitted. To a lesser extent, the procedure may take place at the end of a judicial investigation, before referring the case to court. The guilty plea procedure is often used for less serious offences.

Q109 (2021): source SDSE

Germany

Q055 (General Comment): The information relates to the number of job shares for public prosecutors. There are no absolute figures for the number of persons. The information on the job shares count a judge working full-time as 1. A judge working part-time is counted as the fraction of 1 which corresponds to the proportion of his/her working hours to full-time (e.g. 0.5 for a judge working half the usual number of hours).

Q055 (2021): Figures represent full-time equivalents as of 31. December 2021
"Pact for the Rule of Law" (Pakt für den Rechtsstaat):
The federal level and the Länder on 31 January 2019 agreed on a 'Pact for the Rule of Law'. The pact foresees additional funding of EUR 220 million from the federal level for the Länder to create 2000 additional posts for judges and prosecutors, including the necessary administrative staff by 31 December 2021. In addition, the federal level is creating 24 additional posts at the Federal Court of Justice and 71 posts at the Prosecutor General of the Federal Court of Justice. New posts that were created after the beginning of 2017 are included into the count.
A joint report by the Federal Government and the Länder on the state of implementation of the pact was presented on 10 June 2021. The report concluded that the implementation has well progressed, noting in particular that over 2 700 post for judges and prosecutors have been created so far, with 2 500 being filled.
It should be noted that one of goals of the 'Pact for the Rule of Law' is to address the challenges related to the upcoming wave of retirements of judges and public prosecutors.

Q055 (2020): Figures represent full-time equivalents as of 31. December 2020
"Pact for the Rule of Law" (Pakt für den Rechtsstaat):
The federal level and the Länder on 31 January 2019 agreed on a 'Pact for the Rule of Law'. The pact foresees additional funding of EUR 220 million from the federal level for the Länder to create 2000 additional posts for judges and prosecutors, including the necessary administrative staff by 31 December 2021. In addition, the federal level is creating 24 additional posts at the Federal Court of Justice and 71 posts at the Prosecutor General of the Federal Court of Justice. New posts that were created after the beginning of 2017 are included into the count.
A joint report by the Federal Government and the Länder on the state of implementation of the pact was presented on 10 June 2021. It should be noted that one of goals of the 'Pact for the Rule of Law' is to address the challenges related to the upcoming wave of retirements of judges and public prosecutors.

Q055 (2016): Figures indicate the number of full-time equivalent staff (not the number of individuals). A prosecutor working full hours is counted as a full-time equivalent (i.e. 1). A prosecutor working part-time is counted as a fraction of 1. This fraction corresponds to the number of hours worked in relation to a full-time equivalent (e.g. 0.5 for a prosecutor working half the usual number of hours).

Q107 (General Comment): General information on the public prosecution statistic used as a source for anwering this question:
Once per year, the Federal Statistical Office compiles and publishes the public prosecution statistic. Statistical ordinances define the scope and rules of data collection for these statistic. The public prosecution offices collect the data and submit it to the statistical offices of the Länder, who check and edit the data and send it to the Federal Statistical Office. In simplified terms, the statistical ordinance provides two different kinds of data collection sheets: The "procedural survery" that collects data on the specifics of the investigation proceedings carried out by the public prosecution and the "monthly survey" that collects data on the caseload and other workload of the public prosecution offices. The figures entered here do not include investigations against persons unknown. The public prosecution statistic only shows the number of charges filed against unknown perpetrators. Information on the further treatment of those charges is not available. This is because the monthly survey distinguishes between "caseload of investigation proceedings covered by the procedural surveys" and "other workload". Charges against persons unknown fall into the category "other workload". The number of resolved and pending cases is only collected with regard to the first category (proceedings covered by the procedural surveys). If a suspect is identified in cases with an unknown perpetrator, the case receives a new file-number and then appears in the the category "covered by the procedural surveys".

Q107 (2021): 3.2 Concluded by a penalty or a measure imposed or negotiated by the public prosecutor:
The number represents the the cases that were discontinued in accordance with Section 153a of the Code of Criminal Procedure ("Non-prosecution subject to imposition of conditions and directions")
These cases would also fit into the category "discontinued for reasons of opportunity" (3.1.3) but were allocated to 3.2 here.
3.1.4 The number of cases discontinued for other reasons in the public prosecution statistic 2020 (and previous years) was considerably higher due to a programming issue in one of the Länder. Many of the cases that were registered in this category should have actually been registered within the category "discontinued for reasons of opportunity". The issue was noticed and fixed at the end of 2020.

Q107 (2020): 3.2 Concluded by a penalty or a measure imposed or negotiated by the public prosecutor:
The number represents the the cases that were discontinued in accordance with Section 153a of the Code of Criminal Procedure ("Non-prosecution subject to imposition of conditions and directions")
These cases would also fit into the category "discontinued for reasons of opportunity" (3.1.3) but were allocated to 3.2 here.

Q107 (2018): These figures include first-instance criminal cases led by the public prosecution offices based at the Regional Courts (investigations with a "Js" file number) and the public prosecution offices based at the Higher Regional Courts (investigations with an "OJs" file number). Regarding the latter ("OJs" investigations), figures only exist for the number of cases newly received by the prosecutor generals' offices.
Q107 (2016): These figures include first-instance criminal cases led by the public prosecution offices based at the Regional Courts (investigations with a "Js" file number) and the public prosecution offices based at the Higher Regional Courts (investigations with an "OJs" file number). Regarding the latter ("OJs" investigations), figures only exist for the number of cases newly received by the prosecutor generals' offices.

Greece

Q055 (General Comment): In the position of Paredron of the court of First Instance and prosecutor's office Of civil and criminal courts are appointed graduates of the National School of judges, according to what is defined in Article 36 of N. 4871/2021 (a' 246). The graduates from the directions of civil-criminal judges and prosecutors of the National School of judges are appointed in the order which have in the relevant tables and are placed preferably, respectively, in the courts of First Instance and in Public Prosecutors ' Offices In Athens, Piraeus, Thessaloniki, Patras, Heraklion and Larissa. The paredroi of First Instance and the prosecutor's office have ten (10) months trial service, during of which they have all the rights and obligations of the ordinary judicial officer and inspected, like regular judges. The reports of the paredroi of the court of First Instance on performance, statistics of their performance and any other useful information or information on the performance or their suitability are stored in a specialist individual file, which, after the end of the trial service the file is submitted to the Supreme Court Council through the Minister of Justice.

Q055 (2021): The above data are given by the Directorate of organization and operation of Justice with the cooperation of JUSTSTAT.
Q055 (2020): Positions by law have increased.Gender data are not kept.

Q107 (2021): The definition of the pending cases includes postponed cases or the cases the trial date has been setting out of the refence year or hasn't been determined during the year. The fact is that the theoretical pending cases resulted from pending cases on 1st of January + Incoming cases (cases are related to reference + previous years). However, pending cases on 31 Dec. are only the cases that have not been determined, or cases that have been determined after the reference year. All of the pending cases on 31 of Dec. are related only to the reference year.
Considering that this is the first year where offices calculate their pending cases, and some of them do not have electronical systems to monitor their data, in the next years we will get better and more accurate statistics.

Q107 (2020): No data available for this query.
Q107 (2016): The relevant data are not available electronically for the moment, therefore their extraction is not possible.

Q107-1 (2020): No data available for this query.

Hungary

Q055 (2021): On 31 December 2021, two prosecutors were serving in the Ministry of Justice, on a temporary basis. They are included in the total number of prosecutors; however, they are not taken into account when giving the number of prosecutors serving at different instances (court levels). All prosecutors are appointed to a full-time job; however, it occurs that some prosecutors perform part-time service on a temporary basis for various reasons, such as raising children.
The 'number of prosecutors at first instance level' is an aggregate of the number of prosecutors serving at district-level prosecution services and other prosecution services equivalent to that level, as well as the number of prosecutors serving at high prosecution services. A part of the prosecutors serving at high prosecution services proceed also at second instance (high court) level. The number of prosecutors serving at high prosecution services is 520 (226 males, 294 females), while the number of prosecutors serving at district-level prosecution services (other prosecution services equivalent to that level) is 1210 (439 males, 771 females).
The 'number of prosecutors at second instance (court of appeal) level' means the number of prosecutors serving at appellate prosecution services.

Q055 (2016): Another 9 prosecutors were temporarily serving in the Ministry of Justice. They are included in the total number of prosecutors, but we did not take them into account at each level.

Q107 (General Comment): The data source was, similarly to our previous data provision, the Statistical Subsystem of Completed Criminal Proceedings of the Uniform Investigative Authority and Prosecution Service Statistics (ENyÜBS-BBS). In the ENyÜBS-BBS, data are recorded when the investigating authorities or the prosecution service have taken a procedural decision (e.g. dismissal of a criminal complaint, discontinuation, suspension, indictment) in relation to a criminal act which has led to the statistical reporting of the data. The ENyUBS-BBS subsystem is therefore a so-called follow-up system in terms of the time of the data-recording, and therefore does not show the number of offences occurred in the year under review, but the number of acts/conducts in respect of which a legal decision has been taken and, in relation thereof, statistical reporting (of registrative nature) has been done. From the above it follows that it is not excluded that there are ongoing criminal proceedings that are not yet included in the ENyÜBS database.

Q107 (2021): As to 'Pending cases on 1 Jan. ref. year' and 'Pending cases on 31 Dec. ref. year', please note that the number of pending cases at a given day is not recorded in the database operated by the prosecution service. As to 'Processed cases' (3.), please note that the database of the prosecution service records the number of cases where one or more procedural acts were performed by the prosecution service; besides that, it records the number of procedural acts regarding each type of act.

Q107 (2020): 3.1.4 Discontinued for other reasons:
If the Special Part of the Penal Code regulates the conduct of the accused after the commencement of the proceedings as a ground for termination of criminal liability.
3.3. Cases closed by the public prosecutor for other reasons:At the stage of preparation of the prosecution, Section 221 / A (7) of the Criminal Procedure Act provides that if the mediation proceedings are successful and the application of Section 29 (1) of the Criminal Code is appropriate, the prosecutor shall terminate the proceedings.

Q107-1 (2021): The guilty plea procedure as such does not exist in the Hungarian legal system; however, the new Code of Criminal Proceedings has introduced the so-called plea agreement, which is, in essence, a similar instrument.

Q107-1 (2020): This procedure exists only from 1 July 2018, following the entry into force of the Act XC of 2017 on the new criminal procedure law. In the event that the prosecution can prove the guilt of the accused beyond a reasonable doubt and there is no opportunity to explain what happened in an acceptable manner, the accused will do his best to admit the act and avoid a lengthy trial.
Q107-1 (2018): This procedure exists only from 1 July 2018, following the entry into force of the Act XC of 2017 on the nwe criminal procedure law.
Q109 (2012): In 2012, the total number of traffic offences cases was 3 084.

Ireland

Q055 (General Comment): Allocation of prosecutors work is not in all instances divided as per the questions above. The sub-categories at 1, 2 and 3 of the question posed do not apply in the Irish system.

Q055 (2020): Our court going staff number at the 31st December 2020 is 128 - (50 male / 78 female). This figure includes our Prosecutors and Technical staff - Legal Executive. It also includes 1 Trainee Solicitor. In our Office our Technical Staff and Trainee Solicitors are court going staff and manage the running of a prosecution at trial in the same manner as some of our Prosecutors. In relation to the increase in staff resources for the ODPP, and the context for same, please see the forewords of our Annual Report 2020 and our Annual Report 2019 available at https://www.dppireland.ie/publication-category/annual-reports/.
Q055 (2018): There were 108.7 fulltime equivalent lawyers (fte) (headcount 111) on the payroll of the Office of the Director of Public Prosecutions at 31 December 2018 – 65.6 fte (67 headcount) of these were female and 43.1 fte (44 headcount) were male.
Q055 (2016): Of the staff complement in the Office of the Director of Public Prosecutions at the end of the reference year, 102 were of professional or technical grade at Prosecutor equivalent level or above.

Q055 (2014): Parts' of Full Time Equivalents were counted in decimal figures and have been rounded up. The total represents the number of qualified Solicitors and Barristers employed directly in the Office of the Director of Public Prosecutions (DPP). A proportion of these lawyers represent the DPP in the District Court. Members of the police force also prosecute in this court within a prescribed 'delegated authority' from the DPP. Members of the independent Bar act on behalf of the DPP, on a self-employed basis, in first instance and appellate courts. There are a further 32 State Solicitors contracted to provide a solicitor service to the DPP in cases heard outside of the capital.

Q107 (General Comment): As many of our cases are prosecuted by State Solicitors we don't have any data on the status of a case between the time the direction is issued and when we receive the final outcome; this is for matters on indictment. For summary cases outside of Dublin, we rarely even if ever hear back on the outcome as these directions are passed on to the police by the State Solicitor and the police execute the direction to prosecute without reference to the State Solicitor. This may change in the future if outcome data is exchange using the Criminal Justice Operational Hub. Summary cases outside of Dublin would make up a significant proportion of the files given in our figures.
As per the instructions provided, cases are counted per prosecution file which could include more than one suspect and multiple charges preferred. Therefore, the figure give for 'Discontinued' in 107.3.1 is the number of distinct files where a suspect was directed for 'no prosecution'; in some of these files, other suspects on the file may have been prosecuted in the courts.

Q107 (2021): There has been a significant increase in files received by the office in the last number of years - this is partially due to the increase in complexity of offences and investigations.
These figures were compiled by the Office of the Director of Public Prosecutions and will be included in the Annual Report 2021 which is published annually on the Office of the Director of Public Prosecutions website. Caution should be exercised when comparing these statistics with statistics published by other organisations such as the Courts Service or An Garda Síochána. The statistics published here are based on our own classification and categorisation systems and may in some cases not be in line with the classification systems of other organisations.
Q.3.4: indictable offences

Q107 (2018): *14,856 files in total were received in 2018 including appeals of which 11,647 related to first instance cases .

Q107 (2012): Figures provided for 2012 reflect 2011 data.

Q109 (General Comment): In the vast majority of cases involving traffic offences, the police service (An Garda Síochána) will prefer charges without reference to the Office of the Director of Public Prosecutions. Only in the more serious of such cases, including causing death by dangerous driving, will the Office of the DPP receive files for a decision whether to prosecute or not. Any such traffic offence cases received by the Office of the DPP and decided upon would normally be included in the figures.

Italy

Q055 (2016): There is no specific explanation concerning the increase in the total number of prosecutors at Supreme Court level. However, numbers are small and therefore percentage changes vary more harshly.
Q107-1 (General Comment): As a matter of fact in Italy there is no "guilty plea procedure" as such. However, if someone pleads guilty there are special procedures to speed up the proceedings.

Latvia

Q055 (2020): The increase in the number of prosecutors in court district level prosecutor's offices is related to the imposition of an obligation on the prosecutor of the court district level prosecutor's office, and not on the chief prosecutor of the district (city) prosecutor's office to perform the duties of a higher prosecutor.
Regarding the decrease in the number of women working in the Prosecutor General's Office, it must be concluded that in total the number of women working has decreased by 8 persons. One of the reasons could be reaching the maximum age for performing the duties prescribed by law or the death of a person.

Q055 (2012): During 2011 and 2012, prosecutors' offices increased the number of posts which resulted in the appointment of new prosecutors. In order to decide on the promotion of prosecutors, their professional qualification has been evaluated and their quality of work performance analysed, as well as their participation in trainings, work statistical indicators, etc. Pursuant to the collected data, more male prosecutors have been promoted to higher posts.

Q107 (2021): Cases brought to court: 6061 cases with the total number of criminal offenses - 11008.
Number of incoming cases in 2021 was 11 529. This includes cases received: for initiation of criminal prosecution; after the division of cases or during the phase of investigation; in accordance with urgent procedures; from the court for the elimination of violations/deficiencies; taken over for investigation; restored previously terminated or suspended cases.
The vertical consistency cannot be ensured because in 2021 there were 370 cases that were added to other cases and 82 cases were returned to the investigative authorities to continue the investigation. These cases are not included in the subcategories of Q107. 3.1.2. Discontinued by the public prosecutor due to the lack of an established offence or a specific legal situation - according to Article 380 of the Criminal Procedure Law these preconditions (stated in Article 377, Clauses 1, 2 and 10 of the Criminal Procedure Law) are exonerating circumstances. Data for the year 2020 included also other clauses of Article 377 that contain circumstances that do not exonerate persons, which explains the remarkable difference in numbers. Accordingly, 3.1.3. has increased by the number of relevant cases (that also constitute reasons of opportunity).
3.1.4. Discontinued for other reasons: the cases included in this category are, for example, the cases in which the prosecutor took a decision to terminate criminal proceedings by conditionally releasing from criminal liability a person who has been accused of committing a serious crime and who has substantially assisted in the disclosure of a serious or especially serious crime that is more serious or dangerous than the criminal offence committed by the relevant person himself / herself (Paragraph prim of Section 415 of the Criminal Procedure Law). The information compiled in the information system of the Prosecution Office shows that in 2021, prosecutors took 9 decisions to terminate criminal proceedings based on the aforementioned Paragraph. Besides, for 2021, there are 675 cases in which criminal proceedings were suspended included in this category.
Just like for the year 2020, 365 cases in which the prosecutor took a decision to terminate the criminal proceedings by conditionally releasing a person from criminal liability for the commission of a criminal offense or a less serious crime were included in the category “3.2. Concluded by a penalty or a measure imposed or negotiated by the public prosecutor". This, along with the recommendation included in the Operational Strategy of the Prosecution Office 2022-2027- on the completion of the criminal proceedings in the Prosecution Office where possible, also explains the increase in the latter category. 3.3. Cases closed by the public prosecutor for other reasons: the cases included in this category are, for example, the cases in which the Prosecutor General has made a decision to terminate criminal proceedings against a person who has substantially assisted in the disclosure of a serious or especially serious crime that is more serious or dangerous than a criminal offence committed by such person himself / herself. In 2021, Prosecutor General has not terminated any criminal proceedings based on Article 410 of the Criminal Procedure Law. For 2021, in this category there are 285 cases included that were sent on the basis of the jurisdiction (including – abroad).
4 Pending cases on 31 Dec. ref year: The number has increased mainly due to the COVID-19 pandemic (that affected the timely execution of procedural/investigative actions).
3.4. In 2021 there has been a significant decrease of the number of initiated criminal proceedings (-17%), furthermore the number of criminal proceedings completed in the prosecutor's office has increased (+26%).

Q107 (2020): Cases brought to court
8088 cases with the total number of criminal offenses - 14158
The vertical consistency cannot be ensured because in 2020, there were 520 cases that were added to other cases and 91 cases were returned to the investigative authorities to continue the investigation. These cases are not included in the subcategories of Q107. 3.1.4 Discontinued for other reasons: the cases included in this category are, for example, the cases in which the prosecutor took a decision to terminate criminal proceedings by conditionally releasing from criminal liability a person who has been accused of committing a serious crime and who has substantially assisted in the disclosure of a serious or especially serious crime that is more serious or dangerous than the criminal offence committed by the relevant person himself / herself. The information compiled in the information system of the Prosecution Office shows that in 2020, prosecutors took 2 decisions to terminate criminal proceedings based on Paragraph prim of Section 415 of the Criminal Procedure Law. Besides, for 2020, in this category are included 955 cases in which criminal proceedings were suspended.
3.3. Cases closed by the public prosecutor for other reasons: the cases included in this category are, for example, the cases in which the Prosecutor General has made a decision to terminate criminal proceedings against a person who has substantially assisted in the disclosure of a serious or especially serious crime that is more serious or dangerous than a criminal offence committed by such person himself / herself. In 2020, Prosecutor General has not terminated any criminal proceedings based on Article 410 of the Criminal Procedure Law. For 2020, in this category are included 285 cases that were sent in accordance with the relevant jurisdiction (including – abroad). The category “3.1. Discontinued during the reference year” decreased because 365 cases in which the prosecutor took a decision to terminate the criminal proceedings by conditionally releasing a person from criminal liability for the commission of a criminal offense or a less serious crime were included in the category “3.2. Concluded by a penalty or a measure imposed or negotiated by the public prosecutor". This also explains the increase in the latter category.

Q107 (2018): Cases brought to court
8887 cases with the total number of criminal offenses - 14569

Q107 (2016): Cases brought to court
10022 cases with the total number of criminal offenses - 16892

Q107-1 (2016): In 2016, the Prosecution Office sent a total of 699 cases to the court, in which there was concluded an agreement regarding admission of guilt and a punishment. Of all sent cases, in 21 occasions the court did not approve an agreement entered into during the pre-trial criminal proceedings. Thus in total, in 2016, the court approved 678 agreements concluded by the prosecutor at the pre-trial stage. However, data on the number of agreements approved in the court process (court) were not collected separately in 2016. Accordingly, data on the number of agreements approved in the court process (court) and in total are not available for 2016.

Q107-1 (2012): In 2012, 233 cases were brought to court by public prosecutors under a guilty plea procedure.

Q109 (2021): Data from Accountancy system

Q109 (2016): In accordance with the Latvian legal system on traffic offenses, a person can also be punished administratively, for example, for driving a vehicle under the influence of alcohol, narcotic drugs or other intoxicating substances. Therefore, in this specific case, we would like to emphasize the fact that the indicated number of cases does not include any road traffic violations that are provided for by the Latvian Administrative Violations Code. At the moment, having evaluated the comment received from you, we consider that it is acceptable to rectify the previously given response in Q-109 by indicating "Yes", as it includes road traffic violations for the commission of which there is provided criminal liability

Lithuania

Q055 (2020): After the reorganization of the prosecution service in 2011, 5 second instance prosecutors' offices were merged with 51 separate first instance prosecutor's office in their area of operation, and thus 5 regional first-second instance prosecutor's offices were established.
Q055 (2014): In 2012, the 56 territorial prosecutor’s offices have been reorganised into 5 regional prosecutor’s offices with 10 district prosecutor’s offices functioning inside them (first instance and second instance levels have been combined). Currently, only two instances exist.
Q055 (2012): In 2012, after reorganization of the prosecution service, the first and the second instances have merged. Currently, two instances exist instead of three. Besides, the total number of prosecutors has decreased because some prosecutors have left the service, but no new prosecutors have been recruited.
Q107 (2021): The number of registered crimes is gradually decreasing since 2017 in Lithuania, and this also affects other numbers.
Prosecutor General's Office of the Republic of Lithuania: the numbers are correct. Vertical inconsistency is a result of different sources of data and differences in formulas for calculating some statistical indicators. Numbers of „Pending cases“ and „Incoming cases“ are taken from the national register, however number of „Processed cases“ is taken from registers of the Lithuanian Prosecution Service.
Q107 (2020): Cases closed by the public prosecutor for other reasons: cases closed under Paragraph 3 Article 68 of the Criminal Procedure Code - when criminal act has been committed in the territory of the Republic of Lithuania by a citizen of a foreign country or other person who have subsequently left the Republic of Lithuania, the Prosecutor General's Office of the Republic of Lithuania may request foreign country to take over the criminal case. When criminal case is taken over by another country, the one in Lithuania is discontinued. The number of registered crimes is gradually decreasing since 2017 in Lithuania, and this affects number of incoming cases, processed cases, discontinued cases and cases brought to court.
The reason for the non-compliance of the result of the formula used ((pending cases on 1 January 2020 + incoming cases) – processed cases = pending cases on 31 December 2020) is a result of different sources of data and their differing formulas for calculating some statistical indicators. Numbers of „Pending cases“ and „Incoming cases“ is taken from the national register, however number of „Processed cases“ is taken from registers of the Lithuanian Prosecution Service.

Q107 (2014): In contrast with the 2012 data, the 2014 data includes cases in connected investigations.

Q107 (2012): The category “cases charged before the courts” also encompasses cases discontinued by the court on the prosecutor’s request, when the measures of criminal effect can be imposed on the persons concerned.The increase in the number of cases received by the prosecutor stems from the Lithuanian economic situation and the national economic priorities, as well as from the entry into force of the Law on Domestic Violence (2011). Criminal investigation became compulsory regarding every single incident of domestic violence. Over the last few years, the prosecution service had been seeking to complete criminal investigations under economy procedures - imposing penal or reformative measures, deciding the case with a penal order or using the accelerated process.

Q107-1 (2018): On 1st January 2017 driving under the influence of alcohol has been criminalized. The majority of these cases are brought to court through the guilty plea procedure.

Q107-1 (2012): The 2012 data does not include criminal cases that were brought before court with the bill of indictment. It includes cases that were brought before court with the criminal order under a simplified procedure, and also cases that were discontinued by court on non-rehabilitating grounds.
Q109 (General Comment): A traffic offence is qualified as criminal when it causes health impairment to another person, or the offender has been driving under influence of alcohol, narcotic, psychotropic of other psychoactive substances and his/her driving resulted in health impairment to or death of another person. Other traffic offences are qualified under the administrative legislation.

Luxembourg

Q055 (General Comment): The figure in point 3 includes both second instance and Supreme Court prosecutors, as they are grouped together in the Superior Court of Justice, which is subdivided into the Court of Appeal and the Court of Cassation.

Q055 (2018): Le personnel des juridictions judiciaires et administratives a connu une croissance soutenue ces dernières années, tel que prévu par la loi modifiée du 7 mars 1980 sur l'organisation judiciaire. Ceci explique les variations importantes observées entre 2016 et 2018 au niveau du personnel de la magistrature et du personnel non-juge. Les magistrats appartenant à la cellule de renseignement financier (CRF) sont dorénavant exclus de la question 55.1 (suite au détachement de la CRF du Parquet de Luxembourg) puisqu'ils n'exercent plus de fonction juridictionnelle proprement dite. Au total, la CRF compte 4 magistrats et un attaché de justice en 2018. L'effectif du Parquet d'arrondissement reste toutefois inchangé suite à la création des nouveaux postes affectés à la CRF
Les magistrats du pool de complément sont inclus dans les chiffres de la question 55.3.

Q055 (2016): The number of prosecutors indicated here as working at the Supreme Court corresponds to the number of prosecutors working at the Superior Court of Justice (which includes prosecutors intervening at the Court of Appeal and Court of Cassation level).
Q055 (2014): The number of male public prosecutors decreased between 2012 and 2014, while the number of female public prosecutors increased for the same period. These variations have for sole explanation the normal progress of career of magistrates of the public prosecution office at first instance.
Q107 (2021): 3.1.4 " Discontinued for other reasons": due to the continuing pandemic in 2021, no "Choice18 +" measures could be initiated, nor processed, during this year. Similarly, driving courses were suspended due to the pandemic and did not resume until October 2021.
3.2 "Concluded by a penalty or a measure imposed or negotiated by the public prosecutor": the increase in the number of cases concluded by a penalty or a measure imposed or negotiated by the public prosecutor between 2020 and 2021 cannot be explained by a single event. The increase is mainly due to the growing number of warnings issued by the prosecution service, which is on the one hand the result of punctual measures related to the health crisis and on the other hand depends on the subject matter of the cases dealt with, as warnings are usually issued in less serious cases.

Q107 (2020): "The cases referred to under 3.2. shall be considered closed if the party concerned complies with the condition imposed by the warning or fulfills its obligations arising from the mediation. In case of non-compliance, the public action will resume.
3.1.4: These are essentially two specific measures: firstly, in the area of traffic, the obligation to follow a driving course and, only for young offenders of full age, participation in a course in the Choice 18+ program for the prevention of drug addiction (https://www.solina.lu/fr/facilities/impuls/)."
Q107 (2018): L'augmentation du nombre d'affaires classées s'explique essentiellement au niveau des affaires de police. Depuis 2017, le nombre d'affaires nouvelles a considérablement augmenté, ce qui explique partiellement le nombre important d'affaires classées en la matière. Cet accroissement des affaires ouvertes est lié à l'introduction du système de contrôle et de sanction automatisés (CSA) au cours de l'année 2016, qui a mené à une augmentation importante des affaires de circulation (vitesse), des infractions constatées via des radars fixes et mobiles. En plus, des changements au niveau de la gestion de ces affaires CSA au parquet a engendré le classement d'un nombre important d'affaires en 2018, ce qui contribue à la variation importante des affaires classées observée entre 2016 et 2018. Les affaires reçues par le procureur au cours de l'année de référence incluent les affaires 'Sans Auteur Identifié' (SAI) qui sont provisoirement classées dans l'attente de l'identification d'un auteur. En 2018, 24 799 affaires étaient qualifiées SAI.

Q107-1 (2021): In 2020 and 2021, health measures only allowed the physical presence of a reduced number of persons in hearings compared to previous years. To continue to work efficiently and resolve cases, prosecutors' offices have, as far as possible, given preference to the procedure of judgement by agreement (procédure du jugement sur accord), as it requires less physical presence of parties, defence counsel, witnesses, etc. Moreover, since the procedure of judgment by agreement was only introduced in 2015, the habit of resorting to this measure has only become established in recent years among lawyers, who now take the initiative themselves more often to launch this procedure.

Q107-1 (2020): In 2020, the sanitary measures did allow only a reduced number of people in the court hearings compared to previous years. In order to continue to work effectively and to resolve cases, the state prosecutors' offices decided to resort to the guilty plea procedure, since it does not require the same amount of physical presence of the parties, the defenders, witnesses, etc.
Q107-1 (2018): The "transaction pénale" introduced by a law of February 24th, 2015 under the name of "jugement sur accord" enables the prosecutor and the defendant to "negotiate" a penal judgment that will be rendered executory by the courts.

Q107-1 (2016): The "transaction pénale" introduced by a law of February 24th, 2015 under the name of "jugement sur accord" and enables tht prosecutor and the defendant to "negotiate" a penal judgment that will be rendered executory by the courts.

Malta

Q055 (General Comment): All the lawyers working in the Office of the AG prosecute cases in the criminal courts, but it is not possible, as yet to distinguish between 1st and 2nd Instance Courts. All full-time lawyers have been included in the above figure except the AG herself.
Q055 (2020): The increase in the number of lawyers working at the Office of the AG follows the reform in 2020 whereby the AG has taken up exclusively the role of prosecutor general (the advisory role to government has been vested in the State Advocate). Given this special focus, the Office of the AG has been recruiting more lawyers in order to meet the case demands of the courts.
Q055 (2016): All the lawyers at the Office of the Attorney General work both in Court as well as advisers to the various Ministries and Departments. All prosecuting officers at the Office of the Attorney General act at all court levels. Thus, prosecutors are not classified according to the case instance.
Q055 (2014): These past few years there has been an increase in the number of female law graduates, which will definitely reflect in the employment trends within this sector.
Q107 (2021): The Office of the Attorney General is in the process of setting up a comprehensive case management system that will keep track of all the cases that are processed by the OAG. Until then, the cases quoted above are all cases prosecuted in court at 1st Instance.
The high pending caseload at the beginning of 2021 is a direct result of the inefficiencies experienced during the Covid-19 pandemic. In fact throughout 2020, given that most of the year the courts of justice were closed, the number of incoming cases far exceeding the number of resolved cases. This led to a low CR and a concomitant high pending caseload.

Q107 (2016): The criminal cases brought to court at 1st Instance are prosecuted by the Police and not by the attorneys working in the Office of the AG.
Q109 (2016): Traffic offences are listed with the 1st instance cases filed in front of the Court of Magistrates, Criminal Jurisdiction.

Netherlands

Q055 (General Comment): The Dutch Supreme Court does not have public prosecutors. The office of the Procurator General and Advocates-General at the Dutch Supreme Court is separate from Dutch public prosecution and the Ministry of Justice. They have a different function.
Q055 (2020): The Supreme Court does not have (public) prosecutors. The office of the procurator general and attorneys general that the Supreme Court houses, is separate from the public prosecution and does not function as prosecution. They have a different function.
Q055 (2016): total 927,5 358,12 569,38
1 842,25 312,72 529,53
2 85,25 45,40 39,85
Q055 (2014): For 2014, the number of prosecutors at first instance level includes 8 prosecutors who are still in education (7 females; 1 male). Prosecutors at Supreme Court level are not employees of the National Prosecution Service and therefore not included in the total.
Q107 (General Comment): The number of pending cases at the end of the year cannot equal pending cases at the start of the year + incoming cases – processed cases, because a specific type of case can only be counted in the stock when the file has been judged, not when they are pending. This is for criminal cases where an order is given, but the case is then returned because the order cannot be executed. This specific case type return to the stock, but cannot be measured in the system the public prosecution uses. Once those cases are assessed again and stream out, they become visible in the numbers in the system.
Pending cases are cases that are yet to be judged and for which a hearing has to be planned. Cases for which the hearing has been planned, are not included in this number.

Q107 (2021): Pending cases are cases that are yet to be judged and for which a hearing has to be planned. Cases for which the hearing has been planned, are not included in this number.
Discrepancy comment Pending cases January: The way in which pending cases were counted changed in August 2020, before that time a large number of cases were included that had already been dealt with administratively. Those cases are now excluded from the number of pending cases, which explains the difference in numbers between pending cases Jan 2020 and and pending cases Jan 2021.

Q107 (2020): The number of pending cases at the end of the year cannot equal pending cases at the start of the year + incoming cases – processed cases because a certain type of case can only be counted in the stock when the file has been judged, not when they are pending. These cases are criminal cases where an order is given, but they are then returned because the order cannot be executed. These criminal cases return to the stock, but cannot be measured in the system the public prosecution uses. Once a case like that it assessed again and streams out, it becomes visible in the numbers of the system.

Q107 (2016): In 2014 there were no assistent officers. The lower input results in lower output.

Q107 (2012): The category “cases discontinued for reasons of opportunity” concerns minor cases and covers cases solved by the suspects and victims themselves and cases considered too old to be still prosecuted. Since 2012, these kinds of cases are not filtered anymore by the police and are registered at the public prosecution offices. In 2012, the number of cases concluded by a penalty or a measure imposed or negotiated by the prosecutor, increased due to the Law on Public Prosecution sanctions. The latter extended the possibility for the public prosecution to impose sanctions itself, independently of the Judicial (sentence disposal).

Q107-1 (2021): In 2021, there were experiments with judgement agreements (vonnisafspraken) and trial agreements (procesafspraken), see eg. https://www.bjutijdschriften.nl/tijdschrift/NTS/2022/2/NTS_2666-6553_2022_003_002_003. These experiments were evaluated, and further specified in directives and instructions in 2022. The numbers are not yet available.

Q109 (General Comment): They include traffic offences, but NOT traffic violations. Only serious traffic issues are prosecuted as traffic offence, the less serious as violation or administrative justice (wet Mulder).
Q109 (2020): These include traffic offences, but NOT traffic violations. Only serious traffic issues are prosecuted as traffic offence, the less serious as violation of even administrative justice (wet Mulder).

Poland

Q055 (General Comment): The table under item 1 contains the number of district prosecutors and under item 2 the number of circuit prosecutors. Whereas under item 3 is the number of prosecutors in the position of a prosecutor of the National Prosecutor's Office. The total is higher than the sum of the subcategories because it takes into account the number of prosecutors employed in regional prosecutor's offices, since according to Article 16 of the Law of 28 January 2016 - Law on Prosecutor's Office (Journal of Laws of 2021, item 66) the common organizational units of the prosecutor's office are: National Prosecutor's Office, regional prosecutor's offices, circuit prosecutor's offices and district prosecutor's offices. All items (1-3) include prosecutors for military matters.
The inclusion of the number of prosecutors employed in regional prosecutors' offices only in the total number of prosecutors is due to the design of the table. The table allows prosecutors to be entered: 1. first level, 2. second level 3. highest level. The table does not provide an opportunity to depict the full structure of the prosecutor's office in Poland, which consists of four levels: district, circuit and regional prosecutor's offices and the National Prosecutor's Office with a rank equivalent to the Supreme Court. Regional prosecutors' offices are a separate ('third') level of prosecution and the number of prosecutors employed in them cannot be 'split into instances'.

Q055 (2021): The table under item 1 contains the number of district prosecutors and under item 2 the number of circuit prosecutors. In contrast, under item 3 is the number of prosecutors in the position of prosecutor of the National Prosecuting Authority. The total is higher than the sum of the sub-categories, as it takes into account the number of prosecutors employed in regional prosecutor's offices - a total of 402 prosecutors (154 women and 248 men), as, pursuant to Article 16 of the Act of 28 January 2016 - Law on the Public Prosecutor's Office (Journal of Laws of 2022, item 1247), the common organisational units of the public prosecutor's office are: National Prosecutor's Office, regional prosecutor's offices, circuit prosecutor's offices and district prosecutor's offices.
All items (1 - 3) include military prosecutors, of whom 77 are employed at the district prosecutor's office level, including 19 women and 58 men; at the regional prosecutor's office level, 45 military prosecutors, including 9 women and 36 men; and at the National Prosecutor's Office, 17 military prosecutors (4 women and 13 men).

Q055 (2020): The table under item 1 contains the number of district prosecutors and under item 2 the number of circuit prosecutors. Whereas under item 3 is the number of prosecutors in the position of a prosecutor of the National Prosecutor's Office. The total is higher than the sum of the subcategories because it takes into account the number of prosecutors employed in regional prosecutor's offices - a total of 391 prosecutors (151 women and 240 men), since according to Article 16 of the Law of 28 January 2016 - Law on Prosecutor's Office (Journal of Laws of 2021, item 66) the common organizational units of the prosecutor's office are: National Prosecutor's Office, regional prosecutor's offices, circuit prosecutor's offices and district prosecutor's offices. For 2020, all items (1-3) include prosecutors for military matters, who at the level of the district prosecutor's office are employed by 85, including 22 women and 63 men; at the level of the regional prosecutor's office - 38 prosecutors for military matters, including 8 women and 30 men, and at the National Prosecutor's Office - 13 prosecutors for military matters (2 women and 11 men).

Q055 (2018): Within the organizational structure of general organizational units of the prosecution office, there are Appellate Public Prosecutor’s Offices, which function as a third rank and employ altogether 367 prosecutors (149 women and 224 men). Additionally, 65 prosecutors of military affairs (including 16 women and 49 men) are employed at the level related to the Regional Public Prosecutor’s Office; 30 prosecutors of military affairs (including 6 women and 24 men) - at the level related to the District Public Prosecutor’s Office, and 5 prosecutors of military affairs (5 men) - in the National Public Prosecutor’s Office.

Q107 (General Comment): *The number of cases discontinued for any other reason consists of cases discontinued on the basis of: - art. 17 par. 1 point 3 to 11 of the Code of Criminal Procedure: the social harm of the act is negligible; the law provides that the perpetrator is not subject to punishment; the defendant has died; the criminal statute of limitations has run; criminal proceedings for the same act of the same person have been validly terminated or previously instituted proceedings are pending; the perpetrator is not subject to the jurisdiction of the Polish criminal courts; lack of complaint from an authorized prosecutor; absence of the required authorization for prosecution or request for prosecution from an authorized person, unless otherwise provided by law; there is another circumstance excluding prosecution.
- the Act on Counteracting Drug Addiction (Article 62a and 62b);
- other discontinuances - in addition to those described in report PK-P1K on activity of common organizational units of the Public Prosecutor's Office in criminal cases.
*The number of cases closed by the prosecutor for other reasons consists of: - cases in which criminal prosecution was transferred (Article 591 para. 6 of the Code of Criminal Procedure), - refusal to start an investigation, - suspended cases, - cases finished with the transfer of the commander, - cases settled in another way (there is no data about the way of completion in the report).

Q107 (2020): *The number of cases processed in 2018 was 1,076,123. The number of cases discontinued for this period is 397,471. This number is comparable to the 2019 data. (406,770 cases discontinued) and for 2020. (387,521 cases discontinued). *The number of cases - "concluded by a penalty or measure imposed or negotiated by the prosecutor" for each year was as follows: 2018. – 43 348, in 2019. -36 167, in 2020. - 25 635.

Q107 (2018): Differences which appear between data mentioned in the form related to functioning of the Polish jurisdiction and data specified in the previous edition of research - connected with the amount of cases incoming and the amount of terminated cases - arise from at least two reasons. First, during the years the image of crime has been changing. The amount of committed crimes is not constant and it is changing dynamically. Second, normative changes affect the differences mentioned at the beginning. This is connected with: the penalization of acts which have been criminally indifferent until now and amendments to the Criminal Procedure Law. In the adversarial reform - currently in force since the 1st of July 2015 - the rule related to cases terminated by decisions of police on refusal to allow investigation or on discontinuance of investigation has been introduced. According to this rule the aforementioned cases do not have to be approved by the prosecutor. Therefore such proceedings have not been registered in the prosecution office. Amendments to the Code of Criminal Procedure, which came into force on the 15h of April 2016, cancelled this rule.

Q107 (2016): Cases "Discontinued during the reference year" - only number of staied legal proceedings.

Q107-1 (General Comment): Article 335 [Sentencing without trial - motion] -Criminal Code Procedure
§ 1. If the accused pleads guilty, and in the light of his explanations the circumstances of the commission of the offence and his guilt raise no doubts, and the attitude of the accused indicates that the objectives of the proceedings will be achieved, further proceedings may be omitted.
The public prosecutor, instead of filing a bill of indictment, shall file a motion with the court for issuing a judgment of conviction at a hearing and for agreeing with the defendant on penalties or other measures envisaged for the offence charged, also taking into account the legally protected interests of the victim. The agreement may also include a specific decision on payment of legal costs.
The public prosecutor may attach to the indictment a motion for a judgment of conviction to be handed down at a hearing and for the penalties or other measures prescribed for the offence charged to be agreed upon with the defendant, also taking into account the legally protected interests of the victim, if the circumstances of the offence and the defendant's guilt are beyond doubt, the evidentiary statements made by the defendant do not contradict the findings made, and the defendant's attitude indicates that the objectives of the proceedings will be achieved.
*Article 156 of the Fiscal Penal Code, The public prosecutor, as well as the financial pre-trial body, may attach to the indictment a motion for issuing, without a hearing, a judgment of conviction and imposing a penalty or penal measure agreed with the accused for the fiscal offence or fiscal misdemeanour charged against him, if the circumstances of the commission of the offence do not raise any doubts and the attitude of the accused indicates that the objectives of the proceedings will be achieved.

Q107-1 (2021): *) 51 198 - Data refers to persons convicted at first instance:
- Convicted as a result of granting an application under Article 335 § 1 or 2 of the Code of Criminal Procedure: in Regional Courts - 580 persons, in District Courts - 46,148 persons.
- Voluntary surrender to liability for criminal and fiscal offences (Kks): in District Courts - 4,470 persons.

Q107-1 (2020): *during the main trial – 53 072 - *) The data pertains to persons sentenced in the first instance:
- Sentenced as a result of granting an application under Article 335 § 1 or 2 of the Code of Criminal Procedure: in Regional Courts - 743 persons, in District Courts - 48,762 persons
- Voluntary submission to liability for penal and fiscal offences (Kks): in District Courts - 3,567 persons.
*57 735 - The data on the basis of which the information was provided are collected under the Law on Public Statistics in the Public Prosecutor office - P1K report on the activity of the common organizational units of the public prosecutor's office in criminal cases (statistical program SprawPro). The data for 2018 included only those cases in which a request under Article 335 par 1 of the Code of Criminal Procedure was addressed. On the other hand, the data for 2020 included cases in which the prosecutor addressed a motion for a conviction and motions to join the indictment under Article 335 par 2 of the Code of Criminal Procedure and Article 156 of the Fiscal Penal Code

Portugal

Q055 (General Comment): The communicated data encompasses the number of magistrates of the Public Prosecution Service in courts of first instance, second instance and high superior courts, except the Constitutional Court.

Q055 (2020): No specific explanation for the numbers above.

Q055 (2018): In absolute terms the decrease from 2016 to 2018 is from 7 to 5 female prossecutors, which is not significative in absolute terms, but acquires a more relevant expression in relative terms.
Q055 (2012): The increase in the number of female prosecutors is due to the general tendency of increase of female prosecutors in the last decade at first instance courts. It is natural that gradually the proportion of female prosecutors in the higher courts tends to grow as a result of their career progress. The number of prosecutors in the High Judicial Court and in the High Administrative Court, increased. In particular, in the High Administrative Court there was a strong reinforcement of these professionals in 2011 in order to respond to a pressing need of prosecutors in this court.

Q107 (2020): The data indicated for «number of processed cases» corresponds to “the total number of criminal cases at the investigation stage that have been closed”.
The Public Prosecutor's Office, closes the inquiry as soon as it has gathered sufficient evidence that no crime has been committed, that the defendant has not committed it or that the procedure is legally inadmissible.
The Public Prosecutor's Office also closes the inquiry if it has not been possible to obtain sufficient evidence that a crime has been committed or who the perpetrators were.

Q107 (2014): For 2014, data concerning 1st instance courts is not available due to technical constraints.

Q107 (2012): This category of cases includes inquiry proceedings received by the public prosecutor and inquiry proceedings completed with charges proposed by the public prosecutor.
Q109 (2012): According to 2012 data, the figures include traffic offences which are criminally punished.

Romania

Q055 (General Comment): In Romania there are four level of courts/prosecution offices attached to these courts (first instance courts, tribunals, courts of appeal and the High Court of Cassation and Justice). In line with our previous reports in this matters, in the table above prosecutors from prosecution offices of the tribunals and of the courts of appeal shall be included in the category "second instance professional prosecutors".

Q055 (2018): In Romania there are four level of courts/prosecution offices attached to these courts (first instance courts, tribunals, courts of appeal and the High Court of Cassation and Justice). In line with our previous reports in this matters, in the table above prosecutors from prosecution offices of the tribunals and of the courts of appeal shall be included in the category "second instance professional prosecutors".

Q055 (2014): The prosecutor's offices are established in the following hierarchy: the prosecutor's offices attached to the courts of law (point 1 of the table), the prosecutor's offices attached to tribunals and prosecutor's offices attached to the courts of appeal (point 2), and the Prosecutor's Office attached to the High Court of Cassation and Justice (point 3).

Q055 (2012): The prosecutor's offices are established in the following hierarchy: the prosecutor's offices attached to the courts of law (point 1 of the table), the prosecutor's offices attached to tribunals and prosecutor's offices attached to the courts of appeal (point 2), the Prosecutor's Office attached to the High Court of Cassation and Justice (point 3).

Q107 (2020): There are no available data on grounds on which a decision to discontinue a case is taken by the public prosecutor.
Q107 (2016): As regard the increase from 2014 data related to the number of cases brought to court, most probably the new provisions in terms of guilty plea procedures introduced by the new codes may represent a reason for this increase in using this procedural institution; moreover people/parties become more aware of it/of this procedural instrument and a judicial practice has been created
Q107 (2014): The figure provided for 2014 in respect of the total number of 1st instance criminal cases received by the public prosecutor (1 756 001) corresponds to the stocks and newly entered files for this year. In 2012, the number of newly entered files was 679 193 (789 677 for 2013). The variations observed between 2012 and 2014 are due to the entry into force of the new codes.
Q109 (2020): Only serious offenses that are considered crimes, such as drunk driving or involuntary manslaughter.

Q109 (2018): Only serious offenses that are considered crimes, such as drunk driving or involuntary manslaughter.

Q109 (2016): Only serious offenses that are considered crimes, such as drunk driving or involuntary manslaughter.

Slovak Republic

Q055 (General Comment): The number of prosecutors at the Supreme Court level also includes prosecutors of the Special Prosecution Bureau. The latter deals with crimes of corruption and the most severe offences including organized crime. It intervenes in first instance, but acts as an organizational part of the General Prosecutor's Office.

Q107 (2021): The General public prosecutors office did not deliver any explanation.

Q107 (2020): The data were delivered by General prosecutor office. The number of 1st instance criminal cases are not monitored by General prosecutor office in CEPEJ requested structure.
Q107 (2018): The number of Cases received during the reference year represents the count of received cases on the Prosecution Office, not the count of terminated cases.
To the column Cases discontinued during the reference year we included the decisions of the prosecutor as well as of the police officer. If the police officer has decided on the discontinuance of the criminal prosecution, those decisions were examined by a prosecutor. The prosecutor himself/herself has discontinued the criminal prosecution in 263 cases.
Among Cases terminated by the prosecutor by imposing a sanction or negotiating a measure were included criminal prosecutions of persons against whom the criminal prosecution was conditionally suspended (1334) or the criminal prosecution was suspended by approving a conciliation between the accused and aggrieved party (479).
Among Cases brought to court were included indictments submitted by the prosecutor in the year 2018 to the court. The number of accused persons was 29 789 (the count of the accused persons might not equal the count of the indictments).

Q107 (2016): The number of cases received represents all entries in the criminal registers of the prosecution offices. The decrease of number of the received cases in comparison with the previous cycle is the objective fact out of the range of prosecution service.
Not all of the received cases are concluded in the same year. The number of cases discontinued during the reference year includes the decisions of the prosecutor as well as of the police officer. The decisions of the police officer to discontinue the criminal prosecution were examined by a prosecutor. Only in 62 cases the decision to discontinue the criminal prosecution was issued by the prosecutor (see Q 108).
Cases terminated by the prosecutor by imposing a sanction or negotiating a measure include criminal prosecutions of persons against whom the criminal prosecution was conditionally suspended (1485) or the criminal prosecution was suspended by approving a conciliation between the accused and aggrieved party (469).
The number of cases brought to court (25023) represents the number of indictments submitted to court by the prosecutor in 2016. The number of accused person was 28 612 (according to Slovak criminal law one indictment can be issued against more defendants).

Q107 (2014): For 2012, it was impossible to split the number of cases discontinued by the prosecutor and the number of cases concluded by a penalty. For 2014, both of the categories could be identified. The total is 8547 cases, which is close to the number given in 2012.
Q107-1 (2020): The data were delivered by General prosecutor office. The most of the data are not available, because these are not monitored by General prosecutor office in CEPEJ requested structure.

Slovenia

Q055 (General Comment): The number is reported in FTE.
In the Slovenian criminal justice system state prosecutors are exclusively authorized to conduct public prosecution in criminal matters on behalf of society and in the public interest. The Constitution and law guarantee autonomy in status and functioning of state prosecutors. Decisions made by the state prosecutor shall not be interfered with, except by way of general instructions and assigning of a case in the manner determined by the law.
Slovenian state prosecutors perform their function in 13 organizational units – prosecution offices. There are 11 District State Prosecutor's Offices and one Specialized State Prosecutor's Office of the Republic of Slovenia, where local, district and senior state prosecutors are positioned. At the Office of the Prosecutor General of the Republic of Slovenia supreme state prosecutors and the State Prosecutor General perform their functions. Some state prosecutors of lower ranks are assigned to the office perform demanding professional tasks.
There are no higher state prosecutor's offices as the proceedings at the courts of appeal are governed by the district prosecutor's offices. According to the State Prosecution Service Act prosecutors with the rank of at least local state prosecutor may represent a case at local courts, prosecutors with the rank of at least district state prosecutor may represent a case at district courts, prosecutors with the rank of at least senior state prosecutor may represent a case before higher courts and only supreme state prosecutors may represent a case at the Supreme Court. Local state prosecutors may also appear at district courts, if authorized by the head of state prosecutor's office for certain categories of matters, for a particular matter, for certain categories of procedural acts or for a particular procedural act. Local and district prosecutors may in their cases appear along with a senior prosecutor at courts of appeal, if authorized by the head of an appellate division of the state prosecutor's office for a particular case. Senior and supreme state prosecutors are competent to represent a case at before first instance courts. Local and district prosecutors are reported as prosecutors at first instance level, senior prosecutors as prosecutors at second instance level and supreme prosecutors as prosecutors at Supreme Court level, without regard to the court instance where they perform their function, or that they are assigned to another institution for a limited period of time (e.g for the administration of State Prosecutorial Council).
The number of posts of state prosecutors is set by the Government's Regulation. However the actual number of state prosecutors is lower than the number se by regulation due to different factors.

Q055 (2021): Before 2021, data was reported in gross numbers. For 2021 data, the FTE format is observed.
The above data does not include six State prosecutors who perform other duties (assigned to The Council of State Prosecutors, appointed to Eurojust, the European Public Prosecutor and the European Delegate Prosecutor).
Q055 (2020): The information is in form of gross data. According to the methodology used for reporting judges and court staff (FTE) – by which part-time employees are converted to full-time time by the calculation of working hours, the number amounts to 193, as a number of prosecutors are not working full time.

Q055 (2016): Slovenian state prosecutors perform their function in 13 organizational units. There are 11 district prosecutor's offices and one Specialised State Prosecutor's Office of The Republic of Slovenia, where local, district and higher state prosecutors are positioned. At The Office of the Prosecutor General of the Republic of Slovenia supreme state prosecutors and State Prosecutor General perform their functions. Here are also some state prosecutors of lower ranks assigned to perform demanding professional tasks.
There are no higher state prosecutor's offices as the proceedings before the courts of appeal are governed by the district prosecutor's offices. According to the State Prosecutor Act prosecutors with the rank of at least local state prosecutor may represent a case before local courts, prosecutors with the rank of at least district state prosecutor may represent a case before district courts, prosecutors with the rank of at least higher state prosecutor may represent a case before higher courts and only supreme state prosecutors may represent a case before the supreme court. Local state prosecutors may also appear before district courts if authorized by the head of a state prosecutor's office for certain categories of matters, for a particular matter, for certain categories of procedural acts or for a particular procedural act. According to amendment of legislation in 2015 local and district prosecutors may in their cases appear along with a higher prosecutor before the courts of appeal if authorized by the head of an appellate division of the state prosecutor's office for a particular case. Higher and supreme state prosecutors are competent to represent a case also before first instance courts.
In the context of question 55 we counted local and district prosecutors as prosecutors at first instance level (164), higher prosecutors as prosecutors at second instance level (42) and supreme prosecutors as prosecutors at Supreme Court level (11) without regard of the rang of court before they perform their function in fact or if they are assigned to other institution for a limited period of time (e.g for the administration of State Prosecutorial Council). The information is in form of full-time equivalent.

Q055 (2014): In November 2011, the new State Prosecutor Act came into force. It dissolved the special department of the Office of the State Prosecutor General, responsible for the 2d instance level. Proceedings before courts of appeal are now governed by the 4 State circuit prosecutor offices in towns where the higher courts are located. Prosecutors are organised in 12 offices (11 circuit offices and one Specialised State Prosecutor's Office, where circuit and higher prosecutors work) and the Supreme State Prosecutor Office (where supreme State prosecutors and the general State prosecutor work). The function "assistant State prosecutor" changed in "local State prosecutor". The Specialised State Prosecutor's Office for dealing with the most severe criminal offences was established.

Q055 (2012): In November 2011, the new State Prosecutor Act came into force. It dissolved the special department of the Office of the State Prosecutor General, responsible for the 2d instance level. Proceedings before courts of appeal are now governed by the 4 State circuit prosecutor offices in towns where the higher courts are located. Prosecutors are organised in 12 offices (11 circuit offices and one Specialised State Prosecutor's Office, where circuit and higher prosecutors work) and the Supreme State Prosecutor Office (where supreme State prosecutors and the general State prosecutor work). The function "assistant State prosecutor" changed in "local State prosecutor". The Specialised State Prosecutor's Office for dealing with the most severe criminal offences was established.

Q107 (General Comment): General remarks:
- statistical data is kept on charged, accused or convicted persons, and the data is related to the main crime per defendant (methodology as used in the Joint Annual Report on the Work of State Prosecutor's Offices and previous CEPEJ reporting).
- vertical consistency is not ensured due to the fact that the State Prosecutor's Office reports data from a dynamic information system, where subsequent changes and corrections are possible, and each category
(received, solved, unsolved) is "counted" on a certain day or for a period, which may lead to later deviations; and due to the methodology used at reporting (3.) Processed cases (see below).
- data included cases against known and unknown perpetrators. Cases against known perpetrators are counted according to persons (e.g. a denunciation against five individuals is counited as five cases), and cases against unknown perpetrators (Ktn cases) according to the number of files. It should be noted that between 27,000 and 60,000 complaints against unknown perpetrators are received per year. They are included in the statistical data as pending cases until they are closed (for example, the perpetrator is discovered, the expiration of the statute of limitations or that no legal signs of a crime have been provided).
1. Pending cases on 1 Jan. ref. Year
The data represent existing unresolved criminal complaints against known perpetrators (adults, minors and legal entities) and newly received complaints against unknown perpetrators.
2. Incoming/received cases
Includes criminal denunciations against known and unknown offenders.
Criminal denunciations against known offenders include cases that were received by the
prosecution office as well as cases with unknown offenders whose identity was discovered during
the reporting period.
3. Processed cases
The reported figure represents all resolved criminal complaints in the reporting year. There is a discrepancy between the sum of following categories: [3.1 known offenders+3.2+3.4] and the number of all resolved criminal complaints reported at (3.) Processed cases, because several criminal complaints can be resolved in one criminal file.
3.1. Discontinued during the reference year The number represents the sum of dismissed criminal complaints against known perpetrators and complaints against unknown perpetrators dismissed due to the statute of limitations.
3.1.1. Discontinued by the public prosecutor because the offender could not be identified
The public prosecutor cannot discontinue a case, because the offender could not be identified, so the answer is NAP.
3.1.2. Discontinued by the public prosecutor due to the lack of an established offence or a
specific legal situation Data includes cases in which it was not possible to continue the proceedings due to a lack of procedural or
material preconditions (the act is not a criminal offense, there is no reasonable suspicion that the suspect committed a criminal offence and various procedural obstacles), cases where the motion of the injured party has been withdrawn (only for so-called proposed criminal offences) and cases where the criminal complaint was dismissed due to the expiration of the statute of limitations (procedural obstacle).

Q107 (2021): In 2021 the reporting changed to include cases of discontinued criminal complaints against unknown offenders due to the expiration of statute of limitations in the category (3) Processed cases (previously excluded).
Further break-down of data reported:
(1) Pending cases on 1 Jan. ref. year include transferred criminal complaints: - against known perpetrators: 11.951 and
- against unknown perpetrators: 269.260.
(2) Incoming cases include criminal denunciations: - against known offenders: 24.658 and
- against unknown offenders: 27.199.
(3) Processed cases include processed cases:
- against known offenders: 24.658 and
- discontinued criminal complaints against unknown offenders due to the expiration of statute of limitations: 29.140
(3.1.) Discontinued during the reference year include dismissed criminal complaints:
- against known perpetrators: 14.260 and
- against unknown perpetrators: 29.140
(3.1.2.) Discontinued due to the lack of an established offence or a specific legal situation include:
- a) discontinued criminal complaints against known perpetrators due to the lack of procedural or material preconditions: 10.022, b) cases discontinued (rejected) due to withdrawal of the motion of the injured party: 2.000 and c) cases discontinued due to expiration of the statue of limitation: 75 (total 12.097 cases) and
- discontinued criminal complaints against unknown perpetrators due to the expiration of statute of limitations: 29.140.
(4) Pending cases on 31 Dec. ref. year include unresolved criminal complaints:
- against known offenders: 11.709.
- against known offenders: 277.564.
Differences to 2020 data:
2.Incoming/received cases: decrease by 16%
Contributing factors: a) Covid-19 pandemics, especially limit of movement of population and related police control, b) changes in the registration of the number of criminal offences in police registers and c) increase in merging of diferent cases in one case at the Police and state prosecution level, compared to the previous year. 3.1.2 Discontinued by the public prosecutor due to the lack of an established offence or a
specific legal situation: increase by 17%
The increase is mainly due to a higher number of cases against unknown offenders due to the expiration of statute of limitations, which is beyond control of state prosecution. The number of discontinued cases agains known offenders did not change significantly. 3.1.3 Discontinued by the public prosecutor for reasons of opportunity: decrease by 22%
The number of cases remains comparable (despite the decrease in last year) and cannot be considered unusual, due to the structure of processed cases with the majority of offences against property and within it low value cases. 3.2. Concluded by a penalty or a measure imposed or negotiated by the public prosecutor: increase by 23%
The increase in 2021 is due to partial relief of preventive measures, related to Covid-19 pandemics.

Q107 (2020): Pending cases on 1 Jan. ref. year includes 12.452 cases against known perpetrators and 263.139 cases against unknown perpetrators.
Incoming/received cases includes 27.770 cases against known offenders and 34.019 cases against unknown offenders.
Pending cases on 31 Dec. ref. year includes 12.072 cases against known offenders and 269.260 cases against unknown offenders.

Q107 (2016): The explanation by the state prosecution (data source) concerning the decrease in the number of received cases during the reference year between 2014 and 2016: - since 2013, the number of reported offences to the police is decreasing, hence the decrease in number of cases received (especially cases where the offender is unknown)
- due to several local factors (austerity measures, increased number of immigrants in 2015-2016 and a long strike of police officers in 2016), the number of cases (against identified offenders) processed by the police also decreased
As concerns the decreased number of cases brought to court:
- a decrease in new cases (see above)
- exercising a stricter selection of cases, not appropriate for court procedure (in 2014, almost 30% of resolved cases were brought to court, in 2016 only 25%). The state prosecution also noted some minor differences might be attributed to changes in their methodology for data reporting.

Q107-1 (General Comment): The defendant may plead guilty in two kinds of situations. He/she can achieve an agreement with a state prosecutor in a plea-bargaining procedure or he/she can make a guilty plea irrespectively of the state prosecutor at the pretrial hearing and until the beginning of a main hearing. Cases brought to court by the public prosecutor through the guilty plea procedure are only first mentioned kind of cases. The agreement on guilty plea between the defendant and state prosecutor may be concluded before the commencement of the criminal proceedings and not later than by the beginning of the main hearing. There is no available data on the stage of the proceeding when the agreement was concluded. There is no guilty plea procedure in misdemeanour criminal cases.

Q107-1 (2021): In the previous year (2020) the number of guilty plea procedures was unusually low due to two reasons: a stricter criminal framework (regarding illegal crossing of the state border or territory under Article 308 of the Criminal Code) and the impact of the Covid-19 pandemics.

Q107-1 (2020): The reason for fewer negotiations and fewer agreements is mainly a stricter criminal framework for crimes that were still regulated in 2018 in such a way that they could be the subject of negotiations between the prosecutor and the defendant (illegal crossing of the state border or territory under Article 308 of Criminal Code). Due to the above, there was no interest on the part of the defendants as well as the state prosecutors to agree on guilt and criminal sanction as parties to criminal proceedings. In addition to this, an epidemiological reason for measures to prevent the spread of the covid-19 epidemic is cited as the reason for the reduction in negotiations and plea agreements concluded, furthermore, the poor staffing situation and the high workload of state prosecutors who are engaged in urgent matters in the on-call service and in attending court hearings and the prompt announcement of pre-trial hearings shortly after the indictment becomes final, which significantly shortened the time for conducting negotiations and concluding a plea deal.

Q107-1 (2016): From the enforcement of the provisions on guilty plea bargaining procedures in Criminal procedure act in 2012 there is a steady rise in the number of concluded agreements between the defendant and the prosecutor. The proportion of these agreements compared to filed indictments also grows (2012: 1,1 %, 2014: 2,0%, 2016: 3,8 %). The most general interpretation of this trend would be that the parties of criminal procedures have recognised these new instrument as beneficial in terms of speeding up the process of reaching the final decision and the reduction of the sanction that would be issued, if the complete trial took place.

Q109 (General Comment): The communicated data include only traffic offences, stipulated as criminal offences (in the Penal Code) and therefore prosecuted by State prosecutors. There are two such criminal offences: causing a traffic accident through negligence whereby another person is seriously injured or died and audacious driving in road traffic which is committed by a serious breach of road safety regulations, while other cases of traffic offences are not criminal offences, but minor offences and are not included in the provided figures.

Spain

Q055 (General Comment): The structure of the Prosecution services does not distinguish prosecutors by 'instance level'.
However, it distinguishes three categories.
Article 34 of Law 50/1981, (Organic Statute of the Public Prosecutor's Office) distinguishes three categories:
1st Chamber Prosecutors of the Supreme Court, equal to Magistrates of the High Court. The Deputy Prosecutor of the Supreme Court will be considered the President of the Chamber.
2nd Prosecutors, equated to Magistrates.
3. Lawyers-Prosecutors, equated to Judges.

Q055 (2021): The structure of the Prosecution services does not distinguish prosecutors by 'instance level'.
However, it distinguishes three categories: First, First category (''Fiscales de Sala'') Prosecutor of Chamber: Total 32, Males 21, Females 11 (this category includes the Prosecutors of chamber of Supreme Court).
Second. ''Fiscal'': Total 1825, Males 701, Females 1124
Third: ''Abogado-Fiscal'': Total 774, Males 178, Females 596

Q055 (2020): The structure of the Prosecution services does not distinguish prosecutors by 'instance level'.
However, it distinguishes three categories: First, First category (''Fiscales de Sala del Tribunal Supremo'') Supreme Court Prosecutor of Chamber: Total 50, Males 36, Females 14
Second. ''Fiscal'': Total 1830, Males 700, Females 1130
Third: ''Abogado-Fiscal'': Total 681, Males 158, Females 523

Q055 (2018): The structure of the Prosecution services does not distinguish prosecutors by 'instance level'.
However, it distinguishes three categories: First, Total 33, Males 26, Females 7
Second) Total 1779, Males 696, Females 1083
Third) Total 653, Males 161, Females 492

Q055 (2016): The structure of the Prosecution services does not distinguish prosecutors by 'instance level'.
However, it distinguishes three categories: First) Total 25, Males 19, Females 6
Second) Total 1826, Males 738, Females 1088
Third) Total 622, Males 155, Females 467

Q107 (General Comment): In Spain the general rule is that the Prosecutor is party in the criminal cases, but the Prosecutor does not process (with exclusive competence) the criminal cases. The investigation Judge (Juez de Instrucción) does that. Data provided in question 107 tries to adapt the information in the Annual Report of the State Attorney General's Office to the criteria of CEPEJ, by offering the data of cases received by the Prosecution Service in 2020, according to the classification of procedures of the Spanish procedural legislation (diligencias previas, diligencias urgentes, procedimiento por delitos leves, sumarios y procedimientos del jurado). In addition to that, there are other two kinds of actions for which the Prosecution have exclusive competence: Investigation of criminal reponsibility of minors, and preliminary diligences of Article 773.2 of the Criminal Procedural Act.

Q107 (2020): The provided number of incoming cases is the number of the criminal proceedings received by the Prosecution Service (page 1117 of the Annual Report of the Prosecution Service). It is consistent with the explanatory note as it includes “cases submitted to public prosecutors by the police and other bodies as well as victims (if applicable) within the reference year”. It is an official data, provided by the State Attorney Office.

Q107 (2018): Certain number of cases received are re-sent to other porsecutor offices.

Q107-1 (2021): Explanation of the increased number of guilty plea procedures: Probably, coming back to normal activity after covid restrictions.

Indicator 4: Systems for measuring and evaluating the performance of courts

Comments provided by the national correspondents

organised by question no.

Question 055. Number of public prosecutors (on 31 December of the reference year). (Please give the information in full-time equivalent and for posts actually filled, for all types of courts – general jurisdiction and specialised courts).

Question 107. Public prosecutors: Total number of 1st instance criminal cases.

Question 107-1. If the guilty plea procedure exists, how many cases were concluded by this procedure?

Question 109. Do the figures provided in Q107 include traffic offence cases?

Question .

Question .

Question 055

Austria

(General Comment): Data is presented in full time equivalent.

(2014): The numerical values provided in the table are rounded. The accurate figures are: total – 344,83 (171,52 males and 173,31 females); prosecutors at first instance level – 308,69 (147,13 males and 161,56 females); prosecutors at second instance (court of appeal) level – 20,94 (13,04 males and 7,90 females); prosecutors at Supreme Court level – 15,20 (11,35 males and 3,85 females).

(2012): In 2012, the various tasks were more exactly assigned to the number of full time equivalents - dealing with tasks of the prosecution on the one hand and the administrative tasks on the other hand.

Belgium

(2021): Source: FPS Justice - Directorate General for the Judiciary, HR Department of the Judiciary, Notaries and Enforcement agents

(2020): Support Service of the College of Public Prosecutors

(2014): In 2014, the number of professional prosecutors includes the heads of division of the 15 public prosecutors' offices and the heads of the 8 prosecution offices within labour courts.

Bulgaria

(General Comment): The provided data refers to the actual number of employed persons for the year of reference.

(2016): 1511 is the total number of working prosecutors at 31.12.2016; 888 prosecutors at first instance level includes – the prosecutors from 113 Regional Prosecutor`s Offices and 1 Specialized Prosecotr`s Office; 500 prosecutors work in 28 District Prosecutor`s Offices, 7 Appelate Prosecutor`s Offices and 3 Military District Prosecutor`s Offices; 123 are the prosecutors working in Supreme Prosecutor`s Office of Cassation and Supreme Administrative Prosecutor`s Office and 1 Prosecutor General. (The indicated numbers do not include the number of the investigative magistrates in the investigative departments at District Prosecutor`s Offices and National Investigation Service and their administrative heads.

(2014): For 2014, the number of prosecutors acting at 1st instance includes prosecutors of the regional prosecutor's offices, specialized prosecutor's offices and the military prosecutor's offices. The number of prosecutors acting at 2nd instance includes prosecutors from district and appellate prosecutor's offices. The number of prosecutors at Supreme Court level includes prosecutors from the Supreme Prosecutor's Office of Cassation, Supreme Administrative Public Prosecutor's Office, and the Prosecutor GeneralIn contrast with the 2012 evaluation, the number of investigators in the District Investigation Departments at the District Prosecutor's Offices and the National Investigation Service is not taken into consideration for 2014.

(2012): For 2012, the total includes 512 magistrates with position of "investigator in the Investigation Department at the District Prosecution Office". Conversely, these 512 magistrates are not subsumed in the number of prosecutors at 1st instance level. The number of prosecutors at 2nd instance level including Prosecutor's Office of Appeal and Military District Prosecutor's Office encompasses 451 prosecutors and 433 investigators in the Investigation Departments at the District Prosecution Offices and military investigators. The number of prosecutors at Supreme Court level includes 128 prosecutors and 79 investigators at the National Investigation Service.

Croatia

(General Comment): The provided data encompasses all officials in the public prosecutors' offices, including heads of the public prosecutors' offices (the Public Prosecutor of the Republic of Croatia, county and municipal public prosecutors, the head of the Bureau for Combating Corruption and Organised Crime) and all public prosecutors deputies. The number of prosecutors at the first instance level includes all municipal public prosecutors, their deputies, as well as the head of the Bureau for Combating Corruption and Organised Crime and his deputies. The number of prosecutors at the second instance (court of appeal) level includes all county public prosecutors and their deputies. The number of prosecutors at the Supreme Court level includes the Public Prosecutor and his deputies.

(2018): The above information includes all officials in the public prosecutor's offices – all public prosecutors (heads of prosecution offices) and public prosecutors' deputies (deputies of the Public Prosecutor, deputies of the Head of the Bureau for Combating Corruption and Organised Crime and deputies of the county and municipal public prosecutors).
The number of prosecutors at the first instance level includes all municipal public prosecutors (heads of municipal prosecution offices and Head of the Bureau for Combating Corruption and Organised Crime), their deputies, as well as the deputies of the Head of the Bureau for Combating Corruption and Organised Crime. The number of prosecutors at the second instance level (court of appeal) includes all county public prosecutors (heads of the county prosecutors' offices) and their deputies. The number of prosecutors at the supreme court level includes the Public Prosecutor General and his deputies.

(2012): In 2012, the public prosecutors' Office of the Republic of Croatia employed 21 officials. The county public prosecutors' offices employed 155 officials, and the municipal public prosecutors' offices employed 410 officials. Out of 617 officials, 385 or 62.4% were women. The number of officials remained the same as in 2011. As of 31 December 2012, 7 public prosecutor's posts and 130 deputy public prosecutor's posts were vacant.

Cyprus

(2020): The number includes also legal advisors to the Attorney General's office.
The number increased because more positions of prosecutors were approved.

(2014): All prosecutors appear before all courts.

Czech Republic

(General Comment): The Czech Republic is endowed with a system of 4 levels of State prosecution offices: district, regional, high and supreme. The number of high public prosecutors is included in the number of prosecutors at second instance level.

Denmark

(General Comment): The public prosecutors are the Director of Public Prosecutions, the state prosecutors, the police directors as well as the persons who are assumed to assist them in the judicial processing of criminal cases.
Organizationally, the Prosecution Service consists of the Director of Public Prosecutions and state prosecutor's offices (central prosecution service) with associated police districts (local prosecution service).
The Director of Public Prosecutions and selected employees appear before the Supreme Court. At the end of 2021, 58 prosecutors were employed at the Director of Public Prosecutions office. 6 of them appear before the Supreme Court. The Director of Public Prosecutions is superior to the other public prosecutors and supervises them and handles complaints about decisions made by the state prosecutors office as the first instance. The state prosecutors' offices appear before the high courts (second instance – court of appeal). The state prosecutors supervise the police directors' handling of criminal cases and handle complaints about decisions made by the police directors regarding criminal prosecution.
The directors of police and the public prosecutors who are employed by them appear before the district courts.
The number is the actual number of employees in full-time equivalent as of December 2021. Full-time equivalents are allocated on the 1st of the month, and it is therefore not possible do draw a precise number for 31 December. The number is therefore drawn for 1 December 2021 and scaled up to a full year. The actual numbers of full-time equivalents are calculated as digitals numbers which is not possible to add in the questionnaire. This is why the total number of prosecutors does not add up when compared to the number of males and females.

(2021): The number is the actual number of employees in full-time equivalent as of December 2021. Full-time equivalents are allocated on the 1st of the month, and it is therefore not possible do draw a precise number for 31 December. The number is therefore drawn for 1 December 2021 and scaled up to a full year. The actual numbers of full-time equivalents are calculated as digitals numbers which is not possible to add in the questionnaire. This is why the total number of prosecutors does not add up when compared to the number of males and females.

(2016): The observed discrepancies are due to ordinary changes in staffing.

(2014): The variations over the period 2012-2014 are due to the fact that in 2012, information was missing about prosecutors engaged in tasks concerning administrative cases (Ledelsessekretatiat) and prosecutors employed by the national police (Rigspolitiet).

Estonia

(General Comment): The categorization of questions 55 and 56 regarding public prosecutors do not exist in Estonia.

Finland

(General Comment): The National Prosecution Authority comprises the Office of the Prosecutor General that acts as the general administrative unit, and five prosecution districts: Southern Finland, Western Finland, Northern Finland, Eastern Finland and Åland. The National Prosecution Authority has 34 offices around Finland. The Prosecutor General is the supreme prosecutor and the head of the prosecution service. The Prosecutor General directs and develops prosecutorial activity by issuing general instructions and guidelines to the prosecutors. She/he also appoints district prosecutors. The Prosecutor General may take over a case from a prosecutor, but cannot order a prosecutor to decide the case in any given manner. She/he can also self-decide on the bringing of charges and designate a prosecutor to pursue the case in the courts. The Deputy Prosecutor General decides the matters in his/her competence on the same authority as the Prosecutor General. He/she also acts as a deputy for the Prosecutor General when necessary. For regular prosecutorial tasks, the Office of the Prosecutor General has state prosecutors whose jurisdiction covers the entire country. Most criminal matters (89 256 cases annually) are dealt with by the prosecution areas. The Office of the Prosecutor General deals mainly with criminal cases with wider significance to society as a whole, a few dozen every year. Prosecutors in Finland are not bound on Court instances, and every prosecutor is expected to, in a normal situation, to handle and prosecute the criminal case all the way to the Supreme Court, if needed.

(2020): Prosecutors in Finland are not bound on Court instances.

France

(2021): Data taken from an extraction of the LOLFI SIRH - Number of public prosecutors on 31/12/2021. The values are expressed in FTEs.
Source DSJ
The data have been rounded upwards from 0.5 and downwards below, with the exception of the data relating to the number of male prosecutors at the Courts of appeal (the exact figure is 249.6) in order to ensure vertical consistency.

(2020): Only the judicial order is concerned

(2014): For 2014, State prosecutors, heads of public prosecution services, are included.

(2012): For 2012, only prosecutors of courts of law appointed by 31 December 2012 were counted.

Germany

(General Comment): The information relates to the number of job shares for public prosecutors. There are no absolute figures for the number of persons. The information on the job shares count a judge working full-time as 1. A judge working part-time is counted as the fraction of 1 which corresponds to the proportion of his/her working hours to full-time (e.g. 0.5 for a judge working half the usual number of hours).

(2021): Figures represent full-time equivalents as of 31. December 2021
"Pact for the Rule of Law" (Pakt für den Rechtsstaat):
The federal level and the Länder on 31 January 2019 agreed on a ‘Pact for the Rule of Law’. The pact foresees additional funding of EUR 220 million from the federal level for the Länder to create 2000 additional posts for judges and prosecutors, including the necessary administrative staff by 31 December 2021. In addition, the federal level is creating 24 additional posts at the Federal Court of Justice and 71 posts at the Prosecutor General of the Federal Court of Justice. New posts that were created after the beginning of 2017 are included into the count.
A joint report by the Federal Government and the Länder on the state of implementation of the pact was presented on 10 June 2021. The report concluded that the implementation has well progressed, noting in particular that over 2 700 post for judges and prosecutors have been created so far, with 2 500 being filled.
It should be noted that one of goals of the ‘Pact for the Rule of Law’ is to address the challenges related to the upcoming wave of retirements of judges and public prosecutors.

(2020): Figures represent full-time equivalents as of 31. December 2020
"Pact for the Rule of Law" (Pakt für den Rechtsstaat):
The federal level and the Länder on 31 January 2019 agreed on a 'Pact for the Rule of Law'. The pact foresees additional funding of EUR 220 million from the federal level for the Länder to create 2000 additional posts for judges and prosecutors, including the necessary administrative staff by 31 December 2021. In addition, the federal level is creating 24 additional posts at the Federal Court of Justice and 71 posts at the Prosecutor General of the Federal Court of Justice. New posts that were created after the beginning of 2017 are included into the count.

The report concluded that the implementation has well progressed, noting in particular that over 2 700 post for judges and prosecutors have been created so far, with 2 500 being filled.
It should be noted that one of goals of the 'Pact for the Rule of Law' is to address the challenges related to the upcoming wave of retirements of judges and public prosecutors.

(2016): Figures indicate the number of full-time equivalent staff (not the number of individuals). A prosecutor working full hours is counted as a full-time equivalent (i.e. 1). A prosecutor working part-time is counted as a fraction of 1. This fraction corresponds to the number of hours worked in relation to a full-time equivalent (e.g. 0.5 for a prosecutor working half the usual number of hours).

Greece

(General Comment): In the position of Paredron of the court of First Instance and prosecutor's office Of civil and criminal courts are appointed graduates of the National School of judges, according to what is defined in Article 36 of N. 4871/2021 (a' 246). The graduates from the directions of civil-criminal judges and prosecutors of the National School of judges are appointed in the order which have in the relevant tables and are placed preferably, respectively, in the courts of First Instance and in Public Prosecutors ' Offices In Athens, Piraeus, Thessaloniki, Patras, Heraklion and Larissa. The paredroi of First Instance and the prosecutor's office have ten (10) months trial service, during of which they have all the rights and obligations of the ordinary judicial officer and inspected, like regular judges. The reports of the paredroi of the court of First Instance on performance, statistics of their performance and any other useful information or information on the performance or their suitability are stored in a specialist individual file, which, after the end of the trial service the file is submitted to the Supreme Court Council through the Minister of Justice.

(2021): The above data are given by the Directorate of organization and operation of Justice with the cooperation of JUSTSTAT.

(2020): Positions by law have increased.Gender data are not kept.

Hungary

(2021): On 31 December 2021, two prosecutors were serving in the Ministry of Justice, on a temporary basis. They are included in the total number of prosecutors; however, they are not taken into account when giving the number of prosecutors serving at different instances (court levels). All prosecutors are appointed to a full-time job; however, it occurs that some prosecutors perform part-time service on a temporary basis for various reasons, such as raising children.
The 'number of prosecutors at first instance level' is an aggregate of the number of prosecutors serving at district-level prosecution services and other prosecution services equivalent to that level, as well as the number of prosecutors serving at high prosecution services. A part of the prosecutors serving at high prosecution services proceed also at second instance (high court) level. The number of prosecutors serving at high prosecution services is 520 (226 males, 294 females), while the number of prosecutors serving at district-level prosecution services (other prosecution services equivalent to that level) is 1210 (439 males, 771 females).
The 'number of prosecutors at second instance (court of appeal) level' means the number of prosecutors serving at appellate prosecution services.

(2016): Another 9 prosecutors were temporarily serving in the Ministry of Justice. They are included in the total number of prosecutors, but we did not take them into account at each level.

Ireland

(General Comment): Allocation of prosecutors work is not in all instances divided as per the questions above. The sub-categories at 1, 2 and 3 of the question posed do not apply in the Irish system.

(2020): Our court going staff number at the 31st December 2020 is 128 - (50 male / 78 female). This figure includes our Prosecutors and Technical staff - Legal Executive. It also includes 1 Trainee Solicitor. In our Office our Technical Staff and Trainee Solicitors are court going staff and manage the running of a prosecution at trial in the same manner as some of our Prosecutors. In relation to the increase in staff resources for the ODPP, and the context for same, please see the forewords of our Annual Report 2020 and our Annual Report 2019 available at https://www.dppireland.ie/publication-category/annual-reports/.

(2018): There were 108.7 fulltime equivalent lawyers (fte) (headcount 111) on the payroll of the Office of the Director of Public Prosecutions at 31 December 2018 – 65.6 fte (67 headcount) of these were female and 43.1 fte (44 headcount) were male.

(2016): Of the staff complement in the Office of the Director of Public Prosecutions at the end of the reference year, 102 were of professional or technical grade at Prosecutor equivalent level or above.

(2014): Parts' of Full Time Equivalents were counted in decimal figures and have been rounded up. The total represents the number of qualified Solicitors and Barristers employed directly in the Office of the Director of Public Prosecutions (DPP). A proportion of these lawyers represent the DPP in the District Court. Members of the police force also prosecute in this court within a prescribed 'delegated authority' from the DPP. Members of the independent Bar act on behalf of the DPP, on a self-employed basis, in first instance and appellate courts. There are a further 32 State Solicitors contracted to provide a solicitor service to the DPP in cases heard outside of the capital.

Italy

(2016): There is no specific explanation concerning the increase in the total number of prosecutors at Supreme Court level. However, numbers are small and therefore percentage changes vary more harshly.

Latvia

(2020): The increase in the number of prosecutors in court district level prosecutor's offices is related to the imposition of an obligation on the prosecutor of the court district level prosecutor's office, and not on the chief prosecutor of the district (city) prosecutor's office to perform the duties of a higher prosecutor.
Regarding the decrease in the number of women working in the Prosecutor General's Office, it must be concluded that in total the number of women working has decreased by 8 persons. One of the reasons could be reaching the maximum age for performing the duties prescribed by law or the death of a person.

(2012): During 2011 and 2012, prosecutors' offices increased the number of posts which resulted in the appointment of new prosecutors. In order to decide on the promotion of prosecutors, their professional qualification has been evaluated and their quality of work performance analysed, as well as their participation in trainings, work statistical indicators, etc. Pursuant to the collected data, more male prosecutors have been promoted to higher posts.

Lithuania

(2020): After the reorganization of the prosecution service in 2011, 5 second instance prosecutors' offices were merged with 51 separate first instance prosecutor's office in their area of operation, and thus 5 regional first-second instance prosecutor's offices were established.

(2014): In 2012, the 56 territorial prosecutor's offices have been reorganised into 5 regional prosecutor's offices with 10 district prosecutor's offices functioning inside them (first instance and second instance levels have been combined). Currently, only two instances exist.

(2012): In 2012, after reorganization of the prosecution service, the first and the second instances have merged. Currently, two instances exist instead of three. Besides, the total number of prosecutors has decreased because some prosecutors have left the service, but no new prosecutors have been recruited.

Luxembourg

(General Comment): The figure in point 3 includes both second instance and Supreme Court prosecutors, as they are grouped together in the Superior Court of Justice, which is subdivided into the Court of Appeal and the Court of Cassation.

(2018): Le personnel des juridictions judiciaires et administratives a connu une croissance soutenue ces dernières années, tel que prévu par la loi modifiée du 7 mars 1980 sur l'organisation judiciaire. Ceci explique les variations importantes observées entre 2016 et 2018 au niveau du personnel de la magistrature et du personnel non-juge. Les magistrats appartenant à la cellule de renseignement financier (CRF) sont dorénavant exclus de la question 55.1 (suite au détachement de la CRF du Parquet de Luxembourg) puisqu'ils n'exercent plus de fonction juridictionnelle proprement dite. Au total, la CRF compte 4 magistrats et un attaché de justice en 2018. L'effectif du Parquet d'arrondissement reste toutefois inchangé suite à la création des nouveaux postes affectés à la CRF
Les magistrats du pool de complément sont inclus dans les chiffres de la question 55.3.

(2016): The number of prosecutors indicated here as working at the Supreme Court corresponds to the number of prosecutors working at the Superior Court of Justice (which includes prosecutors intervening at the Court of Appeal and Court of Cassation level).

(2014): The number of male public prosecutors decreased between 2012 and 2014, while the number of female public prosecutors increased for the same period. These variations have for sole explanation the normal progress of career of magistrates of the public prosecution office at first instance.

Malta

(General Comment): All the lawyers working in the Office of the AG prosecute cases in the criminal courts, but it is not possible, as yet to distinguish between 1st and 2nd Instance Courts. All full-time lawyers have been included in the above figure except the AG herself.

(2020): The increase in the number of lawyers working at the Office of the AG follows the reform in 2020 whereby the AG has taken up exclusively the role of prosecutor general (the advisory role to government has been vested in the State Advocate). Given this special focus, the Office of the AG has been recruiting more lawyers in order to meet the case demands of the courts.

(2016): All the lawyers at the Office of the Attorney General work both in Court as well as advisers to the various Ministries and Departments. All prosecuting officers at the Office of the Attorney General act at all court levels. Thus, prosecutors are not classified according to the case instance.

(2014): These past few years there has been an increase in the number of female law graduates, which will definitely reflect in the employment trends within this sector.

Netherlands

(General Comment): The Dutch Supreme Court does not have public prosecutors. The office of the Procurator General and Advocates-General at the Dutch Supreme Court is separate from Dutch public prosecution and the Ministry of Justice. They have a different function.

(2020): The Supreme Court does not have (public) prosecutors. The office of the procurator general and attorneys general that the Supreme Court houses, is separate from the public prosecution and does not function as prosecution. They have a different function.

(2016): total 927,5 358,12 569,38
1 842,25 312,72 529,53
2 85,25 45,40 39,85

(2014): For 2014, the number of prosecutors at first instance level includes 8 prosecutors who are still in education (7 females; 1 male). Prosecutors at Supreme Court level are not employees of the National Prosecution Service and therefore not included in the total.

Poland

(General Comment): The table under item 1 contains the number of district prosecutors and under item 2 the number of circuit prosecutors. Whereas under item 3 is the number of prosecutors in the position of a prosecutor of the National Prosecutor's Office. The total is higher than the sum of the subcategories because it takes into account the number of prosecutors employed in regional prosecutor's offices, since according to Article 16 of the Law of 28 January 2016 - Law on Prosecutor's Office (Journal of Laws of 2021, item 66) the common organizational units of the prosecutor's office are: National Prosecutor's Office, regional prosecutor's offices, circuit prosecutor's offices and district prosecutor's offices. All items (1-3) include prosecutors for military matters.
The inclusion of the number of prosecutors employed in regional prosecutors' offices only in the total number of prosecutors is due to the design of the table. The table allows prosecutors to be entered: 1. first level, 2. second level 3. highest level. The table does not provide an opportunity to depict the full structure of the prosecutor's office in Poland, which consists of four levels: district, circuit and regional prosecutor's offices and the National Prosecutor's Office with a rank equivalent to the Supreme Court. Regional prosecutors' offices are a separate ('third') level of prosecution and the number of prosecutors employed in them cannot be 'split into instances'.

(2021): The table under item 1 contains the number of district prosecutors and under item 2 the number of circuit prosecutors. In contrast, under item 3 is the number of prosecutors in the position of prosecutor of the National Prosecuting Authority. The total is higher than the sum of the sub-categories, as it takes into account the number of prosecutors employed in regional prosecutor's offices - a total of 402 prosecutors (154 women and 248 men), as, pursuant to Article 16 of the Act of 28 January 2016 - Law on the Public Prosecutor's Office (Journal of Laws of 2022, item 1247), the common organisational units of the public prosecutor's office are: National Prosecutor's Office, regional prosecutor's offices, circuit prosecutor's offices and district prosecutor's offices.
All items (1 - 3) include military prosecutors, of whom 77 are employed at the district prosecutor's office level, including 19 women and 58 men; at the regional prosecutor's office level, 45 military prosecutors, including 9 women and 36 men; and at the National Prosecutor's Office, 17 military prosecutors (4 women and 13 men).

(2020): The table under item 1 contains the number of district prosecutors and under item 2 the number of circuit prosecutors. Whereas under item 3 is the number of prosecutors in the position of a prosecutor of the National Prosecutor's Office. The total is higher than the sum of the subcategories because it takes into account the number of prosecutors employed in regional prosecutor's offices - a total of 391 prosecutors (151 women and 240 men), since according to Article 16 of the Law of 28 January 2016 - Law on Prosecutor's Office (Journal of Laws of 2021, item 66) the common organizational units of the prosecutor's office are: National Prosecutor's Office, regional prosecutor's offices, circuit prosecutor's offices and district prosecutor's offices. For 2020, all items (1-3) include prosecutors for military matters, who at the level of the district prosecutor's office are employed by 85, including 22 women and 63 men; at the level of the regional prosecutor's office - 38 prosecutors for military matters, including 8 women and 30 men, and at the National Prosecutor's Office - 13 prosecutors for military matters (2 women and 11 men).

(2018): Within the organizational structure of general organizational units of the prosecution office, there are Appellate Public Prosecutor’s Offices, which function as a third rank and employ altogether 367 prosecutors (149 women and 224 men). Additionally, 65 prosecutors of military affairs (including 16 women and 49 men) are employed at the level related to the Regional Public Prosecutor’s Office; 30 prosecutors of military affairs (including 6 women and 24 men) - at the level related to the District Public Prosecutor’s Office, and 5 prosecutors of military affairs (5 men) - in the National Public Prosecutor’s Office.

Portugal

(General Comment): The communicated data encompasses the number of magistrates of the Public Prosecution Service in courts of first instance, second instance and high superior courts, except the Constitutional Court.

(2020): No specific explanation for the numbers above.

(2018): In absolute terms the decrease from 2016 to 2018 is from 7 to 5 female prossecutors, which is not significative in absolute terms, but acquires a more relevant expression in relative terms.

(2012): The increase in the number of female prosecutors is due to the general tendency of increase of female prosecutors in the last decade at first instance courts. It is natural that gradually the proportion of female prosecutors in the higher courts tends to grow as a result of their career progress. The number of prosecutors in the High Judicial Court and in the High Administrative Court, increased. In particular, in the High Administrative Court there was a strong reinforcement of these professionals in 2011 in order to respond to a pressing need of prosecutors in this court.

Romania

(General Comment): In Romania there are four level of courts/prosecution offices attached to these courts (first instance courts, tribunals, courts of appeal and the High Court of Cassation and Justice). In line with our previous reports in this matters, in the table above prosecutors from prosecution offices of the tribunals and of the courts of appeal shall be included in the category "second instance professional prosecutors".

(2018): In Romania there are four level of courts/prosecution offices attached to these courts (first instance courts, tribunals, courts of appeal and the High Court of Cassation and Justice). In line with our previous reports in this matters, in the table above prosecutors from prosecution offices of the tribunals and of the courts of appeal shall be included in the category "second instance professional prosecutors".

(2014): The prosecutor’s offices are established in the following hierarchy: the prosecutor’s offices attached to the courts of law (point 1 of the table), the prosecutor’s offices attached to tribunals and prosecutor’s offices attached to the courts of appeal (point 2), and the Prosecutor’s Office attached to the High Court of Cassation and Justice (point 3).

(2012): The prosecutor’s offices are established in the following hierarchy: the prosecutor’s offices attached to the courts of law (point 1 of the table), the prosecutor’s offices attached to tribunals and prosecutor’s offices attached to the courts of appeal (point 2), the Prosecutor’s Office attached to the High Court of Cassation and Justice (point 3).

Slovak Republic

(General Comment): The number of prosecutors at the Supreme Court level also includes prosecutors of the Special Prosecution Bureau. The latter deals with crimes of corruption and the most severe offences including organized crime. It intervenes in first instance, but acts as an organizational part of the General Prosecutor’s Office.

Slovenia

(General Comment): The number is reported in FTE.
In the Slovenian criminal justice system state prosecutors are exclusively authorized to conduct public prosecution in criminal matters on behalf of society and in the public interest. The Constitution and law guarantee autonomy in status and functioning of state prosecutors. Decisions made by the state prosecutor shall not be interfered with, except by way of general instructions and assigning of a case in the manner determined by the law.
Slovenian state prosecutors perform their function in 13 organizational units – prosecution offices. There are 11 District State Prosecutor's Offices and one Specialized State Prosecutor's Office of the Republic of Slovenia, where local, district and senior state prosecutors are positioned. At the Office of the Prosecutor General of the Republic of Slovenia supreme state prosecutors and the State Prosecutor General perform their functions. Some state prosecutors of lower ranks are assigned to the office perform demanding professional tasks.
There are no higher state prosecutor's offices as the proceedings at the courts of appeal are governed by the district prosecutor's offices. According to the State Prosecution Service Act prosecutors with the rank of at least local state prosecutor may represent a case at local courts, prosecutors with the rank of at least district state prosecutor may represent a case at district courts, prosecutors with the rank of at least senior state prosecutor may represent a case before higher courts and only supreme state prosecutors may represent a case at the Supreme Court. Local state prosecutors may also appear at district courts, if authorized by the head of state prosecutor's office for certain categories of matters, for a particular matter, for certain categories of procedural acts or for a particular procedural act. Local and district prosecutors may in their cases appear along with a senior prosecutor at courts of appeal, if authorized by the head of an appellate division of the state prosecutor's office for a particular case. Senior and supreme state prosecutors are competent to represent a case at before first instance courts.
Local and district prosecutors are reported as prosecutors at first instance level, senior prosecutors as prosecutors at second instance level and supreme prosecutors as prosecutors at Supreme Court level, without regard to the court instance where they perform their function, or that they are assigned to another institution for a limited period of time (e.g for the administration of State Prosecutorial Council).
The number of posts of state prosecutors is set by the Government's Regulation. However the actual number of state prosecutors is lower than the number se by regulation due to different factors.

(2021): Before 2021, data was reported in gross numbers. For 2021 data, the FTE format is observed.
The above data does not include six State prosecutors who perform other duties (assigned to The Council of State Prosecutors, appointed to Eurojust, the European Public Prosecutor and the European Delegate Prosecutor).

(2020): The information is in form of gross data. According to the methodology used for reporting judges and court staff (FTE) – by which part-time employees are converted to full-time time by the calculation of working hours, the number amounts to 193, as a number of prosecutors are not working full time.

(2016): Slovenian state prosecutors perform their function in 13 organizational units. There are 11 district prosecutor's offices and one Specialised State Prosecutor's Office of The Republic of Slovenia, where local, district and higher state prosecutors are positioned. At The Office of the Prosecutor General of the Republic of Slovenia supreme state prosecutors and State Prosecutor General perform their functions. Here are also some state prosecutors of lower ranks assigned to perform demanding professional tasks.
There are no higher state prosecutor's offices as the proceedings before the courts of appeal are governed by the district prosecutor's offices. According to the State Prosecutor Act prosecutors with the rank of at least local state prosecutor may represent a case before local courts, prosecutors with the rank of at least district state prosecutor may represent a case before district courts, prosecutors with the rank of at least higher state prosecutor may represent a case before higher courts and only supreme state prosecutors may represent a case before the supreme court. Local state prosecutors may also appear before district courts if authorized by the head of a state prosecutor's office for certain categories of matters, for a particular matter, for certain categories of procedural acts or for a particular procedural act. According to amendment of legislation in 2015 local and district prosecutors may in their cases appear along with a higher prosecutor before the courts of appeal if authorized by the head of an appellate division of the state prosecutor's office for a particular case. Higher and supreme state prosecutors are competent to represent a case also before first instance courts.
In the context of question 55 we counted local and district prosecutors as prosecutors at first instance level (164), higher prosecutors as prosecutors at second instance level (42) and supreme prosecutors as prosecutors at Supreme Court level (11) without regard of the rang of court before they perform their function in fact or if they are assigned to other institution for a limited period of time (e.g for the administration of State Prosecutorial Council). The information is in form of full-time equivalent.

(2014): In November 2011, the new State Prosecutor Act came into force. It dissolved the special department of the Office of the State Prosecutor General, responsible for the 2d instance level. Proceedings before courts of appeal are now governed by the 4 State circuit prosecutor offices in towns where the higher courts are located. Prosecutors are organised in 12 offices (11 circuit offices and one Specialised State Prosecutor's Office, where circuit and higher prosecutors work) and the Supreme State Prosecutor Office (where supreme State prosecutors and the general State prosecutor work). The function "assistant State prosecutor" changed in "local State prosecutor". The Specialised State Prosecutor's Office for dealing with the most severe criminal offences was established.

(2012): In November 2011, the new State Prosecutor Act came into force. It dissolved the special department of the Office of the State Prosecutor General, responsible for the 2d instance level. Proceedings before courts of appeal are now governed by the 4 State circuit prosecutor offices in towns where the higher courts are located. Prosecutors are organised in 12 offices (11 circuit offices and one Specialised State Prosecutor's Office, where circuit and higher prosecutors work) and the Supreme State Prosecutor Office (where supreme State prosecutors and the general State prosecutor work). The function "assistant State prosecutor" changed in "local State prosecutor". The Specialised State Prosecutor's Office for dealing with the most severe criminal offences was established.

Spain

(General Comment): The structure of the Prosecution services does not distinguish prosecutors by 'instance level'.
However, it distinguishes three categories.
Article 34 of Law 50/1981, (Organic Statute of the Public Prosecutor's Office) distinguishes three categories:
1st Chamber Prosecutors of the Supreme Court, equal to Magistrates of the High Court. The Deputy Prosecutor of the Supreme Court will be considered the President of the Chamber.
2nd Prosecutors, equated to Magistrates.
3. Lawyers-Prosecutors, equated to Judges.

(2021): The structure of the Prosecution services does not distinguish prosecutors by 'instance level'.
However, it distinguishes three categories: First, First category ("Fiscales de Sala") Prosecutor of Chamber: Total 32, Males 21, Females 11 (this category includes the Prosecutors of chamber of Supreme Court).
Second. "Fiscal": Total 1825, Males 701, Females 1124
Third: "Abogado-Fiscal": Total 774, Males 178, Females 596

(2020): The structure of the Prosecution services does not distinguish prosecutors by 'instance level'.
However, it distinguishes three categories: First, First category ("Fiscales de Sala del Tribunal Supremo") Supreme Court Prosecutor of Chamber: Total 50, Males 36, Females 14
Second. "Fiscal": Total 1830, Males 700, Females 1130
Third: "Abogado-Fiscal": Total 681, Males 158, Females 523

(2018): The structure of the Prosecution services does not distinguish prosecutors by 'instance level'.
However, it distinguishes three categories: First, Total 33, Males 26, Females 7
Second) Total 1779, Males 696, Females 1083
Third) Total 653, Males 161, Females 492

(2016): The structure of the Prosecution services does not distinguish prosecutors by 'instance level'.
However, it distinguishes three categories: First) Total 25, Males 19, Females 6
Second) Total 1826, Males 738, Females 1088
Third) Total 622, Males 155, Females 467

Question 107

Austria

(General Comment): "3.1.3 Discontinued by the public prosecutor for reasons of opportunity": discontinued investigations for reasons of opportunity are only counted by persons against which the investigation was discontinued. In one case, more than one person can be accused and the investigation can be discontinued for reasons of opportunity against more than one accused person. Therefore, the person-count was not delivered because it is inconsistent with the case-count (3.1.1, 3.1.2 and 3.1.4). The number of cases in which an investigation was discontinued for reasons of opportunity is included in the number provided for 3.1.1 and 3.1.2 but cannot be evaluated separately with the standard statistic tools of the Federal Ministry of Justice of Austria.
The provided number of cases discontinued for other reasons (3.1.4) contains cases discontinued because the offender is fugitive or an investigation may not be instituted or continued by law (e.g. because of diplomatic immunity of the offender), also cases (investigations) that were not instituted in the first place because the of a lack of an initial suspicion and all other cases that were discontinued but can not be allocated to one of the above mentioned reasons or the other reasons under 3.1.
Under 3.3, closed cases against unidentified offenders were counted which were discontinued because of another reason than not identifying the offender in the end (mostly cases in which at least one formerly unidentified offender could be identified and therefore the case against the unidentified offender(s) is closed and another (new) case against the known offender(s) is opened).

(2020): The Austrian code of criminal procedure knows measures that the public prosecutor can take in cases of minor criminal offences ("Diversion"). Comparable measures have to be taken by the public prosecutor under certain circumstances under the addictive drug act ("Suchtmittelgesetz"). Until 2019, the last-mentioned cases were counted as files "discontinued by the public prosecutor due to the lack of an established offence or a specific legal situation" (3.1.2). Since 2020, these cases are now counted as "concluded by a penalty or a measure imposed or negotiated by the public prosecutor" (3.2). These changes explain the higher number of cases under 3.1.2. Cases brought to court declined mainly because in 2020 there were far less incoming cases (-13 % compared to 2018).
The number of persons against which an investigation was discontinued by the public prosecutor for reasons of opportunity in 2020 is 9 672.

Belgium

(General Comment): "Since the reform of the judicial landscape that came into effect on April 1, 2014, our country has 15 "first degree" public prosecutors' offices (14 public prosecutors' offices + federal prosecutor's office). The data of the federal prosecutor's office are not included here.
The data only concern correctional offenses committed by persons of legal age and persons who are not (yet) identified. Proceedings against minors are handled by the youth section of the public prosecutor's office. The unit of account is a criminal case: a case can have none, one or more defendants and/or one or more offences.
Dismissals for 'other reasons' refer only to cases in which it was possible to determine in the database that they had been closed by a dismissal for which the reason was not entered or was not correctly registered. In fact, when the reason is correctly recorded, the case is then entered under headings 3.1.1, 3.1.2 or 3.1.3. Therefore, the 'other reasons' heading is for 'unknown reasons' and therefore does not include 'special' reasons." "

(2021): Annual statistics of the Public Prosecution services - Search and prosecution of criminal cases by the public prosecutor's offices at the courts of first instance (http://www.om-mp.be/stat): tables 1, 6, 9 and 11.
The figures in the table have been extracted from the database of the College of General public prosecutors, which is fed by the records of the correctional sections of the public prosecutors' offices at the courts of first instance (MaCH system).
The unit of account is a criminal case: a case can have none, one or more defendants and/or one or more offences.
For point 3.4: In order to count the number of cases brought to courts (55 585 cases), we counted on the one hand all the cases that were closed as a result of a direct summons (41 324 cases) and on the other hand all the cases that were closed as a result of a first fixation before the council chamber in the framework of the settlement of the proceedings (14 261 cases). Indeed, all these cases are also counted as cases closed by the prosecution in the annual statistics of the Public Prosecution services (see table 9).
Additional information on point 3.2:
Of the 100 567 cases closed by a sanction or a measure imposed or negotiated by the King prosecutor (see table 9), 55 167 cases were closed following the payment of a penal transaction; 23 743 cases were closed following an administrative sanction; 19 169 cases were closed as a result of pre-trial probation; 2 446 cases were closed following a successful mediation procedure and measures; 42 cases were closed after referral to the head of the corps.

(2020): "The figures in the table have been extracted from the Data Bank of the College of Public Prosecutors, which is fed by the records of the correctional sections of the Public Prosecutor's Offices at the first instance courts (MaCH system). The data presented below correspond to the status of the database as of January 9, 2021. Useful notes for the interpretation of the data:
Of the 88,614 cases that ended with a sanction or a measure imposed or negotiated by the public prosecutor
- 48,205 cases were closed following the payment of a penal transaction, - 22,091 cases were closed following an administrative sanction
- 15.969 cases were closed as a result of pre-trial probation,
- 2.308 cases were closed following a successful criminal mediation procedure, - 41 cases were closed after referral to the head of the corps.
Of the 122,581 cases closed by the public prosecutor for other reasons. These are :
- 6,249 cases in which the suspect is the subject of an alert. Once the suspect has been discovered, the case can be reopened.
- 40,748 cases that were referred for disposition. A case that has been sent for disposal is a closed case for the prosecutor's office (its division) that made the decision. The recipient of this case will open a new case and start the judicial investigation.
- 75,584 cases were joined. If one or more cases are joined to a parent case, all subsequent decisions are registered in the parent case. The daughter case receives the joinder decision.
In order to count the number of cases brought before the courts (47,274 cases), in contrast to previous years, we counted on the one hand all cases that were closed as a result of a direct summons (33,105 cases) and on the other hand all cases that were closed as a result of a first determination before the council chamber within the framework of the settlement of the proceedings (14,169 cases). In fact, all these cases are also counted as cases closed by the public prosecutor's office in the annual statistics of the public prosecutor's office.
In the previous questionnaires we only counted direct summonses from the Public Prosecutor's Office to the correctional chambers (31,737 cases in 2020), summonses via accelerated procedure (1,159 cases in 2020) and correctionalizations (78 cases in 2020) and referrals to the correctional chambers of the courts following a first fixation before the council chamber within the framework of the settlement of the procedure (7,592 cases in 2020). A part of these referrals relates to cases that were initiated as a result of a civil action. Therefore, these cases were not initiated by the prosecution.
The numbers of incoming, processed and pending cases have all increased for the same reason. Indeed, in 2020, the health crisis due to the outbreak of COVID-19 began. The government took measures to combat this crisis, including several periods of containment. The Public Prosecutor's Office was responsible for taking criminal action against non-compliance with these measures, which explains the sharp increase in the number of new cases and the fact that, at the same time, the flow of other types of cases did not decrease in the same proportions.
Pending cases are cases that are being processed at a given time. If the inflow increases significantly, the number of pending cases will increase accordingly and reach a higher level.
The increase in the "terminated with penalty" and "brought to court" headings is also related to the health crisis. The primary response to a COVID-19 non-compliance violation was a settlement (recorded under "terminated by penalty"). In the case of non-payment of the settlement, repeat offenses, or serious violations of these measures, the criminal policy was to bring the

(2016): 2016 statistical data are not (yet) available due to the change in ITC applications used in Public Prosecution.

(2014): In 2014, on top of the 447 132 discontinued cases listed in Q107 and Q108, 36 914 other discontinued cases have to be added (administrative fine, pretorian probation, identification of the offender, unknown reason). Actually, in 2014, 484 046 cases were discontinued. Out of the 10 126 cases concluded by a penalty or a measure imposed or negotiated by the public prosecutor, 7 363 cases were concluded by the payment of a criminal transaction and 2 763 cases - by a successful criminal mediation procedure.

(2012): In 2012, on top of the 478 505 discontinued cases listed in Q107 and Q108, 37 471 other discontinued cases have to be added (administrative fine, pretorian probation, identification of the offender, unknown reason). Actually, in 2012, 515 976 cases were discontinued. Out of the 9 477 cases concluded by a penalty or a measure imposed or negotiated by the public prosecutor, 6 677 cases were concluded by the payment of a criminal transaction and 2 800 cases - by a successful criminal mediation procedure.

Bulgaria

(General Comment): 1) "Pending cases on 1 Jan. ref. year": the unresolved pre-trial proceedings (PTPs) by a prosecutor as of 1 January of the reference year are reported.
2) “Incoming/received cases”: the closed PTPs;
3) “Processed cases”: the decided PTPs by a prosecutor and is the total value of the data from four indicators (3.1 + 3.2 + 3.3 + 3.4), with reflected types of decisions under the PTPs;
3.1.) “Discontinued during the reference year”: the terminated PTPs (including those by prescription) are reported and the total value of the data from the next four indicators (3.1.1 + 3.1.2 + 3.1.3 + 3.1.4.), with reflected types of terminations;
3.1.1) "Discontinued by the public prosecutor because the offender could not be identified" indicates NAP ;
3.1.2) "Discontinued by the public prosecutor due to the lack of an established offense or a specific legal situation": the terminated PTPs, incl. those by prescription;
3.1.3) "Discontinued by the public prosecutor for reasons of opportunity " the NAP is indicated (analogous to the previous questionnaires); 3.1.4) the indicator "Discontinued for other reasons" indicates NAP;
3.2) "Concluded by a penalty or a measure imposed or negotiated by the public prosecutor " is indicated NAP;
3.3) “Cases closed by the public prosecutor for other reasons”: the suspended PTPs are reported, as well as the PTPs sent by competence (for the respective prosecutor's office, although these cases are essentially unresolved they are closed);
3.4) “Cases brought to court” the submitted PDs in the court are reported;
4) “Pending cases on 31 Dec. ref. year”: the number of pending cases at the end of the year refers to the unresolved pre-trial proceedings by a prosecutor. Regarding the cases sent by competence, the mathematical calculation for collecting the values is not applicable for the two prosecutor's offices - one that sent it by competence (according to the rules of local, functional or special competence), for which the case was decided “closed case for other reasons“ and the other, which accepted it within its competence, if at the end of the year the same case remained pending, the latter is included in the above data.

(2021): 3.1. Discontinued during the reference year (3.1.1+3.1.2+3.1.3+3.1.4.)
The number of discontinued cases in the reference year (in the case of 2021) is 101626. This number includes all discontinued criminal proceedings by the prosecutor in the year on the basis of Art. 24 of the Criminal Procedure Code, including those terminated due to the expiration of the statute of limitations on the basis of Art. 24, para. 1, item 3 of the Criminal Procedure Code (criminal liability is extinguished due to the expiration of the statute of limitations).
The number of cases terminated on statute of limitations grounds is a fact of objective reality, which does not depend on the prosecution. This number is a function of the number of the pending pre-trial proceedings, incl. suspended (predominantly due to failure to establish the perpetrator of the crime during the investigation), as well as the specific crime on which the case is being prosecuted, as the absolute statute of limitations for seeking criminal liability is different and depends on the amount of the penalty provided for in the Criminal Code for the relevant crime (according to Art. 81 of the Criminal Code).
The increase in the number of dismissed cases for 2021 compared to those dismissed in 2020 is mainly due to the greater number of dismissed cases by the prosecutor on the grounds of absolute statute of limitations for prosecution, which obliges the prosecutor to dismiss the case on the basis of Art. 24, para. 1, item 3 of the Criminal Procedure Code. This conclusion is supported by the statistical data for the two years - in 2021, the dismissed cases, on grounds other than the statute of limitations, are relatively similar: 32,400 for 2021 compared to 32,002 for 2020. However, those dismissed on statute of limitations grounds in 2021 are 69,226, and in 2020 - 42565. It can be seen that in 2021 the terminated pre-trial proceedings were significantly more than in the previous year. There is no evidence that this increase is due to any special or extraordinary circumstance that occurred in 2021. Each year the number of cases dismissed on statute of limitations grounds is different and this is due to the above reasons.

(2020): Question 107:
1)"Pending cases on 1 Jan. ref. year" the unresolved pre-trial proceedings (PTPs) by a prosecutor as of 1 January of the reference year are reported.
2)“Incoming/received cases” are reported the closed PTPs (analogous to the previous questionnaires);
3)“Processed cases” are reported the decided PTPs by a prosecutor and is the total value of the data from four indicators (3.1 + 3.2 + 3.3 + 3.4), with reflected types of decisions under the PTPs;
3.1.)“Discontinued during the reference year” the terminated PTPs (including those by prescription) are reported and is the total value of the data from the next four indicators (3.1.1 + 3.1.2 + 3.1.3 + 3.1.4.), with reflected types of terminations;
3.1.1)"Discontinued by the public prosecutor because the offender could not be identified" indicates NAP (similar to the previous questionnaire);
3.1.2 "Discontinued by the public prosecutor due to the lack of an established offence or a specific legal situation" are reported the terminated PTPs, incl. those by prescription (similar to the previous questionnaires);
3.1.3)"Discontinued by the public prosecutor for reasons of opportunity " the NAP is indicated (analogous to the previous questionnaires); 3.1.4) the indicator "Discontinued for other reasons" indicates NAP (similar to the previous questionnaire);
3.2)"Concluded by a penalty or a measure imposed or negotiated by the public prosecutor " is indicated NAP (analogous to the previous questionnaires);
3.3)“Cases closed by the public prosecutor for other reasons” the suspended PTPs are reported, as well as the PTPs sent by competence (for the respective prosecutor's office, although these cases are essentially unresolved they are closed). It is not obligatory for the prosecutor's office, which sent the case within its competence, to conduct a full investigation. If a ground for the competence of another prosecutor's office is established under the rules of local, functional or special competence, the case shall be sent to the respective prosecutor's office for continuation of the investigation. The grounds for determining the competence are exhaustively specified in the CPC (Chapter Four, Section II of the CPC, Article 35 et seq. Of the CPC, Article 195 of the CPC, Articles 396-398 of the CPC, Article 411a of the CPC);
3.4) in the indicator “Cases brought to court” the submitted PDs in the court are reported (analogous to the previous questionnaires);
4) in the indicator “Pending cases on 31 Dec. ref. year” the unresolved PDs by a prosecutor as of December 31of the reference year are reported;
Concerning the increase in the number of processed cases between 2018 and 2020, the number of "cases closed by the prosecutor for other reasons", taken into consideration for this cycle, makes the differnce.

(2018): 1) The number of the terminated pre-trial proceedings has been given under indicator ‘Received during the reference year’ (similar to previous questionnaires);
2) The number of the terminated pre-trial proceedings, including those on limitation has been given under indicator “Discontinued during the reference year (see Q108 below)”;
3) NAP has been indicated under indicator “Concluded by a penalty or a measure imposed or negotiated by the public prosecutor” (similar to previous questionnaires);
4) The number of the pre-trial proceedings that have been brought to court is given under indicator “Cases brought to court” (similar to previous questionnaires).

(2014): In 2014, prosecutors dealt with 139153 pre-trial proceedings for which cases were transferred to court; 75834 were terminated on account of the absence of a crime or other grounds provided for by law. A prosecutor may not terminate the pre-trial proceeding on the ground the perpetrator cannot be identified, unless the limitation period for prosecution has expired (42 588). A prosecutor cannot impose punishment without the approval of a judge. The parties can conclude an agreement (approved by the judge) for some crimes before the case is sent to court (11561), or during the trial (data is not available). Court proceedings can be reduced if during the preliminary hearing, the defendant fully admits the facts stated in the indictment (3505 cases).

(2012): In 2012, prosecutors dealt with 144950 pre-trial proceedings for which the investigation has been completed and the cases were transferred to court. 91523 pre-trial proceedings were terminated on account of the absence of a crime or other grounds explicitly provided for by the law. A prosecutor may not terminate the pre-trial proceeding on the ground the perpetrator cannot be identified, unless the prescribed limitation period for prosecution has expired. Terminated pre-trial proceedings conducted against an unknown perpetrator due to the expiration of the statutory limitation periodwere 59 063, and are part of the total of terminated cases. A prosecutor cannot impose punishment without the approval of a judge.

Croatia

(General Comment): Discontinued for other reasons: cases can be discontinued for reasons such as circumstances which exclude guilt, the fact that there is no reasonable suspicion that the suspect committed particular criminal offence, in the case when criminal complaint is not credible. The reason for discontinue the case can be if the data in the criminal complaint indicate the conclusion that the complaint is not credible.
Cases closed by the public prosecutor for other reasons: cases can be closed for reasons such as the existence of circumstances that preclude the guilt of the defendant or there is no evidence that the defendant committed the offence. Other reasons: If the data in the criminal complaint indicate the conclusion that the application is not credible.

(2021): Source of information: Report of the Chief State Attorney of the Republic of Croatia on the work of State Attorney's offices in 2021
3.1. the total number of cases completed by adopting a decision rejecting criminal charges or a decision terminating the investigation is presented, however, statistical data are not kept by categories requested in the table
3.1.3. There was 523 discontinued cases by the public prosecutor for reasons of opportunity (data covers juvenile perpetrators only because data in relation to other perpetrators is not available).

(2020): Reason for decreased number of incoming cases same as for the courts - pandemic of COVID-19.
Discontinued cases decreased - same as for the courts (COVID-19), please see comment in Q091.
For the category 3.1. Discontinued during the reference year (3.1.1+3.1.2+3.1.3+3.1.4.), PP is not able to differ categories 3.1.1., 3.1.2 and 3.1.4.

(2018): Compared with the data discrepancies from 2016 data, it is evident that the total number of cases received in the State Attorney's Office in 2018 decreased, which is why all other reported figures from 2018 are relatively smaller compared to the 2016 data.

(2016): Under discontinued cases we consider cases in which criminal charge was dismissed and cases that were suspended during criminal proceedings.
Data on the number of cases that were concluded by a penalty or a measure imposed or negotiated by the public prosecutor (conditional deferral and agreement) do not include cases against juveniles and persons aged between 18 and 21 (younger adults) because for these persons we do not have separate information on how many cases have been completed by a penalty or measure imposed or negotiated by the public prosecutor and how much by use of opportunistic principle. Therefore data on juvenile and younger adults are reported in cases that the State Attorney discontinued (dismissal by use of opportunistic principle).

(2014): Variations between 2012 and 2014 are due to amendments in criminal law. Namely, in 2013, the new Criminal Act entered into force by which some criminal acts are decriminalized. The legal understanding of the Criminal Department of the Supreme Court of 27 December 2012, on the amount of indeterminate values, prescribes that the legal characteristics of criminal offences such as theft, embezzlement, defraudation and fraud, described as a matter of small value, represent a matter whose value does not exceed HRK 2,000.00 (instead of the previously HRK 1,000.00). Thus, a large number of criminal proceedings on offences related to property matters, which were so far initiated by the State attorney, are now initiated upon a private complaint.

Czech Republic

(2021): In 2019, we have changed the methodology of reporting for CEPEJ.
In addition, the prosecutor can deal with the case in many ways. We tried to make the data work and the sums to make sense. E.g. Pending cases on 1 Jan. ref. year + Incoming/received cases - Processed cases = Pending cases on 31 Dec. ref. year. However, we would like to state that data comes from various sources and may be sometimes tricky to deal with.
There are many reasons why the prosecution could be discontinued. It is difficult to say under which category they should be included (3.1.2 or 3.1.4). However, the reasons may include following: 1. If such prosecution concerns a person who is exempt from the competencies of the law enforcement authorities or a person for whom the law requires an official consent for their prosecution, if such consent was not awarded by an entitled authority, unless the exemption is temporary or unless the criminal prosecution of the person is inadmissible due to lack of consent only temporarily; 2. if it concerns a person who is below the age of criminal responsibility 3. if it is against a person whose mental illness that occurred after the criminal offence was committed makes it permanently impossible for them to understand the purpose of the criminal prosecution 4. and many others.

(2020): Last year, we have changed the methodology of reporting for CEPEJ.
In addition, the prosecutor can deal with the case in many ways. We tried to make the data work and the sums to make sense. E.g. Pending cases on 1 Jan. ref. year + .Incoming/received cases - Processed cases = Pending cases on 31 Dec. ref. year. However, we would like to state that data comes from various sources and may be sometimes tricky to deal with.
There are many reasons why the prosecution could be discontinued. It is difficult to say under which category they should be included (3.1.2 or 3.1.4). However, the reasons may include following: 1. If such prosecution concerns a person who is exempt from the competencies of the law enforcement authorities or a person for whom the law requires an official consent for their prosecution, if such consent was not awarded by an entitled authority, unless the exemption is temporary or unless the criminal prosecution of the person is inadmissible due to lack of consent only temporarily; 2. if it concerns a person who is below the age of criminal responsibility 3. if it is against a person whose mental illness that occurred after the criminal offence was committed makes it permanently impossible for them to understand the purpose of the criminal prosecution 4. and many others.

(2018): This year, we have changed the methodology of reporting for CEPEJ, thus some number strongly deiffers from previous data.
Also, there are many other ways how the prosecutor can deal with the case. Thus sum of discontinued during the reference year + Concluded by a penalty or a measure imposed or negotiated by the public prosecutor + cases brought to court is smaller than number of cases received during the year.

(2016): The correct number of received cases for 2014 should be 313958.

Denmark

(General Comment): The number of processed cases includes both cases dismissed by the police and cases dismissed by the public prosecutor. The reason that processed cases includes both the police and prosecution service is that we cannot always distinguish closed/finished cases between the police and prosecution service as they are often archived in police departments regardless of who processed the case

(2021): It is not possible to subtract numbers on discontinued cases in the format in Q 3.1.1. + 3.1.2 + 3.1.4, as the legal basis in Denmark (sections 721 and 749 of the Administration of Justice Act) is not devided in such subsectors.
Regarding point 3.1.3 in question 107, it is not possible to account for one specific reason behind the increased number of discontinued cases for reasons of opportunity. However, during 2021 we have had an increased effort in lowering the amount of pending cases. This can partly explain the surge of discontinued cases in 3.1.3.

(2020): It is not possible to subtract numbers on discontinued cases in the format in Q 3.1.1. + 3.1.2 + 3.1.4, as the legal basis in Denmark (sections 721 and 749 of the Administration of Justice Act) is not devided in such subsectors. The data source used in points 1 and 4 (data that do not include post-registration of charges) are different from the data source used in points 2 and 3 (data that includes post-registration of charges). Hence, data does not fit the formula: (pending at the beginning of the year + incoming) – resolved = pending at the end of the year) due to post-registrations of further charges. The number of incoming charges has decreased considerably between 2018 and 2020. This is due to a change in the way we measure the number of incoming charges. The new way of measure incoming cases more correctly than the previous way of measuring as the new way contains all incoming charges and not all processed charges as the previous way did. The number of incoming cases in 2018 is 245.687 when using the new way of measuring.

(2018): Please note that there has been a mistake with the previous data collection for 2006, 2008, 2010, 2012, 2014 and 2016 concerning question 107 and 108. This is due to missing information and collection of data from the Danish Administration of Justice Act. In the future we will make sure that every information is incorporated.

(2016): Cases concluded by a penalty or a measure imposed or negotiated by the public prosecutor include cases concluded by the police as these cases are indistinguishable in the case handling system.

(2014): The increase in the number of cases charged by the public prosecutor before the courts is a result of an increased preliminary charge rate (police) and an increased prosecution rate (public prosecutor). The conviction rate is unchanged over the period despite the increase in both the preliminary charge rate and the prosecution rate.

Estonia

(General Comment): The number of incoming cases is given by registered crimes while the number of cases resolved is given by the number of persons in respect of whom a procedural decision has been made.

(2020): The number of incoming cases is given by registered crimes. the number of cases resolved is given by the number of persons in respect of whom a procedural decision has been made.

(2018): The data for 2018 evaluation cycle are checked and confirmed. The data are not comparable with 2016, because the source of the data changed.

(2016): For this cycle, calculations are based on cases not persons or crimes. One case, especially when brought to court or concluded by penalty, often involves several crimes and persons.

(2012): As to the item “cases charged by the prosecutor before the courts”, the 2010 data referred to settlement proceedings, while the 2012 data includes only cases that were terminated by a prosecutor in case of lack of public interest in proceedings and in case of negligible guilt. These cases are also included under “cases discontinued by the prosecutor”. The category “cases charged by the public prosecutor before the courts” includes cases where a person has been sent to court in order to impose coercive psychiatric treatment by a court and cases which have been sent to court in order to request termination of criminal proceedings (the latter was not taken into account in previous reports).

Finland

(2021): 3.2 Notice cases of summary fines are not included. The number of summary fines in 2021: 34 306.
3.3: Consist of internal transfers of cases between prosecution districts, joining of cases and technical decisions.

(2020): Comments: 3.2 Notice cases of summary fines are not included. The number of summary fines: 38433.
The decrease in the number of cases “3.2. Concluded by a penalty or a measure imposed or negotiated by the public prosecutor” is due to a change in the law. The law on certain type of fine (rangaistusmääräysmenettely) was abolished in 2016 and replaced with the law on fines and summary penalty fee (laki sakon ja rikesakon määräämisestä (754/2010). According to this law, the police can order the summary penal fee. This page, in Finnish, shows figures of the amount in euros of these summary fines imposed by prosecutors (2nd graph) and by the police (3rd graph).
https://www.oikeusrekisterikeskus.fi/fi/index/tietopalvelu/tilastotjaavoindata/sakot.html
3.1.4 Discontinued for other reasons and 3.3. Cases closed by the public prosecutor for other reasons: The prosecutor must waive prosecution if: (1) the prerequisites for the bringing of charges provided in section 6, subsection 1 are not met; (2) the prosecutor waives prosecution on the basis of section 6, subsection 2; (3) the injured party has not requested that charges be brought or another special prerequisite provided in law for the bringing of charges referred to in section 2, subsection 2 is not met and the nature of the case requires that a separate decision be made. The prosecutor may waive prosecution if: (1) if no sentence more severe than a fine is to be anticipated for the offence and the offence, with consideration to its detrimental effects or the degree of culpability of the offender manifested in it, is to be deemed petty as a whole; and (2) if the suspect had not reached the age of eighteen at the time of the commission of the suspected offence and no sentence more severe than a fine or imprisonment for at most six months is to be anticipated for this offence and it is to be deemed to be more the result of lack of understanding or thoughtlessness than of heedlessness of the prohibitions and commands of the law. In addition, the prosecutor may waive prosecution, unless an important public or private interest requires otherwise if: 1) if criminal proceedings and punishment are to be deemed unreasonable or inappropriate in view of a settlement reached by the suspect in the offence and the injured party, the other action of the suspect in the offence to prevent or remove the effects of the offence, the personal circumstances of the suspect in the offence, the other consequences of the act to him or her, the welfare and health care measures undertaken and the other circumstances; (2) under the provisions on joint punishment or on the consideration of previous punishments in sentencing, the suspected offence would not have an essential effect on the total punishment; or (3) the expenses in continuing to consider the case would be in manifest disproportion to the nature of the case and to the sanction possibly to be expected in it. Also, If charges are being considered for two or more offences for which the same person is suspected and if he or she has contributed to the clarification of one or more of the suspected offences, the prosecutor may decide not to bring charges for all of the suspected offences. However, charges shall be brought if required by an important public or private interest.

(2018): With regard to the observed decrease in the number of cases "concluded by a penalty", there were 507 penalty notices given by the prosecutor in 2016 but only 23 in 2018.

(2016): The number of discontinued cases during the reference year includes the number of cases in which the prosecutor has waved the charges before trial and restricted the preliminary investigation in a way that the case is not brought to trial. For 2014, only the cases in which the prosecutor has waved the charges before trial have been informed.

(2014): The number of 1st instance criminal cases concluded by a penalty or a measure imposed or negotiated by the public prosecutor decreased over the years 2010, 2012 and 2014. According to the annual report for 2014 of the Prosecution Service, the number of summary penal judgments decreased by 9 % (2013 – 2014; 59 in numbers). According to the report of 2013, the number of summary penal judgments decreased by almost 19 % (2012 – 2013; 151 in numbers). Some organisational changes were carried out during that time period. Besides, the number of incoming cases decreased, but the degree of difficulty/complexity increased.

France

(General Comment): The complexity and diversity of data on criminal cases do not allow an estimation of the number of pending cases.

(2021): source SDSE

(2016): Among the cases discontinued by the public prosecutor, a distinction should be carried out between the mass of cases that could not be prosecuted because they were not elucidated or insufficiently characterized (3112642) and cases that could be prosecuted but were dismissed in accordance with the opportunity principle (191430).

Germany

(General Comment): General information on the public prosecution statistic used as a source for anwering this question: Once per year, the Federal Statistical Office compiles and publishes the public prosecution statistic. Statistical ordinances define the scope and rules of data collection for these statistic. The public prosecution offices collect the data and submit it to the statistical offices of the Länder, who check and edit the data and send it to the Federal Statistical Office. In simplified terms, the statistical ordinance provides two different kinds of data collection sheets: The "procedural survery" that collects data on the specifics of the investigation proceedings carried out by the public prosecution and the "monthly survey" that collects data on the caseload and other workload of the public prosecution offices. The figures entered here do not include investigations against persons unknown. The public prosecution statistic only shows the number of charges filed against unknown perpetrators. Information on the further treatment of those charges is not available. This is because the monthly survey distinguishes between "caseload of investigation proceedings covered by the procedural surveys" and "other workload". Charges against persons unknown fall into the category “other workload”. The number of resolved and pending cases is only collected with regard to the first category (proceedings covered by the procedural surveys). If a suspect is identified in cases with an unknown perpetrator, the case receives a new file-number and then appears in the the category "covered by the procedural surveys".

(2021): 3.2 Concluded by a penalty or a measure imposed or negotiated by the public prosecutor:
The number represents the the cases that were discontinued in accordance with Section 153a of the Code of Criminal Procedure ("Non-prosecution subject to imposition of conditions and directions")
These cases would also fit into the category "discontinued for reasons of opportunity" (3.1.3) but were allocated to 3.2 here.
3.1.4 The number of cases discontinued for other reasons in the public prosecution statistic 2020 (and previous years) was considerably higher due to a programming issue in one of the Länder. Many of the cases that were registered in this category should have actually been registered within the category "discontinued for reasons of opportunity". The issue was noticed and fixed at the end of 2020.

(2020): 3.2 Concluded by a penalty or a measure imposed or negotiated by the public prosecutor:
The number represents the the cases that were discontinued in accordance with Section 153a of the Code of Criminal Procedure ("Non-prosecution subject to imposition of conditions and directions")
These cases would also fit into the category "discontinued for reasons of opportunity" (3.1.3) but were allocated to 3.2 here.

(2018): These figures include first-instance criminal cases led by the public prosecution offices based at the Regional Courts (investigations with a "Js" file number) and the public prosecution offices based at the Higher Regional Courts (investigations with an "OJs" file number). Regarding the latter ("OJs" investigations), figures only exist for the number of cases newly received by the prosecutor generals' offices.

(2016): These figures include first-instance criminal cases led by the public prosecution offices based at the Regional Courts (investigations with a "Js" file number) and the public prosecution offices based at the Higher Regional Courts (investigations with an "OJs" file number). Regarding the latter ("OJs" investigations), figures only exist for the number of cases newly received by the prosecutor generals' offices.

Greece

(2021): The definition of the pending cases includes postponed cases or the cases the trial date has been setting out of the refence year or hasn’t been determined during the year. The fact is that the theoretical pending cases resulted from pending cases on 1st of January + Incoming cases (cases are related to reference + previous years). However, pending cases on 31 Dec. are only the cases that have not been determined, or cases that have been determined after the reference year. All of the pending cases on 31 of Dec. are related only to the reference year.
Considering that this is the first year where offices calculate their pending cases, and some of them do not have electronical systems to monitor their data, in the next years we will get better and more accurate statistics.

(2020): No data available for this query.

(2016): The relevant data are not available electronically for the moment, therefore their extraction is not possible.

Hungary

(General Comment): The data source was, similarly to our previous data provision, the Statistical Subsystem of Completed Criminal Proceedings of the Uniform Investigative Authority and Prosecution Service Statistics (ENyÜBS-BBS). In the ENyÜBS-BBS, data are recorded when the investigating authorities or the prosecution service have taken a procedural decision (e.g. dismissal of a criminal complaint, discontinuation, suspension, indictment) in relation to a criminal act which has led to the statistical reporting of the data. The ENyUBS-BBS subsystem is therefore a so-called follow-up system in terms of the time of the data-recording, and therefore does not show the number of offences occurred in the year under review, but the number of acts/conducts in respect of which a legal decision has been taken and, in relation thereof, statistical reporting (of registrative nature) has been done. From the above it follows that it is not excluded that there are ongoing criminal proceedings that are not yet included in the ENyÜBS database.

(2021): As to 'Pending cases on 1 Jan. ref. year' and 'Pending cases on 31 Dec. ref. year', please note that the number of pending cases at a given day is not recorded in the database operated by the prosecution service. As to 'Processed cases' (3.), please note that the database of the prosecution service records the number of cases where one or more procedural acts were performed by the prosecution service; besides that, it records the number of procedural acts regarding each type of act.

(2020): 3.1.4 Discontinued for other reasons:
If the Special Part of the Penal Code regulates the conduct of the accused after the commencement of the proceedings as a ground for termination of criminal liability.
3.3. Cases closed by the public prosecutor for other reasons:At the stage of preparation of the prosecution, Section 221 / A (7) of the Criminal Procedure Act provides that if the mediation proceedings are successful and the application of Section 29 (1) of the Criminal Code is appropriate, the prosecutor shall terminate the proceedings.

Ireland

(General Comment): As many of our cases are prosecuted by State Solicitors we don't have any data on the status of a case between the time the direction is issued and when we receive the final outcome; this is for matters on indictment. For summary cases outside of Dublin, we rarely even if ever hear back on the outcome as these directions are passed on to the police by the State Solicitor and the police execute the direction to prosecute without reference to the State Solicitor. This may change in the future if outcome data is exchange using the Criminal Justice Operational Hub. Summary cases outside of Dublin would make up a significant proportion of the files given in our figures.
As per the instructions provided, cases are counted per prosecution file which could include more than one suspect and multiple charges preferred. Therefore, the figure give for 'Discontinued' in 107.3.1 is the number of distinct files where a suspect was directed for 'no prosecution'; in some of these files, other suspects on the file may have been prosecuted in the courts.

(2021): There has been a significant increase in files received by the office in the last number of years - this is partially due to the increase in complexity of offences and investigations.
These figures were compiled by the Office of the Director of Public Prosecutions and will be included in the Annual Report 2021 which is published annually on the Office of the Director of Public Prosecutions website. Caution should be exercised when comparing these statistics with statistics published by other organisations such as the Courts Service or An Garda Síochána. The statistics published here are based on our own classification and categorisation systems and may in some cases not be in line with the classification systems of other organisations.
Q.3.4: indictable offences

**(2018): ***14,856 files in total were received in 2018 including appeals of which 11,647 related to first instance cases .

(2012): Figures provided for 2012 reflect 2011 data.

Latvia

(2021): Cases brought to court: 6061 cases with the total number of criminal offenses - 11008.
Number of incoming cases in 2021 was 11 529. This includes cases received: for initiation of criminal prosecution; after the division of cases or during the phase of investigation; in accordance with urgent procedures; from the court for the elimination of violations/deficiencies; taken over for investigation; restored previously terminated or suspended cases.
The vertical consistency cannot be ensured because in 2021 there were 370 cases that were added to other cases and 82 cases were returned to the investigative authorities to continue the investigation. These cases are not included in the subcategories of Q107. 3.1.2. Discontinued by the public prosecutor due to the lack of an established offence or a specific legal situation - according to Article 380 of the Criminal Procedure Law these preconditions (stated in Article 377, Clauses 1, 2 and 10 of the Criminal Procedure Law) are exonerating circumstances. Data for the year 2020 included also other clauses of Article 377 that contain circumstances that do not exonerate persons, which explains the remarkable difference in numbers. Accordingly, 3.1.3. has increased by the number of relevant cases (that also constitute reasons of opportunity).
3.1.4. Discontinued for other reasons: the cases included in this category are, for example, the cases in which the prosecutor took a decision to terminate criminal proceedings by conditionally releasing from criminal liability a person who has been accused of committing a serious crime and who has substantially assisted in the disclosure of a serious or especially serious crime that is more serious or dangerous than the criminal offence committed by the relevant person himself / herself (Paragraph prim of Section 415 of the Criminal Procedure Law). The information compiled in the information system of the Prosecution Office shows that in 2021, prosecutors took 9 decisions to terminate criminal proceedings based on the aforementioned Paragraph. Besides, for 2021, there are 675 cases in which criminal proceedings were suspended included in this category.
Just like for the year 2020, 365 cases in which the prosecutor took a decision to terminate the criminal proceedings by conditionally releasing a person from criminal liability for the commission of a criminal offense or a less serious crime were included in the category “3.2. Concluded by a penalty or a measure imposed or negotiated by the public prosecutor". This, along with the recommendation included in the Operational Strategy of the Prosecution Office 2022-2027- on the completion of the criminal proceedings in the Prosecution Office where possible, also explains the increase in the latter category. 3.3. Cases closed by the public prosecutor for other reasons: the cases included in this category are, for example, the cases in which the Prosecutor General has made a decision to terminate criminal proceedings against a person who has substantially assisted in the disclosure of a serious or especially serious crime that is more serious or dangerous than a criminal offence committed by such person himself / herself. In 2021, Prosecutor General has not terminated any criminal proceedings based on Article 410 of the Criminal Procedure Law. For 2021, in this category there are 285 cases included that were sent on the basis of the jurisdiction (including – abroad).
4 Pending cases on 31 Dec. ref year: The number has increased mainly due to the COVID-19 pandemic (that affected the timely execution of procedural/investigative actions).
3.4. In 2021 there has been a significant decrease of the number of initiated criminal proceedings (-17%), furthermore the number of criminal proceedings completed in the prosecutor's office has increased (+26%).

(2020): Cases brought to court
8088 cases with the total number of criminal offenses - 14158
The vertical consistency cannot be ensured because in 2020, there were 520 cases that were added to other cases and 91 cases were returned to the investigative authorities to continue the investigation. These cases are not included in the subcategories of Q107. 3.1.4 Discontinued for other reasons: the cases included in this category are, for example, the cases in which the prosecutor took a decision to terminate criminal proceedings by conditionally releasing from criminal liability a person who has been accused of committing a serious crime and who has substantially assisted in the disclosure of a serious or especially serious crime that is more serious or dangerous than the criminal offence committed by the relevant person himself / herself. The information compiled in the information system of the Prosecution Office shows that in 2020, prosecutors took 2 decisions to terminate criminal proceedings based on Paragraph prim of Section 415 of the Criminal Procedure Law. Besides, for 2020, in this category are included 955 cases in which criminal proceedings were suspended.
3.3. Cases closed by the public prosecutor for other reasons: the cases included in this category are, for example, the cases in which the Prosecutor General has made a decision to terminate criminal proceedings against a person who has substantially assisted in the disclosure of a serious or especially serious crime that is more serious or dangerous than a criminal offence committed by such person himself / herself. In 2020, Prosecutor General has not terminated any criminal proceedings based on Article 410 of the Criminal Procedure Law. For 2020, in this category are included 285 cases that were sent in accordance with the relevant jurisdiction (including – abroad). The category “3.1. Discontinued during the reference year” decreased because 365 cases in which the prosecutor took a decision to terminate the criminal proceedings by conditionally releasing a person from criminal liability for the commission of a criminal offense or a less serious crime were included in the category “3.2. Concluded by a penalty or a measure imposed or negotiated by the public prosecutor". This also explains the increase in the latter category.

(2018): Cases brought to court
8887 cases with the total number of criminal offenses - 14569

(2016): Cases brought to court
10022 cases with the total number of criminal offenses - 16892

Lithuania

(2021): The number of registered crimes is gradually decreasing since 2017 in Lithuania, and this also affects other numbers. Prosecutor General's Office of the Republic of Lithuania: the numbers are correct. Vertical inconsistency is a result of different sources of data and differences in formulas for calculating some statistical indicators. Numbers of „Pending cases“ and „Incoming cases“ are taken from the national register, however number of „Processed cases“ is taken from registers of the Lithuanian Prosecution Service.

(2020): Cases closed by the public prosecutor for other reasons: cases closed under Paragraph 3 Article 68 of the Criminal Procedure Code - when criminal act has been committed in the territory of the Republic of Lithuania by a citizen of a foreign country or other person who have subsequently left the Republic of Lithuania, the Prosecutor General's Office of the Republic of Lithuania may request foreign country to take over the criminal case. When criminal case is taken over by another country, the one in Lithuania is discontinued. The number of registered crimes is gradually decreasing since 2017 in Lithuania, and this affects number of incoming cases, processed cases, discontinued cases and cases brought to court.
The reason for the non-compliance of the result of the formula used ((pending cases on 1 January 2020 + incoming cases) – processed cases = pending cases on 31 December 2020) is a result of different sources of data and their differing formulas for calculating some statistical indicators. Numbers of „Pending cases“ and „Incoming cases“ is taken from the national register, however number of „Processed cases“ is taken from registers of the Lithuanian Prosecution Service.

(2014): In contrast with the 2012 data, the 2014 data includes cases in connected investigations.

(2012): The category “cases charged before the courts” also encompasses cases discontinued by the court on the prosecutor’s request, when the measures of criminal effect can be imposed on the persons concerned.The increase in the number of cases received by the prosecutor stems from the Lithuanian economic situation and the national economic priorities, as well as from the entry into force of the Law on Domestic Violence (2011). Criminal investigation became compulsory regarding every single incident of domestic violence. Over the last few years, the prosecution service had been seeking to complete criminal investigations under economy procedures - imposing penal or reformative measures, deciding the case with a penal order or using the accelerated process.

Luxembourg

(2021): 3.1.4 " Discontinued for other reasons": due to the continuing pandemic in 2021, no “Choice18 +” measures could be initiated, nor processed, during this year. Similarly, driving courses were suspended due to the pandemic and did not resume until October 2021.
3.2 “Concluded by a penalty or a measure imposed or negotiated by the public prosecutor”: the increase in the number of cases concluded by a penalty or a measure imposed or negotiated by the public prosecutor between 2020 and 2021 cannot be explained by a single event. The increase is mainly due to the growing number of warnings issued by the prosecution service, which is on the one hand the result of punctual measures related to the health crisis and on the other hand depends on the subject matter of the cases dealt with, as warnings are usually issued in less serious cases.

(2020): "The cases referred to under 3.2. shall be considered closed if the party concerned complies with the condition imposed by the warning or fulfills its obligations arising from the mediation. In case of non-compliance, the public action will resume.
3.1.4: These are essentially two specific measures: firstly, in the area of traffic, the obligation to follow a driving course and, only for young offenders of full age, participation in a course in the Choice 18+ program for the prevention of drug addiction (https://www.solina.lu/fr/facilities/impuls/)."

(2018): L'augmentation du nombre d'affaires classées s'explique essentiellement au niveau des affaires de police. Depuis 2017, le nombre d'affaires nouvelles a considérablement augmenté, ce qui explique partiellement le nombre important d'affaires classées en la matière. Cet accroissement des affaires ouvertes est lié à l'introduction du système de contrôle et de sanction automatisés (CSA) au cours de l'année 2016, qui a mené à une augmentation importante des affaires de circulation (vitesse), des infractions constatées via des radars fixes et mobiles. En plus, des changements au niveau de la gestion de ces affaires CSA au parquet a engendré le classement d'un nombre important d'affaires en 2018, ce qui contribue à la variation importante des affaires classées observée entre 2016 et 2018. Les affaires reçues par le procureur au cours de l'année de référence incluent les affaires 'Sans Auteur Identifié' (SAI) qui sont provisoirement classées dans l'attente de l'identification d'un auteur. En 2018, 24 799 affaires étaient qualifiées SAI.

Malta

(2021): The Office of the Attorney General is in the process of setting up a comprehensive case management system that will keep track of all the cases that are processed by the OAG. Until then, the cases quoted above are all cases prosecuted in court at 1st Instance.
The high pending caseload at the beginning of 2021 is a direct result of the inefficiencies experienced during the Covid-19 pandemic. In fact throughout 2020, given that most of the year the courts of justice were closed, the number of incoming cases far exceeding the number of resolved cases. This led to a low CR and a concomitant high pending caseload.

(2016): The criminal cases brought to court at 1st Instance are prosecuted by the Police and not by the attorneys working in the Office of the AG.

Netherlands

(General Comment): The number of pending cases at the end of the year cannot equal pending cases at the start of the year + incoming cases – processed cases, because a specific type of case can only be counted in the stock when the file has been judged, not when they are pending. This is for criminal cases where an order is given, but the case is then returned because the order cannot be executed. This specific case type return to the stock, but cannot be measured in the system the public prosecution uses. Once those cases are assessed again and stream out, they become visible in the numbers in the system. Pending cases are cases that are yet to be judged and for which a hearing has to be planned. Cases for which the hearing has been planned, are not included in this number.

(2021): Pending cases are cases that are yet to be judged and for which a hearing has to be planned. Cases for which the hearing has been planned, are not included in this number.
Discrepancy comment Pending cases January: The way in which pending cases were counted changed in August 2020, before that time a large number of cases were included that had already been dealt with administratively. Those cases are now excluded from the number of pending cases, which explains the difference in numbers between pending cases Jan 2020 and and pending cases Jan 2021.

(2020): The number of pending cases at the end of the year cannot equal pending cases at the start of the year + incoming cases – processed cases because a certain type of case can only be counted in the stock when the file has been judged, not when they are pending. These cases are criminal cases where an order is given, but they are then returned because the order cannot be executed. These criminal cases return to the stock, but cannot be measured in the system the public prosecution uses. Once a case like that it assessed again and streams out, it becomes visible in the numbers of the system.

(2016): In 2014 there were no assistent officers. The lower input results in lower output.

(2012): The category "cases discontinued for reasons of opportunity" concerns minor cases and covers cases solved by the suspects and victims themselves and cases considered too old to be still prosecuted. Since 2012, these kinds of cases are not filtered anymore by the police and are registered at the public prosecution offices. In 2012, the number of cases concluded by a penalty or a measure imposed or negotiated by the prosecutor, increased due to the Law on Public Prosecution sanctions. The latter extended the possibility for the public prosecution to impose sanctions itself, independently of the Judicial (sentence disposal).

Poland

**(General Comment): ***The number of cases discontinued for any other reason consists of cases discontinued on the basis of:
- art. 17 par. 1 point 3 to 11 of the Code of Criminal Procedure: the social harm of the act is negligible; the law provides that the perpetrator is not subject to punishment; the defendant has died; the criminal statute of limitations has run; criminal proceedings for the same act of the same person have been validly terminated or previously instituted proceedings are pending; the perpetrator is not subject to the jurisdiction of the Polish criminal courts; lack of complaint from an authorized prosecutor; absence of the required authorization for prosecution or request for prosecution from an authorized person, unless otherwise provided by law; there is another circumstance excluding prosecution.
- the Act on Counteracting Drug Addiction (Article 62a and 62b);
- other discontinuances - in addition to those described in report PK-P1K on activity of common organizational units of the Public Prosecutor's Office in criminal cases.
*The number of cases closed by the prosecutor for other reasons consists of: - cases in which criminal prosecution was transferred (Article 591 para. 6 of the Code of Criminal Procedure), - refusal to start an investigation, - suspended cases, - cases finished with the transfer of the commander, - cases settled in another way (there is no data about the way of completion in the report).

**(2020): ***The number of cases processed in 2018 was 1,076,123. The number of cases discontinued for this period is 397,471. This number is comparable to the 2019 data. (406,770 cases discontinued) and for 2020. (387,521 cases discontinued). *The number of cases - "concluded by a penalty or measure imposed or negotiated by the prosecutor" for each year was as follows: 2018. – 43 348, in 2019. -36 167, in 2020. - 25 635.

(2018): Differences which appear between data mentioned in the form related to functioning of the Polish jurisdiction and data specified in the previous edition of research - connected with the amount of cases incoming and the amount of terminated cases - arise from at least two reasons. First, during the years the image of crime has been changing. The amount of committed crimes is not constant and it is changing dynamically. Second, normative changes affect the differences mentioned at the beginning. This is connected with: the penalization of acts which have been criminally indifferent until now and amendments to the Criminal Procedure Law. In the adversarial reform - currently in force since the 1st of July 2015 - the rule related to cases terminated by decisions of police on refusal to allow investigation or on discontinuance of investigation has been introduced. According to this rule the aforementioned cases do not have to be approved by the prosecutor. Therefore such proceedings have not been registered in the prosecution office. Amendments to the Code of Criminal Procedure, which came into force on the 15h of April 2016, cancelled this rule.

(2016): Cases "Discontinued during the reference year" - only number of staied legal proceedings.

Portugal

(2020): The data indicated for «number of processed cases» corresponds to “the total number of criminal cases at the investigation stage that have been closed”.
The Public Prosecutor's Office, closes the inquiry as soon as it has gathered sufficient evidence that no crime has been committed, that the defendant has not committed it or that the procedure is legally inadmissible.
The Public Prosecutor's Office also closes the inquiry if it has not been possible to obtain sufficient evidence that a crime has been committed or who the perpetrators were.

(2014): For 2014, data concerning 1st instance courts is not available due to technical constraints.

(2012): This category of cases includes inquiry proceedings received by the public prosecutor and inquiry proceedings completed with charges proposed by the public prosecutor.

Romania

(2020): There are no available data on grounds on which a decision to discontinue a case is taken by the public prosecutor.

(2016): As regard the increase from 2014 data related to the number of cases brought to court, most probably the new provisions in terms of guilty plea procedures introduced by the new codes may represent a reason for this increase in using this procedural institution; moreover people/parties become more aware of it/of this procedural instrument and a judicial practice has been created

(2014): The figure provided for 2014 in respect of the total number of 1st instance criminal cases received by the public prosecutor (1 756 001) corresponds to the stocks and newly entered files for this year. In 2012, the number of newly entered files was 679 193 (789 677 for 2013). The variations observed between 2012 and 2014 are due to the entry into force of the new codes.

Slovak Republic

(2021): The General public prosecutors office did not deliver any explanation.

(2020): The data were delivered by General prosecutor office. The number of 1st instance criminal cases are not monitored by General prosecutor office in CEPEJ requested structure.

(2018): The number of Cases received during the reference year represents the count of received cases on the Prosecution Office, not the count of terminated cases.
To the column Cases discontinued during the reference year we included the decisions of the prosecutor as well as of the police officer. If the police officer has decided on the discontinuance of the criminal prosecution, those decisions were examined by a prosecutor. The prosecutor himself/herself has discontinued the criminal prosecution in 263 cases.
Among Cases terminated by the prosecutor by imposing a sanction or negotiating a measure were included criminal prosecutions of persons against whom the criminal prosecution was conditionally suspended (1334) or the criminal prosecution was suspended by approving a conciliation between the accused and aggrieved party (479).
Among Cases brought to court were included indictments submitted by the prosecutor in the year 2018 to the court. The number of accused persons was 29 789 (the count of the accused persons might not equal the count of the indictments).

(2016): The number of cases received represents all entries in the criminal registers of the prosecution offices. The decrease of number of the received cases in comparison with the previous cycle is the objective fact out of the range of prosecution service.
Not all of the received cases are concluded in the same year. The number of cases discontinued during the reference year includes the decisions of the prosecutor as well as of the police officer. The decisions of the police officer to discontinue the criminal prosecution were examined by a prosecutor. Only in 62 cases the decision to discontinue the criminal prosecution was issued by the prosecutor (see Q 108).
Cases terminated by the prosecutor by imposing a sanction or negotiating a measure include criminal prosecutions of persons against whom the criminal prosecution was conditionally suspended (1485) or the criminal prosecution was suspended by approving a conciliation between the accused and aggrieved party (469).
The number of cases brought to court (25023) represents the number of indictments submitted to court by the prosecutor in 2016. The number of accused person was 28 612 (according to Slovak criminal law one indictment can be issued against more defendants).

(2014): For 2012, it was impossible to split the number of cases discontinued by the prosecutor and the number of cases concluded by a penalty. For 2014, both of the categories could be identified. The total is 8547 cases, which is close to the number given in 2012.

Slovenia

(General Comment): General remarks:
- statistical data is kept on charged, accused or convicted persons, and the data is related to the main crime per defendant (methodology as used in the Joint Annual Report on the Work of State Prosecutor's Offices and previous CEPEJ reporting).
- vertical consistency is not ensured due to the fact that the State Prosecutor's Office reports data from a dynamic information system, where subsequent changes and corrections are possible, and each category
(received, solved, unsolved) is "counted" on a certain day or for a period, which may lead to later deviations; and due to the methodology used at reporting (3.) Processed cases (see below).
- data included cases against known and unknown perpetrators. Cases against known perpetrators are counted according to persons (e.g. a denunciation against five individuals is counited as five cases), and cases against unknown perpetrators (Ktn cases) according to the number of files. It should be noted that between 27,000 and 60,000 complaints against unknown perpetrators are received per year. They are included in the statistical data as pending cases until they are closed (for example, the perpetrator is discovered, the expiration of the statute of limitations or that no legal signs of a crime have been provided).
1. Pending cases on 1 Jan. ref. Year
The data represent existing unresolved criminal complaints against known perpetrators (adults, minors and legal entities) and newly received complaints against unknown perpetrators.
2. Incoming/received cases
Includes criminal denunciations against known and unknown offenders.
Criminal denunciations against known offenders include cases that were received by the
prosecution office as well as cases with unknown offenders whose identity was discovered during
the reporting period.
3. Processed cases
The reported figure represents all resolved criminal complaints in the reporting year. There is a discrepancy between the sum of following categories: [3.1 known offenders+3.2+3.4] and the number of all resolved criminal complaints reported at (3.) Processed cases, because several criminal complaints can be resolved in one criminal file.
3.1. Discontinued during the reference year The number represents the sum of dismissed criminal complaints against known perpetrators and complaints against unknown perpetrators dismissed due to the statute of limitations.
3.1.1. Discontinued by the public prosecutor because the offender could not be identified
The public prosecutor cannot discontinue a case, because the offender could not be identified, so the answer is NAP.
3.1.2. Discontinued by the public prosecutor due to the lack of an established offence or a
specific legal situation Data includes cases in which it was not possible to continue the proceedings due to a lack of procedural or
material preconditions (the act is not a criminal offense, there is no reasonable suspicion that the suspect committed a criminal offence and various procedural obstacles), cases where the motion of the injured party has been withdrawn (only for so-called proposed criminal offences) and cases where the criminal complaint was dismissed due to the expiration of the statute of limitations (procedural obstacle).

(2021): In 2021 the reporting changed to include cases of discontinued criminal complaints against unknown offenders due to the expiration of statute of limitations in the category (3) Processed cases (previously excluded).
Further break-down of data reported:
(1) Pending cases on 1 Jan. ref. year include transferred criminal complaints: - against known perpetrators: 11.951 and
- against unknown perpetrators: 269.260.
(2) Incoming cases include criminal denunciations: - against known offenders: 24.658 and
- against unknown offenders: 27.199.
(3) Processed cases include processed cases:
- against known offenders: 24.658 and
- discontinued criminal complaints against unknown offenders due to the expiration of statute of limitations: 29.140
(3.1.) Discontinued during the reference year include dismissed criminal complaints:
- against known perpetrators: 14.260 and
- against unknown perpetrators: 29.140
(3.1.2.) Discontinued due to the lack of an established offence or a specific legal situation include:
- a) discontinued criminal complaints against known perpetrators due to the lack of procedural or material preconditions: 10.022, b) cases discontinued (rejected) due to withdrawal of the motion of the injured party: 2.000 and c) cases discontinued due to expiration of the statue of limitation: 75 (total 12.097 cases) and
- discontinued criminal complaints against unknown perpetrators due to the expiration of statute of limitations: 29.140.
(4) Pending cases on 31 Dec. ref. year include unresolved criminal complaints:
- against known offenders: 11.709.
- against known offenders: 277.564.
Differences to 2020 data:
2.Incoming/received cases: decrease by 16%
Contributing factors: a) Covid-19 pandemics, especially limit of movement of population and related police control, b) changes in the registration of the number of criminal offences in police registers and c) increase in merging of diferent cases in one case at the Police and state prosecution level, compared to the previous year. 3.1.2 Discontinued by the public prosecutor due to the lack of an established offence or a
specific legal situation: increase by 17%
The increase is mainly due to a higher number of cases against unknown offenders due to the expiration of statute of limitations, which is beyond control of state prosecution. The number of discontinued cases agains known offenders did not change significantly. 3.1.3 Discontinued by the public prosecutor for reasons of opportunity: decrease by 22%
The number of cases remains comparable (despite the decrease in last year) and cannot be considered unusual, due to the structure of processed cases with the majority of offences against property and within it low value cases. 3.2. Concluded by a penalty or a measure imposed or negotiated by the public prosecutor: increase by 23%
The increase in 2021 is due to partial relief of preventive measures, related to Covid-19 pandemics.

(2020): Pending cases on 1 Jan. ref. year includes 12.452 cases against known perpetrators and 263.139 cases against unknown perpetrators.
Incoming/received cases includes 27.770 cases against known offenders and 34.019 cases against unknown offenders.
Pending cases on 31 Dec. ref. year includes 12.072 cases against known offenders and 269.260 cases against unknown offenders.

(2016): The explanation by the state prosecution (data source) concerning the decrease in the number of received cases during the reference year between 2014 and 2016: - since 2013, the number of reported offences to the police is decreasing, hence the decrease in number of cases received (especially cases where the offender is unknown)
- due to several local factors (austerity measures, increased number of immigrants in 2015-2016 and a long strike of police officers in 2016), the number of cases (against identified offenders) processed by the police also decreased
As concerns the decreased number of cases brought to court:
- a decrease in new cases (see above)
- exercising a stricter selection of cases, not appropriate for court procedure (in 2014, almost 30% of resolved cases were brought to court, in 2016 only 25%). The state prosecution also noted some minor differences might be attributed to changes in their methodology for data reporting.

Spain

(General Comment): In Spain the general rule is that the Prosecutor is party in the criminal cases, but the Prosecutor does not process (with exclusive competence) the criminal cases. The investigation Judge (Juez de Instrucción) does that. Data provided in question 107 tries to adapt the information in the Annual Report of the State Attorney General's Office to the criteria of CEPEJ, by offering the data of cases received by the Prosecution Service in 2020, according to the classification of procedures of the Spanish procedural legislation (diligencias previas, diligencias urgentes, procedimiento por delitos leves, sumarios y procedimientos del jurado). In addition to that, there are other two kinds of actions for which the Prosecution have exclusive competence: Investigation of criminal reponsibility of minors, and preliminary diligences of Article 773.2 of the Criminal Procedural Act.

(2020): The provided number of incoming cases is the number of the criminal proceedings received by the Prosecution Service (page 1117 of the Annual Report of the Prosecution Service). It is consistent with the explanatory note as it includes “cases submitted to public prosecutors by the police and other bodies as well as victims (if applicable) within the reference year”. It is an official data, provided by the State Attorney Office.

(2018): Certain number of cases received are re-sent to other porsecutor offices.

Question 107-1

Austria

(General Comment): There is no guilty plea procedure in Austria.

Belgium

(General Comment): The guilty plea procedure was introduced by the law of February 5, 2016 (Article 216 of the Code of Criminal Investigation), which entered into force on February 29, 2016.
According to Article 216 of the CIC, §1, al.1 "For acts that do not appear to be of a nature to be punishable by a main correctional imprisonment of more than five years, the public prosecutor may, either ex officio or at the request of the suspect or defendant or his/her lawyer, propose the application of the "procedure of prior acknowledgement of guilt" defined in this article, if the suspect or defendant admits to being guilty of the acts attributed to him/her".

Bulgaria

(General Comment): "Total number of guilty plea procedures" indicates the total value of the next two indicators;
"Before the main trial": the agreements submitted by a prosecutor to the court are taken into account;
“During the main trial”: a value is indicated, which is the sum of the number of agreements under Article 384 of the Criminal Procedure Code (with a person or for any of the crimes), concluded by the prosecutors in a court phase (after an indictment has been filed), as well as by the number of procedures under the abbreviated court investigation under Article 371, item 2 of the CPC (under Chapter Twenty-eight of the CPC, pursuant to Article 373, para. 3, supra Article 372, para. 4, supra Article 371, item 2 CPC), under which there have been convictions and acquittals.

(2020): Question 107–1:
– the indicator "Total number of guilty plea procedures" indicates the total value of the next two indicators;
– in the indicator "Before the main trial" the agreements submitted by a prosecutor to the court are taken into account (analogous to the previous questionnaires);
– in the indicator “During the main trial” a value is indicated, which is the sum of the number of agreements under Article 384 of the Criminal Procedure Code (with a person or for any of the crimes), concluded by the prosecutors in a court phase (after an indictment has been filed), as well as by the number of procedures under the abbreviated court investigation under Article 371, item 2 of the CPC (under Chapter Twenty-eight of the CPC, pursuant to Article 373, para. 3, supra Article 372, para. 4, supra Article 371, item 2 CPC), under which there have been convictions and acquittals (similar to the previous questionnaires).

(2018): 1) The total amount of the following two indicators is given under indicator “Total number of guilty plea procedures”;
2) The number of the agreements that were brought to court by a public prosecutor is given under indicator “Before the court case” (similar to previous questionnaires;
3) The indicated amount is sum of the number of the agreements under Art. 384 of the Criminal Procedure Code (with a person or for some offence) concluded by the prosecutors in the judicial phase (after an indictment), as well as the number of procedures under an expedited procedure by Art. 371, it. 2 of the Criminal Procedure Code (under Chapter Twenty Eight of the Criminal Procedure Code in accordance with Art. 373, Para. 3, in conjunction with Art. 372, Para. 4 and in conjunction with Art. 371, it. 2 of the Criminal Procedure Code) under which convictions and acquittals have been imposed, is given under indicator “During the court case”.

Croatia

(General Comment): In criminal proceedings, the defendant is granted the right to plead guilty (for all or a number of the counts of the charge) and reach agreement on the sanction. If the defendant pleads guilty and no agreement on the sanction is reached, the panel shall confirm the indictment and a trial must be scheduled. The parties may negotiate on the conditions of pleading guilty and agreeing on a sanction. During these negotiations, the defendant shall have a defence counsel. If the president of the panel is served with a confirmed indictment to which the accused has pleaded guilty, the proposing of evidence for the trial shall be limited only to the evidence which concerns the decision on criminal-law sanctions. Where the accused pleads guilty to all counts of the charge, the president of the panel shall instruct him/her that he/she may immediately state his/her position on all the circumstances that incriminate him/her and present all the facts in his/her favour, after which the accused shall be interrogated. The guilty plea does not exempt the court from its duty to present other evidence as well. If the confession of the accused at the trial is complete and in accordance with the evidence already gathered, the court shall, in the course of evidentiary proceedings, present only those pieces of evidence that relate to the decision on punishment or other sanction. The State Attorney’s Office keeps only a track record on the judgments rendered by the court in the guilty plea procedure and no distinction can be made between the number of guilty plea procedures “before the court case” and their number “during the court case”.

(2021): Source of information: Report of the Chief State Attorney of the Republic of Croatia on the work of State Attorney's offices in 2021
Data under Severe criminal cases refers to cases under the jurisdiction of county state attorney's offices and the Office for the Suppression of corruption and organised crime
Data under Misdemeanour and / or minor criminal cases refers to cases under the jurisdiction of municipal state attorney's offices, noting that certain severe criminal cases are also within their jurisdiction, however, statistical data are presented in total for all criminal offences under the jurisdiction of municipal state attorney's offices, without separating them into “lighter” and “more serious” criminal offences.

(2016): In total, in 2016, 440 judgements were given under the agreement of the parties in which the accused pleaded guilty (total number of guilty plea procedures is 440), but there is no data on how many cases it occurred before the court case or during the court case. Regarding the data from the previous cycle, there has been a decrease in the number of judgements by the agreement of the parties in which the defendant pleaded guilty because during the previous period in only one criminal case that was within the jurisdiction of the Office for the Suppression of Corruption and Organized Crime with over three hundred defendants, an agreement was reached with a large number of defendants, which ultimately affected a significant increase in the number of judgments given by the parties' agreement.

Czech Republic

(2021): There was a legislative change which make several changes regarding the guilty pleas - it easier to plead guilty and achieve guilty plea. The biggest change is that it is possible to get guilty plea for the most serious crimes. As a result the number of guilty pleas is rapidly rising.

(2020): There was a legislative change which make it easier to plead guilty and achieve guilty plea. The biggest change is that it is possible to get guilty plea for the most serious crimes.

Denmark

(General Comment): Denmark does not have a definition of "severe criminal cases" and "minor criminal cases". The answer covers the number of counts (measured by charges per person). In 2021, the number of complexes are 2997. There has been a decrease in the number of guilty plea procedures. The Director of Public Prosecutions has no explanation for this. In Denmark, a guilty plea procedure is concluded by a court hearing, not a main trial. Instead of an indictment, the Prosecution Service sends the case to the court with a charge sheet describing the offence. The court must in a court hearing ensure that the conditions for proceeding the case as a guilty plea procedure are present. The answer regarding whether the case was concluded before/during the main trial differs from last year´s answer, as guilty plea procedures are correctly concluded before the main trial, as the confession must subsequently be validated by a judge.

(2021): Denmark does not have a definition of "severe criminal cases" and "minor criminal cases". The answer covers the number of counts (measured by charges per person). In 2021, the number of complexes are 2997. There has been a decrease in the number of guilty plea procedures. The Director of Public Prosecutions has no explanation for this. In Denmark, a guilty plea procedure is concluded by a court hearing, not a main trial. Instead of an indictment, the Prosecution Service sends the case to the court with a charge sheet describing the offence. The court must in a court hearing ensure that the conditions for proceeding the case as a guilty plea procedure are present. The answer regarding whether the case was concluded before/during the main trial differs from last year´s answer, as guilty plea procedures are correctly concluded before the main trial, as the confession must subsequently be validated by a judge. The data is registrered through a case-filing tool, POLSAS. POLSAS is first and foremost a case-filing tool, which may be subject to human entry-error. Furthermore, the number of guilty plea procedures can fluctuate on a yearly basis for a variety of reasons. We cannot conclude anything of substance regarding the decrease without a manual investigation.

(2020): The discrepancy is due to the method of calculation. In 2018 the answer covers the number of complexes of cases, and the answer in 2020 covers the number of counts (measured by charges per person). In 2020 the number om number of complexes are 3.449.

Estonia

(2018): The data for 2018 evaluation cycle are checked and confirmed. The data are not comparable with 2016, because the source of the data changed.

(2012): The total number of guilty plea procedures for 2012 was 4 980.

Finland

(General Comment): The possibility of plea bargaining was introduced to the Finnish legal system in the beginning of year 2015. The aim of the reform was to allocate the resources of the national authorities in a more effective way and to speed up both the pre-trial phase of the criminal process and the court proceedings. A defendant can agree to plead guilty to a particular charge in exchange for a more lenient sentence. The prosecutor may also decide not to prosecute for one or for several of the suspected crimes. Plea bargaining can be used if the injured party has no demands in the matter and if he/she agrees to plea bargaining. Plea bargaining can be used when a person is suspected of a crime carrying a maximum sentence of six years' imprisonment. It cannot be used for crimes like homicide, causing bodily injury and sex offences or when the injured party is a child. Plea bargain is also applicable for white-collar crimes.

(2020): The known number of guilty plea procedures is 80. However, the number could be higher as the use of this procedure is not systematically reported, especially when it takes place during the main trial.

(2018): There were less than 100 plea bargaining cases in 2018. The exact number is not available.

(2016): The possibility of plea bargaining was introduced to the Finnish legal system in the beginning of this year. A defendant can agree to plead guilty to a particular charge in exchange for a more lenient sentence. The prosecutor may also decide not to prosecute for one or for several of the suspected crimes. Plea bargaining can be used if the injured party has no demands in the matter and if he/she agree to plea bargaining. Plea bargaining can be used when a person is suspected of a crime carrying a maximum sentence of six years' incarceration. It cannot be used for crimes like homicide, causing bodily injury and sex offences or when the injured party is a child. Plea bargain is also applicable for white-collar crimes. Legislation regarding plea bargaining was approved in August 2014, and the changes entered into force on 1 January 2015. The aim of the reform was to allocate the resources of the national authorities in a more effective way and to speed up both the pre-trial phase of the criminal process and the court proceedings. The Parliament has required the Ministry of Justice to follow up on and evaluate how the legislation on plea bargaining is being applied and implemented and to provide the Law Committee with a report on how the legislation functions by the end of 2017.

(2014): The possibility of plea bargaining was introduced in 2015. A defendant can agree to plead guilty to a particular charge in exchange for a more lenient sentence. The prosecutor may also decide not to prosecute for one or for several of the suspected crimes. Plea bargaining can be used if the injured party has no demands in the matter and if s/he agrees to plea bargaining. It can be used when a person is suspected of a crime carrying a maximum sentence of six years' incarceration. It cannot be used for crimes like homicide, causing bodily injury and sex offences or when the injured party is a child. Plea bargain is also applicable for white-collar crimes.

France

(2021):
source SDSE
Increase in the number of guilty plea procedures: 2020 was marked by a significant drop in activity (caused by the lawyers' strike movement initiated in the second half of 2019 and which continued at the beginning of 2020, then by the slowdown in court activity under the effect of the COVID-19 pandemic and successive lockdowns of the population) and 2021 by a return to normal activity in the courts. It is also necessary to take into account the impact of the law n° 2019-222 of 23 March 2019 on the nature of cases under the CRPC procedure.

(2016): The procedure of appearance on preliminary admission of guilt is a form of prosecution initiated by the prosecutor. In 2016, this procedure was initiated against 92213 perpetrators. Some of these proceedings failed either because the author failed to appear, or because no agreement could be reached on the sentence, or because the judge refused to approve the agreement between the author of the offence, his/her lawyer and the prosecutor. In 2016, the courts certified 75055 convictions in court on a plea of guilty.

(2014): It was not possible to distinguish between guilty plea agreements before the case is brought to court and guilty plea agreements concluded during judicial proceedings. Only the public prosecutor has competence for initiating such procedure when the facts are admitted. To a lesser extent, the procedure may take place at the end of a judicial investigation, before referring the case to court. The guilty plea procedure is often used for less serious offences.

Greece

(2020): No data available for this query.

Hungary

(2021): The guilty plea procedure as such does not exist in the Hungarian legal system; however, the new Code of Criminal Proceedings has introduced the so-called plea agreement, which is, in essence, a similar instrument.

(2020): This procedure exists only from 1 July 2018, following the entry into force of the Act XC of 2017 on the new criminal procedure law. In the event that the prosecution can prove the guilt of the accused beyond a reasonable doubt and there is no opportunity to explain what happened in an acceptable manner, the accused will do his best to admit the act and avoid a lengthy trial.

(2018): This procedure exists only from 1 July 2018, following the entry into force of the Act XC of 2017 on the nwe criminal procedure law.

Italy

(General Comment): As a matter of fact in Italy there is no "guilty plea procedure" as such. However, if someone pleads guilty there are special procedures to speed up the proceedings.

Latvia

(2016): In 2016, the Prosecution Office sent a total of 699 cases to the court, in which there was concluded an agreement regarding admission of guilt and a punishment. Of all sent cases, in 21 occasions the court did not approve an agreement entered into during the pre-trial criminal proceedings. Thus in total, in 2016, the court approved 678 agreements concluded by the prosecutor at the pre-trial stage. However, data on the number of agreements approved in the court process (court) were not collected separately in 2016. Accordingly, data on the number of agreements approved in the court process (court) and in total are not available for 2016.

(2012): In 2012, 233 cases were brought to court by public prosecutors under a guilty plea procedure.

Lithuania

(2018): On 1st January 2017 driving under the influence of alcohol has been criminalized. The majority of these cases are brought to court through the guilty plea procedure.

(2012): The 2012 data does not include criminal cases that were brought before court with the bill of indictment. It includes cases that were brought before court with the criminal order under a simplified procedure, and also cases that were discontinued by court on non-rehabilitating grounds.

Luxembourg

(2021): In 2020 and 2021, health measures only allowed the physical presence of a reduced number of persons in hearings compared to previous years. To continue to work efficiently and resolve cases, prosecutors' offices have, as far as possible, given preference to the procedure of judgement by agreement (procédure du jugement sur accord), as it requires less physical presence of parties, defence counsel, witnesses, etc. Moreover, since the procedure of judgment by agreement was only introduced in 2015, the habit of resorting to this measure has only become established in recent years among lawyers, who now take the initiative themselves more often to launch this procedure.

(2020): In 2020, the sanitary measures did allow only a reduced number of people in the court hearings compared to previous years. In order to continue to work effectively and to resolve cases, the state prosecutors’ offices decided to resort to the guilty plea procedure, since it does not require the same amount of physical presence of the parties, the defenders, witnesses, etc.

(2018): The "transaction pénale" introduced by a law of February 24th, 2015 under the name of "jugement sur accord" enables the prosecutor and the defendant to "negotiate" a penal judgment that will be rendered executory by the courts.

(2016): The "transaction pénale" introduced by a law of February 24th, 2015 under the name of "jugement sur accord" and enables tht prosecutor and the defendant to "negotiate" a penal judgment that will be rendered executory by the courts.

Netherlands

(2021): In 2021, there were experiments with judgement agreements (vonnisafspraken) and trial agreements (procesafspraken), see eg. https://www.bjutijdschriften.nl/tijdschrift/NTS/2022/2/NTS_2666-6553_2022_003_002_003. These experiments were evaluated, and further specified in directives and instructions in 2022. The numbers are not yet available.

Poland

(General Comment): Article 335 [Sentencing without trial - motion] -Criminal Code Procedure
§ 1. If the accused pleads guilty, and in the light of his explanations the circumstances of the commission of the offence and his guilt raise no doubts, and the attitude of the accused indicates that the objectives of the proceedings will be achieved, further proceedings may be omitted.
The public prosecutor, instead of filing a bill of indictment, shall file a motion with the court for issuing a judgment of conviction at a hearing and for agreeing with the defendant on penalties or other measures envisaged for the offence charged, also taking into account the legally protected interests of the victim. The agreement may also include a specific decision on payment of legal costs.
The public prosecutor may attach to the indictment a motion for a judgment of conviction to be handed down at a hearing and for the penalties or other measures prescribed for the offence charged to be agreed upon with the defendant, also taking into account the legally protected interests of the victim, if the circumstances of the offence and the defendant's guilt are beyond doubt, the evidentiary statements made by the defendant do not contradict the findings made, and the defendant's attitude indicates that the objectives of the proceedings will be achieved.
*Article 156 of the Fiscal Penal Code, The public prosecutor, as well as the financial pre-trial body, may attach to the indictment a motion for issuing, without a hearing, a judgment of conviction and imposing a penalty or penal measure agreed with the accused for the fiscal offence or fiscal misdemeanour charged against him, if the circumstances of the commission of the offence do not raise any doubts and the attitude of the accused indicates that the objectives of the proceedings will be achieved.

(2021): *) 51 198 - Data refers to persons convicted at first instance:
- Convicted as a result of granting an application under Article 335 § 1 or 2 of the Code of Criminal Procedure: in Regional Courts - 580 persons, in District Courts - 46,148 persons.
- Voluntary surrender to liability for criminal and fiscal offences (Kks): in District Courts - 4,470 persons.

**(2020): ***during the main trial – 53 072 - *) The data pertains to persons sentenced in the first instance:
- Sentenced as a result of granting an application under Article 335 § 1 or 2 of the Code of Criminal Procedure: in Regional Courts - 743 persons, in District Courts - 48,762 persons
- Voluntary submission to liability for penal and fiscal offences (Kks): in District Courts - 3,567 persons.
*57 735 - The data on the basis of which the information was provided are collected under the Law on Public Statistics in the Public Prosecutor office - P1K report on the activity of the common organizational units of the public prosecutor's office in criminal cases (statistical program SprawPro). The data for 2018 included only those cases in which a request under Article 335 par 1 of the Code of Criminal Procedure was addressed. On the other hand, the data for 2020 included cases in which the prosecutor addressed a motion for a conviction and motions to join the indictment under Article 335 par 2 of the Code of Criminal Procedure and Article 156 of the Fiscal Penal Code

Slovak Republic

(2020): The data were delivered by General prosecutor office. The most of the data are not available, because these are not monitored by General prosecutor office in CEPEJ requested structure.

Slovenia

(General Comment): The defendant may plead guilty in two kinds of situations. He/she can achieve an agreement with a state prosecutor in a plea-bargaining procedure or he/she can make a guilty plea irrespectively of the state prosecutor at the pretrial hearing and until the beginning of a main hearing. Cases brought to court by the public prosecutor through the guilty plea procedure are only first mentioned kind of cases. The agreement on guilty plea between the defendant and state prosecutor may be concluded before the commencement of the criminal proceedings and not later than by the beginning of the main hearing. There is no available data on the stage of the proceeding when the agreement was concluded. There is no guilty plea procedure in misdemeanour criminal cases.

(2021): In the previous year (2020) the number of guilty plea procedures was unusually low due to two reasons: a stricter criminal framework (regarding illegal crossing of the state border or territory under Article 308 of the Criminal Code) and the impact of the Covid-19 pandemics.

(2020): The reason for fewer negotiations and fewer agreements is mainly a stricter criminal framework for crimes that were still regulated in 2018 in such a way that they could be the subject of negotiations between the prosecutor and the defendant (illegal crossing of the state border or territory under Article 308 of Criminal Code). Due to the above, there was no interest on the part of the defendants as well as the state prosecutors to agree on guilt and criminal sanction as parties to criminal proceedings. In addition to this, an epidemiological reason for measures to prevent the spread of the covid-19 epidemic is cited as the reason for the reduction in negotiations and plea agreements concluded, furthermore, the poor staffing situation and the high workload of state prosecutors who are engaged in urgent matters in the on-call service and in attending court hearings and the prompt announcement of pre-trial hearings shortly after the indictment becomes final, which significantly shortened the time for conducting negotiations and concluding a plea deal.

(2016): From the enforcement of the provisions on guilty plea bargaining procedures in Criminal procedure act in 2012 there is a steady rise in the number of concluded agreements between the defendant and the prosecutor. The proportion of these agreements compared to filed indictments also grows (2012: 1,1 %, 2014: 2,0%, 2016: 3,8 %). The most general interpretation of this trend would be that the parties of criminal procedures have recognised these new instrument as beneficial in terms of speeding up the process of reaching the final decision and the reduction of the sanction that would be issued, if the complete trial took place.

Spain

(2021): Explanation of the increased number of guilty plea procedures: Probably, coming back to normal activity after covid restrictions.

Question 109

Austria

(General Comment): The courts only deal with damages to property and negligent bodily injuries caused by traffic accidents in civil and criminal proceedings; offences which do not lead to damages or injuries are punished by administrative bodies (e.g. speeding, having worn-out tires, drunk-driving).

Belgium

(General Comment): The data do not include traffic law cases, cases handled by the labor auditorates, or appeals against police decisions handled by the correctional prosecutor's office.

(2021): The data do not include traffic law cases, cases handled by the labor auditorates, or appeals against police decisions handled by the correctional prosecutor's office.

Bulgaria

(2021): Statistical reporting of the PORB. The data are derived from the statistical reporting of the PORB, according to indicators and order, approved by the Prosecutor General with the Instruction for the organization of the information activity in the PORB.

Estonia

(2020): Only the ones that are classified as criminal offences.

(2016): It includes only a minority of traffic offences that are punisheable according to Penal code, these are more serious offences like causing an accident with injured victims, drunk driving above medium-intoxication level and repeated driving without licence.

(2014): The 2014 data encompasses only severe drunk driving and accidents with serious bodily casualties.

France

(2021): source SDSE

Hungary

(2012): In 2012, the total number of traffic offences cases was 3 084.

Ireland

(General Comment): In the vast majority of cases involving traffic offences, the police service (An Garda Síochána) will prefer charges without reference to the Office of the Director of Public Prosecutions. Only in the more serious of such cases, including causing death by dangerous driving, will the Office of the DPP receive files for a decision whether to prosecute or not. Any such traffic offence cases received by the Office of the DPP and decided upon would normally be included in the figures.

Latvia

(2021): Data from Accountancy system

(2016): In accordance with the Latvian legal system on traffic offenses, a person can also be punished administratively, for example, for driving a vehicle under the influence of alcohol, narcotic drugs or other intoxicating substances. Therefore, in this specific case, we would like to emphasize the fact that the indicated number of cases does not include any road traffic violations that are provided for by the Latvian Administrative Violations Code. At the moment, having evaluated the comment received from you, we consider that it is acceptable to rectify the previously given response in Q-109 by indicating "Yes", as it includes road traffic violations for the commission of which there is provided criminal liability

Lithuania

(General Comment): A traffic offence is qualified as criminal when it causes health impairment to another person, or the offender has been driving under influence of alcohol, narcotic, psychotropic of other psychoactive substances and his/her driving resulted in health impairment to or death of another person. Other traffic offences are qualified under the administrative legislation.

Malta

(2016): Traffic offences are listed with the 1st instance cases filed in front of the Court of Magistrates, Criminal Jurisdiction.

Netherlands

(General Comment): They include traffic offences, but NOT traffic violations. Only serious traffic issues are prosecuted as traffic offence, the less serious as violation or administrative justice (wet Mulder).

(2020): These include traffic offences, but NOT traffic violations. Only serious traffic issues are prosecuted as traffic offence, the less serious as violation of even administrative justice (wet Mulder).

Portugal

(2012): According to 2012 data, the figures include traffic offences which are criminally punished.

Romania

(2020): Only serious offenses that are considered crimes, such as drunk driving or involuntary manslaughter.

(2018): Only serious offenses that are considered crimes, such as drunk driving or involuntary manslaughter.

(2016): Only serious offenses that are considered crimes, such as drunk driving or involuntary manslaughter.

Slovenia

(General Comment): The communicated data include only traffic offences, stipulated as criminal offences (in the Penal Code) and therefore prosecuted by State prosecutors. There are two such criminal offences: causing a traffic accident through negligence whereby another person is seriously injured or died and audacious driving in road traffic which is committed by a serious breach of road safety regulations, while other cases of traffic offences are not criminal offences, but minor offences and are not included in the provided figures.

Indicator 5: Legal aid

Comments provided by the national correspondents

organised by country

Question 016. Does legal aid apply to:

Question 018. Can legal aid be granted for the fees that are related to the enforcement of judicial decisions (e.g. fees of an enforcement agent)?

Question 019. Can legal aid be granted for other costs (different from those mentioned in questions 16 to 18, e.g. fees of technical advisors or experts, costs of other legal professionals (notaries), travel costs etc.)?

Question 020. Please indicate the number of cases for which legal aid has been granted:

Question 020-1. Please indicate the timeframes of the procedure for granting legal aid, in relation to the duration from the initial legal aid request to the final approval of the legal aid request:

Austria

Q016 (General Comment): In principle every person who retains a defence lawyer or another representative has to bear the costs him or herself even if the lawyer was appointed ex officio. By virtue of the Code of Criminal Procedure, the court has to decide on total or partial legal aid on the request of the defendant if the defendant cannot bear the total costs for the defence lawyer without impairment of his/her own or his/her family's maintenance which enables him/her to a simple lifestyle and if it is necessary in the interest of justice in particular in the interest of an adequate defence. Where in any case the defendant needs a defence lawyer, the court has to decide on legal aid ex officio even if the defendant does not request for it but further requirements to provide legal aid are given.

Civil Cases:

A party with insufficient financial means may apply for legal aid when entering into litigation or at any time later as long as the civil proceeding is still pending. As far as required the court can give legal aid by (wholly or partially) freeing the indigent party from court fees and other fees (fees for experts, interpreters, witnesses and guardians appointed by the court - as representatives for absent parties or parties in need of guardianship -, the parties' travelling expenses, and costs of announcements) and by providing legal representation (by a lawyer) free of charge. Where legal representation is provided, legal aid also covers the pre-trial advice given by the lawyer. Legal aid is granted only as the applicant - according to his income, assets and maintenance obligations - is unable to bear (any or part of) the costs mentioned above without endangering the minimum subsistence level necessary to allow a simple standard of living. Legal aid is denied if the claim or defence of the applicant is manifestly unfounded or if the claim has no prospect of success. Legal aid is granted in all civil and commercial court proceedings regardless of the applicant's nationality or place of residence. If legal aid is granted in the main proceeding, the same also applies to the enforcement proceedings. A party which was granted legal aid for a particular legal dispute in another EU Member State is also entitled to legal aid in Austria for a proceeding concerning the recognition and enforcement of the decision given in that dispute. If an application for legal aid is submitted concerning an urgent case (e.g. legal representation in the case of interim measures) the court has to decide speedily. If the court decides that the legal aid includes the assistance of a lawyer, the regional Bar Association selects a lawyer from among its members, by alphabetical order.

However, the applicant may propose a lawyer himself. Although this proposal is not binding on the regional Bar Association, it will in general accept a well-founded proposal (e.g. if the lawyer is willing and already familiar with the case). The regional Bar Association usually appoints a lawyer to represent the applicant within a few days. The application form (ZPForm 1) contains a summary of assets (income, property such as real estate, money in bank accounts, insurance policies, etc.) and liabilities (maintenance, etc.), personal data and information on the applicant's living conditions. Supporting documents are to be submitted as far as possible. False or maliciously incomplete information can lead to considerable fines and can also result in civil liability or criminal prosecution for fraud. At its discretion the courts may grant full legal aid or – depending on the applicant's circumstances and taking into account expected costs – partial legal aid, covering only certain fees. But if the applicant looses the case, he has to reimburse the successful party's procedural costs.

Legal aid covers all stages of the proceedings. As long as it has not been withdrawn because of a change in the applicant's circumstances or annulled by the court if it is established that the conditions under which the aid was granted were not borne out, legal aid covers any appeal (or appeal procedure).

Q016 (2017): As far as civil cases are concerned, according to § 64 of the Austrian Civil Procedure Order (Zivilprozessordnung, ZPO) legal aid may cover a provisional exemption from court fees, fees for witnesses, experts, interpreters and guardians, costs of the necessary announcements and the cash expenditure of guardians or lawyers, representation by a court official or – if necessary – a lawyer.
In criminal cases:
According to sec 391 par 1 CCP the enforcement of the court's decision on costs has to take into account the ability of the convicted person to bear the costs for the daily life for him/herself and the family as well as the obligation of compensation in regard of the offence. The court may, if the costs cannot be enforced because of an impecunious defendant, declare the costs unrecoverable. If the court assumes that in the future the costs will be recoverable but for the time being they are not, the economic capacity of the person concerned has to be re-examined after a certain period. The statute for limitation to recover the costs is five years after the final decision in the proceeding. If the court decides that the convicted person has to bear the costs of the proceeding and further on he or she is not able to pay the costs the authorities, responsible to recover costs, may prolong the payment deadline, allow to pay instalments, or to abate the costs.
In principle every person who retains a defence lawyer or another representative has to bear the costs him or herself even if the lawyer was appointed ex officio (sec 393 par 1 of CCP). According to sec 61 para 2 CCP the court has to decide on total or partial legal aid on the request of the defendant if the defendant cannot bear the total costs for the defence lawyer without impairment of his/her own or his/her family's maintenance which enables him/her to a simple lifestyle and if it is necessary in the interest of justice in particular in the interest of an adequate defence. In any case legal aid has to be granted
during the whole procedure if and as long as the defendant is held in pre trail detention; • during the entire procedure on the confinement in an institution for mentally abnormal offenders; • during the trail on the confinement in an institution for addicted offenders in need of curing and on the confinement in an institution for dangerous subsequent offender; •during the trail in front of a jury or of a court of lay assessors; •during the trail in front of a single judge if the sentence which may be imposed is more than three years of deprivation of liberty; •during the appeal procedure against a verdict of a court of jury or a court of lay assessors, in case the European Court for Human Rights has determined a violation of the European Convention on Human Rights or an additional Protocol to it for conducting the request for the reopening of the procedure and for the trail in public;
•if the defendant is blind, deaf, mute or otherwise handicapped or is not able to conduct the defense by him/herself because he/she can do not understand the language at court,
•for the appeal procedure,
•if the factual and legal position is difficult.
Where in any case the defendant needs a defense lawyer, the court has to decide on legal aid ex officio even if the defendant does not request for it but further requirements to provide legal aid are given.
With regard to the decision on legal aid the court has to examine the defendant's economic capacity to bear the costs for a defense lawyer. The economic capacity is determined by the maintenance which enables the defendant and his/her family to a simple lifestyle, and can be identified at the bases of the minimum living wage which may not be garnished given by sec 5 of the act on garnishment of wages and the appropriate maintenance which is higher than the minimum living wage. In particular the income and other assets on the one hand and the number of persons who are entitled to maintenance on the other hand

Q018 (General Comment): If legal aid is granted in the main proceeding, the same also applies to the enforcement proceeding. According to the Austrian Civil Procedure Order, the requirements for granting legal aid have only to be re-examined, if the enforcement proceeding will be opened one year after the main proceeding has been closed.

Q018 (2019): According to § 64 of the Austrian Civil Procedure Order (Zivilprozessordnung, ZPO) legal aid extends to enforcement proceedings.
Q018 (2018): Legal aid according to § 64 of the Austrian Civil Procedure Order (Zivilprozessordnung, ZPO) extends to enforcement proceedings.
Q019 (General Comment): In civil matters, the Austrian Civil Procedure Order provides for that legal aid may cover not only the (provisional) exemption from court fees but also the exemption from fees for witnesses, experts, interpreters and guardians, costs of the necessary announcements and the cash expenditure of guardians or lawyers, representation by a court official or – if necessary – a lawyer. If the personal presence of the parties at a hearing is ordered by the court, their necessary travel expenses are also replaced. Where legal representation is provided, legal aid also covers the pre-trial advice given by the lawyer. If legal aid is granted in the main proceeding, the same also applies to the enforcement proceedings. A party which was granted legal aid for a particular legal dispute in another EU Member State is also entitled to legal aid in Austria for a proceeding concerning the recognition and enforcement of the decision given in that dispute. In criminal matters, there are no costs to bear for the parties, until the court has taken a final decision, which also encompasses a decision on the costs. In case of an acquittal, the State has to bear all the costs. The Public Prosecutor does not have to bear any costs in any case. The Code of Criminal Procedure pinpoints only one exception to this rule, if a person, different from the Public Prosecutor, i.e. "Privatankläger" holds the accusation and loses the case because of an acquittal. In this case, the so called Privatankläger (private prosecutor) has to bear the costs. In case of a false accusation, the person who knowingly accused the (acquitted) perpetrator would have to bear the costs of the trial.

Q019 (2019): see general comments

Q019 (2018): See above Point 016-1.

Q020 (2016): Legal aid can not be granted for cases that have not been brought to court. Analysis of the non-litigious cases for which legal aid has been granted is not avaiable.

Q020-1 (General Comment): Where legal representation is provided, legal aid also covers the pre-trial advice given by the lawyer. Legal aid is granted only as the applicant - according to his income, assets and maintenance obligations - is unable to bear (any or part of) the costs mentioned above without endangering the minimum subsistence level necessary to allow a simple standard of living. Legal aid is denied if the claim or defence of the applicant is manifestly unfounded or manifestly not brought in good faith. Legal aid is granted in all civil and commercial court proceedings regardless of the applicant's nationality or place of residence.
If legal aid is granted in the main proceeding, the same also applies to the enforcement proceedings. A party which was granted legal aid for a particular legal dispute in another EU Member State is also entitled to legal aid in Austria for a proceeding concerning the recognition and enforcement of the decision given in that dispute. If an application for legal aid is submitted concerning an urgent case (e.g. legal representation in the case of interim measures) the court has to decide speedily. If the court decides that the legal aid includes the assistance of a lawyer, the regional Bar Association selects a lawyer from among its members, by alphabetical order.
Legal aid covers all stages of the proceedings. As long as it has not been withdrawn because of a change in the applicant's circumstances or annulled by the court if it is established that the conditions under which the aid was granted were not borne out, legal aid covers any appeal (or appeal procedure).

Q020-1 (2021): criminal cases: 3,64 days; other than criminal cases: 32,35 days; total: 23,9 days regional administrative courts: maximum duration prescribed in law/regulation: 6 months
supreme administrative court: 29 days

Q020-1 (2020): Actual average duration:
criminal law: 3,67 days; civil law 34,48 days; total: 24,87 days
supreme administrative court: 23 days
regional administrative courts: maximum duration prescribed in law/regulation: 6 months
Actual average duration: 40 days

Q037 (General Comment): The Public Authority's Liability Act (Amtshaftungsgesetz) provides for liability of the state (and other legal entities) for misconduct of their employees in the exercise of public authority, including court proceedings and court decisions, causing damage to persons or property by excessive length of proceedings, wrongful arrest and/or wrongful condemnation. The liability presupposes both wrongfulness and fault. In the case of wrongful arrest or wrongful criminal condemnation, compensation can also be obtained according to the Penal Law's Compensation Act (Strafrechtliches Entschädigungsgesetz) without proving fault of the Authorities. The compensation procedure is laid down in para. 8 ff. Amtshaftungsgesetz and para. 9 ff. Strafrechtliches Entschädigungsgesetz. The injured person may demand – free of costs - of the legal entity against which the claim for damages is to be raised to forward her/him within a three months' term a written statement indicating as to whether it accepts or partially or totally rejects the claim for damages. If the claim is partially or totally rejected, the complaint can still be filed at court. The exclusive jurisidiction over the claim of the injured person against the legal entity rests in the first instance with the regional court (Landesgericht) in charge of civil matters in whose range of jurisdiction the infringement of law occurred. Compensation is funded by the Public Authority's general budget. The liability is unlimited, indemnity is to be paid in terms of money only. To make sure that compensation is paid following the concrete circumstances of each individual case, there is no such thing as a daily tariff or a flat compensation sum. The amount of compensation depends solely on the magnitude of damage suffered by the victim and the degree of fault attributable to the Public Authority.
According to sec 67 CCP victims have the right to claim reimbursement for the damage caused by the criminal act or compensation for the impairment of their legally protected interests. The extent of the damage or the impairment has to be established ex officio as far as this can be done on the basis of the results of the criminal proceeding or with the help of additional simple investigations. If for the assessment of a bodily injury or damage to the health of a person an expert is appointed, he/she also has to be requested to establish the periods of pain.

Q037 (2021): The payments according to the Public Authority's Liability Act and the Penal Law's Compensation Act cannot be quantified regarding the different circumstances. Only the total amount of the payments can be provided. On this basis the payments according to the Public Authority's Liability Act were 714.676,17 Euro and those according to the Penal Law's Compensation Act were 574.038,47 Euro.

Q037 (2020): The payments according to the Public Authority's Liability Act and the Penal Law's Compensation Act cannot be quantified regarding the different circumstances. Only the total amount of the payments can be provided. On this basis the payments according to the Public Authority's Liability Act were 444.740,27 Euro and those according to the Penal Law's Compensation Act were 865.635,22 Euro.

Q037 (2016): The Public Authority's Liability Act (Amtshaftungsgesetz) provides for liability of the state (and other legal entities) for misconduct of their employees in the exercise of public authority, including court proceedings and court decisions, causing damage to persons or property by excessive length of proceedings, wrongful arrest and/or wrongful condemnation. The liability presupposes both wrongfulness and fault. In the case of wrongful arrest or wrongful criminal condemnation, compensation can also be obtained according to the Penal Law's Compensation Act (Strafrechtliches Entschädigungsgesetz) without proving fault of the Authorities. The compensation procedure is laid down in para. 8 ff. Amtshaftungsgesetz and para. 9 ff. Strafrechtliches Entschädigungsgesetz. The injured person may demand – free of costs - of the legal entity against which the claim for damages is to be raised to forward her/him within a three months' term a written statement indicating as to whether it accepts or partially or totally rejects the claim for damages. If the claim is partially or totally rejected, the complaint can still be filed at court.
The exclusive jurisidiction over the claim of the injured person against the legal entity rests in the first instance with the regional court (Landesgericht) in charge of civil matters in whose range of jurisdiction the infringement of law occurred. Compensation is funded by the Public Authority's general budget. The liability is unlimited, indemnity is to be paid in terms of money only. To make sure that compensation is paid following the concrete circumstances of each individual case, there is no such thing as a daily tariff or a flat compensation sum. The amount of compensation depends solely on the magnitude of damage suffered by the victim and the degree of fault attributable to the Public Authority.

Belgium

Q016 (2017): In Belgium there are three types of "legal aid": first-line legal aid, second-line legal aid and legal assistance.
First-line legal aid consists of practical information, legal information, a first legal opinion or referral to a specialised body (Article 508/1 of the Judicial Code).
Second-line legal aid: legal aid granted to a natural person in the form of a detailed legal opinion or legal assistance in or out of court proceedings or assistance in a trial, including legal representation.
Legal assistance consists in exempting, in whole or in part, those who do not have the necessary income to afford the costs of a procedure, from paying the related costs, which will therefore be covered by the State budget (Article 664 of the Judicial Code). Legal assistance may be obtained in civil or criminal matters and in any proceedings (judicial, administrative or arbitral).

Q016 (2016): In Belgium there are three types of "legal aid": front-line legal aid, second-line legal aid and legal assistance.
Front-line legal aid consists of practical information, legal information, a first legal opinion or referral to a specialized body (section 508/1 of the Judicial Code).
Second-line legal aid: legal aid granted to a natural person in the form of a detailed legal opinion or legal assistance in the context or not of a procedure or assistance in the context of a trial including representation. Legal assistance consists in providing, in whole or in part, those who do not have the necessary income to meet the costs of a procedure, to pay the related costs which will therefore be borne by the budget of the State (Article 664 of the Judicial Code). Legal aid may be obtained in civil or criminal matters and in any proceeding (judicial, administrative or arbitral).

Q018 (General Comment): Judicial assistance (one of the components of the legal aid in the sense of the questionnaire) consists in exempting, in whole or in part, those who do not have the necessary means of subsistence to meet the costs of proceedings, even extrajudicial proceedings, from paying the various fees - registration, registry and shipping, as well as other costs related to the proceedings. The beneficiaries are also entitled to free of charge services of public and ministerial officials. They can also have free assistance of a technical adviser during judicial expertise. According to Article 665, 2° of the Judicial Code, judicial assistance covers acts relating to enforcement of judgments and decisions of justice.

Q018 (2020): Legal aid consists in exempting, in whole or in part, those who do not have the necessary means of existence to meet the costs of a procedure, even an extrajudicial one, from paying the various fees, registration, clerk's office and dispatch fees and other costs that it entails. It also assures the interested parties that the ministry of public and ministerial officers is free of charge. It also allows the interested parties to benefit from the free assistance of a technical advisor during judicial expertises. According to article 665, 2° of the Belgian Judicial Code, legal aid is applicable to acts relating to the execution of judgments and decisions.

Q019 (General Comment): Judicial assistance is applicable:
1) to all acts related to applications to be brought or pending before a judge in all legal matters (civil, criminal, administrative) or before arbitrators;
2) to acts related to the enforcement of judgments;
3) to proceedings on request;
4) to procedural acts that fall within the jurisdiction of a civil or criminal judge or require the intervention of a public or ministerial officer;
5) to mediation procedures, extrajudicial or judicial, conducted by an accredited mediator;
6) to all extrajudicial proceedings imposed by law or by the judge;
7) for the enforcement of authentic acts in another member State of the European Union in the frame of Article 11 of the Council Directive 2002/8/EC of 27 January 2003 to improve access to justice in cross-border disputes by establishing minimum common rules relating to legal aid for such disputes, under the conditions defined by that Directive;
8) to the assistance of a technical adviser when a legal expert is required.

Q019 (2020): "Legal aid is applicable:
1° to all acts relating to claims to be brought or pending before a judge of the judicial or administrative order or before arbitrators;
2° to acts relating to the execution of judgments and decisions;
3° proceedings on request;
4° to procedural acts that fall within the competence of a member of the judicial order or require the intervention of a public or ministerial officer
5° to mediation procedures, extrajudicial or judicial, conducted by a certified mediator
6° to all extrajudicial procedures imposed by law or the judge
7° for the enforcement of authentic instruments in another Member State of the European Union within the framework of Article 11 of Council Directive 2003/8/EC of 27 January 2003 to improve access to justice in cross-border disputes by establishing minimum common rules relating to legal aid for such disputes, under the conditions defined by this Directive
8° to the assistance of a technical adviser in the case of judicial expertise.
"

Q019 (2018): Legal aid is applicable: 1° to all acts relating to claims to be brought or pending before a judge of the judicial or administrative order or before arbitrators;
2° to the acts relating to the execution of judgments and decisions;
3° to the proceedings on request;
4° to the procedural acts that fall within the jurisdiction of a member of the judiciary or require the intervention of a public or ministerial officer;
5° to the mediation procedures, extrajudicial or judicial, conducted by an approved mediator;
6° to all extrajudicial proceedings imposed by law or by the judge;
7° for the enforcement of authentic instruments in another Member State of the European Union under Article 11 of Council Directive 2003/8/EC of 27 January 2003 aimed at improving access to justice in cross-border disputes by establishing minimum common rules relating to legal aid for such disputes, under the conditions defined by that Directive;
8° to the assistance of a technical adviser during judicial expert appraisals.

Q019 (2017): Legal assistance is applicable:
(1) to all acts relating to claims to be brought or pending before a judge (civil, penal or administartive) or before arbitrators;
(2) to acts relating to the enforcement of judgments and court decisions;
(3) to proceedings on request;
(4) to procedural acts that fall within the jurisdiction of a member of the civil and penal order or require the intervention of a public or ministerial officer;
(5) voluntary or judicial mediation procedures conducted by a mediator approved by the commission referred to in section 1727;
(6) to all extrajudicial proceedings imposed by law or by the judge;
(7) to the enforcement of authentic acts in another Member State of the European Union under Article 11 of the Council Directive 2003/8/EC of 27 January 2003 aimed at improving access to justice in cross-border disputes by establishing minimum common rules relating to legal aid for such disputes, under the conditions defined by that Directive.
(8) to the assistance of a technical adviser during judicial expert appraisals.
Articles 691 to 692bis of the Judicial Code set out a series of costs advanced by the State (transport and subsistence costs of judges and public or ministerial officials, witness taxes, interpreters' costs, disbursements of bailiffs, notaries, etc.) for the benefit of the person receiving legal assistance.

Q019 (2016): Legal assistance is applicable to:
1 ° all acts relating to applications to be made or pending before a judge of the judicial or administrative order or before arbitrators;
2 ° acts relating to the execution of judgments and decisions;
3 ° proceedings on request;
4° proceedings that fall within the jurisdiction of a member of the Judicial Order or require the intervention of a public or ministerial officer;
5° mediation procedures, whether voluntary or judicial, conducted by a mediator approved by the commission referred to in article 1727;
6 ° [to all extrajudicial procedures imposed by law or by the judge;
7 ° for the enforcement of authentic instruments in another Member State of the European Union within the framework of Article 11 of Council Directive 2003/8 / EC of 27 January 2003 on improving access to justice in cross-border cases by establishing common minimum rules on legal aid granted in such cases, under the conditions laid down in that directive.]
8 ° to the assistance of a technical advisor during judicial appraisals.
Articles 691 to 692bis of the Judicial Code set forth a series of costs advanced by the State (transportation and subsistence expenses of magistrates and public or ministerial officers, taxes of witnesses, interpreters' fees, disbursements of bailiffs, notaries etc ...); to the discharge of the person benefiting from legal aid.

Q020 (2021): For second line legal aid, the number of cases closed for the year 2020-2021 amounts to 217 039 for Belgium.
For the year 2020-2021, the number of cases closed in criminal matters amounts to 79 662 and 137 377 for other matters.
As regards judicial assistance (one of the components of the legal aid in the sense of the questionnaire), the figure is 17 995: these are cases brought before the following courts: first instance courts (civil and family section), company courts and labour tribunals, courts of appeal, criminal section (in criminal matters) and courts of appeal, civil section, and labour court (in other matters). The number of closed cases for which legal aid was granted in full or in part is included in the figures in each category.

Q020 (2020): For second-line legal aid, the number of cases closed for the year 2019-2020 amounts to 203,305 for Belgium.
The figures for the 2018-2019 year were 196,840.
For the year 2019-2020, the number of cases closed in criminal matters is 76,561 and 126,744 for other matters.
Regarding legal aid, it can be noted that the figure of 16,266 corresponds to cases brought before the following courts: court of first instance (civil and family sections), enterprise court and labor court, court of appeal, criminal section (in criminal matters), and court of appeal, civil section, and labor court (in matters other than criminal).The number of closed cases for which legal aid was granted is included in the figures each time.

Q020 (2016): With regard to cases brought to courts, the only figure in our possession is the number of lawyers' appointments. This does not necessarily mean that the case will be closed or even brought to court (even if it is often the case). For the year 2015-2016, there has been 272,313 lawyers' designations (knowing that there may be several designations for a procedure). There is no distinction by subject.
With regard to second-line legal aid, however, the number of cases closed in criminal cases (excluding court work) for the 2015-2016 judicial year is available: 78172. For other subjects (year 2015- 2016): 155,769.
Regarding the number of cases (cases not brought to courts) that benefited from second-line legal aid, we have partial figures from the OVB (order of the Flemish Bars) for the year 2015- 2016: Cases that ended with an amicable settlement or transaction: 4097.

Q020 (2014): As for secondary legal assistance, for the judicial year 2013-2014 the number of cases solved which benefited from legal aid was 212 495. Regarding legal assistance, data are incomplete. Concerning 1st instance courts (civil cases), there were 20 033 orders granting or refusing legal assistance. In respect of commercial courts, 1 023 orders of the Legal Assistance Office granted legal assistance.
For the period 2013-2014 (September to September), secondary legal assistance has been allocated in favour of 212 495 resolved cases. As regards legal assistance, data are incomplete. And regarding first instance courts ruling on civil matter, 20 033 orders have been made, granting or refusing legal assistance. For commercial courts, 1 023 orders of the Judicial Assistance Office have approved the legal assistance.

Q020 (2012): For 2012, the number of non-litigious cases for which legal aid has been granted was 16 432 as regards the Order of the French and German Speaking Bars (Ordre des barreaux francophones et germanophones (OBFG)) and 41 618 as regards the Order of the Dutch Speaking Bars (Ordre des Barreaux néerlandophones (OVB)).

Q020-1 (General Comment): For second-line legal aid, Article 508/15, paragraph 1, of the Judicial Code states that "Except in urgent cases, the applicant and, where appropriate, his or her lawyer, shall be informed of the decision of the office within fifteen days of the application".
Q020-1 (2021): For second-line legal aid, Article 508/15, paragraph 1, of the Judicial Code states that "Except in urgent cases, the applicant and, where appropriate, his or her lawyer, shall be informed of the decision of the office within fifteen days of the application".As regards judicial assistance, the average duration varied between 11 and 4 days (for criminal cases 9 days, civil cases 11 days, before the labour court 7 days and before the labour tribunal 4 days).

Q020-1 (2020): No data available.

Q037 (General Comment): In Belgian law, the terminology is "inoperative preventive detention" and not "wrongful arrest".
Compensation via the civil liability procedure:
In Belgium, the liability of the state for damages resulting from faults committed by the public prosecutor's office or judges, falls under Article 1382 of the Civil Code (action in tort). According to article 1382 of the Civil Code: "Any act of man whatsoever which causes damage to another person obliges the person by whose fault it occurred to make reparation". The fault may consist of negligence according to the terms of article 1383 which provides that "everyone is responsible for the damage he causes not only by his own act but also by his negligence or imprudence". In order to obtain compensation, the plaintiff must demonstrate the existence of a fault, damage and a causal link between the fault and the damage. According to the Constitutional Court (see Constitutional Court ruling of June 30, 2014 (No. 99/2014)), a constitutionally correct interpretation of Article 1382 of the Civil Code implies that the state can be held liable for a fault of a judge/body deciding at the last instance, even if the decision is not repealed, amended, annulled or revoked. It is necessary that the fault consists of a sufficiently serious violation of the applicable rule of law and that, given the limited remedies available against the erroneous decision, it is not possible to obtain an annulment of the decision. Such claims are brought before the civil courts.
Reference should also be made to the Act of 13 March 1973 on compensation for inoperative preventive detention. Article 28 of this law provides that "Any person who has been held in preventive detention for more than eight days without this detention or its continuation having been caused by his own conduct may claim compensation:
a) if he or she has been directly or indirectly excluded from liability by a judicial decision that has become res judicata;
b) if he/she has benefited from an order or a ruling of dismissal;
c) if he/she has been arrested or kept in detention after the public action has been extinguished by prescription;
The amount of such compensation shall be determined in equity, taking into account all the circumstances of public and private interest.
If the person concerned is unable to bring an action for compensation before the ordinary courts, the compensation must be requested in writing to the Minister of Justice, who shall decide within six months.
The compensation shall be awarded by the Minister of Justice at the expense of the Treasury, if the conditions provided for in § 1 are met.
If the compensation or the allocation is refused, if the amount of the compensation or the number of days allocated is deemed insufficient, or if the Minister of Justice has not taken a decision within six months of the request, the person concerned may apply to the Commission for Inoperative Preventive Detention.
With regard to the "number of convictions" for "wrongful arrests": it should be noted that the figure in the table does not correspond to "convictions" but represents the number of cases for which there has been a definitive grant of compensation. In "inoperative preventive detention" cases there is no conviction. It is either a grant of compensation or a refusal of compensation. Therefore, the title of the third column of the table does not correspond to the content (in any case for the ""inoperative preventive detention"")

Q037 (2021): For the item "wrongful arrest" (corresponding in Belgium to "inoperative preventive detention"): concerning the number of decisions taken, there were 20 decisions granting and 21 decisions refusing compensation (+ 39 pending cases), in total 80 applications. Only the 20 decisions granting compensation and the total number of applications are included in the table.

Q037 (2019): 1. Reference should also be made to the Law of 13 March 1973 relating to compensation in the event of inoperative preventive detention. Article 28 stipulates the following:
Any person who has been held in preventive detention for more than eight days without this detention or its extension having been caused by his/her own conduct is entitled to compensation:
a) if s/he has been exonerated directly or indirectly by a court decision that has the force of res judicata;
(b) if s/he has benefited from an order or judgment of dismissal;
(c) if s/he has been arrested or detained after the termination of the prosecution by prescription;
The amount of such compensation shall be fixed in equity and taking into account all circumstances of public and private interest.
If the person concerned is unable to bring an action for compensation before the ordinary courts, the compensation must be requested by written request addressed to the Minister of Justice, who shall decide within six months. If compensation or imputation is refused, if the amount of compensation or the number of days imputed is deemed insufficient, or if the Minister of Justice has not made a decision within six months of the request, the interested party may apply to the "Inoperative Preventive Detention" Commission.
2. Compensation through the civil liability procedure:
In Belgium, the State liability for damage resulting from faults made by the public prosecutor office or judges, falls under the article 1382 of the Civil Code (claims on the basis of tort). According to article 1382 Civil Code: “Any act whatever of man which cause damage to another obliges him by whose fault it occurred to make reparation”. To obtain compensation, the plaintiff must demonstrate the existence of a fault, of damage and of a causal link between the fault and damage. According to the Constitutional Court a constitutionally correct interpretation of article 1382 of the Civil Code implies that the State may be held liable for a fault of a judicial body deciding in last instance, even if the decision is not repealed, amended, annulled or revoked. It is required that the fault consists in a sufficiently serious breach of the applicable legal rule and that, given the limited legal remedies available against the wrongful decision, it is not possible to obtain an annulment of the decision. These claims are brought before the civil courts.
Exceeding a reasonable time is also to be considered as a fault. However, article 21ter of the Code of Criminal Procedure provides that as a consequence of a violation of the right to be tried within a reasonable time, the courts can either impose a penalty below the statutory minimum or simply pronounce a guilty verdict without imposing a sentence. In addition, the Court of Cassation has ruled that the Chambre du conseil (which is the investigative court that intervenes in case of a judicial inquiry) can declare the criminal claim inadmissible if the rights of the defence have been seriously and irretrievably damaged due to the violation of the right to be tried within a reasonable time. In other less serious cases, the Chambre du conseil may establish the violation of the right to be tried within a reasonable time and commit the case for trial, after which the trial court is bound to give a proper response to this violation, in accordance with Article 21ter of the Preliminary Title of the Code of Criminal Procedure.

Q037 (2016): Compensation is only awarded for wrongful arrest. Excessive length may have consequences to the extent that a reduction of the sentence granted is possible: If the length of criminal proceedings exceeds a reasonable time, the judge may convict the offender simply by conviction or impose a sentence that is less than the minimum sentence prescribed by law.

Bulgaria

Q016 (General Comment): Legal aid is granted only to natural persons, in criminal, civil and administrative matters before courts of all instances. Legal aid authorities are the Ministry of Justice which conducts the State policy in the sphere of legal aid; the National Legal Aid Bureau /NLAB/ which provides general and methodological guidance of the activity concerning the granting of legal aid by issuing mandatory instructions on the application of the Act and the statutory instruments of secondary legislation; the Bar Councils which organize and administer legal aid within the respective geographical jurisdiction (network of Regional Counseling Centers / RCCs /, established at thirteen bar councils in the country); the authority directing the procedural steps, the court or the relevant police or customs authority which decide whether to grant legal aid or not in civil or administrative cases. Consultations are provided as well as through the National Telephone for Legal Aid at the NLAB. The NLAB grants or refuses granting legal aid for a consultation with a view to reaching a settlement prior to bringing legal proceedings or to bringing a case before a court and/or preparation of documents for a trial. The types of legal aid are: pre-litigation advice with a view to reaching a settlement prior to bringing legal proceedings or to bringing a case before a court; preparation of documents for bringing a case before a court; representation in court by legal counsel; representation upon detention under Article 72 of the Ministry of Interior Act and under Article 16a of the Customs Act and under Art. 124b, para. 1 of the Law on the State Agency for National Security. The legal aid system covers cases in which the assistance of a lawyer, a stand-by defence counsel or representation is mandatory as provided for by the Criminal Procedure Code, the Civil Procedure Code and the Administrative Procedure Code. Legal aid system covers also cases in which the applicant is unable to pay for a lawyer, wishes to benefit of a legal assistance, and the interests of the justice require such legal assistance. Legal aid for alternative dispute resolution (ADR) does not apply.

Q016 (2014): In 2014, changes were made in the Regulations of the organization and activities of the National Legal Aid Bureau. Since May 2015, within the NLAB are permanently operating the National Primary Legal Aid Hotline and the Regional Consultation Centers for vulnerable social groups.
Q016 (2012): Legislative changes in the Legal Aid Act have been carried out in several directions: increasing the powers of the legal aid system authorities and exercising control over granting legal aid; introduction of the stand-by defence counsel with the purpose of expediting court proceedings in criminal matters; changes in the order and circumstances for entering and striking from the National Legal Aid Register; introducing legislative requirements for reporting legal aid; the scope of the legal aid has been expanded.
Q019 (General Comment): The travel expenses of an official defence counsel are covered by the budget for legal aid administering.
Legal Aid Act: Art. 38 (5) The appointed lawyer shall furthermore be reimbursed for the necessary expenses on the defence, incurred for visit to the places of deprivation of liberty or to detention facilities and on defence in another nucleated settlement according to the procedure established by the Ordinance on Domestic Business Trips.

Q019 (2019): Art 38 ал.5 LAA The travel expenses of an official defence counsel are covered by the budget for legal aid administering.
Q019 (2017): The travel expenses of an official defense counsel are covered by the budget for legal aid administering.

Q020 (General Comment): According to the Bulgarian Law on Legal Aid / LPA / there are four types of legal aid: 1. preliminary legal aid for consultation with a view to reaching an agreement before the commencement of court proceedings or for filing a case; 2. preparation of documents for filing a case; 3. legal aid for procedural representation in an already initiated case in the court or in the pre-trial bodies; 4. legal assistance in case of detention under the Law on the Ministry of Interior and under the Law on Customs, which is a representation by a lawyer before pre-trial criminal proceedings are instituted. The provided data is only in respect of the legal aid for procedural representation in an already initiated case in the court or in the pre-trial bodies (3.)
Q020 (2020): The provided data is only in respect of the legal aid for procedural representation in an already initiated case in the court or in the pre-trial bodies.
Q020 (2018): The number of other than criminal cases brought to court for which legal aid has been granted increased due to the broadening of the net of Regional Centres for consultation functioning in some Bar Councils. The consultations in the centres are predominantly of civil matters and in most of the cases there are grounds for bringing legal proceedings.

Q020 (2016): The increasing of the number of cases other than criminal for which legal aid was provided is due to the amendments (in force from 19 March 2013) in the Legal Aid Act according to which the circle of persons entitled to legal aid was broadened. Foremost there was an increase of the number of cases for which legal aid was provided for seekers of international protection under the Asylum and Refugees Act; under the Law on Child Protection; for persons entitled to maintenance under Council Regulation (EC) No 4/2009 on jurisdiction, applicable law, recognition and enforcement of decisions and cooperation in matters relating to maintenance obligations; for victims of domestic or sexual violence or of trafficking in human beings. Furthermore, there are two new forms for providing legal aid for consultation – the National Telephone Line for Legal Aid as well as Regional Centres for consultation functioning in some the the Bar Councils. Thanks to those two forms for providing legal aid the number of other than criminal cases increased. In respect to criminal cases not brought to court, they remain 0 as in 2014. The increase in the number of criminal cases brought to court for which legal aid has been granted stems also from the amendment to the Legal Aid Act and the extension of the legal aid scope.

Q020-1 (2021): According to the Law on Legal Aid, 14 days is the deadline for providing legal aid for consultation and preparation of documents for the initiation of a case, which within the meaning of the law is a primary legal aid, which is provided by decision of the Chair of the National Legal Aid Bureau. The 14 days period shall run from the moment when all the documents required by law are presented or available and the legal problem is specified. The average time for processing the application for legal aid and preparing the decision is up to 5 working days, provided that the application is accompanied by all documents certifying that the person is eligible for legal aid.

Q020-1 (2020): The term of 14 days is provided in the Law on Legal Aid, in force from January 1, 2006 / SG no. 79 of 2005 Actual average duration- up to 7 days

Q037 (General Comment): The Act on the Liability for Damage Incurred by the State and the Municipalities sets out the procedure for liability for the activity of the Administration, law enforcement authorities, Commission for Forfeiture of Unlawfully Acquired Assets, and Liability for actions of the judiciary bodies, for violation of the right to a hearing and pronouncement of judgment within a reasonable time.
Chapter Three "a" of the Judiciary System Act (JSA) establishes a procedure for the examination of applications submitted by citizens or legal persons against instruments, actions, or omissions of the judicial authorities which infringe the right of the citizen or legal person to have the case thereof heard and disposed of within a reasonable time. The verification of the applications is carried out by the Inspectorate to the Supreme Judicial Council, and after its completion, the documents in the file are sent to the Minister of Justice. The Minister of Justice or a person authorized by him/her rejects the application as unfounded or determines the amount of compensation in accordance with the case law of the European Court of Human Rights and proposes an agreement with the applicant, in cases where the applicant's right to a hearing within a reasonable time is violated. The verification of the circumstances and the ruling on the application shall be carried out within 6 months from its receipt. The maximum amount of compensation may not exceed BGN 10,000. The persons who have received compensation under the Judiciary System Act may not seek compensation on the same grounds in court.
Pursuant to the Act on the Liability for Damage Incurred by the State and the Municipalities (ALDISM), the state and the municipalities shall be liable for any damage inflicted on individuals and legal persons by legally non-conforming acts, actions, or omissions of State bodies and municipal authorities and officials upon or in connection with the performance of an administrative activity, as well as for the damages caused by the action of repealed as illegal or declared as null and void legal acts (Art. 1, para 1).
Art. 2, para. 1 and para. 2 of the ALDISM, list the cases in which the State shall be liable for any damage inflicted on citizens by criminal investigation authorities, public prosecution authorities, or court.
The scope of the ALDISM includes the responsibility for illegal acts, actions, or omissions of the bodies and officials under the Anti-Corruption and Confiscation of Illegally Acquired Property Act, performed during or on the occasion of exercising their powers or service, as well as the responsibility of the bodies of the judiciary for violation of the right to consider and resolve the case within a reasonable time.

Q037 (2021): Statistics on excessive length of proceedings use data by the Procedural Representation before the ECHR Directorate of the Ministry of Justice on the review of applications for the domestic compensatory remedy for an excessive length of proceedings under the Judicial System Act. Sums paid may include payments under applications from December of the previous year. Statistics on wrongful arrest include prosecution data (on detention in custody and house arrest, but also on wrongful charges, because the numbers on the provision for seeking compensation for those are aggregate) and on 24-hour police detention.

Q037 (2019): Chapter Three "a" of the Judiciary System Act (JSA) establishes a procedure for the examination of applications submitted by citizens or legal persons against instruments, actions or omissions of the judicial authorities which infringe the right of the citizen or legal person to have the case thereof heard and disposed of within a reasonable time. The verification of the applications is carried out by the Inspectorate to the Supreme Judicial Council, and after its completion the documents in the file are sent to the Minister of Justice. The Minister of Justice or a person authorized by him/her rejects the application as unfounded or determines the amount of compensation in accordance with the case law of the European Court of Human Rights and proposes an agreement with the applicant, in cases where the applicant's right to a hearing within a reasonable time is violated. The verification of the circumstances and the ruling on the application shall be carried out within 6 months from its receipt. The maximum amount of compensation may not exceed BGN 10,000. The persons who have received compensation under the Judiciary System Act may not seek compensation on the same grounds in court.
Pursuant to the Act on the Liability for Damage Incurred by the State and the Municipalities (ALDISM), the state and the municipalities shall be liable for any damage inflicted on individuals and legal persons by legally non-conforming acts, actions or omissions of State bodies and municipal authorities and officials upon or in connection with the performance of administrative activity, as well as for the damages caused by the action of repealed as illegal or declared as null and void legal acts (Art. 1, para 1).
Art. 2, para. 1 and para. 2 of the ALDISM, lists the cases in which the State shall be liable for any damage inflicted on citizens by criminal investigation authorities, public prosecution authorities or court.
The scope of the ALDISM includes the responsibility for illegal acts, actions or omissions of the bodies and officials under the Anti-Corruption and Confiscation of Illegally Acquired Property Act, performed during or on the occasion of exercising their powers or service, as well as the responsibility of the bodies of the judiciary for violation of the right to consider and resolve the case within a reasonable time.

Q037 (2016): The Act on the Liability for Damage Incurred by the State and the Municipalities sets out the procedure for laibility for activity of the Administration, law-enforcement authorities, Commission for Forfeiture of Unlawfully Acquired Assets and Liability for actions of the judiciary bodies, for violation of the right to a hearing and pronouncement of judgment within a reasonable time.
Chapter Three A of the Judiciary System Act regulates the rules for reviewing applications against the right to be heard within a reasonable time, payment of compensation in case of violations and the relevant measures to remedy the breaches.

Croatia

Q016 (2014): The new Free Legal Aid Act entered into force in 2014. The procedure of exercising the right to primary legal aid (legal information, legal advice, drawing up submissions in procedures before public and international bodies, representation in proceedings in public bodies, legal aid in amicable, out-of-court dispute resolution) is substantially simplified. Involvement of civil society groups, legal clinics and government bodies in the system of primary legal aid and legal counseling increased the territorial availability of expert legal aid. As to the approval of secondary legal aid in court proceedings and exoneration from paying court costs and fees, the focus of the reform has been placed on increasing the property and income threshold for approving legal aid.

Q018 (General Comment): Exemption from court fees in other than criminal cases is one of the forms of secondary legal aid proscribed by the Law on Legal Aid and it may be granted in proceedings related to the enforcement of judicial decisions. The situation changed few times in the last years. While till 2014, the exemption from payment of court fees could be granted in all judicial proceedings, including enforcement procedures and security procedures, due to changes in the Legal Aid Act in 2014, there was no more this possibility to finally again reinstall it again in 2016 Free Legal Aid Act (Official Gazette 143/13) and allow to grant legal aid for the fees related to the enforcement of judicial decisions.

Q018 (2021): e.g. in enforcement proceedings following child maintenance proceedings; labour disputes

Q018 (2019): Legal aid may be granted for exemption of payment of fees related to the enforcement of judicial decisions.

Q018 (2018): Legal aid may be granted for exemption of payment of fees related to the enforcement of judicial decisions.

Q018 (2017): In enforcement proceedings legal aid is granted when it comes to enforcing a claim arising from a civil or administrative court procedure for which legal aid may be granted under the provisions of Free Legal Aid Act (Official Gazette 143/13).

Q018 (2016): In enforcement proceedings legal aid is granted when it comes to enforcing a claim arising from a civil or administrative court procedure for which legal aid may be granted under the provisions of Free Legal Aid Act (Official Gazette 143/13).

Q019 (General Comment): Exemption from court-proceeding-expenses in other than criminal cases is one of the forms of secondary legal aid prescribed by the Law on Legal Aid. It includes exemption from payment costs of witnesses, expert witnesses, court-sworn translators, costs of site visits and court advertisements. The exemption from payment of litigation costs depends on the material conditions and the type of procedure.

Q019 (2018): Legal aid may be granted in the form of exemption from payment of court proceeding costs (costs of witnesses, expert witnesses, court-sworn translators, costs of site visits and court advertisements).

Q019 (2017): The legal aid can be granted in civil and administrative court proceedings (other than criminal cases) for exemption form payment of court proceedings. The exemption from payment of court proceedings includes the exemption from payment of an advance for the costs of witnesses, expert witnesses, investigation and judicial announcements.

Q019 (2016): The legal aid can be granted in civil and administrative court proceedings (other than criminal cases) for exemption from payment of court proceedings. The exemption from payment of court proceedings includes the exemption from payment of an advance for the costs of witnesses, expert witnesses, investigation, judicial announcements.

Q020 (2021): Information not available on cases brought/not brought to court following granting legal aid

Q020 (2018): In 2018. the annual approved and implemented public budget for provision of legal aid in other than criminal cases for cases not brought to court has been increased. This is the result of the increased number of financed projects (NGO's and Legal Clinics) for providing primary legal aid and, subsequently, number of cases in which primary legal aid has been provided increased in this period.

Q020 (2016): The difference between data for 2014 and 2016 occur because data for 2014 only covered the period from 1 September to 31 December 2014, since keeping the record started on 1 September, while data for 2016 include the period of 1 January to 31 December 2016.

Q020 (2014): In 2014, the most of the cases for which free legal aid was granted were family law cases. In total of 374 cases, an exemption from paying costs of court proceedings was granted. In 1167 cases, an exemption from payment of court fees was approved.
In the frame of the 2014 exercise, the attention was drawn on the entry into force of a new Free Legal Aid Act in January 2014. Accordingly, the range of legal issues in which primary free legal aid (cases not brought to court) can be granted has been expanded (with certain exceptions, in proprietary rights, labour relations, enforcement and insurance proceedings, amicable dispute resolution, administrative and civil proceedings). On the contrary, in 2012, primary free legal aid could have been granted only with regard to the citizen status rights, retirement and/or health insurance, exceptionally, in all the other administrative proceedings and the protection of employees' rights with regard to the employer. Due to this expansion and the fact that primary free legal aid is available to a wider range of users, there is a significant increase of the number of cases for which legal aid has been granted (1018 in 2014 in comparison to 465 in 2012).

Q020 (2012): In the frame of the 2012 exercise, it has been specified that from 1st February 2009 until 7 November 2013, legal aid has been granted in 18,905 other than criminal cases (both brought to the court and not brought to the court). In 2012, it has been granted in 5,872 other than criminal cases (both brought to the court and not brought to the court).
In the frame of the 2012 evaluation cycle, it has been specified that from 1st February 2009 until 7 November 2013, legal aid was granted in 2,900 cases that were not conducted before a court. In 2012, legal aid was granted in 465 such cases.

Q020-1 (2021): According to the provisions of the Criminal procedure Act (OG 152/08, 76/09, 80/11, 121/11, 91/12, 143/12, 56/13, 145/13, 152/14, 70/17, 126/19, 126/19), the defendant submits a reasoned request to be granted legal aid on budget charges to the State Attorney processing the indictment or to the court upon submission the indictment. The decision to grant legal aid against budgetary resources shall be decided by a reasoned decision of the State Attorney or the President of the Council or an individual judge. An appeal against the decision of the State Attorney shall be decided by the investigating judge, while an appeal against the decision of the President of the Council or the individual judge shall be decided by the Council. Where the defendant has made a request for legal aid against budgetary resources, the administering authority shall not be authorised to take action in which the defendant has the right to participate or decide on the legal remedy or remedy submitted, before deciding on the validity of the request of the defendant for the appointment of the defence counsel against budgetary resources or before the appointment of the defence counsel against budgetary resources, unless those actions are not subject to delay. The administering authority shall provide the appointed defence with adequate time to prepare the defence.

Q020-1 (2020): Eviseaged timeframe for granting legal aid in other then criminal cases is set out in Law on Legal Aid. However, the proceeding for obtaining legal aid for cases not brought to court in other than criminal cases (primary legal aid) is initiated by directly contacting the primary-legal-aid-provider and there is no proscribed timeframe, that is to say the primary-legal-aid-provider shall provide legal aid imeddiately upon contact with free-legal-aid-recipient. To obtain legal aid for cases brought to court in other than criminal cases (secondary legal aid) an application must be submitted to one of the county-administrative-bodies or Administrative Body of the City of Zagreb and they shall render decision in 15 days of the subbmision of the application.
According to the provisions of the Criminal Procedure Act (OG 152/08, 76/09, 80/11, 121/11, 91/12, 143/12, 56/13, 145/13, 152/14, 70/17, 126 / 19, 126/19) the defendant shall submit a reasoned request for the appointment of a defense counsel at the expense of budgetary funds to the State Attorney until the indictment is filed, or to the court after the indictment is filed. The State Attorney or the President of the Council or a judge shall decide on the merits of the request for the appointment of a defense counsel at the expense of the budget. An appeal against the decision of the State Attorney shall be decided by the investigating judge, while an appeal against the decision of the president of the panel or an individual judge shall be decided by the panel.

Q037 (2020): The data in the table refer to the compensation for unjustified arrest and unjustified conviction
An application for compensation for unjustified arrest and unjustified conviction shall be submitted to the Ministry of Justice and Public Administration. If the applicant does not accept the offer of the Ministry of Justice and Public Administration, he has a right to sue at the competent court.
The Ministry of Justice of the Administration issued a Decision on 19 November 2019, which established that the financial compensation in the mediation procedure amounts to HRK 280.00 for each day of imprisonment for unfounded arrest or unjustified conviction. Therefore, there was an increase in the amount of compensation and a greater number of acceptance of bids, and for that reason there was a greater number of resolved cases.
The amount paid for 2020 refers to payments based on decisions rendered in amicable procedure and court judgments, cases and from previous years in which the payment was made in 2020.
For excessive length of proceedings, the compensation can not exceed 35.000 Croatian kunas (cca 4.600 EUR) per case.

Q037 (2018): * The information in the table also refers to compensation for wrongful arrest and unjustified conviction.
An application for compensation for unjustified arrest and unjustified conviction shall be submitted to the Ministry of Justice. If the applicant does not accept the offer of the Ministry of Justice, the Ministry of Justice has the right to bring an action before the competent court. The amount of compensation offered by the Ministry to the parties as just financial compensation on that basis is unique in all cases and ranges from the following amounts - up to 30 days in custody in the amount of HRK 200.00 per day of deprivation of liberty, for custody of 30 to 90 days in the amount of HRK 160.00 per day of imprisonment, for detention of more than 90 days in the amount of HRK 120.00 per day of imprisonment. The amount paid for 2018 relates to payments made under the amicable settlement and court rulings.

Q037 (2016): Number of requests for compensation and number of condemnation is 167 and refers both to compensation for wrongful arrest and wrongful conviction.
The amount of compensation that the Ministry offers to the injured parties as a fair monetary compensation for claim for damages for wrongful and unjustified conviction is unique in all cases and ranges in the following amounts - for a custody of up to 30 days in the amount of 200,00 HRK per day of deprivation of liberty , for a custody from 30 to 90 days in the amount of HRK 160,00 HRK per day of deprivation of liberty, for a custody of more than 90 days in the amount of HRK 120,00 HRK per day of deprivation of liberty. The amount paid in 2016 (3 155 925 EUR) refers to payments based on decisions issued in a friendly settlement and on court judgements.
• Excessive length of proceedings
According to the Constitution of the Republic of Croatia, everyone shall be entitled have his/her rights and obligations, or suspicion or accusation of a criminal offence decided upon fairly before a legally established, independent and impartial court within a reasonable period.
According to the Courts Act, a party considering that the competent court has not reached a decision within a reasonable time on the party's right or obligation or criminal suspicion or charge, can file an application to the Court President where the proceedings is conducted, for the right to trial within reasonable time. The Court President shall demand from the judge conducting the case the report on the file and determine the term by which the case has to be resolved. Conduct term shall not be longer than 6 months. If the case is not resolved within set time, the judge conducting the case is obliged to deliver a written report to the Court President, President of the immediately superior court and to the Ministry of Justice on the reasons for not resolving the case.
If the court does not decide within the set time, the party can address the request for right to trial within reasonable time to the immediately superior court. If the court decides positively on the merits of the application filed by the applicant, it shall determine a time framework for the court before which the case is heard to decide on the right or obligation or suspicion or criminal charge against the applicant, and shall determine a just compensation to the applicant for violation of the right to trial within reasonable time.
The compensation shall be paid out from the State budget within 4 months from the day the party submits the request for payment of the compensation. The amount of the compensation for the proceeding concerned cannot exceed the amount of 35.000,00 Croatian kunas.
The number of requests for compensation provided in the table above is the total number of the requests received in the 2016 for the compensation for violation of the right to trial within reasonable time (in county courts, High Commercial Court of RoC, Supreme Court of RoC); the number of condemnation is the number of requests that were considered founded by the courts and the total amount is the amount of the just compensation awarded in the judgments.
• Non-execution of court decisions The Republic of Croatia provides the compensation in cases related to the non-execution of final decisions of the European court of Human Rights, according to the Convention for the Protection of Human Rights and Fundamental freedoms. If this question refers to non-execution of court decisions only of domestic courts, then we can confirm that there is no compensation system for non-execution of court decision.

Q037 (2014): According to 2014 data and in respect of the excessive length of proceedings, the right to a fair trial within a reasonable time is enshrined in the Constitution. Besides, according to the Courts Act (2013), a party considering that the competent court has not reached a decision within a reasonable time, can file an application to the Court President (according to the previous Courts Act, a party could file an application with the immediately superior court). The latter shall demand from the judge conducting the case the report on the file and determine the term by which the case has to be resolved (not longer than 6 months). If the case is not resolved within the set time, the judge conducting the case has to deliver a written report to the Court President, the President of the immediately superior court and the Ministry of Justice on the reasons for not resolving the case. If the court does not decide within the set time, the party can apply to the immediately superior court. If the latter decides positively on the merits of the application, it shall determine a time framework for the court before which the case is heard, and shall determine a just compensation to the applicant for violation of the right to a trial within a reasonable time. The compensation shall be paid out from the State budget within 4 months from the day the party submits the request and the amount cannot exceed 35000 Croatian kunas.
As for the non-execution of court judgments, compensation can be granted in case of non-execution of final decisions of the European Court of Human Rights, according to the Convention for the Protection of Human Rights and Fundamental freedoms. Conversely, there is no compensation system for non-execution of domestic courts' judgments.
With regard to wrongful arrest, detention or condemnation, the Constitution provides for the right to an indemnification and a public apology, in compliance with the law. According to the Criminal Procedure Act (2008), a person unjustifiably convicted of a criminal offence or unfoundedly arrested shall be entitled to full rehabilitation, compensation of damage from the State budget and other rights established by law. No compensation is possible if the proceedings were discontinued or the charge rejected because in the new proceedings the subsidiary prosecutor or private prosecutor desisted from prosecution on the basis of an agreement with the defendant. Moreover, a person who caused his arrest by illicit acts is not entitled to compensation of damages.
The compensation can be requested within three years from the day the first instance judgment of acquittal or judgment rejecting the charge became final or from the day the first instance ruling discontinuing the proceedings became final, and if a higher court decided on an appeal, from the day of receipt of the decision of the higher court.

Before bringing a civil action for the compensation of damages, the injured person is bound to submit his request to the Ministry of Justice in order to reach a settlement on the existence of damage and the type and amount of compensation. The Ministry of Justice annually receives an average of between 200 and 250 requests for compensation, while the settlement is reached in approximately 50%.

A person who was unjustifiably detained is entitled to all types of monetary and non-monetary damages according to the provisions of the Obligations Act (OG 35/05, 41/08 and 125/11), for the full amount of damages suffered. An injured person may be awarded compensation for non-monetary damages in case of harm inflicted on his/her individual rights, namely the right to freedom, honor, reputation and respect. Monetary compensation is usually awarded as a result of the loss of earnings or income. The amount of monetary compensation offered to injured persons on the basis of non-monetary damages depends

Cyprus

Q016 (2017): x

Q018 (2017): x

Q019 (2021): These costs can only be given following a court order.

Q019 (2019): in 2019 the legal aid law was amended and European arrest warrant procedure was included. These costs include interpreter fees, translation costs, travel expenses of witnesses.

Q019 (2017): x

Q020 (2020): Other cases include civil cases for serious violations of human rights and family court cases. In the last cycle we did not have available statistics on the family court cases, and in this cycle we have included these cases.

Q037 (2019): The law providing effective remedies for exceeding reasonable time in identifying civil rights and obligations provides for the filing of an action against the government for undue delay in the hearing of a case. The cases are still pending.

Czech Republic

Q018 (General Comment): Legal aid could be granted at every stage of the proceedings – it could be granted even only for enforcement of judicial decision.

Q018 (2017): Legal aid can be granted in any stage of the proceeding.

Q018 (2016): Legal aid can be granted in any stage of the proceeding.

Q019 (General Comment): If legal aid is granted, it covers all costs, including lawyer's fees, fees of judicial experts, etc.

Q037 (2021): There were 5 356 requests for compensation in 2021, from this number 3 045 requests filed to the Ministry of Justice and 2 311 reguests filed to the courts. In 2 490 cases in total was the applicant successful, either fully or partially. 9 617 860 Euro in total was paid.

Denmark

Q016 (General Comment): Criminal cases:
Defendants are in all cases appointed a defence attorney. Victims of certain criminal offences (e.g. sexual offences, homicide and acts of violence) have access to representation in court by a support attorney. Basic legal advice is available to all persons in criminal cases. Further legal advice is only available subject to certain economic criteria. If the prosecuted person is acquitted, the costs of the defence attorney remain free of charge. Contrarily, it is normally the court who decides if the prosecuted person must pay for the defence attorney and other expenses of the case, if the person is convicted. Finally, if the prosecuted person picks his or her own defence attorney, he or she will as a starting point have to pay the attorney's fee.
Other cases:
In civil cases it is normally the losing part who has to pay both one's own and the opposite party's expenses in relation to the court case. The court can decide that both parties must pay their own costs, if the case doesn't have an actual winner.

Q018 (General Comment): The bailiff's court can grant legal aid if the person appearing before the court is deemed to need a lawyer's assistance, and the person fulfils certain economic criteria. (Danish Administration of Justice Act, article 500(2)).

Q019 (General Comment): With regard to other than criminal cases, legal aid can be granted for all necessary costs associated with the proceedings. The court decides which expenses are covered by legal aid, e.g. expenses that have been held in connection with a trial with good reason. Fees for technical advisors or experts are covered in criminal cases under special circumstances.
Q020 (2021): In Denmark, there are four different authorities that can grant legal aid: 1) The courts can grant legal aid to the cases listed in section 327 of the Administrative Procedure Act. 2) In other cases legal aid is granted by the Civil Affairs Agency. 3) The Ministry of Justice processes legal aid cases where the Civil Affairs Agency declares itself incompetent.
4) Complaints over decisions made by the Civil Affairs Agency and the Ministry of Justice can be brought before the Appeals Permission Board. The total number of cases listed above (4098 cases) stems from information given by the the National Board of Justice. It includes all cases brought before the courts where legal aid was granted by either the courts, the Civil Affairs Agency, the Ministry of Justice or the Appeals Permission Board. We are unable to obtain the number of cases not brought before the courts, but where legal aid was granted.

Q020 (2016): The 2.071 cases mentioned above is the number of civil cases in district courts where it is noted on the case that one or all parties have been granted legal aid.
Q020 (2014): In 2014, the overall number of finalized civil cases has decreased about 15% and the number of cases granted with legal aid follows the same trend. The number of petty cases where parties are not supposed to have a lawyer – and therefore do not need legal aid - did not overall fall that much. Accordingly, cases where legal aid does not apply constitute a bigger part of the total, while the number of cases granted with legal aid decreased.
According to 2014 data, there are several voluntary organizations as well as law students etc., offering free assistance in legal matters. It is also possible to pay an insurance to safeguard oneself if a situation arises where help is needed. It is not a part of the "system" as such but it is definitely a part of the overall picture.

Q020-1 (2021): There is no binding legislation on the maximum duration in cases of granting legal aid. At mentioned under the comments to Q20 legal aid can be granted by four different authorities. The average processing time in cases of legal aid request processed by the Civil Affair Agency was 93 days in 2021. It has not been possible to obtain information regarding the average processing time in regards to requests that have been processed by the courts, the Ministry og Justice and the Appeals Permission Board, since this would entail reviewing all the cases manually, which we do not have the resources for.

Q020-1 (2020): The Ministry of Justice Civil Affairs Department has provided information that there is no binding legislation on the maximum duration in cases of granting legal aid. The average processing time in cases of legal aid requests was 60 days in 2020.
Q037 (2021): We can only supply data for the two sub-groups that can be filtered correct. The figures that do not fit under the other categories now appear under "other". It should be noted that the data comes from a case filing tool, and therefore is not a statistics tool. Data may be subject to entry-errors of all sorts such as compensation amount, categorization etc.

Q037 (2020): Data in the table (Q37) has been created outside the standard model. Specifically developed data models are tested, but there is a greater risk of unidentified errors than when using the standard model. Data in the table are thus associated with considrable uncertainty. All figures indicating condemnations of requests and total amount are the sum of cases and amounts fully or partially granted. In regards to the "Other" category, the figures given are total numbers minus the numbers in the three categories for which separate figures are given (excessive length of proceedings, wrongful arrest and wrongful conviction).

Q037 (2019): The Danish Administration of Justice Act contains rules concerning the possibility to obtain compensation for criminal prosecution. These rules allow for compensation under certain circumstances for example due to the excessive length of proceedings, wrongful arrest and wrongful conviction. The Prosecution Service decide on requests for compensation for criminal prosecution and these decisions can be brought before the courts. The Prosecution Service annually decides on approximately 2000 requests for compensation of which approximately 100 are brought before the courts. The budget for the total amount of compensation due criminal prosecution paid in accordance with the rules of the Danish Administration of Justice Act was approximately DKK 31.400.000. This amount is however revised at the end of the year.

Q037 (2018): The Danish Administration of Justice Act contains rules concerning the possibility to obtain compensation for criminal prosecution. These rules allow for compensation under certain circumstances for example due to the excessive length of proceedings, wrongful arrest and
wrongful conviction. The Prosecution Service decide on requests for compensation for criminal prosecution and these decisions can be brought before the courts. The Prosecution Service annually decides on approximately 2000 requests for compensation of which approximately 100 are brought before the courts. In 2018 the total amount of compensation due criminal prosecution paid in accordance with the rules of the Danish Administration of Justice Act was approximately DKK 23.000.000.

Estonia

Q018 (General Comment): Legal aid cannot be granted for fees related to the enforcement of judicial decisions (except for representing a person in enforcement proceedings), but procedural assistance can be granted to release a person from all or a part of the expenses related to enforcement proceedings.

Q018 (2019): Partial or full coverage of the costs related to the enforcement of judicial decisions (incl. fees of an enforcement agent) depending on the financial situation of the claimant. The advance payment of enforcement costs shall not be demanded by the bailiff from the claimant who is a natural person and who has received legal aid for the payment of procedural costs (incl court fees) as well as in case of collection of compensation for damage caused by a criminal offence as well as in case of collection of maintenance support.

Q018 (2018): Partial or full coverage of the costs related to the enforcement of judicial decisions (incl. fees of an enforcement agent) depending on the financial situation of the claimant. The advance payment of enforcement costs shall not be demanded by the bailiff from the claimant who is a natural person and who has received legal aid for the payment of procedural costs (incl court fees) as well as in case of collection of compensation for damage caused by a criminal offence as well as in case of collection of maintenance support.

Q018 (2017): Partial or full coverage of the costs related to the enforcement of judicial decisions (incl. fees of an enforcement agent) depending on the financial situation of the claimant. The advance payment of enforcement costs shall not be demanded by the bailiff from the claimant who is a natural person and who has received legal aid for the payment of procedural costs (incl court fees) as well as in case of collection of compensation for damage caused by a criminal offence as well as in case of collection of maintenance support.

Q018 (2016): Partial or full coverage of the costs related to the enforcement of judicial decisions (incl. fees of an enforcement agent) depending on the financial situation of the claimant. The advance payment of enforcement costs shall not be demanded by the bailiff from the claimant who is a natural person and who has received legal aid for the payment of procedural costs (incl court fees) as well as in case of collection of compensation for damage caused by a criminal offence as well as in case of collection of maintenance support.

Q019 (General Comment): At the request of a lawyer who has provided state legal aid, the court, investigative body or prosecutor's office shall determine the reimbursable travel and accommodation expenses incurred by the lawyer or the manager of the law firm in connection with the provision of state legal aid. Travel and accommodation expenses shall be reimbursed only if the State legal aid has been provided in a place other than the town or municipality where the law firm or the structural unit through which the lawyer provides legal services is located.

Q020 (General Comment): The number of cases referred to court for which legal aid has been granted and the number of cases for which legal aid has been granted only for legal advice cannot be separated.

Q020 (2014): The total number of cases for which legal aid has been granted in 2014 is 16 110.

Q020 (2012): The total number of cases for which legal aid has been granted in 2012 is 17 031.

Q020-1 (2020): The data of legal aid is in two seperate information systems and it is not possible to collect data on actual average duration.

Q037 (2016): There is now a system for excessive length of proceedings or non-execution of court decision, but we do not have the numbers.

Finland

Q018 (General Comment): The granting of legal aid exempts the recipient from liability for the enforcement fees pertaining to the judgment or the court order and any expenses payable in advance. All necessary costs of enforcement are covered from state funds, if they cannot be collected from the opposing party. (Legal Aid Act, Section 4(4)).

Q018 (2020): The granting of legal aid exempts the recipient from liability for the enforcement fees pertaining to the judgment or the court order and any expenses payable in advance. All necessary costs of enforcement are covered from state funds, if they cannot be collected from the opposing party. (Legal Aid Act, Section 4(4)).

Q018 (2019): The granting of legal aid exempts the recipient from liability for the enforcement fees pertaining to the judgment or the court order and any expenses payable in advance. All necessary costs of enforcement are covered from state funds, if they cannot be collected from the opposing party. (Legal Aid Act, Section 4(4)).

Q018 (2017): Legal aid covers exemption from execution fees resulting from court's decision.

Q019 (General Comment): The fees and compensations arising from the interpretation and translation services required in the consideration of the matter are waived for a recipient of legal aid. Compensation for a witness called by a party receiving legal aid is paid from the state funds. Other costs arising from presenting evidence by a party receiving legal aid are paid from the state funds if the evidence was necessary for deciding the case. If a party receiving legal aid, other than the defendant in a criminal case, has been summoned to the court in person, the compensation for the costs of appearing before the court are paid from the state funds. Legal aid can be granted for travel and lodging costs for the lawyer, as well as for the expenses of witnesses, expert witnesses included. A state-covered support person may be appointed to a victim of violent or sexual crimes, in addition to his/her legal representation.

Q019 (2020): Legal aid can be granted for travel and lodging costs for the lawyer, as well as for the expenses of witnesses, expert witnesses included. A state-covered support person may be appointed to a victim of violent or sexual crimes, in addition to his/her legal representation.

Q019 (2019): Legal aid can be granted for travel and lodging costs for the lawyer, as well as for the expenses of witnesses, expert witnesses included. A state-covered support person may be appointed to a victim of violent or sexual crimes, in addition to his/her legal representation.

Q019 (2017): Legal aid can include, for example, fees from interpretation services and costs from adducing evidence.

Q020 (General Comment): Legal aid decisions are taken by the State Legal Aid Offices. Legal aid can be provided in respect of almost any sort of legal matter. In court cases the applicant has a choice of lawyers: (1) a public legal aid lawyer (working at the State Legal Aid Office) or (2) a private lawyer, who can be an advocate (member of the Finnish Bar Association) or a licensed lawyer (lawyer who has been granted a permit by the Licensed Lawyers Board to act as an licensed lawyer). In certain matters legal aid is only given by public legal aid lawyers.

Q020 (2021): At the moment, the requested data cannot be provided because the reporting system of the legal aid is currently being renewed.

Q020 (2020): At the moment, the requested data cannot be provided because the reporting system of the legal aid is currently being renewed.

Q020 (2018): The public legal aid offices received a total of 48 045 cases of which 6 751 were criminal cases and 41 294 other than criminal cases. 20 % of cases dealt with by the legal aid offices were closed with court proceedings. Private lawyers received 32 683 legal aid cases of which 22 040 were criminal cases and 10 643 other than criminal cases.

Q020 (2016): The public legal aid offices received a total of 50,369 cases (2014: 46734), of which 6,762 were criminal cases and 43,607 other than criminal cases. Of the 50,369 cases dealt with by the legal aid offices 20 per cent were closed with court proceedings.
Private lawyers handled 41,315 legal aid cases, of which 54 per cent were criminal cases and 46 per cent other than criminal cases.

Q037 (2021): In criminal cases the primary means to compensate excessive length of proceedings for a convicted person is to reduce the sentence. Therefore the number of compensation paid does not does not reflect the whole picture of the cases where the proceeding has taken too long. For excessive length the compensation is 1500 euro/unduly delayed year, maximum 10.000 euro, which may be exceeded if
there are special circumstances.
The information on wrongful arrest and wrongful conviction are compiled together. There were 415 requests. A total of 1 530 000 euros has been paid as compensation. For wrongful arrest the compensation is in practice approximately 120 euro/day but it can be higher due to the circumstances. For wrongful conviction the compensation covers fair legal costs.

Q037 (2020): In criminal cases the primary means to compensate excessive length of proceedings for a convicted person is to reduce the sentence. Therefore the number of compensation paid does not does not reflect the whole picture of the cases where the proceeding has taken too long. For excessive length the compensation is 1500 euro/unduly delayed year, maximum 10.000 euro, which may be exceeded if
there are special circumstances.
The information on wrongful arrest and wrongful conviction are compiled together. There were 437 requests. A total of 2 916 000 euros has been paid as compensation. For wrongful arrest the compensation is in practice approximately 120 euro/day but it can be higher due to the circumstances. For wrongful conviction the compensation covers fair legal costs.

Q037 (2019): Correction: Excessive length of proceedings number of Number of condemnations in year 2018 should have been 41, not reported 28. The number reported was the number of rejected.

France

Q018 (General Comment): Enforcement agents can be appointed to enforce any court decision for a beneficiary of legal aid, either as a continuation of the proceedings or separately. Article 11 of the Law of 10 July 1991 provides for that legal aid "shall apply as of right to procedures, acts or measures for the enforcement of justice decisions obtained with its benefit, unless enforcement is suspended for more than one year for a reason other than the exercise of an appeal or a decision to suspend enforcement". In addition, Article 10 of the Law of 10 July 1991 provides for that legal aid may be granted "in connection with the enforcement on French territory of a court decision or any other enforceable title, including if they emanate from another Member State of the European Union" (except Denmark). Source SADJAV

Q018 (2020): Article 11 of the aforementioned law provides that legal aid "shall apply as of right to proceedings, acts or measures for the enforcement of legal decisions obtained with its benefit, unless enforcement is suspended for more than one year for a reason other than the exercise of an appeal or a decision to suspend enforcement."

Q018 (2019): Article 11 of the aforementioned law provides for that legal aid "applies automatically to procedures, acts or measures for the enforcement of court decisions obtained with its benefit, unless enforcement is suspended for more than one year for a reason other than the exercise of a remedy or a decision to suspend enforcement".

Q018 (2018): Article 11 of the aforementioned Act provides that legal aid "shall automatically apply to proceedings, acts or measures for the enforcement of court decisions obtained with its benefit, unless enforcement is suspended for more than a year for a cause other than the exercise of a remedy or a stay order. "
Q019 (General Comment): Articles 40 and 40-1 of the law of 10 July 1991 on legal aid provide for that the beneficiary of legal aid is entitled to the assistance of a lawyer and all public or ministerial officers (enforcement agents, solicitors and notaries in particular). He/she is also exempt from paying, advancing or depositing all costs relating to the instances, procedures or acts for which it has been granted (expert reports, social surveys, family mediation, etc.), with the exception of a pleading fee of €13.
Source SADJAV
Q019 (2020): Legal aid covers all legal costs related to a case (in case of total legal aid); notaries, bailiffs, experts can be paid.

Q019 (2019): Legal aid covers all the legal costs related to an instance (in case of total legal aid); can thus be covered notaries', bailiffs' and experts' fees.
Q019 (2018): Legal aid covers all legal costs related to a case (in the case of a total AJ); notaries, bailiffs, experts may thus be paid.
Q019 (2016): Legal aid may be granted for notary, bailiff and expert fees in the frame of legal proceedings. It may also be granted for the assistance of a lawyer during mediation or settlement.

Q020 (General Comment): The data provided correspond to the number of admissions to legal aid per year.

Q020 (2021): The discrepancies are due to the effects of the health crisis. Source SADJAV

Q020 (2020): We do not have the information to distinguish between the number of cases brought and not brought to court. The decrease in the number of cases that received legal aid is explained by the particular context of the health crisis in 2020.

Q020 (2014): In 2012, 52 transactional negotiations were the subject of a mission of assistance under legal aid. In addition, for information or legal advice but also for measures of settlement of disputes, 741,459 people were received in a House of Justice and Law, including by associations in the field of access to the law or lawyers, notaries and bailiffs for legal consultations or by justice conciliators.
Q020 (2012): In 2012, 68 transactional negotiations were the subject of a mission of assistance under legal aid. In addition, for information or legal advice but also for measures of settlement of disputes, 713,319 people were received in a House of Justice and Law, including by associations in the field of access to the law or lawyers, notaries and bailiffs for legal consultations or by justice conciliators.
Q020-1 (2021): Concerning the average reel duration, the precise figure is 49.8 days.
source SADJAV

Q020-1 (2020):
"The processing time for legal aid applications has been set at less than 45 days in the 2020 Annual Performance Project indicators. The actual average time is the time between the filing of the application and the date of the admission or rejection decision, calculated from the time limits maintained by each legal aid office
There is no distinction provided for criminal and non-criminal cases.
"

Q037 (2021): The sub-directorate for legal affairs of the Ministry of Justice, in conjunction with the State judicial agent, monitors liability actions relating to the defective functioning of the public service of Justice (essentially based on Article L. 141-1 of the Code of Judicial Organisation, with regard to users of this service). The State judicial agent directly follows up actions for compensation for pre-trial detention undergone in the context of criminal proceedings that have ended with a decision to dismiss, discharge or acquit (Articles 149 et seq. of the Code of Criminal Procedure).
1. Regarding liability actions relating to the defective functioning of the public service of Justice: The vast majority of them are based on Article L. 141-1 of the Code of Judicial Organisation. According to this article, the State is obliged to allow a compensation for damage caused by the defective functioning of the Justice service. Except in the case of special provisions, this liability is incurred only in the event of serious fault or a denial of justice. This regime of liability concerns only the user of the public service of Justice, the third party to the legal proceedings being able to engage only the liability without fault of the State for breach of equality before public charges.
During 2021, the number of new liability actions brought against the State in connection with the functioning of the civil and criminal justice is 1 016 (compared with 908 in 2020, and 510 in 2019). Of these 1 016 new cases, 754 relate to the excessive length of proceedings before labour courts. In 2021, 580 decisions condemned the State for malfunctioning of the public Justice service, out of a total of 717 decisions on the merits of the case (compared with 249 convictions out of 398 decisions in 2020, and 352 convictions out of 485 decisions in 2019).
Out of the 717 decisions, 530 decisions involve the State's responsibility for the excessive length of proceedings, of which 31 decisions concern the length of proceedings in criminal matters and 499 in civil matters (compared with 17 convictions for excessive length in criminal matters and 200 in civil matters in 2020).
The amount of the condemnations is of 2 514 646,05 euro for excessive length of proceedings out of a total amount of 5 225 167,81 euros (compared with 1 388 393 euros out of a total of 1 975 018 euros in 2020).
2) With regard to actions based on Article 149 et seq. of the Code of Criminal Procedure: article 149 of the Code of Criminal Procedure gives the right, under certain conditions, to full compensation for the damage suffered as a result of detention in proceedings that have been dismissed, acquitted or discharged. Any person who has been held in pre-trial detention during proceedings which have ended in a decision to dismiss, discharge or acquit that has become final, shall be entitled, subject to the exceptions precisely defined by Article 149 of the CCP, at his or her request, to full compensation for the moral and material damage caused by this detention. The compensation awarded is payable by the State.
It is the First president of the court of appeal within whose jurisdiction the decision to dismiss, discharge or acquit, resulting in the detainee's innocence, has been taken, who decides, after a public and contradictory procedure, by a reasoned decision that can be appealed to the national commission for compensation for detention placed at the Court of Cassation (CNRD).
According to data from the State Judicial Agent (SJA) (Sillage application and dashboards), the key data for 2021 are as follows: 571 new cases registered; 575 decisions handed down by the First presidents of the courts of appeal; 19 settlements concluded; 53 decisions rendered by the CNRD with an average detention period of almost 140 days; 28 appeals to the CNRD in 2021 (12 at the initiative of the SJA and 16 at the initiative of the applicants). Source - Sub-Directorate for Legal Affairs, SEM, General Secretariat

Q037 (2020): "The sub-directorate for legal affairs of the Ministry of Justice, in conjunction with the State judicial agent, monitors liability actions relating to the defective operation of the public justice service (essentially based on Article L. 141-1 of the Code of Judicial Organization, with regard to users of this service).
The State's judicial agent directly follows up actions for compensation for pre-trial detention undergone in the context of criminal proceedings that have ended with a decision to dismiss, discharge or acquit (Articles 149 et seq. of the Code of Criminal Procedure).
1. With regard to liability actions relating to the defective functioning of the public service of justice:
The vast majority of them are based on article L. 141-1 of the Code of Judicial Organization.
Under the terms of this article, the State is obliged to repair the damage caused by the defective functioning of the judicial service. Except in the case of specific provisions, this liability is only incurred by gross negligence or by a denial of justice. This system of liability concerns only the user of the public service of justice, the third party to the legal proceedings being able to engage only the liability without fault of the State for breach of equality before public charges.
During the year 2020, the number of new liability actions brought against the State for gross negligence or denial of justice is 908 compared to 510 in 2019. During the same year 2020, 249 decisions condemned the State for malfunctioning of the public service of justice against 352 in 2019, out of a total of 398 decisions on the merits rendered in this matter.
Of the 249 condemnation decisions, 217 decisions implicated the responsibility of the State due to the excessive length of the proceedings, of which 17 decisions concerned proceedings in criminal matters and 200 in civil matters.
The amount of the sentences pronounced is 1,388,393 euros for excessive length of proceedings out of a total amount of 1,975,018 euros. 2. Article 149 of the Code of Criminal Procedure gives the right, under certain conditions, to full compensation for the damage suffered as a result of detention in the context of proceedings that have been dismissed, acquitted or discharged.
Any person who has been remanded in custody in the course of proceedings that have ended in a decision to dismiss, discharge or acquit that has become final, is entitled, with the exceptions specifically defined by Article 149 of the Code of Criminal Procedure, at his or her request, to full compensation for the moral and material damage caused by this detention. The compensation awarded is to be paid by the State.
It is the first president of the court of appeal in whose jurisdiction the decision to dismiss the case, acquit or acquit the detainee was handed down, which results in the detainee's innocence, who decides, after a public and contradictory procedure, by a reasoned decision that can be appealed to the national commission for compensation for detentions placed at the Court of Cassation (CNRD).
According to data from the State Judicial Agent (Sillage application and follow-up tables), the key data for the year 2020 are as follows
- 423 new cases registered.
- 436 decisions rendered by the first presidents of the courts of appeal.
- 8 settlements reached.
- 83 decisions rendered by the CNRD with an average length of compensated detention of less than 400 days.
- 37 appeals to the CNRD in 2020 (4 at the initiative of the AJE and 33 at the initiative of the claimants).

Q037 (2019): 1) The Legal Affairs Sub-Directorate of the Ministry of Justice monitors, in conjunction with the State's judicial agent, liability actions relating to the defective operation of the public service of justice. The vast majority of them are based on Art. L. 141-1 of the Judicial Organization Code. The State is required to repair the damage caused by the defective functioning of the justice system. Except in the case of special provisions, this liability is engaged in respect of court users in case of gross negligence or denial of justice. The third party in the proceedings can engage only the no-fault liability of the State for breach of equality.
In 2019, the number of new liability actions brought against the State for gross negligence or denial of justice is 510, compared with 482 in 2018. 352 decisions condemned the State for malfunctioning of the justice against 393 in 2018 (out of a total of 513). Of the 352 convictions, 302 decisions involved State responsibility due to the excessive length of proceedings (20 in criminal matters and 283 in civil matters) and the amount of 1,599,340 euros was paid out of a total amount of 5 292 676, 47 euros.
2)Article 149 of the Criminal Procedure Code entitles the accused to full compensation from the State, under certain conditions, for damages suffered as a result of detention in connection with proceedings that have been dismissed, discharged or acquitted. It is the first president of the court of appeal in whose jurisdiction the decision of dismissal/ acquittal was pronounced, who decides, after a public and contradictory procedure, by a motivated decision that can be appealed to the national commission for reparation of detentions before the Court of Cassation (CNRD). The State's judicial officer directly follows such actions for compensation. The key data for the year 2019 are as follows: 519 new cases registered; 408 decisions handed down by the first presidents of courts of appeal; 4 transactions concluded. 83 decisions handed down by CNRD with an average compensated detention period of less than 400 days. 55 appeals to the CNRD in 2019 (7 at the initiative of the AJE and 48 at the initiative of the claimants).

Q037 (2016): The category “other” refers to compensation for pre-trial detention. Indeed, article 149 of the Criminal Procedure Code provides for the right, under certain conditions, to full compensation for the damage suffered as a result of detention in the context of proceedings which have been the subject of a decision of dismissal, release or acquittal. Any person who has been detained in custody in the frame of proceedings terminated by a decision of dismissal, release or acquittal that has become final is entitled, subject to exceptions specifically pinpointed by article 149 of the Criminal Procedure Code, at his/her request, to full compensation for the moral and material damage caused by such detention. The compensation awarded shall be borne by the State. It is the first president of the Court of Appeal in whose jurisdiction the decision of dismissal, release or acquittal resulting in the innocence of the detainee has been pronounced, who rules, after a public and contradictory procedure, by a reasoned decision subject to appeal before the National Commission for Compensation of Detentions placed within the Court of Cassation (CNRD).
According to the computer application of the State judicial officer, the latter would have recorded 468 requests in 2012, 480 in 2013, 553 in 2014, 521 in 2015 and 491 in 2016. In 2015, 528 decisions were rendered by the First Presidents of Courts of Appeal. Of these 528 decisions, 84 resulted in rejection and 444 in compensation. 499 decisions were rendered in 2016 (the rejection/compensation ratio is not available). The number of appeals brought before the National Commission for Reparation of Detentions is stable in 2015 and 2016 since the NCRD registered 62 and 61 appeals respectively for these two years. CNRD rendered 84 decisions for the year 2015 and 64 decisions for the year 2016.

Germany

Q016 (General Comment): Criminal Cases:
The concept of “necessary defense” provides that in all criminal cases in which accusations of considerable weight are involved, which are not merely simple in nature or in which the accused is particularly in need of protection, the accused shall be provided with a defense counsel representing him or her upon request or ex officio, irrespective of his or her financial circumstances (Section 140 of the Criminal Procedure Code). In a case of necessary defense the court or - in urgent cases - the public procecutor will assign a defense counsel to the defendant upon his or her request prior to his or her interrogation. A defense counsel has to be appointed ex officio in cases of necessary defense, if (1) the defendant is to be brought before a court for a decision on detention or provisional placement, (2) it becomes known that the accused, to whom the accusation of the crime has been opened, is in an institution on the basis of a judicial order or with judicial authorization, (3) it becomes apparent in the preliminary proceedings that the accused will not be able to defend himself or herself, in particular if the accused is questioned or confronted or if (4) he or she has been summoned to make a statement on the indictment (Section 141 of the Criminal Procedure Code). The appointment of the defense counsel ends with the discontinuation or final conclusion of the criminal pro-ceedings [Section 143 (1) of the Criminal Code]. The defense counsel settles his fees with the state treasury. However, since his or her costs are part of the costs of the proceedings, the defendant must pay them as far as he or she is convicted and insofar as the defendant is ac-quitted, the state treasury must bear the costs and expenses of the proceedings.
Rules for witnesses and victims in criminal cases:
Especially vulnerable witnesses, e.g. children or handicapped persons, can - without proof of being financially needy - be assigned a lawyer free of charge by the court to assist them during an interview (“Zeugenbeistand”, section 68b (2) Code of Criminal Procedure).
Victims of certain crimes, especially violent or sexual crimes, and also close relatives, spou-ses and partners of killed persons, who are entitled to be joint plaintiffs, can be assigned a lawyer without having to cover the expenses and without having to prove their financial need (see sections 397a and 406h (3) Code of Criminal Procedure). Victims of other crimes, who can also be joint plaintiffs, have the possibility to apply for legal aid as financial assistance if their income is too low to cover the costs fully or only in part and if they are unable to assert their own interests sufficiently or cannot be expected to do so (see section 397a (2), 406h (3) Code of Criminal Procedure).
Legal aid can also be granted to persons who claim compensation for damages or pain and suffering in the criminal proceedings in a so-called adhesion claim (“Adhäsionsklage”, see sections 403, 404 (5) Code of Criminal Procedure), if they are not able to cover the expenses (fully or in part) and their legal action offers sufficient expectation of success and is not wanton. The same applies to persons who act as private prosecutors to achieve a punishment of the perpetrator in cases where the prosecution has declined to pursue the offence due to a lack of public interest in the prosecution (“Privatklage”, see sections 374, 379 (3) Code of Criminal Procedure).

Q016 (2017): In Germany there is no legal aid for legal representation in criminal cases because the law provides for the so called “necessary defense” implying mandatory legal representation.
Q018 (General Comment): In civil matters, legal aid in compulsory enforcement is granted for the entire enforcement proceeding and not for individual enforcement measures.
Q018 (2018): -

Q018 (2016): Legal aid in compulsory enforcement is granted for the entire enforcement proceedings and not for individual enforcement measures.

Q019 (General Comment): The approval of legal aid includes the costs for the taking of evidence (e.g. witnesses, experts), as well as travel expenses of the recipient to attend a court hearing if personal attendance at the hearing is necessary. Expenditure for the preparation of the proceedings (e.g. expert witnesses, interpreters) may be refundable as necessary expenditure of the appointed solicitor.
With regard to criminal cases: Other costs are considered costs of the proceedings. These are settled after the discontinuation or final conclusion of the criminal proceedings and not paid in advance. The only exception being travel costs of a defendant who does not have sufficient financial means. However, since these costs are also considered costs of the proceedings, the defendant must pay them as far as he or she is convicted. Insofar as the defendant is acquitted, the state treasury must bear the costs and expenses of the proceedings.

Q019 (2017): If granted, legal aid covers all of the costs of the legal dispute. In particular, this includes the cost of a court-ordered taking of evidence, as well as the costs for compensating witnesses or obtaining expert reports.

Q019 (2016): If granted, legal aid covers all of the costs of the legal dispute. In particular, this includes the cost of a court-ordered taking of evidence, as well as the costs for compensating witnesses or obtaining expert reports.

Q020 (General Comment): In criminal cases, legal aid is granted. However, this is not separately statistically recorded. Therefore: "NA".
Q020 (2012): The information provided for 2012 included approvals of legal aid with installment payments.
The 2012 data referred to the number of cases where legal advice and assistance was granted by the local courts, including the certificates issued by the local courts entitling the applicant to legal advice and assistance, upon application filed directly by the person seeking redress and/or with the support of a lawyer. Data from Bremen and Hamburg are not included since these Länder have public legal advice offices.
Q020-1 (General Comment): Regarding the statement of the opposing party:
According to the Code if Civil Procedure (Section 118 Approval Procedure), the opponent is to be given the opportunity to state his position as to whether or not he believes the prerequisites for the approval of legal aid have been met, unless this is deemed inappropriate for special reasons (e.g. in the case of a claim for an injunction). The Act on Proceedings in Family Matters and in Matters of Non-contentious Jurisdiction includes a similar provision (Section 77).

Q020-1 (2021): The duration of the proceedings depends, among other things, on when the evidence for the means test is submitted in full, whether a statement by the opposing party has to be considered and whether the court has to issue legal notices if necessary.
Q020-1 (2020): The duration of the proceedings depends, among other things, on when the evidence for the means test is submitted in full, whether a statement by the opposing party has to be considered and whether the court has to issue legal notices if necessary.

Q037 (General Comment): According to the Act on Legal Redress for Excessive Length of Court Proceedings and of Criminal Investigation Proceedings (Gesetz über den Rechtsschutz bei überlangen Gerichtsverfahren und strafrechtlichen Ermittlungsverfahren) a person affected may file a complaint about undue delay (censure of delay) to the court seized of the case if proceedings seem unreasonably long. Subsequently, the person affected may bring a court action claiming compensation.
The claim may be brought even before completion of the main proceedings. Adequate compensation is granted for pecuniary and non- pecuniary disadvantages.
In criminal proceedings, the passage of time between the offence and the conviction, as well as the length of the proceedings, must also be taken into account and compensated ex officio by the court and the public prosecutor's office in favour of the accused. Depending on the extent of the delay and the disadvantages suffered by the accused as a result, compensation may be provided by a ruling that a quantified part of the sentence imposed is already deemed to have been enforced (this will be stated in the operative part of the judgment). In individual cases, it may suffice – even at the investigation stage by the public prosecutor's office – to discontinue proceedings (e.g. pursuant to Sections 153, 153a or 154 of the German Code of Criminal Procedure [Strafprozessordnung – StPO]), to dispense with imposing a penalty (Section 60 of the German Criminal Code [Strafgesetzbuch – StGB]) or, in the event of minor delays, to establish in the grounds of the judgment that the proceedings have been delayed in breach of the rule of law. In extreme cases, undue delay may constitute a procedural impediment that requires the court to terminate proceedings. If compensation has been provided in the criminal proceeding, except for compensation for material damage, the accused has received sufficient redress and is not further entitled to compensation in accordance with the Act on Legal Redress for Excessive Length of Court Proceedings and of Criminal Investigation Proceedings.
If parties to a legal dispute suffer damage due to the excessive length of court proceedings, a compensation claim may also ensue under Section 839 of the German Civil Code (Bürgerliches Gesetzbuch – BGB) in conjunction with Article 34 of the German Basic Law (Grundgesetz – GG). A claim under these provisions requires that an official intentionally or negligently breaches the official duty incumbent upon him in relation to a third party. If the official breaches his duties in a judicial decision in a legal matter, then the state is only liable if the breach of duty consists in a criminal offence. This limitation does not apply if the official refuses or delays the exercise of his duty. However, the manner in which a judge conducts the legal proceedings may only be examined for its justifiability due to the constitutional principle of judicial independence.
If the official responsible for the execution of the court decision has delayed compulsory enforcement intentionally or negligently and in breach of his official duty, a compensation claim may ensue under Section 839 of the German Civil Code in conjunction with Article 34 of the German Basic Law.
A claim may also exist under Section 839 of the German Civil Code in conjunction with Article 34 of the German Basic Law in cases of wrongful arrest if the official responsible intentionally or negligently breaches the official duty. Decisions by the judge responsible for matters of custody, as well as discretionary decisions by the public prosecution office in criminal investigation proceedings, may, however, only be examined for their justifiability.
In the case of a wrongful conviction a state liability claim requires that the judge responsible intentionally or negligently breaches the official duty in such a way that the breach of duty consists in a criminal offence.

Q037 (2020): According to the Act on Legal Redress for Excessive Length of Court Proceedings and of Criminal Investigation Proceedings (Gesetz über den Rechtsschutz bei überlangen Gerichtsverfahren und strafrechtlichen Ermittlungsverfahren) a person affected may file a complaint about undue delay (censure of delay) to the court seized of the case if proceedings seem unreasonably long. Subsequently, the person affected may bring a court action claiming compensation. The claim may be brought even before completion of the main proceedings. Adequate compensation is granted for pecuniary and non-pecuniary disadvantages.
In criminal proceedings, the passage of time between the offence and the conviction, as well as the length of the proceedings, must also be taken into account and compensated ex officio by the court and the public prosecutor's office in favour of the accused. Depending on the extent of the delay and the disadvantages suffered by the accused as a result, compensation may be provided by a ruling that a quantified part of the sentence imposed is already deemed to have been enforced (this will be stated in the operative part of the judgment). In individual cases, it may suffice – even at the investigation stage by the public prosecutor's office – to discontinue proceedings (e.g. pursuant to Sections 153, 153a or 154 of the German Code of Criminal Procedure [Strafprozessordnung – StPO]), to dispense with imposing a penalty (Section 60 of the German Criminal Code [Strafgesetzbuch – StGB]) or, in the event of minor delays, to establish in the grounds of the judgment that the proceedings have been delayed in breach of the rule of law. In extreme cases, undue delay may constitute a procedural impediment that requires the court to terminate proceedings. If compensation has been provided in the criminal proceeding, except for compensation for material damage, the accused has received sufficient redress and is not further entitled to compensation in accordance with the Act on Legal Redress for Excessive Length of Court Proceedings and of Criminal Investigation Proceedings.
If parties to a legal dispute suffer damage due to the excessive length of court proceedings, a compensation claim may also ensue under Section 839 of the German Civil Code (Bürgerliches Gesetzbuch – BGB) in conjunction with Article 34 of the German Basic Law (Grundgesetz – GG). A claim under these provisions requires that an official intentionally or negligently breaches the official duty incumbent upon him in relation to a third party. If the official breaches his duties in a judicial decision in a legal matter, then the state is only liable if the breach of duty consists in a criminal offence. This limitation does not apply if the official refuses or delays the exercise of his duty. However, the manner in which a judge conducts the legal proceedings may only be examined for its justifiability due to the constitutional principle of judicial independence.
If the official responsible for the execution of the court decision has delayed compulsory enforcement intentionally or negligently and in breach of his official duty, a compensation claim may ensue under Section 839 of the German Civil Code in conjunction with Article 34 of the German Basic Law.
A claim may also exist under Section 839 of the German Civil Code in conjunction with Article 34 of the German Basic Law in cases of wrongful arrest if the official responsible intentionally or negligently breaches the official duty. Decisions by the judge responsible for matters of custody, as well as discretionary decisions by the public prosecution office in criminal investigation proceedings, may, however, only be examined for their justifiability.
In the case of a wrongful conviction a state liability claim requires that the judge responsible intentionally or negligently breaches the official duty in such a way that the breach of duty consists in a criminal offence.
Anyone who has suffered damage from a criminal conviction is compensated by the Treasury if the conviction is quashed or

Q037 (2019): According to the Act on Legal Redress for Excessive Length of Court Proceedings and of Criminal Investigation Proceedings (Gesetz über den Rechtsschutz bei überlangen Gerichtsverfahren und strafrechtlichen Ermittlungsverfahren) a person affected may file a complaint about undue delay (censure of delay) to the court seized of the case if proceedings seem unreasonably long. Subsequently, the person affected may bring a court action claiming compensation. The claim may be brought even before completion of the main proceedings. Adequate compensation is granted for pecuniary and non-pecuniary disadvantages.
If parties to a legal dispute suffer damage due to the excessive length of court proceedings, a compensation claim may also ensue under Section 839 of the German Civil Code (Bürgerliches Gesetzbuch – BGB) in conjunction with Article 34 of the German Basic Law (Grundgesetz – GG). A claim under these provisions requires that an official intentionally or negligently breaches the official duty incumbent upon him in relation to a third party. If the official breaches his duties in a judicial decision in a legal matter, then the state is only liable if the breach of duty consists in a criminal offence. This limitation does not apply if the official refuses or delays the exercise of his duty. However, the manner in which a judge conducts the legal proceedings may only be examined for its justifiability due to the constitutional principle of judicial independence.
If the official responsible for the execution of the court decision has delayed compulsory enforcement intentionally or negligently and in breach of his official duty, a compensation claim may ensue under Section 839 of the German Civil Code in conjunction with Article 34 of the German Basic Law.
A claim may also exist under Section 839 of the German Civil Code in conjunction with Article 34 of the German Basic Law in cases of wrongful arrest if the official responsible intentionally or negligently breaches the official duty. Decisions by the judge responsible for matters of custody, as well as discretionary decisions by the public prosecution office in criminal investigation proceedings, may, however, only be examined for their justifiability.
In the case of a wrongful conviction a state liability claim requires that the judge responsible intentionally or negligently breaches the official duty in such a way that the breach of duty consists in a criminal offence.
Anyone who has suffered damage from a criminal conviction is compensated by the Treasury if the conviction is quashed or reduced in reopened proceedings or otherwise in criminal proceedings after having become final and binding (Section 1(1) of the Act on Compensation for Criminal Prosecution Measures [Gesetz über die Entschädigung für Strafverfolgungsmaßnahmen – StrEG]). The same applies if a measure of correction and prevention or an ancillary measure has been ordered without a conviction (Section 1(2) of the Act on Compensation for Criminal Prosecution Measures). In cases of acquittal, discontinuation of the proceedings or refusal to initiate the main proceedings, Section 2(1) of the Act on Compensation for Criminal Prosecution Measures provides for compensation for the damage suffered due to the execution of remand detention or temporary arrest. Where the proceedings are discontinued in accordance with a discretional provision, compensation may be granted ex bono (Section 3 of the Act on Compensation for Criminal Prosecution Measures).
The subject of the compensation is the property damage caused by the criminal prosecution measure. In cases of deprivation of liberty on the basis of a court ruling, this can also be immaterial damage (section 7(1) of the Act on Compensation for Criminal Prosecution Measures). The current immaterial compensation is €25 for each day of deprivation of liberty commenced. Currently, legislative proceedings are ongoing to raise this amount of compensation up to €75 per day (BT-Drs. 19/17035).

Q037 (2018): As a general rule, in the case of excessively long court proceedings, the person concerned has to file a complaint about undue delay (Verzögerungsrüge) with the court at which the proceedings seem excessively long. If necessary, he or she can then file an application for compensation even if the original proceedings have not yet been concluded. Adequate compensation is granted for pecuniary disadvantages. To the extent that an alternative form of redress would appear insufficient, a fixed amount of €1,200 per year is granted as a general rule for non-pecuniary disadvantages.
The law of state liability is only partly regulated by national law (see below). In addition, there are provisions of Land law, as well as customary and judge-made law.
Provisions of federal law
If the parties to a legal dispute suffer damage because of the excessive length of proceedings, a compensation claim may ensue from section 839 of the Civil Code (Bürgerliches Gesetzbuch, BGB) in conjunction with Article 34 of the Basic Law (Grundgesetz, GG) if there is a case of an official being culpable of refusal or delay in exercising a public function in breach of duty (section 839 (2), second sentence, of the Civil Code). However, the manner in which a judge conducts the proceedings within the scope of section 839 (2), second sentence, of the Civil Code may only be examined for its justifiability due to the constitutional principle of judicial independence.
A creditor's first port of call in procedural terms against the non-execution of a court decision by a bailiff is to lodge a reminder in accordance with section 766 (2) of the Code of Civil Procedure. The court responsible for execution rules on the reminder. If a senior judicial officer of the court responsible for execution wholly or partially rejects a creditor's motion to issue a compulsory enforcement measure, the creditor may lodge an immediate complaint (section 567 (1) no. 2 of the Code of Civil Procedure). If the organ responsible for execution has delayed compulsory enforcement culpably and in breach of duty, there may be a compensation claim under section 839 (1) of the Civil Code in conjunction with Article 34 of the Basic Law.
A claim may also exist under section 839 of the Civil Code in conjunction with Article 34 of the Basic Law in the case of wrongful arrest if the acting official can be accused of a culpable breach of official duty. As regards rulings by the judge responsible for matters of custody, as well as discretionary decisions by the public prosecution office in the investigation proceedings, the decision may only be examined for its justifiability.
In the case of a wrongful judgment, there is an official liability claim under section 839 of the Civil Code in conjunction with Article 34 of the Basic Law if the breach of duty consists of a criminal offence (section 839 (2), first sentence, of the Civil Code).
The claim under section 839 of the Civil Code in conjunction with Article 34 of the Basic Law is to be asserted in the courts of ordinary jurisdiction.
Distinct from these claims are compensation claims under provisions of special statutes, which as a rule are not intended to compensate for the entire damage, but provide lump sums instead.
In cases of acquittal, discontinuation of the proceedings or refusal to initiate the main proceedings, section 2 (1) of the Act on Compensation for Criminal Prosecution Measures (Gesetz über die Entschädigung für Strafverfolgungsmaßnahmen, StrEG) provides for compensation for the damage suffered due to the execution of
remand detention or temporary arrest. Where the proceedings are discontinued in accordance with a discretional provision, compensation may be granted ex bono (section 2 of the Act on Compensation for Criminal Prosecution Measures). The

Q037 (2016): As a general rule, in the case of excessively long court proceedings, the person concerned has to file a complaint about undue delay (Verzögerungsrüge) with the court at which the proceedings seem excessively long. If necessary, he can then file a complaint for compensation even if the original proceedings have not yet been concluded. Adequate compensation is granted for pecuniary disadvantages. To the extent that an alternative form of redress would appear insufficient, a fixed amount of € 1,200 per year is granted as a general rule for non-pecuniary disadvantages.
The law of state liability is only partly regulated by national law (see below). There are in addition pro-visions of Land law, as well as common and judges' law.
Provisions of federal law
If the parties to a legal dispute suffer damage because of excessive length of proceedings, a damage claim may ensue from section 839 of the Civil Code (Bürgerliches Gesetzbuch, BGB) in conjunction with Article 34 of the Basic Law (Grundgesetz, GG) if a case of culpable refusal or delay of execution of the office in breach of duty applies, section 839 (2), second sentence, of the Civil Code. However, the manner in which a judge pursues the proceedings within the scope of section 839 (2), second sentence, of the Civil Code may only be examined for justifiability because of the constitutional principle of judicial independence.
A creditor's first port of call in procedural terms against the non-execution of court decisions by a bailiff is to lodge a reminder in accordance with section 766 (2) of the Code of Civil Procedure. The execution court rules on the reminder. If a senior judicial officer of the execution court rejects a creditor's motion completely or in part to issue a compulsory enforcement measure, the creditor may lodge an immediate complaint (section 567 (1) no. 2 of the Code of Civil Procedure). If the execution organ has delayed compulsory enforcement culpably and in breach of duty, there may be a compensation claim under section 839 (1) of the Civil Code in conjunction with Article 34 of the Basic Law.
A claim may also exist under section 839 of the Civil Code in conjunction with Article 34 of the Basic Law in the case of wrongful arrest if the acting official can be accused of a culpable breach of official duty. With rulings of the judge responsible for matters of custody, as well as with discretionary decisions of the public prosecution office in the investigation pro-ceedings, the decision may only be examined for its justifiability.
In the case of a wrongful judgment, there is an official liability claim under section 839 of the Civil Code in conjunction with Article 34 of the Basic Law if the breach of duty consists of a criminal offence, section 839 (2), first sentence, of the Civil Code. Section 2 (1) of the Act on Compensation for Criminal Prosecution Measures (Gesetz über die Entschädigung für Strafverfolgungsmaßnahmen, StrEG) provides in cases of acquittal, discontinuation of the proceedings or refusal to initiate the main proceedings for compensation for the damage suffered by
remand detention or temporary arrest that have been carried out. Where the proceedings are discontinued in accordance with a discretional provision, compensation can be granted ex bono, section 3 of the Act on Compensation for Criminal Prosecution Measures. The subject of the compensation is the property damage caused by the criminal prosecution measure, in the case

Greece

Q018 (General Comment): Low-income citizens are entitled to the provision of free legal assistance, that is, the granting of a lawyer, bailiff or notary, in cases of criminal, civil and commercial law of any degree. These include divorce, alimony, custody and communication, insult, paternity recognition, etc.
Greek citizens, EU citizens, as well as third-country citizens or stateless persons are entitled to legal aid if they have a legal residence or habitual residence in Greece. Low-income citizens, beneficiaries of Legal Aid, are those whose annual family income does not exceed two-thirds of the minimum annual individual earnings provided for by the National General Collective Labor Agreement.
Legal Aid is provided at the request of the beneficiary and is provided by law 3226/2004 as in force after its Amendment and completion by law 4274/20

Q018 (2019): article 9 par. 2 and 3 of law 3226/2004: Exemption of court fees in civil and commercial cases, of payment of a bailiff as well as the costs of the enforcement procedure

Q018 (2018): Exoneration from paying court fees in civil and commercial cases covers court bailiffs' fees.

Q018 (2017): Legal aid also includes the bailiff's remuneration.

Q019 (General Comment): Furthermore, if an expert's opinion is considered by the court to be necessary then the relevant costs are covered by the State.
With regard to administrative courts, there is not any such legislative provision, while in civil and commercial cases legal aid is granted for expert fees.

Q019 (2019): appointment of a lawyer, notary, bailiff
payment of a lawyer, notary, bailiff, witness

Q019 (2017): Regarding "criminal cases", the ex officio appointment of a lawyer is provided. Furthermore, if an expert's opinion is considered by the court to be necessary then the relevant costs are covered by the State. As far as "civil and commercial cases" are concerned, legal aid also includes notaries, bailiff's and services of judicial documents cost.
With regard to Administrative courts, there is no specific legislative provision, except Articles 199 and 200 of the code of civil procedure.

Q020 (2020): Evidence has been provided by different courts, but not by their totality, so there is not enough data to give a full answer.
Q020 (2018): From the 657 cases, 637 correspond to cases from administrative disputes in general, while 20 cases correspond to the Council of State (the same 20 cases that were brought to court). More specifically, for the Council of State and for 2018, 52 applications were submitted, 20 of which were accepted.
Q020 (2016): Statistical data may be available next year.

Q020-1 (2020): Law 3226/2004 (as amended and in force with articles 41-47 Law 4689/2020).

Q037 (General Comment): The majority of courts have responded unavailable, there is data for a small percentage of them.

Q037 (2018): Chapter C L.4055/2012 and Articles 1-7 L.4239/2014 provide for the compensation system for the cases brought before administrative, Civil and Criminal courts.
Furthermore, according to Criminal Procedure Court there is a provisional compensation between 8,804 euro and 29,347 euro per day, for the wrongly convicted, which is granted by a relevant judicial decision.
Q037 (2016): Chapter C L.4055/2012 and Articles 1-7 L.4239/2014 provide for the compensation system for the cases brought before administrative, Civil and Criminal courts.
Furthermore, according to Criminal Procedure Court there is a provisional compensation between 8,804 euro and 29,347 euro per day, for the wrongly convicted, which is granted by a relevant judicial decision.

Hungary

Q016 (General Comment): According to the Legal Aid Act LXXX of 2003, the Legal Aid Service may grant legal aid in judicial and extrajudicial cases. The county justice services, as offices of first instance and in charge of receiving the applications for legal aid, do not merely assess the eligibility for aid but, in simple cases, provide legal assistance directly as well – without prior screening of the clients' financial capabilities. However, legal aid (legal advice, drafting a document) is primarily provided by legal aid providers (attorneys, notaries public, non-governmental organizations etc.) who are recorded into the Register of legal aid providers who have contractual relation with the Legal Aid Service. The latter provides professional legal assistance for socially disadvantaged people. The law defines the situations in which legal aid can be granted and those in which no legal aid may be provided.

Q018 (General Comment): If legal aid is authorized, it extends to all stages of the proceedings, including the enforcement phase. However, it concerns only the fee of the legal aid provider. Besides, legal representation cannot be granted in such cases, but only extrajudicial assistance (legal advice, drafting of documents).
Q018 (2021): Legal aid cannot be granted for the fees that are related to the enforcement of judicial decisions (e.g. fees of an enforcement agent), because in Hungary the state-financed legal aid basically covers only the lawyer's fee and, as of 2022, a 25% flat-rate for the lawyer. Previously we marked "Yes" due to a different interpretation, because legal aid extends to all stages of the proceedings, including the enforcement actions, but the state does not pay the fees that are related to the enforcement of judicial decisions (e.g. fees of an enforcement agent).

Q019 (2021): In both cases ("Criminal cases" and "Other than criminal cases") the state-financed legal aid basically covers only the lawyer's fee and, as of 2022, a 25% flat-rate for the lawyer; however, the reimbursement of a few other costs (for example: travel, parking costs and phone, postal expenses) may also be requested. We must note that we don't have accurate data regarding this question since in criminal cases the appointment of the officially appointed defence counsels and determining the fee of an officially appointed defence counsel are the competence of the Bar Association, and legal aid belongs to the government offices.
Q020 (2021): The provided total data is based on data directly from the specialised filing system. The total number is an aggregate only of the numbers of the 19 counties and the capital city, and is not available as requested (distinguished to "In criminal cases" and "In other than criminal cases".)
As it is well known, in 2020 due COVID-19 pandemic the personal appearance of the clients strongly decreased, therefore the applications for legal aid and the number of cases where legal aid was granted decreased also heavily in comparison to 2018. In 2021, the case numbers began to increase again. Only the total numbers are available, so we marked "NA", beacause there is no specific data available for "criminal cases" and "other than criminal cases".

Q020 (2016): Official statistics of the Ministry of Justice

Q020-1 (General Comment): 5 days (if the application form was handed in in person)
15 days (if the application form was not handed in in person)
The timeframes are set by Section 23, Subsection (1) of Act LXXX of 2003 on Legal Aid .

Q037 (General Comment): Excessive length: If the court is not able to finish the cases within reasonable time a compensation may be awarded to the parties. The court decides about the compensation in a fast tarck procedure. Non-execution of court decisions: Usually the court orders a 15 day deadline for fulfilling its final decision. If the party that is obliged to do so does not fulfil this obligation he/she also has to pay an interest from that day. Wrongful arrest: The damages occured for wrongful arrest, house arrest or preliminary detention at a psychiatric institution shall be compensated. Wrongful condemnation: If the person was convicted, but later - as a result of an extraordinary review procedure - he/she was not found guilty or received a lenient punishment. Any pecuniary punishment or cost of the procedure that was paid by the accused person should be repaid with interest included. Other: the court awards a compenstaion if the circumstances of the imprisonment of a convicted or arrested person violate his/her fundamental rights.

Q037 (2020): There is no national level database containing the data for the question.

Q037 (2019): Excessive length:
If the court is not able to finish the cases within reasonable time a compensation may be awarded to the parties. The court decides about the compensation in a fast tarck procedure. The governement given before the Paliament in october 2018 a bill proposal on the financial compensation related to the prolongation of certain court proceedings.
Non-execution of court decisions:
Usually the court orders a 15 day deadline for fulfilling its final decision. If the party that is obliged to do so does not fulfil this obligation he/she also has to pay an interest from that day.
Wrongful arrest:
The damages occured for wrongful arrest, house arrest or preliminary detention at a psychiatric institution shall be compensated.
Wrongful condemnation:
If the person was convicted, but later - as a result of an extraordinary review procedure - he/she was not found guilty or received a lenient punishment. Any pecuniary punishment or cost of the procedure that was paid by the accused person should be repaid with interest included.
Other: the court awards a compenstaion if the circumstances of the imprisonment of a convicted or arrested person violate his/her fundamental rights.

Other: the court awards a compenstaion if the circumstances of the imprisonment of a convicted or arrested person violate his/her fundamental rights.

Ireland

Q016 (2017): Under Irish law, there is a distinguishment between “legal aid” which refers specifically to “representation in court” and “legal advice”. This question is being answered on the basis that the words “legal aid” refers to “legal aid and legal advice” and “Representation in Court” means “Legal Aid”.
Q018 (General Comment): Civil legal aid does not generally include fees in respect of enforcement by an enforcement agent (this is distinct from enforcement of proceedings in a court which may be covered).
Q019 (General Comment): In criminal cases, legal aid can cover the cost of expert witnesses (medical and technical), interpreters, translation service providers, travel costs, disbursements i.e. photocopying costs, prison visits.
In civil cases, fees of other professionals may be covered where it is necessary having regard to the circumstances of the case.

Q019 (2017): In criminal cases, legal aid can cover the cost of expert witnesses (medical and technical), interpreters, translation service providers, travel costs, disbursements i.e. photocopying costs, prison visits.
In other than criminal cases, a legally aided person may apply through their solicitor for the fees of expert witnesses and other experts to be covered.
Q020 (General Comment): In Criminal Cases - this represents the number of criminal legal aid certificates which originated from the criminal prosecutions in the District Court.
In "other than criminal cases" the 'number of cases brought before the court' is the number of legal aid certificates granted. The number of 'cases not brought to court/non-litigious cases' is the number of applications for civil legal aid and advice. However please note that any advice case may progress to being an aid case and the Legal Aid Board does not keep a record of what specific cases never progressed beyond advice stage (i.e. this figure includes all of the cases which eventually became aid cases).

Q020 (2020): We have data for the total criminal legal aid certificates issue, but the necessary breakdown is not available.

Q020 (2018): In Criminal Cases - this represents the number of criminal legal aid certificates, which originated from the criminal prosecutions in the District Court.
In "other than criminal cases" the 'number of cases brought before the court' is the number of legal aid certificates granted. The number of 'cases not brought to court/non-litigious cases' is the number of applications for civil legal aid and advice. However please note that any advice case may progress to being an aid case and the Legal Aid Board does not keep a record of what specific cases never progressed beyond advice stage (i.e. this figure includes all of the cases which eventually became aid cases).

Q020 (2012): The 2012 data does not include asylum cases where legal aid was granted.

Q020-1 (2021): The average actual duration in 2021 was 20 weeks

Q020-1 (2020): Legal Aid Certificates for Emergency / Priority applications (including Child Abduction applications and applications under Sex Offenders Acts) are addressed within 24 hours. Legal Aid Certificates for Standard applications (including foreign applications and non urgent Central Authority cases) are addressed within 2 weeks i.e. granted, refused or further information requested

Italy

Q016 (General Comment): Legal advice does not exist as such in Italy, but lawyers play a role in ADR procedures.

Q018 (General Comment): Legal aid also covers expenses related to the enforcement of judicial decisions.

Q019 (General Comment): Legal aid can also be granted for costs related to private detectives, interpreters and expert witnesses.

Q020 (General Comment): On the occasion of the 2012 evaluation cycle, it has been explained that the higher number of cases for which legal aid had been granted compared to 2010 was due to the fact that the threshold concerning the income and assets evaluation had been slightly increased. Owing to that, since 2012, Italy is experiencing a positive trend in this respect. Additionally, more and more people are living under the threshold under which legal aid can be granted. These numbers must also be seen in the light of the trend of the incoming cases. In recent years the number of incoming cases has decreased, especially in 2019-2020 due to the pandemic.

Q020 (2020): The number of cases not brought to court is not available because this figure is not registered anywhere. Since these cases are not brought to court, these events are outside the sphere of competence/vision of the Ministry of Justice.
However, the vast majority of legal aid cases is ascribed to cases brought to court. For this reason, even though the total is composed of both components, when calculating the total we can omit cases not brought to court.
Covid19 has deeply affected the flow of the incoming cases. Not only the courts were temporary closed but other than that we went through a long period of lockdown and therefore most existing proceedings were delayed and incoming cases drastically fell. The fall of LA cases is the obvious consequence of the above-described scenario.

Q020 (2018): The above figure included number of legal aid granted to administrative proceedings.

Q037 (2021): The number of condemnations is higher than the number of requests because the former refers to condemnations in year 2021 and some of them were initiated in previous years.
Q037 (2019): Unfortunately, the total amount in € is not available at this stage. This is a figure whose source is external to our administration (Ministry of Economy and Finance), hence we cannot guarantee its reliability.

Q037 (2018): Please note that the last two columns at Q.37 (number of condemnations and total amount in euros) refer to those compensating procedures cleared (actually paid) in 2018. Therefore, not necessary they refer to compensation procedures initiated in 2018 (first column).
PS: Given the wide diversity of such procedures we believe that the total doesn't make much sense, hence NA.

Latvia

Q018 (General Comment): In the Republic of Latvia there is another mechanism – a legal framework that provides for exemptions from payment of enforcement of the judgment expenditures on the basis of the law (Section 567 of the Civil Procedure Law). Moreover, in accordance with Section 11 of the Cabinet of Ministers Regulations No 454 of 26 June 2012 "Regulations on the Remuneration Rates of Sworn Bailiffs", a sworn bailiff has the right to reduce the remuneration fees.
It is also possible to submit a complaint to the court about the actions of sworn bailiffs, incl. regarding of the fees. Legal aid in such cases is granted. This also applies to previous years' questionnaire periods

Q018 (2020): Answer for Q18 is "No", but in the Republic of Latvia there is another mechanism how persons receive support at the enforcement of judicial decisions stage – a legal framework that provides for exemptions from the payment of enforcement of the judgment expenditures on the basis of law and in addition sworn bailiffs right to reduce the remuneration fees in another cases.
Q018 (2019): Answer for Q18 is "No", but in the Republic of Latvia there is another mechanism how persons receive support at the enforcement of judicial decisions stage – a legal framework that provides for exemptions from the payment of enforcement of the judgment expenditures on the basis of law and in addition sworn bailiffs right to reduce the remuneration fees in another cases.
Q018 (2017): Answer for Q18 is "No", but in the Republic of Latvia there is another mechanism how persons receive support at the enforcement of judicial decisions stage – a legal framework that provides for exemptions from the payment of enforcement of the judgment expenditures on the basis of law and in addition sworn bailiffs right to reduce the remuneration fees in another cases.
Q018 (2016): Answer for Q18 is "No", but In the Republic of Latvia there is another mechanism how persons receive support at the enforcement of judicial decisions stage – a legal framework that provides for exemptions from the payment to sworn bailiffs of enforcement of the judgment expenditures on the basis of law and in addition sworn bailiffs right to reduce the remuneration fees in another cases.
Q019 (General Comment): In the Republic of Latvia there is another mechanism - a legal framework that provides for exemptions from payment of court costs granted on the basis of the law by the judge in civil proceedings (Section 43 of the Civil Procedure Law). Besides, the Criminal Procedure Law stipulates which costs, for example, conducting of inspections, shall be assumed by the State. The mentioned regulation is applying to court proceedings and exemptions rules in their respect (for example concerning the expertise costs etc).
In addition, according to the State Ensured Legal Aid Law, in cross-borders cases a person has the right to receive the following: 1) services of an interpreter; 2) translation of documents requested by the court or the competent authority and submitted by the recipient of legal aid, which are necessary for adjudication of the matter; 3) payment of expenses related to the attendance at court sittings, if the presence of the person in court is provided for by the law or if the court requests so, deciding that the relevant person cannot be heard in another way (the Legal Aid Administration makes a decision).
In accordance with the Cabinet of Ministers Regulation No 1493 of 22 December 2009 "Regulations Regarding the Amount of State-ensured Legal Aid, the Amount of Payment, Reimbursable Expenses and the Procedures for Payment Thereof", if legal aid is provided outside the place of practice of the provider of legal aid, his or her travelling (transport) expenses and hotel (accommodation) expenses shall be covered from the State budget. It is relevant for all cases – civil, administrative and criminal. In asylum cases and cases related to foreigners who are obligated to be returned, the responsible institution – the Office of Citizenship and Migration Affairs or the Legal Aid Administration – shall ensure the communication of the applicant for legal aid with the provider of legal aid, which covers costs of the interpretation services.
In questions 16-18 it is indicated that the state provides representation in court and legal advice, but in Latvia it is provided and paid also for preparation of procedural documents in all types of cases and in criminal cases for representation in the pre-trial criminal proceedings.

Q019 (2020): We can indicate that additional persons are exempted, for example, from expertise, interpreters and travel expenses (in cross border disputes). If the legal aid is provided outside the place of practice of the provider of legal aid, his or her travelling (transport) expenses and hotel (accommodation) expenses also shall be covered from the State budget. In questions 16-18 it is indicated that the state provides representation in court and legal advice, but in Latvia it is provided and paid also for preparation of procedural documents in all types of cases and in criminal cases for representation in the pre-trial criminal proceedings.

Q019 (2019): We can indicate that additional persons are exempted, for example, from expertise, interpreters and travel expenses (in cross border disputes). If the legal aid is provided outside the place of practice of the provider of legal aid, his or her travelling (transport) expenses and hotel (accommodation) expenses also shall be covered from the State budget. In questions 16-18 it is indicated that the state provides representation in court and legal advice, but in Latvia it is provided and paid also for preparation of procedural documents in all types of cases and in criminal cases for representation in the pre-trial proceedings.

Q019 (2016): indicates that additional persons are exempted, for example, from expertise, interpreters and travel expenses. In accordance with the Cabinet of Ministers Regulation No 1493 of 22 December 2009 “Regulations Regarding the Amount of State-ensured Legal Aid, the Amount of Payment, Reimbursable Expenses and the Procedures for Payment Thereof” the State shall pay to the provider of legal aid also for drawing up procedural documents in all kind of legal aid cases and for representation in pre-trial criminal proceedings.

Q020 (General Comment): The Legal Aid Administration is the competent authority for providing State ensured legal aid in civil matters and certain types of administrative cases and in a Constitutional Court process. It cannot identify data on legal aid granted specifically to cases referred to court. It is noteworthy that one case can last for several years. Consequently, in a given year the Legal Aid Administration shall provide legal aid both in cases undertaken in the previous years and new cases. In criminal proceedings, the advocate shall provide the State ensured legal aid upon a request from the person directing the criminal proceedings to the elder of the sworn advocates or if urgent in conformity with the schedule of the advocates on duty compiled by the elder of the sworn advocates. In these cases, the Legal Aid Administration shall perform payments to an advocate regarding the legal assistance provided. The Legal Aid Administration cannot identify data on legal aid granted specifically to cases referred to court.

Q020 (2021): Legal Aid Administration is the competent authority of providing the State ensured legal aid in a Constitutional Court process, in civil matters and certain types of administrative cases. In 2021 the Legal Aid Administration received 1212 applications for request of State ensured legal aid in a Constitutional Court process, in civil matters and certain types of administrative cases, decisions on ensuring legal aid were adopted in 864 cases, legal aid was ensured in 62 asylum and return cases. It must be noted that one case can last for several years, depending on the duration of proceedings, consequently, in a given year the Legal Aid Administration shall provide the legal aid both in cases undertaken in the previous years and new cases. The advocate shall provide the State ensured legal aid in criminal proceedings upon a request from the person directing the criminal proceedings to the senior of the sworn advocates or in urgent in conformity with the schedule of the advocates on duty compiled by the elder of the sworn advocates. In these cases, the Legal Aid Administration shall perform payments to an advocate regarding the legal assistance provided. According to the data available to the Legal Aid Administration legal aid was provided in approximately 6224 criminal proceedings. Legal Aid Administration alone cannot select data on legal aid in cases existing directly in proceedings.

Q020 (2020): Legal Aid Administration is the competent authority of providing the State ensured legal aid in a Constitutional Court process, in civil matters and certain types of administrative cases. In 2020 the Legal Aid Administration received 1146 applications for request of State ensured legal aid in a Constitutional Court process, in civil matters and certain types of administrative cases, decisions on ensuring legal aid were adopted in 847 cases, legal aid was ensured in 54 asylum and return cases. It must be noted that one case can last for several years, depending on the duration of proceedings, consequently, in a given year the Legal Aid Administration shall provide the legal aid both in cases undertaken in the previous years and new cases. The advocate shall provide the State ensured legal aid in criminal proceedings upon a request from the person directing the criminal proceedings to the senior of the sworn advocates or in urgent in conformity with the schedule of the advocates on duty compiled by the elder of the sworn advocates. In these cases, the Legal Aid Administration shall perform payments to an advocate regarding the legal assistance provided. According to the data available to the Legal Aid Administration legal aid was provided in approximately 7286 criminal proceedings. Legal Aid Administration alone cannot select data on legal aid in cases existing directly in proceedings.

Q020 (2018): Legal Aid Administration is the competent authority of providing the State ensured legal aid in a Constitutional Court process, in civil matters and certain types of administrative cases. The Legal Aid Administration alone cannot select data on legal aid in existing cases directly in proceedings. In 2018 the Legal Aid Administration received 1665 applications for request of State ensured legal aid, decisions on ensuring legal aid in civil cases were adopted in 1253 cases, legal aid was ensured in 31 asylum cases. It must be noted that one case can last for several years, depending on the duration of proceedings, consequently, in a given year the Legal Aid Administration shall provide the legal aid both in cases undertaken in the previous years and new cases. The advocate shall provide the State ensured legal aid in criminal proceedings upon a request from the person directing the criminal proceedings to the senior of the sworn advocates or in urgent in conformity with the schedule of the advocates on duty compiled by the elder of the sworn advocates. In these cases, the Legal Aid Administration shall perform payments to an advocate regarding the legal assistance provided. According to the data available to the Legal Aid Administration legal aid was provided in approximately 8 347 criminal proceedings. Legal Aid Administration alone cannot select data on legal aid in cases existing directly in proceedings.

Q020 (2016): In the Republic of Latvia there is another mechanism - the Civil Procedure Law and the Criminal Procedure Law stipulates which costs, for example, conducting of inspections, costs of the services of an interpreter shall be assumed by the State.
According the State Ensured Legal Aid Law in cross border cases in addition a person has the right to receive the following:
1) services of an interpreter;
2) a translation of such document requested by the court or the competent authority and submitted by the recipient of legal aid, which is necessary for adjudication of the matter; and
3) the payment of such expenses which are related to attendance at court sittings, if the presence of the person in court is provided for in law or if the court requests it, deciding that the relevant person cannot be heard in another way.
In accordance with the Cabinet of Ministers Regulation No 1493 of 22 December 2009 “Regulations Regarding the Amount of State-ensured Legal Aid, the Amount of Payment, Reimbursable Expenses and the Procedures for Payment Thereof”, if the legal aid is provided outside the place of practice of the provider of legal aid, his or her travelling (transport) expenses and hotel (accommodation) expenses shall be covered from the State budget.
In accordance with the Cabinet of Ministers Regulation No 1493 of 22 December 2009 “Regulations Regarding the Amount of State-ensured Legal Aid, the Amount of Payment, Reimbursable Expenses and the Procedures for Payment Thereof” the State shall pay to the provider of legal aid also for drawing up procedural documents in all kind of legal aid cases and for representation in pre-trial criminal proceedings.

Q020 (2014): For 2014, the Legal Aid Administration received 2 318 applications requesting State ensured legal aid which was granted to 1 850 civil cases and 9 administrative cases. In criminal matters, legal aid was provided in approximately 10 300 cases.
Q020-1 (General Comment): Application on legal aid in a Constitutional Court process, in civil matters and certain types of administrative cases shall be reviewed and decision on granting or refusal to grant legal aid shall be adopted by the Administration within 21 days, but in matters affecting children's rights - within 14 days from the date of receipt of an application for legal aid, as well as in partial legal aid cases, the Legal Aid Administration takes a decision within one month. The advocate shall provide the state ensured legal aid in criminal proceedings upon a request from the person directing the criminal proceedings to the senior of the sworn advocates (process takes maximum 3 days, the estimated term in criminal cases is fixed in the Criminal Procedure Law) or in urgent in conformity with the schedule of the advocates on duty compiled by the elder of the sworn advocates.

Q037 (2021): The Ministry of Justice informs that it does not have a separate statistic about circumstances mentioned in Article 037.
The Ministry of Justice informs that the total amount of compensation in 2021 consists of non-pecuniary damages 75350 euros, damages 18708,39 euros, state social insurance contributions 2053,21 euros and personal income tax compensation 1100,40 euros.
The Ministry of Justice also informs that the compensation procedure and the calculation method for the compensation is regulated in a Law on compensation for damage caused in criminal proceedings and administrative violations. According to Article 15 the compensation calculation method of non-pecuniary damages for one unjustified detention day is minimum wage for month divided by 30, then the result without decimal places is multiply by 2. For example compensation for one unjustified detention day in 2021 was 32 euros ((500 euros : 30 = 16,66 euros); 16 euro x 2 x 1 day = 32 euros).

Q037 (2020): The Ministry of Justice informs that it does not have a separate statistic about circumstances mentioned in Article 037.
The Ministry of Justice informs that the total amount of compensation in 2020 consists of non-pecuniary damages 69 889,70 euros, damages 31 471,31 euros, state social insurance contributions 1867,12 euros and personal income tax compensation 820,09 euros.
The Ministry of Justice also informs that the compensation procedure and the calculation method for the compensation is regulated in a Law on compensation for damage caused in criminal proceedings and administrative violations. According to Article 15 the compensation calculation method of non-pecuniary damages for one unjustified detention day is minimum wage for month divided by 30, then the result without decimal places is multiply by 2. For example compensation for one unjustified detention day in 2020 was 28 euros ((430 euros : 30 = 14,33 euros); 14 euro x 2 x 1 day = 28 euros).
In Latvia, there is no compensation in the categories “Non-execution of court decisions” and “Number of condemnations”.

Q037 (2019): For 2019 the number of requests is almost the same than for 2018, while the amount decreased considerably. In 2018, in respect of separate legal proceedings and damages decisions, significant amounts of compensation have been determined compared to other cases. In 5 cases the amount of compensations was bigger than 10 000 euro, representing together 118,687.31 euro. Among those 5 cases, one compensation amount was 50 000 euro. Important compensations are an exception, not a routine, but sometimes they are and have a significant impact on the amount of reimbursement paid.

Q037 (2018): Cost increase exist because in 2016 there was less disbursement than in previous five years as well as the lowest expense rate since 2010. It is alleged that there was simply a coincidence in the cost of the claims, where no serious infringement of the rights of the individual could be established to determine a high level of non-pecuniary damage, or the amount of the loss was not high.
Q037 (2016): The Law on Compensation for Damages Caused by Unlawful or Unfounded Actions of Investigators, Prosecutors or Judges (Par izziņas izdarītāja, prokurora vai tiesneša nelikumīgas vai nepamatotas rīcības rezultātā nodarīto zaudējumu atlīdzināšanu; hereafter – “the Law on Compensation”) determines the extent and the procedure of recovering losses, which as a result of the unlawful or groundless action of an investigator, prosecutor or judge in the course of fulfilling their official duties, are caused to natural
persons, as well as establishes the procedure in which the offended social and employment guarantees of such persons are ensured.
Article 2 of the Law on Compensation determines that legal basis for compensation for losses is: 1) a judgment of acquittal, regardless of the reason for acquittal; 2) termination of a criminal case due to person's exonerating circumstances; 3) recognition of an administrative apprehension as unlawful, and termination of the administrative proceedings.
Paragraph 1 of Article 7 of the Law on Compensation determines that the requests for damages must be submitted to the Ministry of Justice or the Office of the Prosecutor General, depending on the stage in which the proceedings have been terminated.
Parapgraph 3 of Article 5 of the Law on Compensation determines that the in relation to non-pecuniary damages, a person is entitled to submit a civil claim to a court of general jurisdiction. The court of general jurisdiction determines the amount of the compensation in civil cases considering the severity of the non-pecuniary damage and other circumstances, for example, excessive length of proceedings.
The Ministry of Justice collects information only about the total number of requests for compensation and the total paid amount.

Lithuania

Q018 (General Comment): The costs of secondary legal aid cover the costs of the execution process (Article 2(1) of the Law on State-guaranteed legal aid). However, the costs incurred by the debtor in the execution process are not covered.

Q019 (General Comment): The costs of secondary legal aid from which the applicant is exempted are: litigation costs incurred in civil proceedings, the costs incurred in administrative proceedings, the costs related to the hearing of a civil action brought in a criminal matter, the costs related to defence and representation in court (including the appeal and cassation proceedings, irrespective of the initiator) as well as the costs of the execution process, the costs related to the drafting of procedural documents and collection of evidence, interpretation, representation in the event of preliminary extrajudicial consideration of a dispute, where such a procedure has been laid down by laws or by a court decision (Article 14(2) of the Law on State-guaranteed legal aid). The costs of state-guaranteed legal aid cover also the costs of interpretation of communication between the lawyer and the applicant where, in the cases provided for in treaties of the Republic of Lithuania, it is impossible to ensure that a person providing state-guaranteed legal aid communicates with the applicant in the language which the latter understands (Article 14(10) of the Law on State-guaranteed legal aid).
Where the physical presence of an applicant is required by the law or by the court, the travel costs to be borne by an applicant are borne by the State-guaranteed legal aid service (Article 20(2) of the Law on State-guaranteed legal aid). Where the physical presence of an applicant is required by the law or by the court, the travel costs to be borne by an applicant are borne by the State-guaranteed legal aid service (Article 20(2) of the Law on State-guaranteed legal aid).

Q020 (General Comment): The number provided for non-litigious cases or cases not brought to court indicates the number of matters when primary legal aid (legal information, legal advice, drafting of the documents to be submitted to State and municipal institutions, with the exception of procedural documents, advice on the out-of-court settlement of a dispute, actions for the amicable settlement of a dispute and drafting of a settlement agreement) was granted.

Q020 (2021): The number provided for cases not brought to court indicates the number of matters when primary legal aid was granted. The number for cases brought to court indicates the number of matters when secondary legal aid was granted. In total 28184 cases: 19616 criminal cases (18421 cases by decisions of a pre-trial investigation officer, prosecutor or the court when the presence of a lawyer is mandatory and 1195 cases by decisions of State-guaranteed legal aid service where the presence of a lawyer is not mandatory) and 8568 other cases by decisions of State-guaranteed legal aid service.

Q020 (2020): The number provided for cases not brought to court indicates the number of matters when primary legal aid was granted. The number for cases brought to court indicates the number of matters when secondary legal aid was granted. In total 36544 cases: 27442 criminal cases (26102 cases by decisions of a pre-trial investigation officer, prosecutor or the court when the presence of a lawyer is mandatory and 1340 cases by decisions of State-guaranteed legal aid service where the presence of a lawyer is not mandatory) and 9102 in other than criminal cases by decisions of State-guaranteed legal aid service.
The number of decisions to grant secondary legal aid decreased due to the Covid-19 related extreme situation and quarantine. The number of applications decreased despite the fact that it was possible to submit an application by electronic means or mail.

Q020 (2018): Primary legal aid (cases not brought to court) was granted for 41791 legal enquires.
Secondary legal aid (cases brought to court) was granted in total in 42248 cases: - 26833 criminal cases (24944 cases by decisions of a pre-trial investigation officer, prosecutor or the court when the presence of a lawyer is mandatory and 1889 cases by decisions of State-guaranteed legal aid service where the presence of a lawyer is not mandatory);
- 15415 civil and administrative matters by decisions of State-guaranteed legal aid service.

Q020 (2016): It is not possible to calculate and separate the cases where persons who were granted secondary legal aid have eventually brought their cases to courts. Only the total number of secondary legal aid provided is available. In total secondary legal aid was granted in 41063 cases: 24609 criminal cases (22777 cases by decisions of a pre-trial investigation officer, prosecutor or the court when the presence of a defence lawyer is mandatory and 1832 cases by decisions of State-guaranteed legal aid service where defence is not mandatory or the person is an aggrieved party).
Secondary legal aid was granted for 16454 civil and administrative matters by decisions of State-guaranteed legal aid service.

Q020 (2014): In criminal cases, litigants have the right to legal aid in pre-trial investigation procedures. However, the latter may be terminated due to various reasons. Accordingly, it is impossible to identify the number of cases granted with legal aid and referred to court. Only the total number of secondary legal aid provided is available: 32 699 criminal cases (30879 cases by decisions of a pre-trial investigation officer, prosecutor or the court when the presence of a defence lawyer is mandatory and 1820 cases by decisions of State-guaranteed legal aid services where defence is not mandatory or the person is an aggrieved party); 14 206 civil and 722 administrative matters by decisions of State-guaranteed legal aid services.
In 2014, primary legal aid (legal information, legal advice and drafting of the documents to be submitted to state and municipal institutions, with the exception of procedural documents) was granted for 45443 legal enquires.

The Law on State-guaranteed Legal Aid has been amended from 1st of January 2014, enabling easier access to secondary legal aid (e.g. applicants are no longer obligated to address local tax administrator for a stamp on their annual declaration of income and assets; they may choose any practising lawyer for the provision of secondary legal aid).

Q020 (2012): For 2012, the number of criminal cases subsumes: cases for which the presence of a defence lawyer is mandatory and for which legal aid was granted by a decision of a pre-trial investigation officer (17 853), prosecutor or the court (15 312); cases for which defence is not mandatory or the person is an aggrieved party and for which legal aid was granted by a decision of State-guaranteed legal aid services (2 146). The number of other than criminal cases includes cases where legal aid was granted in civil (13 595) or administrative (786) matters by a decision of State-guaranteed legal aid services.

Q020-1 (General Comment): According to the Law on State-guaranteed legal aid, primary legal aid must be provided as soon as the person applies to the municipality. If it is not possible to provide primary legal aid immediately, the applicant will be notified of the time available, which must be no later than 5 working days from the date of application.
Decisions on the provision of secondary legal aid shall be adopted by the SGLAS not later than within 7 working days from the date of receipt of the required documents and information. In cases when in the interests of the applicant the decision to grant secondary legal aid must be taken urgently, the decision shall be taken immediately, but not later than the date of the procedural step which requires lawyers assistance.
There is no timeframe for the decisions of pre-trial investigation officer, prosecutor or court on state guaranteed legal aid (when presence of lawyer is mandatory in criminal cases).

Q020-1 (2020): According to the Law on State-guaranteed legal aid, primary legal aid must be provided as soon as the person applies to the municipality. If it is not possible to provide primary legal aid immediately, the applicant will be notified of the time available, which must be no later than 5 working days from the date of application.
Decisions on the provision of secondary legal aid shall be adopted by the SGLAS not later than within 7 working days from the date of receipt of the required documents and information. In cases when in the interests of the applicant the decision to grant secondary legal aid must be taken urgently, the decision shall be taken immediately, but not later than the date of the procedural step which requires lawyers assistance.
There is no timeframe for the decisions of pre-trial investigation officer, prosecutor or court on state guaranteed legal aid (when presence of lawyer is mandatory in criminal cases).

Q037 (2020): Total - compensation for damage caused by public authorities + compensation for damage caused by public prosecutors and courts;
Other - compensation for damage caused by public authorities;

Q037 (2019): In category “other” the data on the number of requests for compensation is from the Ministry of Justice only, and the number of condemnations data is related to the judgements of all the State institutions, thus the number of condemnations is that much higher. The major part of applicants apply against the State to the court directly, thus the Ministry of Justice has information about the claims against the State in cases where it is the representative of the State only. Also the Ministry of Justice has data on satisfied claims in courts as it is responsible for the enforcement of these judgements.
Category “other” includes damage awarded because of the illegal actions of state institutions or officers and damage awarded because of improper imprisonment conditions.

Q037 (2018): Under the Civil Code and the Law on the Compensation of the Harm Caused by Illegal Actions of Public Authorities and Representation of the State of the Republic of Lithuania the damage resulting from the unlawful condemnation, unlawful arrest, unlawful detention, unlawful application of procedural coercive measures, illegal application of administrative penalty – arrest has to be reimbursed by the state in full, regardless of pre-trial investigation officers, prosecutors and court officials' fault. Compensations for unlawful arrest and unlawful condemnation are paid from separate budgetary program on compensation of damages operated by the Ministry of Justice. These compensations may be paid according to court decisions on damages as well as through out-of-court procedure.
Damages can be compensated after court trial and without court trial (the property damage cannot exceed 1500 EUR, the moral damage cannot exceed 2900 EUR). Information above has been given on both cases.
N.B. In 2016 there was provided information about out-of-court procedure only. In 2018 in order to disclose the complete situation the data is provided also including situations when applicants take an application to the court directly. This can cause some differencies in two periods (2016 and 2018).

Q037 (2016): Under the Civil Code and the Law on the Compensation of the Harm Caused by Illegal Actions of Public Authorities and Representation of the State the damage resulting from the unlawful condemnation, unlawful arrest, unlawful detention, unlawful application of procedural coercive measures, illegal application of administrative penalty – arrest has to be reimbursed by the state in full, regardless of pre-trial investigation officers, prosecutors and court officials' fault. Compensations for unlawful arrest and unlawful condemnation are paid from separate budgetary program on compensation of damages operated by the Ministry of Justice. These compensations may be paid according to court decisions on damages as well as through out-of-court procedure. Damages can be compensated after court trial and without court trial (the property damage can not exceed 1500 EUR, the moral damage can not exceed 2900 EUR).

Luxembourg

Q016 (2017): /

Q018 (General Comment): The amended Law of 10 August 1991 on the profession of lawyer (Art. 37 and 37-1) and, more specifically, the amended Regulation of the Grand-Duché of 18 September 1995 on legal aid (Art. 8) include "fees and costs of bailiffs" among the amounts that may be covered by legal aid.

Q018 (2021): The amended Law of 10 August 1991 on the profession of lawyer (Art. 37 and 37-1) and, more specifically, the amended Regulation of the Grand-Duché of 18 September 1995 on legal aid (Art. 8) include "fees and costs of bailiffs" among the amounts that may be covered by legal aid.

Q018 (2018): An enforcement agent may be required to have a judicial decision executed.

Q018 (2017): An enforcement agent can be mandatory to get a judicial decision executed.

Q019 (2017): /

Q020 (2021): The Diekirch Bar did not provide details on the legal matter of the cases that were granted with legal aid. Among the cases that received legal aid at the Luxembourg Bar, which corresponds to 85% of the total number of cases granted with legal aid, 27% were criminal cases and 73% were other than criminal cases.

Q020-1 (General Comment): The Luxembourg Bar Association has informed us that the average response time to an application for legal aid (LA) is impossible to determine. According to the Bar association, the majority of the applications for legal aid received are incomplete and will have to be returned before a final decision can be taken. The date of this decision depends on how quickly the applicant responds. The Bar association does not have statistics on this point. The processing time of an application for legal aid by the Legal Aid Department of the Luxembourg Bar is on average +/- 1 month, i.e. after receipt of an application for legal aid until a decision is taken, which can be either an approval or a refusal or a return in case of an incomplete application. However, it should be noted that urgent requests are treated as a priority by the service.

Q037 (General Comment): The law of 1 September 1988 on the civil liability of the State and public authorities allows the State to be held civilly liable before the ordinary courts if a person considers that he or she has been victim of a defective functioning of the judicial bodies. Excessive length of proceedings or a conviction resulting from such malfunctioning could be grounds for such an action. These complaints are brought before first instance courts. However, complaints about excessive length of proceedings can also be brought before the European Court of Human Rights (violation of Article 6 of the European Convention on Human Rights) or result in a procedural sanction during the proceedings. However, these last procedural steps do not appear in our systems. Thus, the diversity of the actors involved makes it difficult to identify the claims and decisions on compensation for the different categories and does not allow us to provide figures that reflect reality. However, it was possible to complete the table concerning compensation for wrongful arrest, provided for by the law of 30 December 1981, concerning compensation for inoperative preventive detention. The figures available for compensation for wrongful arrest represent the requests and decisions granting compensation for inoperative preventive detention (IPD) (https://mj.gouvernement.lu/fr/service-citoyens/detentionpreventive.html) as well as the total amount paid. We would like to point out, however, that in the context of the aforementioned law of 30 December 1981, it is not appropriate to speak of convictions, but of administrative decisions that can be appealed before the administrative courts.

Q037 (2021): The law of 1 September 1988 on the civil liability of the State and public authorities allows the State to be held civilly liable before the ordinary courts if a person considers that he or she has been victim of a defective functioning of the judicial bodies. Excessive length of proceedings or a conviction resulting from such malfunctioning could be grounds for such an action. These complaints are brought before first instance courts. However, complaints about excessive length of proceedings can also be brought before the European Court of Human Rights (violation of Article 6 of the European Convention on Human Rights) or result in a procedural sanction during the proceedings. However, these last procedural steps do not appear in our systems. Thus, the diversity of the actors involved makes it difficult to identify the claims and decisions on compensation for the different categories and does not allow us to provide figures that reflect reality. However, it was possible to complete the table concerning compensation for wrongful arrest, provided for by the law of 30 December 1981, concerning compensation for inoperative preventive detention. The figures available for compensation for wrongful arrest represent the requests and decisions granting compensation for inoperative preventive detention (IPD) (https://mj.gouvernement.lu/fr/service-citoyens/detentionpreventive.html) as well as the total amount paid. We would like to point out, however, that in the context of the aforementioned law of 30 December 1981, it is not appropriate to speak of convictions, but of administrative decisions that can be appealed before the administrative courts.

Q037 (2020): The law of September 1, 1988 on the civil liability of the State and public authorities allows the State to be held civilly liable before the ordinary courts if a person believes that he or she has been the victim of a defective operation of the judicial bodies. Excessive length of proceedings or a conviction resulting from such malfunctioning could be grounds for such an action. These complaints are brought before the courts of first instance. However, complaints about excessive length of proceedings can also be brought before the European Court of Human Rights (violation of Article 6 of the Convention on Human Rights) or result in a procedural sanction during the proceedings. However, these last approaches do not appear in our systems. Thus, the diversity of the actors involved makes it difficult to identify the claims and decisions on compensation for the different categories and does not allow us to provide figures that reflect reality. However, it was possible to complete the table concerning compensation for unjustified arrest, provided for by the law of December 30, 1981, concerning compensation for inoperative preventive detention. The figures available for compensation for wrongful arrest represent the requests and decisions granting compensation for inoperative preventive detention (IPD) (https://mj.gouvernement.lu/fr/service-citoyens/detentionpreventive.html) as well as the total amount paid. We would like to point out, however, that in the context of the aforementioned law of December 30, 1981, it is not appropriate to speak of convictions, but of administrative decisions.

Q037 (2019): The law of September 1, 1988 on the civil liability of the State and public authorities allows the State to be held civilly liable before the ordinary courts if a litigant considers that s/he has been the victim of a malfunctioning of the judicial bodies. An excessive length of proceedings or a conviction resulting from such a malfunction could motivate such an action. Such complaints are brought before first instance courts. However, complaints concerning the excessive length of proceedings may also be brought before the European Court of Human Rights (violation of article 6 of the ECHR) or result in a procedural sanction during the proceedings. However, these latter steps do not appear in our systems. Thus, the diversity of the actors involved makes the identification of claims and compensation decisions for the different categories difficult and does not allow for the provision of figures reflecting reality. However, it was possible for us to complete the table concerning compensation for unjustified arrest, provided for by the law of December 30, 1981 on compensation for inoperative pre-trial detention. The figures available for compensation for unjustified arrest represent the claims and decisions granting compensation in the context of inoperative preventive detention (IPR) (https://mj.gouvernement.lu/fr/service-citoyens/detention-preventive.html) as well as the total amount paid. However, we would like to point out that, in the framework of the above-mentioned law of December 30, 1981, we should not speak of convictions, but of administrative decisions.

Q037 (2016): In all cases compensation, in particular on the basis of the civil liability of the State, is possible, but there is no data.

Malta

Q016 (2017): Despite the fact that our current legal aid system does not provide for clients to use the service specifically for legal advice without the requirement of representation in court, in actual practice clients using the services of the Agency are still voluntarily provided with legal advice when solicited.

Q016 (2014): In 2014, Malta implemented a major reform in the provision of legal aid, by establishing it as an independent Agency with its own budget and management structure. Prior to this, legal aid was a function falling within the remit of the office of the Attorney General.

Q018 (General Comment): Eligible candidates can enforce foreign judgements in Malta through legal aid as long as the procedure is carried out through court representation.

Q018 (2021): Eligible candidates can enforce foreign judgements in Malta through legal aid as long as the procedure is carried out through court representation.

Q018 (2018): Eligible candidates can enforce foreign judgements in Malta through legal aid as long as the procedure is carried out through court representation.

Q018 (2017): Eligible candidates can enforce foreign judgements in Malta through Legal Aid as long as the procedure is carried out through court representation.

Q018 (2016): Eligible candidates can enforce foreign judgements in Malta through legal aid as long as the procedure is carried out through court representation.

Q020 (General Comment): The figures quoted for civil and criminal cases do not refer to the actual number of cases but to the number of nominations (requests) for legal aid. For example, if a case is brought to court having 5 accused people requiring legal aid, then this would count as 5 requests but just 1 case.

Q020 (2021): Towards the end of April 2020, Legal Aid Malta started offering legal advice (not representation in courts) to clients experiencing domestic violence. In addition to the 265 cases brought to court, Legal Aid Malta offered legal advice to 160 clients experiencing DV. The nature of the advice given to the victims of domestic violence is both 'criminal' and 'other than criminal' in nature. Each client referred to or requiring assistance from Legal Aid Malta Agency in relation to domestic violence is being assigned a legal aid lawyer for the necessary legal advice required. Such clients do not always want to pursue assistance at Court. This service has fulfilled the obligation set in the Istanbul Convention and has been incorporated in domestic law under Article 57 of the schedule attached to Chapter 581 of the Laws of Malta. In other than criminal cases, legal aid is granted to any party whose annual income does not exceed the national minimum wage for persons over 18 years of age. For 2021 the national minimum wage stood at €181.08 weekly
(€9,416.19 yearly). In 2021, the net asset value should not exceed €6,988 for means test eligibility for legal aid.

Q020 (2020): In Other than Criminal Cases, the low figure quoted as compared to previous evaluations relates to the disruptive effect that the COVID-19 pandemic had on court operations. During 2020, most services at the Legal Aid Agency were limited to the provision of services and the Courts of Law were closed for non-urgent court applications.
It is important to note that towards the end of April 2020, Legal Aid Malta started offering legal advice (not representation in courts) to clients experiencing domestic violence. In addition to the 129 cases brought to court, Legal Aid Malta offered legal advice to 191 clients experiencing DV. Each client referred to or requiring assistance from Legal Aid Malta Agency in relation to domestic violence is being assigned a legal aid lawyer for the necessary legal advice required. Such clients do not always want to pursue assistance at Court. This service has fulfilled the obligation set in the Istanbul Convention and has been incorporated in domestic law under Article 57 of the schedule attached to Chapter 581 of the Laws of Malta.

Q020 (2018): The figures quoted for civil and criminal cases do not refer to the actual number of cases but to the number of nominations (requests) for legal aid. For example, if a case is brought to court having 5 accused people requiring legal aid, then this would count as 5 requests/ nominations. Legal Aid in Malta is mainly granted for court representation but it also provides legal advice in the circumstances outlined in Q16.

Q020 (2016): The above data reflects the number of requests (nominations) made for legal aid in both the civil and criminal fields. These figures do not necessarily reflect the number of cases in which legal aid was granted.

Q020 (2014): Regard being had to the peculiarity of the methodology of presentation of data, the number 607 provided in 2014 in respect of the category “criminal cases brought to court” is a more representative figure of the number of individuals requesting for legal aid.

Q020 (2012): In criminal matters, statistics started being collected with effect from August 2012. Accordingly, the 2012 data refers to the period August - December 2013. Between January and October 2013, the number of criminal cases granted legal aid amounted to 463.

Q020-1 (2020): The average number of days indicated above (19 days) refers to Other than Criminal cases and is computed as follows:
> 5 days: from the time a person asks for legal aid information up to the presentation of the actual means test documents.
> between 7 to 14 days (avg: 10.5 days): from the presentation of the documents by the client to the day set for an appointment with the Advocate for Legal Aid.
> 3 days: from date a Court application is presented at the Court's registry up to the day the Judge gives a decree.
In criminal cases:
No means test is required. When a person is referred to Legal Aid for a criminal case assistance and court representation, the Agency only requires the summons issued by the Police to draft the necessary Court applications, or a copy of the judgment in case of appeals. The average duration of the procedure for the granting of Legal Aid in Criminal Cases, from the point of referral to the day when a Court application is filed, is 4 days.

Q037 (2021): Under article 3 of the 7th protocol of the European Convention for Human Rights there is the right to compensation for wrongful conviction whilst under article 5(5) of the European Convention of Human Rights (transposed as Chapter 319 of the Laws of Malta), there is the right to compensation for unlawful detention. For the purpose of the evaluation, 'unlawful detention' falls under the category 'Wrongful arrest' even if the difference between the two is being acknowledged. For both categories, no data is available.

Q037 (2020): Under article 3 of the 7th protocol of the European Convention for Human Rights there is the right to compensation for wrongful conviction whilst under article 5(5) of the European Convention of Human Rights (transposed as Chapter 319 of the Laws of Malta), there is the right to compensation for unlawful detention.
However no data is available.
Q037 (2018): The items listed at Q37 form the basis of constitutional remedies on the basis of breaches of fundamental human rights. In this respect, such grievances are not covered by our compensation procedure and legislation.

Q037 (2016): The above requested data is not available, as in accordance with our system, an individual has to institute constitutional redress proceedings in order for the court to declare that the individual suffered a violation of his fundamental human rights resulting from length of proceedings or arbitrariness through detention. The compensation awarded by the domestic courts depends on the length of proceedings and the gravity of the case, and whilst such cases are instituted in accordance to Maltese law, this data is not available.

Netherlands

Q018 (General Comment): It is noteworthy that the court fees are lower in respect of litigants with lower incomes.

Q018 (2021): Article 12, Criminal law on prosecution (Wetboek van Strafvordering)

Q018 (2020): Article 12, criminal law on prosecution (wetboek van strafvordering)

Q018 (2019): Article 12, Law on Legal Aid (Wet op de Rechtsbijstand)

Q018 (2018): Article 12, criminal law on prosecution (wetboek van strafvordering)

Q018 (2017): Article 12, criminal law on prosecution (wetboek van strafvordering)

Q019 (General Comment): Legal aid can also be granted for the following costs: travel costs, interpreter and translation costs, administrative costs, medical expert costs in injury cases for which a special regulation exists.
Q019 (2018): Legal aid can also be granted for the following costs: travel costs, interpreter and translation costs, administrative costs, special regulation for medical expert costs in injury cases.
Q020 (General Comment): In criminal matters, legal aid cannot be granted for cases not brought to court.
Policy in the Netherlands makes a distinction between primary and secondary legal aid. Primary legal aid aims at solving judicial problems of citizen without necessarily going to court. There are, for example, Legal Service Counters, where people receive free legal advice on simple judicial problems. The provided figures relate to legal aid certificates. It is worth mentioning that besides legal aid certificates, the Legal Aid Board also provides stand-by duty lawyers. A subsidized lawyer visits each criminal suspect, alien or psychiatric patient who has been lawfully deprived of his liberty against his will. The bulk of such cases are criminal cases. These stand-by lawyers are part of the secondary legal aid system (and not of the primary system). However, the legal aid certificates and the assignment of stand-by duty lawyers are two different operating systems, with different payment methods. Cases (not brought to court) for which stand-by duty lawyers have been assigned are excluded, as these are not payed for with a legal aid certificate. The numbers on stand-by duty lawyers assigned over the years are included in the comment under the question. Once a criminal case for which a stand-by duty lawyer was assigned is brought before the court, a legal aid certificate IS given subsequently. Those certificates ARE included in Q20. Cases dealt with by Legal Service Counters are not counted.

Q020 (2021): In criminal matters, legal aid cannot be granted for cases not brought to court.
The number of stand-by duty lawyers assigned was over the years 110 000 (2010); 127 000 (2012), 126 000 (2014), 108 500 (2020), and 96 500 (2021).
Q020 (2020): The number of cases in 2020 is considerably lower than previous years, probably in part due to the Covid-19 pandemic. Due to the pandemic, criminal cases had been paused, waiting to be handled.
Q020 (2016): Criminal cases: The discrepancy with previous cycle can be explained by the fact that recently a different distinction in cases is made. Now certain cases (bopz) are categorized as civil cases and immigration cases are categorized as administrative cases.
Q020-1 (General Comment): High Trust: many lawyers and mediators regarded the application for a legal aid certificate as burdensome and time-consuming, and the verification process as bureaucratic. Therefore, alternatives were considered to simplify the verification of applications and expense statements. The LAB introduced a High Trust method for dealing with the applications for certificates. The High Trust method implies that the LAB, and lawyers and mediators work together based on transparency, trust and mutual understanding. High Trust involves greater compliance on the part of the legal profession, both as to administrative proceedings of rules, and working in accordance with the law, fixed procedures and support facilities such as Kenniswijzer (an online tool of the LAB with information about legislation, jurisprudence, and guidelines for the application of certificates). The LAB has developed specific tools for compliance assistance, such as information and instruction meetings, which are free of charge for lawyers and mediators under High Trust. The basic philosophy underlying High Trust is that trust among a larger group of people will more readily lead to positive cooperation and compliance than institutionalised distrust. In 2009, the Board started with its first High Trust pilot. Since 2011, the Board has been implementing High Trust across the country in phases. At the end of 2020, more than three quarters of the certificates are issued to lawyers and mediators who work based on the principles of High Trust. It has become easier for providers of legal aid to apply for certificates without having to send documents along with their applications. The Board grants the certificate shortly after assessing the client's eligibility for legal aid. The applications of the lawyers and mediators that work together with the Board according to High Trust are accepted automatically. This means that the client will very soon receive confirmation on whether or not the application has been granted. Verification takes place after the provider of legal aid has submitted the statement of expenses. There are two ways of verification: either verification based on a random sample, or verification on a one-on-one basis of certificates granted.

Q020-1 (2021): maximum duration prescribed in law/regulation: 40 working days, 8 weeks.
The maximum duration is based on statutory law (Awb: General Administrative Law Act). However, this maximum only applies to approx. 20% of applications. Around 80% of the applications fall under the High Trust regime, in which the application is granted automatically within 7 days (after the income and assets check with the tax authorities); in 2021 these automatically granted applications took on average 3 days. Around 20% of the applications do not fall under the High Trust regime. In 2021 it took on average 16 days to grant these applications.

Q020-1 (2020): 40 working days, so eigh weeks. 12 days was the average in 2020.
The maximum duration is 8 weeks (40 working days). This is based on statutory law (the AWB: the General Administrative Law Act). However, this only applies to approximately 20% of the applications. Around 80% of the applications falls under the High Trust regime (see below) in which the application is granted automatically within 7 days (after the income and assets-check with the tax authorities). High Trust: Many lawyers and mediators regarded the application for a certificate as burdensome and time consuming, and the verification as bureaucratic. Therefore alternatives were considered to simplify the verification of applications and expense statements. The LAB introduced a High Trust method for dealing with the applications for certificates. This High Trust method implies that the LAB and lawyers and mediators work together on the basis of transparency, trust and mutual understanding. The High Trust method involves greater compliance on the part of the legal profession, both as to administrative proceedings of rules and working in accordance with the law, fixed procedures and support facilities such as Kenniswijzer (an online tool of the LAB with information about legislation, jurisprudence and guidelines for the application of certificates). The LAB developed specific tools for compliance assistance, such as information and instruction meetings, which are free of charge for lawyers and mediators under High Trust. The basic philosophy underlying High Trust is that trust among a larger group of people will more readily lead to positive cooperation and compliance than institutionalised distrust. In 2009, the Board started with its first High Trust pilot. Since 2011, the Board has been implementing High Trust across the country in phases. At the end of 2020, more than three quarters of the certificates are issued to lawyers and mediators who work based on the principles of High Trust. It has become easier for providers of legal aid to apply for certificates without having to send documents along with their applications. The Board grants the certificate shortly after assessing the client's eligibility for legal aid. The applications of the lawyers and mediators that work together with the Board according to High Trust are accepted automatically. This means that the client will very soon receive confirmation on whether or not the application has been granted. Verification takes place after the provider of legal aid has submitted the statement of expenses. There are two ways of verification: either verification on the basis of a random sample, or verification on a one-on-one basis of certificates granted.

Q037 (General Comment): Numbers cannot be provided, as compensation may involve people who have been in custody but were not accused or found guilty, it may involve damages due to an arrest or possessed goods that have been damaged, sold, destroyed or gone missing. Numbers for compensation for wrongful arrest or wrongful conviction used to be generated by the Statistics Bureau (CBS), but that line of research was discontinued after 2016.

Q037 (2019): It's not possible to give specific numbers for these categories.
Compensation may involve people who were in custody, but were not accused or found guilty, it may involve damages due to an arrest, or possessed goods that have been damaged, sold, destroyed or have gone missing.
Numbers for compensation for wrongful arrest or wrongful conviction used to be generated by the Statistics Bureau (CBS), but that line of research was discontinued after 2016.

Q037 (2018): Numbers cannot be provided for this question, as the compensation may involve people who have been in custody but where not accused of found guilty, it may involve damages due to an arrest, or posessed goods that have been damaged / sold / destroyed / gone missing. I don't have numbers specific to the categories you ask for. Also, this involves only a restricted group of 'users'.
Q037 (2012): In 2012, in 4 783 cases compensation was awarded for wrongful detention.

Poland

Q016 (General Comment): Civil cases: Each party may request that a professional attorney be appointed by the court. In order to do so, you must make a statement before the court that you are unable to pay the fees of an advocate or a legal advisor without the loss of the necessary support for yourself and your family. An application for a court-appointed attorney is independent of an application for exemption from court costs and may be filed at any stage of the proceedings (also prior to their commencement), until the case is finally resolved in the court having jurisdiction over the case. The court decides on the appointment of the attorney, taking into account the need for his/her participation in the case and the ability of the party to cover his/her remuneration. The appointed attorney represents the party in court and gives him/her appropriate legal advice in the case. In criminal proceedings, unless the Code of Criminal Procedure stipulates otherwise, all expenses are temporarily lectured by the State Treasury.

Q016 (2016): Regulations of the act on free legal aid and legal advise were implemented starting 1 January 2016 with some exceptions which were implemented starting 31 August 2015.
Q018 (General Comment): Civil cases:
Exemption from court fees to which a party is entitled by virtue of the law or granted to a party in preliminary proceedings extends to enforcement proceedings. Additionally, it is possible to apply for exemption from court fees only at the stage of enforcement proceedings.
Criminal cases: If the convicted person fails to comply with the obligation to pay the monetary performance or reparation to the injured party, the judgment together with the enforcement order is sent to the court executive officer who initiates the proceedings. The procedure for pursuing such claims is governed by the provisions of the Code of Civil Procedure (claims based on Article 196 § 2 of the Executive Penal Code).
In accordance with the Law on court executive officer fees of 28 February 2018. (Journal of Laws of 2021, item 210), the exemption from court costs to which a party is entitled by virtue of the law or which has been granted to a party in the court proceedings extends to the bailiff's costs (Article 45(1) of the Act). If a party does not exercise this right, the party may apply to the district court by which the judicial officer acts for exemption in whole or in part from enforcement costs. The applicant must prove that he or she is unable to pay the bailiff's fees without prejudice to the necessary maintenance of themselves, or their family (Article 45(2) of the Act).

Q018 (2018): The exemption from court costs granted to the party by the court in the exploratory proceeding or from which the party uses the power of the act extends also to enforcement proceedings (Article 771 of the Code of Civil Procedure). In addition, applications: for exemption from court costs and for the appointment of an attorney - an attorney or legal counsel ex officio may also be submitted during enforcement proceedings.
Q018 (2017): The cost are connected to the enforcement agent fees and actions.
Q018 (2016): The cost are connected to the enforcement agent fees and actions.

Q019 (General Comment): *In civil proceedings, exemption from court costs may relate to fees and expenses. Expenses include in particular: travel costs of a party who is exempt from court costs related to a personal appearance ordered by a court; reimbursement of travel and accommodation costs as well as lost earnings or witness income; remuneration and reimbursement of costs incurred by experts, translators and probation officers established for a party in a given case; lump-sum costs of taking evidence from the opinion-giving opinion of a team of court specialists; remuneration due to other persons or institutions and reimbursement of costs incurred by them; costs of carrying out other evidence; the costs of transporting animals and goods, keeping them or storing them; advertising costs; costs of detention and custody; lump sums due to probation officers for conducting environmental interviews in cases of: annulment of marriage, for divorce and separation, as well as for participation in parents' contacts with children determined by the court; the cost of issuing a certificate by a forensic doctor; the cost of mediation conducted as a result of referral by the court.
*In criminal proceedings, unless the Code of Criminal Procedure stipulates otherwise, all expenses are temporarily lectured by the State Treasury. A witness shall be entitled to reimbursement of travel expenses from his place of residence to the place where the court proceedings are to be conducted upon the order of the court or the authority conducting the pre-trial proceedings. The witness shall be entitled to reimbursement of travel costs from his place of residence to the place where the procedural activities are to be performed at the request of the court or the authority conducting preparatory proceedings. The witness shall also be entitled to reimbursement of earnings or income lost in connection with appearance at the summons of the court or the authority conducting the pre-trial proceedings. A person summoned as a witness is also entitled to reimbursement of the costs of travel and accommodation on condition of appearance. *If a party to a notary's activity is not able to incur the remuneration required by a notary public for its own and for the family, it may apply to the district court competent for its place of residence to release in full or in part from this remuneration. This provision shall apply accordingly to a legal person that proves that he has insufficient funds to incur the remuneration demanded by a notary public.
The court, after determining that there is a need to perform a notarial act, takes into account the application and appoints a notary to perform the requested notarial activity (Article 6 of the Act of 14 February 1991 on Notary Public Rights).

Q019 (2017): Expert fees and travel cost reimbursement.

Q019 (2016): Expert fees and travel cost reimbursement.

Q020 (2021): Data refers to the number of cases in which an ex officio representative (legal adviser, advocate) was appointed.

Q020 (2020): Data on the number of cases in which a proxy was appointed ex officio (legal adviser, advocate)

Q020-1 (2020): The provisions of the procedure do not specify a time limit for examining the application for appointing a legal representative. However, it should be considered without undue delay.

Q037 (General Comment): The rules for granting a sum of money in case of finding excessive length of proceedings are specified in the Act of 17 June 2004 on complaints of violation of the right of a party to hear a case in preparatory proceedings conducted or supervised by a prosecutor and court proceedings without unreasonable delay. According to art. 12 para. 4 of this Act, having regard to the complaint on (excessive), the court adjudicates from the Treasury, and in the case of complaints about the length of the proceedings conducted by the bailiff - from the bailiff, a sum of PLN 2,000 to PLN 20,000. The amount of the monetary sum, within the limits specified in the first sentence, is not less than PLN 500 for each year of the current duration of the proceedings, regardless of the number of stages of proceedings related to the excessive length of proceedings. The court may award a sum of money higher than PLN 500 for each year of the current duration of the proceedings, if the case is of particular importance to the applicant, who by his attitude did not contribute in a manner to prolonging the proceedings. This sum includes the amounts already awarded 16 to the applicant as a sum of money in the same case. No monetary sum is granted in the event of a complaint filed by the State Treasury or public sector units of the public finance sector.
The accused, who was acquitted or condemned to a more lenient punishment as a result of the resumption of the proceedings or cassation, serves the State Treasury for damages and compensation for the harm suffered resulting from the execution of all or part of the punishment he was not supposed to incur. This provision shall also apply if the proceedings were discontinued after the convicting decision was abrogated as a result of circumstances which were not taken into account in the earlier proceedings. The right to compensation and redress also arises in connection with the application of a safeguard measure under the conditions laid down in those circumstances. Compensation and redress also apply in the event of undoubtedly unjustified detention or detention (Article 552 of the Code of Criminal Procedure).

Q037 (2021): *272- number of persons; *12 - number of persons
The amounts of compensations from chapter 75595 paid in 2021 ordered from the State Treasury are presented below, together with an indication of the legal acts on the basis of which the compensations were ordered.
Specification of damages from chapter 75595 amounts paid in 2021
1. Act of 23 February 1991 on declaring invalid judgments issued against persons repressed for activities in favour of the independent existence of the Polish state = EUR 21,625
2 Article 552 of the Act of 6 June 1997 - Code of Criminal Procedure = €6,707; 3 Act of 17 June 2004 on Complaint for Infringement of the Right of a Party to Investigate a Case in Pre-trial Proceedings Conducted or Supervised by a Public Prosecutor and in Judicial Proceedings without Undue Delay € 1,188
4 other damages: inter alia, compensatory pensions, compensation for property damage, unlawful eviction € 324
5 Act of 7 July 2005 on State compensation to victims of certain criminal acts 71 euro
Total compensation in chapter 75595 137 590 pln 29 915 euro
The amount of funds spent on the payment of compensation to entitled persons results directly from the content of judgments of independent courts deciding on the legitimacy of claims and the amount of compensation awarded. Course of implementation of the expenditure plan in chapter 75595 in the course of the financial year is therefore independent of the activities of the financial services of individual courts, since the payment of funds by the financial branch of the court occurs only on the basis of a final court ruling on the payment of compensation to the entitled person.

Q037 (2020): *229 - numer of persons
*19 - numer of persons
Regarding the content of question 37, we would like to inform you that the Ministry of Justice , within its jurisdiction has the following data on the amount of compensation payments also from Section 15 of the State Budget, Chapter 75595, adjudged by the State Treasury in 2020
Specification of compensation from Chapter 75595 in 2020 in euro: 1.On the basis of the Act of 23 February 1991 on the recognition of invalidrulings issued against persons repressed for activities for the benefit of the independent state of Poland - EUR 13 123 0002 On the basis of Article 552 of the Act of 6 June 1997 Code of Criminal Procedure (Journal of Laws of 2018, item 1987) 4 552 000 euro3. pursuant to the Act of 17 June 2004 on a complaint for violationof a party's right to examine a case in preparatory proceedings conducted or supervised by a prosecutor and court proceedings without undue delay (Journal of Laws of 2018, item 75) EUR 1 005 0004. other compensations: inter alia, compensatory pensions, compensation in property damage, unlawful eviction 114 000 euro
5. under the Act of 7 July 2005 on State Compensationto victims of certain criminal acts 32 000 euro
Total compensations from chapter 75595 - 18 826 000 euro
The amount of funds spent on compensation payments to entitled persons results directly from the content of judgments of independent courts deciding on the legitimacy of claims and the amount of awarded compensation. The course of implementation of the expenditure plan in chapter 75595 during the budget year is therefore independent of the actions of the financial services of individual courts, because the payment of funds by the financial branch of the court, occurs only on the basis of a final court decision to pay compensation to the entitled person.

Q037 (2019): The course of the implementation of the expenditure plan in chapter 75595 during the financial year is therefore independent of the actions of the financial services of individual courts, because the payment of funds by the financial department of the court takes place only on the basis of a final court ruling on the payment of compensation to the entitled person.
*Non execution of decision - 317- number of persons
*Wrongful conviction - 26- number of persons

Portugal

Q018 (General Comment): The Portuguese law foresees the total or partial exemption from court fees and other expenses related to the case, such as fees for the enforcement of judicial decisions.
Q019 (General Comment): The Portuguese law provides for the total or partial exemption from court fees and other expenses related to the case.
Q019 (2021): Legal aid may also include fees of technical advisors or experts, costs of other legal professionals (notaries) and travel costs. In addition, all applications, certificates and any other documents requested for legal protection purposes are exempt from taxes, fees and charges.
Q019 (2020): Legal aid may also include fees of technical advisors or experts, costs of other legal professionals (notaries) and travel costs. In addition, all applications, certificates and any other documents requested for legal protection purposes are exempt from taxes, fees and charges.

Q019 (2019): Legal aid may also include fees of technical advisors or experts, costs of other legal professionals (notaries) and travel costs. In addition,all applications, certificates and any other documents requested for legal protection purposes are exempt from taxes, fees and charges.

Q019 (2018): Legal aid may also include fees of technical advisors or experts, costs of other legal professionals (notaries) and travel costs. In addition,all applications, certificates and any other documents requested for legal protection purposes are exempt from taxes, fees and charges.

Q020 (2020): The reduction in the number of total legal aid cases may be the result of the measures taken during the COVID pandemic: on the one hand, the suspension of court deadlines and the expiry and prescription periods, and on the other hand, the reduction of conclicts as a result of the confinements. In any case, it should be emphasized that this is merely a perception, since we do not have the tools to perform a sociological analysis of the requests.

Q020 (2016): Data on cases not brought to court concerns only cases of legal advice. It is not possible to determine how many cases terminated at this time.
In 2014, there was an increase in the number of cases brought to court explained by the economic and financial situation that increased the number of labour conflicts as well as family and criminal disputes. The same reasoning and the economy recovery of the following years may explain the present decrease.

Q020 (2014): The increase in the number of cases brought to court in 2014 can be explained by the current economic and financial situation which resulted in the increase in the number of labour conflicts as well as the number of family and criminal disputes.

Q020-1 (2021): The maximum duration of the procedure for granting legal aid is 30 days (article 25 (1) of Law No. 34/2009, of 29 of July. Regarding the actual average duration, it should be noted that in the context of the COVID Pandemic, procedural deadlines were suspended, which has influenced the duration of the procedural timeframes.

Q020-1 (2020): The maximum duration of the procedure for granting legal aid is 30 days (article 25 (1) of Law No. 34/2009, of 29 of July. Regarding the actual average duration, it should be noted that in the context of the COVID Pandemic, procedural deadlines were suspended, which has influenced the duration of the procedural timeframes.

Q037 (General Comment): There is no data with these levels of disaggregation in Portugal.

Romania

Q018 (General Comment): For the enforcement phase, legal aid may be granted as facilities at the payment of judicial duties. Moreover, according to Article 6 letter c) of the Government Emergency Ordinance 51/2008, it can also be the payment of the bailiff's fee.

Q018 (2017): According to the definition at question 17, for the enforcement phase, legal aid may be granted as facilities at the payment of judicial duties, but, according to Article 6 letter c) of GEO no. 51/2008, it can also be the payment of the bailiff's fee.

Q018 (2016): According to the definition at question 17, for the enforcement phase, legal aid may be granted as facilities at the payment of judicial duties, but, according to Article 6 letter c) of GEO no. 51/2008, it can also be the payment of the bailiff's fee.

Q019 (General Comment): According to Article 6 letter b) of the Government Emergency Ordinance 51/2008, public aid may also cover costs of the expert, translator or interpreter services during the trial, with the consent of the court or of the jurisdictional authority, if this payment is the obligation of the one requiring judicial public aid, according to law.

Q019 (2021): According to the Article 6 letter b) GEO no. 51/2008, public aid may be also the payment of the expert, translator or interpreter used during the trial, with the consent of the court or of the jurisdictional authority, if this payment is the obligation of the one requiring judicial public aid, according to the law.

Q019 (2020): According to the Article 6 letter b) GEO no. 51/2008, public aid may be also the payment of the expert, translator or interpreter used during the trial, with the consent of the court or of the jurisdictional authority, if this payment is the obligation of the one requiring judicial public aid, according to the law.

Q019 (2017): According to the Article 6 letter b) GEO no. 51/2008, public aid may be also the payment of the expert, translator or interpreter used during the trial, with the consent of the court or of the jurisdictional authority, if this payment is the obligation of the one requiring judicial public aid, according to the law.

Q019 (2016): According to the Article 6 letter b) GEO no. 51/2008, public aid may be also the payment of the expert, translator or interpreter used during the trial, with the consent of the court or of the jurisdictional authority, if this payment is the obligation of the one requiring judicial public aid, according to the law.

Q020 (2021): In criminal cases data also include ex officio layers.

Q020 (2020): In criminal cases data also include ex officio layers.

Q020 (2012): In 2012, data was available only for the Courts of Appeal and Tribunals. The database Ecris was not functional for first instance courts and the High Court.
Q020-1 (2021): There is no timeframe set for the procedure of granting legal aid by the court. The procedure is urgent as a general rule, being decided in chambers.
Q020-1 (2020): There is no timeframe set for the procedure of granting legal aid by the court. The procedure is urgent as a general rule, being decided in chambers.
Q037 (General Comment): There is no mechanism for calculating the compensation. The courts take into consideration the national case law and the jurisprudence of the European Court of Human Rights in similar cases.
Even if the civil regulations of material and procedural law do not provide special mechanisms for the compensation of individuals in case of excessive duration of procedures and non-enforcement of judgments, there are norms guaranteeing the right to a fair trial and at case settlement within a reasonable time-limit. In such circumstances, there is a possibility to pay certain sums of money as fines or even as a compensation. In criminal matters, the only possibility to obtain damages in case of procedural delays is the civil claim for damages, based on the provisions of the Civil Code. The new Civil Procedure Code (the Law 134/2010) provides for a much more efficient mechanism to this effect, respectively the contestation concerning the protraction of the case settlement. Thus, according to Article 522 para. (1) of the NCPC, any party, as well as the prosecutor attending the trial may make contestation by which, invoking the infringement of the right to the settlement of the trial within an optimal and reasonable time-limit, he/she solicits the adoption of legal measures remedying to this situation. Please, refer to the regulations of the NCPC as concerns the guarantee of the right to a fair trial and a case settlement within a reasonable time-limit.
The non-observance of judgments is incriminated as offence by Art. 287 of the Criminal Code. Within the criminal trial there may be also formulated the civil claim for damages for the non-enforcement of the judgment. The civil action may be also introduced separately, at the civil court. Both actions shall be judged according to the provisions of the Civil Code, regulating the delictual civil responsibility.
Illegal arrest and illegal conviction are situations circumscribed to judicial errors for which the Romanian state is responsible according to Art. 538-539 and the following of the Criminal Procedure Code (the Law 135/2010). For the appreciation in substance of the civil responsibility, common law rules laid down by the Civil Code apply. According to the provisions of the art. 538 of the Criminal Procedure Code, any person who suffered a wrongful condemnation or was, during a criminal trial, illegally deprived of his/her liberty is entitled to receive a compensation. The compensation should cover both the material and moral prejudices caused to that person. The amount of the compensation is to be determined by the court (the tribunal) in whose district the entitled person has its domicile. The entitled person should introduce a civil action against the state (which is represented by the Ministry of Public Finances), action which is exempted of any judicial fees.
Regarding the excessive duration of the criminal procedures, there is a remedy, but it is not compensatory - see art. 488 (index1) and the following of the Criminal Procedure Code.

Q037 (2020): There is no mechanism for calculating the compensation. The courts take into consideration the national case law and the jurisprudence of the European Court of Human Rights in similar cases.
Even if the civil regulations of material and procedural law do not provide special mechanisms for the compensation of individuals in case of excessive duration of procedures and non-enforcement of judgments, there are norms guaranteeing the right to a fair trial and at case settlement within a reasonable time-limit. Slovak Republic

Q019 (General Comment): Other costs provided by Centre for Legal Aid are costs for lawyers who represent the client at courts and these lawyers has been provided by Centre for Legal Aid. All costs paid by Centre are established in law no. 655/2004 Z. z.
Under the section 5c of the Act on Providing Legal Aid to persons in material need No. 327/2005: Legal aid shall also include: appointment of an interpreter; translation of documents necessary for decision on merits.

Q019 (2017): Under the section 5c of the Act on Providing Legal Aid to persons in material need (No. 327/2005): Legal aid shall also include: -appointment of an interpreter
-translation of documents necessary for decision on merits
-inevitable travel costs of foreign applicant

Q020 (2020): The 2020 was specific due the COVID 19 pandemic situation, there where smaller amount of request for legal aid.
Q020 (2018): According to the Annual report of the Legal Aid Center, in 2018, out of the total number of applications, the Center granted legal aid to applicants in 17,497 legal cases; of which 2,741 in the civil matters (including 16 in the form of legal advice) and 14,756 in the personal bankruptcy agenda
The number of cases where legal aid was granted in criminal proceedings is not available.
Q020-1 (General Comment): If the application for legal aid contains all the documents needed to issue a decision for granting legal aid then a decision is issued within 30 days. The applicant must meet the requirements for granting legal aid established by Act no. 327/2005 Z. z.. If the application is not complete then the proceeding is suspended for min. 8 days max. 30 days till the application is not complete. When the application is complete according to Act no. 327/2005 Z. z. the proceeding continues and decision is issued if the legal aid will or will not be granted.

Q037 (General Comment): The compensations for the excessive length of proceedings can be awarded by the Constitutional court in the finding on violation of the right to trial in the reasonable time. The compensation for wrongful arrest or conviction, non-execution of court decisions can be awarded by the court in the civil procedure. The aggrieved person can seek compensation against the state according to the Act on State Liability for Damage in Exercise of the Public Power.

Q037 (2019): The compensations for the excessive length of proceedings can awarded by the Constitutional court in the finding on violation of the right to trial in the reasonable time. The compensation was awarded in the amount of 375 912 eur in 2019.
The compensation for wrongful arrest or conviction, non-execution of court decisions can be awarded by the court in the civil procedure. The aggrieved person can seek compensation against the state according to the Act on State Liability for Damage in Exercise of the Public Power.
The number of requests for compensation delivered on the Ministry of Justice of the SVK was 214. Out of these only 4 request were satisfied:
one non-execution of court decisions (allocated amount 8.640,65 €),
one wrongful conviction (167,78 €),
two other (administrative mistake of the court, allocated amount 980,16 €).
Some of the unsatisfied request end up on the court in the civil procedure. During 2019 Ministry of Justice of SVK compensated in addition (due the court decision) in 45 cases in the amount of 553 395 euros. In these cases, we do not provide precise information on the reason for compensation, but we can say that in most cases it was compensation for wrongful conviction, in which the applicant was not found guilty.

Q037 (2018): The compensations for the excessive length of proceedings can awarded by the Constitutional court in the finding on violation of the right to trial in the reasonable time.
The compensation for wrongful arrest or conviction can be awarded by the court in the civil procedure. The aggrieved person can seek compensation against the state according to the Act on State Liability for Damage in Exercise of the Public Power.

Slovenia

Q018 (General Comment): In the proceeding of enforcement of judicial decisions the exemption from court fees (according to the Court Fees Act) and legal aid in the form of legal advice, legal representation and the exemption from payment of the procedural costs (the Free Legal Aid Act) is possible.
Q018 (2020): See general comment.

Q018 (2014): In the previous cycle, the answer was No, while for 2014 it changed to Yes, because the question was interpreted as regarding the court fees, exemption of which is regulated under the Court Fees Act and not under the legal aid as regulated by the Free Legal Aid Act (fees related to the enforcement of judicial decisions are still not paid by the party, but the legal ground for the exemption from payment is not legal aid).

Q019 (General Comment): The Free Legal Aid Act (FLAA) prescribes that legal aid shall mean the right of the eligible person to the entire or partial provision of funds necessary to cover the costs of legal assistance and the right to exemption of payment of the costs of the judicial proceeding. Further on the law defines that legal aid may be approved for legal advice, legal representation and other legal services, for all forms of judicial protection before all courts of general jurisdiction and specialised courts based in the Republic of Slovenia, before the Constitutional Court of the Republic of Slovenia, and before all authorities, institutions or persons in the Republic of Slovenia authorised for out-of-court settlement, as well as in the form of exemption from payment of the costs of the judicial proceeding.
The law specifically lists the costs that can be covered by the approved legal aid: for legal advice; for the formulation, verification and certification of documents on legal relations, facts and statements; for legal advice and representation in cases of out-of-court settlement; for legal advice and representation before courts in the first and second instances; for legal advice and representation involving extraordinary appeals; for legal advice and representation involving constitutional action; for legal advice and representation before international courts; for legal advice and representation involving the filing of a petition for the assessment of constitutionality; in the form of exemption from payment of the costs of the judicial or extrajudicial proceeding.
Legal aid may also be granted in the form of an exemption from payment of the costs of proceedings before courts, particularly in the form of an exemption from payment of: costs of experts, witnesses, interpreters, servicing orders and translations, costs of external operations of the court or other authority in the Republic of Slovenia, and other justified costs; security deposits for the costs or of the costs, of the implementation of the proceeding (advance payments); costs of public documents and receipts required for the proceeding before a court; other costs of the proceeding. The legal aid system does not cover the costs of the proceeding and actual expenditure of and remuneration for the person representing the opposing party.

Q019 (2020): See general comment.

Q020 (General Comment): The reported values for Q20 use the categorisation by forms of legal aid granted. In a single legal aid case, the request can be granted for multiple forms of legal aid, therefore the reported numbers at Q20 can be higher than the number of resolved legal aid cases. For the list of all possible forms of legal aid, please see comment to Q12. The data on the number of resolved legal cases is not reported, since one or more forms of legal aid can be granted in a single resolved case, making impossible the distinction to “cases brought to court” or “cases not brought to court”.
Cases brought to court include: 1) legal advice and representation before courts at first and second instance and 2) involving extraordinary appeals.
Cases not brought to court include: 1) legal advice and representation in cases of out-of-court settlement; 2) formulation, verification and certification of documents on legal relations, facts and statements.
The following forms of legal aid are not included in figures at Q20: 1) legal advice and representation involving constitutional action; 2) legal advice and representation at international courts; 3) legal advice and representation involving the filing of a petition for the assessment of constitutionality and 4) exemption from payment of costs of judicial or extrajudicial proceedings.

Q020 (2020): No particular explanation can be given regarding difference in number of Cases not brought to court between the years.
Q020 (2016): The following forms of legal aid are not included in the figures above:
1) legal advice and representation involving constitutional action: 16
2) for legal advice and representation before international courts: 1
3) for legal advice and representation involving the filing of a petition for the assessment of constitutionality: 1
4) exemption from payment of the costs of the judicial or extra judicial proceedings: 2.118

Q020 (2014): The figure provided for 2014 for cases not brought to court for which legal aid has been granted irepresents all the granted forms of legal aid. Please note that in a single legal aid case, the request can be granted for multiple forms of legal aid, therefore the given number can be greater than the number of resolved legal aid cases, where the request was granted.
The number of cases not brought to court for which legal aid has been granted includes: legal advice (469), formulation, verification and certification of documents on legal relations, facts and statements (332); and legal advice and representation in cases of out-of-court settlement (47).

Q020 (2012): The number of cases not brought to court for which legal aid has been granted in 2012 includes: first legal advice (218), legal advice surpassing initial legal advice (207), formulation, verification and certification of documents on legal relations, facts and statements (244); legal advice and representation in cases of out-of-court settlement (29).

Q020-1 (General Comment): If the applicant would miss the deadline or would loose a right in the time it takes to process the application for free legal aid, the court can approve an "urgent" free legal aid, without taking in regard the material criteria for eligibility (however, the lack of merits is still checked). The material criteria are subsequently checked at a later time.

Q037 (General Comment): The Protection of Right to Trial without Undue Delay Act gives a party to court proceedings the right to have his rights, duties and any charges brought against him in his case before the court to be decided upon by the court without undue delay, as well as a right to compensation, if the aforementioned right was infringed.
The procedure for compensation in the case of wrongful arrest and wrongful condemnation is regulated by the Criminal Procedure Act.
Before filing the claim for compensation with the court, the injured person has to address his claim to the Office of the State Attorney General to try and reach agreement about the existence of the damage and the type and extent of compensation. If the request for compensation is not granted or the Office of the State Attorney General and the injured person do not reach accord within three months of the filing of the request, the injured person may file a claim for compensation with the court.
The compensation, offered by the State Attorney's Office for wrongful arrest varies from case to case, since circumstances of the individual case (e.g. length of wrongful arrest, effect on the injured person's family life and his closest social circle, effects of media exposure, effect to injured person's health, etc.), as well as court decisions in similar cases, are taken into account.

Q037 (2021): *The figures above represent cases, closed in 2021, with compensations to be paid in 2021 or later. The figures above represent cases before courts only (court decisions and court settlements).
Data for procedures at the State Attorney for 2021 (before filing law-suit at court):
1. Excessive length of proceedings - Number of requests for compensation: 33;
Number of settlements: 10;
Total amount (in €): 21.715 EUR;
2. Wrongful arrest - Number of requests for compensation: 32;
Number of settlements: 8;
Total amount (in €): 63.174 EUR;
3. Wrongful conviction - Number of requests for compensation: 5;
Number of settlements: 0;
Total amount (in €): 0.

Q037 (2020): *The figures above represent cases, closed in 2020, with compensations to be paid in 2020 or later. The figures above represent cases before courts only.
Data for procedures at the State Attorney for 2020 (before filing law-suit at court):
1. Excessive length of proceedings - Number of requests for compensation: 60;
Number of settlements: 10;
Total amount (in €): 23.222;
2. Wrongful arrest - Number of requests for compensation: 30;
Number of settlements: 8
Total amount (in €): 140.330
3. Wrongful conviction - Number of requests for compensation: 8;
Number of settlements: 1;
Total amount (in €): 1.260.

Q037 (2019): *The figures above do not include cases at ECHR.
*The figures above represent cases, closed in 2019, with compensations to be paid in 2019 or later. The figures above represent cases
before courts only.
Data for procedures at the State Attorney for 2019 (before filing law-suit at court):
1. Excessive length of proceedings - Number of requests for compensation: 69;
Number of settlements: 22;
Total amount (in €): 35.956;
2. Wrongful arrest - Number of requests for compensation: 44;
Number of settlements: 16;
Total amount (in €): 99.493;
3. Wrongful conviction - Number of requests for compensation: 5;
Number of settlements: 1;
Total amount (in €): 36.460.

Q037 (2018): *The figures above do not include cases at ECHR.
*The figures above represent cases, closed in 2018, with compensations to be paid in 2018 or later. The figures above represent cases before courts only.
Data for procedures at the State Attorney for 2018 (before filing law-suit at court):
1. Excessive length of proceedings - Number of requests for compensation: 68;
Number of settlements: 17;
Total amount (in €): 31.105;
2. Wrongful arrest - Number of requests for compensation: 15;
Number of settlements: 9
Total amount (in €): 36.213,22
3. Wrongful conviction - Number of requests for compensation: 9;
Number of settlements: 2;
Total amount (in €): 68.648,98.

Q037 (2016): *The figures above do not include cases at ECHR.
*The figures above represent cases, closed at the State Attorney in 2016, with compensations to be paid in 2016 or later. *The figures above represent cases before courts only. Before filing the claim for damages with the court, the injured person has to address his claim to the Office of the State Attorney General to try and reach agreement about the existence of the damage and the type and extent of compensation. If the request for recovery of damages is not granted or the Office of the State Attorney General and the injured person do not reach accord within three months of the filing of the request, the injured person may file a claim for damages with the court. The compensation, offered by the State Attorney's Office for wrongful arrest varies from case to case, since circumstances of the individual case (e.g. length of wrongful arrest, effect on the injured person's family life and his closest social circle, effects of media exposure, effect to injured person's health, etc.), as well as court decisions in similar cases, are taken into account.. Data for procedures at the State Attorney for 2016: 1. Excessive length of proceedings - Number of requests for compensation: 71; Number of settlements: 37; Total amount (in €): 430.262; 2. Wrongful arrest - Number of requests for compensation: 50; Number of settlements: 31 Total amount (in €): 144.881 3. Wrongful conviction - Number of requests for compensation: 0; Number of condemnations: 0; Total amount (in €): 0.
The Protection of Right to Trial without Undue Delay Act gives a party to court proceedings the right to have his rights, duties and any charges brought against him in his case before the court to be decided upon by the court without undue delay. For detailed explanation on Excessice length of proceedings see Q40.
The procedure for compensation in the case of wrongful arrest and wrongful condemnation is regulated by the Criminal Procedure Act.

Spain

Q018 (General Comment): The legal aid supposes the exemption of the taxes for the judicial procedure. The proceeding for the enforcement of judicial decisions is not subject to taxes or judicial fees. Any case, the concepts and costs covered by legal aid in the enforcement would be the same as in the trial.
In relation to enforcement agents, this role is performed by public officials in Spain.

Q019 (General Comment): According to Legal Aid Act: Legal assistance to the arrested, prisoner or accused who had not appointed a lawyer, for any police action; Free insertion of announcements, during the process, in official newspapers; Free expert assistance; Free collection (or reduction of 80% of fees depending on cases) of copies, testimonies, instruments and notarial acts; Reduction of 80% of fees for notes, certifications, annotations, in the Property and Commercial Registries.

Q020 (2021): Source 2021 data: "XVI Informe del Observatorio de la Justicia Gratuita"
Criminal cases = arrested person assistance of a lawyer (page 29) + genre violence (page 26) + officio lawyer criminal cases (page 28)
According to the report cited, after the paralysis caused by the pandemic, normalization gradual both daily life and judicial activity led to an increase in cases, especially in ex officio cases and in labour cases

Q020 (2020): The methodology of presentation of data, namely the model of calculation, has been changed between 2019 and 2020.
Source 2020 data: "XV Informe del Observatorio de la Justicia Gratuita"
Criminal cases = arrested person assistance of a lawyer (page 31) + genre violence (page 28) + officio lawyer criminal cases (page 30)

Q020 (2014): The total indicated for 2014 includes cases brought to court as well as cases not brought to court.

Q020 (2012): In 2012, 662 434 applications have been granted legal aid. This total includes cases brought to court as well as cases not brought to court.

Q037 (2021): In 2021, 368 files were initiated for abnormal functioning of the Administration of Justice, 205 for preventive detention, 83 for judicial error. € 802.735 were paid for administrative condemnations and € 1.486.968 for judicial condemnations.
It is noteworthy that in Spain the causes of civil liability of the Administration of Justice are divided into a number of categories greater
than the one proposed by the CEPEJ. SOURCE: La Justicia dato a dato, (document issued by the CGPJ)

Q037 (2020): In 2020, 320 files were initiated for abnormal functioning of the Administration of Justice, 62 for preventive detention, 223 for judicial error. € 124.367,5 were paid for administrative condemnations and €445.491,3 for judicial condemnations.
It is noteworthy that in Spain the causes of civil liability of the Administration of Justice are divided into a number of categories greater
than the one proposed by the CEPEJ. The answer tries to group the Spanish categories into those of the CEPEJ.

Q037 (2019): In 2019, 347 files were initiated for abnormal functioning of the Administration of Justice, 151 for preventive detention, 79 for judicial error. € 3.484.896 were paid for administrative condemnations and €934.491,7 for judicial condemnations.
It is noteworthy that in Spain the causes of civil liability of the Administration of Justice are divided into a number of categories greater than the one proposed by the CEPEJ. The answer tries to group the Spanish categories into those of the CEPEJ. In the section 'wrongful conviction', we give the cases of the Spanish category of 'judicial error'. Possibly, other years these cases have simply been included in 'other'. It is a change of criteria with no effect on the total.

Q037 (2018): In 2018, 332 files were initiated for abnormal functioning, 104 for preventive detention, 94 for judicial error. € 722,888.06 were paid for administrative condemnations and € 1,210,585.35 for judicial condemnations

Q037 (2016): According Article 293 of the Organic Law of the Judicial Power: The interested party will direct his indemnification petition directly to the Ministry of Justice, processing it according to the regulatory norms of the patrimonial responsibility of the state. A contentious-administrative appeal will be available against the resolution. The right to claim compensation shall expire a year, from the day on which it could be exercised.
The number of requests because of "judicial error" (non exactly the same concept as Wrongful conviction) that were estimated in 2016 was ONE (1).

Indicator 5: Legal aid

Comments provided by the national correspondents

organised by question no.

Question 016. Does legal aid apply to:

Question 018. Can legal aid be granted for the fees that are related to the enforcement of judicial decisions (e.g. fees of an enforcement agent)?

Question 019. Can legal aid be granted for other costs (different from those mentioned in questions 16 to 18, e.g. fees of technical advisors or experts, costs of other legal professionals (notaries), travel costs etc.)?

Question 020. Please indicate the number of cases for which legal aid has been granted:

Question 020-1. Please indicate the timeframes of the procedure for granting legal aid, in relation to the duration from the initial legal aid request to the final approval of the legal aid request:

Question 016

Austria

(General Comment): In principle every person who retains a defence lawyer or another representative has to bear the costs him or herself even if the lawyer was appointed ex officio. By virtue of the Code of Criminal Procedure, the court has to decide on total or partial legal aid on the request of the defendant if the defendant cannot bear the total costs for the defence lawyer without impairment of his/her own or his/her family's maintenance which enables him/her to a simple lifestyle and if it is necessary in the interest of justice in particular in the interest of an adequate defence. Where in any case the defendant needs a defence lawyer, the court has to decide on legal aid ex officio even if the defendant does not request for it but further requirements to provide legal aid are given.

Civil Cases:

A party with insufficient financial means may apply for legal aid when entering into litigation or at any time later as long as the civil proceeding is still pending. As far as required the court can give legal aid by (wholly or partially) freeing the indigent party from court fees and other fees (fees for experts, interpreters, witnesses and guardians appointed by the court - as representatives for absent parties or parties in need of guardianship -, the parties' travelling expenses, and costs of announcements) and by providing legal representation (by a lawyer) free of charge. Where legal representation is provided, legal aid also covers the pre-trial advice given by the lawyer. Legal aid is granted only as the applicant - according to his income, assets and maintenance obligations - is unable to bear (any or part of) the costs mentioned above without endangering the minimum subsistence level necessary to allow a simple standard of living. Legal aid is denied if the claim or defence of the applicant is manifestly unfounded or if the claim has no prospect of success. Legal aid is granted in all civil and commercial court proceedings regardless of the applicant's nationality or place of residence. If legal aid is granted in the main proceeding, the same also applies to the enforcement proceedings. A party which was granted legal aid for a particular legal dispute in another EU Member State is also entitled to legal aid in Austria for a proceeding concerning the recognition and enforcement of the decision given in that dispute. If an application for legal aid is submitted concerning an urgent case (e.g. legal representation in the case of interim measures) the court has to decide speedily. If the court decides that the legal aid includes the assistance of a lawyer, the regional Bar Association selects a lawyer from among its members, by alphabetical order.

However, the applicant may propose a lawyer himself. Although this proposal is not binding on the regional Bar Association, it will in general accept a well-founded proposal (e.g. if the lawyer is willing and already familiar with the case). The regional Bar Association usually appoints a lawyer to represent the applicant within a few days. The application form (ZPForm 1) contains a summary of assets (income, property such as real estate, money in bank accounts, insurance policies, etc.) and liabilities (maintenance, etc.), personal data and information on the applicant's living conditions. Supporting documents are to be submitted as far as possible. False or maliciously incomplete information can lead to considerable fines and can also result in civil liability or criminal prosecution for fraud. At its discretion the courts may grant full legal aid or – depending on the applicant's circumstances and taking into account expected costs – partial legal aid, covering only certain fees. But if the applicant looses the case, he has to reimburse the successful party's procedural costs.

Legal aid covers all stages of the proceedings. As long as it has not been withdrawn because of a change in the applicant's circumstances or annulled by the court if it is established that the conditions under which the aid was granted were not borne out. legal aid covers any appeal (or appeal procedure).

(2017): As far as civil cases are concerned, according to § 64 of the Austrian Civil Procedure Order (Zivilprozessordnung, ZPO) legal aid may cover a provisional exemption from court fees, fees for witnesses, experts, interpreters and guardians, costs of the necessary announcements and the cash expenditure of guardians or lawyers, representation by a court official or – if necessary – a lawyer.
In criminal cases:
According to sec 391 par 1 CCP the enforcement of the court's decision on costs has to take into account the ability of the convicted person to bear the costs for the daily life for him/herself and the family as well as the obligation of compensation in regard of the offence. The court may, if the costs cannot be enforced because of an impecunious defendant, declare the costs unrecoverable. If the court assumes that in the future the costs will be recoverable but for the time being they are not, the economic capacity of the person concerned has to be re-examined after a certain period. The statute for limitation to recover the costs is five years after the final decision in the proceeding. If the court decides that the convicted person has to bear the costs of the proceeding and further on he or she is not able to pay the costs the authorities, responsible to recover costs, may prolong the payment deadline, allow to pay instalments, or to abate the costs.
In principle every person who retains a defence lawyer or another representative has to bear the costs him or herself even if the lawyer was appointed ex officio (sec 393 par 1 of CCP). According to sec 61 para 2 CCP the court has to decide on total or partial legal aid on the request of the defendant if the defendant cannot bear the total costs for the defence lawyer without impairment of his/her own or his/her family's maintenance which enables him/her to a simple lifestyle and if it is necessary in the interest of justice in particular in the interest of an adequate defence. In any case legal aid has to be granted
during the whole procedure if and as long as the defendant is held in pre trail detention; • during the entire procedure on the confinement in an institution for mentally abnormal offenders; • during the trail on the confinement in an institution for addicted offenders in need of curing and on the confinement in an institution for dangerous subsequent offender; •during the trail in front of a jury or of a court of lay assessors; •during the trail in front of a single judge if the sentence which may be imposed is more than three years of deprivation of liberty; •during the appeal procedure against a verdict of a court of jury or a court of lay assessors, in case the European Court for Human Rights has determined a violation of the European Convention on Human Rights or an additional Protocol to it for conducting the request for the reopening of the procedure and for the trail in public;
•if the defendant is blind, deaf, mute or otherwise handicapped or is not able to conduct the defense by him/herself because he/she can do not understand the language at court,
•for the appeal procedure,
•if the factual and legal position is difficult.
Where in any case the defendant needs a defense lawyer, the court has to decide on legal aid ex officio even if the defendant does not request for it but further requirements to provide legal aid are given.
With regard to the decision on legal aid the court has to examine the defendant's economic capacity to bear the costs for a defense lawyer. The economic capacity is determined by the maintenance which enables the defendant and his/her family to a simple lifestyle, and can be identified at the bases of the minimum living wage which may not be garnished given by sec 5 of the act on garnishment of wages and the appropriate maintenance which is higher than the minimum living wage. In particular the income and other assets on the one hand and the number of persons who are entitled to maintenance on the other hand

Belgium

(2017): In Belgium there are three types of "legal aid": first-line legal aid, second-line legal aid and legal assistance.
First-line legal aid consists of practical information, legal information, a first legal opinion or referral to a specialised body (Article 508/1 of the Judicial Code).
Second-line legal aid: legal aid granted to a natural person in the form of a detailed legal opinion or legal assistance in or out of court proceedings or assistance in a trial, including legal representation.
Legal assistance consists in exempting, in whole or in part, those who do not have the necessary income to afford the costs of a procedure, from paying the related costs, which will therefore be covered by the State budget (Article 664 of the Judicial Code). Legal assistance may be obtained in civil or criminal matters and in any proceedings (judicial, administrative or arbitral).

(2016): In Belgium there are three types of "legal aid": front-line legal aid, second-line legal aid and legal assistance.
Front-line legal aid consists of practical information, legal information, a first legal opinion or referral to a specialized body (section 508/1 of the Judicial Code).
Second-line legal aid: legal aid granted to a natural person in the form of a detailed legal opinion or legal assistance in the context or not of a procedure or assistance in the context of a trial including representation. Legal assistance consists in providing, in whole or in part, those who do not have the necessary income to meet the costs of a procedure, to pay the related costs which will therefore be borne by the budget of the State (Article 664 of the Judicial Code). Legal aid may be obtained in civil or criminal matters and in any proceeding (judicial, administrative or arbitral).

Bulgaria

(General Comment): Legal aid is granted only to natural persons, in criminal, civil and administrative matters before courts of all instances. Legal aid authorities are the Ministry of Justice which conducts the State policy in the sphere of legal aid; the National Legal Aid Bureau /NLAB/ which provides general and methodological guidance of the activity concerning the granting of legal aid by issuing mandatory instructions on the application of the Act and the statutory instruments of secondary legislation; the Bar Councils which organize and administer legal aid within the respective geographical jurisdiction (network of Regional Counseling Centers / RCCs /, established at thirteen bar councils in the country); the authority directing the procedural steps, the court or the relevant police or customs authority which decide whether to grant legal aid or not in civil or administrative cases. Consultations are provided as well as through the National Telephone for Legal Aid at the NLAB. The NLAB grants or refuses granting legal aid for a consultation with a view to reaching a settlement prior to bringing legal proceedings or to bringing a case before a court and/or preparation of documents for a trial. The types of legal aid are: pre-litigation advice with a view to reaching a settlement prior to bringing legal proceedings or to bringing a case before a court; preparation of documents for bringing a case before a court; representation in court by legal counsel; representation upon detention under Article 72 of the Ministry of Interior Act and under Article 16a of the Customs Act and under Art. 124b, para. 1 of the Law on the State Agency for National Security. The legal aid system covers cases in which the assistance of a lawyer, a stand-by defence counsel or representation is mandatory as provided for by the Criminal Procedure Code, the Civil Procedure Code and the Administrative Procedure Code. Legal aid system covers also cases in which the applicant is unable to pay for a lawyer, wishes to benefit of a legal assistance, and the interests of the justice require such legal assistance. Legal aid for alternative dispute resolution (ADR) does not apply.

(2014): In 2014, changes were made in the Regulations of the organization and activities of the National Legal Aid Bureau. Since May 2015, within the NLAB are permanently operating the National Primary Legal Aid Hotline and the Regional Consultation Centers for vulnerable social groups.

(2012): Legislative changes in the Legal Aid Act have been carried out in several directions: increasing the powers of the legal aid system authorities and exercising control over granting legal aid; introduction of the stand-by defence counsel with the purpose of expediting court proceedings in criminal matters; changes in the order and circumstances for entering and striking from the National Legal Aid Register; introducing legislative requirements for reporting legal aid; the scope of the legal aid has been expanded.

Croatia

(2014): The new Free Legal Aid Act entered into force in 2014. The procedure of exercising the right to primary legal aid (legal information, legal advice, drawing up submissions in procedures before public and international bodies, representation in proceedings in public bodies, legal aid in amicable, out-of-court dispute resolution) is substantially simplified. Involvement of civil society groups, legal clinics and government bodies in the system of primary legal aid and legal counseling increased the territorial availability of expert legal aid. As to the approval of secondary legal aid in court proceedings and exoneration from paying court costs and fees, the focus of the reform has been placed on increasing the property and income threshold for approving legal aid.

Cyprus

(2017): x

Denmark

(General Comment): Criminal cases:
Defendants are in all cases appointed a defence attorney. Victims of certain criminal offences (e.g. sexual offences, homicide and acts of violence) have access to representation in court by a support attorney. Basic legal advice is available to all persons in criminal cases. Further legal advice is only available subject to certain economic criteria. If the prosecuted person is acquitted, the costs of the defence attorney remain free of charge. Contrarily, it is normally the court who decides if the prosecuted person must pay for the defence attorney and other expenses of the case, if the person is convicted. Finally, if the prosecuted person picks his or her own defence attorney, he or she will as a starting point have to pay the attorney's fee.
Other cases:
In civil cases it is normally the losing part who has to pay both one's own and the opposite party's expenses in relation to the court case. The court can decide that both parties must pay their own costs, if the case doesn't have an actual winner.

Germany

(General Comment): Criminal Cases:
The concept of "necessary defense" provides that in all criminal cases in which accusations of considerable weight are involved, which are not merely simple in nature or in which the accused is particularly in need of protection, the accused shall be provided with a defense counsel representing him or her upon request or ex officio, irrespective of his or her financial circumstances (Section 140 of the Criminal Procedure Code). In a case of necessary defense the court or - in urgent cases - the public procecutor will assign a defense counsel to the defendant upon his or her request prior to his or her interrogation. A defense counsel has to be appointed ex officio in cases of necessary defense, if (1) the defendant is to be brought before a court for a decision on detention or provisional placement, (2) it becomes known that the accused, to whom the accusation of the crime has been opened, is in an institution on the basis of a judicial order or with judicial authorization, (3) it becomes apparent in the preliminary proceedings that the accused will not be able to defend himself or herself, in particular if the accused is questioned or confronted or if (4) he or she has been summoned to make a statement on the indictment (Section 141 of the Criminal Procedure Code). The appointment of the defense counsel ends with the discontinuation or final conclusion of the criminal pro-ceedings [Section 143 (1) of the Criminal Code]. The defense counsel settles his fees with the state treasury. However, since his or her costs are part of the costs of the proceedings, the defendant must pay them as far as he or she is convicted and insofar as the defendant is ac-quitted, the state treasury must bear the costs and expenses of the proceedings.
Rules for witnesses and victims in criminal cases:
Especially vulnerable witnesses, e.g. children or handicapped persons, can - without proof of being financially needy - be assigned a lawyer free of charge by the court to assist them during an interview ("Zeugenbeistand", section 68b (2) Code of Criminal Procedure).
Victims of certain crimes, especially violent or sexual crimes, and also close relatives, spou-ses and partners of killed persons, who are entitled to be joint plaintiffs, can be assigned a lawyer without having to cover the expenses and without having to prove their financial need (see sections 397a and 406h (3) Code of Criminal Procedure). Victims of other crimes, who can also be joint plaintiffs, have the possibility to apply for legal aid as financial assistance if their income is too low to cover the costs fully or only in part and if they are unable to assert their own interests sufficiently or cannot be expected to do so (see section 397a (2), 406h (3) Code of Criminal Procedure).
Legal aid can also be granted to persons who claim compensation for damages or pain and suffering in the criminal proceedings in a so-called adhesion claim ("Adhäsionsklage", see sections 403, 404 (5) Code of Criminal Procedure), if they are not able to cover the expenses (fully or in part) and their legal action offers sufficient expectation of success and is not wanton. The same applies to persons who act as private prosecutors to achieve a punishment of the perpetrator in cases where the prosecution has declined to pursue the offence due to a lack of public interest in the prosecution ("Privatklage", see sections 374, 379 (3) Code of Criminal Procedure).

(2017): In Germany there is no legal aid for legal representation in criminal cases because the law provides for the so called "necessary defense" implying mandatory legal representation.

Hungary

(General Comment): According to the Legal Aid Act LXXX of 2003, the Legal Aid Service may grant legal aid in judicial and extrajudicial cases. The county justice services, as offices of first instance and in charge of receiving the applications for legal aid, do not merely assess the eligibility for aid but, in simple cases, provide legal assistance directly as well – without prior screening of the clients' financial capabilities. However, legal aid (legal advice, drafting a document) is primarily provided by legal aid providers (attorneys, notaries public, non-governmental organizations etc.) who are recorded into the Register of legal aid providers who have contractual relation with the Legal Aid Service. The latter provides professional legal assistance for socially disadvantaged people. The law defines the situations in which legal aid can be granted and those in which no legal aid may be provided.

Ireland

(2017): Under Irish law, there is a distinguishment between "legal aid" which refers specifically to "representation in court" and "legal advice". This question is being answered on the basis that the words "legal aid" refers to "legal aid and legal advice" and "Representation in Court" means "Legal Aid".

Italy

(General Comment): Legal advice does not exist as such in Italy, but lawyers play a role in ADR procedures.

Luxembourg

(2017): /

Malta

(2017): Despite the fact that our current legal aid system does not provide for clients to use the service specifically for legal advice without the requirement of representation in court, in actual practice clients using the services of the Agency are still voluntarily provided with legal advice when solicited.

(2014): In 2014, Malta implemented a major reform in the provision of legal aid, by establishing it as an independent Agency with its own budget and management structure. Prior to this, legal aid was a function falling within the remit of the office of the Attorney General.

Poland

(General Comment): Civil cases: Each party may request that a professional attorney be appointed by the court. In order to do so, you must make a statement before the court that you are unable to pay the fees of an advocate or a legal advisor without the loss of the necessary support for yourself and your family. An application for a court-appointed attorney is independent of an application for exemption from court costs and may be filed at any stage of the proceedings (also prior to their commencement), until the case is finally resolved in the court having jurisdiction over the case. The court decides on the appointment of the attorney, taking into account the need for his/her participation in the case and the ability of the party to cover his/her remuneration. The appointed attorney represents the party in court and gives him/her appropriate legal advice in the case. In criminal proceedings, unless the Code of Criminal Procedure stipulates otherwise, all expenses are temporarily lectured by the State Treasury.

(2016): Regulations of the act on free legal aid and legal advise were implemented starting 1 January 2016 with some exceptions which were implemented starting 31 August 2015.

Question 018

Austria

(General Comment): If legal aid is granted in the main proceeding, the same also applies to the enforcement proceeding. According to the Austrian Civil Procedure Order, the requirements for granting legal aid have only to be re-examined, if the enforcement proceeding will be opened one year after the main proceeding has been closed.

(2019): According to § 64 of the Austrian Civil Procedure Order (Zivilprozessordnung, ZPO) legal aid extends to enforcement proceedings.

(2018): Legal aid according to § 64 of the Austrian Civil Procedure Order (Zivilprozessordnung, ZPO) extends to enforcement proceedings.

Belgium

(General Comment): Judicial assistance (one of the components of the legal aid in the sense of the questionnaire) consists in exempting, in whole or in part, those who do not have the necessary means of subsistence to meet the costs of proceedings, even extrajudicial proceedings, from paying the various fees - registration, registry and shipping, as well as other costs related to the proceedings. The beneficiaries are also entitled to free of charge services of public and ministerial officials. They can also have free assistance of a technical adviser during judicial expertise. According to Article 665, 2° of the Judicial Code, judicial assistance covers acts relating to enforcement of judgments and decisions of justice.

(2020): Legal aid consists in exempting, in whole or in part, those who do not have the necessary means of existence to meet the costs of a procedure, even an extrajudicial one, from paying the various fees, registration, clerk's office and dispatch fees and other costs that it entails. It also assures the interested parties that the ministry of public and ministerial officers is free of charge. It also allows the interested parties to benefit from the free assistance of a technical advisor during judicial expertises. According to article 665, 2° of the Belgian Judicial Code, legal aid is applicable to acts relating to the execution of judgments and decisions.

Croatia

(General Comment): Exemption from court fees in other than criminal cases is one of the forms of secondary legal aid proscribed by the Law on Legal Aid and it may be granted in proceedings related to the enforcement of judicial decisions. The situation changed few times in the last years. While till 2014, the exemption from payment of court fees could be granted in all judicial proceedings, including enforcement procedures and security procedures, due to changes in the Legal Aid Act in 2014, there was no more this possibility to finally again reinstall it again in 2016 Free Legal Aid Act (Official Gazette 143/13) and allow to grant legal aid for the fees related to the enforcement of judicial decisions.

(2021): e.g. in enforcement proceedings following child maintenance proceedings; labour disputes

(2019): Legal aid may be granted for exemption of payment of fees related to the enforcement of judicial decisions.

(2018): Legal aid may be granted for exemption of payment of fees related to the enforcement of judicial decisions.

(2017): In enforcement proceedings legal aid is granted when it comes to enforcing a claim arising from a civil or administrative court procedure for which legal aid may be granted under the provisions of Free Legal Aid Act (Official Gazette 143/13).

(2016): In enforcement proceedings legal aid is granted when it comes to enforcing a claim arising from a civil or administrative court procedure for which legal aid may be granted under the provisions of Free Legal Aid Act (Official Gazette 143/13).

Cyprus

(2017): x

Czech Republic

(General Comment): Legal aid could be granted at every stage of the proceedings – it could be granted even only for enforcement of judicial decision.

(2017): Legal aid can be granted in any stage of the proceeding.

(2016): Legal aid can be granted in any stage of the proceeding.

Denmark

(General Comment): The bailiff's court can grant legal aid if the person appearing before the court is deemed to need a lawyer's assistance, and the person fulfils certain economic criteria. (Danish Administration of Justice Act, article 500(2)).

Estonia

(General Comment): Legal aid cannot be granted for fees related to the enforcement of judicial decisions (except for representing a person in enforcement proceedings), but procedural assistance can be granted to release a person from all or a part of the expenses related to enforcement proceedings.

(2019): Partial or full coverage of the costs related to the enforcement of judicial decisions (incl. fees of an enforcement agent) depending on the financial situation of the claimant. The advance payment of enforcement costs shall not be demanded by the bailiff from the claimant who is a natural person and who has received legal aid for the payment of procedural costs (incl court fees) as well as in case of collection of compensation for damage caused by a criminal offence as well as in case of collection of maintenance support.

(2018): Partial or full coverage of the costs related to the enforcement of judicial decisions (incl. fees of an enforcement agent) depending on the financial situation of the claimant. The advance payment of enforcement costs shall not be demanded by the bailiff from the claimant who is a natural person and who has received legal aid for the payment of procedural costs (incl court fees) as well as in case of collection of compensation for damage caused by a criminal offence as well as in case of collection of maintenance support.

(2017): Partial or full coverage of the costs related to the enforcement of judicial decisions (incl. fees of an enforcement agent) depending on the financial situation of the claimant. The advance payment of enforcement costs shall not be demanded by the bailiff from the claimant who is a natural person and who has received legal aid for the payment of procedural costs (incl court fees) as well as in case of collection of compensation for damage caused by a criminal offence as well as in case of collection of maintenance support.

(2016): Partial or full coverage of the costs related to the enforcement of judicial decisions (incl. fees of an enforcement agent) depending on the financial situation of the claimant. The advance payment of enforcement costs shall not be demanded by the bailiff from the claimant who is a natural person and who has received legal aid for the payment of procedural costs (incl court fees) as well as in case of collection of compensation for damage caused by a criminal offence as well as in case of collection of maintenance support.

Finland

(General Comment): The granting of legal aid exempts the recipient from liability for the enforcement fees pertaining to the judgment or the court order and any expenses payable in advance. All necessary costs of enforcement are covered from state funds, if they cannot be collected from the opposing party. (Legal Aid Act, Section 4(4)).

(2020): The granting of legal aid exempts the recipient from liability for the enforcement fees pertaining to the judgment or the court order and any expenses payable in advance. All necessary costs of enforcement are covered from state funds, if they cannot be collected from the opposing party. (Legal Aid Act, Section 4(4)).

(2019): The granting of legal aid exempts the recipient from liability for the enforcement fees pertaining to the judgment or the court order and any expenses payable in advance. All necessary costs of enforcement are covered from state funds, if they cannot be collected from the opposing party. (Legal Aid Act, Section 4(4)).

(2017): Legal aid covers exemption from execution fees resulting from court's decision.

France

(General Comment): Enforcement agents can be appointed to enforce any court decision for a beneficiary of legal aid, either as a continuation of the proceedings or separately. Article 11 of the Law of 10 July 1991 provides for that legal aid "shall apply as of right to procedures, acts or measures for the enforcement of justice decisions obtained with its benefit, unless enforcement is suspended for more than one year for a reason other than the exercise of an appeal or a decision to suspend enforcement". In addition, Article 10 of the Law of 10 July 1991 provides for that legal aid may be granted "in connection with the enforcement on French territory of a court decision or any other enforceable title, including if they emanate from another Member State of the European Union" (except Denmark). Source SADJAV

(2020): Article 11 of the aforementioned law provides that legal aid "shall apply as of right to proceedings, acts or measures for the enforcement of legal decisions obtained with its benefit, unless enforcement is suspended for more than one year for a reason other than the exercise of an appeal or a decision to suspend enforcement."

(2019): Article 11 of the aforementioned law provides for that legal aid "applies automatically to procedures, acts or measures for the enforcement of court decisions obtained with its benefit, unless enforcement is suspended for more than one year for a reason other than the exercise of a remedy or a decision to suspend enforcement".

(2018): Article 11 of the aforementioned Act provides that legal aid "shall automatically apply to proceedings, acts or measures for the enforcement of court decisions obtained with its benefit, unless enforcement is suspended for more than a year for a cause other than the exercise of a remedy or a stay order. "

Germany

(General Comment): In civil matters, legal aid in compulsory enforcement is granted for the entire enforcement proceeding and not for individual enforcement measures.

(2018): -

(2016): Legal aid in compulsory enforcement is granted for the entire enforcement proceedings and not for individual enforcement measures.

Greece

(General Comment): Low-income citizens are entitled to the provision of free legal assistance, that is, the granting of a lawyer, bailiff or notary, in cases of criminal, civil and commercial law of any degree. These include divorce, alimony, custody and communication, insult, paternity recognition, etc.
Greek citizens, EU citizens, as well as third-country citizens or stateless persons are entitled to legal aid if they have a legal residence or habitual residence in Greece. Low-income citizens, beneficiaries of Legal Aid, are those whose annual family income does not exceed two-thirds of the minimum annual individual earnings provided for by the National General Collective Labor Agreement.
Legal Aid is provided at the request of the beneficiary and is provided by law 3226/2004 as in force after its Amendment and completion by law 4274/20

(2019): article 9 par. 2 and 3 of law 3226/2004: Exemption of court fees in civil and commercial cases, of payment of a bailiff as well as the costs of the enforcement procedure

(2018): Exoneration from paying court fees in civil and commercial cases covers court bailiffs' fees.

(2017): Legal aid also includes the bailiff's remuneration.

Hungary

(General Comment): If legal aid is authorized, it extends to all stages of the proceedings, including the enforcement phase. However, it concerns only the fee of the legal aid provider. Besides, legal representation cannot be granted in such cases, but only extrajudicial assistance (legal advice, drafting of documents).

(2021): Legal aid cannot be granted for the fees that are related to the enforcement of judicial decisions (e.g. fees of an enforcement agent), because in Hungary the state-financed legal aid basically covers only the lawyer's fee and, as of 2022, a 25% flat-rate for the lawyer. Previously we marked “Yes” due to a different interpretation, because legal aid extends to all stages of the proceedings, including the enforcement actions, but the state does not pay the fees that are related to the enforcement of judicial decisions (e.g. fees of an enforcement agent).

Ireland

(General Comment): Civil legal aid does not generally include fees in respect of enforcement by an enforcement agent (this is distinct from enforcement of proceedings in a court which may be covered).

Italy

(General Comment): Legal aid also covers expenses related to the enforcement of judicial decisions.

Latvia

(General Comment): In the Republic of Latvia there is another mechanism – a legal framework that provides for exemptions from payment of enforcement of the judgment expenditures on the basis of the law (Section 567 of the Civil Procedure Law). Moreover, in accordance with Section 11 of the Cabinet of Ministers Regulations No 454 of 26 June 2012 “Regulations on the Remuneration Rates of Sworn Bailiffs”, a sworn bailiff has the right to reduce the remuneration fees.
It is also possible to submit a complaint to the court about the actions of sworn bailiffs, incl. regarding of the fees. Legal aid in such cases is granted. This also applies to previous years' questionnaire periods

(2020): Answer for Q18 is “No”, but in the Republic of Latvia there is another mechanism how persons receive support at the enforcement of judicial decisions stage – a legal framework that provides for exemptions from the payment of enforcement of the judgment expenditures on the basis of law and in addition sworn bailiffs right to reduce the remuneration fees in another cases.

(2019): Answer for Q18 is “No”, but in the Republic of Latvia there is another mechanism how persons receive support at the enforcement of judicial decisions stage – a legal framework that provides for exemptions from the payment of enforcement of the judgment expenditures on the basis of law and in addition sworn bailiffs right to reduce the remuneration fees in another cases.

(2017): Answer for Q18 is “No”, but in the Republic of Latvia there is another mechanism how persons receive support at the enforcement of judicial decisions stage – a legal framework that provides for exemptions from the payment of enforcement of the judgment expenditures on the basis of law and in addition sworn bailiffs right to reduce the remuneration fees in another cases.

(2016): Answer for Q18 is “No”, but In the Republic of Latvia there is another mechanism how persons receive support at the enforcement of judicial decisions stage – a legal framework that provides for exemptions from the payment to sworn bailiffs of enforcement of the judgment expenditures on the basis of law and in addition sworn bailiffs right to reduce the remuneration fees in another cases.

Lithuania

(General Comment): The costs of secondary legal aid cover the costs of the execution process (Article 2(1) of the Law on State-guaranteed legal aid). However, the costs incurred by the debtor in the execution process are not covered.

Luxembourg

(General Comment): The amended Law of 10 August 1991 on the profession of lawyer (Art. 37 and 37-1) and, more specifically, the amended Regulation of the Grand-Duché of 18 September 1995 on legal aid (Art. 8) include "fees and costs of bailiffs" among the amounts that may be covered by legal aid.

(2021): The amended Law of 10 August 1991 on the profession of lawyer (Art. 37 and 37-1) and, more specifically, the amended Regulation of the Grand-Duché of 18 September 1995 on legal aid (Art. 8) include "fees and costs of bailiffs" among the amounts that may be covered by legal aid.

(2018): An enforcement agent may be required to have a judicial decision executed.

(2017): An enforcement agent can be mandatory to get a judicial decision executed.

Malta

(General Comment): Eligible candidates can enforce foreign judgements in Malta through legal aid as long as the procedure is carried out through court representation.

(2021): Eligible candidates can enforce foreign judgements in Malta through legal aid as long as the procedure is carried out through court representation.

(2018): Eligible candidates can enforce foreign judgements in Malta through legal aid as long as the procedure is carried out through court representation.

(2017): Eligible candidates can enforce foreign judgements in Malta through Legal Aid as long as the procedure is carried out through court representation.

(2016): Eligible candidates can enforce foreign judgements in Malta through legal aid as long as the procedure is carried out through court representation.

Netherlands

(General Comment): It is noteworthy that the court fees are lower in respect of litigants with lower incomes.

(2021): Article 12, Criminal law on prosecution (Wetboek van Strafvordering)

(2020): Article 12, criminal law on prosecution (wetboek van strafvordering)

(2019): Article 12, Law on Legal Aid (Wet op de Rechtsbijstand)

(2018): Article 12, criminal law on prosecution (wetboek van strafvordering)

(2017): Article 12, criminal law on prosecution (wetboek van strafvordering)

Poland

(General Comment): Civil cases:
Exemption from court fees to which a party is entitled by virtue of the law or granted to a party in preliminary proceedings extends to enforcement proceedings. Additionally, it is possible to apply for exemption from court fees only at the stage of enforcement proceedings.
Criminal cases: If the convicted person fails to comply with the obligation to pay the monetary performance or reparation to the injured party, the judgment together with the enforcement order is sent to the court executive officer who initiates the proceedings. The procedure for pursuing such claims is governed by the provisions of the Code of Civil Procedure (claims based on Article 196 § 2 of the Executive Penal Code).
In accordance with the Law on court executive officer fees of 28 February 2018. (Journal of Laws of 2021, item 210), the exemption from court costs to which a party is entitled by virtue of the law or which has been granted to a party in the court proceedings extends to the bailiff's costs (Article 45(1) of the Act). If a party does not exercise this right, the party may apply to the district court by which the judicial officer acts for exemption in whole or in part from enforcement costs. The applicant must prove that he or she is unable to pay the bailiff's fees without prejudice to the necessary maintenance of themselves, or their family (Article 45(2) of the Act).

(2018): The exemption from court costs granted to the party by the court in the exploratory proceeding or from which the party uses the power of the act extends also to enforcement proceedings (Article 771 of the Code of Civil Procedure). In addition, applications: for exemption from court costs and for the appointment of an attorney - an attorney or legal counsel ex officio may also be submitted during enforcement proceedings.

(2017): The cost are connected to the enforcement agent fees and actions.

(2016): The cost are connected to the enforcement agent fees and actions.

Portugal

(General Comment): The Portuguese law foresees the total or partial exemption from court fees and other expenses related to the case, such as fees for the enforcement of judicial decisions.

Romania

(General Comment): For the enforcement phase, legal aid may be granted as facilities at the payment of judicial duties. Moreover, according to Article 6 letter c) of the Government Emergency Ordinance 51/2008, it can also be the payment of the bailiff's fee.

(2017): According to the definition at question 17, for the enforcement phase, legal aid may be granted as facilities at the payment of judicial duties, but, according to Article 6 letter c) of GEO no. 51/2008, it can also be the payment of the bailiff's fee.

(2016): According to the definition at question 17, for the enforcement phase, legal aid may be granted as facilities at the payment of judicial duties, but, according to Article 6 letter c) of GEO no. 51/2008, it can also be the payment of the bailiff's fee.

Slovenia

(General Comment): In the proceeding of enforcement of judicial decisions the exemption from court fees (according to the Court Fees Act) and legal aid in the form of legal advice, legal representation and the exemption from payment of the procedural costs (the Free Legal Aid Act) is possible.

(2020): See general comment.

(2014): In the previous cycle, the answer was No, while for 2014 it changed to Yes, because the question was interpreted as regarding the court fees, exemption of which is regulated under the Court Fees Act and not under the legal aid as regulated by the Free Legal Aid Act (fees related to the enforcement of judicial decisions are still not paid by the party, but the legal ground for the exemption from payment is not legal aid).

Spain

(General Comment): The legal aid supposes the exemption of the taxes for the judicial procedure. The proceeding for the enforcement of judicial decisions is not subject to taxes or judicial fees. Any case, the concepts and costs covered by legal aid in the enforcement would be the same as in the trial.
In relation to enforcement agents, this role is performed by public officials in Spain.

Question 019

Austria

(General Comment): In civil matters, the Austrian Civil Procedure Order provides for that legal aid may cover not only the (provisional) exemption from court fees but also the exemption from fees for witnesses, experts, interpreters and guardians, costs of the necessary announcements and the cash expenditure of guardians or lawyers, representation by a court official or – if necessary – a lawyer. If the personal presence of the parties at a hearing is ordered by the court, their necessary travel expenses are also replaced. Where legal representation is provided, legal aid also covers the pre-trial advice given by the lawyer. If legal aid is granted in the main proceeding, the same also applies to the enforcement proceedings. A party which was granted legal aid for a particular legal dispute in another EU Member State is also entitled to legal aid in Austria for a proceeding concerning the recognition and enforcement of the decision given in that dispute. In criminal matters, there are no costs to bear for the parties, until the court has taken a final decision, which also encompasses a decision on the costs. In case of an acquittal, the State has to bear all the costs. The Public Prosecutor does not have to bear any costs in any case. The Code of Criminal Procedure pinpoints only one exception to this rule, if a person, different from the Public Prosecutor, i.e. “Privatankläger” holds the accusation and loses the case because of an acquittal. In this case, the so called Privatankläger (private prosecutor) has to bear the costs. In case of a false accusation, the person who knowingly accused the (acquitted) perpetrator would have to bear the costs of the trial.

(2019): see general comments

(2018): See above Point 016-1.

Belgium

(General Comment): Judicial assistance is applicable:
1) to all acts related to applications to be brought or pending before a judge in all legal matters (civil, criminal, administrative) or before arbitrators;
2) to acts related to the enforcement of judgments;
3) to proceedings on request;
4) to procedural acts that fall within the jurisdiction of a civil or criminal judge or require the intervention of a public or ministerial officer;
5) to mediation procedures, extrajudicial or judicial, conducted by an accredited mediator;
6) to all extrajudicial proceedings imposed by law or by the judge;
7) for the enforcement of authentic acts in another member State of the European Union in the frame of Article 11 of the Council Directive 2002/8/EC of 27 January 2003 to improve access to justice in cross-border disputes by establishing minimum common rules relating to legal aid for such disputes, under the conditions defined by that Directive;
8) to the assistance of a technical adviser when a legal expert is required.

(2020): "Legal aid is applicable:
1° to all acts relating to claims to be brought or pending before a judge of the judicial or administrative order or before arbitrators;
2° to acts relating to the execution of judgments and decisions;
3° proceedings on request;
4° to procedural acts that fall within the competence of a member of the judicial order or require the intervention of a public or ministerial officer
5° to mediation procedures, extrajudicial or judicial, conducted by a certified mediator
6° to all extrajudicial procedures imposed by law or the judge
7° for the enforcement of authentic instruments in another Member State of the European Union within the framework of Article 11 of Council Directive 2003/8/EC of 27 January 2003 to improve access to justice in cross-border disputes by establishing minimum common rules relating to legal aid for such disputes, under the conditions defined by this Directive
8° to the assistance of a technical adviser in the case of judicial expertise.
"

(2018): Legal aid is applicable: 1° to all acts relating to claims to be brought or pending before a judge of the judicial or administrative order or before arbitrators;
2° to the acts relating to the execution of judgments and decisions;
3° to the proceedings on request;
4° to the procedural acts that fall within the jurisdiction of a member of the judiciary or require the intervention of a public or ministerial officer;
5° to the mediation procedures, extrajudicial or judicial, conducted by an approved mediator;
6° to all extrajudicial proceedings imposed by law or by the judge;
7° for the enforcement of authentic instruments in another Member State of the European Union under Article 11 of Council Directive 2003/8/EC of 27 January 2003 aimed at improving access to justice in cross-border disputes by establishing minimum common rules relating to legal aid for such disputes, under the conditions defined by that Directive;
8° to the assistance of a technical adviser during judicial expert appraisals.

(2017): Legal assistance is applicable:
(1) to all acts relating to claims to be brought or pending before a judge (civil, penal or administartive) or before arbitrators;
(2) to acts relating to the enforcement of judgments and court decisions;
(3) to proceedings on request;
(4) to procedural acts that fall within the jurisdiction of a member of the civil and penal order or require the intervention of a public or ministerial officer;
(5) voluntary or judicial mediation procedures conducted by a mediator approved by the commission referred to in section 1727;
(6) to all extrajudicial proceedings imposed by law or by the judge;
(7) to the enforcement of authentic acts in another Member State of the European Union under Article 11 of the Council Directive 2003/8/EC of 27 January 2003 aimed at improving access to justice in cross-border disputes by establishing minimum common rules relating to legal aid for such disputes, under the conditions defined by that Directive.
(8) to the assistance of a technical adviser during judicial expert appraisals.
Articles 691 to 692bis of the Judicial Code set out a series of costs advanced by the State (transport and subsistence costs of judges and public or ministerial officials, witness taxes, interpreters' costs, disbursements of bailiffs, notaries, etc.) for the benefit of the person receiving legal assistance.

(2016): Legal assistance is applicable to:
1 ° all acts relating to applications to be made or pending before a judge of the judicial or administrative order or before arbitrators;
2 ° acts relating to the execution of judgments and decisions;
3 ° proceedings on request;
4° proceedings that fall within the jurisdiction of a member of the Judicial Order or require the intervention of a public or ministerial officer;
5° mediation procedures, whether voluntary or judicial, conducted by a mediator approved by the commission referred to in article 1727;
6 ° [to all extrajudicial procedures imposed by law or by the judge;
7 ° for the enforcement of authentic instruments in another Member State of the European Union within the framework of Article 11 of Council Directive 2003/8 / EC of 27 January 2003 on improving access to justice in cross-border cases by establishing common minimum rules on legal aid granted in such cases, under the conditions laid down in that directive.]
8 ° to the assistance of a technical advisor during judicial appraisals.
Articles 691 to 692bis of the Judicial Code set forth a series of costs advanced by the State (transportation and subsistence expenses of magistrates and public or ministerial officers, taxes of witnesses, interpreters' fees, disbursements of bailiffs, notaries etc ...); to the discharge of the person benefiting from legal aid.

Bulgaria

(General Comment): The travel expenses of an official defence counsel are covered by the budget for legal aid administering.
Legal Aid Act: Art. 38 (5) The appointed lawyer shall furthermore be reimbursed for the necessary expenses on the defence, incurred for visit to the places of deprivation of liberty or to detention facilities and on defence in another nucleated settlement according to the procedure established by the Ordinance on Domestic Business Trips.

(2019): Art 38 ал.5 LAA The travel expenses of an official defence counsel are covered by the budget for legal aid administering.

(2017): The travel expenses of an official defense counsel are covered by the budget for legal aid administering.

Croatia

(General Comment): Exemption from court-proceeding-expenses in other than criminal cases is one of the forms of secondary legal aid prescribed by the Law on Legal Aid. It includes exemption from payment costs of witnesses, expert witnesses, court-sworn translators, costs of site visits and court advertisements. The exemption from payment of litigation costs depends on the material conditions and the type of procedure.

(2018): Legal aid may be granted in the form of exemption from payment of court proceeding costs (costs of witnesses, expert witnesses, court-sworn translators, costs of site visits and court advertisements).

(2017): The legal aid can be granted in civil and administrative court proceedings (other than criminal cases) for exemption form payment of court proceedings. The exemption from payment of court proceedings includes the exemption from payment of an advance for the costs of witnesses, expert witnesses, investigation and judicial announcements.

(2016): The legal aid can be granted in civil and administrative court proceedings (other than criminal cases) for exemption from payment of court proceedings. The exemption from payment of court proceedings includes the exemption from payment of an advance for the costs of witnesses, expert witnesses, investigation, judicial announcements.

Cyprus

(2021): These costs can only be given following a court order.

(2019): in 2019 the legal aid law was amended and European arrest warrant procedure was included. These costs include interpreter fees, translation costs, travel expenses of witnesses.

(2017): x

Czech Republic

(General Comment): If legal aid is granted, it covers all costs, including lawyer’s fees, fees of judicial experts, etc.

Denmark

(General Comment): With regard to other than criminal cases, legal aid can be granted for all necessary costs associated with the proceedings. The court decides which expenses are covered by legal aid, e.g. expenses that have been held in connection with a trial with good reason. Fees for technical advisors or experts are covered in criminal cases under special circumstances.

Estonia

(General Comment): At the request of a lawyer who has provided state legal aid, the court, investigative body or prosecutor's office shall determine the reimbursable travel and accommodation expenses incurred by the lawyer or the manager of the law firm in connection with the provision of state legal aid. Travel and accommodation expenses shall be reimbursed only if the State legal aid has been provided in a place other than the town or municipality where the law firm or the structural unit through which the lawyer provides legal services is located.

Finland

(General Comment): The fees and compensations arising from the interpretation and translation services required in the consideration of the matter are waived for a recipient of legal aid. Compensation for a witness called by a party receiving legal aid is paid from the state funds. Other costs arising from presenting evidence by a party receiving legal aid are paid from the state funds if the evidence was necessary for deciding the case. If a party receiving legal aid, other than the defendant in a criminal case, has been summoned to the court in person, the compensation for the costs of appearing before the court are paid from the state funds. Legal aid can be granted for travel and lodging costs for the lawyer, as well as for the expenses of witnesses, expert witnesses included. A state-covered support person may be appointed to a victim of violent or sexual crimes, in addition to his/her legal representation.

(2020): Legal aid can be granted for travel and lodging costs for the lawyer, as well as for the expenses of witnesses, expert witnesses included. A state-covered support person may be appointed to a victim of violent or sexual crimes, in addition to his/her legal representation.

(2019): Legal aid can be granted for travel and lodging costs for the lawyer, as well as for the expenses of witnesses, expert witnesses included. A state-covered support person may be appointed to a victim of violent or sexual crimes, in addition to his/her legal representation.

(2017): Legal aid can include, for example, fees from interpretation services and costs from adducing evidence.

France

(General Comment): Articles 40 and 40-1 of the law of 10 July 1991 on legal aid provide for that the beneficiary of legal aid is entitled to the assistance of a lawyer and all public or ministerial officers (enforcement agents, solicitors and notaries in particular). He/she is also exempt from paying, advancing or depositing all costs relating to the instances, procedures or acts for which it has been granted (expert reports, social surveys, family mediation, etc.), with the exception of a pleading fee of €13.
Source SADJAV

(2020): Legal aid covers all legal costs related to a case (in case of total legal aid); notaries, bailiffs, experts can be paid.

(2019): Legal aid covers all the legal costs related to an instance (in case of total legal aid); can thus be covered notaries', bailiffs' and experts' fees.

(2018): Legal aid covers all legal costs related to a case (in the case of a total AJ); notaries, bailiffs, experts may thus be paid.

(2016): Legal aid may be granted for notary, bailiff and expert fees in the frame of legal proceedings. It may also be granted for the assistance of a lawyer during mediation or settlement.

Germany

(General Comment): The approval of legal aid includes the costs for the taking of evidence (e.g. witnesses, experts), as well as travel expenses of the recipient to attend a court hearing if personal attendance at the hearing is necessary. Expenditure for the preparation of the proceedings (e.g. expert witnesses, interpreters) may be refundable as necessary expenditure of the appointed solicitor.
With regard to criminal cases: Other costs are considered costs of the proceedings. These are settled after the discontinuation or final conclusion of the criminal proceedings and not paid in advance. The only exception being travel costs of a defendant who does not have sufficient financial means. However, since these costs are also considered costs of the proceedings, the defendant must pay them as far as he or she is convicted. Insofar as the defendant is acquitted, the state treasury must bear the costs and expenses of the proceedings.

(2017): If granted, legal aid covers all of the costs of the legal dispute. In particular, this includes the cost of a court-ordered taking of evidence, as well as the costs for compensating witnesses or obtaining expert reports.

(2016): If granted, legal aid covers all of the costs of the legal dispute. In particular, this includes the cost of a court-ordered taking of evidence, as well as the costs for compensating witnesses or obtaining expert reports.

Greece

(General Comment): Furthermore, if an expert's opinion is considered by the court to be necessary then the relevant costs are covered by the State.
With regard to administrative courts, there is not any such legislative provision, while in civil and commercial cases legal aid is granted for expert fees.

(2019): appointment of a lawyer, notary, bailiff
payment of a lawyer, notary, bailiff, witness

(2017): Regarding "criminal cases", the ex officio appointment of a lawyer is provided. Furthermore, if an expert's opinion is considered by the court to be necessary then the relevant costs are covered by the State. As far as "civil and commercial cases" are concerned, legal aid also includes notaries, bailiff's and services of judicial documents cost.
With regard to Administrative courts, there is no specific legislative provision, except Articles 199 and 200 of the code of civil procedure.

Hungary

(2021): In both cases (“Criminal cases” and “Other than criminal cases”) the state-financed legal aid basically covers only the lawyer's fee and, as of 2022, a 25% flat-rate for the lawyer; however, the reimbursement of a few other costs (for example: travel, parking costs and phone, postal expenses) may also be requested. We must note that we don’t have accurate data regarding this question since in criminal cases the appointment of the officially appointed defence counsels and determining the fee of an officially appointed defence counsel are the competence of the Bar Association, and legal aid belongs to the government offices.

Ireland

(General Comment): In criminal cases, legal aid can cover the cost of expert witnesses (medical and technical), interpreters, translation service providers, travel costs, disbursements i.e. photocopying costs, prison visits.
In civil cases, fees of other professionals may be covered where it is necessary having regard to the circumstances of the case.

(2017): In criminal cases, legal aid can cover the cost of expert witnesses (medical and technical), interpreters, translation service providers, travel costs, disbursements i.e. photocopying costs, prison visits.
In other than criminal cases, a legally aided person may apply through their solicitor for the fees of expert witnesses and other experts to be covered.

Italy

(General Comment): Legal aid can also be granted for costs related to private detectives, interpreters and expert witnesses.

Latvia

(General Comment): In the Republic of Latvia there is another mechanism - a legal framework that provides for exemptions from payment of court costs granted on the basis of the law by the judge in civil proceedings (Section 43 of the Civil Procedure Law). Besides, the Criminal Procedure Law stipulates which costs, for example, conducting of inspections, shall be assumed by the State. The mentioned regulation is applying to court proceedings and exemptions rules in their respect (for example concerning the expertise costs etc).
In addition, according to the State Ensured Legal Aid Law, in cross-borders cases a person has the right to receive the following: 1) services of an interpreter; 2) translation of documents requested by the court or the competent authority and submitted by the recipient of legal aid, which are necessary for adjudication of the matter; 3) payment of expenses related to the attendance at court sittings, if the presence of the person in court is provided for by the law or if the court requests so, deciding that the relevant person cannot be heard in another way (the Legal Aid Administration makes a decision).
In accordance with the Cabinet of Ministers Regulation No 1493 of 22 December 2009 “Regulations Regarding the Amount of State-ensured Legal Aid, the Amount of Payment, Reimbursable Expenses and the Procedures for Payment Thereof”, if legal aid is provided outside the place of practice of the provider of legal aid, his or her travelling (transport) expenses and hotel (accommodation) expenses shall be covered from the State budget. It is relevant for all cases – civil, administrative and criminal. In asylum cases and cases related to foreigners who are obligated to be returned, the responsible institution – the Office of Citizenship and Migration Affairs or the Legal Aid Administration – shall ensure the communication of the applicant for legal aid with the provider of legal aid, which covers costs of the interpretation services.
In questions 16-18 it is indicated that the state provides representation in court and legal advice, but in Latvia it is provided and paid also for preparation of procedural documents in all types of cases and in criminal cases for representation in the pre-trial criminal proceedings.

(2020): We can indicate that additional persons are exempted, for example, from expertise, interpreters and travel expenses (in cross border disputes). If the legal aid is provided outside the place of practice of the provider of legal aid, his or her travelling (transport) expenses and hotel (accommodation) expenses also shall be covered from the State budget. In questions 16-18 it is indicated that the state provides representation in court and legal advice, but in Latvia it is provided and paid also for preparation of procedural documents in all types of cases and in criminal cases for representation in the pre-trial criminal proceedings.

(2019): We can indicate that additional persons are exempted, for example, from expertise, interpreters and travel expenses (in cross border disputes). If the legal aid is provided outside the place of practice of the provider of legal aid, his or her travelling (transport) expenses and hotel (accommodation) expenses also shall be covered from the State budget. In questions 16-18 it is indicated that the state provides representation in court and legal advice, but in Latvia it is provided and paid also for preparation of procedural documents in all types of cases and in criminal cases for representation in the pre-trial criminal proceedings.

(2017): We can indicate that additional persons are exempted, for example, from expertise, interpreters and travel expenses (in cross border disputes). If the legal aid is provided outside the place of practice of the provider of legal aid, his or her travelling (transport) expenses and hotel (accommodation) expenses also shall be covered from the State budget. In questions 16-18 it is indicated that the state provides representation in court and legal advice, but in Latvia it is provided and paid also for preparation of procedural documents in all types of cases and in criminal cases for representation in the pre-trial proceedings.

(2016): indicates that additional persons are exempted, for example, from expertise, interpreters and travel expenses.
In accordance with the Cabinet of Ministers Regulation No 1493 of 22 December 2009 “Regulations Regarding the Amount of State-ensured Legal Aid, the Amount of Payment, Reimbursable Expenses and the Procedures for Payment Thereof” the State shall pay to the provider of legal aid also for drawing up procedural documents in all kind of legal aid cases and for representation in pre-trial criminal proceedings.

Lithuania

(General Comment): The costs of secondary legal aid from which the applicant is exempted are: litigation costs incurred in civil proceedings, the costs incurred in administrative proceedings, the costs related to the hearing of a civil action brought in a criminal matter, the costs related to defence and representation in court (including the appeal and cassation proceedings, irrespective of the initiator) as well as the costs of the execution process, the costs related to the drafting of procedural documents and collection of evidence, interpretation, representation in the event of preliminary extrajudicial consideration of a dispute, where such a procedure has been laid down by laws or by a court decision (Article 14(2) of the Law on State-guaranteed legal aid). The costs of state-guaranteed legal aid cover also the costs of interpretation of communication between the lawyer and the applicant where, in the cases provided for in treaties of the Republic of Lithuania, it is impossible to ensure that a person providing state-guaranteed legal aid communicates with the applicant in the language which the latter understands (Article 14(10) of the Law on State-guaranteed legal aid).
Where the physical presence of an applicant is required by the law or by the court, the travel costs to be borne by an applicant are borne by the State-guaranteed legal aid service (Article 20(2) of the Law on State-guaranteed legal aid). Where the physical presence of an applicant is required by the law or by the court, the travel costs to be borne by an applicant are borne by the State-guaranteed legal aid service (Article 20(2) of the Law on State-guaranteed legal aid).

Luxembourg

(2017): /

Netherlands

(General Comment): Legal aid can also be granted for the following costs: travel costs, interpreter and translation costs, administrative costs, medical expert costs in injury cases for which a special regulation exists.

(2018): Legal aid can also be granted for the following costs: travel costs, interpreter and translation costs, administrative costs, special regulation for medical expert costs in injury cases.

Poland

**(General Comment): ***In civil proceedings, exemption from court costs may relate to fees and expenses. Expenses include in particular: travel costs of a party who is exempt from court costs related to a personal appearance ordered by a court; reimbursement of travel and accommodation costs as well as lost earnings or witness income; remuneration and reimbursement of costs incurred by experts, translators and probation officers established for a party in a given case; lump-sum costs of taking evidence from the opinion-giving opinion of a team of court specialists; remuneration due to other persons or institutions and reimbursement of costs incurred by them; costs of carrying out other evidence; the costs of transporting animals and goods, keeping them or storing them; advertising costs; costs of detention and custody; lump sums due to probation officers for conducting environmental interviews in cases of: annulment of marriage, for divorce and separation, as well as for participation in parents' contacts with children determined by the court; the cost of issuing a certificate by a forensic doctor; the cost of mediation conducted as a result of referral by the court.
*In criminal proceedings, unless the Code of Criminal Procedure stipulates otherwise, all expenses are temporarily lectured by the State Treasury. A witness shall be entitled to reimbursement of travel expenses from his place of residence to the place where the court proceedings are to be conducted upon the order of the court or the authority conducting the pre-trial proceedings. The witness shall be entitled to reimbursement of travel costs from his place of residence to the place where the procedural activities are to be performed at the request of the court or the authority conducting preparatory proceedings. The witness shall also be entitled to reimbursement of earnings or income lost in connection with appearance at the summons of the court or the authority conducting the pre-trial proceedings. A person summoned as a witness is also entitled to reimbursement of the costs of travel and accommodation on condition of appearance. *If a party to a notary's activity is not able to incur the remuneration required by a notary public for its own and for the family, it may apply to the district court competent for its place of residence to release in full or in part from this remuneration. This provision shall apply accordingly to a legal person that proves that he has insufficient funds to incur the remuneration demanded by a notary public.
The court, after determining that there is a need to perform a notarial act, takes into account the application and appoints a notary to perform the requested notarial activity (Article 6 of the Act of 14 February 1991 on Notary Public Rights).

(2017): Expert fees and travel cost reimbursement.

(2016): Expert fees and travel cost reimbursement.

Portugal

(General Comment): The Portuguese law provides for the total or partial exemption from court fees and other expenses related to the case.

(2021): Legal aid may also include fees of technical advisors or experts, costs of other legal professionals (notaries) and travel costs. In addition, all applications, certificates and any other documents requested for legal protection purposes are exempt from taxes, fees and charges.

(2020): Legal aid may also include fees of technical advisors or experts, costs of other legal professionals (notaries) and travel costs. In addition, all applications, certificates and any other documents requested for legal protection purposes are exempt from taxes, fees and charges.

(2019): Legal aid may also include fees of technical advisors or experts, costs of other legal professionals (notaries) and travel costs. In addition,all applications, certificates and any other documents requested for legal protection purposes are exempt from taxes, fees and charges.

(2018): Legal aid may also include fees of technical advisors or experts, costs of other legal professionals (notaries) and travel costs. In addition,all applications, certificates and any other documents requested for legal protection purposes are exempt from taxes, fees and charges.

Romania

(General Comment): According to Article 6 letter b) of the Government Emergency Ordinance 51/2008, public aid may also cover costs of the expert, translator or interpreter services during the trial, with the consent of the court or of the jurisdictional authority, if this payment is the obligation of the one requiring judicial public aid, according to law.

(2021): According to the Article 6 letter b) GEO no. 51/2008, public aid may be also the payment of the expert, translator or interpreter used during the trial, with the consent of the court or of the jurisdictional authority, if this payment is the obligation of the one requiring judicial public aid, according to the law.

(2020): According to the Article 6 letter b) GEO no. 51/2008, public aid may be also the payment of the expert, translator or interpreter used during the trial, with the consent of the court or of the jurisdictional authority, if this payment is the obligation of the one requiring judicial public aid, according to the law.

(2017): According to the Article 6 letter b) GEO no. 51/2008, public aid may be also the payment of the expert, translator or interpreter used during the trial, with the consent of the court or of the jurisdictional authority, if this payment is the obligation of the one requiring judicial public aid, according to the law.

(2016): According to the Article 6 letter b) GEO no. 51/2008, public aid may be also the payment of the expert, translator or interpreter used during the trial, with the consent of the court or of the jurisdictional authority, if this payment is the obligation of the one requiring judicial public aid, according to the law.

Slovak Republic

(General Comment): Other costs provided by Centre for Legal Aid are costs for lawyers who represent the client at courts and these lawyers has been provided by Centre for Legal Aid. All costs paid by Centre are established in law no. 655/2004 Z. z.
Under the section 5c of the Act on Providing Legal Aid to persons in material need No. 327/2005: Legal aid shall also include: appointment of an interpreter; translation of documents necessary for decision on merits.

(2017): Under the section 5c of the Act on Providing Legal Aid to persons in material need (No. 327/2005): Legal aid shall also include: -appointment of an interpreter
-translation of documents necessary for decision on merits
-inevitable travel costs of foreign applicant

Slovenia

(General Comment): The Free Legal Aid Act (FLAA) prescribes that legal aid shall mean the right of the eligible person to the entire or partial provision of funds necessary to cover the costs of legal assistance and the right to exemption of payment of the costs of the judicial proceeding. Further on the law defines that legal aid may be approved for legal advice, legal representation and other legal services, for all forms of judicial protection before all courts of general jurisdiction and specialised courts based in the Republic of Slovenia, before the Constitutional Court of the Republic of Slovenia, and before all authorities, institutions or persons in the Republic of Slovenia authorised for out-of-court settlement, as well as in the form of exemption from payment of the costs of the judicial proceeding.
The law specifically lists the costs that can be covered by the approved legal aid: for legal advice; for the formulation, verification and certification of documents on legal relations, facts and statements; for legal advice and representation in cases of out-of-court settlement; for legal advice and representation before courts in the first and second instances; for legal advice and representation involving extraordinary appeals; for legal advice and representation involving constitutional action; for legal advice and representation before international courts; for legal advice and representation involving the filing of a petition for the assessment of constitutionality; in the form of exemption from payment of the costs of the judicial or extrajudicial proceeding.
Legal aid may also be granted in the form of an exemption from payment of the costs of proceedings before courts, particularly in the form of an exemption from payment of: costs of experts, witnesses, interpreters, servicing orders and translations, costs of external operations of the court or other authority in the Republic of Slovenia, and other justified costs; security deposits for the costs or of the costs, of the implementation of the proceeding (advance payments); costs of public documents and receipts required for the proceeding before a court; other costs of the proceeding. The legal aid system does not cover the costs of the proceeding and actual expenditure of and remuneration for the person representing the opposing party.

(2020): See general comment.

Spain

(General Comment): According to Legal Aid Act: Legal assistance to the arrested, prisoner or accused who had not appointed a lawyer, for any police action; Free insertion of announcements, during the process, in official newspapers; Free expert assistance; Free collection (or reduction of 80% of fees depending on cases) of copies, testimonies, instruments and notarial acts; Reduction of 80% of fees for notes, certifications, annotations, in the Property and Commercial Registries.

Question 020

Austria

(2016): Legal aid can not be granted for cases that have not been brought to court. Analysis of the non-litigious cases for which legal aid has been granted is not avaiable.

Belgium

(2021): For second line legal aid, the number of cases closed for the year 2020-2021 amounts to 217 039 for Belgium. For the year 2020-2021, the number of cases closed in criminal matters amounts to 79 662 and 137 377 for other matters.
As regards judicial assistance (one of the components of the legal aid in the sense of the questionnaire), the figure is 17 995: these are cases brought before the following courts: first instance courts (civil and family section), company courts and labour tribunals, courts of appeal, criminal section (in criminal matters) and courts of appeal, civil section, and labour court (in other matters). The number of closed cases for which legal aid was granted in full or in part is included in the figures in each category.

(2020): For second-line legal aid, the number of cases closed for the year 2019-2020 amounts to 203,305 for Belgium. The figures for the 2018-2019 year were 196,840.
For the year 2019-2020, the number of cases closed in criminal matters is 76,561 and 126,744 for other matters.
Regarding legal aid, it can be noted that the figure of 16,266 corresponds to cases brought before the following courts: court of first instance (civil and family sections), enterprise court and labor court, court of appeal, criminal section (in criminal matters), and court of appeal, civil section, and labor court (in matters other than criminal).The number of closed cases for which legal aid was granted is included in the figures each time.

(2016): With regard to cases brought to courts, the only figure in our possession is the number of lawyers' appointments. This does not necessarily mean that the case will be closed or even brought to court (even if it is often the case). For the year 2015-2016, there has been 272,313 lawyers' designations (knowing that there may be several designations for a procedure). There is no distinction by subject.
With regard to second-line legal aid, however, the number of cases closed in criminal cases (excluding court work) for the 2015-2016 judicial year is available: 78172. For other subjects (year 2015- 2016): 155,769.
Regarding the number of cases (cases not brought to courts) that benefited from second-line legal aid, we have partial figures from the OVB (order of the Flemish Bars) for the year 2015- 2016: Cases that ended with an amicable settlement or transaction: 4097.

(2014): As for secondary legal assistance, for the judicial year 2013-2014 the number of cases solved which benefited from legal aid was 212 495. Regarding legal assistance, data are incomplete. Concerning 1st instance courts (civil cases), there were 20 033 orders granting or refusing legal assistance. In respect of commercial courts, 1 023 orders of the Legal Assistance Office granted legal assistance.
For the period 2013-2014 (September to September), secondary legal assistance has been allocated in favour of 212 495 resolved cases. As regards legal assistance, data are incomplete. And regarding first instance courts ruling on civil matter, 20 033 orders have been made, granting or refusing legal assistance. For commercial courts, 1 023 orders of the Judicial Assistance Office have approved the legal assistance.

(2012): For 2012, the number of non-litigious cases for which legal aid has been granted was 16 432 as regards the Order of the French and German Speaking Bars (Ordre des barreaux francophones et germanophones (OBFG)) and 41 618 as regards the Order of the Dutch Speaking Bars (Ordre des Barreaux néerlandophones (OVB)).

Bulgaria

(General Comment): According to the Bulgarian Law on Legal Aid / LPA / there are four types of legal aid: 1. preliminary legal aid for consultation with a view to reaching an agreement before the commencement of court proceedings or for filing a case; 2. preparation of documents for filing a case; 3. legal aid for procedural representation in an already initiated case in the court or in the pre-trial bodies; 4. legal assistance in case of detention under the Law on the Ministry of Interior and under the Law on Customs, which is a representation by a lawyer before pre-trial criminal proceedings are instituted. The provided data is only in respect of the legal aid for procedural representation in an already initiated case in the court or in the pre-trial bodies (3.)

(2020): The provided data is only in respect of the legal aid for procedural representation in an already initiated case in the court or in the pre-trial bodies.

(2018): The number of other than criminal cases brought to court for which legal aid has been granted increased due to the broadening of the net of Regional Centres for consultation functioning in some Bar Councils. The consultations in the centres are predominantly of civil matters and in most of the cases there are grounds for bringing legal proceedings.

(2016): The increasing of the number of cases other than criminal for which legal aid was provided is due to the amendments (in force from 19 March 2013) in the Legal Aid Act according to which the circle of persons entitled to legal aid was broadened. Foremost there was an increase of the number of cases for which legal aid was provided for seekers of international protection under the Asylum and Refugees Act; under the Law on Child Protection; for persons entitled to maintenance under Council Regulation (EC) No 4/2009 on jurisdiction, applicable law, recognition and enforcement of decisions and cooperation in matters relating to maintenance obligations; for victims of domestic or sexual violence or of trafficking in human beings. Furthermore, there are two new forms for providing legal aid for consultation – the National Telephone Line for Legal Aid as well as Regional Centres for consultation functioning in some the the Bar Councils. Thanks to those two forms for providing legal aid the number of other than criminal cases increased. In respect to criminal cases not brought to court, they remain 0 as in 2014. The increase in the number of criminal cases brought to court for which legal aid has been granted stems also from the amendment to the Legal Aid Act and the extension of the legal aid scope.

Croatia

(2021): Information not available on cases brought/not brought to court following granting legal aid

(2018): In 2018. the annual approved and implemented public budget for provision of legal aid in other than criminal cases for cases not brought to court has been increased. This is the result of the increased number of financed projects (NGO's and Legal Clinics) for providing primary legal aid and, subsequently, number of cases in which primary legal aid has been provided increased in this period.

(2016): The difference between data for 2014 and 2016 occur because data for 2014 only covered the period from 1 September to 31 December 2014, since keeping the record started on 1 September, while data for 2016 include the period of 1 January to 31 December 2016.

(2014): In 2014, the most of the cases for which free legal aid was granted were family law cases. In total of 374 cases, an exemption from paying costs of court proceedings was granted. In 1167 cases, an exemption from payment of court fees was approved.
In the frame of the 2014 exercise, the attention was drawn on the entry into force of a new Free Legal Aid Act in January 2014. Accordingly, the range of legal issues in which primary free legal aid (cases not brought to court) can be granted has been expanded (with certain exceptions, in proprietary rights, labour relations, enforcement and insurance proceedings, amicable dispute resolution, administrative and civil proceedings). On the contrary, in 2012, primary free legal aid could have been granted only with regard to the citizen status rights, retirement and/or health insurance, exceptionally, in all the other administrative proceedings and the protection of employees' rights with regard to the employer. Due to this expansion and the fact that primary free legal aid is available to a wider range of users, there is a significant increase of the number of cases for which legal aid has been granted (1018 in 2014 in comparison to 465 in 2012).

(2012): In the frame of the 2012 exercise, it has been specified that from 1st February 2009 until 7 November 2013, legal aid has been granted in 18,905 other than criminal cases (both brought to the court and not brought to the court). In 2012, it has been granted in 5,872 other than criminal cases (both brought to the court and not brought to the court).
In the frame of the 2012 evaluation cycle, it has been specified that from 1st February 2009 until 7 November 2013, legal aid was granted in 2,900 cases that were not conducted before a court. In 2012, legal aid was granted in 465 such cases.

Cyprus

(2020): Other cases include civil cases for serious violations of human rights and family court cases. In the last cycle we did not have available statistics on the family court cases, and in this cycle we have included these cases.

Denmark

(2021): In Denmark, there are four different authorities that can grant legal aid: 1) The courts can grant legal aid to the cases listed in section 327 of the Administrative Procedure Act. 2) In other cases legal aid is granted by the Civil Affairs Agency. 3) The Ministry of Justice processes legal aid cases where the Civil Affairs Agency declares itself incompetent.
4) Complaints over decisions made by the Civil Affairs Agency and the Ministry of Justice can be brought before the Appeals Permission Board. The total number of cases listed above (4098 cases) stems from information given by the the National Board of Justice. It includes all cases brought before the courts where legal aid was granted by either the courts, the Civil Affairs Agency, the Ministry of Justice or the Appeals Permission Board. We are unable to obtain the number of cases not brought before the courts, but where legal aid was granted.

(2016): The 2.071 cases mentioned above is the number of civil cases in district courts where it is noted on the case that one or all parties have been granted legal aid.

(2014): In 2014, the overall number of finalized civil cases has decreased about 15% and the number of cases granted with legal aid follows the same trend. The number of petty cases where parties are not supposed to have a lawyer – and therefore do not need legal aid - did not overall fall that much. Accordingly, cases where legal aid does not apply constitute a bigger part of the total, while the number of cases granted with legal aid decreased.
According to 2014 data, there are several voluntary organizations as well as law students etc., offering free assistance in legal matters. It is also possible to pay an insurance to safeguard oneself if a situation arises where help is needed. It is not a part of the "system" as such but it is definitely a part of the overall picture.

Estonia

(General Comment): The number of cases referred to court for which legal aid has been granted and the number of cases for which legal aid has been granted only for legal advice cannot be separated.

(2014): The total number of cases for which legal aid has been granted in 2014 is 16 110.

(2012): The total number of cases for which legal aid has been granted in 2012 is 17 031.

Finland

(General Comment): Legal aid decisions are taken by the State Legal Aid Offices. Legal aid can be provided in respect of almost any sort of legal matter. In court cases the applicant has a choice of lawyers: (1) a public legal aid lawyer (working at the State Legal Aid Office) or (2) a private lawyer, who can be an advocate (member of the Finnish Bar Association) or a licensed lawyer (lawyer who has been granted a permit by the Licensed Lawyers Board to act as an licensed lawyer). In certain matters legal aid is only given by public legal aid lawyers.

(2021): At the moment, the requested data cannot be provided because the reporting system of the legal aid is currently being renewed.

(2020): At the moment, the requested data cannot be provided because the reporting system of the legal aid is currently being renewed.

(2018): The public legal aid offices received a total of 48 045 cases of which 6 751 were criminal cases and 41 294 other than criminal cases. 20 % of cases dealt with by the legal aid offices were closed with court proceedings. Private lawyers received 32 683 legal aid cases of which 22 040 were criminal cases and 10 643 other than criminal cases.

(2016): The public legal aid offices received a total of 50,369 cases (2014: 46734), of which 6,762 were criminal cases and 43,607 other than criminal cases. Of the 50,369 cases dealt with by the legal aid offices 20 per cent were closed with court proceedings.
Private lawyers handled 41,315 legal aid cases, of which 54 per cent were criminal cases and 46 per cent other than criminal cases.

France

(General Comment): The data provided correspond to the number of admissions to legal aid per year.

(2021): The discrepancies are due to the effects of the health crisis. Source SADJAV

(2020): We do not have the information to distinguish between the number of cases brought and not brought to court. The decrease in the number of cases that received legal aid is explained by the particular context of the health crisis in 2020.

(2014): In 2012, 52 transactional negotiations were the subject of a mission of assistance under legal aid. In addition, for information or legal advice but also for measures of settlement of disputes, 741,459 people were received in a House of Justice and Law, including by associations in the field of access to the law or lawyers, notaries and bailiffs for legal consultations or by justice conciliators.

(2012): In 2012, 68 transactional negotiations were the subject of a mission of assistance under legal aid. In addition, for information or legal advice but also for measures of settlement of disputes, 713,319 people were received in a House of Justice and Law, including by associations in the field of access to the law or lawyers, notaries and bailiffs for legal consultations or by justice conciliators.

Germany

(General Comment): In criminal cases, legal aid is granted. However, this is not separately statistically recorded. Therefore: "NA".

(2012): The information provided for 2012 included approvals of legal aid with installment payments.
The 2012 data referred to the number of cases where legal advice and assistance was granted by the local courts, including the certificates issued by the local courts entitling the applicant to legal advice and assistance, upon application filed directly by the person seeking redress and/or with the support of a lawyer. Data from Bremen and Hamburg are not included since these Länder have public legal advice offices.

Greece

(2020): Evidence has been provided by different courts, but not by their totality, so there is not enough data to give a full answer.

(2018): From the 657 cases, 637 correspond to cases from administrative disputes in general, while 20 cases correspond to the Council of State (the same 20 cases that were brought to court). More specifically, for the Council of State and for 2018, 52 applications were submitted, 20 of which were accepted.

(2016): Statistical data may be available next year.

Hungary

(2021): The provided total data is based on data directly from the specialised filing system. The total number is an aggregate only of the numbers of the 19 counties and the capital city, and is not available as requested (distinguished to “In criminal cases” and “In other than criminal cases”.)
As it is well known, in 2020 due COVID-19 pandemic the personal appearance of the clients strongly decreased, therefore the applications for legal aid and the number of cases where legal aid was granted decreased also heavily in comparison to 2018. In 2021, the case numbers began to increase again. Only the total numbers are available, so we marked “NA”, beacause there is no specific data available for “criminal cases” and “other than criminal cases”.

(2016): Official statistics of the Ministry of Justice

Ireland

(General Comment): In Criminal Cases - this represents the number of criminal legal aid certificates which originated from the criminal prosecutions in the District Court.
In "other than criminal cases" the 'number of cases brought before the court' is the number of legal aid certificates granted. The number of 'cases not brought to court/non-litigious cases' is the number of applications for civil legal aid and advice. However please note that any advice case may progress to being an aid case and the Legal Aid Board does not keep a record of what specific cases never progressed beyond advice stage (i.e. this figure includes all of the cases which eventually became aid cases).

(2020): We have data for the total criminal legal aid certificates issue, but the necessary breakdown is not available.

(2018): In Criminal Cases - this represents the number of criminal legal aid certificates, which originated from the criminal prosecutions in the District Court.
In "other than criminal cases" the 'number of cases brought before the court' is the number of legal aid certificates granted.
The number of 'cases not brought to court/non-litigious cases' is the number of applications for civil legal aid and advice. However please note that any advice case may progress to being an aid case and the Legal Aid Board does not keep a record of what specific cases never progressed beyond advice stage (i.e. this figure includes all of the cases which eventually became aid cases).

(2012): The 2012 data does not include asylum cases where legal aid was granted.

Italy

(General Comment): On the occasion of the 2012 evaluation cycle, it has been explained that the higher number of cases for which legal aid had been granted compared to 2010 was due to the fact that the threshold concerning the income and assets evaluation had been slightly increased. Owing to that, since 2012, Italy is experiencing a positive trend in this respect. Additionally, more and more people are living under the threshold under which legal aid can be granted. These numbers must also be seen in the light of the trend of the incoming cases. In recent years the number of incoming cases has decreased, especially in 2019-2020 due to the pandemic.

(2020): The number of cases not brought to court is not available because this figure is not registered anywhere.
Since these cases are not brought to court, these events are outside the sphere of competence/vision of the Ministry of Justice.
However, the vast majority of legal aid cases is ascribed to cases brought to court. For this reason, even though the total is composed of both components, when calculating the total we can omit cases not brought to court.
Covid19 has deeply affected the flow of the incoming cases. Not only the courts were temporary closed but other than that we went through a long period of lockdown and therefore most existing proceedings were delayed and incoming cases drastically fell. The fall of LA cases is the obvious consequence of the above-described scenario.

(2018): The above figure included number of legal aid granted to administrative proceedings.

Latvia

(General Comment): The Legal Aid Administration is the competent authority for providing State ensured legal aid in civil matters and certain types of administrative cases and in a Constitutional Court process. It cannot identify data on legal aid granted specifically to cases referred to court. It is noteworthy that one case can last for several years. Consequently, in a given year the Legal Aid Administration shall provide legal aid both in cases undertaken in the previous years and new cases. In criminal proceedings, the advocate shall provide the State ensured legal aid upon a request from the person directing the criminal proceedings to the elder of the sworn advocates or if urgent in conformity with the schedule of the advocates on duty compiled by the elder of the sworn advocates. In these cases, the Legal Aid Administration shall perform payments to an advocate regarding the legal assistance provided. The Legal Aid Administration cannot identify data on legal aid granted specifically to cases referred to court.

(2021): Legal Aid Administration is the competent authority of providing the State ensured legal aid in a Constitutional Court process, in civil matters and certain types of administrative cases. In 2021 the Legal Aid Administration received 1212 applications for request of State ensured legal aid in a Constitutional Court process, in civil matters and certain types of administrative cases, decisions on ensuring legal aid were adopted in 864 cases, legal aid was ensured in 62 asylum and return cases. It must be noted that one case can last for several years, depending on the duration of proceedings, consequently, in a given year the Legal Aid Administration shall provide the legal aid both in cases undertaken in the previous years and new cases. The advocate shall provide the State ensured legal aid in criminal proceedings upon a request from the person directing the criminal proceedings to the senior of the sworn advocates or in urgent in conformity with the schedule of the advocates on duty compiled by the elder of the sworn advocates. In these cases, the Legal Aid Administration shall perform payments to an advocate regarding the legal assistance provided. According to the data available to the Legal Aid Administration legal aid was provided in approximately 6224 criminal proceedings. Legal Aid Administration alone cannot select data on legal aid in cases existing directly in proceedings.

(2020): Legal Aid Administration is the competent authority of providing the State ensured legal aid in a Constitutional Court process, in civil matters and certain types of administrative cases. In 2020 the Legal Aid Administration received 1146 applications for request of State ensured legal aid in a Constitutional Court process, in civil matters and certain types of administrative cases, decisions on ensuring legal aid were adopted in 847 cases, legal aid was ensured in 54 asylum and return cases. It must be noted that one case can last for several years, depending on the duration of proceedings, consequently, in a given year the Legal Aid Administration shall provide the legal aid both in cases undertaken in the previous years and new cases. The advocate shall provide the State ensured legal aid in criminal proceedings upon a request from the person directing the criminal proceedings to the senior of the sworn advocates or in urgent in conformity with the schedule of the advocates on duty compiled by the elder of the sworn advocates. In these cases, the Legal Aid Administration shall perform payments to an advocate regarding the legal assistance provided. According to the data available to the Legal Aid Administration legal aid was provided in approximately 7286 criminal proceedings. Legal Aid Administration alone cannot select data on legal aid in cases existing directly in proceedings.

(2018): Legal Aid Administration is the competent authority of providing the State ensured legal aid in a Constitutional Court process, in civil matters and certain types of administrative cases. The Legal Aid Administration alone cannot select data on legal aid in existing cases directly in proceedings. In 2018 the Legal Aid Administration received 1665 applications for request of State ensured legal aid, decisions on ensuring legal aid in civil cases were adopted in 1253 cases, legal aid was ensured in 31 asylum cases. It must be noted that one case can last for several years, depending on the duration of proceedings, consequently, in a given year the Legal Aid Administration shall provide the legal aid both in cases undertaken in the previous years and new cases. The advocate shall provide the State ensured legal aid in criminal proceedings upon a request from the person directing the criminal proceedings to the senior of the sworn advocates or in urgent in conformity with the schedule of the advocates on duty compiled by the elder of the sworn advocates. In these cases, the Legal Aid Administration shall perform payments to an advocate regarding the legal assistance provided. According to the data available to the Legal Aid Administration legal aid was provided in approximately 8 347 criminal proceedings. Legal Aid Administration alone cannot select data on legal aid in cases existing directly in proceedings.

(2016): In the Republic of Latvia there is another mechanism - the Civil Procedure Law and the Criminal Procedure Law stipulates which costs, for example, conducting of inspections, costs of the services of an interpreter shall be assumed by the State.
According the State Ensured Legal Aid Law in cross border cases in addition a person has the right to receive the following:
1) services of an interpreter;
2) a translation of such document requested by the court or the competent authority and submitted by the recipient of legal aid, which is necessary for adjudication of the matter; and
3) the payment of such expenses which are related to attendance at court sittings, if the presence of the person in court is provided for in law or if the court requests it, deciding that the relevant person cannot be heard in another way.
In accordance with the Cabinet of Ministers Regulation No 1493 of 22 December 2009 “Regulations Regarding the Amount of State-ensured Legal Aid, the Amount of Payment, Reimbursable Expenses and the Procedures for Payment Thereof”, if the legal aid is provided outside the place of practice of the provider of legal aid, his or her travelling (transport) expenses and hotel (accommodation) expenses shall be covered from the State budget.
In accordance with the Cabinet of Ministers Regulation No 1493 of 22 December 2009 “Regulations Regarding the Amount of State-ensured Legal Aid, the Amount of Payment, Reimbursable Expenses and the Procedures for Payment Thereof” the State shall pay to the provider of legal aid also for drawing up procedural documents in all kind of legal aid cases and for representation in pre-trial criminal proceedings.

(2014): For 2014, the Legal Aid Administration received 2 318 applications requesting State ensured legal aid which was granted to 1 850 civil cases and 9 administrative cases. In criminal matters, legal aid was provided in approximately 10 300 cases.

Lithuania

(General Comment): The number provided for non-litigious cases or cases not brought to court indicates the number of matters when primary legal aid (legal information, legal advice, drafting of the documents to be submitted to State and municipal institutions, with the exception of procedural documents, advice on the out-of-court settlement of a dispute, actions for the amicable settlement of a dispute and drafting of a settlement agreement) was granted.

(2021): The number provided for cases not brought to court indicates the number of matters when primary legal aid was granted. The number for cases brought to court indicates the number of matters when secondary legal aid was granted. In total 28184 cases: 19616 criminal cases (18421 cases by decisions of a pre-trial investigation officer, prosecutor or the court when the presence of a lawyer is mandatory and 1195 cases by decisions of State-guaranteed legal aid service where the presence of a lawyer is not mandatory) and 8568 other cases by decisions of State-guaranteed legal aid service.

(2020): The number provided for cases not brought to court indicates the number of matters when primary legal aid was granted. The number for cases brought to court indicates the number of matters when secondary legal aid was granted. In total 36544 cases: 27442 criminal cases (26102 cases by decisions of a pre-trial investigation officer, prosecutor or the court when the presence of a lawyer is mandatory and 1340 cases by decisions of State-guaranteed legal aid service where the presence of a lawyer is not mandatory) and 9102 in other than criminal cases by decisions of State-guaranteed legal aid service.
The number of decisions to grant secondary legal aid decreased due to the Covid-19 related extreme situation and quarantine. The number of applications decreased despite the fact that it was possible to submit an application by electronic means or mail.

(2018): Primary legal aid (cases not brought to court) was granted for 41791 legal enquires.
Secondary legal aid (cases brought to court) was granted in total in 42248 cases: - 26833 criminal cases (24944 cases by decisions of a pre-trial investigation officer, prosecutor or the court when the presence of a lawyer is mandatory and 1889 cases by decisions of State-guaranteed legal aid service where the presence of a lawyer is not mandatory);
- 15415 civil and administrative matters by decisions of State-guaranteed legal aid service.

(2016): It is not possible to calculate and separate the cases where persons who were granted secondary legal aid have eventually brought their cases to courts. Only the total number of secondary legal aid provided is available. In total secondary legal aid was granted in 41063 cases: 24609 criminal cases (22777 cases by decisions of a pre-trial investigation officer, prosecutor or the court when the presence of a defence lawyer is mandatory and 1832 cases by decisions of State-guaranteed legal aid service where defence is not mandatory or the person is an aggrieved party).
Secondary legal aid was granted for 16454 civil and administrative matters by decisions of State-guaranteed legal aid service.

(2014): In criminal cases, litigants have the right to legal aid in pre-trial investigation procedures. However, the latter may be terminated due to various reasons. Accordingly, it is impossible to identify the number of cases granted with legal aid and referred to court. Only the total number of secondary legal aid provided is available: 32 699 criminal cases (30879 cases by decisions of a pre-trial investigation officer, prosecutor or the court when the presence of a defence lawyer is mandatory and 1820 cases by decisions of State-guaranteed legal aid services where defence is not mandatory or the person is an aggrieved party); 14 206 civil and 722 administrative matters by decisions of State-guaranteed legal aid services.
In 2014, primary legal aid (legal information, legal advice and drafting of the documents to be submitted to state and municipal institutions, with the exception of procedural documents) was granted for 45443 legal enquires.

The Law on State-guaranteed Legal Aid has been amended from 1st of January 2014, enabling easier access to secondary legal aid (e.g. applicants are no longer obligated to address local tax administrator for a stamp on their annual declaration of income and assets; they may choose any practising lawyer for the provision of secondary legal aid).

(2012): For 2012, the number of criminal cases subsumes: cases for which the presence of a defence lawyer is mandatory and for which legal aid was granted by a decision of a pre-trial investigation officer (17 853), prosecutor or the court (15 312); cases for which defence is not mandatory or the person is an aggrieved party and for which legal aid was granted by a decision of State-guaranteed legal aid services (2 146). The number of other than criminal cases includes cases where legal aid was granted in civil (13 595) or administrative (786) matters by a decision of State-guaranteed legal aid services.

Luxembourg

(2021): The Diekirch Bar did not provide details on the legal matter of the cases that were granted with legal aid. Among the cases that received legal aid at the Luxembourg Bar, which corresponds to 85% of the total number of cases granted with legal aid, 27% were criminal cases and 73% were other than criminal cases.

Malta

(General Comment): The figures quoted for civil and criminal cases do not refer to the actual number of cases but to the number of nominations (requests) for legal aid. For example, if a case is brought to court having 5 accused people requiring legal aid, then this would count as 5 requests but just 1 case.

(2021): Towards the end of April 2020, Legal Aid Malta started offering legal advice (not representation in courts) to clients experiencing domestic violence. In addition to the 265 cases brought to court, Legal Aid Malta offered legal advice to 160 clients experiencing DV. The nature of the advice given to the victims of domestic violence is both 'criminal' and 'other than criminal' in nature. Each client referred to or requiring assistance from Legal Aid Malta Agency in relation to domestic violence is being assigned a legal aid lawyer for the necessary legal advice required. Such clients do not always want to pursue assistance at Court. This service has fulfilled the obligation set in the Istanbul Convention and has been incorporated in domestic law under Article 57 of the schedule attached to Chapter 581 of the Laws of Malta. In other than criminal cases, legal aid is granted to any party whose annual income does not exceed the national minimum wage for persons over 18 years of age. For 2021 the national minimum wage stood at €181.08 weekly
(€9,416.19 yearly). In 2021, the net asset value should not exceed €6,988 for means test eligibility for legal aid.

(2020): In Other than Criminal Cases, the low figure quoted as compared to previous evaluations relates to the disruptive effect that the COVID-19 pandemic had on court operations. During 2020, most services at the Legal Aid Agency were limited to the provision of services and the Courts of Law were closed for non-urgent court applications.
It is important to note that towards the end of April 2020, Legal Aid Malta started offering legal advice (not representation in courts) to clients experiencing domestic violence. In addition to the 129 cases brought to court, Legal Aid Malta offered legal advice to 191 clients experiencing DV. Each client referred to or requiring assistance from Legal Aid Malta Agency in relation to domestic violence is being assigned a legal aid lawyer for the necessary legal advice required. Such clients do not always want to pursue assistance at Court. This service has fulfilled the obligation set in the Istanbul Convention and has been incorporated in domestic law under Article 57 of the schedule attached to Chapter 581 of the Laws of Malta.

(2018): The figures quoted for civil and criminal cases do not refer to the actual number of cases but to the number of nominations (requests) for legal aid. For example, if a case is brought to court having 5 accused people requiring legal aid, then this would count as 5 requests/ nominations. Legal Aid in Malta is mainly granted for court representation but it also provides legal advice in the circumstances outlined in Q16.

(2016): The above data reflects the number of requests (nominations) made for legal aid in both the civil and criminal fields. These figures do not necessarily reflect the number of cases in which legal aid was granted.

(2014): Regard being had to the peculiarity of the methodology of presentation of data, the number 607 provided in 2014 in respect of the category “criminal cases brought to court” is a more representative figure of the number of individuals requesting for legal aid.

(2012): In criminal matters, statistics started being collected with effect from August 2012. Accordingly, the 2012 data refers to the period August - December 2013. Between January and October 2013, the number of criminal cases granted legal aid amounted to 463.

Netherlands

(General Comment): In criminal matters, legal aid cannot be granted for cases not brought to court.
Policy in the Netherlands makes a distinction between primary and secondary legal aid. Primary legal aid aims at solving judicial problems of citizen without necessarily going to court. There are, for example, Legal Service Counters, where people receive free legal advice on simple judicial problems. The provided figures relate to legal aid certificates. It is worth mentioning that besides legal aid certificates, the Legal Aid Board also provides stand-by duty lawyers. A subsidized lawyer visits each criminal suspect, alien or psychiatric patient who has been lawfully deprived of his liberty against his will. The bulk of such cases are criminal cases. These stand-by lawyers are part of the secondary legal aid system (and not of the primary system). However, the legal aid certificates and the assignment of stand-by duty lawyers are two different operating systems, with different payment methods. Cases (not brought to court) for which stand-by duty lawyers have been assigned are excluded, as these are not payed for with a legal aid certificate. The numbers on stand-by duty lawyers assigned over the years are included in the comment under the question. Once a criminal case for which a stand-by duty lawyer was assigned is brought before the court, a legal aid certificate IS given subsequently. Those certificates ARE included in Q20. Cases dealt with by Legal Service Counters are not counted.

(2021): In criminal matters, legal aid cannot be granted for cases not brought to court.
The number of stand-by duty lawyers assigned was over the years 110 000 (2010); 127 000 (2012), 126 000 (2014), 108 500 (2020), and 96 500 (2021).

(2020): The number of cases in 2020 is considerably lower than previous years, probably in part due to the Covid-19 pandemic. Due to the pandemic, criminal cases had been paused, waiting to be handled.

(2016): Criminal cases: The discrepancy with previous cycle can be explained by the fact that recently a different distinction in cases is made. Now certain cases (bopz) are categorized as civil cases and immigration cases are categorized as administrative cases.

Poland

(2021): Data refers to the number of cases in which an ex officio representative (legal adviser, advocate) was appointed.

(2020): Data on the number of cases in which a proxy was appointed ex officio (legal adviser, advocate)

Portugal

(2020): The reduction in the number of total legal aid cases may be the result of the measures taken during the COVID pandemic: on the one hand, the suspension of court deadlines and the expiry and prescription periods, and on the other hand, the reduction of conclicts as a result of the confinements. In any case, it should be emphasized that this is merely a perception, since we do not have the tools to perform a sociological analysis of the requests.

(2016): Data on cases not brought to court concerns only cases of legal advice. It is not possible to determine how many cases terminated at this time.
In 2014, there was an increase in the number of cases brought to court explained by the economic and financial situation that increased the number of labour conflicts as well as family and criminal disputes. The same reasoning and the economy recovery of the following years may explain the present decrease.

(2014): The increase in the number of cases brought to court in 2014 can be explained by the current economic and financial situation which resulted in the increase in the number of labour conflicts as well as the number of family and criminal disputes.

Romania

(2021): In criminal cases data also include ex officio layers.

(2020): In criminal cases data also include ex officio layers.

(2012): In 2012, data was available only for the Courts of Appeal and Tribunals. The database Ecris was not functional for first instance courts and the High Court.

Slovak Republic

(2020): The 2020 was specific due the COVID 19 pandemic situation, there where smaller amount of request for legal aid.

(2018): According to the Annual report of the Legal Aid Center, in 2018, out of the total number of applications, the Center granted legal aid to applicants in 17,497 legal cases; of which 2,741 in the civil matters (including 16 in the form of legal advice) and 14,756 in the personal bankruptcy agenda
The number of cases where legal aid was granted in criminal proceedings is not available.

Slovenia

(General Comment): The reported values for Q20 use the categorisation by forms of legal aid granted. In a single legal aid case, the request can be granted for multiple forms of legal aid, therefore the reported numbers at Q20 can be higher than the number of resolved legal aid cases. For the list of all possible forms of legal aid, please see comment to Q12. The data on the number of resolved legal cases is not reported, since one or more forms of legal aid can be granted in a single resolved case, making impossible the distinction to “cases brought to court” or “cases not brought to court”.
Cases brought to court include: 1) legal advice and representation before courts at first and second instance and 2) involving extraordinary appeals.
Cases not brought to court include: 1) legal advice and representation in cases of out-of-court settlement; 2) formulation, verification and certification of documents on legal relations, facts and statements.
The following forms of legal aid are not included in figures at Q20: 1) legal advice and representation involving constitutional action; 2) legal advice and representation at international courts; 3) legal advice and representation involving the filing of a petition for the assessment of constitutionality and 4) exemption from payment of costs of judicial or extrajudicial proceedings.

(2020): No particular explanation can be given regarding difference in number of Cases not brought to court between the years.

(2016): The following forms of legal aid are not included in the figures above:
1) legal advice and representation involving constitutional action: 16
2) for legal advice and representation before international courts: 1
3) for legal advice and representation involving the filing of a petition for the assessment of constitutionality: 1
4) exemption from payment of the costs of the judicial or extra judicial proceedings: 2.118

(2014): The figure provided for 2014 for cases not brought to court for which legal aid has been granted irepresents all the granted forms of legal aid. Please note that in a single legal aid case, the request can be granted for multiple forms of legal aid, therefore the given number can be greater than the number of resolved legal aid cases, where the request was granted. The number of cases not brought to court for which legal aid has been granted includes: legal advice (469), formulation, verification and certification of documents on legal relations, facts and statements (332); and legal advice and representation in cases of out-of-court settlement (47).

(2012): The number of cases not brought to court for which legal aid has been granted in 2012 includes: first legal advice (218), legal advice surpassing initial legal advice (207), formulation, verification and certification of documents on legal relations, facts and statements (244); legal advice and representation in cases of out-of-court settlement (29).

Spain

(2021): Source 2021 data: "XVI Informe del Observatorio de la Justicia Gratuita"
Criminal cases = arrested person assistance of a lawyer (page 29) + genre violence (page 26) + officio lawyer criminal cases (page 28)
According to the report cited, after the paralysis caused by the pandemic, normalization gradual both daily life and judicial activity led to an increase in cases, especially in ex officio cases and in labour cases

(2020): The methodology of presentation of data, namely the model of calculation, has been changed between 2019 and 2020.
Source 2020 data: "XV Informe del Observatorio de la Justicia Gratuita"
Criminal cases = arrested person assistance of a lawyer (page 31) + genre violence (page 28) + officio lawyer criminal cases (page 30)

(2014): The total indicated for 2014 includes cases brought to court as well as cases not brought to court.

(2012): In 2012, 662 434 applications have been granted legal aid. This total includes cases brought to court as well as cases not brought to court.

Question 020-1

Austria

(General Comment): Where legal representation is provided, legal aid also covers the pre-trial advice given by the lawyer. Legal aid is granted only as the applicant - according to his income, assets and maintenance obligations - is unable to bear (any or part of) the costs mentioned above without endangering the minimum subsistence level necessary to allow a simple standard of living. Legal aid is denied if the claim or defence of the applicant is manifestly unfounded or manifestly not brought in good faith. Legal aid is granted in all civil and commercial court proceedings regardless of the applicant's nationality or place of residence.
If legal aid is granted in the main proceeding, the same also applies to the enforcement proceedings. A party which was granted legal aid for a particular legal dispute in another EU Member State is also entitled to legal aid in Austria for a proceeding concerning the recognition and enforcement of the decision given in that dispute. If an application for legal aid is submitted concerning an urgent case (e.g. legal representation in the case of interim measures) the court has to decide speedily. If the court decides that the legal aid includes the assistance of a lawyer, the regional Bar Association selects a lawyer from among its members, by alphabetical order.
Legal aid covers all stages of the proceedings. As long as it has not been withdrawn because of a change in the applicant's circumstances or annulled by the court if it is established that the conditions under which the aid was granted were not borne out, legal aid covers any appeal (or appeal procedure).

(2021): criminal cases: 3,64 days; other than criminal cases: 32,35 days; total: 23,9 days regional administrative courts: maximum duration prescribed in law/regulation: 6 months
supreme administrative court: 29 days

(2020): Actual average duration:
criminal law: 3,67 days; civil law 34,48 days; total: 24,87 days
supreme administrative court: 23 days
regional administrative courts: maximum duration prescribed in law/regulation: 6 months
Actual average duration: 40 days

Belgium

(General Comment): For second-line legal aid, Article 508/15, paragraph 1, of the Judicial Code states that "Except in urgent cases, the applicant and, where appropriate, his or her lawyer, shall be informed of the decision of the office within fifteen days of the application".

(2021): For second-line legal aid, Article 508/15, paragraph 1, of the Judicial Code states that "Except in urgent cases, the applicant and, where appropriate, his or her lawyer, shall be informed of the decision of the office within fifteen days of the application".As regards judicial assistance, the average duration varied between 11 and 4 days (for criminal cases 9 days, civil cases 11 days, before the labour court 7 days and before the labour tribunal 4 days).

(2020): No data available.

Bulgaria

(2021): According to the Law on Legal Aid, 14 days is the deadline for providing legal aid for consultation and preparation of documents for the initiation of a case, which within the meaning of the law is a primary legal aid, which is provided by decision of the Chair of the National Legal Aid Bureau. The 14 days period shall run from the moment when all the documents required by law are presented or available and the legal problem is specified. The average time for processing the application for legal aid and preparing the decision is up to 5 working days, provided that the application is accompanied by all documents certifying that the person is eligible for legal aid.

(2020): The term of 14 days is provided in the Law on Legal Aid, in force from January 1, 2006 / SG no. 79 of 2005
Actual average duration- up to 7 days

Croatia

(2021): According to the provisions of the Criminal procedure Act (OG 152/08, 76/09, 80/11, 121/11, 91/12, 143/12, 56/13, 145/13, 152/14, 70/17, 126/19, 126/19), the defendant submits a reasoned request to be granted legal aid on budget charges to the State Attorney processing the indictment or to the court upon submission the indictment. The decision to grant legal aid against budgetary resources shall be decided by a reasoned decision of the State Attorney or the President of the Council or an individual judge. An appeal against the decision of the State Attorney shall be decided by the investigating judge, while an appeal against the decision of the President of the Council or the individual judge shall be decided by the Council.
Where the defendant has made a request for legal aid against budgetary resources, the administering authority shall not be authorised to take action in which the defendant has the right to participate or decide on the legal remedy or remedy submitted, before deciding on the validity of the request of the defendant for the appointment of the defence counsel against budgetary resources or before the appointment of the defence counsel against budgetary resources, unless those actions are not subject to delay. The administering authority shall provide the appointed defence with adequate time to prepare the defence.

(2020): Eviseaged timeframe for granting legal aid in other then criminal cases is set out in Law on Legal Aid. However, the proceeding for obtaining legal aid for cases not brought to court in other than criminal cases (primary legal aid) is initiated by directly contacting the primary-legal-aid-provider and there is no proscribed timeframe, that is to say the primary-legal-aid-provider shall provide legal aid imeddiately upon contact with free-legal-aid-recipient. To obtain legal aid for cases brought to court in other than criminal cases (secondary legal aid) an application must be submitted to one of the county-administrative-bodies or Administrative Body of the City of Zagreb and they shall render decision in 15 days of the subbmision of the application.
According to the provisions of the Criminal Procedure Act (OG 152/08, 76/09, 80/11, 121/11, 91/12, 143/12, 56/13, 145/13, 152/14, 70/17, 126 / 19, 126/19) the defendant shall submit a reasoned request for the appointment of a defense counsel at the expense of budgetary funds to the State Attorney until the indictment is filed, or to the court after the indictment is filed. The State Attorney or the President of the Council or a judge shall decide on the merits of the request for the appointment of a defense counsel at the expense of the budget. An appeal against the decision of the State Attorney shall be decided by the investigating judge, while an appeal against the decision of the president of the panel or an individual judge shall be decided by the panel.

Denmark

(2021): There is no binding legislation on the maximum duration in cases of granting legal aid. At mentioned under the comments to Q20 legal aid can be granted by four different authorities. The average processing time in cases of legal aid request processed by the Civil Affair Agency was 93 days in 2021. It has not been possible to obtain information regarding the average processing time in regards to requests that have been processed by the courts, the Ministry og Justice and the Appeals Permission Board, since this would entail reviewing all the cases manually, which we do not have the resources for.

(2020): The Ministry of Justice Civil Affairs Department has provided information that there is no binding legislation on the maximum duration in cases of granting legal aid. The average processing time in cases of legal aid requests was 60 days in 2020.

Estonia

(2020): The data of legal aid is in two seperate information systems and it is not possible to collect data on actual average duration.

France

(2021): Concerning the average reel duration, the precise figure is 49.8 days.
source SADJAV

(2020):
"The processing time for legal aid applications has been set at less than 45 days in the 2020 Annual Performance Project indicators. The actual average time is the time between the filing of the application and the date of the admission or rejection decision, calculated from the time limits maintained by each legal aid office
There is no distinction provided for criminal and non-criminal cases.
"

Germany

(General Comment): Regarding the statement of the opposing party:
According to the Code if Civil Procedure (Section 118 Approval Procedure), the opponent is to be given the opportunity to state his position as to whether or not he believes the prerequisites for the approval of legal aid have been met, unless this is deemed inappropriate for special reasons (e.g. in the case of a claim for an injunction). The Act on Proceedings in Family Matters and in Matters of Non-contentious Jurisdiction includes a similar provision (Section 77).

(2021): The duration of the proceedings depends, among other things, on when the evidence for the means test is submitted in full, whether a statement by the opposing party has to be considered and whether the court has to issue legal notices if necessary.

(2020): The duration of the proceedings depends, among other things, on when the evidence for the means test is submitted in full, whether a statement by the opposing party has to be considered and whether the court has to issue legal notices if necessary.

Greece

(2020): Law 3226/2004 (as amended and in force with articles 41-47 Law 4689/2020).

Hungary

(General Comment): 5 days (if the application form was handed in in person)
15 days (if the application form was not handed in in person)
The timeframes are set by Section 23, Subsection (1) of Act LXXX of 2003 on Legal Aid .

Ireland

(2021): The average actual duration in 2021 was 20 weeks

(2020): Legal Aid Certificates for Emergency / Priority applications (including Child Abduction applications and applications under Sex Offenders Acts) are addressed within 24 hours. Legal Aid Certificates for Standard applications (including foreign applications and non urgent Central Authority cases) are addressed within 2 weeks i.e. granted, refused or further information requested

Latvia

(General Comment): Application on legal aid in a Constitutional Court process, in civil matters and certain types of administrative cases shall be reviewed and decision on granting or refusal to grant legal aid shall be adopted by the Administration within 21 days, but in matters affecting children's rights - within 14 days from the date of receipt of an application for legal aid, as well as in partial legal aid cases, the Legal Aid Administration takes a decision within one month. The advocate shall provide the state ensured legal aid in criminal proceedings upon a request from the person directing the criminal proceedings to the senior of the sworn advocates (process takes maximum 3 days, the estimated term in criminal cases is fixed in the Criminal Procedure Law) or in urgent in conformity with the schedule of the advocates on duty compiled by the elder of the sworn advocates.

Lithuania

(General Comment): According to the Law on State-guaranteed legal aid, primary legal aid must be provided as soon as the person applies to the municipality. If it is not possible to provide primary legal aid immediately, the applicant will be notified of the time available, which must be no later than 5 working days from the date of application.
Decisions on the provision of secondary legal aid shall be adopted by the SGLAS not later than within 7 working days from the date of receipt of the required documents and information. In cases when in the interests of the applicant the decision to grant secondary legal aid must be taken urgently, the decision shall be taken immediately, but not later than the date of the procedural step which requires lawyers assistance.
There is no timeframe for the decisions of pre-trial investigation officer, prosecutor or court on state guaranteed legal aid (when presence of lawyer is mandatory in criminal cases).

(2020): According to the Law on State-guaranteed legal aid, primary legal aid must be provided as soon as the person applies to the municipality. If it is not possible to provide primary legal aid immediately, the applicant will be notified of the time available, which must be no later than 5 working days from the date of application.
Decisions on the provision of secondary legal aid shall be adopted by the SGLAS not later than within 7 working days from the date of receipt of the required documents and information. There is no timeframe for the decisions of pre-trial investigation officer, prosecutor or court on state guaranteed legal aid (when presence of lawyer is mandatory in criminal cases).

Luxembourg

(General Comment): The Luxembourg Bar Association has informed us that the average response time to an application for legal aid (LA) is impossible to determine. According to the Bar association, the majority of the applications for legal aid received are incomplete and will have to be returned before a final decision can be taken. The date of this decision depends on how quickly the applicant responds. The Bar association does not have statistics on this point. The processing time of an application for legal aid by the Legal Aid Department of the Luxembourg Bar is on average +/- 1 month, i.e. after receipt of an application for legal aid until a decision is taken, which can be either an approval or a refusal or a return in case of an incomplete application. However, it should be noted that urgent requests are treated as a priority by the service.

Malta

(2020): The average number of days indicated above (19 days) refers to Other than Criminal cases and is computed as follows:
> 5 days: from the time a person asks for legal aid information up to the presentation of the actual means test documents.
> between 7 to 14 days (avg: 10.5 days): from the presentation of the documents by the client to the day set for an appointment with the Advocate for Legal Aid.
> 3 days: from date a Court application is presented at the Court's registry up to the day the Judge gives a decree.
In criminal cases:
No means test is required. When a person is referred to Legal Aid for a criminal case assistance and court representation, the Agency only requires the summons issued by the Police to draft the necessary Court applications, or a copy of the judgment in case of appeals. The average duration of the procedure for the granting of Legal Aid in Criminal Cases, from the point of referral to the day when a Court application is filed, is 4 days.

Netherlands

(General Comment): High Trust: many lawyers and mediators regarded the application for a legal aid certificate as burdensome and time-consuming, and the verification process as bureaucratic. Therefore, alternatives were considered to simplify the verification of applications and expense statements. The LAB introduced a High Trust method for dealing with the applications for certificates. The High Trust method implies that the LAB, and lawyers and mediators work together based on transparency, trust and mutual understanding. High Trust involves greater compliance on the part of the legal profession, both as to administrative proceedings of rules, and working in accordance with the law, fixed procedures and support facilities such as Kenniswijzer (an online tool of the LAB with information about legislation, jurisprudence, and guidelines for the application of certificates). The LAB has developed specific tools for compliance assistance, such as information and instruction meetings, which are free of charge for lawyers and mediators under High Trust. The basic philosophy underlying High Trust is that trust among a larger group of people will more readily lead to positive cooperation and compliance than institutionalised distrust. In 2009, the Board started with its first High Trust pilot. Since 2011, the Board has been implementing High Trust across the country in phases. At the end of 2020, more than three quarters of the certificates are issued to lawyers and mediators who work based on the principles of High Trust. It has become easier for providers of legal aid to apply for certificates without having to send documents along with their applications. The Board grants the certificate shortly after assessing the client's eligibility for legal aid. The applications of the lawyers and mediators that work together with the Board according to High Trust are accepted automatically. This means that the client will very soon receive confirmation on whether or not the application has been granted. Verification takes place after the provider of legal aid has submitted the statement of expenses. There are two ways of verification: either verification based on a random sample, or verification on a one-on-one basis of certificates granted.

(2021): maximum duration prescribed in law/regulation: 40 working days, 8 weeks.
The maximum duration is based on statutory law (Awb: General Administrative Law Act). However, this maximum only applies to approx. 20% of applications. Around 80% of the applications fall under the High Trust regime, in which the application is granted automatically within 7 days (after the income and assets check with the tax authorities); in 2021 these automatically granted applications took on average 3 days. Around 20% of the applications do not fall under the High Trust regime. In 2021 it took on average 16 days to grant these applications.

(2020): 40 working days, so eigh weeks. 12 days was the average in 2020.
The maximum duration is 8 weeks (40 working days). This is based on statutory law (the AWB: the General Administrative Law Act). However, this only applies to approximately 20% of the applications. Around 80% of the applications falls under the High Trust regime (see below) in which the application is granted automatically within 7 days (after the income and assets-check with the tax authorities). High Trust: Many lawyers and mediators regarded the application for a certificate as burdensome and time consuming, and the verification as bureaucratic. Therefore alternatives were considered to simplify the verification of applications and expense statements. The LAB introduced a High Trust method for dealing with the applications for certificates. This High Trust method implies that the LAB and lawyers and mediators work together on the basis of transparency, trust and mutual understanding. The High Trust method involves greater compliance on the part of the legal profession, both as to administrative proceedings of rules and working in accordance with the law, fixed procedures and support facilities such as Kenniswijzer (an online tool of the LAB with information about legislation, jurisprudence and guidelines for the application of certificates). The LAB developed specific tools for compliance assistance, such as information and instruction meetings, which are free of charge for lawyers and mediators under High Trust. The basic philosophy underlying High Trust is that trust among a larger group of people will more readily lead to positive cooperation and compliance than institutionalised distrust. In 2009, the Board started with its first High Trust pilot. Since 2011, the Board has been implementing High Trust across the country in phases. At the end of 2020, more than three quarters of the certificates are issued to lawyers and mediators who work based on the principles of High Trust. It has become easier for providers of legal aid to apply for certificates without having to send documents along with their applications. The Board grants the certificate shortly after assessing the client's eligibility for legal aid. The applications of the lawyers and mediators that work together with the Board according to High Trust are accepted automatically. This means that the client will very soon receive confirmation on whether or not the application has been granted. Verification takes place after the provider of legal aid has submitted the statement of expenses. There are two ways of verification: either verification on the basis of a random sample, or verification on a one-on-one basis of certificates granted.

Poland

(2020): The provisions of the procedure do not specify a time limit for examining the application for appointing a legal representative. However, it should be considered without undue delay.

Portugal

(2021): The maximum duration of the procedure for granting legal aid is 30 days (article 25 (1) of Law No. 34/2009, of 29 of July. Regarding the actual average duration, it should be noted that in the context of the COVID Pandemic, procedural deadlines were suspended, which has influenced the duration of the procedural timeframes.

(2020): The maximum duration of the procedure for granting legal aid is 30 days (article 25 (1) of Law No. 34/2009, of 29 of July. Regarding the actual average duration, it should be noted that in the context of the COVID Pandemic, procedural deadlines were suspended, which has influenced the duration of the procedural timeframes.

Romania

(2021): There is no timeframe set for the procedure of granting legal aid by the court. The procedure is urgent as a general rule, being decided in chambers.

(2020): There is no timeframe set for the procedure of granting legal aid by the court. The procedure is urgent as a general rule, being decided in chambers.

Slovak Republic

(General Comment): If the application for legal aid contains all the documents needed to issue a decision for granting legal aid then a decision is issued within 30 days. The applicant must meet the requirements for granting legal aid established by Act no. 327/2005 Z. z.. If the application is not complete then the proceeding is suspended for min. 8 days max. 30 days till the application is not complete. When the application is complete according to Act no. 327/2005 Z. z. the proceeding continues and decision is issued if the legal aid will or will not be granted.

Slovenia

(General Comment): If the applicant would miss the deadline or would loose a right in the time it takes to process the application for free legal aid, the court can approve an "urgent" free legal aid, without taking in regard the material criteria for eligibility (however, the lack of merits is still checked). The material criteria are subsequently checked at a later time.

Question 037

Austria

(General Comment): The Public Authority's Liability Act (Amtshaftungsgesetz) provides for liability of the state (and other legal entities) for misconduct of their employees in the exercise of public authority, including court proceedings and court decisions, causing damage to persons or property by excessive length of proceedings, wrongful arrest and/or wrongful condemnation. The liability presupposes both wrongfulness and fault. In the case of wrongful arrest or wrongful criminal condemnation, compensation can also be obtained according to the Penal Law's Compensation Act (Strafrechtliches Entschädigungsgesetz) without proving fault of the Authorities. The compensation procedure is laid down in para. 8 ff. Amtshaftungsgesetz and para. 9 ff. Strafrechtliches Entschädigungsgesetz. The injured person may demand – free of costs - of the legal entity against which the claim for damages is to be raised to forward her/him within a three months' term a written statement indicating as to whether it accepts or partially or totally rejects the claim for damages. If the claim is partially or totally rejected, the complaint can still be filed at court. The exclusive jurisidiction over the claim of the injured person against the legal entity rests in the first instance with the regional court (Landesgericht) in charge of civil matters in whose range of jurisdiction the infringement of law occurred. Compensation is funded by the Public Authority's general budget. The liability is unlimited, indemnity is to be paid in terms of money only. To make sure that compensation is paid following the concrete circumstances of each individual case, there is no such thing as a daily tariff or a flat compensation sum. The amount of compensation depends solely on the magnitude of damage suffered by the victim and the degree of fault attributable to the Public Authority.
According to sec 67 CCP victims have the right to claim reimbursement for the damage caused by the criminal act or compensation for the impairment of their legally protected interests. The extent of the damage or the impairment has to be established ex officio as far as this can be done on the basis of the results of the criminal proceeding or with the help of additional simple investigations. If for the assessment of a bodily injury or damage to the health of a person an expert is appointed, he/she also has to be requested to establish the periods of pain.

(2021): The payments according to the Public Authority's Liability Act and the Penal Law's Compensation Act cannot be quantified regarding the different circumstances. Only the total amount of the payments can be provided. On this basis the payments according to the Public Authority's Liability Act were 714.676,17 Euro and those according to the Penal Law's Compensation Act were 574.038,47 Euro.

(2020): The payments according to the Public Authority's Liability Act and the Penal Law's Compensation Act cannot be quantified regarding the different circumstances. Only the total amount of the payments can be provided. On this basis the payments according to the Public Authority's Liability Act were 444.740,27 Euro and those according to the Penal Law's Compensation Act were 865.635,22 Euro.

(2016): The Public Authority's Liability Act (Amtshaftungsgesetz) provides for liability of the state (and other legal entities) for misconduct of their employees in the exercise of public authority, including court proceedings and court decisions, causing damage to persons or property by excessive length of proceedings, wrongful arrest and/or wrongful condemnation. The liability presupposes both wrongfulness and fault. In the case of wrongful arrest or wrongful criminal condemnation, compensation can also be obtained according to the Penal Law's Compensation Act (Strafrechtliches Entschädigungsgesetz) without proving fault of the Authorities. The compensation procedure is laid down in para. 8 ff. Amtshaftungsgesetz and para. 9 ff. Strafrechtliches Entschädigungsgesetz. The injured person may demand – free of costs - of the legal entity against which the claim for damages is to be raised to forward her/him within a three months' term a written statement indicating as to whether it accepts or partially or totally rejects the claim for damages. If the claim is partially or totally rejected, the complaint can still be filed at court.
The exclusive jurisidiction over the claim of the injured person against the legal entity rests in the first instance with the regional court (Landesgericht) in charge of civil matters in whose range of jurisdiction the infringement of law occurred. Compensation is funded by the Public Authority's general budget. The liability is unlimited, indemnity is to be paid in terms of money only. To make sure that compensation is paid following the concrete circumstances of each individual case, there is no such thing as a daily tariff or a flat compensation sum. The amount of compensation depends solely on the magnitude of damage suffered by the victim and the degree of fault attributable to the Public Authority.

Belgium

(General Comment): In Belgian law, the terminology is "inoperative preventive detention" and not "wrongful arrest".
Compensation via the civil liability procedure:
In Belgium, the liability of the state for damages resulting from faults committed by the public prosecutor's office or judges, falls under Article 1382 of the Civil Code (action in tort). According to article 1382 of the Civil Code: "Any act of man whatsoever which causes damage to another person obliges the person by whose fault it occurred to make reparation". The fault may consist of negligence according to the terms of article 1383 which provides that "everyone is responsible for the damage he causes not only by his own act but also by his negligence or imprudence". In order to obtain compensation, the plaintiff must demonstrate the existence of a fault, damage and a causal link between the fault and the damage. According to the Constitutional Court (see Constitutional Court ruling of June 30, 2014 (No. 99/2014)), a constitutionally correct interpretation of Article 1382 of the Civil Code implies that the state can be held liable for a fault of a judge/body deciding at the last instance, even if the decision is not repealed, amended, annulled or revoked. It is necessary that the fault consists of a sufficiently serious violation of the applicable rule of law and that, given the limited remedies available against the erroneous decision, it is not possible to obtain an annulment of the decision. Such claims are brought before the civil courts.
Reference should also be made to the Act of 13 March 1973 on compensation for inoperative preventive detention. Article 28 of this law provides that "Any person who has been held in preventive detention for more than eight days without this detention or its continuation having been caused by his own conduct may claim compensation:
a) if he or she has been directly or indirectly excluded from liability by a judicial decision that has become res judicata;
b) if he/she has benefited from an order or a ruling of dismissal;
c) if he/she has been arrested or kept in detention after the public action has been extinguished by prescription;
The amount of such compensation shall be determined in equity, taking into account all the circumstances of public and private interest.
If the person concerned is unable to bring an action for compensation before the ordinary courts, the compensation must be requested in writing to the Minister of Justice, who shall decide within six months.
The compensation shall be awarded by the Minister of Justice at the expense of the Treasury, if the conditions provided for in § 1 are met.
If the compensation or the allocation is refused, if the amount of the compensation or the number of days allocated is deemed insufficient, or if the Minister of Justice has not taken a decision within six months of the request, the person concerned may apply to the Commission for Inoperative Preventive Detention.
With regard to the "number of convictions" for "wrongful arrests": it should be noted that the figure in the table does not correspond to "convictions" but represents the number of cases for which there has been a definitive grant of compensation. In "inoperative preventive detention" cases there is no conviction. It is either a grant of compensation or a refusal of compensation. Therefore, the title of the third column of the table does not correspond to the content (in any case for the ""inoperative preventive detention"")

(2021): For the item "wrongful arrest" (corresponding in Belgium to "inoperative preventive detention"): concerning the number of decisions taken, there were 20 decisions granting and 21 decisions refusing compensation (+ 39 pending cases), in total 80 applications. Only the 20 decisions granting compensation and the total number of applications are included in the table.

(2019): 1. Reference should also be made to the Law of 13 March 1973 relating to compensation in the event of inoperative preventive detention. Article 28 stipulates the following:
Any person who has been held in preventive detention for more than eight days without this detention or its extension having been caused by his/her own conduct is entitled to compensation:
a) if s/he has been exonerated directly or indirectly by a court decision that has the force of res judicata;
(b) if s/he has benefited from an order or judgment of dismissal;
(c) if s/he has been arrested or detained after the termination of the prosecution by prescription;
The amount of such compensation shall be fixed in equity and taking into account all circumstances of public and private interest.
If the person concerned is unable to bring an action for compensation before the ordinary courts, the compensation must be requested by written request addressed to the Minister of Justice, who shall decide within six months. If compensation or imputation is refused, if the amount of compensation or the number of days imputed is deemed insufficient, or if the Minister of Justice has not made a decision within six months of the request, the interested party may apply to the "Inoperative Preventive Detention" Commission.
2. Compensation through the civil liability procedure:
In Belgium, the State liability for damage resulting from faults made by the public prosecutor office or judges, falls under the article 1382 of the Civil Code (claims on the basis of tort). According to article 1382 Civil Code: “Any act whatever of man which cause damage to another obliges him by whose fault it occurred to make reparation”. To obtain compensation, the plaintiff must demonstrate the existence of a fault, of damage and of a causal link between the fault and damage. According to the Constitutional Court a constitutionally correct interpretation of article 1382 of the Civil Code implies that the State may be held liable for a fault of a judicial body deciding in last instance, even if the decision is not repealed, amended, annulled or revoked. It is required that the fault consists in a sufficiently serious breach of the applicable legal rule and that, given the limited legal remedies available against the wrongful decision, it is not possible to obtain an annulment of the decision. These claims are brought before the civil courts.
Exceeding a reasonable time is also to be considered as a fault. However, article 21ter of the Code of Criminal Procedure provides that as a consequence of a violation of the right to be tried within a reasonable time, the courts can either impose a penalty below the statutory minimum or simply pronounce a guilty verdict without imposing a sentence. In addition, the Court of Cassation has ruled that the Chambre du conseil (which is the investigative court that intervenes in case of a judicial inquiry) can declare the criminal claim inadmissible if the rights of the defence have been seriously and irretrievably damaged due to the violation of the right to be tried within a reasonable time. In other less serious cases, the Chambre du conseil may establish the violation of the right to be tried within a reasonable time and commit the case for trial, after which the trial court is bound to give a proper response to this violation, in accordance with Article 21ter of the Preliminary Title of the Code of Criminal Procedure.

(2016): Compensation is only awarded for wrongful arrest. Excessive length may have consequences to the extent that a reduction of the sentence granted is possible: If the length of criminal proceedings exceeds a reasonable time, the judge may convict the offender simply by conviction or impose a sentence that is less than the minimum sentence prescribed by law.

Bulgaria

(General Comment): The Act on the Liability for Damage Incurred by the State and the Municipalities sets out the procedure for liability for the activity of the Administration, law enforcement authorities, Commission for Forfeiture of Unlawfully Acquired Assets, and Liability for actions of the judiciary bodies, for violation of the right to a hearing and pronouncement of judgment within a reasonable time.
Chapter Three "a" of the Judiciary System Act (JSA) establishes a procedure for the examination of applications submitted by citizens or legal persons against instruments, actions, or omissions of the judicial authorities which infringe the right of the citizen or legal person to have the case thereof heard and disposed of within a reasonable time. The verification of the applications is carried out by the Inspectorate to the Supreme Judicial Council, and after its completion, the documents in the file are sent to the Minister of Justice. The Minister of Justice or a person authorized by him/her rejects the application as unfounded or determines the amount of compensation in accordance with the case law of the European Court of Human Rights and proposes an agreement with the applicant, in cases where the applicant's right to a hearing within a reasonable time is violated. The verification of the circumstances and the ruling on the application shall be carried out within 6 months from its receipt. The maximum amount of compensation may not exceed BGN 10,000. The persons who have received compensation under the Judiciary System Act may not seek compensation on the same grounds in court.
Pursuant to the Act on the Liability for Damage Incurred by the State and the Municipalities (ALDISM), the state and the municipalities shall be liable for any damage inflicted on individuals and legal persons by legally non-conforming acts, actions, or omissions of State bodies and municipal authorities and officials upon or in connection with the performance of an administrative activity, as well as for the damages caused by the action of repealed as illegal or declared as null and void legal acts (Art. 1, para 1).
Art. 2, para. 1 and para. 2 of the ALDISM, list the cases in which the State shall be liable for any damage inflicted on citizens by criminal investigation authorities, public prosecution authorities, or court.
The scope of the ALDISM includes the responsibility for illegal acts, actions, or omissions of the bodies and officials under the Anti-Corruption and Confiscation of Illegally Acquired Property Act, performed during or on the occasion of exercising their powers or service, as well as the responsibility of the bodies of the judiciary for violation of the right to consider and resolve the case within a reasonable time.

(2021): Statistics on excessive length of proceedings use data by the Procedural Representation before the ECHR Directorate of the Ministry of Justice on the review of applications for the domestic compensatory remedy for an excessive length of proceedings under the Judicial System Act. Sums paid may include payments under applications from December of the previous year. Statistics on wrongful arrest include prosecution data (on detention in custody and house arrest, but also on wrongful charges, because the numbers on the provision for seeking compensation for those are aggregate) and on 24-hour police detention.

(2019): Chapter Three "a" of the Judiciary System Act (JSA) establishes a procedure for the examination of applications submitted by citizens or legal persons against instruments, actions or omissions of the judicial authorities which infringe the right of the citizen or legal person to have the case thereof heard and disposed of within a reasonable time. The verification of the applications is carried out by the Inspectorate to the Supreme Judicial Council, and after its completion the documents in the file are sent to the Minister of Justice. The Minister of Justice or a person authorized by him/her rejects the application as unfounded or determines the amount of compensation in accordance with the case law of the European Court of Human Rights and proposes an agreement with the applicant, in cases where the applicant's right to a hearing within a reasonable time is violated. The verification of the circumstances and the ruling on the application shall be carried out within 6 months from its receipt. The maximum amount of compensation may not exceed BGN 10,000. The persons who have received compensation under the Judiciary System Act may not seek compensation on the same grounds in court.
Pursuant to the Act on the Liability for Damage Incurred by the State and the Municipalities (ALDISM), the state and the municipalities shall be liable for any damage inflicted on individuals and legal persons by legally non-conforming acts, actions or omissions of State bodies and municipal authorities and officials upon or in connection with the performance of administrative activity, as well as for the damages caused by the action of repealed as illegal or declared as null and void legal acts (Art. 1, para 1).
Art. 2, para. 1 and para. 2 of the ALDISM, lists the cases in which the State shall be liable for any damage inflicted on citizens by criminal investigation authorities, public prosecution authorities or court.
The scope of the ALDISM includes the responsibility for illegal acts, actions or omissions of the bodies and officials under the Anti-Corruption and Confiscation of Illegally Acquired Property Act, performed during or on the occasion of exercising their powers or service, as well as the responsibility of the bodies of the judiciary for violation of the right to consider and resolve the case within a reasonable time.

(2016): The Act on the Liability for Damage Incurred by the State and the Municipalities sets out the procedure for laibility for activity of the Administration, law-enforcement authorities, Commission for Forfeiture of Unlawfully Acquired Assets and Liability for actions of the judiciary bodies, for violation of the right to a hearing and pronouncement of judgment within a reasonable time.
Chapter Three A of the Judiciary System Act regulates the rules for reviewing applications against the right to be heard within a reasonable time, payment of compensation in case of violations and the relevant measures to remedy the breaches.

Croatia

(2020): The data in the table refer to the compensation for unjustified arrest and unjustified conviction
An application for compensation for unjustified arrest and unjustified conviction shall be submitted to the Ministry of Justice and Public Administration. If the applicant does not accept the offer of the Ministry of Justice and Public Administration, he has a right to sue at the competent court.
The Ministry of Justice of the Administration issued a Decision on 19 November 2019, which established that the financial compensation in the mediation procedure amounts to HRK 280.00 for each day of imprisonment for unfounded arrest or unjustified conviction. Therefore, there was an increase in the amount of compensation and a greater number of acceptance of bids, and for that reason there was a greater number of resolved cases.
The amount paid for 2020 refers to payments based on decisions rendered in amicable procedure and court judgments, cases and from previous years in which the payment was made in 2020.
For excessive length of proceedings, the compensation can not exceed 35.000 Croatian kunas (cca 4.600 EUR) per case.

(2018): * The information in the table also refers to compensation for wrongful arrest and unjustified conviction.
An application for compensation for unjustified arrest and unjustified conviction shall be submitted to the Ministry of Justice. If the applicant does not accept the offer of the Ministry of Justice, the Ministry of Justice has the right to bring an action before the competent court. The amount of compensation offered by the Ministry to the parties as just financial compensation on that basis is unique in all cases and ranges from the following amounts - up to 30 days in custody in the amount of HRK 200.00 per day of deprivation of liberty, for custody of 30 to 90 days in the amount of HRK 160.00 per day of imprisonment, for detention of more than 90 days in the amount of HRK 120.00 per day of imprisonment. The amount paid for 2018 relates to payments made under the amicable settlement and court rulings.

(2016): Number of requests for compensation and number of condemnation is 167 and refers both to compensation for wrongful arrest and wrongful conviction.
The amount of compensation that the Ministry offers to the injured parties as a fair monetary compensation for claim for damages for wrongful and unjustified conviction is unique in all cases and ranges in the following amounts - for a custody of up to 30 days in the amount of 200,00 HRK per day of deprivation of liberty , for a custody from 30 to 90 days in the amount of HRK 160,00 HRK per day of deprivation of liberty, for a custody of more than 90 days in the amount of HRK 120,00 HRK per day of deprivation of liberty. The amount paid in 2016 (3 155 925 EUR) refers to payments based on decisions issued in a friendly settlement and on court judgements.
• Excessive length of proceedings
According to the Constitution of the Republic of Croatia, everyone shall be entitled have his/her rights and obligations, or suspicion or accusation of a criminal offence decided upon fairly before a legally established, independent and impartial court within a reasonable period.
According to the Courts Act, a party considering that the competent court has not reached a decision within a reasonable time on the party's right or obligation or criminal suspicion or charge, can file an application to the Court President where the proceedings is conducted, for the right to trial within reasonable time. The Court President shall demand from the judge conducting the case the report on the file and determine the term by which the case has to be resolved. Conduct term shall not be longer than 6 months. If the case is not resolved within set time, the judge conducting the case is obliged to deliver a written report to the Court President, President of the immediately superior court and to the Ministry of Justice on the reasons for not resolving the case.
If the court does not decide within the set time, the party can address the request for right to trial within reasonable time to the immediately superior court. If the court decides positively on the merits of the application filed by the applicant, it shall determine a time framework for the court before which the case is heard to decide on the right or obligation or suspicion or criminal charge against the applicant, and shall determine a just compensation to the applicant for violation of the right to trial within reasonable time.
The compensation shall be paid out from the State budget within 4 months from the day the party submits the request for payment of the compensation. The amount of the compensation for the proceeding concerned cannot exceed the amount of 35.000,00 Croatian kunas.
The number of requests for compensation provided in the table above is the total number of the requests received in the 2016 for the compensation for violation of the right to trial within reasonable time (in county courts, High Commercial Court of RoC, Supreme Court of RoC); the number of condemnation is the number of requests that were considered founded by the courts and the total amount is the amount of the just compensation awarded in the judgments.
• Non-execution of court decisions The Republic of Croatia provides the compensation in cases related to the non-execution of final decisions of the European court of Human Rights, according to the Convention for the Protection of Human Rights and Fundamental freedoms. If this question refers to non-execution of court decisions only of domestic courts, then we can confirm that there is no compensation system for non-execution of court decision.

(2014): According to 2014 data and in respect of the excessive length of proceedings, the right to a fair trial within a reasonable time is enshrined in the Constitution. Besides, according to the Courts Act (2013), a party considering that the competent court has not reached a decision within a reasonable time, can file an application to the Court President (according to the previous Courts Act, a party could file an application with the immediately superior court). The latter shall demand from the judge conducting the case the report on the file and determine the term by which the case has to be resolved (not longer than 6 months). If the case is not resolved within the set time, the judge conducting the case has to deliver a written report to the Court President, the President of the immediately superior court and the Ministry of Justice on the reasons for not resolving the case. If the court does not decide within the set time, the party can apply to the immediately superior court. If the latter decides positively on the merits of the application, it shall determine a time framework for the court before which the case is heard, and shall determine a just compensation to the applicant for violation of the right to a trial within a reasonable time. The compensation shall be paid out from the State budget within 4 months from the day the party submits the request and the amount cannot exceed 35000 Croatian kunas.
As for the non-execution of court judgments, compensation can be granted in case of non-execution of final decisions of the European Court of Human Rights, according to the Convention for the Protection of Human Rights and Fundamental freedoms. Conversely, there is no compensation system for non-execution of domestic courts' judgments.
With regard to wrongful arrest, detention or condemnation, the Constitution provides for the right to an indemnification and a public apology, in compliance with the law. According to the Criminal Procedure Act (2008), a person unjustifiably convicted of a criminal offence or unfoundedly arrested shall be entitled to full rehabilitation, compensation of damage from the State budget and other rights established by law. No compensation is possible if the proceedings were discontinued or the charge rejected because in the new proceedings the subsidiary prosecutor or private prosecutor desisted from prosecution on the basis of an agreement with the defendant. Moreover, a person who caused his arrest by illicit acts is not entitled to compensation of damages.
The compensation can be requested within three years from the day the first instance judgment of acquittal or judgment rejecting the charge became final or from the day the first instance ruling discontinuing the proceedings became final, and if a higher court decided on an appeal, from the day of receipt of the decision of the higher court.

Before bringing a civil action for the compensation of damages, the injured person is bound to submit his request to the Ministry of Justice in order to reach a settlement on the existence of damage and the type and amount of compensation. The Ministry of Justice annually receives an average of between 200 and 250 requests for compensation, while the settlement is reached in approximately 50%.

A person who was unjustifiably detained is entitled to all types of monetary and non-monetary damages according to the provisions of the Obligations Act (OG 35/05, 41/08 and 125/11), for the full amount of damages suffered. An injured person may be awarded compensation for non-monetary damages in case of harm inflicted on his/her individual rights, namely the right to freedom, honor, reputation and respect. Monetary compensation is usually awarded as a result of the loss of earnings or income. The amount of monetary compensation offered to injured persons on the basis of non-monetary damages depends

Cyprus

(2019): The law providing effective remedies for exceeding reasonable time in identifying civil rights and obligations provides for the filing of an action against the government for undue delay in the hearing of a case. The cases are still pending.

Czech Republic

(2021): There were 5 356 requests for compensation in 2021, from this number 3 045 requests filed to the Ministry of Justice and 2 311 reguests filed to the courts. In 2 490 cases in total was the applicant successful, either fully or partially. 9 617 860 Euro in total was paid.

Denmark

(2021): We can only supply data for the two sub-groups that can be filtered correct. The figures that do not fit under the other categories now appear under "other". It should be noted that the data comes from a case filing tool, and therefore is not a statistics tool. Data may be subject to entry-errors of all sorts such as compensation amount, categorization etc.

(2020): Data in the table (Q37) has been created outside the standard model. Specifically developed data models are tested, but there is a greater risk of unidentified errors than when using the standard model. Data in the table are thus associated with considrable uncertainty. All figures indicating condemnations of requests and total amount are the sum of cases and amounts fully or partially granted. In regards to the "Other" category, the figures given are total numbers minus the numbers in the three categories for which separate figures are given (excessive length of proceedings, wrongful arrest and wrongful conviction).

(2019): The Danish Administration of Justice Act contains rules concerning the possibility to obtain compensation for criminal prosecution. These rules allow for compensation under certain circumstances for example due to the excessive length of proceedings, wrongful arrest and wrongful conviction. The Prosecution Service decide on requests for compensation for criminal prosecution and these decisions can be brought before the courts. The Prosecution Service annually decides on approximately 2000 requests for compensation of which approximately 100 are brought before the courts. The budget for the total amount of compensation due criminal prosecution paid in accordance with the rules of the Danish Administration of Justice Act was approximately DKK 31.400.000. This amount is however revised at the end of the year.

(2018): The Danish Administration of Justice Act contains rules concerning the possibility to obtain compensation for criminal prosecution. These rules allow for compensation under certain circumstances for example due to the excessive length of proceedings, wrongful arrest and
wrongful conviction. The Prosecution Service decide on requests for compensation for criminal prosecution and these decisions can be brought before the courts. The Prosecution Service annually decides on approximately 2000 requests for compensation of which approximately 100 are brought before the courts. In 2018 the total amount of compensation due criminal prosecution paid in accordance with the rules of the Danish Administration of Justice Act was approximately DKK 23.000.000.

Estonia

(2016): There is now a system for excessive length of proceedings or non-execution of court decision, but we do not have the numbers.

Finland

(2021): In criminal cases the primary means to compensate excessive length of proceedings for a convicted person is to reduce the sentence. Therefore the number of compensation paid does not does not reflect the whole picture of the cases where the proceeding has taken too long. For excessive length the compensation is 1500 euro/unduly delayed year, maximum 10.000 euro, which may be exceeded if
there are special circumstances.
The information on wrongful arrest and wrongful conviction are compiled together. There were 415 requests. A total of 1 530 000 euros has been paid as compensation. For wrongful arrest the compensation is in practice approximately 120 euro/day but it can be higher due to the circumstances. For wrongful conviction the compensation covers fair legal costs.

(2020): In criminal cases the primary means to compensate excessive length of proceedings for a convicted person is to reduce the sentence. Therefore the number of compensation paid does not does not reflect the whole picture of the cases where the proceeding has taken too long. For excessive length the compensation is 1500 euro/unduly delayed year, maximum 10.000 euro, which may be exceeded if
there are special circumstances.
The information on wrongful arrest and wrongful conviction are compiled together. There were 437 requests. A total of 2 916 000 euros has been paid as compensation. For wrongful arrest the compensation is in practice approximately 120 euro/day but it can be higher due to the circumstances. For wrongful conviction the compensation covers fair legal costs.

(2019): Correction: Excessive length of proceedings number of Number of condemnations in year 2018 should have been 41, not reported 28. The number reported was the number of rejected.

France

(2021): The sub-directorate for legal affairs of the Ministry of Justice, in conjunction with the State judicial agent, monitors liability actions relating to the defective functioning of the public service of Justice (essentially based on Article L. 141-1 of the Code of Judicial Organisation, with regard to users of this service). The State judicial agent directly follows up actions for compensation for pre-trial detention undergone in the context of criminal proceedings that have ended with a decision to dismiss, discharge or acquit (Articles 149 et seq. of the Code of Criminal Procedure).
1. Regarding liability actions relating to the defective functioning of the public service of Justice: The vast majority of them are based on Article L. 141-1 of the Code of Judicial Organisation. According to this article, the State is obliged to allow a compensation for damage caused by the defective functioning of the Justice service. Except in the case of special provisions, this liability is incurred only in the event of serious fault or a denial of justice. This regime of liability concerns only the user of the public service of Justice, the third party to the legal proceedings being able to engage only the liability without fault of the State for breach of equality before public charges.
During 2021, the number of new liability actions brought against the State in connection with the functioning of the civil and criminal justice is 1 016 (compared with 908 in 2020, and 510 in 2019). Of these 1 016 new cases, 754 relate to the excessive length of proceedings before labour courts. In 2021, 580 decisions condemned the State for malfunctioning of the public Justice service, out of a total of 717 decisions on the merits of the case (compared with 249 convictions out of 398 decisions in 2020, and 352 convictions out of 485 decisions in 2019).
Out of the 717 decisions, 530 decisions involve the State's responsibility for the excessive length of proceedings, of which 31 decisions concern the length of proceedings in criminal matters and 499 in civil matters (compared with 17 convictions for excessive length in criminal matters and 200 in civil matters in 2020).
The amount of the condemnations is of 2 514 646,05 euro for excessive length of proceedings out of a total amount of 5 225 167,81 euros (compared with 1 388 393 euros out of a total of 1 975 018 euros in 2020).
2) With regard to actions based on Article 149 et seq. of the Code of Criminal Procedure: article 149 of the Code of Criminal Procedure gives the right, under certain conditions, to full compensation for the damage suffered as a result of detention in proceedings that have been dismissed, acquitted or discharged. Any person who has been held in pre-trial detention during proceedings which have ended in a decision to dismiss, discharge or acquit that has become final, shall be entitled, subject to the exceptions precisely defined by Article 149 of the CCP, at his or her request, to full compensation for the moral and material damage caused by this detention. The compensation awarded is payable by the State.
It is the First president of the court of appeal within whose jurisdiction the decision to dismiss, discharge or acquit, resulting in the detainee's innocence, has been taken, who decides, after a public and contradictory procedure, by a reasoned decision that can be appealed to the national commission for compensation for detention placed at the Court of Cassation (CNRD).
According to data from the State Judicial Agent (SJA) (Sillage application and dashboards), the key data for 2021 are as follows: 571 new cases registered; 575 decisions handed down by the First presidents of the courts of appeal; 19 settlements concluded; 53 decisions rendered by the CNRD with an average detention period of almost 140 days; 28 appeals to the CNRD in 2021 (12 at the initiative of the SJA and 16 at the initiative of the applicants). Source - Sub-Directorate for Legal Affairs, SEM, General Secretariat

(2020): "The sub-directorate for legal affairs of the Ministry of Justice, in conjunction with the State judicial agent, monitors liability actions relating to the defective operation of the public justice service (essentially based on Article L. 141-1 of the Code of Judicial Organization, with regard to users of this service).
The State's judicial agent directly follows up actions for compensation for pre-trial detention undergone in the context of criminal proceedings that have ended with a decision to dismiss, discharge or acquit (Articles 149 et seq. of the Code of Criminal Procedure).
1. With regard to liability actions relating to the defective functioning of the public service of justice:
The vast majority of them are based on article L. 141-1 of the Code of Judicial Organization.
Under the terms of this article, the State is obliged to repair the damage caused by the defective functioning of the judicial service. Except in the case of specific provisions, this liability is only incurred by gross negligence or by a denial of justice. This system of liability concerns only the user of the public service of justice, the third party to the legal proceedings being able to engage only the liability without fault of the State for breach of equality before public charges.
During the year 2020, the number of new liability actions brought against the State for gross negligence or denial of justice is 908 compared to 510 in 2019. During the same year 2020, 249 decisions condemned the State for malfunctioning of the public service of justice against 352 in 2019, out of a total of 398 decisions on the merits rendered in this matter.
Of the 249 condemnation decisions, 217 decisions implicated the responsibility of the State due to the excessive length of the proceedings, of which 17 decisions concerned proceedings in criminal matters and 200 in civil matters.
The amount of the sentences pronounced is 1,388,393 euros for excessive length of proceedings out of a total amount of 1,975,018 euros. 2. Article 149 of the Code of Criminal Procedure gives the right, under certain conditions, to full compensation for the damage suffered as a result of detention in the context of proceedings that have been dismissed, acquitted or discharged.
Any person who has been remanded in custody in the course of proceedings that have ended in a decision to dismiss, discharge or acquit that has become final, is entitled, with the exceptions specifically defined by Article 149 of the Code of Criminal Procedure, at his or her request, to full compensation for the moral and material damage caused by this detention. The compensation awarded is to be paid by the State.
It is the first president of the court of appeal in whose jurisdiction the decision to dismiss the case, acquit or acquit the detainee was handed down, which results in the detainee's innocence, who decides, after a public and contradictory procedure, by a reasoned decision that can be appealed to the national commission for compensation for detentions placed at the Court of Cassation (CNRD).
According to data from the State Judicial Agent (Sillage application and follow-up tables), the key data for the year 2020 are as follows
- 423 new cases registered.
- 436 decisions rendered by the first presidents of the courts of appeal.
- 8 settlements reached.
- 83 decisions rendered by the CNRD with an average length of compensated detention of less than 400 days.
- 27 appeals to the CNRD in 2020 (4 at the initiative of the AJE and 23 at the initiative of the claimants).

(2019): 1) The Legal Affairs Sub-Directorate of the Ministry of Justice monitors, in conjunction with the State's judicial agent, liability actions relating to the defective operation of the public service of justice. The vast majority of them are based on Art. L. 141-1 of the Judicial Organization Code. The State is required to repair the damage caused by the defective functioning of the justice system. Except in the case of special provisions, this liability is engaged in respect of court users in case of gross negligence or denial of justice. The third party in the proceedings can engage only the no-fault liability of the State for breach of equality.
In 2019, the number of new liability actions brought against the State for gross negligence or denial of justice is 510, compared with 482 in 2018. 352 decisions condemned the State for malfunctioning of the justice against 393 in 2018 (out of a total of 513). Of the 352 convictions, 302 decisions involved State responsibility due to the excessive length of proceedings (20 in criminal matters and 283 in civil matters) and the amount of 1,599,340 euros was paid out of a total amount of 5 292 676, 47 euros.
2)Article 149 of the Criminal Procedure Code entitles the accused to full compensation from the State, under certain conditions, for damages suffered as a result of detention in connection with proceedings that have been dismissed, discharged or acquitted. It is the first president of the court of appeal in whose jurisdiction the decision of dismissal/ acquittal was pronounced, who decides, after a public and contradictory procedure, by a motivated decision that can be appealed to the national commission for reparation of detentions before the Court of Cassation (CNRD). The State's judicial officer directly follows such actions for compensation. The key data for the year 2019 are as follows: 519 new cases registered; 408 decisions handed down by the first presidents of courts of appeal; 4 transactions concluded. 83 decisions handed down by CNRD with an average compensated detention period of less than 400 days. 55 appeals to the CNRD in 2019 (7 at the initiative of the AJE and 48 at the initiative of the claimants).

(2016): The category “other” refers to compensation for pre-trial detention. Indeed, article 149 of the Criminal Procedure Code provides for the right, under certain conditions, to full compensation for the damage suffered as a result of detention in the context of proceedings which have been the subject of a decision of dismissal, release or acquittal. Any person who has been detained in custody in the frame of proceedings terminated by a decision of dismissal, release or acquittal that has become final is entitled, subject to exceptions specifically pinpointed by article 149 of the Criminal Procedure Code, at his/her request, to full compensation for the moral and material damage caused by such detention. The compensation awarded shall be borne by the State. It is the first president of the Court of Appeal in whose jurisdiction the decision of dismissal, release or acquittal resulting in the innocence of the detainee has been pronounced, who rules, after a public and contradictory procedure, by a reasoned decision subject to appeal before the National Commission for Compensation of Detentions placed within the Court of Cassation (CNRD).
According to the computer application of the State judicial officer, the latter would have recorded 468 requests in 2012, 480 in 2013, 553 in 2014, 521 in 2015 and 491 in 2016. In 2015, 528 decisions were rendered by the First Presidents of Courts of Appeal. Of these 528 decisions, 84 resulted in rejection and 444 in compensation. 499 decisions were rendered in 2016 (the rejection/compensation ratio is not available). The number of appeals brought before the National Commission for Reparation of Detentions is stable in 2015 and 2016 since the NCRD registered 62 and 61 appeals respectively for these two years. CNRD rendered 84 decisions for the year 2015 and 64 decisions for the year 2016.

Germany

(General Comment): According to the Act on Legal Redress for Excessive Length of Court Proceedings and of Criminal Investigation Proceedings (Gesetz über den Rechtsschutz bei überlangen Gerichtsverfahren und strafrechtlichen Ermittlungsverfahren) a person affected may file a complaint about undue delay (censure of delay) to the court seized of the case if proceedings seem unreasonably long. Subsequently, the person affected may bring a court action claiming compensation.
The claim may be brought even before completion of the main proceedings. Adequate compensation is granted for pecuniary and non- pecuniary disadvantages.
In criminal proceedings, the passage of time between the offence and the conviction, as well as the length of the proceedings, must also be taken into account and compensated ex officio by the court and the public prosecutor’s office in favour of the accused. Depending on the extent of the delay and the disadvantages suffered by the accused as a result, compensation may be provided by a ruling that a quantified part of the sentence imposed is already deemed to have been enforced (this will be stated in the operative part of the judgment). In individual cases, it may suffice – even at the investigation stage by the public prosecutor’s office – to discontinue proceedings (e.g. pursuant to Sections 153, 153a or 154 of the German Code of Criminal Procedure [Strafprozessordnung – StPO]), to dispense with imposing a penalty (Section 60 of the German Criminal Code [Strafgesetzbuch – StGB]) or, in the event of minor delays, to establish in the grounds of the judgment that the proceedings have been delayed in breach of the rule of law. In extreme cases, undue delay may constitute a procedural impediment that requires the court to terminate proceedings. If compensation has been provided in the criminal proceeding, except for compensation for material damage, the accused has received sufficient redress and is not further entitled to compensation in accordance with the Act on Legal Redress for Excessive Length of Court Proceedings and of Criminal Investigation Proceedings.
If parties to a legal dispute suffer damage due to the excessive length of court proceedings, a compensation claim may also ensue under Section 839 of the German Civil Code (Bürgerliches Gesetzbuch – BGB) in conjunction with Article 34 of the German Basic Law (Grundgesetz – GG). A claim under these provisions requires that an official intentionally or negligently breaches the official duty incumbent upon him in relation to a third party. If the official breaches his duties in a judicial decision in a legal matter, then the state is only liable if the breach of duty consists in a criminal offence. This limitation does not apply if the official refuses or delays the exercise of his duty. However, the manner in which a judge conducts the legal proceedings may only be examined for its justifiability due to the constitutional principle of judicial independence.
If the official responsible for the execution of the court decision has delayed compulsory enforcement intentionally or negligently and in breach of his official duty, a compensation claim may ensue under Section 839 of the German Civil Code in conjunction with Article 34 of the German Basic Law.
A claim may also exist under Section 839 of the German Civil Code in conjunction with Article 34 of the German Basic Law in cases of wrongful arrest if the official responsible intentionally or negligently breaches the official duty. Decisions by the judge responsible for matters of custody, as well as discretionary decisions by the public prosecution office in criminal investigation proceedings, may, however, only be examined for their justifiability.
In the case of a wrongful conviction a state liability claim requires that the judge responsible intentionally or negligently breaches the official duty in such a way that the breach of duty consists in a criminal offence

(2020): According to the Act on Legal Redress for Excessive Length of Court Proceedings and of Criminal Investigation Proceedings (Gesetz über den Rechtsschutz bei überlangen Gerichtsverfahren und strafrechtlichen Ermittlungsverfahren) a person affected may file a complaint about undue delay (censure of delay) to the court seized of the case if proceedings seem unreasonably long. Subsequently, the person affected may bring a court action claiming compensation. The claim may be brought even before completion of the main proceedings. A claim may also exist under Section 839 of the German Civil Code in conjunction with Article 34 of the German Basic Law in cases of wrongful arrest if the official responsible intentionally or negligently breaches the official duty. Decisions by the judge responsible for matters of custody, as well as discretionary decisions by the public prosecution office in criminal investigation proceedings, may, however, only be examined for their justifiability.

In the case of a wrongful conviction a state liability claim requires that the judge responsible intentionally or negligently breaches the official duty in such a way that the breach of duty consists in a criminal offence.

Anyone who has suffered damage from a criminal conviction is compensated by the Treasury if the conviction is quashed or reduced in reopened proceedings or otherwise in criminal proceedings after having become final and binding (Section 1(1) of the Act on Compensation for Criminal Prosecution Measures [Gesetz über die Entschädigung für Strafverfolgungsmaßnahmen – StrEG]). The same applies if a measure of correction and prevention or an ancillary measure has been ordered without a conviction (Section 1(2) of the Act on Compensation for Criminal Prosecution Measures). In cases of acquittal, discontinuation of the proceedings or refusal to initiate the main proceedings, Section 2(1) of the Act on Compensation for Criminal Prosecution Measures provides for compensation for the damage suffered due to the execution of remand detention or temporary arrest. Where the proceedings are discontinued in accordance with a discretional provision, compensation may be granted ex bono (Section 3 of the Act on Compensation for Criminal Prosecution Measures).

The subject of the compensation is the property damage caused by the criminal prosecution measure. In cases of deprivation of liberty on the basis of a court ruling, this can also be immaterial damage (section 7(1) of the Act on Compensation for Criminal Prosecution Measures). The current immaterial compensation is €25 for each day of deprivation of liberty commenced. Currently, legislative proceedings are ongoing to raise this amount of compensation up to €75 per day (BT-Drs. 19/17035).

(2018): As a general rule, in the case of excessively long court proceedings, the person concerned has to file a complaint about undue delay (Verzögerungsrüge) with the court at which the proceedings seem excessively long. If necessary, he or she can then file an application for compensation even if the original proceedings have not yet been concluded. Adequate compensation is granted for pecuniary disadvantages. To the extent that an alternative form of redress would appear insufficient, a fixed amount of €1,200 per year is granted as a general rule for non-pecuniary disadvantages.
The law of state liability is only partly regulated by national law (see below). In addition, there are provisions of Land law, as well as customary and judge-made law.
Provisions of federal law
If the parties to a legal dispute suffer damage because of the excessive length of proceedings, a compensation claim may ensue from section 839 of the Civil Code (Bürgerliches Gesetzbuch, BGB) in conjunction with Article 34 of the Basic Law (Grundgesetz, GG) if there is a case of an official being culpable of refusal or delay in exercising a public function in breach of duty (section 839 (2), second sentence, of the Civil Code). However, the manner in which a judge conducts the proceedings within the scope of section 839 (2), second sentence, of the Civil Code may only be examined for its justifiability due to the constitutional principle of judicial independence.
A creditor's first port of call in procedural terms against the non-execution of a court decision by a bailiff is to lodge a reminder in accordance with section 766 (2) of the Code of Civil Procedure. The court responsible for execution rules on the reminder. If a senior judicial officer of the court responsible for execution wholly or partially rejects a creditor's motion to issue a compulsory enforcement measure, the creditor may lodge an immediate complaint (section 567 (1) no. 2 of the Code of Civil Procedure). If the organ responsible for execution has delayed compulsory enforcement culpably and in breach of duty, there may be a compensation claim under section 839 (1) of the Civil Code in conjunction with Article 34 of the Basic Law.
A claim may also exist under section 839 of the Civil Code in conjunction with Article 34 of the Basic Law in the case of wrongful arrest if the acting official can be accused of a culpable breach of official duty. As regards rulings by the judge responsible for matters of custody, as well as discretionary decisions by the public prosecution office in the investigation proceedings, the decision may only be examined for its justifiability.
In the case of a wrongful judgment, there is an official liability claim under section 839 of the Civil Code in conjunction with Article 34 of the Basic Law if the breach of duty consists of a criminal offence (section 839 (2), first sentence, of the Civil Code).
The claim under section 839 of the Civil Code in conjunction with Article 34 of the Basic Law is to be asserted in the courts of ordinary jurisdiction.
Distinct from these claims are compensation claims under provisions of special statutes, which as a rule are not intended to compensate for the entire damage, but provide lump sums instead.
In cases of acquittal, discontinuation of the proceedings or refusal to initiate the main proceedings, section 2 (1) of the Act on Compensation for Criminal Prosecution Measures (Gesetz über die Entschädigung für Strafverfolgungsmaßnahmen, StrEG) provides for compensation for the damage suffered due to the execution of
remand detention or temporary arrest. Where the proceedings are discontinued in accordance with a discretional provision, compensation may be granted ex bono (section 2 of the Act on Compensation for Criminal Prosecution Measures). The

(2016): As a general rule, in the case of excessively long court proceedings, the person concerned has to file a complaint about undue delay (Verzögerungsrüge) with the court at which the proceedings seem excessively long. If necessary, he can then file a complaint for compensation even if the original proceedings have not yet been concluded. Adequate compensation is granted for pecuniary disadvantages. To the extent that an alternative form of redress would appear insufficient, a fixed amount of € 1,200 per year is granted as a general rule for non-pecuniary disadvantages.
The law of state liability is only partly regulated by national law (see below). There are in addition pro-visions of Land law, as well as common and judges' law.
Provisions of federal law
If the parties to a legal dispute suffer damage because of excessive length of proceedings, a damage claim may ensue from section 839 of the Civil Code (Bürgerliches Gesetzbuch, BGB) in conjunction with Article 34 of the Basic Law (Grundgesetz, GG) if a case of culpable refusal or delay of execution of the office in breach of duty applies, section 839 (2), second sentence, of the Civil Code. However, the manner in which a judge pursues the proceedings within the scope of section 839 (2), second sentence, of the Civil Code may only be examined for justifiability because of the constitutional principle of judicial independence.
A creditor's first port of call in procedural terms against the non-execution of court decisions by a bailiff is to lodge a reminder in accordance with section 766 (2) of the Code of Civil Procedure. The execution court rules on the reminder. If a senior judicial officer of the execution court rejects a creditor's motion completely or in part to issue a compulsory enforcement measure, the creditor may lodge an immediate complaint (section 567 (1) no. 2 of the Code of Civil Procedure). If the execution organ has delayed compulsory enforcement culpably and in breach of duty, there may be a compensation claim under section 839 (1) of the Civil Code in conjunction with Article 34 of the Basic Law.
A claim may also exist under section 839 of the Civil Code in conjunction with Article 34 of the Basic Law in the case of wrongful arrest if the acting official can be accused of a culpable breach of official duty. With rulings of the judge responsible for matters of custody, as well as with discretionary decisions of the public prosecution office in the investigation pro-ceedings, the decision may only be examined for its justifiability.
In the case of a wrongful judgment, there is an official liability claim under section 839 of the Civil Code in conjunction with Article 34 of the Basic Law if the breach of duty consists of a criminal offence, section 839 (2), first sentence, of the Civil Code. The claim under section 839 of the Civil Code in conjunction with Article 34 of the Basic Law is to be asserted in the courts of ordinary jurisdiction.
Distinct from these claims are compensation claims under provisions of special statutes, which as a rule are not intended to compensate for the entire damage, but provide lump sums.
Section 2 (1) of the Act on Compensation for Criminal Prosecution Measures (Gesetz über die Entschädigung für Strafverfolgungsmaßnahmen, StrEG) provides in cases of acquittal, discontinuation of the proceedings or refusal to initiate the main proceedings for compensation for the damage suffered by
remand detention or temporary arrest that have been carried out. Where the proceedings are discontinued in accordance with a discretional provision, compensation can be granted ex bono, section 3 of the Act on Compensation for Criminal Prosecution Measures. The subject of the compensation is the property damage caused by the criminal prosecution measure, in the case

Greece

(General Comment): The majority of courts have responded unavailable, there is data for a small percentage of them.

(2018): Chapter C L.4055/2012 and Articles 1-7 L.4239/2014 provide for the compensation system for the cases brought before administrative, Civil and Criminal courts.
Furthermore, according to Criminal Procedure Court there is a provisional compensation between 8,804 euro and 29,347 euro per day, for the wrongly convicted, which is granted by a relevant judicial decision.

Hungary

(General Comment): Excessive length: If the court is not able to finish the cases within reasonable time a compensation may be awarded to the parties. The court decides about the compensation in a fast tarck procedure. Non-execution of court decisions: Usually the court orders a 15 day deadline for fulfilling its final decision. If the party that is obliged to do so does not fulfil this obligation he/she also has to pay an interest from that day. Wrongful arrest: The damages occured for wrongful arrest, house arrest or preliminary detention at a psychiatric institution shall be compensated. Wrongful condemnation: If the person was convicted, but later - as a result of an extraordinary review procedure - he/she was not found guilty or received a lenient punishment. Any pecuniary punishment or cost of the procedure that was paid by the accused person should be repaid with interest included. Other: the court awards a compenstaion if the circumstances of the imprisonment of a convicted or arrested person violate his/her fundamental rights.

(2020): There is no national level database containing the data for the question.

(2019): Excessive length:
If the court is not able to finish the cases within reasonable time a compensation may be awarded to the parties. The court decides about the compensation in a fast tarck procedure. The governement given before the Paliament in october 2018 a bill proposal on the financial compensation related to the prolongation of certain court proceedings.
Non-execution of court decisions:
Usually the court orders a 15 day deadline for fulfilling its final decision. If the party that is obliged to do so does not fulfil this obligation he/she also has to pay an interest from that day.
Wrongful arrest:

Italy

(2021): The number of condemnations is higher than the number of requests because the former refers to condemnations in year 2021 and some of them were initiated in previous years.

(2019): Unfortunately, the total amount in € is not available at this stage. This is a figure whose source is external to our administration (Ministry of Economy and Finance), hence we cannot guarantee its reliability.

(2018): Please note that the last two columns at Q.37 (number of condemnations and total amount in euros) refer to those compensating procedures cleared (actually paid) in 2018. Therefore, not necessary they refer to compensation procedures initiated in 2018 (first column).
PS: Given the wide diversity of such procedures we believe that the total doesn't make much sense, hence NA.

Latvia

(2021): The Ministry of Justice informs that it does not have a separate statistic about circumstances mentioned in Article 037.
The Ministry of Justice informs that the total amount of compensation in 2021 consists of non-pecuniary damages 75350 euros, damages 18708,39 euros, state social insurance contributions 2053,21 euros and personal income tax compensation 1100,40 euros.
The Ministry of Justice also informs that the compensation procedure and the calculation method for the compensation is regulated in a Law on compensation for damage caused in criminal proceedings and administrative violations. According to Article 15 the compensation calculation method of non-pecuniary damages for one unjustified detention day is minimum wage for month divided by 30, then the result without decimal places is multiply by 2. For example compensation for one unjustified detention day in 2021 was 32 euros ((500 euros : 30 = 16,66 euros); 16 euro x 2 x 1 day = 32 euros).

(2020): The Ministry of Justice informs that it does not have a separate statistic about circumstances mentioned in Article 037.
The Ministry of Justice informs that the total amount of compensation in 2020 consists of non-pecuniary damages 69 889,70 euros, damages 31 471,31 euros, state social insurance contributions 1867,12 euros and personal income tax compensation 820,09 euros.
The Ministry of Justice also informs that the compensation procedure and the calculation method for the compensation is regulated in a Law on compensation for damage caused in criminal proceedings and administrative violations. According to Article 15 the compensation calculation method of non-pecuniary damages for one unjustified detention day is minimum wage for month divided by 30, then the result without decimal places is multiply by 2. For example compensation for one unjustified detention day in 2020 was 28 euros ((430 euros : 30 = 14,33 euros); 14 euro x 2 x 1 day = 28 euros).
In Latvia, there is no compensation in the categories “Non-execution of court decisions” and “Number of condemnations”.

(2019): For 2019 the number of requests is almost the same than for 2018, while the amount decreased considerably. In 2018, in respect of separate legal proceedings and damages decisions, significant amounts of compensation have been determined compared to other cases. In 5 cases the amount of compensations was bigger than 10 000 euro, representing together 118,687.31 euro. Among those 5 cases, one compensation amount was 50 000 euro. Important compensations are an exception, not a routine, but sometimes they are and have a significant impact on the amount of reimbursement paid.

(2018): Cost increase exist because in 2016 there was less disbursement than in previous five years as well as the lowest expense rate since 2010. It is alleged that there was simply a coincidence in the cost of the claims, where no serious infringement of the rights of the individual could be established to determine a high level of non-pecuniary damage, or the amount of the loss was not high.

(2016): The Law on Compensation for Damages Caused by Unlawful or Unfounded Actions of Investigators, Prosecutors or Judges (Par izziņas izdarītāja, prokurora vai tiesneša nelikumīgas vai nepamatotas rīcības rezultātā nodarīto zaudējumu atlīdzināšanu; hereafter – "the Law on Compensation") determines the extent and the procedure of recovering losses, which as a result of the unlawful or groundless action of an investigator, prosecutor or judge in the course of fulfilling their official duties, are caused to natural
persons, as well as establishes the procedure in which the offended social and employment guarantees of such persons are ensured.
Article 2 of the Law on Compensation determines that legal basis for compensation for losses is: 1) a judgment of acquittal, regardless of the reason for acquittal; 2) termination of a criminal case due to person's exonerating circumstances; 3) recognition of an administrative apprehension as unlawful, and termination of the administrative proceedings.
Paragraph 1 of Article 7 of the Law on Compensation determines that the requests for damages must be submitted to the Ministry of Justice or the Office of the Prosecutor General, depending on the stage in which the proceedings have been terminated.
Parapgraph 3 of Article 5 of the Law on Compensation determines that the in relation to non-pecuniary damages, a person is entitled to submit a civil claim to a court of general jurisdiction. The court of general jurisdiction determines the amount of the compensation in civil cases considering the severity of the non-pecuniary damage and other circumstances, for example, excessive length of proceedings.
The Ministry of Justice collects information only about the total number of requests for compensation and the total paid amount.

Lithuania

(2020): Total - compensation for damage caused by public authorities + compensation for damage caused by public prosecutors and courts;
Other - compensation for damage caused by public authorities;

(2019): In category "other" the data on the number of requests for compensation is from the Ministry of Justice only, and the number of condemnations data is related to the judgements of all the State institutions, thus the number of condemnations is that much higher. The major part of applicants apply against the State to the court directly, thus the Ministry of Justice has information about the claims against the State in cases where it is the representative of the State only. Also the Ministry of Justice has data on satisfied claims in courts as it is responsible for the enforcement of these judgements.
Category "other" includes damage awarded because of the illegal actions of state institutions or officers and damage awarded because of improper imprisonment conditions.

(2018): Under the Civil Code and the Law on the Compensation of the Harm Caused by Illegal Actions of Public Authorities and Representation of the State of the Republic of Lithuania the damage resulting from the unlawful condemnation, unlawful arrest, unlawful detention, unlawful application of procedural coercive measures, illegal application of administrative penalty – arrest has to be reimbursed by the state in full, regardless of pre-trial investigation officers, prosecutors and court officials' fault. Compensations for unlawful arrest and unlawful condemnation are paid from separate budgetary program on compensation of damages operated by the Ministry of Justice. These compensations may be paid according to court decisions on damages as well as through out-of-court procedure.
Damages can be compensated after court trial and without court trial (the property damage cannot exceed 1500 EUR, the moral damage cannot exceed 2900 EUR). Information above has been given on both cases.
N.B. In 2016 there was provided information about out-of-court procedure only. In 2018 in order to disclose the complete situation the data is provided also including situations when applicants take an application to the court directly. This can cause some differencies in two periods (2016 and 2018).

(2016): Under the Civil Code and the Law on the Compensation of the Harm Caused by Illegal Actions of Public Authorities and Representation of the State the damage resulting from the unlawful condemnation, unlawful arrest, unlawful detention, unlawful application of procedural coercive measures, illegal application of administrative penalty – arrest has to be reimbursed by the state in full, regardless of pre-trial investigation officers, prosecutors and court officials' fault. Compensations for unlawful arrest and unlawful condemnation are paid from separate budgetary program on compensation of damages operated by the Ministry of Justice. These compensations may be paid according to court decisions on damages as well as through out-of-court procedure. Damages can be compensated after court trial and without court trial (the property damage can not exceed 1500 EUR, the moral damage can not exceed 2900 EUR).

Luxembourg

(General Comment): The law of 1 September 1988 on the civil liability of the State and public authorities allows the State to be held civilly liable before the ordinary courts if a person considers that he or she has been victim of a defective functioning of the judicial bodies. Excessive length of proceedings or a conviction resulting from such malfunctioning could be grounds for such an action. These complaints are brought before first instance courts. However, complaints about excessive length of proceedings can also be brought before the European Court of Human Rights (violation of Article 6 of the European Convention on Human Rights) or result in a procedural sanction during the proceedings. However, these last procedural steps do not appear in our systems. Thus, the diversity of the actors involved makes it difficult to identify the claims and decisions on compensation for the different categories and does not allow us to provide figures that reflect reality. However, it was possible to complete the table concerning compensation for wrongful arrest, provided for by the law of 30 December 1981, concerning compensation for inoperative preventive detention. The figures available for compensation for wrongful arrest represent the requests and decisions granting compensation for inoperative preventive detention (IPD) (https://mj.gouvernement.lu/fr/service-citoyens/detentionpreventive.html) as well as the total amount paid. We would like to point out, however, that in the context of the aforementioned law of 30 December 1981, it is not appropriate to speak of convictions, but of administrative decisions that can be appealed before the administrative courts.

(2021): The law of 1 September 1988 on the civil liability of the State and public authorities allows the State to be held civilly liable before the ordinary courts if a person considers that he or she has been victim of a defective functioning of the judicial bodies. Excessive length of proceedings or a conviction resulting from such malfunctioning could be grounds for such an action. These complaints are brought before first instance courts. However, complaints about excessive length of proceedings can also be brought before the European Court of Human Rights (violation of Article 6 of the European Convention on Human Rights) or result in a procedural sanction during the proceedings. However, these last procedural steps do not appear in our systems. Thus, the diversity of the actors involved makes it difficult to identify the claims and decisions on compensation for the different categories and does not allow us to provide figures that reflect reality. However, it was possible to complete the table concerning compensation for wrongful arrest, provided for by the law of 30 December 1981, concerning compensation for inoperative preventive detention. The figures available for compensation for wrongful arrest represent the requests and decisions granting compensation for inoperative preventive detention (IPD) (https://mj.gouvernement.lu/fr/service-citoyens/detentionpreventive.html) as well as the total amount paid. We would like to point out, however, that in the context of the aforementioned law of 30 December 1981, it is not appropriate to speak of convictions, but of administrative decisions that can be appealed before the administrative courts.

(2020): The law of September 1, 1988 on the civil liability of the State and public authorities allows the State to be held civilly liable before the ordinary courts if a person believes that he or she has been the victim of a defective operation of the judicial bodies. Excessive length of proceedings or a conviction resulting from such malfunctioning could be grounds for such an action. These complaints are brought before the courts of first instance. However, complaints about excessive length of proceedings can also be brought before the European Court of Human Rights (violation of Article 6 of the Convention on Human Rights) or result in a procedural sanction during the proceedings. However, these last approaches do not appear in our systems. Thus, the diversity of the actors involved makes it difficult to identify the claims and decisions on compensation for the different categories and does not allow us to provide figures that reflect reality. However, it was possible to complete the table concerning compensation for unjustified arrest, provided for by the law of December 30, 1981, concerning compensation for inoperative preventive detention. The figures available for compensation for wrongful arrest represent the requests and decisions granting compensation for inoperative preventive detention (IPD) (https://mj.gouvernement.lu/fr/service-citoyens/detentionpreventive.html) as well as the total amount paid. We would like to point out, however, that in the context of the aforementioned law of December 30, 1981, it is not appropriate to speak of convictions, but of administrative decisions.

(2019): The law of September 1, 1988 on the civil liability of the State and public authorities allows the State to be held civilly liable before the ordinary courts if a litigant considers that s/he has been the victim of a malfunctioning of the judicial bodies. An excessive length of proceedings or a conviction resulting from such a malfunction could motivate such an action. Such complaints are brought before first instance courts. However, complaints concerning the excessive length of proceedings may also be brought before the European Court of Human Rights (violation of article 6 of the ECHR) or result in a procedural sanction during the proceedings. However, these latter steps do not appear in our systems. Thus, the diversity of the actors involved makes the identification of claims and compensation decisions for the different categories difficult and does not allow for the provision of figures reflecting reality. However, it was possible for us to complete the table concerning compensation for unjustified arrest, provided for by the law of December 30, 1981 on compensation for inoperative pre-trial detention. The figures available for compensation for unjustified arrest represent the claims and decisions granting compensation in the context of inoperative preventive detention (IPR) (https://mj.gouvernement.lu/fr/service-citoyens/detention-preventive.html) as well as the total amount paid. However, we would like to point out that, in the framework of the above-mentioned law of December 30, 1981, we should not speak of convictions, but of administrative decisions.

(2016): In all cases compensation, in particular on the basis of the civil liability of the State, is possible, but there is no data.

Malta

(2021): Under article 3 of the 7th protocol of the European Convention for Human Rights there is the right to compensation for wrongful conviction whilst under article 5(5) of the European Convention of Human Rights (transposed as Chapter 319 of the Laws of Malta), there is the right to compensation for unlawful detention. For the purpose of the evaluation, 'unlawful detention' falls under the category 'Wrongful arrest' even if the difference between the two is being acknowledged.
For both categories, no data is available.

(2020): Under article 3 of the 7th protocol of the European Convention for Human Rights there is the right to compensation for wrongful conviction whilst under article 5(5) of the European Convention of Human Rights (transposed as Chapter 319 of the Laws of Malta), there is the right to compensation for unlawful detention.
However no data is available.

(2018): The items listed at Q37 form the basis of constitutional remedies on the basis of breaches of fundamental human rights. In this respect, such grievances are not covered by our compensation procedure and legislation.

(2016): The above requested data is not available, as in accordance with our system, an individual has to institute constitutional redress proceedings in order for the court to declare that the individual suffered a violation of his fundamental human rights resulting from length of proceedings or arbitrariness through detention. The compensation awarded by the domestic courts depends on the length of proceedings and the gravity of the case, and whilst such cases are instituted in accordance to Maltese law, this data is not available.

Netherlands

(General Comment): Numbers cannot be provided, as compensation may involve people who have been in custody but were not accused or found guilty, it may involve damages due to an arrest or possessed goods that have been damaged, sold, destroyed or gone missing. Numbers for compensation for wrongful arrest or wrongful conviction used to be generated by the Statistics Bureau (CBS), but that line of research was discontinued after 2016.

(2019): It's not possible to give specific numbers for these categories.
Compensation may involve people who were in custody, but were not accused or found guilty, it may involve damages due to an arrest, or possessed goods that have been damaged, sold, destroyed or have gone missing.
Numbers for compensation for wrongful arrest or wrongful conviction used to be generated by the Statistics Bureau (CBS), but that line of research was discontinued after 2016.

(2018): Numbers cannot be provided for this question, as the compensation may involve people who have been in custody but where not accused of found guilty, it may involve damages due to an arrest, or posessed goods that have been damaged / sold / destroyed / gone missing. I don't have numbers specific to the categories you ask for. Also, this involves only a restricted group of 'users'.

(2012): In 2012, in 4 783 cases compensation was awarded for wrongful detention.

Poland

(General Comment): The rules for granting a sum of money in case of finding excessive length of proceedings are specified in the Act of 17 June 2004 on complaints of violation of the right of a party to hear a case in preparatory proceedings conducted or supervised by a prosecutor and court proceedings without unreasonable delay. According to art. 12 para. 4 of this Act, having regard to the complaint on (excessive), the court adjudicates from the Treasury, and in the case of complaints about the length of the proceedings conducted by the bailiff - from the bailiff, a sum of PLN 2,000 to PLN 20,000. The amount of the monetary sum, within the limits specified in the first sentence, is not less than PLN 500 for each year of the current duration of the proceedings, regardless of the number of stages of proceedings related to the excessive length of proceedings. The court may award a sum of money higher than PLN 500 for each year of the current duration of the proceedings, if the case is of particular importance to the applicant, who by his attitude did not contribute in a manner to prolonging the proceedings. This sum includes the amounts already awarded 16 to the applicant as a sum of money in the same case. No monetary sum is granted in the event of a complaint filed by the State Treasury or public sector units of the public finance sector.
The accused, who was acquitted or condemned to a more lenient punishment as a result of the resumption of the proceedings or cassation, serves the State Treasury for damages and compensation for the harm suffered resulting from the execution of all or part of the punishment he was not supposed to incur. This provision shall also apply if the proceedings were discontinued after the convicting decision was abrogated as a result of circumstances which were not taken into account in the earlier proceedings. The right to compensation and redress also arises in connection with the application of a safeguard measure under the conditions laid down in those circumstances. Compensation and redress also apply in the event of undoubtedly unjustified detention or detention (Article 552 of the Code of Criminal Procedure).

**(2021): ***272- number of persons; *12 - number of persons
The amounts of compensations from chapter 75595 paid in 2021 ordered from the State Treasury are presented below, together with an indication of the legal acts on the basis of which the compensations were ordered.
Specification of damages from chapter 75595 amounts paid in 2021
1. Act of 23 February 1991 on declaring invalid judgments issued against persons repressed for activities in favour of the independent existence of the Polish state = EUR 21,625
2 Article 552 of the Act of 6 June 1997 - Code of Criminal Procedure = €6,707; 3 Act of 17 June 2004 on Complaint for Infringement of the Right of a Party to Investigate a Case in Pre-trial Proceedings Conducted or Supervised by a Public Prosecutor and in Judicial Proceedings without Undue Delay € 1,188
4 other damages: inter alia, compensatory pensions, compensation for property damage, unlawful eviction € 324
5 Act of 7 July 2005 on State compensation to victims of certain criminal acts 71 euro
Total compensation in chapter 75595 137 590 pln 29 915 euro
The amount of funds spent on the payment of compensation to entitled persons results directly from the content of judgments of independent courts deciding on the legitimacy of claims and the amount of compensation awarded. Course of implementation of the expenditure plan in chapter 75595 in the course of the financial year is therefore independent of the activities of the financial services of individual courts, since the payment of funds by the financial branch of the court occurs only on the basis of a final court ruling on the payment of compensation to the entitled person.

**(2020): ***229 - numer of persons
*19 - numer of persons
Regarding the content of question 37, we would like to inform you that the Ministry of Justice , within its jurisdiction has the following data on the amount of compensation payments also from Section 15 of the State Budget, Chapter 75595, adjudged by the State Treasury in 2020
Specification of compensation from Chapter 75595 in 2020 in euro: 1.On the basis of the Act of 23 February 1991 on the recognition of invalidrulings issued against persons repressed for activities for the benefit of the independent state of Poland - EUR 13 123 0002 On the basis of Article 552 of the Act of 6 June 1997 Code of Criminal Procedure (Journal of Laws of 2018, item 1987) 4 552 000 euro3. pursuant to the Act of 17 June 2004 on a complaint for violationof a party's right to examine a case in preparatory proceedings conducted or supervised by a prosecutor and court proceedings without undue delay (Journal of Laws of 2018, item 75) EUR 1 005 0004. other compensations: inter alia, compensatory pensions, compensation in property damage, unlawful eviction 114 000 euro
5. under the Act of 7 July 2005 on State Compensationto victims of certain criminal acts 32 000 euro
Total compensations from chapter 75595 - 18 826 000 euro
The amount of funds spent on compensation payments to entitled persons results directly from the content of judgments of independent courts deciding on the legitimacy of claims and the amount of awarded compensation. The course of implementation of the expenditure plan in chapter 75595 during the budget year is therefore independent of the actions of the financial services of individual courts, because the payment of funds by the financial branch of the court, occurs only on the basis of a final court decision to pay compensation to the entitled person.

(2019): The course of the implementation of the expenditure plan in chapter 75595 during the financial year is therefore independent of the actions of the financial services of individual courts, because the payment of funds by the financial department of the court takes place only on the basis of a final court ruling on the payment of compensation to the entitled person.
*Non execution of decision - 317- number of persons
*Wrongful conviction - 26- number of persons

Portugal

(General Comment): There is no data with these levels of disaggregation in Portugal.

Romania

(General Comment): There is no mechanism for calculating the compensation. The courts take into consideration the national case law and the jurisprudence of the European Court of Human Rights in similar cases.
Even if the civil regulations of material and procedural law do not provide special mechanisms for the compensation of individuals in case of excessive duration of procedures and non-enforcement of judgments, there are norms guaranteeing the right to a fair trial and at case settlement within a reasonable time-limit. In such circumstances, there is a possibility to pay certain sums of money as fines or even as a compensation. In criminal matters, the only possibility to obtain damages in case of procedural delays is the civil claim for damages, based on the provisions of the Civil Code. The new Civil Procedure Code (the Law 134/2010) provides for a much more efficient mechanism to this effect, respectively the contestation concerning the protraction of the case settlement. Thus, according to Article 522 para. (1) of the NCPC, any party, as well as the prosecutor attending the trial may make contestation by which, invoking the infringement of the right to the settlement of the trial within an optimal and reasonable time-limit, he/she solicits the adoption of legal measures remedying to this situation. Please, refer to the regulations of the NCPC as concerns the guarantee of the right to a fair trial and a case settlement within a reasonable time-limit.
The non-observance of judgments is incriminated as offence by Art. 287 of the Criminal Code. Within the criminal trial there may be also formulated the civil claim for damages for the non-enforcement of the judgment. The civil action may be also introduced separately, at the civil court. Both actions shall be judged according to the provisions of the Civil Code, regulating the delictual civil responsibility.
Illegal arrest and illegal conviction are situations circumscribed to judicial errors for which the Romanian state is responsible according to Art. 538-539 and the following of the Criminal Procedure Code (the Law 135/2010). For the appreciation in substance of the civil responsibility, common law rules laid down by the Civil Code apply. According to the provisions of the art. 538 of the Criminal Procedure Code, any person who suffered a wrongful condemnation or was, during a criminal trial, illegally deprived of his/her liberty is entitled to receive a compensation. The compensation should cover both the material and moral prejudices caused to that person. The amount of the compensation is to be determined by the court (the tribunal) in whose district the entitled person has its domicile. The entitled person should introduce a civil action against the state (which is represented by the Ministry of Public Finances), action which is exempted of any judicial fees.
Regarding the excessive duration of the criminal procedures, there is a remedy, but it is not compensatory - see art. 488 (index1) and the following of the Criminal Procedure Code.

(2020): There is no mechanism for calculating the compensation. The courts take into consideration the national case law and the jurisprudence of the European Court of Human Rights in similar cases.

Slovak Republic

(General Comment): The compensations for the excessive length of proceedings can be awarded by the Constitutional court in the finding on violation of the right to trial in the reasonable time. The compensation for wrongful arrest or conviction, non-execution of court decisions can be awarded by the court in the civil procedure. The aggrieved person can seek compensation against the state according to the Act on State Liability for Damage in Exercise of the Public Power.

(2019): The compensations for the excessive length of proceedings can awarded by the Constitutional court in the finding on violation of the right to trial in the reasonable time. The compensation was awarded in the amount of 375 912 eur in 2019.
The compensation for wrongful arrest or conviction, non-execution of court decisions can be awarded by the court in the civil procedure. The aggrieved person can seek compensation against the state according to the Act on State Liability for Damage in Exercise of the Public Power.
The number of requests for compensation delivered on the Ministry of Justice of the SVK was 214. Out of these only 4 request were satisfied:
one non-execution of court decisions (allocated amount 8.640,65 €),
one wrongful conviction (167,78 €),
two other (administrative mistake of the court, allocated amount 980,16 €).
Some of the unsatisfied request end up on the court in the civil procedure. During 2019 Ministry of Justice of SVK compensated in addition (due the court decision) in 45 cases in the amount of 553 395 euros. In these cases, we do not provide precise information on the reason for compensation, but we can say that in most cases it was compensation for wrongful conviction, in which the applicant was not found guilty.

(2018): The compensations for the excessive length of proceedings can awarded by the Constitutional court in the finding on violation of the right to trial in the reasonable time.
The compensation for wrongful arrest or conviction can be awarded by the court in the civil procedure. The aggrieved person can seek compensation against the state according to the Act on State Liability for Damage in Exercise of the Public Power.

Slovenia

(General Comment): The Protection of Right to Trial without Undue Delay Act gives a party to court proceedings the right to have his rights, duties and any charges brought against him in his case before the court to be decided upon by the court without undue delay, as well as a right to compensation, if the aforementioned right was infringed.
The procedure for compensation in the case of wrongful arrest and wrongful condemnation is regulated by the Criminal Procedure Act.
Before filing the claim for compensation with the court, the injured person has to address his claim to the Office of the State Attorney General to try and reach agreement about the existence of the damage and the type and extent of compensation. If the request for compensation is not granted or the Office of the State Attorney General and the injured person do not reach accord within three months of the filing of the request, the injured person may file a claim for compensation with the court.
The compensation, offered by the State Attorney's Office for wrongful arrest varies from case to case, since circumstances of the individual case (e.g. length of wrongful arrest, effect on the injured person's family life and his closest social circle, effects of media exposure, effect to injured person's health, etc.), as well as court decisions in similar cases, are taken into account.

**(2021): ***The figures above represent cases, closed in 2021, with compensations to be paid in 2021 or later. The figures above represent cases before courts only (court decisions and court settlements).
Data for procedures at the State Attorney for 2021 (before filing law-suit at court):
1. Excessive length of proceedings - Number of requests for compensation: 33;
Number of settlements: 10;
Total amount (in €): 21.715 EUR;
2. Wrongful arrest - Number of requests for compensation: 32;
Number of settlements: 8;
Total amount (in €): 63.174 EUR;
3. Wrongful conviction - Number of requests for compensation: 5;
Number of settlements: 0;
Total amount (in €): 0.

**(2020): ***The figures above represent cases, closed in 2020, with compensations to be paid in 2020 or later. The figures above represent cases before courts only.
Data for procedures at the State Attorney for 2020 (before filing law-suit at court):
1. Excessive length of proceedings - Number of requests for compensation: 60;
Number of settlements: 10;
Total amount (in €): 23.222;
2. Wrongful arrest - Number of requests for compensation: 30;
Number of settlements: 8
Total amount (in €): 140.330
3. Wrongful conviction - Number of requests for compensation: 8;
Number of settlements: 1;
Total amount (in €): 1.260.

**(2019): ***The figures above do not include cases at ECHR.
*The figures above represent cases, closed in 2019, with compensations to be paid in 2019 or later. The figures above represent cases
before courts only.
Data for procedures at the State Attorney for 2019 (before filing law-suit at court):
1. Excessive length of proceedings - Number of requests for compensation: 69;
Number of settlements: 22;
Total amount (in €): 35.956;
2. Wrongful arrest - Number of requests for compensation: 44;
Number of settlements: 16;
Total amount (in €): 99.493;
3. Wrongful conviction - Number of requests for compensation: 5;
Number of settlements: 1;
Total amount (in €): 36.460.

**(2018): ***The figures above do not include cases at ECHR.
*The figures above represent cases, closed in 2018, with compensations to be paid in 2018 or later. The figures above represent cases before courts only.
Data for procedures at the State Attorney for 2018 (before filing law-suit at court):
1. Excessive length of proceedings - Number of requests for compensation: 68;
Number of settlements: 17;
Total amount (in €): 31.105;
2. Wrongful arrest - Number of requests for compensation: 15;
Number of settlements: 9
Total amount (in €): 36.213,22
3. Wrongful conviction - Number of requests for compensation: 9;
Number of settlements: 2;
Total amount (in €): 68.648,98.

**(2016): ***The figures above do not include cases at ECHR.
*The figures above represent cases, closed at the State Attorney in 2016, with compensations to be paid in 2016 or later. *The figures above represent cases before courts only. Before filing the claim for damages with the court, the injured person has to address his claim to the Office of the State Attorney General to try and reach agreement about the existence of the damage and the type and extent of compensation. If the request for recovery of damages is not granted or the Office of the State Attorney General and the injured person do not reach accord within three months of the filing of the request, the injured person may file a claim for damages with the court. The compensation, offered by the State Attorney's Office for wrongful arrest varies from case to case, since circumstances of the individual case (e.g. length of wrongful arrest, effect on the injured person's family life and his closest social circle, effects of media exposure, effect to injured person's health, etc.), as well as court decisions in similar cases, are taken into account.. Data for procedures at the State Attorney for 2016: 1. Excessive length of proceedings - Number of requests for compensation: 71; Number of settlements: 37; Total amount (in €): 430.262; 2. Wrongful arrest - Number of requests for compensation: 50; Number of settlements: 31 Total amount (in €): 144.881 3. Wrongful conviction - Number of requests for compensation: 0; Number of condemnations: 0; Total amount (in €): 0.
The Protection of Right to Trial without Undue Delay Act gives a party to court proceedings the right to have his rights, duties and any charges brought against him in his case before the court to be decided upon by the court without undue delay. For detailed explanation on Excessice length of proceedings see Q40.
The procedure for compensation in the case of wrongful arrest and wrongful condemnation is regulated by the Criminal Procedure Act.

Spain

(2021): In 2021, 368 files were initiated for abnormal functioning of the Administration of Justice, 205 for preventive detention, 83 for judicial error. € 802.735 were paid for administrative condemnations and € 1.486.968 for judicial condemnations.
It is noteworthy that in Spain the causes of civil liability of the Administration of Justice are divided into a number of categories greater
than the one proposed by the CEPEJ. SOURCE: La Justicia dato a dato, (document issued by the CGPJ)

(2020): In 2020, 320 files were initiated for abnormal functioning of the Administration of Justice, 62 for preventive detention, 223 for judicial error. € 124.367,5 were paid for administrative condemnations and €445.491,3 for judicial condemnations.
It is noteworthy that in Spain the causes of civil liability of the Administration of Justice are divided into a number of categories greater
than the one proposed by the CEPEJ. The answer tries to group the Spanish categories into those of the CEPEJ.

(2019): In 2019, 347 files were initiated for abnormal functioning of the Administration of Justice, 151 for preventive detention, 79 for judicial error. € 3.484.896 were paid for administrative condemnations and €934.491,7 for judicial condemnations.
It is noteworthy that in Spain the causes of civil liability of the Administration of Justice are divided into a number of categories greater than the one proposed by the CEPEJ. The answer tries to group the Spanish categories into those of the CEPEJ. In the section 'wrongful conviction', we give the cases of the Spanish category of 'judicial error'. Possibly, other years these cases have simply been included in 'other'. It is a change of criteria with no effect on the total.

(2018): In 2018, 332 files were initiated for abnormal functioning, 104 for preventive detention, 94 for judicial error. € 722,888.06 were paid for administrative condemnations and € 1,210,585.35 for judicial condemnations

(2016): According Article 293 of the Organic Law of the Judicial Power: The interested party will direct his indemnification petition directly to the Ministry of Justice, processing it according to the regulatory norms of the patrimonial responsibility of the state. A contentious-administrative appeal will be available against the resolution. The right to claim compensation shall expire a year, from the day on which it could be exercised.
The number of requests because of "judicial error" (non exactly the same concept as Wrongful conviction) that were estimated in 2016 was ONE (1).

Q063-7 (2018): The data for the measurement tools is provided by the CMS, but there is no way get access to this data directly by using the CMS.

Belgium

Q062-7 (2021): For civil and/or commercial and criminal matters: local modification of models is always possible. As regards the Council of State (the highest administrative court in the country), administrative matters: for each type of procedure, there are templates of judgments which contain certain standardised paragraphs. This standardisation concerns in particular the part relating to the conduct of the proceedings. Constant harmonisation work is carried out under the impetus of the First President and with the help of the Chief Registrar. Some documents are now generated automatically on the basis of information contained in our internal databases (e.g. setting orders and hearing tables). However, there are no writing assistance tools as such.
It should be noted that, following a change initiated in 2007, the Council of State's judgments have all been written in direct style since 2017. This generalisation of the direct style has ensured greater uniformity in the presentation of judgments.
Judges of the Belgian Council of State have a number of tools at their disposal: legal databases are maintained internally and made available to the public as well (Juridict www.juridict.be, refLex www.reflex.be, etc.); access is provided to private, paying legal databases (StradaLex www.stradalex.be, Jurisquare www.jurisquare.be, etc.); an intranet managed by the Council of State also centralises all documents produced by the Council of State (judgments, orders, reports, etc.) - it is called Documap; the Council of State's website also offers numerous search options www.raadvst-consetat.be.

Q062-7 (2020): "For civil and/or commercial and criminal matters: local modification of the models is always possible. As regards the Council of State (the highest administrative court in the country); administrative matters:
1. For each type of procedure, there are models of judgments which include certain standardized paragraphs. This standardization concerns in particular the part relating to the course of the procedure. A constant work of harmonization is carried out under the impulse of the First President and with the help of the Chief Clerk.
Some documents are now generated automatically on the basis of information taken from our internal databases (e.g. setting orders and hearing tables).
However, there are no "judgment drafting tools" as such.
2. It should be noted that, following an evolution initiated in 2007, the judgments of the highest administrative Courts - since 2017 - all written in direct style. This generalization of the direct style has made it possible to ensure greater uniformity in the presentation of judgments.
3. The magistrates of the Belgian highest administrative Courts have many tools at their disposal:
- legal databases are maintained internally and made available to the public as well (Juridict www.juridict.be , refLex www.reflex.be , etc.);
- access is provided to private, paying legal databases (StradaLex www.stradalex.be , Jurisquare www.jurisquare.be , etc.);
- an intranet managed by the Council of State also centralizes all documents produced by the Council of State (judgments, orders, reports, etc.). It is called Documap.
- The website of the highest adminsitrative Courts also offers numerous search possibilities www.raadvst-consetat.be.
"

Q062-7 (2019): Administrative: For each type of procedure, there are models of judgments within the Council of State which include certain standardized paragraphs. This standardization concerns in particular the part relating to the course of the procedure. A constant work of harmonization is carried out under the impetus of the First President and with the help of the chief registrar. Certain documents are now generated automatically on the basis of information contained in our internal databases (fixing orders and audience tables, for example). Strictly speaking, however, there are no "drafting aid tools" for judgments.
2. It should be noted that following a development initiated in 2007, the judgments of the Council of State have - since 2017 - all been drafted in direct style. This generalization of the direct style made it possible to ensure greater uniformity in the presentation of judgments.
3. The magistrates of the Council of State of Belgium have many tools at their disposal:
- legal databases are kept up to date internally and also made available to the public (Juridict www.juridict.be, refLex www.reflex.be, etc.);
- access is offered to private and chargeable legal databases (StradaLex www.stradalex.be, Jurisquare www.jurisquare.be, etc.);
- an intranet managed by the Council of State also centralizes all the documents produced by the Council of State (judgments, ordinances, reports, etc.). It is called Documap.
- the website of the Council of State also offers many search possibilities www.raadvst-consetat.be.

Q062-8 (2021): Comment on Q62-8
The provision of a simple dictation tool is based on an individual online request with a specific and restrictive allocation policy.

Q062-8 (2020): "comments for questions 62-1 through 62-9:
Provision of a simple dictation solution is on an individual online request basis with a specific and limiting allocation policy."

Q063-6 (2019): Budget and financial management: the Fedcom systemhas been launched as a pilot project in the College of Courts and Tribunals.
Since the 1st January 2020, within each judicial district there has been a “court costs office” responsible for processing and paying court costs. The office uses a new system focused on fully digital management.
Other: The court fee (Rolrechten / droit de role) is centralized in one national system and communicated to the department of Finance. The status of the payment is returned from the department of finance to the department of justice

Q063-7 (2019): The Aris tool has been launched as a pilot project by the prosecution to measure workload both at central and local level, both for prosecutors of non-prosecutor staff.
Q063-7 (2018): A pilot project is being launched by the Public Prosecutor's Office for an instrument to measure workload at both central and local levels. The Aris instrument will be tested in pilot courts.

Bulgaria

Q062-7 (2020): Pursuant to Article 55 of the Civil Procedure Code, the Minister of Justice issues an ordinance approving the samples of all papers related to service. The amendment of the samples is done by amending and supplementing the ordinance.

Q063-7 (2020): With a decision of the Prosecutors Chamber with the Supreme Judicial Council of Bulgaria (SJC) dated 18.12.2019, as of 01.01.2020, Rules for measuring the workload of the prosecutor's offices and the individual workload of each prosecutor and investigator have been adopted. With a decision of the SJC of 16.12.2015, Rules for assessment of the workload of judges have been adopted.
The instruments do not refer to court employees, but only to judges, prosecutors and investigators within the prosecutor's offices and courts in the Republic of Bulgaria.

Q063-7 (2018): By decision of the Supreme Judicial Council of Bulgaria (SJC) of 11.12.2014, as of 01.01.2015, Rules for measuring the workload of the prosecution offices and the individual workload of each prosecutor and investigator were adopted. By decision of the SJC of 16.12.2015, as of 01.04.2016, Rules for assessment of the workload of judges were adopted. The instruments do not refer to judicial officers, but only to judges, prosecutors and investigators within the prosecutor's offices and courts in the Republic of Bulgaria.

Czech Republic

Q062-7 (2021): It depends on the court agenda. Some information systems for specific agendas can automatically create documents based on the predefine template, data stored in the system and the selected procedural action by a user. Some older information systems have a dedicated external application that allows the creation of the required documents based on user input (application called “APSTR”), and for some court agenda the writing assistance tools are not available at all. Regarding the process of coordinating new templates, the origin of the templates varies. Some are developed by the Ministry of Justice, others are created on the national level in cooperation with experts and court staff. Templates created at the national level can be and are modified in some court agendas at the local level by individual courts or in some cases by individual users.

Q062-7 (2020): The templates are available for all courts but do not cover all matters.

Q062-7-1 (General Comment): The templates are available for all courts but do not cover all matters.

Q062-8 (2021): Most courtrooms have installed specific voice recording tools for recording several separate audio tracks. The project regarding “spoken word-to-text conversion” was realized in the proof-of-concept stage. Based on the results of the project and other factors, the spoken word-to-text project has been included in the National Recovery Plan and will be realized in the upcoming years.

Q063-6 (2021): All Czech courts are using for budgetary and financial management information system called IRES. This system is used to generate and manage payment transactions, record assets, receivables, payables and other related areas. Although the IRES system (in the sense of all local court distributions) communicates with the National Treasury, which could be thought of as a centralized point where data is consolidated at the national level, it is not a tool/system that allows for easy data consolidation or direct analytical activities for the benefit of judicial agendas. The IRES system is not primarily used for the justice expenses management of exclusively judicial items such as court fees, litigation costs, etc. This data is not available to the chiefs judges of the courts from the IRES system in a comprehensive form and on a court-by-court basis. Selected judicial information systems that manage the certain justice agenda are able to report the necessary information on justice expense data. These information systems then use IRES to make and record payments.

Q063-6 (2020): The budgetary information system is called IRES and is used by the Ministry of Justice since 1995.

Q063-7 (2020): The measurement tool is only available to assess the workload of judges and public prosecutors.

Denmark

Q062-7 (2020): For civil/commercial cases the availability rate slightly decreased as we simply went through the different areas of use and the different patterns of uses and found that there were certain areas where we were not covered.

Q062-7 (2019): For civil/commercial cases the availability rate slightly decreased as we simply went through the different areas of use and the different patterns of uses and found that there were certain areas where we were not covered.

Q062-7 (2015): 62.7 assistance tools are also available in criminal cases, probate cases, enforcenemt cases and land registration cases

Q062-8 (2021): In addition to voice recording, the Danish Court administration have implemented speech-recognition in connection with certain court precedings. Further implementation of a wider roll-out of speech-recognition is being evaluated currently.

Q062-8 (2020): We had some testing of the quality of voice recognition and found that the software was unreliable in regards to the Danish language. We are again moving forward with this initiative.

Q062-8 (2019): We had some testing of the quality of voice recognition and found that the software was unreliable in regards to the Danish language. The response is based on the multiple choice fields and by pilot testing, we simply mean light testing and we are not moving forward with this initiative.

Q063-6 (General Comment): We have multiple tools in the various courts available for controlling and managing costs and the degrees to which they are being used varies. This data is relatively unknown by the central organization and this is our best estimate.
Activity in terms of weighted cases is used also in allocation of resources.

Q063-6 (2019): We have multiple tools in the various courts available for controlling and managing costs and the degrees to which they are being used varies. This data is relatively unknown by the central organization and this is our best estimate.
Activity in terms of weighted cases is used also in allocation of resources.

Q063-7 (General Comment): We measure how much time each judge or staff on different categories of work (civil cases, criminal cases, administration etc.). We calculate the activity a court creates in weighted cases. We therefore measure productivity. For prosecutors: There is a well-implemented time recording system where the Prosecution Service´s staff weekly report their time spent on specific tasks, e.g. court work, formal charging, dropping of cases/withdrawal of charges, transport time to and from court, training etc. The time recording system is also used to report work outside normal working hours (overtime), including shifts for which a separate fee is paid. In addition, the number of prosecutions and withdrawal of charges is measures, with each charge weighted according to a specific system. Time recording data is used in calculations of the Prosecution Service´s case production and efficiency – and thus also in the management information in QlickView that is available on the Prosecution Service at national level as well as for the individual police districts and State Prosecutor´s offices.

Q063-7 (2021): Judges above: Danish Court Administration has chosen 10-49 %. It might be higher. The point is that on district courts, all judges either fill out how time is spend on a daily basis, or - for appointed judges - on a half-yearly basis. At some courts, the court has decided that the judges despite Danish Court Administration does not demand it, anyway fill out this daily information. At a High Court and Supreme court level this is not done though. So it is not an absolute. Therefor 10-49 %. Data are used by Danish Court Administration. It is up to the individual court, how they use and how closely they monitor the staff (Judges). The same counts for non-judge staff. Danish Court Administration has no data re prosecutor staff. Overall, there has not been changes to the systems that help assess how the workload is for public prosecutors but due to ongoing interest in how the workload is distributed – not only for the single employee but also the districts between – it is estimated that there has been an increase in the percentage. The workload is monitored in more general terms centrally through the Attorney General's office and locally the districts/local prosecution monitor their prosecutors and the workload more closely. The estimate of 50-99% is therefore not an absolute but an estimate since there has been an increase in the focus on monitoring the workload. For prosecutors: There is a well-implemented time recording system where the Prosecution Service´s staff weekly report their time spent on specific tasks, e.g. court work, formal charging, dropping of cases/withdrawal of charges, transport time to and from court, training etc. The time recording system is also used to report work outside normal working hours (overtime), including shifts for which a separate fee is paid. In addition, the number of prosecutions and withdrawal of charges is measures, with each charge weighted according to a specific system. Estonia

Q062-7 (2018): It's available for everyone, but not everyone uses it.

Q062-8 (2020): Courts have adopted voice recognition software.

Q062-8 (2019): Should be available by the end of 2020.

Q063-6 (2021): "Other": For example, all the costs related to state legal aid.

Q063-6 (2020): "Other": For example, all the costs related to state legal aid.

Finland

Q062-8 (2020): Simple dictation tools are "not available", as the dictation tools are not used to dictate so that someone could type it later. Availability of multiple speakers recording tools: Witness statements are recorded in the courts to a centralized server from which they can be accessed by a higher court handling the appeal.
Q062-8 (2018): Dictation tools are no longer used as they are considered to be old-fashioned technology. Witness statements are recorded in the courts to a centralized server from which they can be accessed by a higher court handling the appeal. Voice recognition tools are tested, but there is not good enough product yet on the market for the Finnish language.

Q063-7 (2021): There is a system for collecting data on handling cases and this is deployed to all courts.
In administrative courts Power BI software is compatible with the new case management system, HAIPA. During the transition period,
the administrative courts also use the Business Objects Board software (BOBI) the cases still pending in the old case management
system.
The general courts are also transitioning to a new case management system, AIPA. However, the number of cases in the new system was much lower than in the administrative courts. Similarly, during the transition period, the general courts also use the Business Objects Board software (BOBI) the cases still pending in the old case management system.
Due to data protection, only the court were the judge / staff member works, looks at the data related to an individual. The heads of courts are able follow the number of cases resolved by the judge. Often, this data is not used on detailed/short term manner. Rather, it may be used at a court level (for example in budget negotiations) and as a long term indicator, or in case of a sudden and radical change in judges output (but even then not as a tool for disciplinary measure). In addition, there is a tool for reporting the working hours is 'deployed' to the courts 100% in the sense that it is available and accessible. We estimated the use to correspond '50-99%'.

Q063-7 (2020): There is a system for collecting data on handling cases and this is deployed to all courts.
In administrative courts Power BI software is compatible with the new case management system, HAIPA. During the transition period, the administrative courts also use the Business Objects Board software (BOBI) the cases still pending in the old case management system.

Similarly, during the transition period, the general courts also use the Business Objects Board software (BOBI) the cases still pending in the old case management system.
Due to data protection, only the court were the judge / staff member works, looks at the data related to an individual. The heads of courts are able follow the number of cases resolved by the judge. Often, this data is not used on detailed/short term manner. Rather, it may be used at a court level (for example in budget negotiations) and as a long term indicator, or in case of a sudden and radical change in judges output (but even then not as a tool for disciplinary measure). In addition, there is a tool for reporting the working hours is 'deployed' to the courts 100% in the sense that it is available and accessible. We estimated the use to correspond '50-99%'.
For prosecutors: The data is used for monitoring at national level and at local level. The tool used (BOBI) is not connected to the CMS. PowerBI software will be introduced in 2021 for statistical and monitoring purposes, and the preparation were done in 2020. Similarly, the introduction of the new case management system AIPA and the new administrative register HILDA in 2021 were prepared in 2020.

Q063-7 (2019): The courts and the prosecutors' offices use Business Objects XI software (BOXI) which is now updated to Business Objects
Board software (BOB). In administrative courts Power BI software is integrated to case management system.
The tool is 'deployed' 100% in the sense that it is available and accessible. However, judges are not required to use the tool, so it is not used 100%. We estimated the use to correspond '10-49%'. The heads of courts are able follow the number of cases resolved by the judge. However, this is usually not used on detailed/short term manner. Rather, it may be used at a court level (for example in budget negotiations) and as a long term indicator, or in case of a sudden and radical change in judges output (but even then not as a tool for disciplinary measure). Similarly to judges, the process servers record their hours in a different manner, and we estimated the use to correspond '50-99%'.

Q063-7 (2018): The courts and the prosecutors offices use Business Objects XI software (BOXI) which is now updated to Business Objects Board software (BOB). In administrative courts, Power BI software which is integrated to case management system is being tested.

France

Q062-7 (2021): In criminal matters: the templates available in the applications cover a large part of the criminal law field. However, in some cases, it is still necessary for judges and court clerks to make changes.
The new templates or those to be modified as a result of legislative reforms and the templates not present in the application are available on the ministerial intranet before being integrated into the applications in order to facilitate the work of the registry staff during the development phases. Source DSJ and DACS.
Q062-7 (2019): Cassiopée for all « Tribunaux de grande instance »
APPI for execution of sentences services
MINOS for police courts
Q062-7 (2018): Penal: Cassiopeia for all IMTs; APPI for enforcement services; MINOS for police courts

Q062-8 (2021): Source Council of State

Q062-8 (2019): Positive reply only with regard to administrative justice.

Q062-8 (2018): Such tools exist but their use is not generalised

Q063-6 (2021): Data on civil, criminal and administrative justice. Sources: DSJ and Council of State

Q063-6 (2020): "Concerning ""other"", neither of the two orders of jurisdiction has provided an answer.
Answers from the judicial and administrative justice "
Q063-6 (2019): Reply concerning the administrative justice.

Q063-6 (2018): data related to administrative justice

Q063-7 (2021): As regards administrative justice, the answer is no, source: Council of State
Concerning civil and criminal justice: The answer is yes, partially. Yes for non-judge staff. In fact: the Management and Distribution Tool for Civil Servants (OUTILGREF) was created in 1992. It has been online via the private Justice network since 2006. It measures the workload of registry officials (i.e. excluding legal assistants and specialised assistants) and assesses the need for registry staff (FTE) in the courts and regional administrative services (RAS) in relation to the activity of these structures, the need being understood as the volume of staff required to process the annual flow of cases so as not to generate any stock. This is a single tool for all courts and RAS, which exhaustively lists the court and administrative activities of the registry. It also includes an assessment of the workload of the common or support services. It is regularly updated in line with reforms and changes in working methods, in particular, to ensure its reliability and accuracy. A data collection exercise is carried out each year to feed it. See table 63.7.1.
As regards judges and prosecutors, the answer is currently no. However, since December 2019, the Directorate of Judicial Services (DSJ) has been working on a more effective management tool to measure the activity of judges, based on a case weighting system (SPA).
Operational case weighting tables should be available by the end of 2022 for the first instance, once the results of the survey conducted in the pilot courts have been analysed.
This is an ambitious, long-term project, as the quality of the tool developed is a necessary condition for its acceptability within the judicial institution but also for its credibility outside the Ministry of Justice, particularly during budget negotiations. The objectives of this work are as follows: 1) To gain a more rapid and detailed understanding of changes in judicial activity and the national need for judges and prosecutors to deal with them, i.e.: to give greater objectivity to staffing requests made during budget negotiations in the context of the preparation of a finance bill; more accurately assess the impact of reforms or changes in public policy on the national need for magistrates.
2) Promote greater equity in the distribution of staff allocated by the Finance Act among the courts in the country.
At the national level, the DSJ has drawn on previous work carried out on this subject within the directorate, but also on the recommendations made by the Court of Auditors in its December 2018 report entitled "Methodological approach to the costs of justice", asking the Ministry of Justice to build a system for allocating resources associated with a "case weighting system inspired by foreign models based on a typology of court cases allowing for an efficient allocation of resources and better management of justice".
It also drew on the work of the Council of Europe's Commission for the Efficiency of Justice (CEPEJ) which, on 2 July 2020, adopted a report on the weighting of court cases, encouraging the member States of this European organisation to adopt a system for measuring the activity of the courts based on a weighting by type of case in order to improve the efficiency of the management of justice.
A weighting table must therefore be drawn up for each judicial function performed within the courts and courts of appeal. This table will be organised around jurisdictional activity but also support activity.
To achieve this, the DSJ has favoured peer-to-peer working meetings (the so-called Delphi method). A working group (WG), made up of representatives of the conferences of heads of court and jurisdiction, professional associations of judges (investigation judges, enforcement judges, juvenile judges, judges specialised in protection litigation, etc.), trade unions and

Q063-7 (2020): "For non-judge staff: the Civil Servant Job Management and Distribution Tool (OUTILGREF) was created in 1992. It has been online via the private Justice network since 2006. It measures the workload of court registrars (i.e., excluding legal assistants and specialized assistants) and evaluates the need for court clerks (etpE) in the courts and regional administrative services (SAR) with respect to the activity of these structures, the need being understood as the volume of agents necessary for the annual processing of the flow of cases in order to not generate any stock. This is a single tool for all the courts and the regional administrative services, which exhaustively lists the court and administrative activities of the registry. It also includes an evaluation of the workload of the common or support services. It is regularly updated according to the reforms and the evolution of working methods in particular, to guarantee its reliability and sincerity. A data collection operation is carried out each year to feed it.
With regard to magistrates (judges and prosecutors), the French Ministry of Justice is currently conducting work to better measure their workload. A system for evaluating their activity, based on the weighting of court cases, is being developed and should, by the end of 2022, provide a better understanding of the activity of courts and tribunals, as well as a more accurate allocation of resources between jurisdictions and within the departments of the same jurisdiction. With this in mind, a working group has been set up and has met more than ten times since December 2019, with the Ministry favouring peer-to-peer meetings (Delphi method), which is based on an estimate of time in order to establish the weighting table.
[2] For non-judge staff, the Outil de Gestion et de Répartition des Emplois de Fonctionnaires (OUTILGREF) was created in 1992. It has been online via the private Justice network since 2006. It measures the workload of court registrars (i.e., excluding legal assistants and specialized assistants) and evaluates the need for court registrars (etpE) in the courts and regional administrative services (SAR) with respect to the activity of these structures, the need being understood as the volume of agents necessary for the annual processing of the flow of cases in order to not generate any stock. This is a single tool for all the courts and the regional administrative services, which exhaustively lists the court and administrative activities of the registry. It also includes an evaluation of the workload of the common or support services. It is regularly updated according to the reforms and the evolution of working methods in particular, to guarantee its reliability and sincerity. A data collection exercise is carried out each year to feed it.
On the other hand, the answer given by the administrative justice is "no".

Q063-7 (2014): As regards the judiciary, the software “Outil de Gestion et de Répartition des Emplois de Fonctionnaires” (OUTILGREF) measures the workload of court clerks, and assesses the specific needs of the jurisdictions. This workload is calculated based on indicators which measure the average flow of new cases filed by a jurisdiction for a period of one year. Evaluations made through the OUTILGREF tool help monitor the localisation of court clerks vacancies in jurisdictions. This monitoring operation takes place once a year, and comparable operations exist for the completion of impact studies of draft legislation and regulation which may affect clerks. OUTILGREF is a tool shared by both the central administration and decentralised departments to analyse the activity of jurisdictions.

As regards the administrative courts, equipment rate of tools used to measure workload is evaluated to 10-49%.

Germany

Q062-8 (2021): Availability of simple dictation tools: The vast majority of the Länder have them available in all courts, the remaining Länder have them available in most courts.
Availability of multiple speaker recording tools:
Availability differs greatly among the Länder. Overall, the answer "in some courts" describes the situation best. Availability in civil and criminal matters seems to be slighty higher than in administrative matters.
Q062-8 (2018): No statistical information available on the prevalence of multiple speakers recording tools and voice recognition features.
Q063-6 (2021): "Budgetary and financial management of courts"
Tool deployment rate: A slight majority of the Länder answered "50-99 %". The remaining Länder have a tool deployment rate of 100%. 2 Länder answered "NA". Data consolidated at national level: The Federal Ministry of Justice has answered this question with "yes" with regard to the courts at federal level. A slight minority of the Länder replied "yes", while the slight majority replied "no". One of the Länder answered "no" for the labour and administrative courts and "yes" for the remaining courts. 3 Länder could not provide an answer. "Justice expenses management"
Tool deployment rate: A slight majority of the Länder answered "100 %". Half of the remaining Länder answered "50-99%" while the other half answered "10-49%". One of the Länder answered "NA".
Data consolidated at national level: The Federal Ministry of Justice has answered this question with "yes" with regard to the courts at federal level. The majority of the Länder answered "no". 2 Länder could not provide an answer.
"Other"
Tool deployment rate: The vast majority of the Länder answered "NA".
"Other" tools that are in use in the remaining Länder are tools for medium term fiscal planning (consolidated on national level: yes; communicating with other ministries: yes) and case management at the finance courts (consolidated at national level: no; communicating with other ministries: no)

Q063-6 (2020): Since "Other" was answered with "NA" by most of the Länder, Tool deployment rate, consolidated data and system communicating were also answered "NA".
Information on "other" budgetary and financial management systems submitted by Baden Württemberg:
Justice budget and budget calculation, medium term fiscal planning
Deployment rate: 100%, System communicating with other ministries: yes

Q063-6 (2018): Name of the tool: HV SAP

Greece

Q062-7 (2019): In the context of the Informational System OSDDY PP there are provided templates for certificates, case files and other documents that are used in the judicial proceedings.
Q062-8 (2021): The system of keeping minutes of court meetings has been extended to criminal proceedings following the signing of a new relevant contract.
Q063-6 (2021): The answer was given by the Directorate of Budget and Financial Management.

Hungary

Q063-6 (2021): NEXON HR - budgetary aspects of human resource management, KIRA - management of wages.

Q063-6 (2020): NEXON HR - budgetary aspects of human resource management, KIRA - management of wages.

Q063-6 (2019): Other: NEXON HR - budgetary aspects of human resource management, KIRA - management of wages.

Q063-6 (2018): NEXON HR - budgetary aspects of human resource management, KIRA - management of wages.

Q063-7 (2021): A methodology to conduct workload assessment was developed at the General Prosecutor's Office; however, it has not yet been finalised. The methodology can be summarized as follows:
I. ACTIVITY INDICATORS ("TM")
- In the system of criminal prosecution indicator, a weight is assigned to each outcome available in the criminal prosecution case management system, between 0 and 5. For instance, 1 is assigned when a decision rejecting a report of crime is ordered to be amended, 3,5 is assigned in case of raising charges.
- The system also allocates a weight to each criminal offense (the most significant offense within a case, and regardless of aggravated circumstances), between 1 and 9. For instance, driving under the influence of alcohol is given 2,8 points, while money laundering is given 8,5. - The system weighs the number of the defendants involved in a case, depending on whether the outcome related to the whole case or a to a person involved. In cases involving not more than 20 defendants, 1 point is given to one defendant, and 0,1 point is given to each additional defendant. The activity indicator is calculated as follows: the system records the weight assigned to the outcome, multiplies it with the weight assigned to the offense, and that result is multiplied again with the weight assigned to the number of defendants. If the outcome is related to a whole case, the weight numbers aligned with the number of defendants are applied. If the outcome concerns one particular person, the calculation is repeated according to the number of defendants, without using the weight numbers aligned with the number of defendants. The organizational activity indicator is an aggregate of all the activity indicators calculated by the above method.
II. STAFF NUMBER ("L")
Staff numbers are calculated on the basis of the weighed staff number of each organizational unit on the last calendar day of a given month, by taking into account actually filled positions, except for chief prosecutors, deputy chief prosecutors and heads of department. Staff numbers are weighed according to the weekly worktime and the field of activity.
III. WORKLOAD INDICATOR ("MT")
Activity indicators are aggregated on a monthly basis at each organizational unit. After that, the aggregate number is divided by the staff number of the month in question. So, the workload indicator of an organizational unit is the result of the division of the aggregated activity indicator by the staff number: MT = TM / L
By adding up the monthly workload indicators, quarterly and yearly figures can be calculated in respect of each unit. Nevertheless, adding up the workload indicators of several organizational units will unduly distort, i.e. multiply the result. So, it is impossible to determine the workload of a high prosecution service by adding up the already calculated workload indicators of the district prosecution services within the area of jurisdiction of the high prosecution service, as well as the workload indicator of the high prosecution service itself. To get the correct result, one must add up the activity indicators (TM), respectively the staff numbers, and then one must carry out the division.
The above system is capable of (1) showing the changing trends of workload in respect of a particular organizational unit, as well as of comparing the workload of several organizational units in respect of the same field of activity.
The system, however, is incapable of measuring a prosecutor's individual workload. The distribution of workload within a unit can be measured still by the detailed examination of case files. Furthermore, the system is not really capable of comparing workloads concerning different fields of activity.

Ireland

Q062-7 (2021): The tools used for administrative are the same as for civil cases since Ireland does not operate administrative courts
Q062-7 (2020): The tools used for administrative are the same as for civil cases since Ireland does not operate administrative courts
Q062-7 (2015): 62.7 - Court Registrars at the various jurisdictional levels have access to template/model court forms (orders, warrants etc.) case tracking systems, staff intranet or shared folders. The Courts Service provides Dragon software, which is a voice recognition application, to all judges on request. "Winscribe" is provided to all High Court, Court of Appeal and Supreme Court judges on request. 62.10 - Information of an educational nature is available to judges via a judges intranet and a sentencing information website. Courts staff can access training materials via the Training and Development Section of courts links on the Courts Service network. The Training Unit is also planning the introduction of a new online video-based training function.

Q062-8 (2021): The tools used for administrative are the same as for civil cases since Ireland does not operate administrative courts
Q062-8 (2020): The tools used for administrative are the same as for civil cases since Ireland does not operate administrative courts
Q063-7 (2021): The Judicial Council was established in 2019 pursuant to the Judicial Council Act 2019. Further information is available on their website.
https://www.irishstatutebook.ie/eli/2019/act/33/enacted/en/html?q=judicial+council+act https://judicialcouncil.ie/about-the-judicial-council/

Italy

Q062-8 (2021): As far as civil cases are concerned, multiple speakers recording tools are available in all courts which deal with labour disputes.
Q062-8 (2019): The whole justice personnel is now provided with Office 2016 licences, which have dictation tools integrated.

Q063-7 (2021): The same tool might potentially be used to assess the workload of both magistrates and their staff. The monitoring of the activity of judges/prosecutors is eventually used to assess their evaluation. The same doesn't apply to court staff, hence the answer 0 provided in the previous cycle.

Latvia

Q063-6 (2015): Q63.6. - With both financial management system and system for budget planning and budget performance monitoring works only staff from Court Administration

Lithuania

Q062-7 (General Comment): Templates are prepared and stored in the Lithuanian Courts Information System (LITEKO) together with special tools for filling them with metadata. Also, templates are prepared in administrative offence and pretrial cases and are available in Lithuanian Courts Information System (LITEKO) and the Integrated Criminal Process Information System (IBPS).
Q062-7 (2019): Templates are prepared and stored in the Lithuanian Courts Information System (LITEKO) together with special tools for filling them with metadata. Also, templates are prepared in administrative offence and pretrial cases and are available in Lithuanian Courts Information System (LITEKO) and the Integrated Criminal Process Information System (IBPS).

Q062-7 (2018): Templates are prepared and stored in the Lithuanian Courts Information System (LITEKO) together with special tools for filling them with metadata. Also, templates are prepared in administrative offence and pretrial cases and are available in Lithuanian Courts Information System (LITEKO) and the Integrated Criminal Process Information System (IBPS).

Q062-8 (2020): The courts hearings are recorded in all courts and cases, the record substitutes the written protocol except the criminal case and is made in all cases with some specific exceptions, when the protocol is not required (e.g. some administrative offence cases or when the case is dealt with by written procedure).
Q062-8 (2019): The courts hearings are recorded in all courts and cases, the record substitutes the written protocol except the criminal case and is made in all cases with some specific exceptions, when the protocol is not required (e.g. some administrative offence cases).
Q062-8 (2018): The courts hearings are recorded in all courts and cases, the record substitutes the written protocol except the criminal case and is made in all cases with some specific exceptions, when the protocol is not required (e.g. some administrative offence cases).

Luxembourg

Q062-7 (2021): All magistrates and clerks have access to these assistants, however not the entire scope of documents is covered, as the possibility to use free text is essential to the work of the judiciary. Administrative courts have been provided with a new application in 2018.
Q062-7 (2020): All magistrates and clerks have access to these assistants, however not the entire scope of documents is covered, as the possibility to use free text is essential to the work of the judiciary. Administrative courts have been provided with a new application in 2018.
Q062-7 (2019): All magistrates and clerks have access to these assistants, however not the entire scope of documents is covered, as the possibility to use free text is essential to the work of the judiciary. Administrative courts have been provided with a new application in 2018.
Q062-7 (2018): All magistrates and clerks have access to these assistants, however not the entire scope of documents is covered, as the possibility to use free text is essential to the work of the judiciary. Administrative courts have been provided with a new application in 2018.
Q062-8 (2021): The use of private dictation applications is tolerated, but they are not in general used.
Q062-8 (2020):
The use of private dictation applications is tolerated, but is not in general use.
Q062-8 (2019): The use of private dictation applications is tolerated, but is not in general use.
Q062-8 (2018): The use of private dictation applications is tolerated, but is not in general use.
Q063-7 (2014): Luxembourg does not use tools to measure the workload of magistrates to monitor their activity, but merely for statistical purposes.

Malta

Q062-7 (2018): Reference is being made to the Case Management System

Q062-8 (2021): The Courts Services Agency were piloting new software that recognises voices in Maltese and translates speech to text. The software is currently being piloted in other courts as well with the intention of implementing it across all courts by 2023.

Netherlands

Q062-7 (General Comment): The tool ‘Schrijfhulp’ (‘Writing Assistance’) e.g. helps people write a response to a summons. Templates for the courts are approved centrally, so if they are available, they would be available for all courts, but no specific information is available.

Q062-7 (2020): There is a tool, called 'Schrijfhulp' (writing assistance), which is a tool that helps people e.g. write a letter to respond to a summons.

Q062-8 (General Comment): In some courtrooms, sound is recorded to an SD-card. This is solely to assist in reporting, it is not a product in itself. The level of automation/comperization differs betwee courts and types of courts, which makes it difficult to report on how often and how much voice-recording tools are used. Voice recognition is not used.

Q062-8 (2020): In some courtrooms, sound is recorded to an SD-card. This is solely to assist in reporting, it is not a product in itself. The level of automation / computerization differs between courts and types of courts, which makes it difficult to report on how often and how much voice recording tools are used. Voice recognition is not used.

Q062-8 (2019): There are some court rooms with sound recordings to an SD-card. This is solely to assist in the reporting. It is not product in itself.
The level of automisation differs between courts and types of courts, which makes it difficult to report how much voice recording tools are used. Voice recognition is not used.
Q062-8 (2018): A value must be entered for each question !
I am unable to answer yes or no, because I don't know.

Poland

Q062-7 (2020): So called e-Protocol system – financed from EU funds
Registration form for notification of erroneous activities of IT systems, information from the National Court Register, Application form for access to public information, Civil complaint forms, Forms of bankruptcy complaints - "consumers", National Court Registry forms, formulas for reserve management services and forwarded to Central Information on Registered Pledges, Information request forms with the National Criminal Register, Application form for execution and reporting bailiff operations, inventory configuration list, toolkit form for central information on registered sets, formula for court and economic judgment.
It is difficult to assess it due to the different degree of computerization of litigation and non-litigious proceedings, as well as the uneven use of various tools, starting with ZEUS.

Q062-7 (2019): So called e-Protocol system – financed from EU funds
Registration form for notification of erroneous activities of IT systems, information from the National Court Register, Application form for access to public information, Civil complaint forms, Forms of bankruptcy complaints - "consumers", National Court Registry forms, formulas for reserve management services and forwarded to Central Information on Registered Pledges, Information request forms with the National Criminal Register, Application form for execution and reporting bailiff operations, inventory configuration list, toolkit form for central information on registered sets, formula for court and economic judgment.
It is difficult to assess it due to the different degree of computerization of litigation and non-litigious proceedings, as well as the uneven use of various tools, starting with ZEUS.

Q062-8 (2020): 1.Civil and criminal cases : So called e-Protocol system – financed from EU funds/ Tzw. system e-Protokół - finansowany z funduszy UE.
2.The videoconference system used to conduct online hearings enables the recording of image and sound. The provisions of the act of August 30, 2002 v- law on proceedings before administrative courts do not provide for electronic casebooks protocol.

Q063-6 (2020): 1. The ZSRK system (Integrated Accounting and Personnel System) was implemented in common courts, which is a key system supporting all common court units in the field of keeping broadly understood accounting, personnel records, budget reporting and statistical reporting.
2. IT System for the Handling of the State Budget (TREZOR) facilitating the flow of information between the holders of budget funds and the Ministry of Finance in the implementation of the following budget processes: budget planning and execution.
In relation to the "system of communication with other ministries (including the Ministry of Finance)", the basis for giving a positive answer is the functioning TREZOR system, which improves the flow of information between the administrators of budget funds and the Ministry of Finance in the implementation of the following budget processes: planning and budget execution. Justice expenses managment. With reference to "Data Consolidated at National Level" in scope "Court budget and finance management systems" the basis for giving a positive answer is the implementation of the ZSRK system (Integrated Accounting and Personnel System) in common courts, which is a key system supporting all common court units in the field of keeping broadly understood accounting, personnel records, budget reporting and statistical reporting.

Q063-6 (2019): 1. The ZSRK system (Integrated Accounting and Personnel System) was implemented in common courts, which is a key system supporting all common court units in the field of keeping broadly understood accounting, personnel records, budget reporting and statistical reporting.
2. IT System for the Handling of the State Budget (TREZOR) facilitating the flow of information between the holders of budget funds and the Ministry of Finance in the implementation of the following budget processes: budget planning and execution.

Justice expenses managment. With reference to "Data Consolidated at National Level" in scope "Court budget and finance management systems" the basis for giving a positive answer is the implementation of the ZSRK system (Integrated Accounting and Personnel System) in common courts, which is a key system supporting all common court units in the field of keeping broadly understood accounting, personnel records, budget reporting and statistical reporting.

Q063-6 (2018): There is a special system called ZSRK.

Q063-7 (2019): This kind of tools exist only for prosecutors. For judges and in courts there is only software used for registering judicial proceedings and their management. ZSRK system does not cover: units of the prosecutor's office, administrative judiciary, military judiciary, Supreme Court, Tribunal Constitutional and the National Council of the Judiciary.

Portugal

Q062-7 (2018): It also exists in labour courts and maritime courts.

Q062-8 (2020): Concerning the voice recognition feauture, there was a pilot projetct ongoing in the previous evaluation cicle, but it still wasn't implemented. We are working to implement tools for Automatic Speech Recognition

Q062-8 (2018): The voice recognition features are to be implemented in all courts.

Q063-7 (2021): There is no specific general management tool to access the workload of non-judge staff/non prosecutor staff. The information is collected directly from the case management system and then it is organized by the General Directorate of Administration of Justice/Ministry of Justice.

Q063-7 (2020): There is no specific general management tool to access the workload of non-judge staff/non prosecutor staff. The information is collected directly from the case management system and then it is organized by the General Directorate of Administration of Justice/Ministry of Justice.

Romania

Q062-7 (2018): ECRIS, REGISTRY

Q063-7 (2015): STATIS – tool for statistical measurements and analysis both local and national

Slovak Republic

Q062-7 (2020): There are different types of templates when creating documents in the CMS, which can be also pre-filled with data from databases.

Q062-8 (2018): Voice recognition feature is in preparing phase.

Q063-6 (2020): The SAP (human resources) system is deployed at the Ministry of Justice of the Slovak republic and regional level.
The SUP (accounting system) system is deployed at the district court level.

Q063-6 (2015): We are still in phase of implementing new complex economic system (SAP). We have several partial systems implemented within the Ministry which operate individually-payroll system for budget, etc.
Q063-7 (2020): Application/tool collecting the time information about the activities of the judges, can be used for senior judicial officials in the future as well. The tool is part of the project Case weighting analyses (CWA) and the result should be used to assess the workload of the judges in the future. In 2020 the cellecting data for the CWA project was stoped becuase of covid pandemic situation.

Q063-7 (2019): Still in development. Application/tool collecting the time information about the activities of the judges, can be used for senior judicial officials as well. The tool is part of the project Case weighting analyses and the result should be used to assess the workload of the judges in the future. The tool is not connected to CMS and was still not developed at the full scale in 2019 (hence the deployment rate is 50-99%).

Slovenia

Q062-7 (General Comment): The writing assistance tools are included in the CMSs, provided by the Project mamagement Service at the Supreme Court. The templates (including pre-written texts) are verified by the judges.

Q062-7 (2020): Other: civil enforcement on the basis of the authentic document procedure.

Q062-7 (2018): Other: civil enforcement on the basis of the authentic document procedure.

Q062-7 (2015): Q 62.7
Model writings (templates) are available on the intranet or through the case management system. In some types of procedures, such as civil enforcement (iVpisnik), land registry (eZK) etc. some documents can be generated automatically.
Other: civil enforcement on basis of authentic document (iVpisnik) and insolvency cases (eINS).

Q062-8 (General Comment): All courts are equpped by voice recording tools, maintained by courts.

Spain

Q062-7 (General Comment): The systems for procedures management have different names in the different Autonomous Regions. Minerva is the name of the system of the regions that depend of the Ministry of Justice.
Q062-7 (2015): There are also writing assistance tools for labour and penal courts and, in general, all courts in Spain no matter the jusridiction they deal with are provided with writing assistance tools.
(62.7), writing assistance tools have been available for the huge majority of the judges and courts since long time ago. In 2014 the availability was already really very near to 100% and in 2015 it was developed to the 100%.

Q062-8 (2019): There are audio visual recording systems for hearings.

Q062-8 (2018): There are audio visual recordings tools for hearings.

Q063-6 (General Comment): - There is the electronic system to manage the bank account of the Court. The system includes an application for the
management of judicial auctions. - Public Administrations are subject to an electronic invoice system. Legal persons are obliged to use it. It imposes a structured format, and they must be signed with an advanced electronic signature. - The General Subdirectorate for Programming and Economic Management of the Public Justice Service (and similar bodies of the Autonomous Regions) manage other applications for salaries and other payments.

Q063-6 (2020): - There is an electronic system to manage the bank account of the Court. The system includes an application for the
management of judicial auctions. - Public Administrations are subject to an electronic invoice system. Legal persons are obliged to use it. It imposes a structured format, and they must be signed with an advanced electronic signature. - The General Subdirectorate for Programming and Economic Management of the Public Justice Service (and similar bodies of the Autonomous Regions) manage other applications for salaries and other payments.

Q063-6 (2019): There is an electronic system to manage the bank account of the Court. The system includes an application for the
management of judicial auctions. This system is under the responsibility of the 'Letrado de la Administración de Justicia'.
The General Subdirectorate for Programming and Economic Management of the Public Justice Service (and similar bodies of the Autonomous Regions) manage other applications for sallaries and other payments.

Q063-6 (2018): There is an electronic system to manage the bank account of the Court, and in this system has an application for the management of judicial auctions, this system is responsibility of the Judicial Counsellor.
The Sub-Directorate General of Economic Resources of the Administration of Justice (and similar bodies of the Autonomous Regions) manage other applications for sallaries and other payments.

Indicator 6: The ICT tools of courts and for court users

Comments provided by the national correspondents

organised by question no.

Question 062-7. Are there writing assistance tools for which the content is coordinated at national level? (models or templates, paragraphs already pre-written, etc.)
Question 062-7-1. If yes, please specify the following information:

Question 062-8. Are there voice recording tools?

Question 062-8-1. If yes, please specify:

Question 063-6. Budgetary and financial management systems of courts

Question 063-7. Measurement tools to assess the workload of judges, prosecutors and/or non-judge/non-prosecutor staff (tool quantifying the activity of judges, prosecutors and/or non-judge/non-prosecutor staff – for example the number of cases resolved)
Question 063-7-1. If yes, please specify the following information:

Question 062-7

Belgium

(2021): For civil and/or commercial and criminal matters: local modification of models is always possible. As regards the Council of State (the highest administrative court in the country), administrative matters: for each type of procedure, there are templates of judgments which contain certain standardised paragraphs. This standardisation concerns in particular the part relating to the conduct of the proceedings. Constant harmonisation work is carried out under the impetus of the First President and with the help of the Chief Registrar. Some documents are now generated automatically on the basis of information contained in our internal databases (e.g. setting orders and hearing tables). However, there are no writing assistance tools as such.
It should be noted that, following a change initiated in 2007, the Council of State's judgments have all been written in direct style since 2017. This generalisation of the direct style has ensured greater uniformity in the presentation of judgments.
Judges of the Belgian Council of State have a number of tools at their disposal: legal databases are maintained internally and made available to the public as well (Juridict www.juridict.be, refLex www.reflex.be, etc.); access is provided to private, paying legal databases (StradaLex www.stradalex.be, Jurisquare www.jurisquare.be, etc.); an intranet managed by the Council of State also centralises all documents produced by the Council of State (judgments, orders, reports, etc.) - it is called Documap; the Council of State's website also offers numerous search options www.raadvst-consetat.be.

(2020): "For civil and/or commercial and criminal matters: local modification of the models is always possible. As regards the Council of State (the highest administrative court in the country); administrative matters:
1. For each type of procedure, there are models of judgments which include certain standardized paragraphs. This standardization concerns in particular the part relating to the course of the procedure. A constant work of harmonization is carried out under the impulse of the First President and with the help of the Chief Clerk.
Some documents are now generated automatically on the basis of information taken from our internal databases (e.g. setting orders and hearing tables).
However, there are no "judgment drafting tools" as such.
2. It should be noted that, following an evolution initiated in 2007, the judgments of the highest administrative Courts - since 2017 - all written in direct style. This generalization of the direct style has made it possible to ensure greater uniformity in the presentation of judgments.
3. The magistrates of the Belgian highest administrative Courts have many tools at their disposal:
- legal databases are maintained internally and made available to the public as well (Juridict www.juridict.be , refLex www.reflex.be , etc.);
- access is provided to private, paying legal databases (StradaLex www.stradalex.be , Jurisquare www.jurisquare.be , etc.);
- an intranet managed by the Council of State also centralizes all documents produced by the Council of State (judgments, orders, reports, etc.). It is called Documap.
- The website of the highest adminsitrative Courts also offers numerous search possibilities www.raadvst-consetat.be.
"

(2019): Administrative: For each type of procedure, there are models of judgments within the Council of State which include certain standardized paragraphs. This standardization concerns in particular the part relating to the course of the procedure. A constant work of harmonization is carried out under the impetus of the First President and with the help of the chief registrar.
Certain documents are now generated automatically on the basis of information contained in our internal databases (fixing orders and audience tables, for example). Strictly speaking, however, there are no "drafting aid tools" for judgments.
2. It should be noted that following a development initiated in 2007, the judgments of the Council of State have - since 2017 - all been drafted in direct style. This generalization of the direct style made it possible to ensure greater uniformity in the presentation of judgments.
3. The magistrates of the Council of State of Belgium have many tools at their disposal:
- legal databases are kept up to date internally and also made available to the public (Juridict www.juridict.be, refLex www.reflex.be, etc.);
- access is offered to private and chargeable legal databases (StradaLex www.stradalex.be, Jurisquare www.jurisquare.be, etc.);
- an intranet managed by the Council of State also centralizes all the documents produced by the Council of State (judgments, ordinances, reports, etc.). It is called Documap.
- the website of the Council of State also offers many search possibilities www.raadvst-consetat.be.

Bulgaria

(2020): Pursuant to Article 55 of the Civil Procedure Code, the Minister of Justice issues an ordinance approving the samples of all papers related to service. The amendment of the samples is done by amending and supplementing the ordinance.

Czech Republic

(2021): It depends on the court agenda. Some information systems for specific agendas can automatically create documents based on the predefine template, data stored in the system and the selected procedural action by a user. Some older information systems have a dedicated external application that allows the creation of the required documents based on user input (application called “APSTR”), and for some court agenda the writing assistance tools are not available at all.
Regarding the process of coordinating new templates, the origin of the templates varies. Some are developed by the Ministry of Justice, others are created on the national level in cooperation with experts and court staff. Templates created at the national level can be and are modified in some court agendas at the local level by individual courts or in some cases by individual users.

(2020): The templates are available for all courts but do not cover all matters.

Denmark

(2020): For civil/commercial cases the availability rate slightly decreased as we simply went through the different areas of use and the different patterns of uses and found that there were certain areas where we were not covered.

(2019): For civil/commercial cases the availability rate slightly decreased as we simply went through the different areas of use and the different patterns of uses and found that there were certain areas where we were not covered.

(2015): 62.7 assistance tools are also available in criminal cases, probate cases, enforcenemt cases and land registration cases

Estonia

(2018): It's available for everyone, but not everyone uses it.

France

(2021): In criminal matters: the templates available in the applications cover a large part of the criminal law field. However, in some cases, it is still necessary for judges and court clerks to make changes.
The new templates or those to be modified as a result of legislative reforms and the templates not present in the application are available on the ministerial intranet before being integrated into the applications in order to facilitate the work of the registry staff during the development phases. Source DSJ and DACS.

(2019): Cassiopée for all « Tribunaux de grande instance »
APPI for execution of sentences services
MINOS for police courts

(2018): Penal: Cassiopeia for all IMTs; APPI for enforcement services; MINOS for police courts

Greece

(2019): In the context of the Informational System OSDDY PP there are provided templates for certificates, case files and other documents that are used in the judicial proceedings.

Ireland

(2021): The tools used for administrative are the same as for civil cases since Ireland does not operate administrative courts

(2020): The tools used for administrative are the same as for civil cases since Ireland does not operate administrative courts

(2015): 62.7 - Court Registrars at the various jurisdictional levels have access to template/model court forms (orders, warrants etc.) case tracking systems, staff intranet or shared folders. The Courts Service provides Dragon software, which is a voice recognition application, to all judges on request. "Winscribe" is provided to all High Court, Court of Appeal and Supreme Court judges on request. 62.10 - Information of an educational nature is available to judges via a judges intranet and a sentencing information website. Courts staff can access training materials via the Training and Development Section of courts links on the Courts Service network. The Training Unit is also planning the introduction of a new online video-based training function.

Lithuania

(General Comment): Templates are prepared and stored in the Lithuanian Courts Information System (LITEKO) together with special tools for filling them with metadata. Also, templates are prepared in administrative offence and pretrial cases and are available in Lithuanian Courts Information System (LITEKO) and the Integrated Criminal Process Information System (IBPS).

(2019): Templates are prepared and stored in the Lithuanian Courts Information System (LITEKO) together with special tools for filling them with metadata. (2018): ECRIS, REGISTRY

Slovak Republic

(2020): There are different types of templates when creating documents in the CMS, which can be also pre-filled with data from databases.

Slovenia

(General Comment): The writing assistance tools are included in the CMSs, provided by the Project mamagement Service at the Supreme Court. The templates (including pre-written texts) are verified by the judges.

(2020): Other: civil enforcement on the basis of the authentic document procedure.

(2018): Other: civil enforcement on the basis of the authentic document procedure.

(2015): Q 62.7
Model writings (templates) are available on the intranet or through the case management system. In some types of procedures, such as civil enforcement (iVpisnik), land registry (eZK) etc. some documents can be generated automatically.
Other: civil enforcement on basis of authentic document (iVpisnik) and insolvency cases (eINS).

Spain

(General Comment): The systems for procedures management have different names in the different Autonomous Regions. Minerva is the name of the system of the regions that depend of the Ministry of Justice.

(2015): There are also writing assistance tools for labour and penal courts and, in general, all courts in Spain no matter the jusridiction they deal with are provided with writing assistance tools.
(62.7), writing assistance tools have been available for the huge majority of the judges and courts since long time ago. In 2014 the availability was already really very near to 100% and in 2015 it was developed to the 100%.

Question 062-7-1

Czech Republic

(General Comment): The templates are available for all courts but do not cover all matters.

Question 062-8

Belgium

(2021): Comment on Q62-8
The provision of a simple dictation tool is based on an individual online request with a specific and restrictive allocation policy.

(2020): "comments for questions 62-1 through 62-9:
Provision of a simple dictation solution is on an individual online request basis with a specific and limiting allocation policy."

Czech Republic

(2021): Most courtrooms have installed specific voice recording tools for recording several separate audio tracks. The project regarding “spoken word-to-text conversion” was realized in the proof-of-concept stage. Based on the results of the project and other factors, the spoken word-to-text project has been included in the National Recovery Plan and will be realized in the upcoming years.

Denmark

(2021): In addition to voice recording, the Danish Court administration have implemented speech-recognition in connection with certain court precedings. Further implementation of a wider roll-out of speech-recognition is being evaluated currently.

(2020): We had some testing of the quality of voice recognition and found that the software was unreliable in regards to the Danish language. We are again moving forward with this initiative.

(2019): We had some testing of the quality of voice recognition and found that the software was unreliable in regards to the Danish language. The response is based on the multiple choice fields and by pilot testing, we simply mean light testing and we are not moving forward with this initiative.

Estonia

(2020): Courts have adopted voice recognition software.

(2019): Should be available by the end of 2020.

Finland

(2020): Simple dictation tools are "not available", as the dictation tools are not used to dictate so that someone could type it later. Availability of multiple speakers recording tools: Witness statements are recorded in the courts to a centralized server from which they can be accessed by a higher court handling the appeal.

(2018): Dictation tools are no longer used as they are considered to be old-fashioned technology. Witness statements are recorded in the courts to a centralized server from which they can be accessed by a higher court handling the appeal. Voice recognition tools are tested, but there is not good enough product yet on the market for the Finnish language.

France

(2021): Source Council of State

(2019): Positive reply only with regard to administrative justice.

(2018): Such tools exist but their use is not generalised

Germany

(2021): Availability of simple dictation tools: The vast majority of the Länder have them available in all courts, the remaining Länder have them available in most courts.
Availability of multiple speaker recording tools:
Availability differs greatly among the Länder. Overall, the answer "in some courts" describes the situation best. Availability in civil and criminal matters seems to be slighty higher than in administrative matters.

(2018): No statistical information available on the prevalence of multiple speakers recording tools and voice recognition features.

Greece

(2021): The system of keeping minutes of court meetings has been extended to criminal proceedings following the signing of a new relevant contract.

Ireland

(2021): The tools used for administrative are the same as for civil cases since Ireland does not operate administrative courts

(2020): The tools used for administrative are the same as for civil cases since Ireland does not operate administrative courts

Italy

(2021): As far as civil cases are concerned, multiple speakers recording tools are available in all courts which deal with labour disputes.

(2019): The whole justice personnel is now provided with Office 2016 licences, which have dictation tools integrated.

Lithuania

(2020): The courts hearings are recorded in all courts and cases, the record substitutes the written protocol except the criminal case and is made in all cases with some specific exceptions, when the protocol is not required (e.g. some administrative offence cases or when the case is dealt with by written procedure).

(2019): The courts hearings are recorded in all courts and cases, the record substitutes the written protocol except the criminal case and is made in all cases with some specific exceptions, when the protocol is not required (e.g. some administrative offence cases).

(2018): The courts hearings are recorded in all courts and cases, the record substitutes the written protocol except the criminal case and is made in all cases with some specific exceptions, when the protocol is not required (e.g. some administrative offence cases).

Luxembourg

(2021): The use of private dictation applications is tolerated, but they are not in general used.

(2020):
The use of private dictation applications is tolerated, but is not in general use.

(2019): The use of private dictation applications is tolerated, but is not in general use.

(2018): The use of private dictation applications is tolerated, but is not in general use.

Malta

(2021): The Courts Services Agency were piloting new software that recognises voices in Maltese and translates speech to text. The software is currently being piloted in other courts as well with the intention of implementing it across all courts by 2023.

Netherlands

(General Comment): In some courtrooms, sound is recorded to an SD-card. This is solely to assist in reporting, it is not a product in itself. The level of automation/comperization differs betwee courts and types of courts, which makes it difficult to report on how often and how much voice-recording tools are used. Voice recognition is not used.

(2020): In some courtrooms, sound is recorded to an SD-card. This is solely to assist in reporting, it is not a product in itself. The level of automation / computerization differs between courts and types of courts, which makes it difficult to report on how often and how much voice recording tools are used. Voice recognition is not used.

(2019): There are some court rooms with sound recordings to an SD-card. This is solely to assist in the reporting. It is not product in itself.
The level of automisation differs between courts and types of courts, which makes it difficult to report how much voice recording tools are used. Voice recognition is not used.

(2018): A value must be entered for each question !
I am unable to answer yes or no, because I don't know.

Poland

(2020): 1.Civil and criminal cases : So called e-Protocol system – financed from EU funds/ Tzw. system e-Protokół - finansowany z funduszy UE.
2.The videoconference system used to conduct online hearings enables the recording of image and sound. The provisions of the act of August 30, 2002 v- law on proceedings before administrative courts do not provide for electronic casebooks protocol.

Portugal

(2020): Concerning the voice recognition feauture, there was a pilot projetct ongoing in the previous evaluation cicle, but it still wasn't implemented. We are working to implement tools for Automatic Speech Recognition

(2018): The voice recognition features are to be implemented in all courts.

Slovak Republic

(2018): Voice recognition feature is in preparing phase.

Slovenia

(General Comment): All courts are equpped by voice recording tools, maintained by courts.

Spain

(2019): There are audio visual recording systems for hearings.

(2018): There are audio visual recordings tools for hearings.

Question 063-6

Austria

(2021): Monthly controlling reports of the budgetary authorities.

(2020): Monthly controlling reports of the budgetary authorities.

(2019): Monthly Controlling Reports of the budgetary authorities.

(2018): Monthly controlling reports of the budgetary authorities.

Belgium

(2019): Budget and financial management: the Fedcom systemhas been launched as a pilot project in the College of Courts and Tribunals.
Since the 1st January 2020, within each judicial district there has been a “court costs office” responsible for processing and paying court costs. The office uses a new system focused on fully digital management.
Other: The court fee (Rolrechten / droit de role) is centralized in one national system and communicated to the department of Finance. The status of the payment is returned from the department of finance to the department of justice

Czech Republic

(2021): All Czech courts are using for budgetary and financial management information system called IRES. This system is used to generate and manage payment transactions, record assets, receivables, payables and other related areas. Although the IRES system (in the sense of all local court distributions) communicates with the National Treasury, which could be thought of as a centralized point where data is consolidated at the national level, it is not a tool/system that allows for easy data consolidation or direct analytical activities for the benefit of judicial agendas. The IRES system is not primarily used for the justice expenses management of exclusively judicial items such as court fees, litigation costs, etc. This data is not available to the chiefs judges of the courts from the IRES system in a comprehensive form and on a court-by-court basis. Selected judicial information systems that manage the certain justice agenda are able to report the necessary information on justice expense data. These information systems then use IRES to make and record payments.

(2020): The budgetary information system is called IRES and is used by the Ministry of Justice since 1995.

Denmark

(General Comment): We have multiple tools in the various courts available for controlling and managing costs and the degrees to which they are being used varies. This data is relatively unknown by the central organization and this is our best estimate.
Activity in terms of weighted cases is used also in allocation of resources.

(2019): We have multiple tools in the various courts available for controlling and managing costs and the degrees to which they are being used varies. This data is relatively unknown by the central organization and this is our best estimate.
Activity in terms of weighted cases is used also in allocation of resources.

Estonia

(2021): "Other": For example, all the costs related to state legal aid.

(2020): "Other": For example, all the costs related to state legal aid.

France

(2021): Data on civil, criminal and administrative justice. Sources: DSJ and Council of State

(2020): "Concerning ""other"", neither of the two orders of jurisdiction has provided an answer.
Answers from the judicial and administrative justice "

(2019): Reply concerning the administrative justice.

(2018): data related to administrative justice

Germany

(2021): "Budgetary and financial management of courts"
Tool deployment rate: A slight majority of the Länder answered "50-99 %". The remaining Länder have a tool deployment rate of 100%. 2 Länder answered "NA". Data consolidated at national level: The Federal Ministry of Justice has answered this question with "yes" with regard to the courts at federal level. A slight minority of the Länder replied "yes", while the slight majority replied "no". One of the Länder answered "no" for the labour and administrative courts and "yes" for the remaining courts. 3 Länder could not provide an answer. "Justice expenses management"
