# „Workshop on cybercrime Training Strategies for Law Enforcement Agencies and access to ECTEG materials“

## Who we are

Ministry of Interior of the Republic of Srpska

Crime Police Administration

Department for Combating High Tech Crime

Established in 2010 (12 inspectors – IT engineers)

9 Police administrations all over the Republic of Srpska each one has an inspector for combating high-tech crime

We proceed on the basis of the Criminal Code of the Republic of Srpska (Official Gazette No. 49/03) chapter 24, Articles:

- 292a Criminal offences against computer data
- 292b Computer sabotage
- 292v Creating and entering computer viruses
- 292g Computer fraud
- 292d Unauthorized access to a protected computer, computer network, telecommunication network and Electronic data processing
- 292dj Restricting access to the public computer network
- 292e Unauthorized use of computers or computer networks

We do not have strategy for training cyber crime and electronic evidence yet but we do have at the level of the Republic of Srpska two strategies:

Strategy for Combating Cybercrime

Strategy for Cyber security

We have two trainers (Dražen Visnjić, Head of the department for combating high-tech crime and inspector Milan Milosević), operatives participating in investigations of criminal offenses against high-tech crime.

We organize training and cooperation with government agencies, academic institutions and the private sector. (NCFTA, IACIS) cooperate with schools (recent case known as blue whale)

ns4.iwantaname.net

Trying zone transfer first...
Testing ns1.iwantaname.net
Request timed out or transfer not allowed.
Testing ns2.iwantaname.net
Request timed out or transfer not allowed.
Testing ns3.iwantaname.net
Request timed out or transfer not allowed.
Testing ns4.iwantaname.net
Request timed out or transfer not allowed.

Unsuccessful in zone transfer (it was worth a shot)
Okay, trying the good old fashioned way... brute force

Checking for wildcard DNS...
None found.
Now performing 2280 test(s)...
74.125.68.121 www.sn4ck-eye.com

Subnets found (may want to probe here using nmap or unicorn)
74.125.68.0-255 : 1 hostnames found.

Done with Fierce scan: http://hacker.org/fierce/
Found 1 entries.

Have a nice day.

```

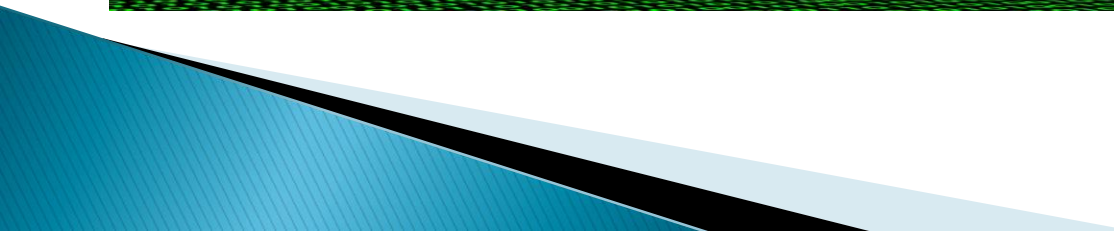

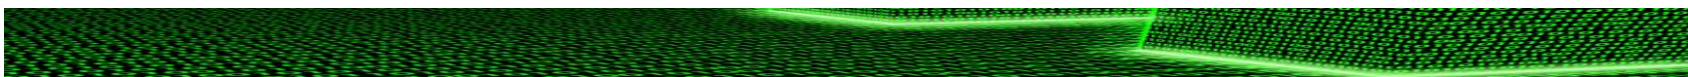

We investigate and prosecute:

- all persons outside the country that commit crime at the expense of our citizens
- all persons from our country who commit a criminal offense against foreign country
- all persons who use our infrastructure to commit criminal offence against our country or other foreign country

We are engaged in preventive work  
We cooperate with 38 countries  
The most significant operational actions  
"Port Royal / Darkode" - undercover investigators on line  
Plejade / DD4BC  
Odisej / Trawler in cooperation with the German police  
Venus / Purple haze should already begin  
(the massive attack that recently happened could be either prevented or damage could be significantly reduced only if Venus started on time)

The advantage to us is that we are completely independent  
We do not use services of private sector (for example –digital forensic)
