#### Remarks:

This document only contains the final conclusions for the species/habitats discussed at the second Emerald biogeographical evaluation Seminar for Norway. The conclusions for the species/habitats which were not reviewed at this seminar can be found in the final conclusions document of the first Emerald biogeographical evaluation Seminar for Norway (June 2013) or in the consolidated version of the conclusions, both available on the [Emerald Network Reference Portal](#).

The IN MIN status implies that the Emerald Network of the country will be considered as sufficient for the given species/habitats if one or several already proposed Emerald sites are added in the database. In general, the necessary sites or the regions where these already proposed sites are located were identified. Therefore, the common understanding of the second Emerald evaluation Seminar for Norway is that it is relevant to treat species with IN MIN as SUF, assuming the database will be updated before a possible 3rd evaluation round.
