

Detailed final conclusions on the representation of animal species from Res. No. 6 (1998) of the Bern Convention in Emerald Network sites in Georgia (Alpine, Black Sea and Steppic)

Remarks:

- As indicated during the biogeographical seminar, for the next data delivery it is expected that much more attention will be drawn to fill in quantitative data for the population size for species and the area coverage for habitats within the Emerald Network Sites.

- This should also allow for a better estimation of the population assessments for species and relative area coverage assessments for habitats. It is recommended to review these assessments for all features.

- If the conclusion is 'EXCL REF', countries must check if the feature is deleted from all sites which are entirely within a particular bio-geographical region.

- If the conclusion includes 'CD' (correction of data), countries need to systematically check population assessments for species and relative surface assessments for habitats. A special attention should be paid to check if 'D' category (insignificant) is appropriately used for species. Guidance on this is available in the guidelines for filling the SDF:

<https://rm.coe.int/guidelines-for-filling-the-standard-data-form/16808d2a6b>

- If the conclusion contains 'CD' and the species has also double codes and scientific names in use (i.e. old and new names), countries need to systematically ensure that only one code and name (the newest) is used.

- In the case of Scientific Reserve (SR), country authorities on the first hand must supply a separate written information (apart from the SDF) explaining how the reserve was solved (i.e. fieldwork, literature work, communication with scientific community, etc.) and if and how it was reflected in the new database (SDF) submission (no action, sites added, sites deleted, etc.).
