

Strasbourg, 5 February 2021

CAHAI(2020)27

AD HOC COMMITTEE ON ARTIFICIAL INTELLIGENCE (CAHAI)

3rd meeting

Strasbourg, 15-17 December 2020

Online meeting – KUDO Platform

MEETING REPORT

Prepared by the CAHAI Secretariat

www.coe.int/cahai

I. Introduction

1. The Council of Europe's Ad Hoc Committee on Artificial Intelligence (hereinafter referred to as "CAHAI" or "the Committee") held its 3rd plenary meeting online on 15-17 December 2020, in conformity with its terms of reference adopted by the Committee of Ministers on 11 September 2019.
2. The Chair, Mr Gregor Stojin (Slovenia), opened the meeting and welcomed the participants.

II. List of items discussed at the meeting and decisions taken by the CAHAI

Agenda item 1: Opening of the meeting

3. The Chair welcomed Ms Marija Pejčinović Burić, Secretary General of the Council of Europe, Mr Rik Daems, President of the Parliamentary Assembly of the Council of Europe and Prof. Christian Kastrop, State Secretary, the Federal Ministry of Justice and Consumer Protection, on behalf of the German Presidency of the Committee of Ministers, to the meeting.
4. The Chair also welcomed Mr Casper Klynge, Microsoft's Vice President for European Government Affairs, and former Tech Ambassador of Denmark.
5. The Secretary General of the Council of Europe, Ms Pejčinović Burić, congratulated the CAHAI for its valuable work on AI and its progress which has also been welcomed by the Committee of Ministers. Considering the real risks posed by AI for human rights, democracy and the rule of law, the feasibility study clearly shows the need for a rapid action. Although there is not a complete regulatory vacuum, the high number and diversity of instruments may be creating challenges in interpretation and application. Procedural gaps remain, such as in respect to technical robustness and transparency of AI and due to the inherent limitations of soft law instruments. In this regard, she stressed the unique role of the Council of Europe in the pan European family, and her expectation it could provide appropriate guidance in the development of AI while defending human rights, democracy and rule of law.
6. The President of the Parliamentary Assembly of the Council of Europe (PACE), Mr Daems, pointed out the prompt necessity of having a legal instrument regulating AI, recalling also the position assumed by the German Presidency of the Committee of Ministers who has identified AI as a priority. While he recognized the huge benefits of using AI, mostly during the Covid-19 breakout, he also mentioned AI threats. The President of the PACE mentioned in particular the risks linked to facial recognition, to the right to free election and to the manipulation of consumers' behaviour. Looking at the latter threats posed to human rights, democracy and rule of law, self-regulation is not enough. Mr Daems expressed his wishes for a legal instrument that defines the scope and boundaries of AI, with binding and non-binding elements. Finally, he stressed the full support of the PACE for the mandate of the CAHAI and his wish to continue the cooperation.
7. State Secretary Professor Kastrop, recalling the work of UNESCO and European Commission on AI, highlighted the unique influence of the Council of Europe, which, with its 47 member States, goes far beyond the EU borders. Despite the fact that AI saved lives during the current

pandemic, it poses real risks. He cited the issues of manipulation and surveillance by AI as well as the risk for the freedom of information. Considering that human beings cannot be at the mercy of technology, he highlighted the urgent need for concrete regulatory action and, notably, emphasised the importance of some principles such as transparency. He concluded that clear rules enable certainty and that innovation and human rights can be correlated to one another.

8. Mr Klynge underlined the significant responsibility of Microsoft as tech industry in the AI field and consequently the crucial part observers have to play in working towards an international convention. In this light, he values the multi-stakeholder approach followed by CAHAI. The Council of Europe has a key role to play regarding the important legal, economic and political questions raised by AI. He also emphasised the need for a legal framework in order to ensure a responsible approach to AI. Finally, he expressed the full commitment of Microsoft to do its part as a tech industry and underlined the global outreach of the Council of Europe.
9. The Chair thanked the speakers for their opening remarks and for their words of appreciation for the work of the CAHAI.

Agenda item 2: Adoption of the agenda and order of business

10. The agenda and order of business were adopted without any modifications.

Agenda item 3: General presentation of the draft feasibility study

11. The Committee exchanged views on the general presentation of the study made by the co-Chair of the CAHAI Policy Development Group (CAHAI-PDG) and thanked the CAHAI-PDG co-Chairs and members for their work.
12. The committee expressed its appreciation for the high quality of the draft feasibility study bearing in mind the time constraints under which it has been produced.
13. However, some concerns were raised (the Netherlands, the Russian Federation, Sweden and Israel) on the importance of bringing a neutral conclusion to the study, which should not promote one instrument more than another.
14. The Netherlands, Sweden and Israel emphasised that the current legal gap analysis is not clear enough and should be more thorough.
15. Some other participants (Finland, Germany, Switzerland) highlighted the importance of the complementarity between binding and non-binding instruments and the necessity to pay attention to the risk of duplication with other instruments, such as the Convention 108 and 108+ (the Russian Federation).
16. The Russian Federation highlighted the necessity of the development by member States of a common methodology regarding certification to ensure that AI meets future requirements. It expressed its reservations about that the establishment of a single body of certification under the Council of Europe because of the competencies of member States in this area and the variety and context-dependency applications of AI systems.

17. During discussions on certain substantive points, some participants raised issues concerning the terminology used in the study, such as technological neutrality (Finland) or “democratic” AI; the latter notion would have to be reconsidered when drafting the elements of a future legal framework (the Russian Federation). The importance of specific human rights such as transparency and accountability were pointed out (Access Now), as well as economic and social rights which are missing (Finland).
18. Finland and the Netherlands also expressed their uncertainty regarding the liability principle identified as a human rights’ issue and whether it should be addressed here.
19. Switzerland underlined that effects of AI applications on democracy and the rule of law and compliance requirements in these fields would need to be developed further in the work of the CAHAI.
20. The Russian Federation and Sweden pointed out that the final decision on the most appropriate format for a future legal instrument will be taken by the Committee of Ministers.
21. Finally, the Chair of the CAHAI and the Chair of the CAHAI-PDG, reminded the committee that the feasibility study does not constitute a draft legal framework but a policy document identifying subjects to be further developed in the form of elements of a future legal framework.

Items 3.1 – 3.10 (Chapters 1 to 10)

22. The Committee took note of the presentations of Chapters 1-10 of the feasibility study by the co-Chair of the CAHAI-PDG and Secretariat and expressed its views and comments on the chapters.
23. The Committee reviewed the comments presented by its members, observers and participants and agreed on a consolidated text for Chapters 1-10.
24. Representatives of the European Commission for Democracy through Law of the Council of Europe (Venice Commission) presented the principles for a fundamental rights-compliant use of digital technologies in electoral processes, approved by the Council for Democratic Elections at its 70th meeting (10 December 2020) and adopted by the Venice Commission at its 125th Plenary Session (11-12 December 2020). The relevance of these principles for CAHAI’s work was underlined by the Committee.
25. The views and comments expressed by the members, observers and participants of CAHAI are reflected hereafter.

Item 3.1 Chapter 1 - General introduction

26. No views or comments were raised on Chapter 1 of the draft feasibility study.

Item 3.2 Chapter 2. Scope of a Council of Europe legal framework on artificial intelligence

27. The views and comments shared by delegations regard primarily the question of the definition of AI.

28. Spain argued that the definition of AI at this stage should remain open. A framework convention could make reference to “AI” generally or contain list of characteristics of AI systems, as the risk is that a definition might evolve over time.
29. Andorra highlighted the difficult task of defining AI and insisted on the importance of having a common understanding of the scope and implications of the instrument on reaching a final definition.
30. Regarding the issue of defining AI, Switzerland expressed the need to be aware of the fact that AI is a fast-evolving field and that it may not be possible to find a consensual and clear definition. It may be necessary to describe elements and features of technologies that CAHAI considers falling within the scope of a legal instrument. He added that terms such as “automated decision-making procedures” or “algorithmic data processes” could be more helpful as they can be more precisely defined.
31. The Netherlands appreciated the current approach to adopt a broad perspective of AI and not focusing on definitional particularities. It specified that the definition can be approached based on general problems arising in this scientific discipline. A definition of automated decision-making or something more closely related to human behaviour with regard to technology could be used. Finally, the Netherlands emphasised the need of a broad definition to identify the problems related to AI.
32. The Gender Equality Rapporteur (Jana NOVHORADSKA, Czech Republic) expressed her satisfaction that the gender equality perspective is included in the text however noted the lack of gender data.
33. In the light of these comments, the Chair of the CAHAI suggested to maintain the definition as it is and to address this question further in the next stage under the mandate of the CAHAI-LFG.

Item 3.3 Chapter 3 - Opportunities and risks arising from the design, development and application of artificial intelligence on human rights, the rule of law and democracy. “Green” and “red” areas - meaning respectively positive and problematic examples of artificial intelligence applications from a human rights, the rule of law and democracy perspective, while considering the context-sensitive environment for artificial intelligence design, development and application in Europe and developments at global level.

34. Ireland indicated that the reference to discrimination grounds should be as comprehensive as possible, including LGBTQI+, disability or religion. Reference to intersectionality or multiple/cumulative types of discrimination and to specific phenomenon of proxy discrimination should also be included.
35. Slovenia reminded the committee that finding an AI definition is difficult and pointed to the structured definition of the OECD which can be considered for the next stage.
36. Canada shared the concerns of the Netherlands and Sweden regarding conclusions drawn in the draft feasibility study. It considered that in the next step of the work of CAHAI, a more in-depth analysis of all risks should be included and also as to how current legal instruments meet the risks.

37. The Russian Federation proposed that terms such as “accuracy”, “unjust bias”, “unjust discrimination” or “opacity” should be better determined and need common definitions. In this regard, ISO and ITU documents could provide some help.
38. There were exchanges of views on the question of green and red lines. The Russian Federation stated that it had been convincingly shown by experts that the implications of AI exceed the scope of any other technology, and that the diversity of application contexts of AI calls for a more nuanced understanding of the red line- green line approach. Simply put, a singly red or green line cannot span a range of diverse applications ranging from education and media to legal proceedings and medicine. The Russian Federation believes that a risk-based approach in a specific application context, coupled with a clear mechanism for allocating legal and ethical responsibility for consequences of AI application will, in practice, be more effective than an attempt to draw simplistic red lines which eventually will not serve the public interest and will be detrimental to human and technological development. Therefore, it proposed to substitute the concept of red/green lines with a simple risk-based approach.
39. While there was general agreement on red lines, other participants disagreed on how to approach green lines (Slovenia, IBA, Conference of INGOs, Access Now and Homo Digitalis) and others underlined, that if green lines are deleted, the Committee should make sure that also positive examples of AI applications are further taken into consideration in CAHAI’s work (Belgium).
40. Regarding the use of the term “accountability”, the Russian Federation pointed to the necessity of distinguish between accountability and responsibility in this feasibility study as they are legally different notions.
41. Finally, Japan expressed its appreciation for the work of the CAHAI. This will help the future of AI regulation. It also pointed out the importance of careful consideration before taking further steps towards a legally binding instrument. Japan supports a risk-based approach and a determination of specific ways needed to address risks via use cases, field trials and sandboxes.

Item 3.4 Chapter 4 – The Council of Europe’s work on artificial intelligence to date

42. Several delegations expressed their satisfaction with Chapter 4 in its current format.
43. Minor changes and additions were requested by the ECRI and the Joint Council of Youth. Amendments were also introduced upon the request of the Russian Federation.
44. Ireland highlighted the value of the Budapest convention. However, that Convention only applies to acts which are offences against confidentiality, integrity and availability of computer data so does not capture consequences of AI that are not criminal offenses but may nevertheless be problematic. In this regard, an amending protocol of the Budapest convention alone could not be considered as efficient in the AI field.

Item 3.5 Chapter 5 - Mapping of instruments applicable to artificial intelligence

45. Several delegations expressed their support for Chapter 5 in its current format, stressing its importance for the feasibility study.

46. There was an exchange of views on the possibility to replace “accountability” by “responsibility” in this chapter (Russian Federation) or not (Poland, Joint Council of Youth, Conference of INGOs) and the Committee decided to use both terms where it is needed in order to maintain the distinction between both notions.
47. The Netherlands highlighted that the efficiency of a legal instrument should be considered separately from its legal status. Hard law is not necessarily the best solution to address the challenges raised by AI.
48. Germany underlined that effectiveness goes hand in hand with legal certainty and in this regard, there is a need for a new specific legal instrument that will deal with AI. It indicated the importance of accountability to ensure human oversight.
49. The Netherlands and Sweden indicated that a close look should be taken as to which existing instruments already apply or could be applied to AI.
50. Slovenia pointed out that Chapter 5 highlights the complex nature of AI and asked for a more detailed analysis in order to identify gaps and common ground to reach the common goal of a sustainable AI.
51. Switzerland pointed out that, bearing in mind the requirements in terms of the overall length of the feasibility study, Chapter 5 illustrates to a reasonable extent where regulatory gaps lie.
52. Japan pointed to the challenge of defining a regulation whilst encountering difficulties defining the object to be regulated.
53. The United States underlined the importance of fostering innovation and building trust and expressed support for the adoption of regulatory and non-regulatory instruments.
54. The European Union Agency for Fundamental Rights (FRA) informed the Committee about its recently published report on AI and fundamental rights, which confirms the existence of gaps in the current regulatory framework leading to difficulties of interpretation and application by AI operators. It stressed the need for providing relevant safeguards for fundamental rights by law and pointed out that guidelines, along with a human rights impact assessment, could be beneficial for the process.
55. Furthermore, certain participants underlined that the rights and obligations formulated in existing legal instruments do not explicitly address some AI-specific issues, hampering their effective application to the challenges raised throughout the life cycle of an AI system.

Item 3.6 Chapter 6 - Key findings of the multi-stakeholder consultations

56. No views or comments were raised on Chapter 1 of the feasibility study.

Item 3.7 Chapter 7 - Main elements of a legal framework for the design, development and application of artificial intelligence

57. The Netherlands indicated that Chapter 7 contains an interesting collection of rights and obligations to be considered in an AI context and made general statements in order to serve

future discussions. Firstly, it stated that it should become clear which rights already exist and which are newly proposed. Secondly, any new right or obligation will need justification as being necessary, useful and proportional to the goal that it needs to be achieved. Thirdly, it stressed that rights may need to be balanced with other public interests. For instance, transparency may need to be balanced with the interest of public security. Fourthly, it is not always clear whether the proposed risk-based approach is always taken, as several norms do mention risk explicitly, but others do not.

58. More specifically, regarding paragraph 126, the position of the Netherlands is that the existing liability regime is sufficient and that only where gaps are demonstrated in this regime, new rules would be necessary. With respect to paragraph 103, the Netherlands were of the opinion that it should be mentioned that exceptions may be possible to the right not to be subject to automated decision making. For instance, it should be permissible to automate routine administrative decisions. Finally, the subject of disinformation contained in paragraph 115 and the corresponding proposals in the box should be dealt with at EU level.
59. The Russian Federation made some general comments to chapter 7. Firstly, CAHAI should develop the elements of AI regulation which would ensure that AI solutions or parts of them such as datasets to train AI could be used without hindrance in other State parties of this regulation. Therefore, such Council of Europe's document should have a clear scope of application, define main requirements to the development and use of AI namely the composition of datasets, scope of human control and information provided to the users on AI functioning, personal data protection measures, establish clear certification criteria for AI (instead of red and green lines) and resolve the question of jurisdiction and responsibility for AI actions. The need for and scope of particular requirements should be confirmed by relevant studies. Secondly, it is CAHAI-LFG which should develop the main elements of a legal framework. Therefore, the whole chapter 7 should be put in square brackets. These proposals may serve as an input to the CAHAI-LFG but the group should not be bound by them and it is that group which should make a final draft of this chapter and submit it to the CAHAI Plenary. Specifically, it is proposed to separate "emerging rights" which have no basis in relevant documents from the rights enshrined in the European Convention on Human Rights. Thirdly, the Russian Federation stressed that all the requirements worded in this chapter should be clear, unequivocal and executable.
60. Sweden reiterated that here clarity is needed on which are existing and which are new rights. Care would be needed to ensure that any resulting instrument does not overlap with other legal instruments.
61. Finland stated that new human rights seem to be emerging. He regretted that economic and social rights are not sufficiently addressed in this chapter. Finland expressed doubts on the relevance of including question of liability for damage (Chapter 7.3) as it did not appear to be a human rights issue.
62. Changes reflecting the comments of delegations have been included in the revised version of the feasibility study in Chapter 7 upon a common agreement. This includes questions related to rights and obligations described in that Chapter, such as inclusion of liability (Poland), discrimination (ECRI), disinformation and misinformation (Joint Council of Youth), balance of human rights (CCBE), due diligence (IBA), and responsibility of public authorities (Algorithm Watch) .
63. The Chair reminded the Committee that this specific Chapter will be developed by the CAHAI-LFG.

Item 3.8 Chapter 8 - Possible options for a Council of Europe legal framework on the design, development and application of artificial intelligence based on human rights, rule of law and democracy

64. Ireland indicated that although the Budapest Convention and Convention 108+ address certain aspects of AI, their scope may be too limited and not address the full picture. There is a need to remain technology neutral in any future text.
65. “Homo digitalis” specified that adopting legal rules is a continuous and dynamic process and it is very satisfied of the inclusive way in which Chapter 8 has been drafted and the resulting draft feasibility study.
66. The Netherlands and Sweden requested a clarification on the conclusion of the study in order to keep it open and make it clear that other types of instrument could be considered.
67. The representative from the Consultative Committee of Convention 108 joined the discussions to express his support for a specific AI instrument.
68. Turkey drew the attention of CAHAI to the risk of overlapping and conflict between national and international law and highlighted the importance to ensure harmonization.
69. Greece thanked the CAHAI-PDG for its relevant study which reflects the feasibility of a Council of Europe legal framework and looks forward to continuing the work.
70. The Russian Federation made a number of comments on Chapter 8. In the view of the Russian Federation, the Budapest convention hardly covers any rights, it is more about rather narrow aspects of criminal responsibility. It is too early to conclude whether the format of a framework Convention would be more suitable for an AI-related instrument. Given the diversity of views, customs and cultural traditions in among the members of Council of Europe, the Russian Federation does not consider that the complex nature of AI interaction with the society can be submitted to simple benchmarking (Chapter 8.4). The creation of a European Benchmarking institute will not serve the aims of the Council of Europe. Finally, the idea of creating a single body for certification of AI systems (Chapter 8.5), which will develop and establish uniform European standards for the compliance of all AI systems with the requirements of democracy and the rule of law would be premature, as AI is used in very different ways and it is hardly possible to adopt common standards applicable to all of them.
71. Hungary also pointed out that there is no single best solution and flexibility should be ensured. A combination of legal instruments could be good way forward.

Item 3.9 Chapter 9 - Possible practical mechanisms to ensure compliance and effectiveness of the legal framework (such as for instance the creation of mechanisms of ex-ante-verification and/or certification, oversight by independent authorities, sandboxing, etc.)

72. The Consultative Committee of Convention 108 indicated that sandboxes are important but derogation to regulation should be consistent with criteria and should be reflected in the future instrument.

73. Regarding due diligence including human rights impact assessment, Ireland referred to parallel discussions at EU level. Following a detailed impact assessment, the European Commission will be putting forward a horizontal regulatory proposal within the first quarter of 2021.
74. The International Bar Association (IBA) proposed to include human rights impact assessment as part of due diligence in order to enlarge requirement of companies to meeting their responsibility to general mechanisms. It also mentioned to look at what the EU is doing as regards human rights and the environment.
75. The office of the United Nations High Commissioner for Human rights supported the feasibility study and the strong necessity for a human rights approach on AI regulation. He added that human rights impact assessment is needed and should be based on due diligence.
76. The Russian Federation asked for a cautious approach concerning benchmarking as there would be no precedent and reiterated that it is up to member States to define specific mechanism of oversight.
77. The Institute of Electrical and Electronics Engineers (IEEE) indicated that the U.S. National Institute of Standards and Technology (NIST) has conducted benchmarking procedure on facial recognition, which represents a precedent in the field of AI. It demonstrates that desirable societal objectives can be designed in high-risk AI systems. It also empowers citizens, fosters equality and addresses fears of undermining innovation.
78. Germany expressed the view, that it is possible to have both legal requirements of certification bodies and a voluntary labelling scheme which demonstrates to consumers that AI systems meet special criteria.
79. Regarding Certification and Quality Labelling (Chapter 9.3.2), Turkey pointed out that the CEPEJ considers a specific certification for AI systems in the legal sector such as law enforcement, courts and judiciary. The EU has already different types of certifications and labelling such as CE, Ecolabel, EU Trustmark, Privacy Labelling and Certification under GDPR. All of them have different requirements in terms of obtaining relevant certification and labelling. Turkey found that the CAHAI should take this point into consideration.
80. Azerbaijan congratulated the CAHAI for its work and made general remarks. It supported the argument for further work on terminology as legal scholars and decision makers will rely on this and also expressed support for the AI ecosystem approach and for further recommendations of the draft to concentrate on AI actors, in terms of obligations and responsibility from a legal perspective. Finally, a domain-specific approach of analysis is also relevant.
81. Slovenia recommended mentioning in Chapter 9.5 the need to implement an automatic or semi-automatic system to track the implementation and impact of the CAHAI's legal instrument in academia and industry. Likewise, such an observatory should provide a dynamic landscape of the area of "AI and human rights" as it appears in academia and industry, and possibly monitor societal consequences of AI in the space of AI and human rights from global media.

Item 3.10 Chapter 10 – Final considerations

82. The Russian Federation stated an appropriate legal framework would likely consist of an international comprehensive legally-binding document such as a convention establishing

horizontal principles overarching all different sectors and specific rules on issues of critical importance, which could be combined with national tailored rules and would ensure the required legal certainty. This document would serve as a basis for relevant national legislation. A committee of the parties to the convention could be established, inter alia, to collect and disseminate best practices on AI regulation.

83. The Netherlands underlined that it cannot be concluded from this study that the only next steps are to draft the main elements of a binding legal framework. Also, the alternative of a bottom-up approach should be developed further. Such an approach would allow for learning which rules are needed and at which level (for instance sectoral or horizontal). Soft law instruments should also be considered, both as a complementary instrument to binding legal rules and as an alternative to binding rules where this would be fitting in the context. Also, the Netherlands would like to point out that due consideration should be given to the risk of rules overlapping and being contradictory as well as to the risk of rules being over-detailed and thus not futureproof and possibly creating unnecessary administrative burdens.
84. "Access Now" expressed support for the work of the CAHAI in particular the analysis of gaps in AI regulation. In their view, much effort has already gone into soft law in the field of AI however the Council of Europe could establish the first far-reaching binding legal instrument.
85. Sweden asked for a use of terminology which would keep the conclusion of the study open. In reply the Committee reached consensus on the formulation of paragraph 177 of the feasibility study.
86. The Netherlands, Sweden, Canada and Israel stated that the conclusion of the feasibility study should present different options as alternatives and not recommend one more than another.
87. Estonia expressed its wish for a balance between sending a clear message and taking the concerns raised into consideration. The Chair agreed that presenting too many options may prevent there being a deliverable.
88. Belgium, Germany, Hungary, Poland, the Russian Federation supported a binding instrument in possible combination with complementary non-binding instruments, while underlining that the opinion made by the PACE and industry, soliciting a binding instrument, have to be taken into consideration.
89. Belgium stressed the need to give clear guidance to the committee of Ministers. In its opinion the need for more than soft law instruments in the field of AI could not be ignored.
90. Switzerland and Estonia asked for more insight on next steps, deliverables and mandates of CAHAI working groups.
91. France pointed out the importance of the work of CAHAI and the importance of this work being communicated speedily to the Committee of Ministers in order to obtain more political guidance for the next steps.
92. The Chair of CAHAI took note of the differing opinions and indicated that a detailed meeting report, including main national positions, would be prepared by the secretariat and shared with the CAHAI-LFG.
93. At the end of the discussions, the Committee reached a consensus on the formulation of

paragraph 177 of the feasibility study. The CAHAI should focus its work on the elaboration of the specific elements of an appropriate legal framework. This could include a binding legal instrument, as well as non-binding instruments as appropriate, in parallel with progress that can be made on sectoral instruments.

Agenda item 4: Analysis of the electronic consultation of CAHAI members, observers and participants

94. The Secretariat informed the Committee that a deadline of 17 January has been set to provide comments or new contributions on the analysis of the electronic consultation for CAHAI members and representatives of bodies, committees, observer organisations and partner companies (CAHAI(2020)09-rev2).

Agenda item 5: Hearing of candidates for observer status to the CAHAI (in camera; for Heads of Delegations only)

95. The Committee held a hearing of the four organisations having requested the status of observer to the CAHAI. These organisations were Together Against Cybercrime International (TAC), International Research Center on Artificial Intelligence (IRCAI), ALLAI and International Chamber of Commerce (ICC).
96. The Committee unanimously decided to admit the International Research Center on Artificial Intelligence (IRCAI), ALLAI and International Chamber of Commerce as observers to the CAHAI.
97. With regard to the applicant TAC, the Secretariat recalled that, in the framework of a written procedure in June 2020, unanimity had not been reached for the admission of the applicant to the CAHAI. It had therefore been proposed to further decide on its application at the 2nd plenary meeting on 6-8 July 2020, during which the applicant could not be heard by the CAHAI due to connectivity problems. In line with the CM/Res(2011)24, the Committee decided to refer the matter of the admission of the applicant TAC to the Committee of Ministers for decision.
98. The Committee instructed the Secretariat to notify the organisations of the outcome of the process.

Agenda item 6: Information point, updates provided by CAHAI members, observers and participants

99. The committee took note of the main developments at the domestic and international level as regards instruments and policies on AI, in particular of the adoption of the Ukrainian National Strategy on AI.

Agenda item 7: Information point: Conference on “Protecting Human Rights in the era of AI - Europe as an international standard setter for the regulation of Artificial Intelligence”

100. Germany presented the main elements of the conference that will be organised on 20 January 2021, in the framework of the German Chairmanship of the Committee of Ministers of the Council of Europe and invited the members, participants and observers of the Committee to take part in the event.

101. The Chair welcomed the initiative and took note of the provisional agenda of the event.

Agenda item 8: Information point: draft Committee of Ministers' Declaration on the risks of computer-assisted or artificial-intelligence-enabled decision making in the field of the social safety net.

102. The Committee took note of the information provided by the Secretariat on a draft Committee of Ministers' declaration on the risks of computer-assisted or AI-enabled decision making in the field of social services prepared by the Secretariat of the European Social Cohesion Platform (PECS), namely that the *GR-SOC* (Committee of Ministers Rapporteur Group for Social and Health Questions) decided to transmit the draft declaration to CAHAI for consultation, prior to its approval, and that a consultation process was underway.

Agenda item 9: Co-operation with other international organisations

103. UNESCO presented its ongoing work on artificial intelligence, which includes a first draft of ethical recommendations on AI. The draft contains principles such as respect of human dignity, protection of the environment and inclusiveness, and it is currently undertaking multi-stakeholder consultations. Moreover, the representative of UNESCO stressed the necessity to foster co-operation with stakeholders. In addition, UNESCO is working on policy recommendations which will include the issue of the implementation of education and literacy on AI.

104. The OECD presented its ongoing work on AI, referring both to the implementation of AI principles and on the initiative of development of OECD policy recommendations. The OECD is also dealing with the issue of AI definition, offering CAHAI and other international organisations the possibility to refer to its high-level AI definition.

105. The European Commission presented its ongoing work on AI, mentioning that the CAHAI and the EU are working on the same AI issues, focusing on equal concerns. The official publication of the "*AI White Paper*" took place in February 2020, in the meanwhile various AI initiatives are still ongoing. The representative cited the wide consultations conducted by the EU; of which the results showed the need for regulatory action. Indeed, 90% of the respondents revealed awareness about the potential infringement of human rights by AI. Finally, the European Commission expects a proposal for a horizontal framework for 2021 about high-risk AI applications.

106. The representative of FRA presented its ongoing work on AI; of which the main update is the report "*Getting the future right – Artificial intelligence and fundamental rights*" launched in December. Also, FRA has carried out a mapping of existing policies and laws on AI. Furthermore, FRA highlighted areas of major concern, namely data protection in automated decision-making systems, equality and no-discrimination principles, and justice.

107. The CAHAI thanked the representatives of UNESCO, the OECD, the European Commission and FRA for their updates on their work related to AI and underlined the importance of ensuring continued coordination and complementarity with the initiatives undertaken.

Agenda item 10: CAHAI multi-stakeholder consultations

108. The Committee thanked the co-Chairs of the CAHAI Consultation and Outreach Group

(CAHAI-COG) and its members for their comprehensive preparatory work for the multi-stakeholder consultation and held an exchange of views on the documents presented by the CAHAI-COG. It decided that an extra meeting of the CAHAI will be organised to discuss more thoroughly the different issues related to the multi-stakeholder consultation in February 2021.

109. The Committee agreed on the need to ensure a close coordination among the different CAHAI Working Groups in the framework of the multi-stakeholder consultation and entrusted the Bureau to ensure such coordination. The finalisation of the documents prepared by the CAHAI-COG will be coordinated by the Bureau with input from the three Working Groups.

Agenda item 11: Next steps for the finalisation of the draft feasibility study in view of its submission to the Committee of Ministers

110. The Committee unanimously adopted the feasibility study as amended during the meeting and was informed by the Secretariat that the feasibility study would be submitted to the GR-J (Rapporteur Group on Legal Cooperation) with a view to its further transmission to the Committee of Ministers.

Agenda item 12: CAHAI Working Groups (nominations, calendar, tasks)

111. The Secretariat presented document CAHAI(2020)10ADDREV2 on working methods of the CAHAI for 2021, which envisages that the three previously established working groups would continue to be operational in 2021.
112. The Committee agreed on the updated tasks and terms of references for the three working groups in 2021 and took note of the document, while underlining the need for flexibility in the modalities of implementation of the working groups' terms of reference.

Agenda item 13: Information on the CAHAI Bureau

113. The Committee welcomed the two recently elected members of the Bureau, Mr Andrei Dinculescu (Romania) and Mr David Leslie (United Kingdom) and took note of the information provided by the Secretariat as regards the fourth Bureau meeting which was held on 23 November 2020.

Agenda item 14: Election or re-election of the Chair and the Vice-Chair for 2021

114. The Committee re-elected by acclamation until the end of the mandate of the CAHAI:

Gregor STROJIN (Slovenia) as Chair of CAHAI
Peggy VALCKE (Belgium) as Vice-Chair.

Agenda item 15: Dates and place of the next meetings

115. The Committee took note of document CAHAI(2020)25rev including the dates of CAHAI plenary meetings, Bureau meetings and working group meetings for 2021. The secretariat will notify participants shortly about the date of the plenary meeting on the multi-stakeholder consultation to be held in the second half of February 2021.

Agenda item 16: Any other business

116. No point was raised by delegations.

Agenda item 17: Adoption of the abridged report and close of the meeting

117. The CAHAI adopted the abridged meeting report and list of decisions.

118. The Committee took note that a full meeting report will be made available by 31 January 2021.

119. The Chair thanked all participants for their active participation in the meeting and the Secretariat for its support in organising the meeting.

End of the meeting

APPENDIX I
