

### ***Statement of Interpretation on Article 3 – Climate change***

The Committee recalls its case law under Article 3 in relation to the protection against dangerous agents and substances (including asbestos and ionizing radiation), and air pollution (see Conclusions XIV-2 (1998), Statement of interpretation on Article 3). Further, the Committee notes the United Nations General Assembly Resolution A/RES/76/300 (28 July 2022) “The human right to a clean, healthy and sustainable environment”.

The Committee notes that climate change has had an increasing impact on the safety and health of workers across all affected sectors, with a particular impact on workers from vulnerable groups such as migrant workers, women, older people, persons with disabilities, persons with pre-existing health conditions and youth. As noted by the United Nations Committee on Economic, Social and Cultural Rights, rapid environmental changes, caused by climate change, increase risks to working conditions and exacerbate existing ones (General comment No. 27 (2025) on economic, social and cultural rights and the environmental dimension of sustainable development, UN Doc E/C.12/GC/27, §51). Hazards related to climate change include, but are not limited to, excessive heat, ultraviolet radiation, extreme weather events (such as heatwaves), indoor and outdoor workplace pollution, vector-borne diseases and exposure to chemicals. These phenomena can have a serious effect on both the physical and mental health of workers. (Ensuring safety and health at work in a changing climate, Geneva: International Labour Office, 2024).

States should take measures to identify and assess climate change risks and adopt preventive and protective measures. These risks and impacts should be addressed through appropriate policies, regulations, and collective agreements. Particular attention should be paid to vulnerable workers, such as migrant workers, persons involved in informal work, young and older workers, women, persons with disabilities and persons with pre-existing health conditions. States must effectively monitor the application of standards addressing climate-related safety and health risks, including through appropriate supervisory mechanisms, and should undertake these efforts in close consultation with employers’ and workers’ organisations.

Risk assessment and prevention/protection plans should include measures aimed at mitigating the effects of climate change on the safety and physical and mental health of workers (for example, provision of personal protective equipment, appropriate clothing, sun protection, hydration, ventilation, as well as the introduction of reduced or flexible working hours and the provision of mental health support and other support services, where appropriate). The Committee further stresses the importance of providing guidance and training to employers and workers, as well as implementing awareness-raising activities, collection of data and carrying out of research concerning the impact of climate change.
