Exploring the Intersection of Youth Information and Artificial Intelligence

Webinar

4 December 2024, 10-11:30 CET

As the world becomes increasingly digitalised and interconnected, the use of artificial intelligence (AI) is becoming more prevalent in various sectors, including youth information and counselling services. AI has the potential to revolutionise how young people access and engage with information, offering personalised and efficient solutions to their needs. However, the integration of AI in youth information services also raises questions about ethical considerations, privacy concerns, and the potential impact on the quality of information provided. This webinar of the Council of Europe and ERYICA aims to provide valuable insights and resources for youth information providers to enhance their services and better support young people in an increasingly digital world.

Registration:
Please register here for the webinar by 2 December 2024. Attendance is free of charge.

Programme

- Opening and welcome – *Natalja Turenne, Council of Europe & Tanja Herceg, ERYICA*
