## Implemented Judicial System Budget (IJSB)

**Budget:** The judicial system budget of Hungary cannot be calculated for 2022 due to the unavailability of data on legal aid budget. Even though the implemented courts' budget per inhabitant increased between 2020 and 2022 from 41 € to 46 €, it remains slightly below the CoE median. On the other hand, the public prosecution services' budget per inhabitant (16 €) is slightly above the CoE median.

**Judicial organisation:** There are not specialised courts as separate legal entities. Indeed, the 20 administrative and labour courts were dismissed on the 31st of March 2020. Since then, Regional Courts deal with labour cases on first instance while administrative cases are dealt with by eight Regional Courts at regional level.

**Information and Communication Technologies (ICT):** Hungary has an ICT Deployment index of 8,5 which is the highest in Europe. Hungary appears to be similarly developed in ICT in all matters. It was reported that legislative changes in recent years have made digital administration widely available. However, it is difficult to estimate the usage rate due to partial data on the use of digital technology in courts.

**Professionals and gender balance:** It is to be noted that the number of judges declined since 2018 (from 30,15 to 27,71 judges per 100 000 inhabitants) contrary to the trend identified in the majority of the states. Women constitute the majority within different judicial professions: judges, prosecutors, non-judge and non-prosecutor staff, lawyers and notaries. Female judges are over 60% at all three instances, while female prosecutors do not have the majority only at 2nd instance (46%). Moreover, 51% of court presidents are women. However female heads of prosecution services are at 39%.

## Efficiency - Disposition Time (days)

**Efficiency:** Except for the highest instance criminal cases, all other case types record a DT well below the respective European medians across the three instances. The second instance courts stand out as most efficient, while administrative justice appears as the most efficient area of law.

Data on administrative cases should be construed against the background of recent legislative reforms. Indeed, starting from April 2020 appeals in administrative matters were decided by the Curia. However, following a legislative amendment effective from March 2022, administrative cases are dealt with by High courts at 1st instance and by Regional courts at 2nd instance, while the Curia has original jurisdiction in exceptional cases set out by law.

## Human Resources (per 100 000 inhabitants)

## Gender Balance

## Absolute gross salaries

## Ratio with the average annual gross salary

## Training of Justice Professionals

Average number of live training participations per professional\*

Distribution (%) of 1st instance specialised and general jurisdiction courts

● Specialised courts  
● Courts of general jurisdiction  
● CoE Median

First instance legal entities per 100 000 inh.

All courts (geographic locations)

\* This indicator is calculated as follows: the number of participants in live trainings is divided by the number of professionals for that category. For example, if the CoE Median for judges is 3,9, this means that, each judge in Europe participated to 3,9 live trainings (as mid value). Indeed, this analysis allows to better understand quantity of training per professional if all were trained.

## CEPEJ Efficiency Indicators

Clearance Rate (CR) = (Resolved cases / Incoming cases) \* 100

CR > 100%, the court/judicial system is able to resolve more cases than it received => backlog is decreasing

CR < 100%, the court/judicial system is able to resolve fewer cases than it received => backlog is increasing

Disposition Time (DT) = (Pending cases / Resolved cases) \* 365

The Disposition Time (DT) is the theoretical time for a pending case to be resolved, taken into consideration the current pace of work of the courts

■ Highest Instance

## Incoming Cases

## Total number of 1st instance cases per 100 inhabitants

## Total number of 2nd instance cases per 100 inhabitants

## Total number of Supreme Court cases per 100 inhabitants

## Public Prosecution Services

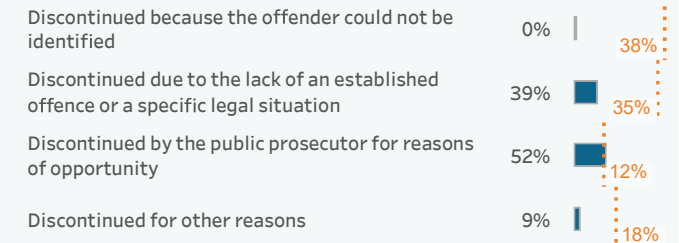

### Total number of received cases (1st instance) per prosecutor

### Distribution of processed cases in %

### Distribution of discontinued cases in %

Note: There are different methodologies for calculating the number of cases in the prosecution services' statistics: by event or by perpetrator. The CEPEJ collects data per case (event), but some countries present it per perpetrator.

## ICT Deployment and Usage Index (from 0 to 10)

Total deployment rate : **8,53**

Total usage rate : **5,30**
