CEPEJ-GT-EVAL(2024)20

Méthodologie pour le calcul des indices des Technologies de l'Information et de la Communication (TIC) de la CEPEJ

Structure du questionnaire TIC

Le questionnaire de la CEPEJ comprend 38 questions relatives aux Technologies de l'Information et de la Communication (TIC), structurées selon 3 groupes:

- Les questions relatives à l'organisation des TIC (7 questions)
- Les questions relatives aux outils traitement électronique des affaires (24 questions)
- Les questions relatives aux autres outils (7 questions)

Seules les 24 questions relatives au traitement électronique des affaires, allant de la numéro 062-08 à la numéro 062-31, sont prises en compte dans le calcul des indices TIC.

Ces 24 questions se répartissent en 11 groupes de 2 ou 3 questions, groupes abordant un type d'outil particulier :

Groupes de questions	Catégories des indices TIC	Points	Coefficient de question
Introduction électronique d'une affaire	Accès numérique à la justice	29	1
Envoi électronique de documents au tribunal	Accès numérique à la justice	25,5	1
Envoi électronique de notifications	Accès numérique à la justice	31,5	1
Consultation d'une affaire en ligne	Accès numérique à la justice	29	1
Organisation d'audiences en ligne	Accès numérique à la justice	18	1,5
Archivage électronique	Gestion des affaires	3	1
Système de gestion des affaires (SGA)	Gestion des affaires	30,5	2
Outils d'assistance à la rédaction	Aide à la décision	13,5	1
Enregistrement des audiences	Aide à la décision	18	0,5
Base de données de décisions de justice	Aide à la décision	33,8	0,5
Outils statistiques d'analyse des données des affaires	Gestion des affaires	57	1

Types de questions

Il existe deux types de questions :

- Les questions relatives aux taux de déploiement et d'utilisation
- Les questions relatives aux fonctionnalités

De plus, chaque question est divisée en trois sections pour chaque affaire (civile, pénale et administrative).

Les indices des TIC

Il existe plusieurs indices différents qui sont calculés à la fois pour le déploiement et pour l'utilisation, le second étant encore en phase de test en raison de la difficulté à recevoir de bonnes estimations. L'indice principal est l'indice ICT total, mais il y a aussi ceux qui sont calculés par affaire et par catégorie (accès numérique à la justice, gestion des affaires et aide à la décision).

Pondération des taux de déploiement et d'utilisation

Chacun des 11 groupes mentionnés plus haut commence par une question relative aux taux de déploiement et d'utilisation de l'outil concerné. La réponse à cette question est fondamentale, car elle fournit les coefficients qui seront ensuite multipliés aux points obtenus dans les questions relatives aux fonctionnalités. Ci-dessous, un tableau récapitulant la pondération appliquée selon le taux sélectionné :

Taux sélectionné	Pondération appliqué
95-100 %	1
75-95 %	0,8
50-75 %	0,6
25-50 %	0,4
1-25 %	0,2
0 %	0
NAP	0
NA	0

Il est à noter que certaines options dans ce tableau entraînent un coefficient égal à zéro, annulant le bénéfice des éventuels points acquis aux questions suivantes relatives aux fonctionnalités.

Cas particulier du taux d'utilisation

Dans le cadre du cycle d'évaluation 2024 de la CEPEJ sur les données 2022, il a été demandé aux correspondants nationaux de renseigner les taux d'utilisation des outils existants. Par exemple, si un outil est déployé à 50 % mais utilisé par 100 % des utilisateurs où il a été déployé, le taux d'utilisation signalé est de 100 %. Afin d'estimer le taux d'utilisation réel à l'échelle du système judiciaire, la CEPEJ multiplie le coefficient obtenu au titre du taux de déploiement par le coefficient obtenu au titre du taux d'utilisation déclaré, afin de prendre en compte les secteurs dans lesquels l'outil concerné n'est pas encore déployé.

Fonctionnalités

Le second type de question aborde les fonctionnalités existantes dans l'outil concerné. A chaque fonctionnalité est attribué un certain nombre de points. Selon la question, le cumul des points se fait de 3 façons différentes :

- Somme : les points de toutes les options sélectionnées sont additionnés
- Maximum : seuls les points de la meilleure option sélectionnée sont pris en compte
- Moyenne : la moyenne des points est retenue

Coefficient de question

Un coefficient (voir tableau ci-dessus) est attribué à chacun des 11 groupes de questions, déterminant l'importance donnée à l'outil concerné. Ce coefficient est multiplié aux points obtenus.

Construction finale de l'indice/Normalisation

A partir de chacun des éléments de calcul présentés ici et du détail des points par question une somme totale pour un pays est calculée. En plus du total principal, d'autres sous-totaux sont construits par affaire (civile, pénale et administrative) et par catégorie (accès numérique à la justice, aide à la décision et gestion des dossiers). Enfin, ces totaux sont normalisés par rapport à un modèle théorique représentant le maximum de points qu'il est possible d'atteindre. Ce calcul se fait sous la forme d'un ratio qui est ensuite multiplié par 10, afin de fournir un score sur une échelle de 10 points.

Calculateur/simulateur

Pour mieux comprendre l'effet des différentes réponses aux questions, vous pouvez utiliser notre calculateur/simulateur et calculer l'indice pour votre pays. Vous pouvez télécharger cet outil sur le site de la CEPEJ.

Annexe
