Introduction and methodology

Introduction and methodology

- This report analyses spending on content by audiovisual services in Europe* between 2012 and 2022. As the report deals only with spending by audiovisual services, figures do not represent the total financing of original content: other sources (notably public funding, distributors' minimum guarantees, fiscal incentives, etc.) are not considered.
- The report builds on a dataset provided by <u>Ampere Analysis</u>. Ampere Analysis collects data on spending on audiovisual works by the main broadcasters and global streamers in Europe. The dataset combines two different categories of data: **P&L** (profit and loss) **expenses** for broadcasters and **cash investments** for global streamers. Cash investments can be substantially different from P&L expenses, as investments are amortised over a certain period. In particular, when cash investments grow, the growth is not immediately fully reflected in the P&L accounts. As global streamers' cash investments grow more quickly than broadcasters', combining the two different categories of data probably leads to an overestimation of **the share of global streamers in total spending.**
- Generally speaking, the dataset **excludes** two main categories of spending:
 - News, when produced internally by a broadcaster.
 - Global streamers' acquisitions from their parent company, when this parent company is a Hollywood studio (e.g. Disney+, Paramount+, HBO Max), as these internal transactions cannot be monitored.

Introduction and methodology

- Spending on content is split into three categories:
 - **Original content**, which refers to any programme commissioned, pre-purchased or co-produced by an audiovisual service. As mentioned above, figures in this report do not include news produced internally. As a proxy, spending on original content by audiovisual services active in Europe is considered as spending on original European content. This assumption can be wrong in a very limited number of cases (e.g. minority co-production of a non-European work).
 - **Acquired film & TV programmes,** which refers to any programme acquired without participation in the financing. For broadcasters, "acquired film & TV" content refers to content from any origin, European or not; for streamers, it refers to European content.
 - **Sports rights**, from any origin, European or not.
- The report is organised into three sections:
 - Section 1: "Spending on <u>European original content</u> by audiovisual services in Europe" deals only with original content spending, and excludes news, acquired film & TV content and sports rights.
 - Section 2: "Additional data on broadcasters' spending on content" provides additional data on the overall content spending on data of broadcasters. In this section "acquired film & TV" content and "sports rights" refer to content from any origin.
 - Section 3: "Additional data on global streamers' spending on content" provides additional data on the overall content spending of global streamers. In this section "acquired film & TV" content refers to European content.

Data from sections 2 and 3 are not comparable, as definitions vary.

Key findings

Key findings

A. Spending on European original content

- Total spending on **European original works** (excluding news and sports rights) amounted to EUR 20.8 bn in 2022, reflecting a strong rebound after the COVID-19 crisis.
- Spending on original content has increased faster than European audiovisual sector revenues, while at the same time sports rights spending is increasing sharply. This apparent disconnect can be accounted for by a series of factors: a trade-off between original content and acquisitions; a race for market share rather than profitability for certain players; bundling of SVOD services with other services.
- Global streamers' spending increased sharply in 2022 (+70% vs. 2021 at EUR 4.9 bn), and accounted for 24% of all spending on European original content. But this does not imply that the growth will continue, as some streamers have announced that they will limit their investments in non-US content. Among global streamers, Netflix accounted for about 45% of streamer spending on European original content, down from 58% in 2021, as other SVOD services, notably Amazon Prime, increased their investments.
- The share of scripted* programming in streamers' spending on original content has slightly decreased over time but scripted programming still accounts for the lion's share (83%).
- Global streamer spending has not substituted broadcaster spending. On the contrary, broadcasters increased their spending, at least until the pandemic, faster than before the entry of the global streamers into the European market. This increase of broadcaster spending was driven by private groups, even though there was simultaneously strong growth in sports rights costs.

^{*}Data only available for Netflix and Amazon Prime Video.

Key findings

- Still, public broadcasters play a key role in the financing of original content in several countries (e.g. Denmark, Germany, Belgium or the Netherlands). Conversely, private broadcasters lead in Poland, Italy and France.
- The UK and Spain accounted together for 57% of global streamers' spending on original European content. The share of global streamers in original content spending is particularly high in Spain (over 50%) and, to a lesser extent, in the United Kingdom, Italy, Denmark and Sweden.

B. Beyond original content: other insights

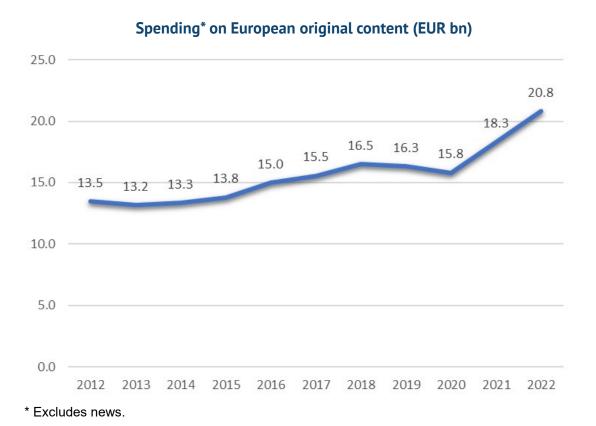

- Original content accounts for 35% of broadcaster spending, followed by sports rights and acquired programming, almost at par (28% and 26%, respectively). But sports rights are number one in terms of content spending for private broadcasters and they grew significantly faster than any other category of programming.
- Both private and public broadcasters increased their investments in original content, probably at the expense of acquisitions.
- Overtime, streamer spending has increased both for acquisitions and commissioning of European original content. Original content represented 45% of spending on European content in 2022.

Spending on European original content by audiovisual services in Europe

This section deals only with original content spending, and excludes news, acquired film & TV content and sports rights. As a proxy, all original content spending in Europe is considered spending on European content (see section "Introduction and methodology" above).

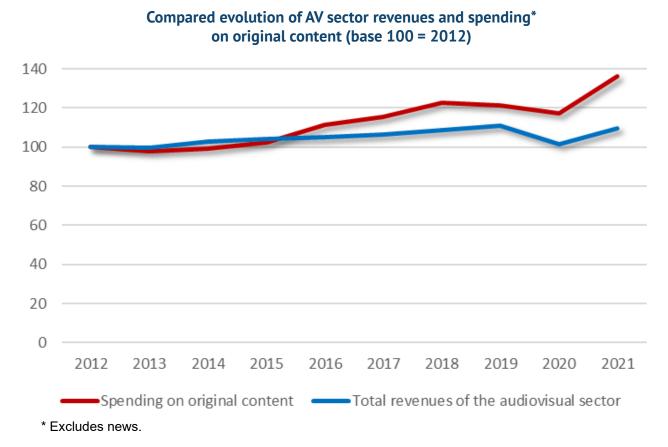

Spending on European original content accelerated in recent years

- Total spending on European original production amounted to EUR 20.8 bn in 2022.
- The growth of spending accelerated from 2015 until the pandemic and strongly rebounded in 2021 and 2022.

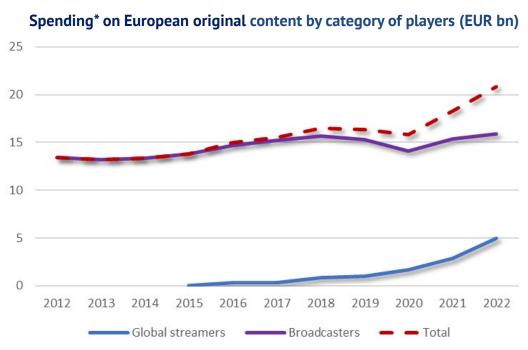

The share of the sector's revenues dedicated to original content has increased

Since 2015, spending on original European content has increased faster than European audiovisual sector revenues, while sports rights spending has also increased sharply. This apparent disconnect can be accounted for by a series of factors: a trade-off between original content and acquisitions; a race for market share rather than profitability for certain players; bundling of SVOD services with other services.

Global streamers accounted for most of the growth

- The pandemic did not impact the constant increase of global streamers' spending on European content.
- Global streamer spending did not substitute broadcaster spending. On the contrary, broadcasters increased their investments, at least until the pandemic, faster than before the entry of the global streamers into the European market.
- The sharp increase in global streamer spending since 2020 does not imply that the growth will continue. In 2022/2023, HBO and The Walt Disney Company announced that they would limit their investments in non-US content.

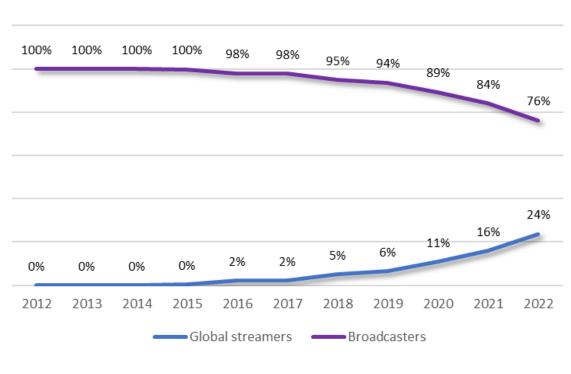

^{*} Excludes news

Global streamers account for 24% of spending on European original content

The global streamer share of spending on European original content grew rapidly to 24% in 2022.

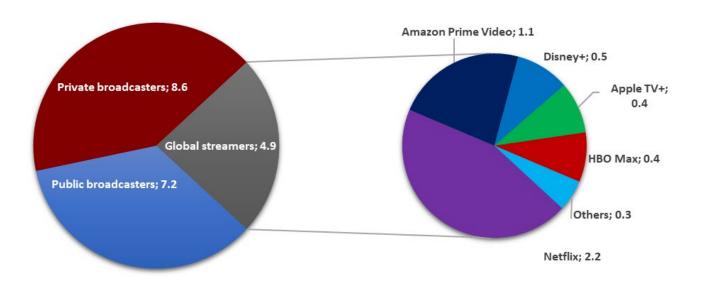

^{*} Excludes news.

Netflix clear leader in global streamer spending on original content

Netflix accounted for about 45% of 2022 global streamer spending on European original content, down from 58% in 2021, as other streamers, notably Amazon Prime, increased their investments.

Breakdown of spending* on European original content (EUR bn, 2022)

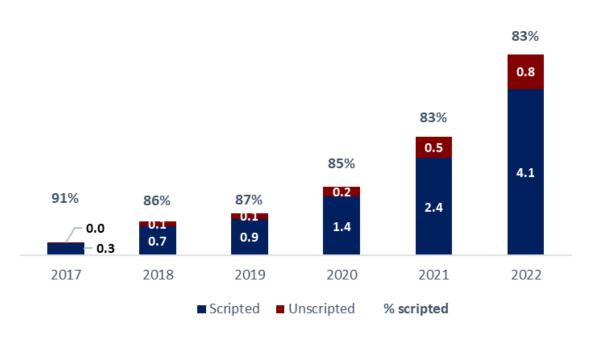

^{*} Excludes news.

Scripted content accounts for the bulk of streamer spending on original content

• The share of scripted* programming in streamer spending on original content has slightly decreased over time but scripted programming still accounts for the lion's share.

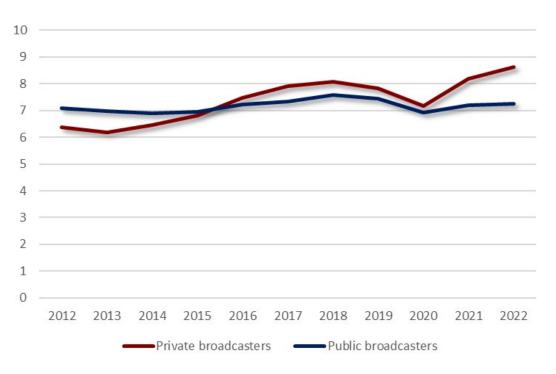

^{*} Documentaries are classified as "unscripted" in the Ampere Analysis dataset.

The growth of broadcaster spending was driven by private players

- Private broadcasters significantly increased their investments in original content, even though sports rights costs saw strong growth (see slide 22).
- In turn, public broadcaster investments have likely been limited by stagnating resources.

Breakdown of broadcaster spending* on original production (excl. sports) by statute (EUR bn)

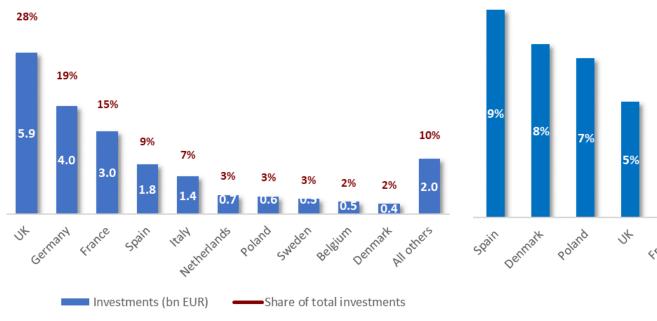

^{*} Excludes news.

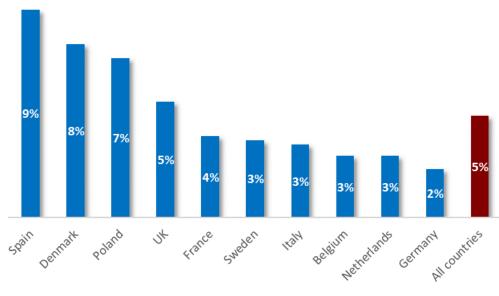

About 28% of spending on European original content went to UK works

• Dynamics differ between countries, with, since 2012, above-average growth in Spain, Denmark and Poland.

Top 10 countries by spending* on European original content (2022)

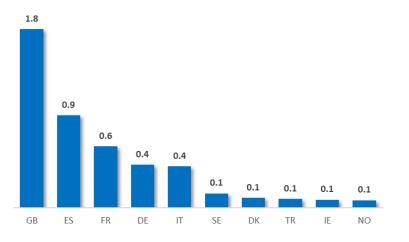

^{*} Excludes news.

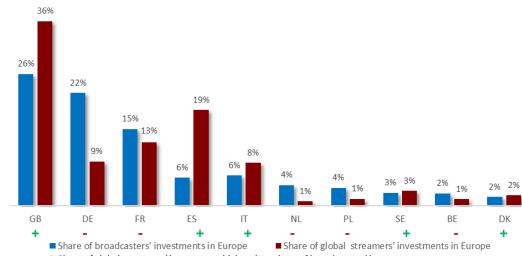

SVOD impacts the geography of European original content production

- The UK and Spain accounted together for 57% of global streamer spending on European original content.
- Germany and, to a lesser extent, the Netherlands and Poland, appear to be lagging behind with regard to their ability to capture global streamer investments.

Top 10 countries by global streamer spending on original content (2022)

Top 10 countries* compared share of broadcaster and streamer spending** in Europe (2022)

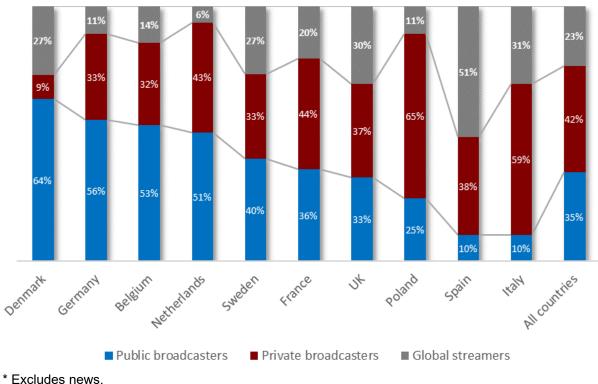

- + Share of global streamers' investments higher than share of broadcasters' investments
- Share of global streamers' investments lower than share of broadcasters' investments
- * Excludes news.
- ** Top 10 countries by total spending on original content (broadcasters + global streamers)

Weight of players varies between countries

- Public broadcasters invest particularly strongly in original content in Denmark, Germany, Belgium and the Netherlands.
- Private broadcasters are key to original content in Poland, Italy and France.
- Global streamers represent the bulk of spending in Spain.

Breakdown of spending by category of players in the top 10 countries (2022)

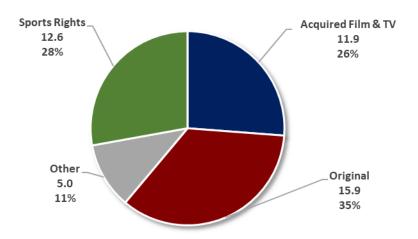

Additional data on broadcaster spending on content

Beyond investment in original content, this section provides additional data on the overall content spending on data by broadcasters. In this section "Acquired film & TV" and "Sports rights" refer to content from any origin.

Original content accounts for largest chunk of broadcaster spending

Original content accounts for 35% of broadcaster spending, followed by, almost at par, sports rights and acquired programming.

Breakdown of broadcaster spending* on content (2022, EUR bn)

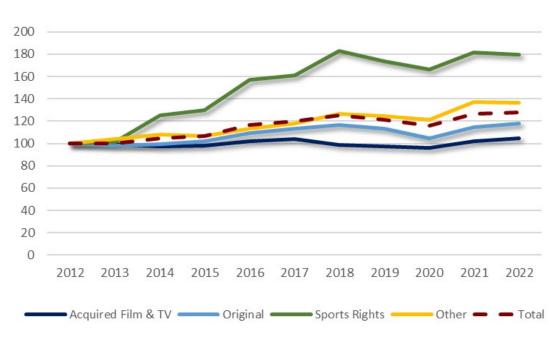

Total broadcaster spending on content: 45,4 bn EUR

^{*} Excludes news; content from all origin.

Sports rights spending increased at pace

- Sports rights spending grew significantly faster than any other category of programming.
- Original content is likely to have substituted acquired programmes.

Evolution of broadcaster spending* on content (base 100 = 2012)

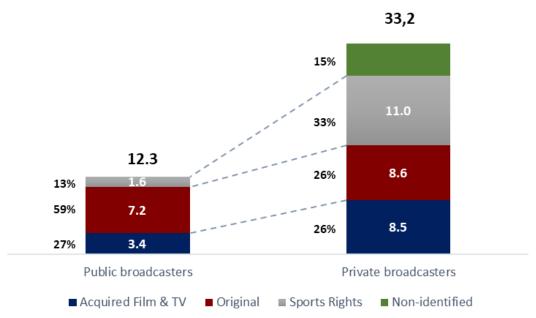

^{*} Excludes news; content from all origin.

Strong differences in the structure of broadcasters' content spending

- Sports rights account for the biggest slice of spending by private broadcasters, whereas they represent a comparatively small share of spending for public broadcasters.
- In turn, public broadcasters are in a position to dedicate a larger share of their spending to original content.

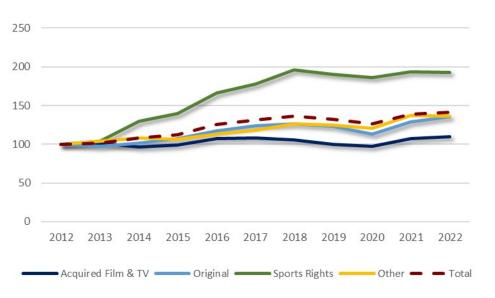

^{*} Excludes news – content from all origin.

Despite booming sports rights, more investment in original content

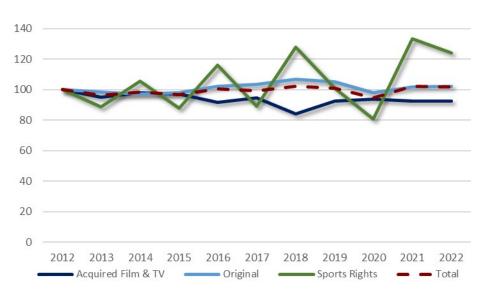

- Both private and public broadcasters increased their investments in original content, probably at the expense of acquisitions.
- Private broadcasters had to cope with the increase in sports rights spending; sports rights spending is much more variable for public broadcasters, depending on the sports events calendar.

Evolution of <u>private</u> broadcasters' spending* on content (base 100 = 2012)

^{*} Excludes news. content from all origin.

Evolution of <u>public</u> broadcaster spending* on content (base 100 = 2012)

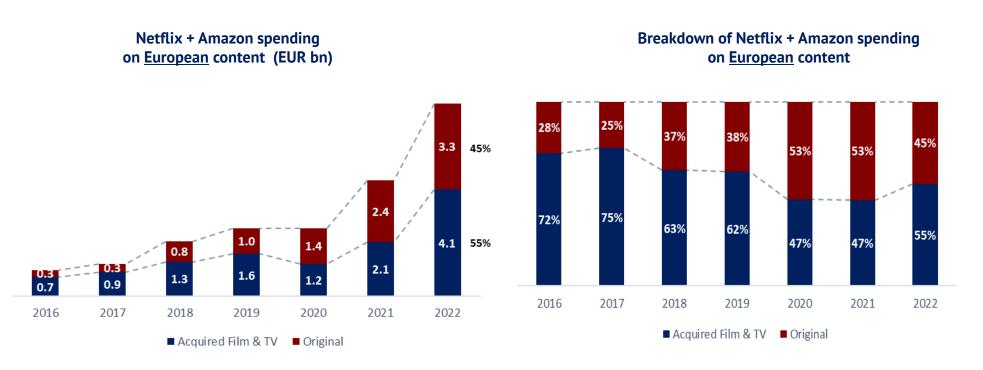

^{*} Excludes news; content from all origin.

Additional data on global streamer spending on content

Beyond investment in original content, this section provides additional data on the overall content spending of global streamers. In this section "acquired film & TV" refers to European content.

Original content accounts for 45% of global streamer spending in Europe

- Over time, streamer* spending has increased on both acquisitions** and original content.
- But, whereas original content became the lead category for spending in 2020 and 2021, acquired programming spending increased more than original content spending in 2022.

^{*} Data only available for Netflix and Amazon.

^{**} Acquisition of European content.
