### Implemented Judicial System Budget (IJSB)

**Budget:** The available data indicates that the implemented budget for the public prosecution service in Portugal is 137 208 499 €, reflecting a 4% decrease from 2020. The judicial system budget cannot be calculated since there is no available data for the courts' budget. The implemented budget for legal aid stands at 133 191 222 €, equivalent to 12,7 € per inhabitant, which is nearly five times the CoE median.

**Professionals and gender balance:** The number of professionals per 100 000 inhabitants are in line with the CoE median, except for lawyers which are more than double of the CoE median. Gender representation for judges and prosecutors in the first instance is in favour of women. Yet, at the highest instances, the percentage of women sharply decreases to 33% and 29% respectively, highlighting the glass ceiling phenomenon for these categories.

**Legal Aid:** In 2022, a new computer application - APJ ELETRÓNICO - was developed for submitting, processing and deciding applications for legal protection requested by natural persons (with a Social Security Identification Number). This application ensures the dematerialisation, simplification and interoperability during the legal aid application, with the aim to contribute to meet the legal deadline for the decision.

**Specific training for prosecutors:** Portugal is part of few states/entities that have also specialised integrated sections in the Departments of Criminal Investigation and Prosecution especially for cases of domestic violence and sexual violence where minors are involved. Indeed, prosecutors in these sections are responsible in the areas of criminal investigation and family and children's law.

### Efficiency - Disposition Time (days)

**Efficiency:** The courts remain most efficient in the third instance, with the criminal domain being the most efficient area of law. Overall, the administrative cases show the highest Disposition Time among all matters. In particular, the second instance administrative cases have the lowest record for the Clearance Rate (78,4%) and their Disposition Time is 1 054 days (more than five times the CoE median). The first instance administrative cases also have a Disposition Time higher than the CoE Median. However, the courts dealing with these cases have steadily been reducing the pending cases, by keeping their Clearance Rate well over 100% in the past cycles.

## Human Resources (per 100 000 inhabitants)

## Gender Balance

## Absolute gross salaries

## Ratio with the average annual gross salary

## Training of Justice Professionals

Average number of live training participations per professional\*

Distribution (%) of 1st instance specialised and general jurisdiction courts

● Specialised courts  
● Courts of general jurisdiction  
● CoE Median

First instance legal entities per 100 000 inh.

All courts (geographic locations)

● Portugal ● CoE median

\* This indicator is calculated as follows: the number of participants in live trainings is divided by the number of professionals for that category. For example, if the CoE Median for judges is 3,9, this means that, each judge in Europe participated to 3,9 live trainings (as mid value). Indeed, this analysis allows to better understand quantity of training per professional if all were trained.

## CEPEJ Efficiency Indicators

**Clearance Rate (CR) = (Resolved cases / Incoming cases) \* 100**

CR > 100%, the court/judicial system is able to resolve more cases than it received => backlog is decreasing

CR < 100%, the court/judicial system is able to resolve fewer cases than it received => backlog is increasing

**Disposition Time (DT) = (Pending cases / Resolved cases) \* 365**

The Disposition Time (DT) is the theoretical time for a pending case to be resolved, taken into consideration the current pace of work of the courts
