IV. The right to a healthy environment.....	13
A. <i>Recognition of the right to a healthy environment – the international situation at global and regional levels</i>	<i>13</i>
B. <i>Recognition of the right to a healthy environment – the domestic situation in Council of Europe member States (and globally)</i>	<i>15</i>
C. <i>The constituent elements of the right to a healthy environment</i>	<i>17</i>
V. The need for a further instrument or instruments in the field of human rights and the environment	18
A. <i>Human rights and the triple planetary crisis</i>	<i>18</i>
B. <i>Enhanced protection of individuals from environmental harm through the human right to a healthy environment.....</i>	<i>19</i>
i. <i>The implications of the Court’s climate change rulings on the need for a new instrument or instruments.....</i>	<i>20</i>
C. <i>Business and human rights</i>	<i>23</i>
D. <i>Human rights defenders in environmental matters (“environmental human rights defenders”)</i>	<i>23</i>
VI. The expectations of the Parliamentary Assembly and independent actors.....	24
VII. Different options for a further instrument in the field of human rights and the environment..	25
A. <i>An additional protocol to the Convention on the human right to a healthy environment.....</i>	<i>25</i>
i. <i>General considerations relating to an additional protocol to the Convention (all models).....</i>	<i>26</i>
ii. <i>Model I (guaranteeing the right to a healthy environment)</i>	<i>27</i>
iii. <i>Model II (guaranteeing the human right to a healthy environment plus definition of its constituent elements).....</i>	<i>27</i>
iv. <i>Model III (guaranteeing the human right to a healthy environment plus definition of its constituent elements, with additional elements).....</i>	<i>27</i>
B. <i>An additional protocol to the ESC guaranteeing the human right to a healthy environment</i>	<i>28</i>
i. <i>General considerations relating to an additional protocol to the ESC (all models).....</i>	<i>29</i>
ii. <i>Model specific considerations – model III (guaranteeing the human right to a healthy environment plus definition of its constituent elements, with additional elements).....</i>	<i>29</i>

C. A standalone convention on human rights and the environment	29
i. Model I (guaranteeing the human right to a healthy environment plus definition of its constituent elements).....	30
ii. Model II (guaranteeing the human right to a healthy environment plus definition of its constituent elements, with additional elements).....	30
D. Monitoring mechanisms	30
E. Mentioning environmental protection in the preamble of the Convention	31
F. Mentioning environmental protection in the preamble of the ESC	31
G. A non-binding instrument recognising the human right to a healthy environment	32
H. A combination of different instruments	32
I. The option of not adopting any new instrument	32
VIII. Conclusions and recommendations	33

I. Introduction – terms of reference and procedure

1. The terms of reference of the CDDH for 2024-2027 require it to prepare a study on the need for and feasibility of a further instrument or instruments in the field of human rights and the environment (“Study on need and feasibility”).¹

2. The CDDH entrusted preparatory work to its Drafting Group on human rights and environment (CDDH-ENV). The CDDH-ENV devoted six meetings to this task between September 2022 and March 2024. The first of these meetings involved an exchange of views with independent experts and representatives of the Parliamentary Assembly and the European Committee on Social Rights (ECSR).² Representatives of the secretariats of the Parliamentary Assembly, the European Social Charter (ESC), the Conference of International NGOs, and other relevant Council of Europe bodies, as well as members of the Registry of the European Court of Human Rights and the office of the Council of Europe Commissioner for Human Rights, along with representatives of the Office of the UN High Commissioner for Human Rights, the European Network of National Human Rights Institutions (ENNHRI), and a number of international non-governmental organisations participated in the meetings of the CDDH-ENV.

3. In May 2023, the members of the CDDH-ENV participated in the High-level Conference on the right to a healthy environment in practice, organized by the Icelandic Presidency of the Committee of Ministers.³

4. The CDDH-ENV finalised a “draft CDDH report on the need for and feasibility of a further instrument or instrument on human rights and the environment” at its meeting in March 2024. In April 2024, the European Court of Human Rights (the Court) issued rulings in three cases concerning the effects of climate change. In June 2024, the CDDH exchanged views with Professor Helen Keller on these rulings. The CDDH noted that the rulings were relevant to a number of fundamental issues in its ongoing work and considered that their meaning and implications would require detailed examination in its Study on need and feasibility. The CDDH therefore decided to ask the Committee of Ministers for an extension of the deadline for completion of the present Study on need and feasibility. The Committee of Ministers subsequently granted an extension until 31 December 2024.

5. The CDDH adopted the present Study on need and feasibility at its 101st meeting in November 2024. The Study summarises much of the background information and analysis contained in the CDDH-ENV document. Readers wishing to explore in detail the preparatory work conducted by the CDDH-ENV are invited to consult the “Background document prepared by the CDDH-ENV”.⁴

¹ This instruction was a continuation of an earlier decision of the Committee of Ministers inviting the CDDH to “prepare a report on the need for and feasibility of a further instrument or instrument on human rights and the environment, bearing in mind Recommendation 2211 (2021) of the Parliamentary Assembly [entitled “Anchoring the right to a healthy environment: need for enhanced action by the Council of Europe”].

² The invited participants were Prof. Helen Keller, Sébastien Duyck, Prof. John H. Knox, Dr Lea Raible, Prof. Elisabeth Lambert, Simon Moutquin (Parliamentary Assembly), and Prof. Giuseppe Palmisano (ECSR). The [programme](#) of the exchange of views is available online.

³ The [programme](#) and [proceedings](#) of the conference are available online.

⁴ This document, in effect the “draft CDDH report on the need for and feasibility of a further instrument or instrument on human rights and the environment” prepared by the CDDH-ENV but retitled in order to avoid confusion with the present document, is available online.

II. The Council of Europe and the environment

6. The Council of Europe has a long history of activity relating to the environment, including the connections between the environment and human rights. The organisation's focus on environmental issues has intensified in recent years. In 2022, for example, the Committee of Ministers adopted Recommendation CM/Rec(2022)20 to member States on human rights and the protection of the environment, and in 2021 the CDDH adopted the updated 3rd edition of its Manual on Human Rights and the Environment.

7. This tendency was underlined in May 2023 at the Fourth Summit of Heads of State and Government of the Council of Europe. Amongst other things, this initiated the "Reykjavík Process", encouraged the establishment of a new intergovernmental committee on environment and human rights ("Reykjavík Committee"), and called for the conclusion of the CDDH's feasibility study as soon as possible.⁵ On 10 July 2024, as follow-up to the Fourth Summit, the Committee of Ministers established an Ad hoc Multidisciplinary Group on the Environment (GME), instructing it "to prepare a draft Council of Europe Strategy on the Environment and a related Action Plan for its implementation in accordance with the Reykjavík Declaration, focusing on areas where the Council of Europe has a comparative advantage and/or unique legal instruments and expertise, ensuring an inclusive consultation process, and leveraging synergies with partners and stakeholders with a view to providing added value."⁶

A. Activities relating directly to the environment

8. The Council of Europe has adopted a number of specific instruments on environment-related issues. Notable examples include the 1979 Convention on the Conservation of European Wildlife and Natural Habitats (the Bern Convention, ETS No. 104), the 1987 EUR-OPA Major Hazards Agreement,⁷ and the 2000 Landscape Convention (ETS No. 176), along with its 2016 amending protocol (CETS No. 219). There are also Council of Europe treaties on the use of detergents, intended in part for the protection of nature, and on various issues relating to animals (animal experimentation, pets, farm animals, and international transport of animals).⁸

9. Two other environment-related conventions have been adopted but have not entered into force due to insufficient ratifications. These are the 1993 Convention on Civil Liability for Damage Resulting from Activities Dangerous to the Environment (ETS No. 150) and the 1998 Convention on the Protection of the Environment through Criminal Law (ETS No. 172). In November 2022, the Committee of Ministers established a Committee of Experts on the Protection of the Environment through Criminal Law (PC-ENV) to work, under the authority of the European Committee on Crime Problems (CDPC), on a new draft Convention superseding and replacing the European Convention on the Protection of the Environment through Criminal Law. The CDPC approved the draft convention and explanatory report at its meeting in November 2024 and transmitted it to the Committee of Ministers for adoption.

⁵ See in particular the Reykjavík Declaration, Appendix V.

⁶ See doc. CM/Del/Dec(2024)1504/4.1. The Reykjavík Declaration was adopted at the Fourth Summit of Heads of State and Government of the Council of Europe (see further below).

⁷ Committee of Ministers Resolution 87(2) setting up a co-operation group for the prevention of, protection against, and organisation of relief in major natural and technological disasters.

⁸ For further details, see doc. CDDH-ENV(2023)06REV4, para. 3.

B. Activities relating to human rights in the environmental context

10. The Council of Europe's two principal human rights conventions – the European Convention on Human Rights (the Convention) and the ESC – have been applied in such a way as to ensure protection, respect and fulfilment of numerous rights against harm that emerges in the environmental context (often referred to as the “greening of human rights”).⁹ These issues are examined further below. However, neither of these conventions protect the human right to a clean, healthy and sustainable environment as such.¹⁰

11. The 2009 Convention on Access to Official Documents (CETS No. 205, Tromsø Convention) is the only international legal instrument which guarantees a general right to access to official documents held by public authorities, including documents concerning environmental matters. Its preamble refers to the 1998 United Nations Economic Commission for Europe Convention on Access to Information, Public Participation in Decision-making and Access to Justice in Environmental Matters (Aarhus Convention).

12. Council of Europe bodies, including the Committee of Ministers and several of its recent presidencies, the Parliamentary Assembly, and the Congress of Local and Regional Authorities, have engaged in activities relating to human rights and the environment. The subject was also addressed at the 9th edition of the Council of Europe's World Forum for Democracy in 2020.¹¹

III. International human rights law and the environment

13. Before exploring the relationship between international human rights law (IHRL) and the environment, it is important to distinguish between IHRL and international environmental law (IEL). IHRL and IEL have developed as separate regimes. IEL aims primarily to address negative impacts on the environment, with the objective of protecting and conserving the environment; whilst IHRL is principally concerned with the protection of human rights. Although they are two different branches of international law, it is recognised that they complement one another on some issues.

14. As per the current state of law, while certain IEL instruments grant limited directly actionable procedural rights to individuals or groups that can be invoked before national courts or international monitoring mechanisms,¹² IEL does not grant to individuals or groups any general, directly actionable right to an environment of a certain standard.¹³ By contrast, IHRL usually grants directly actionable rights to individuals and groups, including oversight at the international level by courts and treaty bodies.¹⁴ However, where IEL sets rules to which States must adhere in relation to the natural environment,¹⁵ IHRL does not grant direct protection to the environment.¹⁶

⁹ Further information on the ways in which the Court and the ECSR have elaborated the relationship between rights protected under respectively the Convention and the ESC and the environment can be found in the 3rd edition of the [CDDH Manual on human rights and the environment](#). It should be recalled that the 3rd edition of the Manual was adopted in 2021, before the Court issued its climate change rulings.

¹⁰ The present report uses the term “the human right to a healthy environment” as a generic, “shorthand” term that incorporates the qualifying adjectives used in the different instruments, for further information see CDDH-ENV(2023)06REV4, para 75.

¹¹ For further details, see doc. CDDH-ENV(2023)06REV4, paras. 7 – 12.

¹² Report of the Secretary-General, Gaps in international environmental law and environment-related instruments: towards a global pact for the environment, 30 November 2018, UN doc. A/73/419.

¹³ Notable exception exists under the Escazú Agreement. There are divergent views on whether the Aarhus Convention codifies procedural components of the human right to a healthy environment.

¹⁴ See, for example, the Right of individual application to the European Court of Human Rights (art. 34 of the Convention).

¹⁵ See, for example, Report of the United Nations Conference on the Human Environment, Stockholm, 5–16 June 1972 A/CONF.48/14/Rev.1, Principle 2; The World Charter for Nature, 28 October 1982, A/RES/37/3, general principles.

¹⁶ It only does so indirectly, through the application of certain human rights in an environmental context. See e.g. *López Ostra v. Spain*, application no. 16798/90, judgment of 9 December 1994, §51.

15. Taking into account its terms of reference, composition, and field of expertise, the CDDH in the present Study on need and feasibility will focus on the situation under IHRL, whilst recognising that protection of the environment under IEL contributes to the full enjoyment of human rights. Since there is no European (regional) or international (global) binding human rights instrument guaranteeing the right to a clean, healthy and sustainable environment (“right to a healthy environment”), this issue will be addressed in a separate section of the present Study on need and feasibility.

A. The European Convention on Human Rights, as interpreted and applied in the caselaw of the European Court of Human Rights

16. While the Convention does not mention the environment, the Court has so far ruled in over 300 environment-related cases involving a wide range of environment-related considerations.¹⁷ Under Article 2 (the right to life) and Article 3 (prohibition of inhuman or degrading treatment), the Court has examined situations concerning dangerous industrial activities, exposure to nuclear radiation, industrial emissions, natural disasters and passive smoking in prison. Under Article 6(1) (right to a fair trial), the Court has addressed the issues of access to court, fairness of proceedings concerning environmental matters and failure to enforce final judicial decision on those matters. The Court’s caselaw under Article 8 (right to respect for private and family life and home) concerns issues such as environmental risk and access to information, industrial pollution, noise pollution, mobile phone antennas, emission from diesel vehicles, soil and water contamination, urban development, and waste collection, management, treatment and disposal, or the adverse effects of climate change. Under Article 10 (freedom of expression), the Court has examined issues concerning the freedom to receive and impart information on environmental matters and under Article 11, (freedom of assembly and association) it has addressed issues relating to collective action in environmental matters. The Court’s caselaw on Article 1 of Protocol No. 1 to the Convention (protection of property) covers issues ranging from the obligation to tolerate hunting on land owned by those who object to hunting on ideological grounds, to States’ positive obligations to protect property in case of natural disasters. Under Article 13 (the right to an effective remedy), the Court has examined the availability of remedies for alleged violations of the substantive rights listed above.

17. The Court develops its interpretation of the Convention and its Protocols in response to legal, social, ethical or scientific developments, by application of the “living instrument doctrine” according to which “the Convention [...] must be interpreted in the light of present-day conditions”.¹⁸ This allows the Court to address new challenges insofar as they relate to the rights guaranteed by the Convention. The Court, however, cannot, by means of such evolutive interpretation, derive from these instruments a right that was not included therein at the outset, especially where the omission was deliberate.¹⁹

18. The conditions relating to the jurisdiction of and admissibility of applications to the Court, as well as the criteria for application of Convention rights and the rules of evidence, have an impact on the extent of the indirect protection of the environment that result from the protection of rights guaranteed by the Convention in the context of the environment.

¹⁷See https://www.echr.coe.int/documents/fs_environment_eng.pdf and the CDDH Manual on Human Rights and the Environment (3rd Edition, adopted in 2021).

¹⁸ *Tyler v. the United Kingdom*, application no. 5856/72, judgment of 25 April 1978, §31.

¹⁹ See i.a. *Johnston and Others v. Ireland*, application no. 9697/82, § 53, judgment of 18 December 1986; *Austin and Others v. the United Kingdom*, applications nos. 39692/09 and 2 others, Grand Chamber judgment of 15 March 2012, § 53; *Ferrazzini v. Italy*, application no. 44759/98, Grand Chamber judgment of 12 July 2001, § 30; and *Magyar Helsinki Bizottság*, application no. 18030/11, Grand Chamber judgment of 08 November 2016, §§ 118-122 and 125.

i. Implications of the Convention's procedural requirements

19. The jurisdictional requirements under Article 1 of the Convention as currently interpreted by the Court delimit the Court's competence to address environmental issues. Article 1 of the Convention states that a Contracting Party must 'secure' the protected rights and freedoms to persons within its 'jurisdiction'. The State's jurisdiction under Article 1 is primarily territorial, i.e. the victim is within the national territory of the State. If the victim is outside a State's territory, extraterritorial jurisdiction may exceptionally be established if (i) the State exercises power (or control) over the victim (personal concept of jurisdiction), or (ii) the State exercises effective control over the territory in which the alleged violation occurs (spatial concept of jurisdiction).²⁰ The Convention's jurisdictional requirements may thus delimit the Court's competence to address certain environmental cases, in particular in cases of transboundary environmental harm, where pollution originating in one state has an impact on individuals in another.²¹

20. The Court's decision in the *Duarte Agostinho* case, brought by a group of young Portuguese individuals against Portugal and 32 other States Parties to the Convention, confirmed this approach to jurisdiction in cases involving the adverse effects of climate change. It found that none of the existing grounds applied to establish extraterritorial jurisdiction of the respondent States other than Portugal.²² It also rejected the applicants' arguments in favour of a more expansive view of extraterritorial jurisdiction. The suggestion that the respondent States other than Portugal should be held "accountable" for the impact of climate change on the applicants' Convention rights was dismissed on the basis that "jurisdiction should be differentiated from the issue of responsibility".²³ The Court dismissed the suggestion that extraterritorial jurisdiction could be based on "control over the applicants' Convention interests", considering that this would lead to an "untenable level of uncertainty for the States", involving an "unlimited expansion of States' extraterritorial jurisdiction under the Convention and responsibilities under the Convention towards people practically anywhere in the world. This would turn the Convention into a global climate-change treaty."²⁴ It also declined to find that the materials presented by the applicants concerning jurisdiction under certain other international instruments provided support for establishing extraterritorial jurisdiction under the Convention in this case.²⁵

21. The Court in *Duarte Agostinho* did, however, specify that its findings were specific to cases concerning the adverse effects of climate change and did not deal with possible issues of extraterritorial jurisdiction that may arise, for instance, in the context of more localised transboundary environmental harm.²⁶ The *Duarte Agostinho* judgment thus does not prejudice the possibility of further development of the Court's caselaw on extraterritorial jurisdiction in a possible future case not involving climate change.

22. Under Article 34 of the Convention, the Court may receive applications from any person, non-governmental organisation or group of individuals claiming to be the victim of a violation. Article 34 excludes the possibility of *actio popularis*, i.e. public-interest applications that do not directly concern the applicant's individual rights. For this, applications cannot be made by or on behalf of a category of persons, such as "future generations".

²⁰ Specific circumstances of a procedural nature have also been used to justify the application of the Convention in relation to events which occurred outside the respondent State's territory, however, this is not relevant in the present context, see *M.N. and Others v. Belgium* (dec.) [GC], no. 3599/18, 5 May 2020 §107.

²¹ Summary, Raible, p. 5-6.

²² *Duarte Agostinho and Others v. Portugal and 32 Others*, application no. 39371/20, Grand Chamber judgment of 9 April 2024, paragraphs 181-183.

²³ *Duarte Agostinho*, paragraph 202.

²⁴ *Duarte Agostinho*, paragraph 208.

²⁵ *Duarte Agostinho*, paragraph 211.

²⁶ *Duarte Agostinho*, paragraph 167.

23. The Court's judgment in the *Verein KlimaSeniorinnen Schweiz and Others* case involved a significant development in the interpretation and application of the victim status requirement under Article 34 in climate change cases.²⁷ Most importantly, associations will have standing before the Court to bring climate change cases, though not in the sense of *actio popularis*, but rather in a representative capacity, subject to certain conditions. Individuals will still be able to bring cases, where there is a high intensity of exposure to the adverse effects of climate change and a pressing need for individual protection against the adverse effects of climate change. For further examination of the *Verein KlimaSeniorinnen Schweiz* judgment and its implications in this and other respects, see below.²⁸

24. Article 35(1) of the Convention allows the Court to deal with a matter only after all domestic remedies have been exhausted. The application of this requirement in cases involving the impact of climate change on Convention rights was examined by the Court in its *Duarte Agostinho* judgment. The Court confirmed its existing approach, finding that "it cannot be considered that there were any special reasons for exempting the applicants from the requirement to exhaust domestic remedies in accordance with the applicable rules and the available procedures under domestic law".²⁹ It also rejected the argument that the novel and supranational nature of issues in the case meant that the Court should provide guidance to States on their Convention obligations in relation to climate change,³⁰ before the opportunity has been given to domestic courts to do so, recalling that "it is not a court of first instance".³¹

ii. Implications of the Convention's substantive standards

25. Environmental factors such as pollution only engage Convention rights if their adverse impact reaches a certain level of severity. In cases under Articles 2 (right to life) or 3 (prohibition of inhuman or degrading treatment), the level of severity is inherent in the nature of the subject-matter. Severe environmental harm may also affect individuals' well-being in a way that does not seriously endanger their health but which may adversely affect their private and family life.³² An issue may thus arise under Article 8 (right to respect for private and family life) where an individual is directly and seriously affected by some form of pollution or nuisance.³³ Even if the environment itself has been severely damaged, however, the Convention is not engaged unless that damage directly affects an individual's rights.³⁴ Article 8 of the Convention is not engaged every time environmental harm or the risk thereof occurs.³⁵

26. In general, the Court applies the principle that the party making an allegation must prove that allegation. It also generally applies the standard of proof of "beyond reasonable doubt"; such proof may follow from "the coexistence of sufficiently strong, clear and concordant inferences or of similar unrebutted presumptions of fact."³⁶ In environmental cases in general, and pollution cases

²⁷ *Verein KlimaSeniorinnen Schweiz & Others v. Switzerland*, application no. 53600/20, Grand Chamber judgment of 09 April 2024.

²⁸ For further examination, see paragraph 70 below. Noting the partly concurring partly dissenting opinion of Judge Eicke in respect of the methodology and conclusions on both admissibility and merits.

²⁹ *Duarte Agostinho*, paragraph 226.

³⁰ *Duarte Agostinho*, paragraph 133.

³¹ *Duarte Agostinho*, paragraph 228.

³² *Lopez Ostra v. Spain*, application no. 16798/90, judgment of 09 December 1994, paragraph 51; *Kapa & otrs v. Poland*, application no. 75031/13, judgment of 14 October 2021, paragraph 149.

³³ *Hatton & Others v. United Kingdom*, application no. 36022/97, Grand Chamber judgment of 8 July 2003, paragraph 96.

³⁴ *Kyrtatos*, §53.

³⁵ *Jugheli and Others v. Georgia*, application no. 38342/05, judgment of 13 July 2017, §62; and *Çiçek and Others v. Türkiye* (dec.), application no. 44837/07, 4 February 2020, §22.

³⁶ *Fadeyeva v Russia*, application no. 55723/00, judgment of 09 June 2005, §79.

in particular, evidentiary difficulties arise due to the complex interlinkages between environmental harm and the health risks or effects that an applicant must demonstrate, as the Court has recognised: “[...] it is often impossible to quantify the effects of serious industrial pollution in each individual case and to distinguish them from the influence of other relevant factors, such as age, profession or personal lifestyle.”³⁷ The Court may not always rigorously apply the principle that the party making an allegation must prove that allegation, however, notably in circumstances where only the respondent Government has access to information capable of corroborating or refuting the applicant’s allegations.³⁸

B. The European Social Charter, as interpreted by the European Committee on Social Rights

27. The ESC does not explicitly contain a human right to a healthy environment as such, with no specific articles or provisions which address this. The ECSR, through its activity of monitoring and interpreting the ESC, has nevertheless been able to clarify and put into practice the relationship between environmental protection and social rights, in particular, with regard to the application and interpretation of the right to protection of health, which is enshrined in Article 11 of the ESC. These are provided through conclusions and statements of interpretation by the ECSR, in accordance with its role as the body with responsibility for legal interpretation of the ESC. The ECSR holds that public health systems must respond appropriately to risks that can be controlled by human action, which include environmental threats. Consequently, the ECSR has interpreted the right to protection of health to include the right to a healthy environment.³⁹

28. The ECSR monitors compliance with the ESC under two separate procedures: (i) regular reporting by States parties on their implementation of the ESC, and (ii) collective complaints lodged by the social partners and non-governmental organisations, for those States having ratified the 1995 Additional Protocol Providing for a System of Collective Complaints.⁴⁰ National reports are examined by the ECSR, which determines whether the national situations they describe comply with the ESC. In this framework, the ECSR adopts conclusions which are published every year. Insofar as they refer to binding legal provisions and are adopted by a monitoring body established by the ESC, the conclusions and decisions of the ECSR represent an authoritative, although not legally binding interpretation of the ESC’s provisions. States Parties have an obligation to cooperate with the ECSR and its decisions and conclusions that arises from the application of the principle of good faith to the observance of all treaty obligations. Follow-up to the conclusions of the ECSR is ensured by the Committee of Ministers.

29. The collective complaints procedure entitles social partners and international, and where recognised, national non-governmental organisations to lodge collective complaints concerning alleged violations of the ESC.⁴¹ The complaint is examined by the ECSR, which declares it admissible if the formal requirements have been met.⁴² The ECSR then takes a decision on the merits of the complaint, which it transmits to the parties concerned and to the Committee of Ministers in a report. Based on the report, the Committee of Ministers adopts a resolution. In case

³⁷ *Jugheli*, paragraph 63.

³⁸ *Fadeyeva*, paragraph 79.

³⁹ *Marangopoulos Foundation for Human Rights (MFHR) v. Greece*, complaint no. 30/2005, decision on the merits of 6 December 2006, §§194-195, §202.

⁴⁰ 16 of the 42 Parties to the ESC have ratified this additional protocol.

⁴¹ Organisations entitled to lodge complaints: trade unions and employers’ organisations (national and international), national and international non-governmental organisations and, in certain circumstances, national non-governmental organisations (Articles 1 and 2 of the Additional Protocol to the ESC Providing for a System of Collective Complaints).

⁴² Under Article 4 of the Additional Protocol, “complaints shall be lodged in writing, relate to a provision of the Charter accepted by the Contracting Party concerned and indicate in what respect the latter has not ensured the satisfactory application of this provision.”

violations have been found by the ECSR, the Committee of Ministers may recommend that the State concerned take specific measures to bring the situation into line with the ESC.

30. The operation of the ESC's procedural requirements and the application of its substantive standards for arguing a case before the ECSR may influence the extent of indirect protection.

i. Implications of the ESC's procedural requirements

31. The personal scope of the ESC includes foreigners only in so far as they are nationals of other Parties lawfully resident or working regularly within the territory of the Party concerned.⁴³ The ECSR has, however, considered that the restriction on the personal scope should not be read in such a way as to deprive foreigners coming within the category of irregularly present migrants of the protection of the most basic rights enshrined in the ESC or to impair their fundamental rights such as the right to life or to physical integrity or the right to human dignity.⁴⁴

ii. Implications of the ESC's substantive standards

32. The ESC protects the environment only insofar as it has an impact on ESC rights. Under Article 11 of the ESC, the ECSR has clarified that measures must be designed by States to remove the causes of ill-health resulting from environmental threats such as pollution,⁴⁵ and to protect the population against, for example, nuclear hazards⁴⁶ as well as against health risks related to asbestos.⁴⁷ Likewise, situations where availability of drinking water represents a problem for a significant proportion of the population have been considered by the ECSR to be in breach of Article 11 of the ESC.⁴⁸ The ECSR has also emphasised that States have positive obligations in order to combat air pollution.⁴⁹ States are required to take measures to remove the causes of ill-health from environmental threats such as pollution, within a reasonable time, by showing measurable progress and making best possible use of the resources at their disposal.⁵⁰ In addition, the ECSR has considered that States are under an obligation to apply the precautionary principle when there are reasonable grounds to believe that there is a risk of serious damage to human health.⁵¹

C. Other IHRL instruments

33. Issues related to human rights and the environment have also been addressed by the treaty bodies monitoring States parties' compliance with core UN human rights treaties, including the International Covenant on Civil and Political Rights (ICCPR), the International Covenant on Economic, Social and Cultural Rights (ICESCR), the Convention on the Rights of the Child (CRC), and the Convention on the Elimination of All Forms of Discrimination against Women (CEDAW). (It should be noted that – like the ECSR, but unlike the Court – these treaty bodies do not adopt legally binding decisions.)

⁴³ Appendix to the European Social Charter (Revised), CETS 163, §1.

⁵¹ *International Federation of Human Rights Leagues (FIDH) v. Greece*, Complaint No. 72/2011, decision on the merits of 23 January 2013, §§150-152.

34. The UN Human Rights Committee, which monitors the ICCPR, issued General Comment No. 36 on the right to life in 2018, emphasising that States' obligation to protect life also entails that they should take adequate measures to alleviate societal conditions that may threaten life, such as environmental degradation. Moreover, it stated that "environmental degradation, climate change, and unsustainable development constitute some of the most pressing and serious threats to the ability of present and future generations to enjoy the right to life. The obligations of States parties under international environmental law should thus inform the content of article 6 of the Covenant [right to life], and the obligation of States parties to respect and ensure the right to life should also inform their relevant obligations under international environmental law."⁵²

35. The UN Human Rights Committee has also addressed environment-related cases under its individual communications (complaints) procedure. These have included allegations of violation of the right to life and the right to private and family life due to failures to adequately regulate the use of toxic agrochemicals and investigate the death of an individual exposed to such chemicals;⁵³ an allegation that the removal of the complainant to an island that climate change would ultimately render uninhabitable would violate his right to life;⁵⁴ and an allegation that failure to adequately protect the indigenous inhabitants of certain islands against adverse impacts of climate change would violate their rights to respect for private, family and home life and the rights of ethnic, religious or linguistic minorities.⁵⁵

36. The UN Committee on Economic, Social, and Cultural Rights (CESCR) has interpreted the ICESCR rights to the enjoyment of the highest possible standard of health (Article 12)⁵⁶ and to an adequate standard of living (Article 11)⁵⁷ to include "the requirement to ensure an adequate supply of safe and potable water and basic sanitation [and] the prevention and reduction of the population's exposure to harmful substances such as radiation and harmful chemicals or other detrimental environmental conditions that directly or indirectly impact upon human health."⁵⁸

37. In its General Comment No. 26 on children's rights and the environment, with a special focus on climate change, the UN Committee on the Rights of the Child stressed the principle of intergenerational equity and the interests of future generations, stating that "States bear the responsibility for foreseeable environment-related threats arising as a result of their acts or omissions now, the full implications of which may not manifest for years or even decades". Section II of the General Comment describes the connections between the environment and provisions of the CRC. Section III concerns the right to a clean, healthy and sustainable environment and will be discussed in more detail in Section C below. Section IV is devoted to general measures of implementation, and Section V deals with climate change.

38. The UN Committee on the Rights of the Child, in *obiter dicta*, in its decisions relating to the individual communications in *Sacchi and others v. Argentina and others*, stated that jurisdiction in the sense of Article 2 of the CRC may be established "if there is a causal link between the acts or omissions of the State in question and the negative impact on the rights of children located outside its territory, when the State of origin exercises effective control over the sources of the emissions in question", adding that "the alleged harm suffered by the victims needs to have been reasonably

foreseeable to the State party at the time of its acts or omissions.”⁵⁹ The communication in question, which concerned alleged violations of the CRC due to insufficient cuts to greenhouse gas emissions and failure to use available tools to protect children from the adverse effects of climate change, was found inadmissible for failure to exhaust local remedies.⁶⁰

39. In 2019, five UN human rights treaty bodies issued a joint statement on climate change calling for States to implement policies aimed at reducing emissions, so as to realise the objectives of the Paris Agreement.⁶¹

IV. The right to a healthy environment

A. Recognition of the right to a healthy environment – the international situation at global and regional levels

40. On 28 July 2022, the UN General Assembly, with 161 States (including all Council of Europe member States) voting in favour, zero against and eight abstentions, adopted resolution 76/300 on the human right to a clean, healthy and sustainable environment (UNGA resolution).⁶² 38 Council of Europe member States co-sponsored the UNGA Resolution.⁶³ The UNGA resolution was accompanied by a number of Explanations of Votes, including from Council of Europe member States, some noting the lack of international consensus on the legal basis of the right and on what it comprises, or that political recognition did not have legal effect. The UNGA resolution followed UN Human Rights Council (HRC) resolution 48/13 on “[t]he human right to a clean, healthy and sustainable environment”, which had been adopted on 8 October 2021.⁶⁴

41. The UNGA resolution recognises the right to a clean, healthy and sustainable environment as a human right that is related to other rights and existing international law. Its preambular paragraphs recognise that the exercise of human rights, including the rights to seek, receive and impart information, to participate effectively in the conduct of government and public affairs and to an effective remedy, is vital to the protection of a clean, healthy and sustainable environment.

42. UN treaty bodies have also addressed the right to a healthy environment. In its General Comment No. 26, the UN Committee on the Rights of the Child affirmed that “[c]hildren have the right to a clean, healthy and sustainable environment”, which is “implicit” in the CRC and “directly linked” to other rights. The CESCR, in 2022, adopted General Comment No. 26 on Land and Economic, Social and Cultural Rights, holding that “[t]he sustainable use of land is essential to ensure the right to a clean, healthy and sustainable environment and to promote the right to development, among other rights”. The UN Committee on the Elimination of Discrimination against Women, in its 2022 General Recommendation No. 39 on the rights of Indigenous women and girls,

⁵⁹ *Sacchi et al. v Argentina, Brazil, France, Germany and Türkiye*, UN Committee on the Rights of the Child, CRC/88/D/104/2018, §10.7.

⁶⁰ *Ibid.*, §§8 and 7.

⁶¹ <https://www.ohchr.org/en/statements/2019/09/five-un-human-rights-treaty-bodies-issue-joint-statement-human-rights-and>.

⁶² UN General Assembly resolution, The human right to a clean, healthy and sustainable environment, 26 July 2022, A/RES/76/300.

⁶³ See Addendum to the draft resolution of the General Assembly on the human right to a clean, healthy and sustainable environment (28 July 2022), UN Doc. A/76/L.51/Add.1 (2022): Albania, Andorra, Armenia, Austria, Belgium, Bosnia and Herzegovina, Bulgaria, Croatia, Cyprus, Czechia, Denmark, Estonia, Finland, France, Georgia, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lichtenstein, Lithuania, Luxembourg, Monaco, Montenegro, Netherlands, Portugal, Republic of Moldova, Romania, San Marino, Slovakia, Slovenia, Spain, Sweden, Switzerland and Ukraine.

⁶⁴ According to the core group president (Costa Rica), the word “safe” had been removed from the draft text of resolution 48/13 so that it refers to a right to a clean, healthy and sustainable environment more faithfully capturing the results of the consultations and dialogues, as the adjective “safe” was not clear enough for the parties involved, see the presentation of the draft resolution: <https://media.un.org/en/asset/k1g/k1g6cdjnxl>

urged States to “[a]dopt legislation to fully ensure the rights of Indigenous women and girls to land, water and other natural resources, including their right to a clean, healthy and sustainable environment”.⁶⁵

43. At the regional level, the 1981 African Charter on Human and Peoples Rights (the African Charter) provides that “all peoples shall have the right to a general satisfactory environment favorable to their development” (article 24). The 2003 Protocol to the African Charter on the Rights of Women in Africa states that women “shall have the right to live in a healthy and sustainable environment” (article 18) and “the right to fully enjoy their right to sustainable development” (article 19). The 1988 Additional Protocol to the American Convention on Human Rights (Protocol of San Salvador), states that “everyone shall have the right to live in a healthy environment” (article 11(1)). The 2004 Arab Charter on Human Rights includes a right to a “safe environment” as part of the right to an adequate standard of living that ensures well-being and a decent life (article 38). The Human Rights Declaration adopted by the Association of Southeast Asian Nations (ASEAN) incorporates a “right to a safe, clean and sustainable environment” also an element of the right to an adequate standard of living (para. 28 (f)); this declaration, however, is a soft law document.

44. The human right to a healthy environment is also referred to in the Aarhus Convention,⁶⁶ adopted under the auspices of the UN Economic Commission for Europe.⁶⁷ The stated aim of the Aarhus Convention is to contribute to the protection of “the right of every person of present and future generations to live in an environment adequate to his or her health and well-being” by each Party guaranteeing “the rights of access to information, public participation in decision-making, and access to justice in environmental matters in accordance with the provisions of this Convention (art. 1). There are divergent views on whether the Aarhus Convention codifies procedural components of the human right to a healthy environment (see further below).⁶⁸

45. Decisions adopted in the context of certain environmental agreements refer to the human right to a healthy environment. These include the Sharm el-Sheikh Implementation Plan,⁶⁹ and the UAE Consensus,⁷⁰ and the Kunming-Montreal Global Biodiversity Framework.⁷¹ The Global Framework on Chemicals,⁷² five resolutions adopted during the Sixth United Nations Environment

⁶⁵ General recommendation No. 39 (2022) on the rights of Indigenous women and girls, CEDAW/C/GC/39, p. 9, point e); see also in the same, p. 24 et seq.

⁶⁶ 1998 Aarhus Convention on Access to Information, Public Participation in Decision-Making and Access to Justice in Environmental Matters, 2161 UNTS 447, 38 ILM 517 (1999). It has been ratified by all Council of Europe member States with the exception of Andorra, San Marino, and Türkiye, as well as by the EU.

⁶⁷ The Aarhus Convention has been opened to ratification by non-European states and was ratified by Guinea-Bissau in 2023.

⁶⁸ At the Latin American and Caribbean level, the 2018 Regional Agreement on Access to Information, Public Participation and Justice in Environmental Matters in Latin America and the Caribbean (Escazú Agreement) is similar in purpose to the Aarhus Convention. It has among its objectives “the creation and strengthening of capacities and cooperation, contributing to the protection of the right of every person of present and future generations to live in a healthy environment and to sustainable development” (art 1). Article 4(1) of the Escazú Agreement states that “[e]ach Party shall guarantee the right of every person to live in a healthy environment”.

⁶⁹ Adopted by consensus at the 27th Conference of the Parties to the UN Framework Convention on Climate Change (COP-27).

⁷⁰ Adopted by consensus at the 28th meeting of the Conference of the Parties to the UN Framework Convention on Climate Change (COP-28): see Decision 1/CP.27: Sharm el-Sheikh Implementation Plan, Report of the Conference of the Parties on its twenty-seventh session, FCCC/CP/2022/10/Add.1, pp 8 and UAE Consensus Decision -/CM.

⁷¹ Adopted at the 15th Conference of the Parties to the Convention on Biological Diversity: see Decision 1/COP.15: Kunming-Montreal Global biodiversity framework, CBD/COP/15/L.25, Annex, §14.

⁷² Adopted at the 5th International Conference on Chemicals Management (ICCM5): see resolution V/1: Global Framework on Chemicals – For a Planet Free of Harm from Chemicals and Waste, Annex II, (t).

Assembly in February-March 2024,⁷³ as well as the decision on Biodiversity and climate change⁷⁴ and the Global Action Plan on Biodiversity and Health⁷⁵ adopted by COP16 of the Convention on Biological Diversity, among others, also refer to the right to a clean, healthy and sustainable environment.

46. Unlike the African, Inter-American, and Arab regional human rights systems, the European system provides no explicit guarantee of a right to a healthy environment. Committee of Ministers Recommendation CM/Rec(2022)20 merely calls on member States to “reflect on the nature, content and implications of the right to a clean, healthy and sustainable environment and, on that basis, actively consider recognising at the national level this right as a human right that is important for the enjoyment of human rights and is related to other rights and existing international law”. The Recommendation implies a need for further clarification of the right, reflecting a lack of consensus amongst Council of Europe member States on its nature, content and implications (see further below).

B. Recognition of the right to a healthy environment – the domestic situation in Council of Europe member States (and globally)

47. Despite the lack of a regional or global binding instrument, many Council of Europe member States recognise, either explicitly or implicitly, some formulation of the human right to a healthy environment under domestic law.⁷⁶ Most of them qualify the right by including a reference to human well-being and/or human quality of life in the relative provisions, using formulae such as a “healthy environment”⁷⁷ or an environment “favourable” or “conducive” to health.⁷⁸ Other member States use terms such as “benevolent”⁷⁹ or “habitable”⁸⁰ in relation to the environment and “decent”⁸¹ or “enjoyable”⁸² in relation to the quality of life. Rights holders are always human beings; no member State defines the environment or nature itself as a legal subject entitled to protection. In almost all of these member States, the Supreme and/or Constitutional Courts play an important role in applying and developing the human right to a healthy environment.⁸³

48. All member States that recognise the right in their national law conceive the obligations on States inherent in the human right to a healthy environment as not being limited to the negative obligation to refrain from harmful action. The positive obligation to protect the right against interference by other actors is recognised in all of these States. In addition, some member States

⁷³ Resolution 6/5. Environmental aspects of minerals and metals (UNEP/EA.6/Res.5); p. 1; Resolution 6/6. Fostering national action to address global environmental challenges through increased cooperation between the United Nations Environment Assembly, the United Nations Environment Programme and multilateral environmental agreements (UNEP/EA.6/Res.6), p. 2; Resolution 6/9. ⁷⁶ Andorra, Azerbaijan, Belgium, Croatia, Czechia, Estonia, Finland, France, Georgia, Greece, Hungary Italy, Latvia, Lithuania, Malta, Republic of Moldova, Montenegro, Netherlands, North Macedonia, Norway, Portugal, Serbia, Slovak Republic, Slovenia, Spain, Türkiye, Ukraine.

⁷⁷ Belgium, Croatia, Finland, Georgia, Portugal, Slovenia, Türkiye.

⁷⁸ Azerbaijan, Czechia, Norway, Slovak Republic.

⁷⁹ Latvia

⁸⁰ Netherlands.

⁸¹ Croatia.

⁸² Finland, Georgia.

⁸³ The information in this and following paragraphs comes from the replies received to a questionnaire sent by the CDDH to member States: see doc. CDDH-ENV(2022)09.

have recognised a positive obligation to protect the environment, in the sense of positively ensuring and creating conditions for a healthy environment.⁸⁴ However, the extent to which the right is justiciable varies between States. All member States that recognise the right in their national law leave a margin of appreciation to the legislator in deciding on the means used to fulfil their obligations.⁸⁵

49. 41 member States provide for rights of access to environmental information, public participation in environmental decision-making, and access to justice in environmental matters as a result of their ratification of the Aarhus Convention.

50. A number of member States that do not recognise a human right to a healthy environment have codified environmental protection as a constitutional principle or objective.⁸⁶ These States describe environmental protection as an objective for the national well-being, which, by virtue of the relevant constitutional provisions, must be promoted and taken into consideration in the relevant legislative, administrative and judicial decision-making processes.⁸⁷ Some constitutions even accord primacy of environmental protection over other (constitutional) principles⁸⁸ or otherwise visibly prioritise environmental protection as a leading principle within their national constitutional framework.⁸⁹ This objective guarantee of environmental protection is shaped in the jurisprudence of the domestic courts. Member States that follow this objective model of environmental protection have reported substantial jurisprudential evolutions.⁹⁰ The combination of traditional fundamental/ human rights with a constitutional principle of environmental protection has in at least one jurisdiction been seen to generate results that are comparable to the effects of the protection of the human right to a healthy environment.⁹¹

51. As regards the situation globally, the UN Special Rapporteur on the issue of human rights obligations relating to the enjoyment of a safe, clean, healthy and sustainable environment reported in 2019 that the right is recognized in domestic law by more than 80% (156 out of 193) of United Nations Member States.⁹² According to information received by the CDDH-ENV from the Office of the High Commissioner for Human Rights in November 2024, another eight (non-European) States had subsequently also recognised the human right to a healthy environment in their domestic law, which would amount to 85% (164 out of 193) of United Nations Member States.⁹³

⁸⁴ Czechia, Georgia, Greece, Latvia, Lithuania, Malta, Slovenia, Türkiye.

⁸⁵ Belgium, Croatia, Czechia, Finland, Italy, Norway, France, Georgia, Greece, Latvia, Norway, Portugal, Slovak Republic, Slovenia, Türkiye.

⁸⁶ Armenia, Austria, Germany, Switzerland.

⁸⁷ Also Sweden.

⁸⁸ The Croatian Constitution for example in its Article 3 ranks the protection of the environment among „the highest values of the constitutional order of the Republic“ and declares it a „basis for interpreting the Constitution.“

⁸⁹ Austria, Armenia, Switzerland.

⁹⁰ Austria, Germany, Switzerland.

⁹¹ The German Federal Constitutional Court for example has derived a doctrine of so-called intergenerational equality from the objective to environmental protection in Art. 20a of the German Basic Law that is justiciable under the traditional fundamental rights guarantees.

⁹² Report of the Special Rapporteur on the issue of human rights obligations relating to the enjoyment of a safe, clean, healthy and sustainable environment, HRC, 30 December 2019, A/HRC/43/53.

⁹³ It should be noted that the Special Rapporteur considers that ratification of the Aarhus Convention amounts to recognition of the right to a healthy environment, implying that 43 out of 46 Council of Europe member States have recognised the right. The CDDH, however, considers that divergent views exist on whether this Convention protects a human right to a healthy environment.

C. The constituent elements of the right to a healthy environment

52. Various actors have sought to identify constituent elements of the right to a healthy environment. The reports prepared by UN Special Rapporteurs on the human right to a clean, healthy and sustainable environment, based on several decades of experience from over 100 States, identify both procedural and substantive elements of the right.⁹⁴ The procedural elements identified in these reports include (i) access to information, (ii) public participation, and (iii) access to justice and effective remedies. The substantive elements include (i) clean air, (ii) a safe climate, (iii) access to safe water and adequate sanitation, (iv) healthy and sustainably produced food, (v) non-toxic environments in which to live, work, study, and play, and (vi) healthy biodiversity and ecosystems.⁹⁵ The preamble to UN General Assembly Resolution 76/300, which recognized the human right to a healthy environment, refers to other specific reports by UN Special Rapporteurs on the various substantive elements of the right.⁹⁶

53. General Comment No. 26 of the UN Committee on the Rights of the Child, having found that the right to a healthy environment is “implicit” in the CRC (see above), sets out substantive elements of the right, including “clean air, a safe and stable climate, healthy ecosystems and biodiversity, safe and sufficient water, healthy and sustainable food and non-toxic environments”. The General Comment also underlines the importance of procedural elements of the right, including access to information, participation in decision making and child-friendly access to justice with effective remedies. These elements correspond to those identified by the UN Special Rapporteur on human rights and the environment (see above).

54. The Working Group on the Protocol of San Salvador, which examines State reports submitted under this protocol, has identified five State obligations inherent in the right to live in a healthy environment as contained in article 11 of the protocol: (1) to guarantee to everyone, without any discrimination, a healthy environment in which to live; (2) to guarantee to everyone, without any discrimination, basic public services; (3) to promote environmental protection; (4) to promote environmental conservation; and (5) to promote improvement of the environment.⁹⁷ The Inter-American Court of Human Rights, in its Advisory Opinion OC/23/17, has referred to this Working Group’s specification of the obligations inherent in the right to a healthy environment.⁹⁸ The Inter-American Court of Human Rights also highlighted that the right to a healthy environment was comprised of procedural and substantive elements, the procedural ones being the access to information, political participation and access to justice and substantive ones being air, water, food, ecosystems, and climate, amongst others.⁹⁹

⁹⁵ See also chapter 3.2 (“The elements of the right to a healthy environment”) of the January 2023 Information Note entitled “What is the Right to a Healthy Environment?”, published by the Office of the United Nations High Commissioner for Human Rights, the United Nations Environment Programme and the United Nations Development Programme.

⁹⁶ Notably the Framework Principles on human rights and the environment (UN doc. A/HRC/37/59) and reports on clean air (A/HRC/40/55), safe and sufficient water (A/HRC/46/28), non-toxic environments (A/HRC/52/33), a safe climate (A/74/161), healthy ecosystems and biodiversity (A/75/161), and healthy and sustainably produced food (A/76/179).

⁹⁷ “Progress Indicators: Second Group of Rights,” November 5, 2013, OEA/Ser.L/XXV.2.1, GT/PSS/doc.9/13, §26. It may be noted that each of the items in this list corresponds to an explicit element of Article 11 of the Protocol of San Salvador, respectively the first and second parts of Article 11(1) and the three constituent elements of Article 11(2), read alongside Article 3, which contains a general prohibition on discrimination in implementation of the protocol.

⁹⁸ Inter-American Court of Human Rights, Advisory Opinion OC/23/17 of November 15, 2017, requested by the Republic of Colombia, on the environment and human rights.

⁹⁹ See Advisory Opinion OC/23/17, paragraphs 62 and 212, and the judgment in the *Habitantes de La Oroya vs. Peru* case, paragraph 118.

V. The need for a further instrument or instruments in the field of human rights and the environment

55. A number of arguments have been examined relating to the possible need for a further Council of Europe instrument or instruments in the field of human rights and the environment.

A. Human rights and the triple planetary crisis

56. Humanity is facing an unprecedented challenge in the form of environmental degradation and the triple planetary crisis¹⁰⁰ of climate change,¹⁰¹ biodiversity loss,¹⁰² and pollution.¹⁰³ Individuals and communities around the world are affected and where there are human rights consequences,¹⁰⁴ they are most severe for those who are already in vulnerable and in exposed situations.¹⁰⁵ Regard should be had to the effects on the younger and future generations.¹⁰⁶

57. The climate crisis has been identified as the greatest threat to human rights by the former United Nations High Commissioner for Human Rights.¹⁰⁷ According to the Sixth Assessment Report published by the Intergovernmental Panel on Climate Change (IPCC), which was approved by all States Parties to the Council of Europe, adaptation and mitigation actions that prioritise equity, social justice, climate justice, rights-based approaches, and inclusivity, lead to more sustainable outcomes, reduce trade-offs, support transformative change and advance climate resilient development.¹⁰⁸ The decline in biodiversity,¹⁰⁹ coupled with air, soil, and water pollution's

¹⁰⁰ There is no universally agreed definition on “triple planetary crisis”; as a suggestion, see <https://www.unep.org/news-and-stories/speech/triple-planetary-crisis-forging-new-relationship-between-people-and-earth>

¹⁰¹ IPCC, 2022: Summary for Policymakers [H.-O. Pörtner, D.C. Roberts, E.S. Poloczanska, K. Mintenbeck, M. Tignor, A. Alegría, M. Craig, S. Langsdorf, S. Löschke, V. Möller, A. Okem (eds.)]. Contribution of Working Groups I, II and III to the Sixth Assessment Report of the Intergovernmental Panel on Climate Change [Core Writing Team, H. Lee and J. Romero (eds.)], IPCC, Geneva, Switzerland [IPCC AR6 SYR], Section 4.4, p. 101.

¹⁰⁹ UNEP, *Human Rights and Biodiversity: Key Messages*, 2021; see also IPBES, *Global Assessment Report on Biodiversity and Ecosystem Services of the Intergovernmental Science-Policy Platform on Biodiversity and Ecosystem Services*, 2019, IPBES secretariat, Bonn, Germany at key messages A and B; Ch. 4, section 4.4.1.1.; see also Ch. 5, section 5.4.1.5

detrimental impact on human well-being,¹¹⁰ further underscore the potential need for enhanced protection of human rights and the environment. In the Reykjavik Declaration, Heads of States and Governments of the Council of Europe have underlined the urgency of additional efforts to protect the environment, as well as to counter the impact of the triple planetary crisis on human rights, democracy and the rule of law, and committed to strengthening their work on the human rights aspects of the environment.¹¹¹

58. The consequences of these environmental issues for human rights are common and urgent concerns that require continued attention and consideration. There is an extensive international regulatory framework concerning the protection of the environment that is already in place, which produces legal effects both under national and international law. The question nevertheless remains whether, in light of the critical human rights challenges posed by environmental degradation and the triple planetary crisis, there is a need for a new instrument or instruments on human rights and the environment within the system of the Council of Europe.

B. Enhanced protection of individuals from environmental harm through the human right to a healthy environment

59. The human right to a healthy environment is not yet explicitly contained in a treaty either at global level or within the Council of Europe framework. Unlike Europe, other regional human rights systems have already legally recognised the human right to a healthy environment. It has been suggested that establishing legally binding recognition of the right in Europe would clarify the relationship between environmental protection and human rights and would reinforce the understanding that human rights norms require protection of the environment, and that environmental protection depends on the exercise of human rights. Depending on how it were done, such recognition could create a legal framework that provides rights holders with better tools to enforce the human right to a healthy environment, thereby providing accountability for States' actions or omissions that violate the right, which could in turn contribute to preventing violations of this right.

60. There is no common understanding of the constituent elements of the human right to a healthy environment amongst Council of Europe member States and the content is not settled as a matter of international law. It has been argued that a new instrument or instruments legally recognising the human right to a healthy environment could allow Council of Europe member States to express their understanding of the constituent elements of this right and inspire corresponding national legislation, and that this would contribute to legal certainty. It would also allow member States to influence further developments related to the human right to a healthy environment at the international level.

61. It was argued that the effects of the recognition of the human right to a healthy environment at the Council of Europe level could produce the following legal and environmental benefits at

¹¹⁰ World Health Organization, Household air pollution, 28 November 2022, available at <https://www.who.int/news-room/fact-sheets/detail/household-air-pollution-and-health>; European Environment Agency (EEA), Air quality in Europe 2021, available at <https://www.eea.europa.eu/publications/air-quality-in-europe-2021/health-impacts-of-air-pollution>; EEA, Air quality in Europe 2022, available at <https://www.eea.europa.eu/publications/air-quality-in-europe-2022>; EEA, Air pollution levels across Europe still not safe, especially for children, April 2023 <https://www.eea.europa.eu/en/newsroom/news/air-pollution-levels-across-europe>; and Special Rapporteur on the issue of human rights obligations relating to the enjoyment of a safe, clean, healthy and sustainable environment, Human rights and the global water crisis: water pollution, water scarcity and water-related disasters, 19 January 2021, UN Doc. No. A/HRC/46/28. See also Office of the High Commissioner for Human Rights, The water crisis has a "major impact on human rights" expert say, 2021, available at <https://www.ohchr.org/en/stories/2021/03/water-crisis-has-major-impact-human-rights-expert-says>

¹¹¹ 2023 Reykjavik Declaration, United around our values, p. 6.

national level: (i) stronger environmental laws and policies; (ii) improved implementation and enforcement; (iii) greater citizen participation in environmental decision making; (iv) increased accountability; (v) reduction in environmental injustices; (vi) a level playing field with social and economic rights; and (vii) better environmental performance.¹¹² It was also argued that a new instrument or instruments on human rights and the environment could encourage States that have not yet protected the right in domestic law to do so, and encourage those States that have already done so to take further active measures to implement it.¹¹³

62. As noted above, the operation of procedural requirements and the application of substantive standards under the ECHR and ESC may influence the reach of these instruments in the field of the environment. It has been argued that additional protocols to these instruments guaranteeing the human right to a healthy environment, containing explicit provisions on these requirements and standards that could deviate from those that are currently applied under the ECHR and the ESC, could provide more effective overall protection to rights-holders.¹¹⁴

i. The implications of the Court's climate change rulings on the need for a new instrument or instruments

63. Even if the Court's judgment in the *Verein KlimaSeniorinnen Schweiz* case concerns the adverse effects of climate change, it may have implications for the arguments surrounding whether there is a need for a new instrument or instrument on human rights and the environment. These can be considered from two perspectives. First, the Court's approach to admissibility criteria under the Convention, notably the issues of victim status and standing for associations (see above); and second, the Court's approach to substantive standards, including evidentiary issues and States' obligations under Article 8 in the context of the adverse impact of climate change.

64. As regards evidentiary issues and the burden of proof, the Court made basic findings of facts relying on the UN Framework Convention on Climate Change (UNFCCC) and subsequent international agreements including the Paris Agreement, and the internationally accepted scientific findings of the Intergovernmental Panel on Climate Change (IPCC).¹¹⁵

65. Concerning the admissibility criteria under Article 34 of the Convention, including the victim-status requirement. The Court noted that "If the circle of "victims" [...] is drawn in a wide-ranging and generous manner, this would risk disrupting national constitutional principles and the separation of powers by opening broad access to the judicial branch as a means of prompting changes in general policies regarding climate change." On the other hand, if "this circle is drawn too tightly and restrictively, there is a risk that even obvious deficiencies or dysfunctions in government action or democratic processes could lead to the Convention rights of individuals and groups of individuals being affected without them having any judicial recourse before the Court."¹¹⁶ The Court has sought to resolve this dilemma by indicating specific criteria for individuals and associations complaining of the adverse effects of climate change on Convention rights.

66. With respect to individuals, in order to satisfy the victim-status requirement, an applicant must "show that he or she was personally and directly affected by the impugned failures" by the State to combat climate change. In this context, the Court applied two tests. First, "the applicant

¹¹³ Summary, Knox, p 5.

¹¹⁴ Summary, Keller p. 2, Knox p. 5, Lambert pp. 6-7.

¹¹⁵ *Verein KlimaSeniorinnen Schweiz*, paragraph 436.

¹¹⁶ *Verein KlimaSeniorinnen Schweiz*, paragraph 484.

must be subject to a high intensity of exposure to the adverse effects of climate change, that is, the level and severity of (the risk of) adverse consequences of governmental action or inaction affecting the applicant must be significant". Second, and in addition, "there must be a pressing need to ensure the applicant's individual protection, owing to the absence or inadequacy of any reasonable measures to reduce harm."¹¹⁷ The threshold for fulfilling these two criteria is "especially high."¹¹⁸ One may expect that the Court will in future admit relatively few applications concerning climate change from individuals.

67. With respect to associations, the Court first recalled that "when citizens are confronted with particularly complex administrative decisions, recourse to collective bodies such as associations is one of the accessible means, sometimes the only means, available to them whereby they can defend their particular interests effectively. This is especially true in the context of climate change, which is a global and complex phenomenon. [... Collective action] may be one of the only means through which the voice of those at a distinct representational disadvantage can be heard".¹¹⁹

68. In order for an association to have standing to make an application, the Court has set out a threefold test: the association must (i) be lawfully established in the respondent State's jurisdiction or have standing to act there, (ii) pursue, as a dedicated purpose in accordance with its statutory objectives, collective action for the protection of the human rights of its members or other affected individuals within the jurisdiction against the threats arising from climate change, and (iii) be genuinely qualified and representative to take such action on behalf of individuals within the jurisdiction who are subject to specific threats to, or adverse effects of climate change on, their lives, health or well-being as protected under the Convention. In this connection, the Court will have regard to such factors as the purpose for which the association was established, that it is of non-profit character, the nature and extent of its activities within the relevant jurisdiction, its membership and representativeness, its principles and transparency of governance and whether on the whole, in the particular circumstances of a case, the grant of such standing is in the interests of the proper administration of justice. An association may make an application even if those on whose behalf it is brought would not meet the victim status requirements for individuals in climate change cases (see above).¹²⁰

69. The *Verein KlimaSeniorinnen Schweiz* judgment thus touches upon several of the issues that could be addressed by an additional protocol to the Convention.. It should be noted, however, that the Court repeatedly states that the special rules that it develops and applies in this judgment relate only to climate change cases, and not to cases concerning the environment generally. The argumentation behind its special approach to climate change cases depends on its general findings of fact that are specific to that context.

70. As to its substantive analysis of issues under Article 8 of the Conventions, the Court found that, "[i]n line with the international commitments undertaken by the member States, most notably under the UNFCCC and the Paris Agreement, and the cogent scientific evidence provided, in particular, by the IPCC, the Contracting States need to put in place the necessary regulations and measures aimed at preventing an increase in GHG concentrations in the Earth's atmosphere and a rise in global average temperature beyond levels capable of producing serious and irreversible adverse effects on human rights".¹²¹ To this end, "effective respect for the rights protected by Article 8 of the Convention requires that each Contracting State undertake measures for the substantial and progressive reduction of their respective GHG emission levels, with a view to reaching net

¹¹⁷ *Verein KlimaSeniorinnen Schweiz*, paragraph 487.

¹¹⁹ *Verein KlimaSeniorinnen Schweiz*, paragraph 489.

¹²⁰ *Verein KlimaSeniorinnen Schweiz*, paragraph 502.

¹²¹ *Verein KlimaSeniorinnen Schweiz*, paragraph 546.

neutrality within, in principle, the next three decades.”¹²² This implies both “immediate action” and “adequate intermediate goals”, “incorporated into a binding regulatory framework at the national level, followed by adequate implementation.”¹²³

71. On this basis, the Court ruled that when assessing whether a State has remained within its margin of appreciation, it will “examine whether the competent domestic authorities, be it at the legislative, executive or judicial level, have had due regard to the need” to take various procedural measures relating to reduction of greenhouse gas (GHG) emissions.¹²⁴ The Court’s assessment of whether the State’s actions are sufficient is “of an overall nature”, so that a shortcoming in relation to one measure does not necessarily mean that a State has overstepped its margin of appreciation.¹²⁵ The Court will also examine whether the State’s decision-making process in the context of climate change involves public access to relevant information and public participation.¹²⁶

72. The Court again stressed in the *Verein KlimaSeniorinnen Schweiz* judgment that “no Article of the Convention is specifically designed to provide general protection of the environment as such”.¹²⁷ “[T]he crucial element which must be present in determining whether, in the circumstances of a given case, an environmental harm has adversely affected one of the rights safeguarded by the Convention is the existence of a harmful effect on a person and not simply the general deterioration of the environment”.¹²⁸ Under Article 8, the Court found that such harmful effects related to individuals’ “life, health, well-being and quality of life.”¹²⁹ In that sense, the Court did not depart from the approach taken in previous environment-related cases, as described in Section III.A.ii. above. It may have found as fact that climate change exists and has an adverse effect on everyone’s enjoyment of their Convention rights, but it limited its examination to alleged violations of those rights and did not consider any separate ‘right to a safe climate’. The positive obligations that the Court identified under Article 8 may relate to reduction of GHG emissions as a climate change mitigation measure, but they are only intended to address climate change insofar as that is necessary to ensure respect for private and family life. Without the established chain of causation between GHG emissions, climate change, and adverse effects on Convention rights, the Court would have had no basis for defining positive obligations. Different considerations may be relevant regarding such a chain of causation in other environmental cases.

73. The *Verein KlimaSeniorinnen Schweiz* judgment thus touches upon several of the issues that, could be addressed by an additional protocol to the Convention. It is an open question whether the Court may in future build on its recent climate change rulings so as to adapt the application of procedural requirements and substantive standards in cases involving the adverse effects of environmental factors other than climate change. It should be noted, however, that the Court repeatedly states that the special rules that it develops and applies in this judgment relate only to climate change cases, and not to cases concerning the environment generally. The argumentation behind its special approach to climate change cases depends on its general findings of fact that are specific to that context.

¹²² *Verein KlimaSeniorinnen Schweiz*, paragraph 548.

¹²⁴ *Verein KlimaSeniorinnen Schweiz*, paragraph 550.

¹²⁵ *Verein KlimaSeniorinnen Schweiz*, paragraph 551.

¹²⁶ *Verein KlimaSeniorinnen Schweiz*, paragraph 554. Although not the main subject matter of the case, the Court also noted that mitigation measures should be “supplemented by adaptation measures aimed at alleviating the most severe or imminent consequences of climate change”: paragraph 552.

¹²⁷ *Verein KlimaSeniorinnen Schweiz*, paragraph 445.

¹²⁸ *Verein KlimaSeniorinnen Schweiz*, paragraph 446.

¹²⁹ *Verein KlimaSeniorinnen Schweiz*, paragraph 519. These elements had been identified by the Court in previous judgments under Article 8: see e.g. *Hatton* (see footnote 34), paragraph 96, *Fadeyeva* (see footnote 37), paragraph 88, and *Ivan Atanasov v. Bulgaria*, application no. 12853/03, judgment of 02 December 2010, paragraph 67.

C. Business and human rights

74. Various instruments on business and human rights already exist, including the UN Guiding Principles on Business and Human Rights, the OECD Guidelines for Multinational Enterprises on Responsible Business Conduct, and Committee of Ministers Recommendation CM/Rec(2016)3 to member States on human rights and business. Environment-related human rights due diligence standards for business enterprises are under development on global, regional and national levels.¹³⁰

75. It has been argued that a new instrument containing direct comprehensive environment-related human rights due diligence standards for business enterprises and in particular provisions on access to remedies could usefully enhance the responsibility and accountability of business enterprises. An international [legally binding] mechanism that could provide victims of corporate environment-related human rights violations with access to a remedy, such as some form of alternative dispute resolution, does not yet exist. It has been argued that these elements could potentially be addressed by the Council of Europe, while emphasizing and strengthening synergies with existing systems and instruments such as the UNGPs, the OECD Guidelines for Multinational Enterprises, OECD Due Diligence Guidance for Responsible Business Conduct, applicable regional agreements, existing legislation at national and EU level and sectoral approaches, taking into account developments at international level such as the work of the UN Open-Ended Working Group on transnational corporations and other business enterprises with respect to human rights. However, it has also been suggested that the multiplication of international obligations concerning corporate due diligence could entail a risk of diluting efforts in this field.

D. Human rights defenders in environmental matters (“environmental human rights defenders”)

76. Despite the legal protection offered by different human rights systems, environmental human rights defenders are a group at particularly high-risk of killings, threats, and intimidation.¹³¹ Many human rights bodies and organisations, including the Council of Europe Commissioner for Human Rights,¹³² have issued recommendations on how national authorities might better protect and support their work.¹³³ The Meeting of the Parties to the Aarhus Convention decided in 2021 to establish a rapid response mechanism to protect environmental defenders, and in June 2022 elected the first special rapporteur in this new system.

77. It has been argued that recognising the human right to a healthy environment in a legally binding way could serve as a catalyst for establishing a safe and enabling environment for environmental defenders as human rights defenders. It would do this by clarifying that environmental defenders’ activities are directly connected to the protection of a legally protected human right. This could have many tangible impacts in policymaking, for example, by bringing

¹³⁰ See for example, the open-ended intergovernmental working group on transnational corporations and other business enterprises with respect to human rights (<https://www.ohchr.org/en/hr-bodies/hrc/wg-trans-corp/igwg-on-tnc>)

environmental defenders into the scope of policies and programmes designed for human rights defenders.¹³⁴

VI. The expectations of the Parliamentary Assembly and independent actors

78. The Parliamentary Assembly has made repeated calls for Council of Europe action in response to the triple planetary crisis. In 1970, with subsequent efforts in 1990, 1999, 2003, 2009 and more recently the Parliamentary Assembly proposed an additional protocol to the European Convention on Human Rights. Parliamentary Assembly Recommendation 2211 (2021) on “Anchoring the right to a healthy environment: the need for reinforced action by the Council of Europe” calls for the adoption of additional protocols to the Convention and to the (revised) European Social Charter protecting the “right to a safe, clean, healthy and sustainable environment” and to study the feasibility of drafting an autonomous and comprehensive convention combining so-called “5 Ps” prevention provisions, Prosecution of violations of the right to a safe, clean, healthy and sustainable environment and Protection of victims, so that the contracting states adopt effective and sustainable ‘integrated policies’, including a supranational monitoring mechanism based on the model of committees of independent experts. Recommendation 2211 (2021) includes a proposed text for an additional protocol to the Convention. Noting that three years after this appeal, the Council of Europe was still the only regional human rights system not to have yet recognised the right to a healthy environment, the Assembly stressed the importance for the legitimacy and added value of the Council of Europe of formalising an autonomous right to a healthy environment through the drafting of a legally binding instrument (Resolution 2545(2024) ‘Mainstreaming the human right to a healthy environment through the Reykjavik process’). In its Recommendation (2272)2024, the Assembly reaffirmed that recognition of the right to a healthy environment must be based on a human rights approach and recommended that the Committee of Ministers dedicate the standard-setting component of its strategy to formal recognition of the right to a healthy environment by drafting a binding legal instrument as soon as possible. The Parliamentary Assembly has also set up a network of parliamentarians for a healthy environment, which aims to anchor the right to a ‘safe, clean, healthy and sustainable environment’ in legislation, policies, practices and public awareness in Europe and beyond.

79. Europe has a history of environmental activism and climate action in a variety of forms, including youth climate movements.¹³⁵ The Conference of International NGOs, including as a participant in the work of the CDDH and CDDH-ENV, has consistently advocated in favour of an additional protocol to the Convention protecting the right to a healthy environment. A large number of civil society organisations have called on the Council of Europe to “address the triple planetary crisis of climate change, biodiversity loss and pollution as a supreme human rights crisis” and more specifically to “recognise and protect a legally binding, autonomous right to a clean, healthy and sustainable environment through an additional protocol to the European Convention on Human Rights.”¹³⁶ Civil society organisations have also formed a Coalition for the Right to a Clean, Healthy, and Sustainable Environment at the Council of Europe, issuing a joint “Call for the adoption of an additional Protocol to the European Convention on Human Rights on the right to a clean, healthy, and sustainable environment.”¹³⁷¹³⁸

¹³⁴ Summary, Knox, p 5.

¹³⁵ See the CoE Commissioner’s Report “Environmental Rights Activism and Advocacy in Europe: Issues, Threats, Opportunities” <https://rm.coe.int/environmental-rights-activism-and-advocacy-in-europe-issues-threats-op/1680a1e360>.

¹³⁶ See <https://cure-campaign.org/wp-content/uploads/CSSDeclarationFinal.pdf> (at point 6).

¹³⁷ “Call for the adoption of an additional Protocol to the European Convention on Human Rights on the right to a clean, healthy, and sustainable environment: To the Ministers of Foreign Affairs and to the Permanent Representatives of the Member States of the Council of Europe,” available here via <https://healthyenvironmenteurope.com/>

¹³⁸ See CDDH-ENV2024(3) for a summary of the expectations of the Conference of INGOs.

80. The European Network of National Human Rights Institutions (ENNHRI) has also expressed its support for a binding instrument on the human right to a healthy environment. According to ENNHRI, an Additional Protocol to the European Convention on Human Rights would establish the strongest and the most effective legal protection. This form of protection could be complemented by an Additional Protocol to the European Social Charter, which would secure access to justice for civil society organisations. ENNHRI also submits that a standalone Convention on Human Rights and the Environment might be an alternative avenue, if vested with an effective and binding oversight mechanism. However, ENNHRI only considers the standalone convention as an option if an Additional Protocol to the European Convention on Human Rights is not adopted. Overall, ENNHRI underlines that any binding instrument adopted by the Council of Europe should be coupled with an effective and binding oversight mechanism to ensure adequate access to justice for affected individuals and communities.¹³⁹

81. In November 2023, Dr David R. Boyd and Prof. John H. Knox, at the time respectively current and former UN Special Rapporteur on obligations related to the enjoyment of a safe, clean, healthy and sustainable environment, wrote to the CDDH-ENV drafting group commenting on its work then in progress. In their letter, they expressed the belief that the Council of Europe would “reach the conclusion that most of its Member States, most of the States of the world, and every other regional human rights body have already reached: that the time has come to legally recognize the human right to a healthy environment.”¹⁴⁰

VII. Different options for a further instrument in the field of human rights and the environment

82. This section sets out possible further Council of Europe instruments and how they may address the relationship between human rights and the environment. The different options were variously proposed by Council of Europe bodies or experts heard by the CDDH-ENV, or during discussions within the CDDH-ENV.

A. An additional protocol to the Convention on the human right to a healthy environment

83. It has been argued that guaranteeing the human right to a healthy environment within the Convention system would ensure improved protection of individuals against environmental harm and legal certainty for both rights holders and member States.. An additional protocol to the Convention could allow applicants access to the Court to enforce their claims in relation to environmental issues in cases where the environment does not necessarily have an impact on other Convention rights. However, unless a new additional protocol would protect the environment as such, a right to a healthy environment would still require that the environmental harm has some form of negative effect on individuals.

84. The core element of any additional protocol to the Convention would be legal protection of an explicit human right to a healthy environment. Beyond that, it could be possible to include also provisions specifying the constituent elements of the right and/or additional provisions relating to the conditions of jurisdiction and admissibility under the Convention and the application of its

¹³⁹ See https://ennhri.org/wp-content/uploads/2024/03/ENNHRI-Statement_CDDH-ENV-March-2024.pdf

¹⁴⁰ “Comments on [Draft] CDDH report on the need for and feasibility of a further instrument or instruments on human rights and the environment (CDDH-ENV(2023)06”, 10 November 2023. See also the Letter to the Committee of Ministers from the Special Rapporteur on the human right to a clean, healthy and sustainable environment, the Special Rapporteur on the promotion and protection of human rights in the context of climate change, the Special Rapporteur on toxics and human rights, and the Special Rapporteur on the human rights to safe drinking water and sanitation dated 13 November 2024.

substantive standards in environment-related cases (see further above). Consequently, three conceptual models for an additional protocol may be considered: (i) guaranteeing the human right to a healthy environment ('model I'); (ii) guaranteeing the human right to a healthy environment plus definition of its possible constituent elements ('model II'); and (iii) guaranteeing the human right to a healthy environment plus definition of its possible constituent elements of the right plus additional provisions relating to the application of the conditions of jurisdiction and admissibility under the Convention and the application of substantive standards in cases falling under the protocol ("additional elements"¹⁴¹) ('model III').

i. General considerations relating to an additional protocol to the Convention (all models)

85. It has been argued that some environmental issues, such as the allocation of economic cost for adverse environmental impact prevention and reduction measures or the level of environmental protection to be achieved, involve policy choices, with potentially society-wide implications. It could also be asked whether an explicit right would give sufficient room for the broader societal considerations and the holistic approach which is inherent in many environmental cases, and consequently whether such a right would, in a wider perspective, be a suitable and effective means of mitigating the impact of environmental harm on human well-being, compared to for instance obligations of international environmental law. However, a wide range of positive effects of the recognition of the right to a healthy environment has been described, for example by the Special Rapporteur on the human right to a clean, healthy and sustainable environment in his report.¹⁴² Some argue that there is a risk that the Court would not necessarily be a suitable body to decide on such issues and should defer to political processes at the national level.

86. That said, the Court has an established practice of deferring to State policy choices and applying a margin of appreciation to them, particularly in issues that are complex and technical, which might allay some of the concerns about the way in which the Court could adjudicate the implementation of the right guaranteed by a new additional protocol.¹⁴³ In any event, the Court will only adjudicate on alleged violations of Convention rights. However, a wide range of positive effects of the recognition of the human right to a healthy environment have been described, for example, by the Special Rapporteur on the human right to a clean, healthy and sustainable environment in his reports.¹⁴⁴ Guaranteeing the human right to a healthy environment, even in general terms, confirms the fact that human rights defenders working on environmental matters ("environmental human rights defenders") are indeed human rights defenders and entitled to the protection that human rights defenders enjoy.

87. An additional protocol guaranteeing the human right to a healthy environment may result in an increased workload for the Court, which may need additional financial resources. On the other hand, it is argued that the impact of environmental degradation and the triple planetary crisis on human rights is already leading to a rise in the number of cases. It has also been argued that a new protocol could streamline and improve the Court's decision-making in environmental cases, replacing the current piecemeal approach to such cases and increasing legal certainty. The Court is experienced in dealing with systemic problems and, in its *Verein KlimaSeniorinnen Schweiz* judgment, took an approach to victim status that was wary of the potential for extremely large

¹⁴¹ The additional elements could, for example, include provisions on jurisdiction, victim status/ NGO standing before the Court, the assessment of evidence, and/or environmental human rights defenders. Individual elements or a combination of elements may be considered for an additional protocol.

¹⁴² See, for example, doc. A/73/188.

¹⁴³ See, for example, *Verein KlimaSeniorinnen Schweiz*, paragraph 449.

¹⁴⁴ See, for example, doc. A/73/188, paragraphs 39-44.

numbers of future applications.¹⁴⁵ Furthermore, experience in national courts has shown that the recognition of the human right to a healthy environment does not necessarily increase a court's caseload.¹⁴⁶

88. The process of adopting a new protocol, and its entry into force, can be protracted depending on which model is adopted, with the more complex versions (Models II and III) requiring more consideration.¹⁴⁷ A limited number of ratifications of a new protocol would affect the geographical scope of its protection of the right to a healthy environment in practice.¹⁴⁸

ii. Model I (guaranteeing the right to a healthy environment)

89. Model I would have the general advantages and disadvantages of any additional protocol, as described above.

90. Without specifying the constituent elements of the human right to a healthy environment, Model I would not allow member States actively to shape the constituent elements of the human right to a healthy environment. Instead, these would be shaped through the development of the Court's jurisprudence. This means that difficult questions on policy choices will be decided by the Court. This model would also not allow the inclusion of provisions adjusting the conditions of jurisdiction and admissibility foreseen under the Convention and the criteria relating to the application of the right to a healthy environment, which could only be affected to a certain extent through the Court developing its jurisprudence. Finally, while it could, through positive obligations of States, indirectly enhance the international responsibility of businesses for the environmental impact of their activities, only guaranteeing the human right to a healthy environment would establish neither comprehensive environmental due diligence standards for businesses nor a right that is directly actionable against businesses.

iii. Model II (guaranteeing the human right to a healthy environment plus definition of its constituent elements)

91. Compared to Model I, this model of the additional protocol would also allow member States more actively and directly to shape the content of the human right to a healthy environment at the regional level. However, the possibility of the member States to shape the content of the right would be limited to extending the protection compared to how the Court has interpreted the right to protection from the consequences of environmental harm under the existing Convention rights. The further development by the Court of its jurisprudence on the application of existing Convention rights in environmental contexts could be influenced by the way in which an additional protocol would specify the constituent elements of the human right to a healthy environment.

iv. Model III (guaranteeing the human right to a healthy environment plus definition of its constituent elements, with additional elements)

92. By also addressing the conditions relating to jurisdiction and admissibility provided for by the Convention and the application of substantive standards, this model could provide for enhanced protection of the human right to a healthy environment, beyond what would be possible under

¹⁴⁵ Verein KlimaSeniorinnen Schweiz, paragraph 483.

¹⁴⁶ Summary, Knox, p. 5

¹⁴⁷ For example, for Protocol no. 12 to the Convention (ETS No. 177, general prohibition on discrimination), from the beginning of drafting to its entry into force took seven years.

¹⁴⁸ Only one (Protocol No. 6) of the six additional protocols to the Convention has been ratified all of the 46 member States, and Protocol No. 12 has been ratified by only 20. Each of the others (Protocols Nos. 1, 4, 7, and 13), however, has been ratified by over 40 member States.

Models I or II, which would apply existing rules and procedures. Under the current understanding of jurisdiction within the meaning of Article 1 of the Convention, it may not be possible to invoke the potential transboundary causes of some environmental harm before the Court (but see above, §§ 19-21).¹⁴⁹ Amendments to the rules on jurisdiction could allow for more comprehensive protection of individuals' human right to a healthy environment. Furthermore, granting NGOs standing to bring public interest cases could improve access to justice to defend environmental interests with a collective dimension.¹⁵⁰ Easing the burden of proof on the applicants may also be considered, as well as specific provisions on environmental human rights defenders to foster a safer and more enabling environment for them.

93. It should be recalled that the Court's *Verein KlimaSeniorinnen Schweiz* judgment marked a significant evolution in the Court's caselaw, recognising a possibility for representative associations to bring applications on behalf of their members in climate change cases (see further above). The Court in this judgment also appears to have left open the possibility of further developments in its caselaw concerning extraterritorial jurisdiction in cases of transboundary harm. Whilst these considerations do not relate to protection of the right to a healthy environment, they are relevant to the question of procedural requirements in environmental cases brought under existing rights.

94. Depending on what is negotiated, a Model III Protocol could require the Court to apply different standards to claims based on the human right to a healthy environment compared to claims based on other Convention rights. This could potentially lead to fragmentation of the Court's treatment of claims, depending on the right involved, even within a single application concerning the human right to a healthy environment and other rights. That said, in the *Verein KlimaSeniorinnen Schweiz* case, the Court has already shown itself capable of taking a differentiated approach to cases depending on their subject-matter, by developing special rules on the issues of victim status and standing for associations intended for application only in cases concerning the adverse effects of climate change. A Model III Protocol could also include extensive changes to the jurisdiction and admissibility requirements under the Convention. This could have profound and unprecedented implications for the way the Court adjudicates cases, which would significantly deviate from how the Court treats existing rights. That may, in turn, impact the willingness of States to ratify the Protocol, affecting the overall extent to which the Protocol can guarantee the right in practice.

B. An additional protocol to the ESC guaranteeing the human right to a healthy environment

95. As a preliminary, it is important to note that the ESCR has already interpreted Article 11 (the right to protection of health) of the ESC to include the human right to a healthy environment. All options involving an additional protocol to the ESC involve the recognition of the human right to a healthy environment as a standalone right.

96. As with the proposal of an additional protocol to the Convention, three options may be considered: (i) guaranteeing the human right to a healthy environment ('model I'); (ii) guaranteeing the human right to a healthy environment plus definition of its possible constituent elements ('model II'); and (iii) guaranteeing the human right to a healthy environment plus definition of its constituent elements plus adjusting or removing the restriction on the personal scope of the Charter and extending the reach of rights either for the Charter as a whole or solely for an additional protocol

¹⁴⁹ R Spano – Keynote Speech, Proceedings of the Council of Europe High-level Conference on the Right to a Clean, Healthy and Sustainable Environment in Practice, 3 May 2023, p. 27.

¹⁵⁰ The concept of "public interest cases", also known as *actio popularis*, should be distinguished from the conditional standing for representative associations that was recognised in the *Verein KlimaSeniorinnen Schweiz* judgment (paragraphs 500-502) – see following paragraph.

on the human right to a healthy environment,¹⁵¹ along with the possibility of accepting the collective complaints procedure only in relation to the additional protocol ('model III') (together referred to as "additional elements").

i. General considerations relating to an additional protocol to the ESC (all models)

97. It has been argued that the ESC's monitoring mechanism, combining a reporting procedure and an optional complaints procedure, may be appropriate in an area where difficult policy choices need to be made. It has also been argued that a human right to a healthy environment could be easily integrated into a system of social rights such as the ESC.¹⁵²

98. Since decisions of the ECSR are non-binding on member States, however, there may be a higher possibility of non-implementation as compared to binding judgments by a body such as the Court. Moreover, the ECSR does not accept individual complaints and collective complaints can only be lodged against a minority of Council of Europe member States. In addition, an additional Protocol to the ESC guaranteeing the human right to a healthy environment may result in an increase of the caseload of the ECSR, which may as a result need additional financial resources.

99. The process of adopting a new protocol, and its entry into force, can be protracted depending on which model is adopted, with the more complex versions (Models II and III) requiring more consideration.

ii. Model specific considerations – model III (guaranteeing the human right to a healthy environment plus definition of its constituent elements, with additional elements)

100. A variant on model III that extends the collective complaints procedure to the right to a healthy environment could provide a way for non-governmental organisations and social partners to lodge complaints concerning this right. There would be no requirement for the complainant to have exhausted domestic remedies or itself to be a victim of the alleged violation, since these are not admissibility criteria under the ESC system (unlike the Convention system). However, there would be no option for individuals to lodge complaints of violations of the human right to healthy environment.

101. Depending on what is negotiated, a Model III Protocol could require the ECSR to apply different standards to claims based on the human right to a healthy environment. This could potentially lead to fragmentation of the ECSR's treatment of claims, depending on the right involved, even within a single collective complaint should it concern the human right to a healthy environment and other rights. That may, in turn, impact the willingness of States to ratify the protocol, affecting the extent to which the protocol can guarantee the right.

C. A standalone convention on human rights and the environment

102. Rather than establishing the right to a healthy environment within the system of one of the Council of Europe's existing core human rights treaties, an alternative could be to establish a standalone convention devoted specifically (or primarily) to such a right. There are two options for doing this: (i) guaranteeing the human right to a healthy environment including its possible constituent elements ('model I'); and (ii) guaranteeing the human right to a healthy environment (including its constituent elements) plus additional elements as described below ('model II').

¹⁵¹ See the Appendix to the European Social Charter, §1 second sentence: "This interpretation would not prejudice the extension of similar facilities to other persons by any of the Parties."

¹⁵² Summary, Palmisano, pp. 2-3

i. Model I (guaranteeing the human right to a healthy environment plus definition of its constituent elements)

103. This option would allow member States actively and directly to shape the constituent elements of the human right to a healthy environment. Legal recognition of such a right through a standalone convention would confirm that human rights defenders working on environmental matters (“environmental human rights defenders”) are indeed human rights defenders and entitled to the protections enjoyed by human rights defenders generally. This option would, however, not provide rights holders with the ability to seek accountability of States for violations of the right to a healthy environment.

ii. Model II (guaranteeing the human right to a healthy environment plus definition of its constituent elements, with additional elements)

104. In addition to guaranteeing the human right to a healthy environment and setting out its constituent elements, this model could include additional elements aimed at enhancing the protection of the right. Various approaches to monitoring of implementation could be envisaged, such as a State reporting system as found in several Council of Europe treaties (including the ESC) and UN human rights treaties. This could be combined with a complaints-based monitoring mechanism, bearing in mind that a monitoring mechanism that issues binding decisions would provide for greater accountability and enforceability. Admissibility requirements could be tailored to the specificities of the convention’s content and could differ from those under the Convention or the ESC. Another possibility would be to allow for requests for Advisory Opinions from the Court, as foreseen in the Convention on Human Rights and Biomedicine (ETS No. 164, Oviedo Convention), which allows the Court to give advisory opinions on legal questions concerning the interpretation of that convention at the request of any of the Parties or the Council of Europe committee designated to this end by the Committee of Ministers.

105. A standalone convention could also include provisions aimed at enhancing the accountability of businesses through, for example, due-diligence obligations for businesses or the creation of a mechanism of alternative dispute resolution that involves business entities.

D. Monitoring mechanisms

106. Another option is a monitoring mechanism to deal with issues of human rights and the environment. This could take the form of a committee of independent experts, similar to the European Commission against Racism and Intolerance (ECRI). Its tasks could be organised around three pillars: (i) country monitoring, involving ongoing dialogue with member States, identification of solutions to problems, and promotion of good practice, along with regular country visits; (ii) thematic work, with policy recommendations to member States; and (iii) outreach to society at large, including as a forum for dialogue with civil society and young people, and through contacts with business enterprises.

107. Another form of mechanism would be a new Council of Europe Commissioner on environment and human rights, elected by the Parliamentary Assembly. The office-holder would be empowered to engage systematically in a permanent dialogue with member States, provide early warning and rapid reaction and offer relevant assistance, in close co-operation with key parts of the Council of Europe Secretariat and institutions. Yet other forms may be possible.

108. A monitoring mechanism that acts through dialogue and recommendations could contribute to member States’ understanding of the constituent elements of the human right to a healthy environment. However, member States would not be able to shape the content of the right. To a

limited extent, by engaging in dialogue with business entities, it could indirectly enhance international responsibilities of businesses for the environmental impact of their activities. Its thematic work could be taken into account by international tribunals when examining cases concerning environmental degradation and the triple planetary crisis.

109. Non-binding monitoring may be more easily introduced in an area where complex domestic policy choices need to be made. It would, however, be an addition to the multiple existing international monitoring mechanisms and the multiple UN and other special rapporteurs working on human rights and the environment. There would also be a risk of overlap with existing Council of Europe bodies, including the Commissioner for Human Rights. It would not provide rights holders with limited ability to seek accountability of States for violations of the right to a healthy environment. A new mechanism may suffer from a relative lack of practical impact, yet nevertheless require funding by member States.

E. Mentioning environmental protection in the preamble of the Convention

110. It has been suggested that a mention of environmental protection could be added to the preamble of the Convention by way of an amending protocol. Through the interpretative function of the preamble,¹⁵³ this could provide additional legitimacy to the Court's jurisprudence addressing environmental degradation and the triple planetary crisis, and encourage its further development. However, this option – even with an explanatory memorandum clarifying the aim of the addition – would leave States with no possibility to shape the way the Court would use the addition to the preamble, other than through pleadings in the course of Court proceedings.

111. A protocol amending the existing preamble (as was done by Article 1 of Protocol No. 15) would have to be ratified by all member States in order to enter into force. This process is time and resource intensive at both Council of Europe and national levels.¹⁵⁴

F. Mentioning environmental protection in the preamble of the ESC

112. It has similarly been suggested that a mention of environmental protection could be added to the preamble of the ESC by way of an amending protocol. This could provide additional legitimacy to the ECSR's environmental practice and encourage its further development in accordance with the existing procedural requirements and substantive standards. However, this option – even with an explanatory memorandum clarifying the aim of the addition – would leave States with no possibility to shape the way the ECSR will use the addition to the preamble, other than pleading in favour of certain interpretations as a respondent. In addition, this option would not allow individuals to lodge complaints of human rights violations resulting from environmental degradation and obtain binding decisions.

113. Although the Charter is silent on the process of amending the preamble, amendments to the Charter are considered under Article J of the Charter which provides for a simplified procedure.¹⁵⁵ Because the preamble does not concern the extension of rights which can be accepted individually by the Parties, it could be amended similarly to Parts III to VI of the Charter, which require acceptance by all Parties. Therefore, unlike the corresponding proposal concerning

¹⁵³ See the Vienna Convention on the Law of Treaties, Article 31(2).

¹⁵⁴ Protocol No. 15 was opened for signature in June 2013 and entered into force, following its ratification by all Contracting Parties to the Convention, eight years later in August 2021.

¹⁵⁵ Article J "Amendments" of the Charter does not refer to the procedure of amending the Preamble specifically. Under Article J(4) of the Revised Charter: "Any amendment to Parts III to VI of this Charter shall enter into force on the first day of the month following the expiration of a period of one month after the date on which all Parties have informed the Secretary General that they have accepted it."

the Convention, amendment of the preamble of the ESC does not necessarily require the adoption of an amending protocol.

G. A non-binding instrument recognising the human right to a healthy environment

114. The existing Committee of Ministers Recommendation CM/Rec(2022)20 does not recognise the human right to a healthy environment. A new recommendation could either (i) follow the path of UNGA Resolution 76/300 and explicitly recognise the right or (ii) recognise the right and, in addition, recognise possible constituent elements of the right.

115. As all Council of Europe member States voted in favour of UNGA resolution 76/300, recreating the content of that resolution within the Council of Europe framework would arguably be only a limited step forward. It would not establish legally binding recognition of the human right to a healthy environment in the Council of Europe framework. Nevertheless, the Court and the ECSR could take such a recommendation into account where appropriate.

116. The process of negotiating and adopting a non-binding instrument is usually less labour and resource intensive than the adoption and ratification of binding instruments and such soft law standard-setting can facilitate consensus-building. The inclusion of environment-related due diligence standards for businesses could be envisaged in a non-binding instrument. Rather than requiring a new instrument, although this could also be done through revision of Committee of Ministers Recommendation CM/Rec(2016)3 to member States on human rights and business, as proposed by the Parliamentary Assembly in its Recommendation 2211(2021).

117. If the non-binding instrument were also to specify possible constituent elements of the right, it could give States an opportunity to actively shape the right by allowing them to negotiate and determine a common understanding of those elements. This could serve as a catalyst for future binding codification work. It would allow subsequent harmonisation of implementation of the right at national levels, thereby to a certain extent improving national protection of the right. However, a non-binding instrument would not provide rights holders with access to an international monitoring mechanism.

H. A combination of different instruments

118. The following non-exhaustive list of combinations of instruments have also been discussed: (i) additional protocols to both the ECHR and the ESC; (ii) a standalone convention on human rights and the environment plus inclusion of environmental protection in the preamble of the ECHR; (iii) additional protocol to the ECHR and/or the ESC combined with a standalone monitoring mechanism (e.g. an ECRI-style committee) or a commissioner type mechanism; and (iv) a standalone convention on human rights and the environment combined with a standalone monitoring mechanism.

119. The overall benefit of these various options is that they combine the advantages of the respective instruments whilst potentially avoiding certain conceivably negative considerations. They would, however, pose other challenges due to the complexities involved in drafting, combining, and adopting different instruments and still carry most, or all of the downsides of each option.

I. The option of not adopting any new instrument

120. Another option could be not to adopt any new instrument. This would not necessarily be a final, definitive decision. It could instead be intended to allow the Court more time to develop further

its caselaw in environment-related cases, including those involving the adverse effects of climate change. The Convention is a living instrument which must be interpreted in light of present-day conditions. The situation could be reassessed at some later stage against the eventual effects of any such developments. The CDDH recommended this option in 2003 and 2009, noting that it was likely that the Court's case-law would continue to evolve in relation to environmental issues. The Court's case-law has indeed evolved to gradually and progressively expand the scope of the Convention to encompass protection in relation to various substantive and procedural issues of nature and environmental protection, pollution and climate change. The option of not adopting a new instrument would, however, deprive member States of the opportunity to influence the development of the human right to a healthy environment through a process of negotiation.

VIII. Conclusions and recommendations

121. The CDDH recognises that the triple planetary crisis of climate change, biodiversity loss, and pollution has consequences for human rights that are common and urgent concerns requiring continued attention and consideration. In this connection, the CDDH recalls the commitment expressed by the Heads of State and Government in the Reykjavik Declaration to "strengthening our work at the Council of Europe on the human rights aspects of the environment based on the political recognition of the right to a clean, healthy and sustainable environment as a human right, in line with United Nations General Assembly Resolution 76/300 'The human right to a clean, healthy and sustainable environment'".

122. As regards the various options of possible additional instrument that have been examined, the CDDH considers that, setting aside their advantages and disadvantages, they are all legally feasible.

123. There is a range of views in the CDDH on the questions of both the need for a further instrument or instruments and the feasibility (in terms of advantages and disadvantages) of the various options that have been considered. Member States expressed their openness to continue engaging constructively on these issues. Some consider that negotiations should now begin on a binding legal instrument to guarantee the human right to a healthy environment. Others consider the need for such an instrument has not yet been established, given the protection of the environment itself under international environmental law and the protection of human rights under the Convention as interpreted and applied by the European Court of Human Rights in environmental cases. Some States have not yet expressed their position on these questions. Some States have not expressed any view.

124. Some member States consider that the Court's development of its caselaw interpreting and applying existing Convention rights and the development of the ECSR's interpretation and application of the ESC in environmental cases will be a commensurate response to the human rights impact of the triple planetary crisis.

125. Other member States, however, consider that it is not certain how the Court will develop its caselaw, or in what timeframe. Some member States consider that the scope of development of new legal standards that is needed goes beyond what the Court could reasonably be expected to do under accepted principles of judicial interpretation of the Convention. Some States consider that it should be for the member States to determine the essential normative content of new legal standards, in particular the human right to a healthy environment.

126. Some member States consider that the adoption by the UN General Assembly of Resolution 76/300 recognising at a political level the human right to a clean, healthy and sustainable environment (right to a healthy environment), with all Council of Europe member States voting in

favour, combined with the absence of a European regional binding legal instrument guaranteeing an explicit human right to a healthy environment, implies the need for a Council of Europe instrument to this end.

127. Some member States consider that, for various reasons, the Court may not be the most appropriate mechanism for the protection of an explicit human right to a healthy environment.

128. Other member States consider that the human right to a healthy environment should be added to the catalogue of Convention rights so that individuals may apply to the Court for a binding judgment on alleged violations of the right.

129. Amongst member States that would prefer a new, binding legal instrument guaranteeing the human right to a healthy environment, some would prefer an additional protocol to the Convention, others would prefer a standalone convention, and others have not indicated a preferred type of instrument. Member States recognise that the negotiation, adoption, ratification, and entry into force of a new, binding legal instrument would itself take time.

130. Some member States consider that a common understanding amongst Council of Europe States of the nature, constituent elements, and implications for States and individuals of the human right to a healthy environment is needed before any decisions on an instrument to guarantee the right, in this connection recalling Committee of Ministers Recommendation CM/Rec(2022)20 on human rights and the protection of the environment.

131. The CDDH considers that the present study responds to the mandate given to it by the Committee of Ministers to prepare a study of the need for and feasibility of a further instrument or instruments in the field of human rights and the environment. Further consideration of the issue implies political decisions.

132. On this basis, the CDDH concludes that the Committee of Ministers could consider:

- Exploring the extent of political support for each of the options identified by CDDH for further work in the field of human rights and the environment, including whether to begin drafting a new instrument, whether legally binding or otherwise, guaranteeing the human right to a healthy environment, and the most appropriate form of any instrument.
- Instructing the CDDH to conduct further analysis regarding the nature, content and implications of the human right to a clean, healthy and sustainable environment with a view to further informing whether the right should be the subject of a new instrument and if so, the most appropriate form of the instrument.
