European Audiovisual Observatory

Introduction

The aim of this report is to provide an overview of viewing time on SVOD services for works (films and TV series) by origin, genre and age (for films only) by analysing SVOD viewing time data in 9 EU countries (Denmark, Finland, France, Germany, Italy, Netherlands, Poland, Spain, Sweden - in this report EU9).

Research questions:

- What is the share of viewing time for films and TV content by region of origin and country of production on SVOD services over a one-year period? How has this evolved over time?
- What is the viewing time of works by format (fiction, documentary and animation), by genre (comedy, drama, thriller…) and by region of origin? How does the age of a film and its region of origin affect SVOD consumption?
- What proportion of viewing time is devoted to national and non-national European films and TV series on SVOD services? How have these proportions evolved over time?
- What proportion of viewing time is spent on theatrical and non-theatrical films? How has this proportion changed over time?
- What proportion of total SVOD viewing time is accounted for by original TV series and films? How has this changed over time?
- What are the viewing time shares of films and TV series by origin on SVOD?
- What is the concentration of films and TV series in terms of viewing time on SVOD services?

Methodology

- The viewing time data were provided by Digital i from the four main service providers, representing nine SVOD country catalogues.
- The catalogue data was a snapshot extracted from JustWatch in July 2025.
- Viewing time is calculated in minutes.
- For viewing time, the retained time frame is from 1st January to 31st December 2025.
- A work is defined as either a film or a TV season.
- Information regarding original content is based on Digital i data. For a title to be considered a streamer's original, it must be marked as such by Digital i and streamed on the same platform that produced the title. This means that Netflix originals are only counted as such when they are watched on Netflix. Streamers' originals exclude content labelled as 'exclusive', coproductions with TV channels and films released in cinemas.
- Only the first production country of a work is considered when identifying the region of origin. This is the case for coproductions when more than one country is listed for the origin of the work.
- The regions of origin for works are:
  - EU27 (member states of the European Union)
  - GB (works which have as first production country the United Kingdom)
  - Other European countries (all other member states of the Council of Europe)
  - USA
  - Other international (all other countries)

European Audiovisual Observatory

Methodology

- Formats were assigned by using IMDb genre listings and reassigned according to the following rules:
  - If 'Animation' is in the IMDb genre, the work is classified as Animation.
  - If 'Documentary' is in the IMDb genre, the work is classified as Documentary.
  - All other works are classified as 'live-action' for films and 'Fiction TV' for TV seasons.

- For the genre analysis, only live-action titles were considered. Works were counted as many times as they have genres.

- Genres were assigned by using IMDb genre listings (action, adventure, biography, comedy, crime, drama, family, fantasy, game-show, history, horror, music, musical, mystery, news, reality-TV, romance, sci-fi, short, sport, talk-show, thriller, war, western).

- Certain genres have been grouped in this way:
  - Thriller with crime and mystery.
  - Action with adventure, war and western.
  - Sci-Fi with fantasy
  - Game-show with history, music, musical, news, short, sport, talk-show together in 'other'.

Glossary

- Catalogue: the full list of titles made available by a service in the countries of the sample.
- Film: all feature films, fiction films, documentaries or other content available in the “Film” / “Movie” section of the platforms of the study are considered.
- TV season: all content classified as “TV” in of the platforms of the study is considered.
- Format: a classification category based on the production medium and factual intent.
- Genre: a classification category based on the narrative elements that create the story arc.
- Original: title that a streaming platform financed, commissioned, or exclusively produced in opposition to acquired titles.
- SVOD (Subscription Video On Demand): services which propose for a monthly fee a catalogue of works available on demand.

Limits

- The Digital i sample of households is statistically representative of the households in the given countries. Sample sizes range from 600 households (1 500–2 000 individuals) in the Netherlands to 1 250 households (3 000–4 000 individuals) in Germany.

- The titles were matched through databases with their countries of production. The consistency of data is obtained by matching each entry with a unique original title. There may be small errors in the identification of a work.

Main findings

European Audiovisual Observatory

A. THE SVOD VIEWING TIME LANDSCAPE

The vast majority of usage is for live-action fiction series

The evolution of viewing time shows TV seasons dominating consistently over the period. TV seasons dominate viewing time due to their longer format compared to films. Since 2020, the share of viewing time accounted for by TV seasons has never fallen below 75%. SVOD usage is also more geared towards live-action content (85% in 2025) than documentaries and animations (15%) regardless of programme type.

Drama and thriller are among the most popular genres of live-action content

Dramas and thrillers are the two most popular genres. They account for 39% of viewing time for live-action films and 52% for live-action TV seasons. However, some differences emerge when comparing the viewing time of films and TV seasons by genre. The action genre accounts for 19% of time spent watching films, but only 9% of time spent watching TV seasons.

Viewing is concentrated in a small number of titles

In contrast to the depth of the catalogues, SVOD usage is also quite concentrated, with 100 works representing less than 1% of the catalogue and accounting for around 15% of total viewing time. Both films and TV seasons are subject to a high level of concentration in terms of viewing. This suggests that SVOD usage includes popular titles as well as a wide range of more niche content, including local content.

Originals - in particular TV series - are among the most successful programmes

Original films and TV seasons from streaming services represent a significant portion of the most-viewed programmes. Original content accounts for only 44% of TV seasons viewing and 22% of film viewing, when considering all viewing. Moreover, original films and series account for 63% of the top 100 programmes. Regarding the weight of EU27 originals in the total viewing of EU27 works, it consistently receives a higher proportion of viewing time than content from all origins. Original films are also more represented in the top EU27 films than in the top films of all origins (45% vs 40% in the top 100).

B. PERFORMANCE OF EU AND EUROPEAN CONTENT ON SVOD

European content accounts for 1/4 of SVOD usage

European content accounts for 25% of SVOD usage, with 16% attributed to EU content. EU films demonstrate a comparatively stronger performance than EU series. EU films account for 20% of film viewing, compared to only 14% for EU series. Non-EU European content is primarily made up of UK films and TV seasons, which have a relatively consistent share of around 8% each.

EU theatrical films in decline

The share of EU theatrical films in EU film viewing time has decreased sharply over time, from 80% in 2020 to 55% in 2025. The share of streamers' originals in film viewing increased to 30%. The remaining 15% of viewing time share is covered by non-theatrical films acquired or co-produced by the streaming platforms.

Key findings

EU content viewing time is stable

Since 2020, the proportion of viewing time allocated to EU content has remained relatively stable, with slight increases in viewing time of EU films and slight decreases for EU series. The share of EU national viewing time has increased, while the share of EU non-national viewing time has decreased by a similar amount. Meanwhile, the US share of viewing time has remained close to 60%.

Strong variations between countries

The nine countries in the sample have very different viewing shares for EU works (ranging from 9% to 25%) and, within EU works, for EU national content (ranging from close to 0% to over 20%).
Larger production countries rely more on national content and reach a higher viewing share for EU content. Smaller production countries, do not reach the same level of viewing even if they offset the relative lack of national content with EU non-national content in their SVOD catalogues.
Among the 9 countries, Spain has by far the highest share of viewing time for EU content, driven by the success of national original TV series, while Spain accounts for 20% of total viewing time across the nine countries, this figure rises to 45% when only EU national content is considered.

Viewing time of EU content far more concentrated than for content of all origin

The viewing time of EU content is much more concentrated than for content of all origin, both for films (the top 100 accounts for 37% of EU films viewing time vs 18% for films of all origin) and for series (43% for the top 100 vs 19% for series of all origin). Spanish works top the ranking of the most-watched EU films and series.

Content from Spain, France and Germany is the most successful in other EU countries
Spanish, French and German works account for 53% of viewing time spent on non-national EU works. Spanish TV seasons represent a particularly significant proportion of this figure (28% of non-national viewing in other EU countries) as do French films (25%).

C. COMPARING SVOD USAGE AND SVOD CATALOGUES

For EU works, SVOD usage does not reflect the composition of SVOD catalogues
In all but two countries in the sample (Poland and Spain), EU content is proportionally less watched than its share of the catalogues. The discrepancy is particularly pronounced in Finland where the proportion of EU content viewed is 15 percentage points lower than its catalogue availability.

The gap is especially due to non-national content
In four out of the nine countries, national content is viewed more frequently than its proportionate share of catalogues. Conversely, EU non-national content is viewed at a lower rate than its share of catalogues across all countries in the sample. The data suggests that streamers include a variable proportion of European non-national content, which struggles to achieve a corresponding audience.

Also gap by format and age of programmes

Documentaries, both films and series, are over-represented in catalogues when comparing with their viewing time share. Conversely, live action films are proportionally more viewed than their share of catalogues and live-action TV series even more. Clearly, EU catalogue films (aged five years or more) represent a smaller proportion of audience engagement (27%) than they do of catalogues (63%). However, there is no reason to believe that SVOD usage should align with the composition of catalogues, given that the latter also serves two purposes: the acquisition and retention of consumers.

No major gap by genres

The comparison between share of the catalogue and share of viewing time reveals no major discrepancy. Action, thriller and fantasy are the three genres over-represented in viewing time in both films and TV seasons. Conversely, comedies and family content are under-represented.

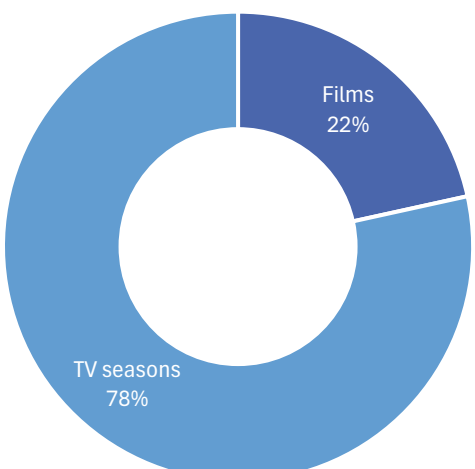

Part 1: The SVOD viewing landscape in 9 EU countries

European Audiovisual Observatory

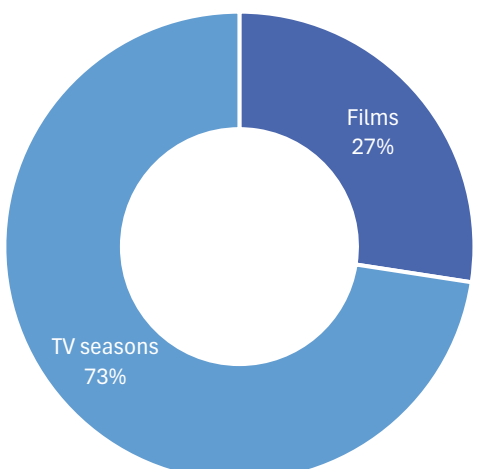

TV seasons get the lion share of viewing time

- Longer than films, TV seasons account for 78% of total viewing time on SVOD services in the sample.
- For EU27 works, TV seasons have a smaller share with 73% of total viewing time.

Split of viewing time between all films and TV seasons in EU9

European Audiovisual Observatory

European works account for a quarter of total viewing time

- European content (EU27+GB+other European countries) accounts for 25% of the total viewing time of European SVOD subscribers in the nine EU countries.
- EU national works are watched more than EU non-national works.
- Unsurprisingly, US works account for 62% of the total viewing time.

Viewing time of all works (films and TV seasons) in EU9 on SVOD services
In % of total viewing time in hours by region of origin, 2025

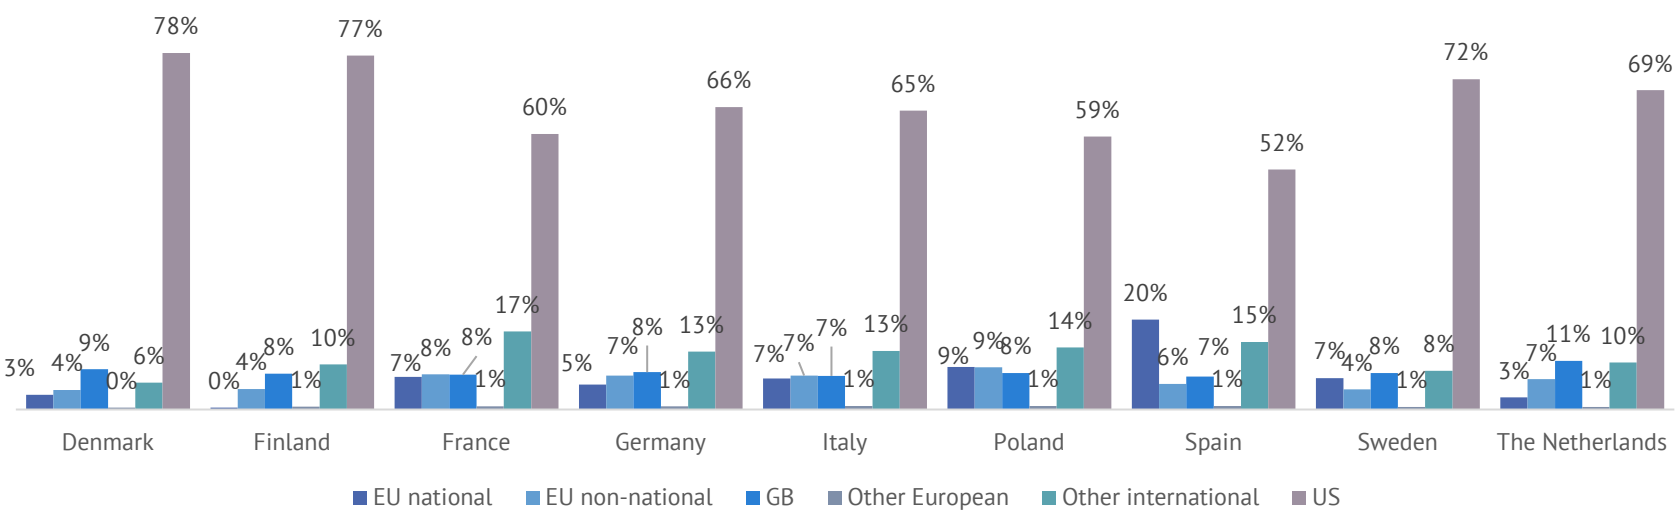

Source: OBS based on Digital i data

European Audiovisual Observatory

European works account for between 13% and 33% of total viewing time in the EU9

- With an EU9 average of 25%, the viewing of European works varies widely across the nine countries. The main difference is the proportion of viewing time devoted to national works.
- Spain has by far the highest share of viewing time for national works (20%), driven by streaming originals produced in the country, and Finland the lowest (0%).
- In six countries, viewing time for non-national EU works is higher than for national EU works.
- Poland has the highest proportion of viewing time devoted to non-national EU works (9%).
- EU content is over-represented in consumption in Spain and Poland, while US content is over-represented in consumption in the Nordic countries, the Netherlands and Germany compared to the EU9 average.

Viewing time by country and origin

European Audiovisual Observatory

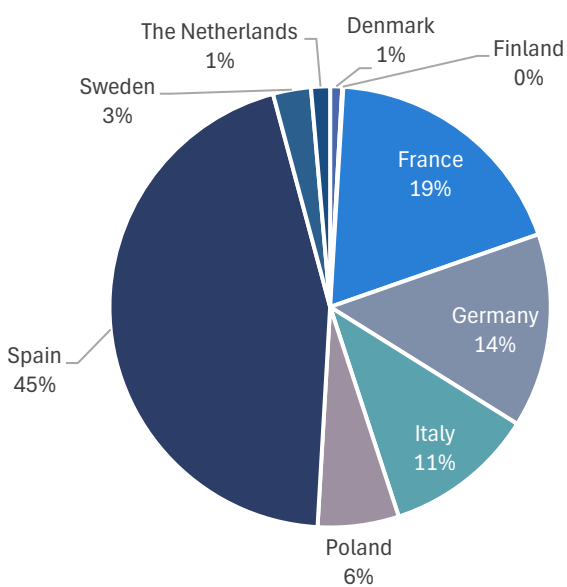

Spanish viewers represent almost half of EU national viewing time in the sample

- Spanish viewers represent 45% of total EU national viewing time and only 16% of total EU non-national, despite accounting for only 20% of total viewing time.
- French and German viewers represent 23% of total viewing time but respectively 26% and 25% of EU non-national viewing time.

European Audiovisual Observatory

EU27 films perform comparatively better than EU27 TV seasons

- With 29% of total viewing time of films, European films have a higher share of total viewing time than European TV seasons with 23% of total viewing time of all TV seasons.
- EU national perform better than EU non-national for films and TV seasons.
- US TV seasons account for 62% of total viewing time and US films for 63%.
- Other international TV seasons perform significantly better than other international films (15% vs 8%).

European Audiovisual Observatory

European films account for between 17% and 31% of film viewing time in the sample

- With an EU9 average of 29% of viewing time, the viewing of European films varies considerably between the nine European countries, the main difference being the proportion of viewing time devoted to national films.
- France has the highest proportion of viewing time devoted to national films (16%), while Finland has the lowest (1%).
- Germany and Poland have the highest share of viewing time for non-national EU films (11%).
- EU films are over-represented in terms of consumption in France, Italy, Poland and Spain while US films are over-represented in terms of consumption in the Nordic countries and the Netherlands compared to the average EU9 viewing time.

Source: OBS based on Digital i data

European Audiovisual Observatory

European TV seasons account for between 12% and 34% of TV seasons viewing time

- Spain has the country with the highest share of viewing time for national TV seasons with 21%, driven by streaming originals produced in the country, and Finland the lowest with 0%.
- The share of viewing time by EU non-nationals is higher than that by EU nationals in most countries of the sample, due to the success of Spanish, French or Swedish TV seasons.
- Poland has the highest share of viewing time for EU non-national TV seasons with 9%.
- EU TV seasons are over-represented in terms of consumption in Spain and Poland compared to the average EU9 viewing time.

Viewing time of all TV seasons, by country and origin
In % of total viewing time in hours, EU9, 2025

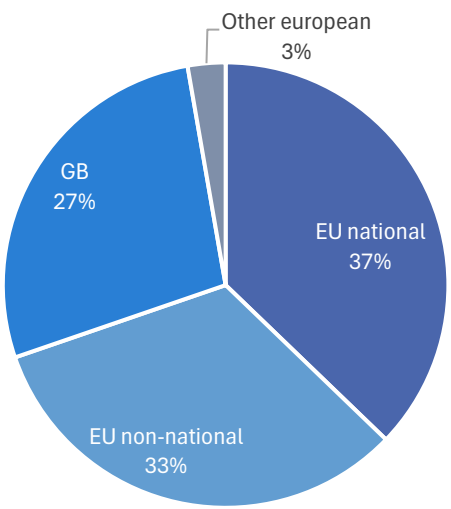

European Audiovisual Observatory

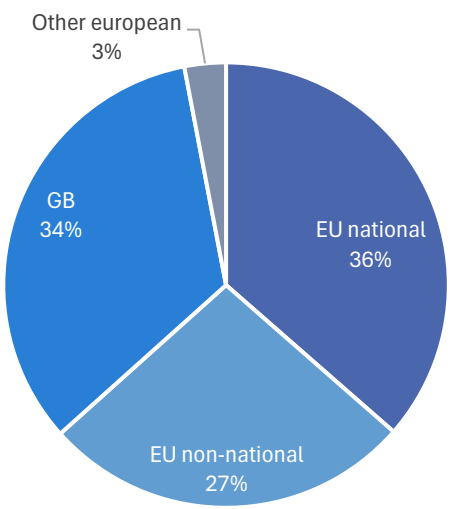

EU national content accounts for majority of European viewing time

- Viewing of national works by EU viewers accounts for the largest proportion among European content viewing time. This accounts for 37% of film viewing time and 36% of TV seasons viewing time.
  Films such as *A Widow's Game* or TV seasons such as *Billionaires' Bunker* are among the most popular.

European Audiovisual Observatory

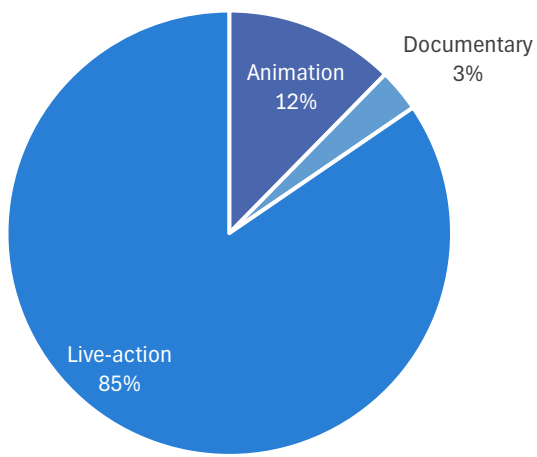

Viewing time is dominated by live-action* and fiction* TV

- Live-action films and TV series is the most watched formats by European viewers, with live-action films accounting for 88% of total viewing time (and live-action films accounting for 85% of films in SVOD catalogues and fiction TV accounting for 80% of TV viewing time but only 66% of TV series in catalogues).
- Documentaries, on the other hand, account for 3% of film viewing (and 12% of all films in SVOD catalogues) and 3% of TV season viewing (and 13% of all TV seasons in catalogues).
- The share of animated films in film viewing (9% of total viewing time) is higher than the share of animated films in catalogues (8%). For animated TV series, the share of total viewing time (12%) is well below the share of animated TV series in SVOD catalogues (21%).

European Audiovisual Observatory

Live-action* content account for between 83% and 86% of viewing time across countries

- The nine countries surveyed have roughly the same level of consumption in terms of formats, with live-action films and TV fiction dominating.
- Animation is the second most consumed format, with consumption ranging from 8% (DK) to 15% (SE) in the nine EU countries.
- Documentaries account for a similar variation of total viewing time, ranging from 2% (IT, FR) to 7% (DK) across countries.

European Audiovisual Observatory

Live action – EU films national get more shares than EU TV seasons national

- Both for films and TV series, EU viewers watch more national films and TV series than EU non-national, on average in the EU 9.
- For live-action films, European films account for 31% of total viewing time, US live-action films for 61% of total viewing time and other international films make up 8% of total viewing time.
- Live-action European TV seasons make up 24% of total viewing time and US TV series account for 63% of total viewing time.

European Audiovisual Observatory

Animation – Other international account for a significant share of viewing time in TV seasons

- International animation account for 34% of viewing of animation TV seasons, thanks to the success of Japanese anime series and the Australian cartoon for children *Bluey*.
- When it comes to films, US animated works dominate, accounting for 79% of viewing time for animation films.
- European animation films account for only 8% of viewing time; for TV seasons, European animation TV seasons account for 12% of viewing time.

Documentaries – A higher share of viewing time than other format for European works

- European viewers prefer mainly to watch European documentary films with 44% of total documentary viewing time. British documentary films account for 24% of documentary film viewing time, followed by national documentary films with 10%.
- When it comes to TV documentaries, US documentaries account for 59% of total documentary TV viewing time, followed by European documentary TV seasons with 37% of viewing time. Notably, for European documentary TV seasons, viewers watch more GB documentaries with 19% of total viewing time than EU documentaries.

European Audiovisual Observatory

EU27 content viewing time dominated by drama

- Four genres account for ¾ of films and TV seasons viewing time.
- The leading genres for films are drama and comedy, with 24% and 21% respectively.
- The comedy genre accounts for a larger share of film consumption for EU27 compared to the sample average.
- Drama is the genre with the largest share of viewing time for TV seasons, accounting for 30% of viewing time, followed by thriller (22%).

European Audiovisual Observatory

Recent films account for more than 2/3 of the viewing time of EU27 titles

- Viewers prefer to watch more recent films. Films produced in 2024 and 2025 account for 28% of total viewing time.
- For EU27 films, this trend is even more pronounced, with recent EU27 films accounting for 39% of all EU27 film viewing time.
- Films produced in 2018 or before account for 42% of total viewing time and only 27% of EU27 titles viewing time.

Films - Split of viewing time by origin and by year of production

European Audiovisual Observatory

Most of the viewing time for EU non-national TV seasons is generated through originals

- For national and non-national films, most of the viewing time is attributable to non-original films.
- On average in the EU9, EU non-national original TV seasons account for 62% of EU non-national TV viewing time, showing that for TV seasons, streaming originals such as *The Åre Murders* or *Secrets We Keep* account for most of the EU non-national viewing time by subscribers, which could also be a consequence of more promotion of SVOD originals on SVOD homepages.
- On the other hand, national originals account for 38% of national TV viewing time on average in the EU9.

European Audiovisual Observatory

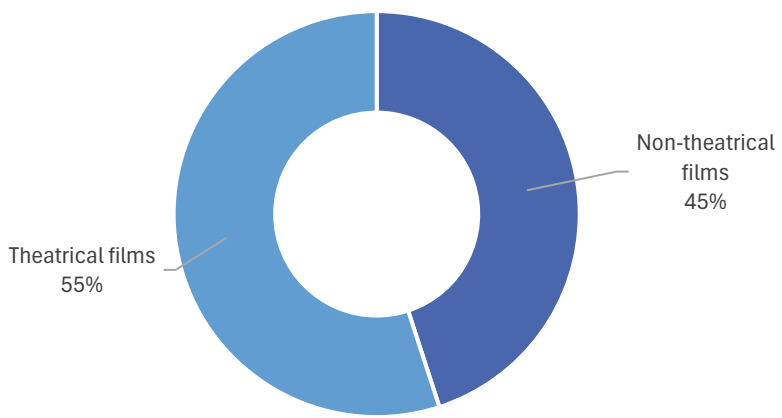

Theatrical films dominate viewing time for films of all origins and EU27 films

- Films released in cinemas account for the majority of viewing time with 65% and 55% of viewing time for all films and EU27 films respectively, as films released in cinemas are better known by audiences.
- Nevertheless, only 3 of the top 10 most watched films were released in cinemas which may be related to a more intensive promotion on the homepages of original streaming services.

Split of viewing time all films - Theatrical and non-theatrical films

European Audiovisual Observatory

Theatrical film titles generate the majority of viewing time in all countries for all origin films

- Theatrical films receive the majority of viewing time for works of all origins but their share of viewing time is smaller for EU27 titles.
- In Italy, theatrical films of all origins receive the most viewing time (69%).
- Sweden, Poland, Finland and the Netherlands are the countries where EU27 non-theatrical films receive more viewing time than theatrical films.

European Audiovisual Observatory

Originals – Originals dominate the top lists of most-viewed works

- Original works dominate the list of most-viewed content on SVOD services in the EU9.
- In the top 100 works most watched works, originals account for 62% of works of all origins, while the top 10 works are even more dominated by originals: with 10 out of the top 10 most watched works are original streaming productions with titles such as *Wednesday, Squid Game* or *Adolescence*.

All works - Share of originals of the most watched works
In % of all works, EU9, 2025

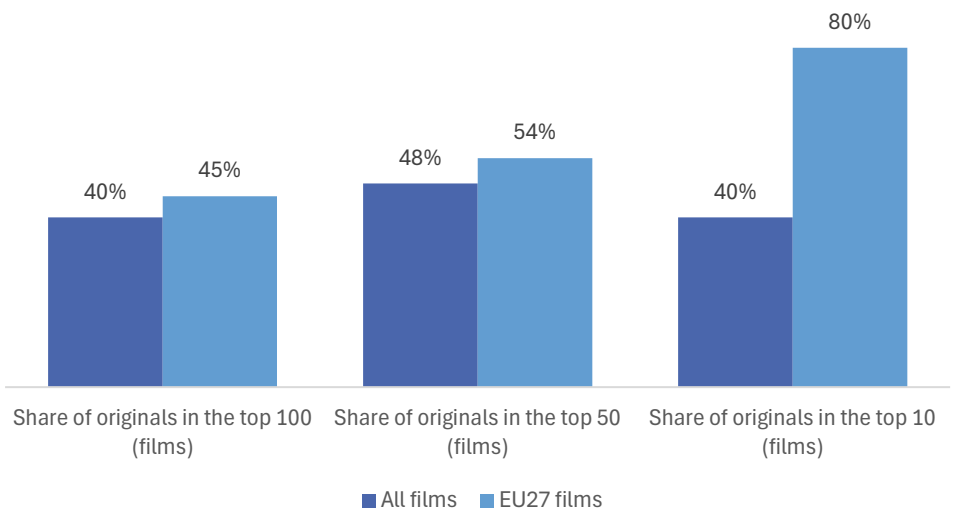

Source: OBS based on Digital i data

European Audiovisual Observatory

Originals – More original films in the EU27 top list

- Original films are more represented in the top EU27 films than in the top films of all origins.
- In the top 100 most watched films, originals represent 40% of films from all origins and 45% of EU27 films.
- One possible reason for this is that SVOD services tend to promote original content on their homepages.

Films - Share of originals of the most watched films
In % of original films, EU9, 2025
